Soares, Manuel (*d* Lisbon, 4 July 1756). Portuguese composer. He was a member of the order of St Peter. He belongs to a group of composers whose old-fashioned style was appreciated by King João V and cultivated in the Portuguese royal chapel in the first half of the 18th century. His own works, most of them apparently composed for Lisbon Cathedral, are for four voices *a cappella*; they are mostly modal and written in mensural notation, and some are based on a plainchant *cantus firmus*. He also added voices and supplementary verses to works by Manuel Mendes, Palestrina and Victoria.

WORKS

Benedictus Dominus; Ecce vidimus eum; Exaltabo te Deus; In monte oliveti; Jerusalem surge; Lauda anima mea; Lauda Jerusalem; Laudate Dominum; Omnes amici mei; Plange; Sicut ovis; Tristis est; Velum templi; Vinea mea: all 4 vv, *P-VV*

Psalms, *Lf*

MANUEL CARLOS DE BRITO

Soares Pereira, Marcos. *See* PEREIRA, MARCOS SOARES.

Soave (It.: 'mild', 'gentle'). An expression mark, sometimes used in the forms *con soavità*, *soavamente* and *soavemente* (all 'gently'). Brossard (*Dictionaire*, 1703) translated *soave* as 'agréable, doux, gracieux, etc'. It was used particularly often by Boccherini both as a dynamic and as a mark of expression.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Sob. A descriptive term used by Thomas Mace (*Musick's Monument*, London, 1676, 170 [*recte* 175]) in his explanation of the staccato chord articulation CRACKLE.

JAMES TYLER

Sobieska [née Pietruszyńska], **Jadwiga** (*b* Warsaw, 14 Oct 1909; *d* Warsaw, 5 Dec 1995). Polish ethnomusicologist. She studied the violin at the Poznań Conservatory, and also musicology with Łucian Kamieński and Wacław Gieburowski at the University of Poznań (1929–35); from 1934 to 1935 she was also an assistant in the musicological department and in the regional phonographic archives of the university. Subsequently she became an associate of the State Institute of Art in Warsaw and also head of the organization responsible for collecting folk music in Poland (1950–59). She was then appointed head of the records archive in the Institute of Art of the Polish Academy of Sciences, Warsaw (1960–67), and head of the folk music research section there (1967–9). She was married to Marian Sobieski.

ZYGMUNT M. SZWEYKOWSKI

Sobieski, Marian (Bazyli) (*b* Milosławice, Wielkopolska district, 14 June 1908; *d* Warsaw, 25 Oct 1967). Polish ethnomusicologist. He studied musicology under Łucian Kamieński and Wacław Gieburowski at the University of Poznań and music at the Poznań Conservatory (1928–35). As an assistant in the regional phonographic archives of the musicology department of Poznań University (1935–9) he made recordings of the folk music of the Wielkopolska district; he was later (1945–54) an assistant and lecturer in the department. From 1947 he was also a lecturer at music schools in Poznań, head of the music section of the State Institute of Folk Music Research, research director of the organization responsible for collecting folk music in Poland (1950–54) and head of the folk music research section in the State Institute of Art. In 1954 he was appointed lecturer in the department of musicology at the University of Warsaw and head of the folk music research section of the Institute of Art of the Polish Academy of Sciences; the collection of records of Polish folk music grew to over 65,000 under his direction. These recordings are particularly valuable because they were made before the Polish villages were industrialized. Through their collections and records of Polish folk music, and with their own theoretical writings, Sobieski and his wife Jadwiga laid the foundations of ethnomusicology as a scholarly discipline in Poland.

ZYGMUNT M. SZWEYKOWSKI

Sobinov, Leonid Vital'yevich (*b* Yaroslavlý, 26 May/7 June 1872; *d* Riga, 14 Oct 1934). Russian tenor. After embarking on a law career he studied singing in Moscow, where he made his operatic début in small roles with a visiting Italian troupe (1893–4). He sang at the Bol'shoy from 1897, then with private opera companies and at the Moscow and St Petersburg imperial theatres, at La Scala (1903, 1905, 1911), Monte Carlo and Berlin (1905) and Madrid (1908). He made numerous appearances throughout Russia. He was much admired for Lensky (*Yevgeny Onegin*), Sinodal (Rubinstein's *Demon*, his Bol'shoy début role), Dubrovsky (in Nápravník's opera), Vladimir (*Prince Igor*), Berendey (*Snow Maiden*), Levko (*May Night*), Werther, Faust, Romeo, Des Grieux (*Manon*), Ernesto (*Don Pasquale*), the Duke of Mantua, Alfredo (*La traviata*), Lohengrin and Orpheus (Gluck). Even after he left the stage (1924) he was active at the Bol'shoy in various capacities. He had a profoundly poetic approach to his roles and studied every aspect of them in detail. His attractive stage presence and his even, expressive voice endeared him to a vast public. He made 66 recordings between 1901 and 1910, which reveal a well-placed lyric tenor voice used with the utmost sensitivity; the elegiac quality of his Lensky has been matched by few. Two volumes of his letters, articles, speeches and reminiscences were published, with a discography, in Moscow in 1970.

HAROLD BARNES/ALAN BLYTH

Sobolewski, (Johann Friedrich) Eduard [Edward] (*b* Königsberg [now Kaliningrad], 1 Oct 1804; *d* St Louis, 17 May 1872). American composer and conductor of Polish descent. He studied composition with Zelter in Berlin and Weber in Dresden (1821–4). In 1830 he became director of music at the theatre in Königsberg, where he presented his operas *Imogen* (1832), *Velleda* (1835), *Salvator Rosa* (1848) and *Der Prophet von Khorassan* (1850); the last, his greatest success, received widespread publicity. In 1835 he became Kantor of the Altstadt church and composed a series of oratorios including *Die Auferweckung des Lazarus* and *Johannes der Täufer*, some of which were combined into a large cycle, *Der Erlöser* (1841). He composed a choral symphony, *Süden und Norden* (1845), as well as symphonic poems. He also worked as a critic and writer, notably for the *Neue Zeitschrift für Musik*, and published his judgment of Wagner's essays and works in his *Reaktionäre Briefe aus dem Feuilleton der Ostpreuss. Zeitung* (Königsberg, 1854; Eng. trans. in *Musical World*, xxxiii, 1855), which in turn became part of the controversy surrounding the Berlioz-Wagner season in London (1855). In 1854 he moved to Bremen as music director of the theatre; at that time he was developing his own style of motivic construction and continuous music which he used in *Komala* and explained in *Oper, nicht Drama* (Königsberg, 1857; *D-BMs*). After its 1857 première, *Komala* was produced by Liszt at Weimar in 1858, the first of Sobolewski's operas to be performed outside his Kapellmeister posts. Richard Pohl, in a lengthy review (1859), placed it within the camp of the moderns, thereby bringing it into an already raging debate.

Sobolewski left Bremen for the USA and settled in Milwaukee in July 1859. There his opera *Mohega, die Blume des Waldes*, based on the Pulaski episode in the Revolutionary War, was performed with the help of the Milwaukee Musical Society on 11 October and 1 November 1859; the first opera on an Amerindian theme to be composed in the USA, it followed many of the same principles as *Komala* and caused a major controversy in Milwaukee. His melodrama *An die Freude* was given in a Schiller festival there the same year. After founding and conducting briefly the Milwaukee Philharmonic Society Orchestra, in June 1860 he moved to St Louis where he became conductor of the Philharmonic Society. He resigned in 1866 to devote himself to teaching and composition, and also contributed some articles on musical subjects to the *Journal of Speculative Philosophy*. Although most of his compositions are lost, detailed reviews with musical examples are extant. The songs, in particular, are of some artistic merit. Schumann admired some of his work, but found it lacking in overall planning. A gifted composer who produced striking ideas, Sobolewski seldom spent time in revision and reflection to perfect his works. His stageworks nonetheless form part of the history of exoticism in opera.

WORKS
(*selective list*)

STAGE

Imogen (op, 3, Sobolewski), Königsberg, Stadt, 6 Dec 1832
Velleda, die Seherin des Brockens (op), Königsberg, Stadt, 1835
Salvator Rosa (op), Königsberg, Stadt, 22 Feb 1848
Der Prophet [Der Seher] von Khorassan (op, 3, Sobolewski, after T. Moore: *Lalla Rookh*), Königsberg, Stadt, early 1850, lib *D-LÜh*
Ziska vom Kelch (op, after A. Meissner), Königsberg, Stadt, 14 Feb 1851
Ein Lied als Verräther (comic op, H. Hartung), Königsberg, Stadt, 1852
Komala [Comala], die Königstochter von Inisthore (op, 3, Sobolewski, after J. Macpherson: *Fingal*), Bremen, Stadt, early 1857
Mohega, die Blume des Waldes (amerikanische Nationaloper, 3, Sobolewski), Milwaukee, 11 Oct 1859, lib *US-SLug*

VOCAL

Orats: Die Auferweckung des Lazarus (after J.G. Herder), Königsberg, 18 May 1837; Johannes der Täufer, Königsberg, 16 Oct 1839, vs (Leipzig, 1840); Die Erlöser (cycle incl. Die Prophezeiung and Heilige Nacht, both Königsberg, 7 Nov 1840, and Der Retter, Königsberg, 1841), vs (Leipzig, 1841)

Choral: Meeresphantasie (C.v. Lengerne), soloists, chorus, orch, MS, *US-Bc*; 4 partsongs (1871/2); other unpubd works

Songs, 1v, pf: I Wept as I Lay Dreaming/Ich hab' im Traum' geweinet (H. Heine) (St Louis, 1861); Loving Shepherd, with org (St Louis, 1864); Thoughts of Thee (St Louis, 1870); I Arise from Dreams of Thee (St Louis, 1870); Sweet Memories of Thee (St Louis, 1870); Love's Philosophy (1870/71); Youth Never Comes Again (1871); Hail Columbia; Blow Bugle Blow

ORCHESTRAL

Süden und Norden (Tongemälde in Form einer Symphonie mit Chor), chorus, orch, Leipzig, 3 Nov 1845

Himmel und Erde, ein Mysterium von Lord Byron, Königsberg, 11 Sept 1845

Star Spangled Banner, ov (Milwaukee, 1860)

JAMES M. BURK, ROBERT T. LAUDON

Soca. A song and dance genre directly related to CALYPSO. In the 1970s, at a time of new oil wealth and modernizing tendencies on Trinidad, technological and musical influence from North American soul and dance musics inspired a new form of calypso. Singer Lord Shorty's 'Soul Calypso' gave its abbreviated name 'So-Ca' to the new sound which mixed elements of soul and disco drum features with funk, mid-tempo ska and traditional calypso. While the satire, metaphor and political comment of calypso did not disappear entirely, the emphasis shifted from song lyrics to the rhythms of dance and the culture of partying.

Soca artists like David Rudder have kept calypso values while embracing international musical ideas, while Arrow (Alphonse Cassell), who wrote the soca party anthem 'Hot, Hot, Hot', focusses on creating a Caribbean music, with *merengue*, *zouk* and *salsa* influences that enables people to forget their problems and feel good. With soca continually cross-fertilizing with other contemporary popular musics such as rap, the calypso genre has shifted its lyrical priorities, gaining a more international musical focus and in consequence a larger audience inside and outside the Caribbean (see *Calypso and Soca*, The Rough Guide RGNET 1040, 1999).

Social history of music. *See* MUSICOLOGY, §II, 9 and SOCIOLOGY OF MUSIC.

Socialist realism. A doctrine with sources in 19th-century aesthetics but now chiefly associated with Marxism or communism. It has had, to say the least, a somewhat chequered ideological career. Its applications have ranged from the largely descriptive to the downright prescriptive and dogmatic, their common factors being a realist (mimetic) theory of representation and a belief that art can promote human emancipation by offering a truthful yet affirmative vision. Argument about these terms has been widespread since the 1930s, but was especially urgent in the Soviet Union and its satellite countries, where socialist realism was for long periods official policy.

The great paradox of that policy, as viewed by most Western Marxist commentators, was that it espoused revolutionary aims in the socio-political sphere while adopting a conservative canon of aesthetic values, even if there was the authority of Lukács for 19th-century realism as the means of portraying 20th-century injustice. In musical terms, that conservatism resulted in a favouring of such forms as the programme symphony, the dramatic cantata and other such genres (opera, ballet, epic film score) that could range from private suffering to reaffirmed social values – values that distinguished socialist realism from other (as Lukács would have it, 'bourgeois-decadent') realisms that emphasized human misery without any redeeming sense of collective destiny and purpose. Hence a connection with the Promethean works of Beethoven's middle period.

But Beethoven could also be interpreted differently. For Adorno, the collapse of political revolution had brought about the decisive change in Beethoven's music to the late style, and socialist realism failed to recognize how hope had been revoked more than a century before. To some extent, these opposing views mirrored the postwar division of Europe, between a west defining itself against collectivism and an east anxious to present itself as the chief adversary of Nazism and heir to those values the Nazis had sought to destroy. However, the argument goes deeper. What most distinguishes socialist realism is its conception of the artist's prime responsibility as being to fellow participants in the effort to construct a genuine democratic culture.

Commentators have not been slow to remark on the quantity of bad music produced to the standard prescription, nor are we lacking for views of Shostakovich's most apparently committed socialist-realist works as shot through with bitter irony. Wider problems have to do with what 'realism' means in the case of music and with defining how, in Marxist terms, economic base is related to cultural superstructure. If material forces are bound to prevail, it would be hard for art to be at once realist, in the sense of reflecting things as they are, and socialist, in the sense of providing an image of things as they might be.

One way out of this dilemma is through Engels's notion of 'relative autonomy', by which factors other than economic (political, philosophical, cultural etc.) may at times assume a decisive role in shaping change. At the opposite extreme lies Zhdanov's hard-line realism, which assumes an achieved socialist order and requires the artist to celebrate. This doctrine was enforced during the period of political and cultural retrenchment in the Soviet Union, which started in the late 1920s and ended the relative freedom enjoyed by artists as a by-product of Lenin's mixed-market New Economic Policy. Where hitherto there had been a rivalry between two groups of composers – the modernists and those advocating mass appeal – now the latter came to control all aspects of Soviet musical life. And where socialist realism, as outlined by Marx and Engels, had allowed scope for complex 'mediations'

between base and superstructure, now it was the bluntest of instruments to impose conformism.

But abuse does not discredit the idea. Fine music has come from the spirit, if not the bureaucratic letter, of socialist realism, by composers within the Soviet Union (Shostakovich, notwithstanding revisionist commentaries, and Myaskovsky) and beyond (Eisler, Schulhoff, Weill, Bush, Stevens, Stevenson, Henze). There is no reason to suppose that gifted composers have not been genuinely moved by social inequity and not genuinely responded. Socialist realism, as an effort to liberate such response, is not a codified and now obsolete musical style but rather an expression of humane values that have been with us at least since the French Revolution.

Società Italiana Autori ed Editori [SIAE]. *See* COPYRIGHT, §VI (under Italy).

Società Italiana di Musica Moderna. Italian society active from 1917 to 1919, founded by Alfredo Casella. *See* CASELLA, ALFREDO, §1 and ITALY, §I, 7.

Società Italiana di Musicologia. Italian organization, founded in 1964 to encourage musicology and stimulate the development and diffusion of musical culture. It encourages research through meetings and publishing activities. Its presidents have included Guglielmo Barblan (1964), Claudio Gallico (1968), Alberto Basso (1973) and Agostino Ziino. It has held congresses in Parma (1966), Siena (1967), Milan (1968) and Fusignano (1968 and 1974), and in 1995 had more than 800 members. Its many publications include the periodical *Rivista italiana di musicologia* (1966–) and the series Monumenti Musicali Italiani (1975–), the first volumes of which initiated a complete edition of the works of Frescobaldi.

□

Société Belge de Musicologie (Flem. Belgische Vereniging voor Muziekwetenschap). Belgian organization, founded in 1946 by Charles van den Borren, Suzanne Clercx-Lejeune and Albert Vander Linden to bring together musicologists and promote musicological research in Belgium. After van den Borren died in 1966 the society's activities were limited and resumed only in 1974; the following year Vander Linden became president, succeeded in 1978 by Robert Wangermée. In 1995 the society had 100 Belgian and 20 foreign members, comprising musicologists, students and performers. The society began publishing a journal *Revue belge de musicologie* in 1946, and has issued several monographs and one volume (1950) of Flores Musicae Belgicae.

Société (des dîners) du Caveau. The name given to a carefree dining club founded in 1733 by the writers Alexis Piron, Claude-Prosper Jolyot de Crébillon and Charles Collé. Its meetings were held twice a month in a windowless room (hence the name 'caveau') in Nicolas-Alexis Landelle's restaurant on the rue de Buci. One of its principal activities was the composition of satirical chansons. The circle was soon enlarged to include many of the liveliest writers and artists of the day. According to Laujon, Rameau was a member, as were several of his librettists – not only Piron and Collé but Louis Fuzelier, Pierre-Joseph Bernard and Le Clerc de La Bruère. During the Lulliste-Ramiste dispute, members of the Caveau provided the composer with stalwart support. The society was disbanded in 1742. It was reconstituted at various times from 1759 onwards, but never had the same impact on French literary or musical life.

GRAHAM SADLER

Société Française de Musicologie. An organization founded in Paris by Lionel de La Laurencie in 1917 to encourage musicological study in France and abroad. In addition to established scholars its membership (about 350 in 1995) includes students, performers and amateurs. Presidents

have included the most distinguished French musicologists, among them Saint-Foix, Masson, Pincherle, Dufourcq, Thibault, Lesure and Bridgman. The society's journal *Revue de musicologie* began as the *Bulletin de la Société française de musicologie* (1917–22). The society began an extensive series of publications in 1925 that includes editions (Monuments de la Musique Ancienne), studies by leading French musicologists, documents, inventories and catalogues.

Society for American Music. American organization, formerly known as the Sonneck Society. Founded in 1975 to encourage interest in and study of American music in all its facets, the society was named after Oscar G.T. Sonneck (1873–1928) as a tribute to his passion in documenting American musical life. By 1998 it had over 900 members (musicologists, performers, collectors, librarians, students, critics, publishers and educational institutions). It was renamed in 1999. The society publishes a *Bulletin* (1975–) three times a year and a quarterly journal, *American Music* (1983–). The society's annual conference is dedicated to the diverse activities of the organization, which encompasses scholarship, performance and librarianship as well as educational programmes. The society bestows annual awards for significant books, articles and dissertations as well as individual recognition for distinguished service to the field.

JOHN SHEPARD/GEORGE BOZIWICK

Society for Ethnomusicology. American society with international membership founded in Philadelphia in 1955 to advance research and study in the field of ethnomusicology. Its research interests cover all musics, but generally Western art music has not been a strong focus. It is governed by eight directors nominated by and from the membership of a council, but elected by the general membership. Directors serve a two-year term, though the president serves for four years (one as president elect, one as past president). As a scholarly body, representing many professional ethnomusicologists (around 2500 at the end of the 20th century) working in universities, museums archives and a variety of other contexts, the society was admitted to constituent membership in the American Council of Learned Societies in 1966.

The founders, David McAllester, Alan Merriam, Willard Rhodes and Charles Seeger, all had training in anthropology or musicology. To establish communication among ethnomusicologists throughout the world, the mimeographed *Ethno-musicology Newsletter*, edited by Merriam, appeared from 1953 to 1957 (11 issues); it was succeeded by *Ethnomusicology*, a triannual journal, edited successively by McAllester, Nettl, Frank Gillis, Israel J. Katz, Norma McLeod, Gerard Béhague, Fredric Lieberman, Timothy Rice, K. Peter Etzkorn, Charles Capwell, Jeff Todd Titon, James R. Cowdery and Bruno Nettl. The society also issues the *S.E.M. Newsletter* (1967–), a monograph series and an audio-visual series. Annual scholarly meetings were instituted in 1956; nine regional chapters also hold meetings and read papers, while committees (archive, education, current issues etc.) produce panels, reports, and occasional publications. The society also awards several prizes for outstanding scholarship in the field. The society's office is in Bloomington, Indiana.

BARBARA KRADER/R

Society for Research in Asiatic Music (Jap. Tōyō Ongakugakkai). Society founded in 1936 by Hisao Tanabe, Kenzō Hayashi, Shigeo Kishibe and others. Its objective is systematic research in Asian music, including Japanese, and the promotion of musicological activities in Japan. Its membership in 1995 was about 740. Since its foundation, the society has issued a yearly journal, *Tōyō Ongaku Kenkyū* (Journal of the Society for Research in Asiatic Music).

MASAKATA KANAZAWA

Society for the Promotion of New Music [SPNM]. British organization founded in 1943 by Francis Chagrin to support the work of young and unestablished composers. It was launched at a meeting of the Arrangers', Composers' and Copyists' subcommittee of the Musicians' Union, and was originally named the Committee for the Promotion of New Music. Vaughan Williams accepted the presidency with the proviso that it 'avoid all cliques [and] give a welcome to all good work in whatever style or school'. Its initial activities, which were subsidized by the wartime Council for the Encouragement of Music and the Arts and by private donations from Vaughan Williams, Bliss and others, remained the basis for much of its subsequent work: 'recommended lists' of works were drawn up, which resulted in increased broadcasting by the BBC and in a recording project by Decca; 'studio recitals' were given, which included chaired discussions of the music; 'Experimental Orchestral Rehearsals' were established. All the music was chosen by expert reading panels.

Renamed in 1952, the society embarked on a chequered period in which its activities were often beset by financial problems, but that did not prevent the launching of new projects like the series of 'Composers' Weekends', in which eminent figures like Babbitt and Dallapiccola presided over intense learning sessions involving young composers and experienced performers. In 1967 it unexpectedly received a large bequest, and an era of change ensued. Its philosophy and methods were constantly questioned by new generations of composers, who perceived a growing danger of promoting the 'typical SPNM piece', decently composed but conformist. Its financial affairs were not always well managed, but at its 30th anniversary it could boast a list of 270 composers it had helped, including most of Britain's finest.

After 1980 changes of administration led to increasing financial stability, and with additional funding from the Arts Council and other sources the SPNM gradually broadened the scope of its operations, taking over the administration of the British section of the ISCM and launching the record label New Music Cassettes. Since 1989 each year's activities have been entrusted to a programme director, who makes a personal choice of music aided by a reading panel. Evenhandedness is ensured by choosing successive directors of contrasting tastes. A typical SPNM year consists of workshops, directed by experienced composers in both London and the regions, concerts, collaborations with other promoters, including universities and festivals throughout the country, and exchange programmes with societies abroad. An ambitious educational scheme has also been initiated, and the SPNM is now recognized as the most important supporter and promoter of young composers in Britain.

ANTHONY PAYNE

Society for the Publication of American Music [SPAM]. An American non-profit-making organization founded in 1919 by Burnet C. Tuthill in New York for the publication of contemporary American chamber music. It flourished for half a century and had several hundred subscribers. A selection committee was appointed to examine manuscripts and listen to live performances, and about 85 works were published. The composers chosen include Daniel Gregory Mason, Leo Sowerby, Arthur Shepherd, Quincy Porter, Edward Burlingame Hill, David Diamond, Ingolf Dahl, Irving Fine, Lukas Foss, William Bergsma and Mel Powell. The first president of the society was John Alden Carpenter; William B. Tuthill was secretary until his death in 1929, and Burnet C. Tuthill was treasurer until 1949. From 1920 the society sponsored the Aliénor Harpsichord Composition Awards. In 1969 it was dissolved and the rest of its music stock turned over to the Theodore Presser Company, which had been its publisher and distributor for the last few years of its existence; the catalogue is no longer active.

Society Islands. *See* POLYNESIA, §II, 3(i).

Society of British Composers. British organization. It was founded in London in 1905 under the chairmanship of Frederick Corder to assist the publication of works by British composers. Within two years it had a membership of 254 composers and others and had published 44 works, chiefly songs and chamber music in its Avison Edition, which was first published by Breitkopf & Härtel, then by Novello and finally, from 1914 until the society's dissolution in 1918, by Cary. It also organized concerts of British music.

□

Society of British Musicians. British organization. It was founded in London in 1834 to encourage British music and to try to secure for British musicians a position similar to that conferred on painters and sculptors by the Royal Academy. It offered membership only to musicians of British birth and originally excluded all but British music from its concerts. At first the society was extremely successful, and by 1836 had 250 members. But many influential musicians regarded its policy as parochial, and in 1841 an attempt was made to widen its appeal by the inclusion of works by composers who were not members, and foreigners. An appeal for support in 1854 met with only a limited response, and the society was dissolved in 1865.

□

Society of Composers. Organization founded in New York in 1966 as the American Society of University Composers by Donald Martino, J.K. Randall, Claudio Spies, Henry Weinberg, Peter Westergaard, Charles Wuorinen and Benjamin Boretz. Each year it holds one national and seven regional conferences at which members' music is performed. The society also publishes the *Journal of Music Scores* and both a print and a monthly on-line newsletter (SCION). In 1995 the society had about 1000 members, primarily in the USA.

RITA H. MEAD/R

Society of Musicians. British benevolent society founded in London in 1738, known from 1790 as the ROYAL SOCIETY OF MUSICIANS OF GREAT BRITAIN.

Society of St Gregory. British society, founded in 1929 by J. Bernard McElligott to foster knowledge and understanding of music in the liturgy of the Roman Catholic Church, to improve the standards of performance and to stimulate debate. Its membership includes clergy, composers and church musicians, mainly in Great Britain, but also in the USA and elsewhere; numerous distinguished Roman Catholic musicians have been involved with its work, including Henry Washington and A. Gregory Murray. The latter edited the society's journal *Music and Liturgy* (renamed *Liturgy* in 1944; *Life and Worship*, 1970–74) from 1929 to 1952. In 1955 the Church Music Association, a breakaway group, published its own journal *Church Music* (from 1959); in 1975 the two bodies were reunited and their journals amalgamated under the original title. Since the Second Vatican Council the Society's work has been concentrated on the implementation of its decrees; summer schools have been instituted, and composers' groups have been formed, to this end.

□

Society of Women Musicians. British organization. Founded in 1911 by the singer Gertrude Eaton, the composer Katharine Eggar and the musicologist Marion M. Scott, it aimed to provide a focal point for women composers and performers to meet and enjoy the benefits of mutual cooperation. The 37 women at the inaugural meeting included musicians such as Ethel Barns, Rebecca Clarke, Agnes Larkcom, Anne Mukle and her sister, May Mukle, and Liza Lehmann, who became the society's first president. Later presidents included Cécile Chaminade, Fanny Davies, Rosa Newmarch, Myra Hess, Astra Desmond and Elizabeth Poston. Early members included Florence Marshall, Maude Valérie White and Ethel Smyth, who was honorary vice-president from 1925 to 1944. Among subsequent honorary vice-presidents were Nadia Boulanger, Imogen Holst, Elisabeth Lutyens, Elizabeth Maconchy and Fanny Waterman. By the end of its first year the society had formed a choir and a library, given several private concerts and a public concert of members' works (which included the première of the first two movements of Smyth's String Quartet in E minor), hosted

a variety of lectures, held a composers' conference and attracted 152 female members and 20 male associates, including Thomas Dunhill and W.W. Cobbett, who donated the Cobbett Free Library of Chamber Music to the Society in 1918. By 1913 the Society had also formed an orchestra.

In the 61 years of its existence, the society campaigned vigorously for the rights of women musicians, especially as members of professional symphony orchestras, and awarded prizes to composers and performers, as well as continuing to organize concerts and meetings. In 1972, the year after its Diamond Jubilee had been celebrated at the Queen Elizabeth Hall in London, the organization disbanded. The society's archive, including a collection of press cuttings, is held at the RCM in London.

SOPHIE FULLER

Sociology of music. The study of the role of music within society, its dynamic as a mode of human communication and its position within established social structures. Initially the discipline concerned itself largely with Western art music, but more recently greater attention has been paid to popular music of all forms and the role of music within mass culture.

1. THE DISCIPLINE. Sociology has roots going back in Europe to at least the 18th century. The word, a combination of the Latin *societas* and the Greek *logos*, was first used by Auguste Comte (1789–1857). Sociology was thus conceived as the science of the history and constitution of human societies. In its early stages, it drew in its thinking from the natural sciences: societies, like biological organisms, were seen as systems of related elements in which the whole was greater than the sum of the parts, and the functioning of the parts could be understood only in terms of their contribution to the whole. Thus arose a fundamental and defining characteristic of sociology: the priority of society over the individual. This was in contrast to much previous thinking, in which the social order had been conceived as the consequence of the qualities of individuals and their acts. The sociology of Emile Durkheim (1858–1917) entrenched and developed the basic concepts, stressing the role of processes of socialization, through which growing individuals learnt the norms, values and beliefs of their culture, and that of internalization, through which these norms, values and beliefs became part of the individual: an understanding of these roles should provide the means to ensure the smooth running of society.

However, from its beginnings, sociology has been a creature of social and historical circumstances: there never has been, nor could there be, only one sociology. Some forms, most notably those influenced by Karl Marx (1818–83), have been critical, seeking to uncover the causes of social inequality and stressing conflict rather than consensus as a fundamental dynamic of social process. Marx's work was driven in many respects by 'alienation', the phenomenon through which the products of human social activity appear to take on a life of their own as independent forces which then subordinate individuals. In the light of the grave social inequalities, ills and injustices of 19th-century European society, Marx came to believe that there was a hierarchy of alienation, with economic alienation being fundamental. The outcome was a model of social process in which the development of material productive forces, together with the relations into which people entered to utilize them, came to shape if not determine the character of various cultural institutions: legal, religious and educational systems, together with the state, were seen as forms of ideological alienation through which people were led to believe that the social relations of production into which they were forced in order to earn a living were justified and legitimate. Through such processes, a dominant class was understood to maintain its position of superiority and to subordinate others.

The sociologies of Durkheim and Marx were thus quite different: Durkheim's was consensual and largely ahistorical, concerned with understanding how, at any one time, different institutions contributed mutually to the larger social picture, and with an ultimate agenda of liberal, reformist, social engineering; Marx's was critical, understanding tension and conflict as the basic engines of social process, deeply historical and with a driving vision of the redress of social injustice. These sociologies had two important common characteristics: they assumed the priority of society over the individual, and they were concerned with uncovering and understanding dynamics considered basic to social process. Max Weber's sociology, by contrast, was motivated less by a desire to provide a basic explanation for the dynamics of social process than to understand social behaviour through categories of social action. For Weber (1864–1920), sociology was a comprehensive science of social action. In its terms, he rejected both Durkheim's idea that collective social forces determined human behaviour and Marx's concept of the character of economic processes. Drawing on an examination of the importance of Protestant religions to the development of industrial capitalism, for example, he argued that cultures manifest beliefs and values that cannot be reduced to economic factors. For Weber, 'social structure', 'class' and even 'society' were concepts rather than concrete entities manifesting real causality or agency. To subjugate the complexities of social action to the condition of these concepts was to reify them, or to turn them conceptually into 'things', which they were not; the social order could thus arise and persist only through the actions of real people. However, in asserting this, Weber did not abandon the defining characteristic of sociology: the priority of the social over the individual. He understood people acting socially in four ways: rationally in relation to a goal; rationally in relation to a value; affectively; and in terms of established tradition. Modern societies, according to Weber, were characterized by an increasing dominance of rational action, particularly in relation to a goal.

Marx, Weber and Durkheim have commonly been regarded as the founding fathers of sociology, and their influence has been both broad and pervasive. However, other developments have been as formative. Sociology in the USA, for example, has been less concerned with comprehensive theories and categorizations and has focussed instead more on the pragmatic in the form of demographic studies, studies of social organizations and studies of social inequality and stratification. An important motivation for sociological research in the USA flowed from the practicalities of engendering a sense of

nationhood and common culture in populations from widely different ethnic backgrounds. If European sociology has tended to be more theoretical, philosophical and distanced, even antagonistic, in its relations with the long-established societies from which it emerged, American sociology has on the whole had a more intimate and friendly relationship with its own society. In common with that of Durkheim, American sociology has tended to evidence both a liberal, reformist orientation, as well as a concern with social engineering. A powerful and influential advocate of this form of normative American sociology during the 1950s and 60s was Talcott Parsons.

The forms of sociology so far described have been concerned with major forces and movements: they have represented forms of 'macro-sociology'. A distinctive contribution of American sociology has been the development of symbolic interactionism, a 'micro-sociology' that, in concentrating on face-to-face behaviour and small group dynamics, has shared Weber's concern with individual social action as the wellspring of social order. Symbolic interactionism developed from the work of the American philosopher George Herbert Mead, who distinguished between the 'I' and the 'me', the intensely subjective awareness constituted through the temporal flow of consciousness and the objective awareness of self constituted through the imaginative projection by the individual into how others might see them. A fundamental tenet of symbolic interactionism was that individuals behave in terms of the meanings that society holds for them, in terms of the meanings proffered to the self by the organized community or social group that Mead designated 'the generalized other' (Mead, A1934). This developed largely at the University of Chicago: its practitioners have come to be known as the 'Chicago School'. It has contributed to areas such as deviance (particularly in youth cultures), work and the professions, and the desire to understand and contribute to the American cultural 'melting-pot'. Unlike most forms of macro-sociology, which have preferred statistical and quantitative methods, symbolic interactionism has been the realm of qualitative methods: observation, participant observation, interviews and questionnaires. Its best-known practitioners have included Erving Goffman and Howard S. Becker.

Sociology has been, and is increasingly, characterized by a series of related debates and differences: consensus *v.* conflict, determinism *v.* agency, macro-sociology *v.* micro-sociology, theoreticism *v.* empiricism, reformism *v.* critique, and so on. Further, sociology, like social anthropology, has not been concerned with a specific subset of social activities, such as the political, the economic or the legal. It has in principle been concerned with all social activities and social relations, even if this concern has on the whole been restricted to modern societies. Social anthropology and sociology have had distinct histories, have customarily studied different kinds of societies (one traditional, the other modern) and have used different methodologies, social anthropology investing heavily in fieldwork, sociology more tied to statistics and quantitative methods as well as interviews and observation. However, the increasingly transnational character of capital, the increasing interconnectedness of the world's regions, nations and ethnic communities, and increasing globalization have drawn the interests of the two disciplines closer. While sociology, like social anthropology, has a clear object of study, that of the character, order and consequence of human relatedness, it is as a result a discipline that readily spills over and contributes to others, while at the same time being easily subject to developments within them. It has at the same time contributed to, and been influenced by, developments in interdisciplinary intellectual trajectories such as structuralism and semiology, cultural studies, feminism, post-structuralism, post-modernism, post-colonialism and Foucauldian discourse analysis. Indeed, there was evident towards the end of the 20th century a split between more established forms of sociology, up to and including the work of the Chicago School, and 'post-Chicago' sociology, strongly critical in orientation, and investing heavily in conversations with such intellectual traditions. Towards the end of the 20th century, the discipline was widely seen as entering a state of crisis.

2. General considerations, early history. Two characteristics marked work in the sociology of music from the outset. First, there was no community of scholars dedicated to examining the subject, and thus no continuity of intellectual tradition. The principal considerations of sociology lay elsewhere in understanding phenomena such as social inequality, social cohesion, the logic of mass movements and of small group interaction. Music has always been regarded within sociology as of only marginal interest. Those sociologists who did write about music tended to do so as an extension of their other activities and their work, as a consequence, was understandably characterized by their own theoretical and methodological predilections.

Thus, Weber, the only one of sociology's 'founding fathers' to write on music, developed a sophisticated – and arguably too little known and appreciated – analysis of the finite and closed system of functional tonality as an expression and incorporation of the rational instincts of modern Western societies. This work was published posthumously in 1921 (Weber, B1921). Earlier, in the 19th century, Herbert Spencer and Georg Simmel, in replicating the earlier, scientific model of sociology, had contributed to what has been called 'a somewhat futile debate about the origins of music (initiated by Darwin's view that musical communication preceded speech in humans)' (Martin, B1995; see also Newman, B1905; Etzkorn, B1964).

Much later, Alfred Schütz published an article, 'Making music together: a study in social relationship' (B1951). Nearly 20 years before, he had made an important contribution to sociology by publishing a volume that, in drawing on the philosophical tradition of phenomenology, shared some of the interests of Mead and the Chicago School in the manner in which social awareness was constituted, but in this case from a more theoretical and less empirical basis (A1932). Schütz's article argued that an examination of the micro-social relations of musical performance and listening could reveal much about processes fundamental to human communication. Although Schütz draws here on Weber's notion of goal-orientated action and his definition of a social relation, there is little to connect their writings. Weber is concerned with a particular musical system as an expression and embodiment of rationality, while Schütz is attempting to understand the social constitution of subjective and objective awareness as manifest in the relations of performance and listening.

A second characteristic to mark work in the sociology of music has been an unusual preoccupation with Western art music. This concern might seem warranted, in that it is this form of music, rather than traditional or popular forms of music, which has been argued to be autonomous, and essentially divorced in its aesthetic core from the influence of social processes. Here, in other words, would seem to lie a central problem for sociologists, rather than in the fields of traditional and popular music, forms whose social character, on the face of it, seems all too evident. However, such has not been the case. The preoccupation among many sociologists with art music, rather than with traditional or popular music, has lain in art music's privileged position, not only in society in general, but also in the academy, where there has been an overwhelming tendency – abating during the second half of the 20th century – to view it as the only form of music worthy of scholarly treatment.

Thus, scholars such as Supičić (B1964) have understood a lack of interest in art music on the part of large sections of the population as a problem requiring resolution through the work of sociologists, and the development of appropriate policies in the spheres of education and culture. Norbert Elias's study of Mozart (B1991) clearly 'places him in the context of the general "civilizing process"' (Martin, B1995), while the work of Weber and Schütz are in their different ways based on the art music tradition. More recently, Christopher Ballantine's contributions to the sociology of music in his book *Music and its Social Meanings* (C1984) rest heavily on critical examinations of art music, while even more recently, in the related field of cultural theory, Christopher Norris's collection, *Music and the Politics of Culture* (B1989), is overwhelmingly concerned with the art music tradition as, remarkably, is Edward Said's *Musical Elaborations* (B1991). It is in particular difficult to reconcile Said's pioneering work in post-colonial thought with a book seemingly so indifferent to the music of other groups and cultures.

Nowhere, perhaps, does the privileged position of the art music tradition emerge more strongly than in the work of Theodor W. Adorno. Adorno differs from many other scholars who have written in this area in that music was his primary though not exclusive interest. He is rightly regarded as the father of the sociology of music, and his work has succeeded in giving shape – if perhaps in a somewhat idiosyncratic way – to a rather fragmented field of study. A trained musician with a minor but not insignificant career as a composer, his principal contribution was as a philosopher and scholar of music. On the completion of his academic studies in 1931, he joined the Department of Philosophy at Frankfurt University and became associated with the Institute for Social Research, directed by Max Horkheimer. When the Nazis came to power in 1933, Adorno left Germany, moving first to England, and in 1938 to New York, where he rejoined the Institute of Social Research in exile. He moved to Los Angeles in 1941 and then, in 1949, returned to Frankfurt and became, with Horkheimer, co-director of the re-established Institute. The influence of the 'Frankfurt School', the group of scholars associated with the Institute, began to grow within Germany and, subsequently, throughout circles of critical scholarship within English-speaking intellectual life.

The work and influence of the Frankfurt School can be understood in part as a reaction to the rise and fall of fascism in Germany, and also in part as a reaction to the alienation experienced by its members in the face of American popular culture. *Dialectic of Enlightenment*, by Adorno and Horkheimer (A1947), develops a theory of ideology in terms of which the culture industries are seen to instil in the majority of the population, through the mass production of cultural commodities, patterns of feeling and behaviour commensurate with the needs of the dominant social form of industrial capitalism. Adorno was thus instrumental in developing an influential theory of mass culture that was pervasively Marxist and critical in its orientation, and that coloured his understanding of popular music in particular. Adorno heard popular music – in his experience, apparently the dance-band music of the late 1930s and 40s – as standardized and repetitive, hypnotically so in its alienating effects on the mass of people. However, to Adorno's credit, and unlike many who preceded and followed him, he paid attention to popular as well as to art music (Adorno, B1941, B1967, B1991).

Indeed, it was a fundamental assumption of Adorno's work that no form of music in modern Western cultures could be understood in isolation. His work on popular music thus formed part of a much larger undertaking in which he attempted to grasp the significance of the entire contemporary musical field in its full historical and social dimensions. He was concerned to tease out from the actual materials of musical works their social and historical implications. This approach is most clearly evidenced in *Philosophy of Modern Music*, first published in 1949 (B1949), in which, to put it candidly, he saw in the work of the Second Viennese School a vision of a future, egalitarian and socialist world, and in that of Stravinsky a regression to the bourgeois, subjective individualism implicit in much 19th-century music. There is thus apparent in Adorno's work, as in certain pronouncements of Marx on culture, an idealist strain of thinking according to which works produced in specific social and historical circumstances only realize their full significance in the future with the advent of socialism – a socialism in which the population would have unfettered access to, and enjoyment of, the 'highest' cultural attainments of humankind.

Adorno's work is clearly the product of a troubled and contentious period of history and of a severely dislocated biography. With the benefit of hindsight, many of his principal ideas on music are easy to criticize. However, his legacy can be argued to lie more importantly in the character and scope of the questions he asked than in the specifics of the answers he provided. Adorno understood the holistic character of the entire 'musical-historical field'; that various musical traditions in modern Western societies could be understood only through the character of their mutual relations, which were embedded in extended forms of social organization; and that music needed to be understood not only in terms of its formal characteristics but also in terms of the relation of these to the circumstances of its production and reception. Adorno's work has been much discussed and much debated, and has been highly influential (see Martin, B1995; Middleton, G1990; Paddison, B1982, B1993, B1996; and Witkin, B1998).

A reason for the influence of Adorno's work lies in the way in which, as a sociology of music, it can be positioned away from the more democratizing instincts of the discipline, and closer to the idealist and exclusionary tendencies of historical musicology and music theory. Adorno believed that it was the business of the sociology of music to make aesthetic judgments (for which he has been criticized: Martin, B1995). This belief was part of a critical orientation that had little time for the kind of consensual and positivistic objectivity claimed by many sociologists. Adorno would thus have had little time for publications such as Alphons Silbermann's *The Sociology of Music*, first published in 1957 (B1957). Indeed, Adorno saw such claims – which in the case of music pit the aesthetic and the emotional against social 'facts' – as so much ideology, and reasoned that the aesthetic was necessarily social. But while this critical orientation, grounded in the wider Marxist project, generated the basis for later approaches to music that questioned the social and cultural *status quo* and the role in it of art music, it also allowed for the persistence of established beliefs concerning the relative value of art music and popular music. It was this retention of an aesthetics recognizable as traditional that allowed many musicologists, faced with the cultural and aesthetic challenges of the 1960s and afterwards, to reconcile in an acceptable form two realms regarded previously as incommensurable, the sociological and the musicological.

3. THE 1970S AND AFTER. It can be argued that the cultural and intellectual shifts, first of the 1950s, and then, more importantly, of the 1960s, marked the beginnings of a watershed in the academic study of music to which sociological and social anthropological concerns contributed importantly. In the USA, this watershed first became apparent in the founding, in 1955, of the Society for Ethnomusicology. Ethnomusicology was a discipline developed in its initial formulation in the USA (it has a history that can be traced back to the years before World War II in Europe as well as the USA: *see* ETHNOMUSICOLOGY) from the disciplines of social anthropology and musicology. The advocacy of this society for the inclusion of traditional music in the curricula of university faculties, schools and departments of music was to have far-reaching implications in challenging the exclusivity of art music. Following on from this, the cultural and political challenges of the 1960s, intimately related as they were to various developments in rock, folk and popular music, gave rise to a generation of young people, some of whom, in obtaining academic positions in a range of disciplines in the 1970s, brought with them their cultural, political and musical affiliations. A similar phenomenon had occurred in the USA in the late 1930s and 40s as a younger generation of scholars raised on jazz entered the academy: jazz, slowly but surely, became accepted as a legitimate object of academic study.

The preferred music of the 1970s was rock, and its infusion into the academy had four consequences: the challenge to the exclusivity of art music posed by ethnomusicology was supplemented by an advocacy for the inclusion of popular music in education at both the secondary and post-secondary levels, an advocacy resting heavily on sociological arguments (see for example Vulliamy, I1976, I1977, I1978; Shepherd and Vulliamy, I1983, Vulliamy and Shepherd, I1984); the sociology of music itself became quickly and increasingly concerned with forms of popular music; as a field of study, it in addition began to manifest a recognizable community of scholars and, for a short while, a coherent intellectual trajectory (the foundation, in 1979, of the International Association for the Study of Popular Music was in part an expression of these trends). However, it also began to undergo two transformations: it began to be practised as much by non-sociologists as sociologists and, in the formulation to emerge in the late 1970s, its democratizing and critical instincts spread readily and quickly outside the borders of its established concerns in conversations with ethnomusicology, as well as with interdisciplinary intellectual trajectories such as cultural studies and feminism. Sociology, through its relations with the study of music as in other areas of endeavour, was by the late 1980s evidencing both the porous character of its disciplinary borders and its move towards a perceived state of crisis.

This changed character of the sociology of music became apparent first in Great Britain (for discussion of the forces behind this development, see Chambers, G1985, and Shepherd, G1994). 1977 saw the publication of *Whose Music? a Sociology of Musical Languages*, by Shepherd and others (B1977), and Christopher Small's *Music–Society–Education* (B1977). Both books cast a critical eye on the social constitution and character of art music and argue for the serious study of other music, including popular music, in terms and criteria drawn not from the study of art music but from within the cultural and social realities of the people creating and appreciating music of these other kinds. The work of Shepherd and his colleagues was influenced in particular by Berger and Luckmann's *The Social Construction of Reality* (A1967) which, in drawing in part on the work of Goffman, Mead and Schütz, argued for the manner in which both subjective and objective reality were socially constituted. Together with Kuhn's *The Structure of Scientific Revolutions* (A1962), Berger and Luckmann's work laid the foundations for a more relativistic sociology of knowledge and of culture than had hitherto been practised, as applied to the study of music.

In *The Sociology of Rock* (B1978), Frith argued that the social relevance of popular music in Britain had to be understood as much in terms of generational as class differences. While 'pop' music, chart orientated and acquiescing in the conditions of its own commercial production, was relevant to youth culture and subcultures in the formation of their identities, it was rock music, judged as authentic and as carrying a critique of its own conditions of production, that more directly served the oppositional stances of many youth subcultures. *The Sociology of Rock* (subsequently reworked as *Sound Effects: Youth, Leisure and the Politics of Rock 'n' Roll*, 1983) combined the methods and instincts of symbolic interactionism with the insights of cultural Marxism. This combination, characteristic of the conversation between British sociology and cultural studies at the time, received clearer theoretical formulation in Willis's *Profane Culture* (C1978), which made a case for the structural similarities between early rock and roll and the lived realities of bikeboy cultures on the one hand, and progressive rock and the lived realities of hippie counter-cultures on the other, both in opposition to the conditions of industrial capitalism. Hebdige's highly influential *Subculture: the Meaning of Style* (A1979), although hardly mentioning

music, provided insightful analyses of many youth subcultures in which music had played a constitutive role, including, most importantly, that of British punk in the late 1970s.

This British sociology of music, oppositional in its stance to the social and musical *status quo*, was prefigured in the work of the ethnomusicologist John Blacking, whose *How Musical is Man?* (C1973) undertook a comparative and critical, Marxist-orientated analysis of established attitudes concerning Western art music, based on his experiences of fieldwork with the Venda of South Africa. This approach was echoed in *Tiv Song* (C1979) by the American scholar Charles Keil, whose fieldwork with the Tiv of Nigeria during the Nigerian civil war in 1966 served as a stark counterpoint to the character of Western musical practices. The point of contact between this sociological and anthropological work was that, despite its different disciplinary background, it shared a concern with a Marxist-influenced, critical orientation and, in many cases, the importance of fieldwork and observation in understanding the construction of specific and different musical realities.

From this point the boundaries between sociology, social anthropology, ethnomusicology, cultural studies, feminism and, indeed, some forms of musicology became less and less clear as the major task seemed that of constituting a critical, cultural musicology rather than of working within established disciplinary boundaries. 1987 saw the publication of Leppert and McClary's *Music and Society: the Politics of Composition, Performance and Reception* (B1987), contributed to equally by sociologists, musicologists, cultural theorists and feminists, and the late 1980s and early 90s witnessed the publication of four important volumes concentrating on ethnography, interviews and face-to-face interaction as the route to understanding the social constitution of musical realities. Two were by social anthropologists (Ruth Finnegan's *The Hidden Musicians: Music-Making in an English Town*, D1989, and Sara Cohen's *Rock Culture in Liverpool: Popular Music in the Making*, D1991), one by a sociologist (Deena Weinstein's *Heavy Metal: a Cultural Sociology*, D1991) and the other the result of a study, the 'Music in Daily Life Project', led by an ethnomusicologist (Crafts, Cavicchi and Keil's *My Music*, E1993). Of equal importance was *Feminine Endings: Music, Gender and Sexuality* (C1991), by feminist musicologist Susan McClary, which occasioned heated debate within musicology as to the gendered provenance of music.

The connections between ethnomusicology and the sociology of music discernible in the 1970s and 80s became even closer in the 90s as a growing community of interest on the part of sociologists and social anthropologists in questions of ethnicity, difference, identity and globalization found expression in the study of world popular music – popular music having been an area in which the study of Western music had predominated and in which sociology had been more influential than ethnomusicology. This drew several important contributions to the study of popular music on a world basis and thus to the sociology of music as broadly defined (Frith, H1989; Waterman, G1990; Stokes, G1992; Guilbault and others, G1993; Slobin, G1993; Erlmann, G1996; and Langlois, G1996). This concern with the way in which ethnicity, difference and identity have figured in the social constitution of musical realities has also given rise, in an era of globalization and postmodernity, to an interest in the concept of 'place', being understood more in terms of a community of intersecting musical interests and cross-fertilizations and less in terms of a notion of physically delimited space; there have been important contributions from an ethnic studies scholar (Lipsitz, G1994), an ethnomusicologist (Stokes, G1994) and a geographer (Leyshon, Matless and Revill, G1998).

4. The diffuse and political character of the sociology of music. The history of the sociology of music has thus been diffuse as well as fragmented. A reason for this is the character of sociology as a discipline. One of its central tenets is that all human action and thought is at the least profoundly influenced by the character of the social circumstances in which they occur; some sociologists go further and argue that people, their thoughts and actions, are all socially constituted. This implies that nothing that happens in human life is beyond the realm of the social. In one sense this is true: since 'the social', by definition, refers to human relatedness and its character in any specific situation, and since individuals cannot develop into recognizable and functioning people independently of relations with others, either direct or indirect, there is little in human life that can escape it. Yet this does not mean that people are unilaterally determined by the social. The social is constituted by human relations, and individuals can contribute to these as well as be profoundly affected by them. As the work of Weber and the symbolic interactionists attests, the social may encompass the creative as well as the scripted.

However, this principal tenet of sociology raises a question: why the need for sociology if all thought and action are socially constituted? Cannot various subsets of human activity be covered adequately in the other disciplines of the arts, humanities and social sciences? More specifically, if all human thought and action are socially constituted, then why the need for a sociology or sociologies of music as distinct from other forms of the study of music? The idea that all thought and action are socially constituted has not met with easy acceptance, either during sociology's formative times or more recently. This idea has continued to be resisted within the academic study of music, a tendency which itself requires historical and sociological analysis.

Although they may not use these terms or the modes of thinking that accompany them, in most if not all traditional cultures the endemically social character of music appears self-evident. The activities that have come to be understood in modern Western cultures under the separate linguistic and epistemological category of 'music' form an integral aspect of nearly all other activities in traditional cultures, and are understood linguistically and epistemologically as such (see for example Keil, C1979). A related though far from identical claim might be made with respect to European art music up to the end of the 18th century, at least in the sense that such music was intended for specific social occasions: it had a social function. However, an impulse in European culture to treat music as something apart from other activities, and to understand it as of more relevance to the individual than to the collectivity, can be traced to the late Middle Ages. This impulse received an additional and vital emphasis at the beginning of the 19th century, when European art music came to be thought of as 'autonomous' in relation to other activities, a pursuit that had value in

its own right, and was in this sense 'pure art'. This move has been accompanied by the 'professionalization' of the artist, whether composer or performer, who have seen themselves increasingly as governed by the conventions and norms of their profession, a view symptomatic of a desire to render themselves as free as possible from the constraints of church, state, patrons and the public (Supičić, B1964).

From a sociological point of view, such developments have to be understood as themselves products of social processes, with their underlying logic grounded in the exigencies of wider social forces (Shepherd, C1991). The separation of music (or, more precisely, art music) from society as part of the received wisdoms of modern bourgeois culture created as a consequence a situation ripe for the sociologist's intervention. 'Music' and 'society' were seen as separate entities and the problem became that of understanding how the two might relate. This problem was more attractive to sociologists than to historical musicologists or music theorists, since historical musicology and music theory had developed in part as an aspect of the entrenchment of art music as autonomous. Despite the initial and continuing tendency within the sociology of music to study art music, not because of the particularly intriguing sociological problem it posed but because of its privileged position in society and the academy, the sociology of music from the time of Adorno onwards nonetheless evidenced increasingly critical and democratizing tendencies, which in the final two decades of the 20th century resulted in the mounting of explicit opposition to the desired exclusivity of art music as an object of study and to its presumed autonomous character.

The basis of this opposition resided in a critical, sociological instinct. However, because work resting on this instinct assumed that music, like all human activity, was socially constituted, it was an instinct whose fruits could no longer be contained exclusively within the discipline of sociology as traditionally conceived. There were several other disciplines and intellectual trajectories to which the politics of music and its study were relevant. Therein lies the diffuse character of the sociology of music, in particular during the 1980s and 90s.

This diffusion and its political character have been integrally linked to a critical impulse that results habitually in the 'problematization' of objects of study. This concern to problematize the world has distinguished critical forms of sociology from everyday, commonsense reality, and leads to the sociological enterprise being viewed with suspicion. This arises because, for the majority of people, the world is something to be 'lived within'. While individuals certainly analyse the world and are critical of it, there remains a great deal that most individuals can take for granted as they lead their everyday lives. In contrast, the sociologist examines the relational processes through which people collectively produce and reproduce their worlds; the sociologist's understandings and explanations are themselves part and parcel of these processes. There is in consequence little that the critical sociologist can take at face value. Actions, events, trends, views, opinions and beliefs: these are the stuff of sociological investigation and, in order to investigate them, the critical sociologist must enter a state of constructive scepticism. In many cases, that which seems unremarkable, mundane and unexceptional has lurking within it a question that needs to be framed and formulated if light is to be thrown on the character of its social constitution. Such framing and formulation for sociological investigation renders problematic the unremarkable, the mundane and the unexceptional; in other words, objects of study become 'problematized' through their very constitution by critical sociologists.

If sociology's object of study seems widely general, if its borders seem more porous than most, and if its *modus operandi* involves a suspension of reality – or at least a suspension of everyday reality – then it may seem more like a frame of mind, a way of relating to the world, than an academic discipline as such. This attitudinal as opposed to formal understanding of sociology as a discipline goes some way to explaining the increasingly diffuse character of the sociology of music. That sociology is a discipline is not, however, in question. Yet the frame of mind, the constructive scepticism and the suspension of reality do give a feel for the character of critical sociology as a practice. All these things involve what has perceptively been referred to as 'the sociological imagination' (Mills, A1959).

It is the exercise of this imagination which made such a difference in the academic study of music during the 1980s and 90s. However, more conventional forms of the sociology of music have nonetheless continued to be practised. One form approximates to social history in examining the history of the institutional, political and economic circumstances within which music has been practised. Here the pioneering work of Henry Raynor (H1972, H1976) has been important in the context of European art music, as has the work of Tia DeNora (H1991, H1995). Another approximates to a more synchronic concern with such circumstances, as well as with the effects that music itself can have upon them; important in the realm of concert music have been the contributions of DiMaggio (H1986; with Useem, H1982), and in popular music studies the contributions of Garofalo (H1992), Bennett and others (H1993) and Eyerman and Jamison (H1998).

5. Music as social meaning. The assumption that all human thought and action is socially constituted has given rise to the possibility that the structures and sounds of music are of social significance: that is, the meanings articulated through the structures and sounds of music may themselves be socially constituted. This line of thinking, implicit in the work of Weber and Adorno, became explicit around the 1970s (see Lomax, C1968; Blacking, C1973; Shepherd, C1977, C1982; Small, B1977; Willis, C1978; Keil, C1979; and Ballantine, C1984).

All this work, with some variations, rested on the central idea that the character of social or cultural formations could find expression through musical structures and sounds, if not be in part constituted through them. Ballantine's work drew explicitly on that of Adorno yet brought into question the supposed social importance of avant-garde music and perceived in some forms of popular music resistance rather than subjugation to dominant ideological forces. However, Ballantine retained a strong sense of the importance of aesthetic judgment in distinguishing between 'good' forms of popular music, such as that of Bob Dylan and punk culture, clearly seen as oppositional, and those such as disco, clearly seen as passively reproductive of dominant ideology.

Lomax's work, by contrast, is more evidently Durkheimian and consensual in spirit, seeing in the song styles of traditional cultures a reflection of essential cultural forms as well as a reinforcement of normative behaviour. This strain is apparent also in the work of Blacking, Keil, Willis and Shepherd, as is a more critical, Marxist-orientated element. In the work of Willis and Shepherd, this critical element (as in the work of Ballantine) is located in the presumed oppositional stances of various genres of popular music, a stance resting on a perceived homology between the technical characteristics of the musical genre in question and the character of the subcultural reality involved with the music. Shepherd (C1982), drawing in part on the work of Willis and Hebdige, nuanced this element by identifying in the technical musical characteristics of a wide range of popular music genres the potential for both social reproduction and resistance.

A rather different and distinctive approach to the question of music's social meaning has been developed by Philip Tagg (C1979, C1982, C1987, C1991). Drawing in part on the semiotics of Charles Peirce (Fisch and Kloesel, A1982–99), and in part on the work of Charles Seeger (G1977), Tagg developed the concept of the museme as the equivalent in music to the morpheme in language. As the morpheme in language depends on phonemes, so the museme depends on 'musical phonemes' or 'basic *elements (not units)* of musical expression' (C1979, p.71). Unlike the phoneme as a basic and consistently stable unit of meaning in language, the parameters of musical phonemes as elements of meaning in music may shift according to the conventions of the musical genre in question and the perception of listeners. Having determined the existence of a museme as an agglomeration of musical phonemes through the 'interobjective comparison' of musemes between similar pieces of music, Tagg creates a hypothesis of meaning for the museme: 'affectual meaning in associative verbal form', which is then tested through a process of hypothetical substitution or commutation. Unlike language, in which morphemes occur in a discrete and sequential manner, musemes in music can be heard simultaneously, thus giving rise to subtle and complex relations of both denotative and connotative meaning. For Tagg, the notion of 'museme stacks' which thus derives is understood to correspond to the notion of a 'sound' in popular music (C1982, pp.50–53).

Tagg's method of analysing social meanings in popular music has been used to provide extended and sophisticated analyses of the theme from the television show *Kojak* and of the ABBA hit song *Fernando the Flute* (C1979, C1991). Insightful though these analyses are, the criticism can easily be lodged that the kinds of music Tagg has chosen – music with strong associative visual images or lyrics – favour his mode of analysis (Middleton, G1990, pp.233–6; Shepherd and Wicke, C1997, pp.105–8). The difficulty of applying the technique 'to a pop recording with relatively bland, unimportant, or "musicalized" lyrics' (Middleton) highlights a second weakness, shared by nearly all work on the social meaning of music: a silence or lack of precision on the question of how 'the social' gets into 'the musical'. A related question that is as difficult is that of how musical materials can have such meanings in the first place. There are two possibilities. One is that the meanings are endemic, 'immanent' in some way to the specific character of the musical materials in question. Yet the presumed fixity of relation between meaning and music precludes the possibility for negotiation fundamental to the constitution of any social meaning. The alternative is that the characteristics of the sounds in question are assumed to play little role in the construction of the meanings articulated through them. This has been the position of Lawrence Grossberg, who has seen the sounds of music as little more than a ground of physiological and affective stimulation which can take on meaning only after being interpellated into the world of language (E1984, E1987, E1993).

A basic tension in the sociological analysis of musical meaning has thus lain in the need on the one hand to understand the characteristics of musical sounds as in some way being implicated in meaning construction, and on the other to allow that processes of meaning construction through music are social in character. Martin (B1995) has identified this tension as a basic difficulty in the work of Shepherd, which in turn has highlighted another problem: the tendency to reify both social structures and musical structures in the service of ensuring a smooth analytical fit between the two. It remains to be seen whether the more recent work of Shepherd and Wicke (C1997) is to be judged successful in resolving these tensions and difficulties through its development of an alternative social semiology for music. Drawing on and critiquing extant work in structuralism, semiology and poststructuralism of relevance to the understanding of music, this work, in following that of the French sociologist Pierre Bourdieu (A1972), problematizes the concept of the social structure, as well as the related concepts of 'society' and 'the social'. It also engages in a problematization of the concept of 'music', hitherto taken for granted, suggested by the ways in which many societies and cultures function without this linguistic and epistemological category.

6. Music as social interaction. An interest in music as social interaction at the level of micro-sociology was first revealed in the work of Schütz. It is also evident in Henry Kingsbury's important ethnographic study of the social dynamics of life in a music conservatory (D1988). However, it has been argued for extensively and consistently by Howard Becker, who has drawn a clear distinction between a more theoretical sociology of music, concerned with teasing out music's meanings, and an empirical sociology of music based on an examination of what 'people do together'. Sociologists working in this latter mode, he has observed, 'aren't much interested in "decoding" art works, in finding the work's secret meanings as reflections of society. They prefer to see those works as a result of what a lot of people do together' (D1989, p.282).

Becker's initial contribution to the sociology of music is to be found in his book *Outsiders* (D1963), a seminal contribution to the field of deviance, where two chapters deal with the distinctive way of life and careers of dance musicians. Though the activities of dance musicians are formally within the law, 'their culture and way of life are sufficiently bizarre and unconventional for them to be labeled as outsiders by more conventional members of the community' (p.79). He gained access to the culture of dance band musicians in 1948–9 through an almost perfect form of participant observation. He had played the piano professionally for many years and been active in musical circles in Chicago; like many other musicians,

he took advantage of the G.I. Bill to attend college, so his status as a student did not differentiate him from other musicians. Working in a wide variety of orchestras, he was able to make extensive notes on events in which he was involved and conversations that he heard. Most of the people he observed did not know that he was undertaking a study of musicians.

What Becker's research revealed was that dance musician subculture formed around a tension between the need of these musicians to work as dance musicians and the desire to perform jazz, the only music that in their view was worth playing. There was thus a need to choose between the necessity of engaging in a conventional form of earning a living and the desire to maintain self-respect and integrity by conforming to artistic standards as defined by the subculture. In this situation, the outsiders who listened to these musicians' performances in dance bands were referred to as 'squares', and disliked intensely for their role in representing unwanted interference in the artistic lives the musicians wished to lead. The musicians thus saw themselves as essentially different from other people and felt little compunction about disregarding the norms of 'square' society. They thus behaved in ways regarded as deviant as a means of constructing a strong subcultural identity.

Becker's *Art Worlds* (D1982) – a major contribution to the sociology of art, and thus to the sociology of music – rendered problematic received notions of art, understanding artistic works and other forms of cultural products as a consequence of the whole range of activities, hitherto taken for granted, involved in their production and consumption. For Becker, art worlds are constituted through the social interactions of a wide variety of players, who act according to the opportunities, norms and constraints that typify the art world in question. The products of such worlds are thus shaped through the character of these actions which, in line with the general tenets of symbolic interactionism, may involve innovation as well as conformity. The possibility of understanding the social institutions of art and culture that thus arise as the ordered playing out of such interactions effectively dissolves the distinction between 'the work' and its 'context' that has characterized much work in the sociology of music, a dissolution also seen in the work of Weinstein (D1991). In such work, the production and consumption of cultural commodities is understood as a complex but basically ordered set of mediations, in which the materials of music themselves also play a role.

This emphasis on mediation has been central to the work of the French sociologist Antoine Hennion. The sociology of culture as practised in France during the 1980s was heavily influenced by the tradition of symbolic interactionism and Becker's work in particular. In a series of publications (D1981, D1983, D1986, D1996–7; see also Hennion and Meadel, D1986), Hennion has argued against both an understanding of the art work as an independent object of beauty and a sociological approach that conceptually eradicates the specific and distinctive qualities of individual art works by reducing them to the conditions of reflective social symbols. In stressing the concept of mediation, Hennion understands the specific and distinctive character of cultural commodities as complex emanations of the social interactions that produce them, and the character of the material objects in and through which they are invested. He has thus striven to transcend a distinction customarily drawn in the sociology of culture between the circumstances of production and consumption.

Work on music as social interaction has not only distinguished between its interests and the more theoretical concerns of work on music as social meaning; it has also been critical of the latter in failing to demonstrate through concrete analyses of musical activity how social meanings in music actually arise. Thus, at the beginning of the 1990s, it was observed that 'what is particularly missing in the literature [on popular music] is ethnographic data and micro-sociological detail' (Cohen, D1991, p.6). In the same vein, Becker criticized Shepherd's work for an absence of 'any sense of the process by which [the] connections [between changes in large-scale historical forces and in musical forms] actually come about and any attention to the details of the worlds whose features are given such explanatory weight' (Becker, D1992, p.529).

An important contrast between concepts fundamental to the two traditions has been made in the distinction between 'musical communities' and 'musical scenes'. For Will Straw, a musical community 'may be imagined as a particular population group whose composition is relatively stable . . . and whose involvement in music takes the form of an ongoing exploration of a particular musical idiom said to be organically rooted in that community'. A musical scene, by contrast, is 'that cultural space within which a range of musical practices co-exist, interacting with each other within a variety of processes of differentiation and according to widely varying trajectories of change and cross-fertilization'. The break with the tradition of work established in the 1970s on the social meaning of music – both sociological and ethnomusicological – becomes clear in Straw's observation that cultural theorists like himself 'encountering ethnomusicological studies for the first time after an apprenticeship in the hermeneutics of suspicion may be struck by the prominence within them of notions of cultural totality or claims concerning an expressive unity of musical practices'. The conclusion that the concept of the musical scene is 'the most appropriate term for designating centres of musical activity today' stands as a theoretical prolegomena for much work that followed on the relations between music, ethnicity, difference, identity, place and the forces of globalization and postmodernity (Straw, E1991, pp.369–73). The notion of the scene as it developed through the 1990s owed much to Becker's work on art worlds as well as to Shank's work on music in the city of Austin (E1994).

7. Music as social identity. Towards the end of the 1980s, Frith observed that 'the experience of pop music is an experience of placing: in responding to a song, we are drawn, haphazardly, into affective and emotional alliances with the performers and with the performers' other fans'; he concluded that the 'interplay between personal absorption into music and the sense that it is, nevertheless, something out there, something public, is what makes music so important in the cultural placing of the individual in the social'. What he identified in this article was the way in which popular music in particular serves as a powerful force of identity for the individual within society, as well as a powerful force in forming the collective cultural and group identities from which individuals draw sustenance in constructing a sense of

self. As he concludes, 'the intensity of this relationship between taste and self-definition seems peculiar to popular music – it is "possessable" in ways that other cultural forms are not ... other cultural forms – painting, literature, design – can articulate and show off shared values and pride, but only music can make you *feel* them' (Frith, E1987, pp.139–44).

This interest in music as a basis for the formation of social identities, whether individual or collective, can be traced back to the late 1960s and early 70s in work concerned to understand the relations between popular music and young people's perceived proclivity to challenge the social *status quo* (Denzin, B1970; Hirsch, B1971; Robinson and Hirsch, B1972). Towards the end of the 1970s and going into the 80s, this nascent interest took on a more explicit character in attempts to understand popular music as a force for the construction of gender and sexed identities (Frith and McRobbie, E1978; Shepherd, C1987; see also Taylor and Laing, E1979). However, the major contribution to the understanding of popular music as a force for the construction of identities – beyond the largely ethnomusicological contributions to the study of world popular music and the related questions of ethnicity and place of the mid- to late-1990s – has lain in the work of Frith.

Like Grossberg, Frith has maintained a strong interest in what people say about music as a route to understanding the meanings that music holds for them. In this, he has demonstrated a strong affinity for the work of scholars such as Finnegan and Cohen in distancing himself from the more totalizing claims of studies in popular music emanating from British cultural studies of the 1970s (E1992) and for the work of Becker (D1982) and Bourdieu (A1979) in understanding how meaning and value are attributed to music (E1990). Frith does not understand various genres and styles of popular music as reflecting cultural and group realities so much as serving to constitute them in complex ways. A key to understanding his work is the way in which, as a sociologist, he has refused to take the discourses in terms of which people talk about music at face value but to problematize them in the process of getting beneath their surface to grasp how they serve to constitute meaning and value for people in music. It was Frith who first importantly pointed out that notions of authenticity as attached to certain kinds of rock music in contrast to the perceived commercialism of pop music were in fact ideological in character: 'the myth of authenticity is, indeed, one of rock's own ideological effects' (E1987, p.137). He followed this by arguing that the discourses of autonomy, authenticity and commercialism customarily applied to art music, folk music and popular music respectively were much more slippery than appeared at first sight. In referring to the way in which 'in the 1930s jazz was understood, in bewilderingly quick succession, first in commercial, then in folk, and finally in art terms', he concluded that a 'comparative sociology would reveal far less clear distinctions between these worlds than their discursive values imply' (E1990, p.101). Elements of all these discourses can in fact be discerned in what people have said about all three of these musical traditions.

The character of Frith's insights can be traced in part to the dual careers he has followed, as a professional sociologist on the one hand, and a rock critic on the other, working at various times for the London *Sunday Times* and the *Observer*. The former career tended to be concerned with the development of dispassionate but committed social analyses, the latter with the world of value judgments: they came together in his book *Performing Rites: on the Value of Popular Music* (E1996), a series of essays in which, as an academic critic, he seeks to understand the constitution of personal taste and emotional response in relation to music. Like Adorno, therefore, Frith has put aesthetic judgment at the centre of his sociological agenda. But, unlike Adorno, he does not see the purpose of the sociology of music as the making of such judgments, but rather their understanding. Other important contributions to understanding the role of music in constituting social identities have been made by Walser in respect of heavy metal rock music (E1993), Thornton in respect of the music of dance clubs and raves (E1995) and Grossberg, particularly in respect of the situation of rock music in an era of popular conservatism and postmodern culture (E1992).

8. Music as commercial and industrial process. The practice of music, and not just popular music, has, since at least the middle of the 19th century, become increasingly commercial and industrialized. Forces of mass production and mass consumption have, through different forms of mass dissemination (for example radio, film, television and Mp3 software) and of commodification (for example sheet music, cylinders, records and compact discs), changed the practice of music from something necessarily embodied, local, face-to-face and located in the here-and-now to something as often as not disembodied, global, impersonal and out of time and space. The influential theory of mass culture developed by Adorno and Horkheimer viewed these innovations as having nothing but a deleterious effect on social and cultural life, although their contemporary Walter Benjamin argued a more positive case, seeing in the new technologies of mass production and mass dissemination creative possibilities for artists and cultural workers (A1961; see also Middleton, G1990). The stage was set by Adorno's work in particular for the conventional view that the music industries do little in their constant search for profits but create fantasy worlds of escapism for the vast majority of the population, thus serving the ideological needs of industrial capitalism as a social form and effectively marginalizing any possibility for opposition. This view, in essence, was replicated in the work of Chapple and Garofalo (F1977) and, in a more measured way, Wallis and Malm (F1984).

Much work in the sociology of music since the 1970s has argued for the oppositional potential of many genres of popular music, while still acknowledging the undoubted influence and importance of the music industries in shaping public taste. Further, towards the close of the 20th century, much work in popular music studies – including, notably, work on world popular musics – in choosing to concentrate more on the social interactions giving rise to particular musical scenes and genres than on the development of all-inclusive theories, began to reveal a more complex and nuanced understanding of the character of the tensions and plays that occur between musicians and the music industries than could possibly be illuminated through an assumed stand-off between the forces of reproduction and resistance.

Nonetheless, it is important in these contexts to explore the dynamics of the music industries as a topic *sui generis*,

and in this the work of Richard Peterson has been influential. He has sought to account for the pervasive influence of the music industries on the one hand and the fact that, on the other, the industries cannot actually determine tastes and buying habits: music sales are manifestly unpredictable, which is why, in comparison to other commodities, cultural or otherwise, the music industries put out such a massive variety of product. In 1975 Peterson and Berger developed a cyclical theory, according to which, during periods of oligarchy in the music industries – when a small number of major or transnational record companies command a high share of the market-place – opportunities for artistic innovation and creativity are low, and a high degree of control over public taste is maintained (F1975). By contrast, at the other end of the cycle, when the major companies command a relatively low share of the market-place, independent record companies are seen to play a more significant role, and the argument is that artists have more creative freedom and consumers a wider choice of product.

This work concentrates on the middle part of the 20th century and, during this period in the history of the music industries, when American companies dominated, it is arguable that their analysis possessed considerable explanatory power. Peterson's use of this theory (F1990) to explain the rise of Elvis Presley and rock and role in the mid-1950s in terms of major structural tensions and changes in the music industries from approximately 1948 to 1958 is valuable in countering the customary 'great man' accounts of these events, even if his explanation can, on the other hand, be judged somewhat one-dimensional in discounting wider cultural forces and the undoubted performing ability of Presley himself.

However, as the 20th century progressed, it became more difficult to draw clear distinctions between major record companies and independents. Further, the American command of major, transnational record companies began to decline. As the role of the traditional 'artist and repertoire' men diminished (they acted as talent scouts, who identified, signed and then supervised the recording of potentially successful musicians), and the independent producer became increasingly influential, the major record companies began, on an increasingly international scale, to use independent producers and companies as creative partners who assumed the initial risks in identifying and recording artists. In consequence, the major companies concentrated more and more on marketing and distribution and the management of an increasingly complex web of rights. Thus, although six major record companies accounted for 90% of American sales and between 70 and 80% of world sales by the 1990s (Burnett, F1996), it is questionable whether the 1998 takeover of Polygram by the Canadian alcoholic beverage company Seagrams to form the largest conglomeration of record companies in the world, with an estimated 22% share of the world market (Seagrams already owned Universal), can be understood solely or even largely in terms of Peterson's model. Indeed, this kind of model has been explicitly challenged by Christianen (F1995).

While rationalization is an undoubted feature of such business takeovers, it seems likely that creative decisions are located at a relatively low level in the organization and that the conglomeration is more of a complex of associated record and production companies, many of whom 'contract out' work to associated but essentially independent firms. As early as 1992, it was pointed out that major record companies were becoming noticeably more decentralized and using more open management techniques (Lopes, F1992). Added to this, there has been the development of new information technologies, which, in affecting processes of both production and marketing, have allowed record companies to become both more flexible and more focussed in their operations, moving them away from the old 'mass production' models (Hesmondhalgh, F1996). It was not until the end of the 20th century that an attempt was made to provide the first systematic analysis of the corporate culture and strategies of the major record companies (Negus, F1999) or a truly international history of the music industries (Gronow and Ilpo, F1998).

In these discussions, it is important to recognize the contributions of Becker and Hennion, who have been concerned to render more sophisticated the analysis of music's relations to its conditions of production and consumption. These contributions have worked against the view that music is some kind of 'object', which then endures, for example, the ministrations of the music industries in the manner in which it is produced and consumed. This standard view has been problematized by both Hennion and Frith, who have variously argued that music's specific characteristics are actually constituted through the conditions of their production and consumption, while at the same time not being reducible to them. The central flaw of the traditional view, it has been argued, 'is the suggestion that music is the starting point of the industrial process – the raw material over which everyone fights – when it is, in fact, the final product'. . . 'the "industrialization of music" can't be understood as something that happens *to* music but describes a process in which music itself is made – a process, that is, which fuses (and confuses) capital, technical, and musical arguments' (Frith, F1987, p.54).

JOHN SHEPHERD

Sock cymbals. *See* HI-HAT.

Socor, Matei (*b* Iaşi, 15 Sept 1909; *d* Bucharest, 30 April 1980). Romanian composer. During the final year of his studies with Brăiloiu, Castaldi and Cucu at the Bucharest Conservatory (1927–9), he was part of Brăiloiu's team collecting folksongs in the region of Drăguş-Făgăraş. Socor also studied composition with Karg-Elert and Grabner, and conducting at the Leipzig Conservatory (1930–33). On his return he conducted sporadically. A supporter of the Communist Party, outlawed before the Second World War, Socor was arrested and convicted then freed on the intercession of his colleagues at the Society of Romanian Composers, headed by Enescu and Jora. After the installation of the communist regime he became president of the Radio Commission (1945–52) and the Composers' Union (1949–53), appearing more frequently as a conductor before concentrating on composition in 1954. Socor's works from the 1930s and early 40s identify him as an avant-garde composer; in the late 40s he began to compose works of a political flavour which enjoyed some success despite lacking depth or any outstanding qualities. As he had written the official resolution in 1952 that music should serve the construction of socialism, Socor had to set an example by composing in an ideologically unassailable style. His later works were an attempt to extricate himself from obscurity. Further information is given in G. Constantinescu: *Matei Socor* (Bucharest, 1983).

WORKS
(*selective list*)

Op: Conul Leonida faţă cu reacţiunea [Mr Leonida in the Presence of Reaction] (after I.L. Caragiale), 1976, Bucharest, Română, 28 Dec 1978

Deşliu), 1953; Să fii partidului oştean [Fight for the Party] (Beniuc), 1958; Stejarul din Borzeşti [The Borzeşti Oak] (orat, Deşliu), 1961 [inc.]

Inst: Pf Sonata, 1932; Chbr Conc., 7 insts, 1937; Conc., orch, 1939; Passacaglia, orch, 1944; Căluşul şi Sârba, orch, 1952; Cântarea României, orch rhapsody, 1954; Vn Conc., 1955; Trei şalviri [Three Thieves], spkr, ww sextet, 1968

OCTAVIAN COSMA

Soderini, Agostino (*fl* Milan, 1598–1608). Italian composer. In 1598 he was organist of the congregation of Lateran nuns at S Maria della Passione, Milan, and in 1608 he held the same position at S Maria Rossa, Milan. He was held in high esteem as a composer, particularly of instrumental music, and as such was cited by Borsieri among the musicians of 'great repute'. He belonged to the circle around the nobleman and amateur musician Luca Francesco Brivio, who, like his brothers Ambrogio and Giovanni Battista, gave concerts in his palace. There Soderini's *Canzoni a 4 e 8 voci libro primo* op.2 (Milan,

1608[20]; ed. in IIM, xix, 1992) were first performed, even before they had been printed, as may be gathered from the dedication. The instrumental canzonas are each dedicated to a family of the Milanese nobility in accordance with the Lombard custom of the time; one, *La Brasca*, is by Giovanni Paolo Olegio, a pupil of Soderini's. Three of the canzoni for eight voices are really 'motetti e canzoni'; of the two ensembles used, the first consists of instruments and the second of voices. The last two motets in eight parts, however, are for voices only. In the *Sacrarum cantionum 8 et 9 vocibus liber primus* (Milan, 1598) Soderini alternated the parts for voices with those for instruments.

MARIANGELA DONÀ

Søderlind, Ragnar (*b* Oslo, 27 June 1945). Norwegian composer. He studied with Conrad Baden in Oslo and at the Sibelius Academy in Helsinki with Bergman and Kokkonen. He also holds a degree in conducting from the Norwegian State Academy of Music. He is now associate professor at the Academy. Initially he composed orchestral works which were strongly influenced by late Romanticism and early 20th-century European music. His style has become more advanced over the years, yet throughout he has been a master of orchestration and has maintained his personal stamp on sound. His output shows two prevailing directions. The first is his dramatic works – incidental music, ballets and operas. The second is his orchestral music, in which his narrative inclination is also evident. Many of his works are connected to texts (more often poetry than prose), and they can be seen as programmatic without resorting to the more obvious techniques. His direct expression and occasionally political statements as well as his music's exuberance and fresh sound have won him a large audience, and he has received a number of commissions from leading orchestras and institutions. He has also arranged much music, including several works by Grieg, and he has recently written an opera that includes Grieg's music for *Olav Tryggvason*.

WORKS

Dramatic: Esther and the Blue Serenity (op, 1, S. Obstfelder), op.19, 1972; Hedda Gabler (sym. drama, choreog., after H. Ibsen), op.26, 1978; Kristin Lavransdatter (ballet, after trilogy by S. Undset), op.32, 1982; Victoria (ballet, after novel by K. Hamsun), op.45, 1985–6; Rose og ravn [Rose and Raven] (op, K.J. Moe), op.47, 1989

Orch: Rokkomborre, sym. poem, op.8, 1967; Polaris – visioni sinfoniche, op.11, 1967–9; Trauermusik, op.12, 1968; International Rhapsody, op.17a, 1972; 2 Pieces from the Desert, ob, small orch/pf, op.21b, 1973, rev. 1975; Sinfonia I per orchestra grande con soprano solo, op.23, 1975, rev. 1979; Amor et labor, sym. poem, op.27, 1979; Sinfonietta, brass, perc, op.31a, 1981, rev. 1988; Sym. no.2 'Sinfonia breve', op.30, 1981; Garland and Cross (sym. poem, after Undset: *Kristin Lavransdatter*), op.64, 1982–95; Olav's Hymn (Å.-M. Nesse), op.36, solo v, choir, orch, 1983; Septemberlys [September Light] (Nesse), op.37, solo v, choir, orch, 1983; Eystradalir, nostalgic rhapsody, op.43, 1984; Sym. no.3 'Les illuminations symphoniques', op.40, 1984; Av hav er du komen (Nesse), nars, orch, 1985; Vn Conc., op.46, 1986–7; Sinfonia no.4, op.50, 1990, rev. 1995; Victoria, ballet suite, op.45b, 1990; The Hour of Love, tone poem, op.45d, 1990 [from the ballet Victoria]; Vc Conc., op.54, 1991–2; Angst (sym. poem, after works by E. Munch), op.68, 1995; Sinfonia no.5 'Kvitsunn', op.60, 1995; Pf Conc. 'Colosso' (F. Alnaes: *Koloss*), op.70, 1996–7

Chbr: Dithyrambe, bn, hp, 1967; La poema battutta, op.20, perc, 1973; Str Qt no.1, op.22, 1975; Quintetto per ottoni, op.31, 1982; Tranströmer-svit (T. Tranströmer), op.52, v, various ens, 1991; Pf Trio, op.58, 1994; Str Qt no.2, op.71, 1997

Vocal: Stabat mater, op.48, choir, insts, 1989; Røgden Sjø [Lake Røgden] (cant., Å. Holth), op.72a, S, choir, orch, 1997; many songs and choral works

ARVID O. VOLLSNES

Söderman, (Johan) August (*b* Stockholm, 17 July 1832; *d* Stockholm, 10 Feb 1876). Swedish composer. He was the son of Johan Wilhelm Söderman (1808–58), the director of music at theatres in Stockholm and a prolific composer and arranger of incidental music for stage plays. Söderman was a pupil at the Swedish Royal Academy of Music from 1847 to 1850, studying harmony with Erik Drake and the piano with Jan van Boom. He also taught himself to play the violin and the oboe, and was soon playing in orchestras. In 1851 he was engaged by the actor-manager Stjernström as director of music for his theatre troupe, and from this time writing and arranging theatre music became his lifelong occupation. During tours with Stjernström's company in Finland (1852–3) he produced his first notable compositions, the fairy operetta *Urdur* and incidental music to *Regina von Emmeritz*, both of which were successfully performed in Helsinki.

In 1853 the players returned to Sweden, and eventually settled at the Mindre Teater in Stockholm, although they continued to tour outside the capital as well. Wishing to enhance with further study his practical experience as a composer, Söderman obtained leave of absence for a year and travelled to Leipzig (1856–7), where he took private lessons in counterpoint with E.F. Richter and seized every opportunity of hearing music by different composers. During this time he wrote the songs in the collection *Heidenröslein*, strongly influenced by Schumann, completed the ballads *Tannhäuser* and *Die verlassene Mühle*, and sketched many works which he completed later.

On his return from Leipzig, Söderman rejoined the Stjernström company, but in 1860 was appointed chorus master and deputy conductor to Ludvig Norman at the Royal Opera, Stockholm. He held this post until shortly before his death. In 1869–70, having been awarded a Jenny Lind grant, he made a new and extensive journey, including visits to Copenhagen, Dresden, Berlin, Prague and Vienna, and made contacts with many foreign musicians.

Söderman's works occupy a position of central importance in Swedish music, and exerted a great influence on later generations of Swedish composers. Not only his personal use of stylistic elements from folk music (for instance, in his realistic portrayal of peasant life) but also many other traits of his music were for a long time valued for their authentic Swedish qualities. His instrumental works are few, and unequal in quality. His scoring, however, shows an assured feeling for orchestral colouring. In spite of his great admiration for works of Liszt and Wagner, which can be observed in his last ballad, *Der schwarze Ritter*, and in his mass, he did not develop major continuous forms but came into his own in epigrammatically concentrated works, often with dance-like rhythms and a clearcut strophic form. In this, as in certain melodic

and harmonic details, he has much in common with Grieg. Especially in his vocal works, Söderman shows a highly developed feeling for pregnant psychological and dramatic expression.

WORKS
(*selective list*)

all first performances and publications in Stockholm unless otherwise indicated

MSS of non-theatrical works without publication dates in S-Skma

STAGE
incidental music unless otherwise indicated

Erik XIV (J. Börjesson), Turku, 15 March 1852
Urdur, eller Neckens dotter (operetta, J. Granberg), Helsinki, 19 Sept 1852
Regina von Emmeritz (Z. Topelius), Helsinki, 13 April 1853
Zigenarhöfdingen Zohrab [Zohrab, the Gipsy Chief] (operetta), Gothenburg, 19 April 1854
Hin Ondes första lärospån (operetta, F. Arlberg, after E. Scribe: Le diable à l'école), Stockholm, Mindre, 29 June 1856
Några timmar på Kronoborgs slott [A Few Hours in Kronoborg Castle] (O. Fredrik), 27 Sept 1858; ov. later used for Orleanska jungfrun (after F. von Schiller), 1867, and pubd as Svenskt festspel, vs (1858), fs (1867)
Folkungalek (L. Josephson), Stockholm, Kungliga, 20 Sept 1864
Bröllopet på Ulfåsa [Wedding in Ulfåsa] (F. Hedberg), Stockholm, Kungliga, 1 April 1865
Marsk Stigs döttrar [Marshal Stig's Daughters] (Josephson), Stockholm, Kungliga, 19 March 1866
Peer Gynt (H. Ibsen), 1870, partly lost, never perf. with the play
Richard III (Hedberg, after W. Shakespeare), Stockholm, Kungliga, 17 Dec 1872
Music for *c*70 other works

CHORAL

Die Wallfahrt nach Kevlaar (H. Heine), Bar, 4vv, orch, 1859–66 (1867)
Ett bondbröllop [A Peasant Wedding] (R. Gustavsson), male vv (1868)
Signelills färd [Signelill's Journey] (L. Josephson), solo vv, 4vv, orch, 1869; vs, ed. V. Svedbom (1892)
Ur idyll och epigram (J.L. Runeberg), 4vv (1869)
Hjertesorg (K. Wetterhoff), solo vv, 4vv, orch, 1870 (1883)
Trenne sånger (Quanten, Z. Topelius), male vv (1871)
Andeliga sånger [Spiritual Songs], 4vv, org (1872)
Tre visor i folkton, male vv (1872)
Katolsk Messa [Missa solemnis], solo vv, 4vv, orch, 1875, vs (1881)

BALLADS AND SONGS

Tannhäuser (E. Geibel), Bar, orch, ?1856–7 (1860)
Die verlassene Mühle/Qvarnruinen [The Abandoned Mill] (A.F.A. Schnetzler), Bar, orch, 1857 (1867)
Arme Peter (H. Heine), 1v, orch, 1857–67 (1870)
Kung Heimer och Aslög [King Heimer and Aslög] (F. Hedberg), 1v, orch, *c*1870 (1883)
Der schwarze Ritter (L. Uhland), B, orch, 1874; ed. J.P. Carstensen and E. Ellberg (1886)

*c*65 songs, some pubd in collections, incl. Tre ballader, 1855–69 (1871); Heidenröslein (Heine), 1856–7 (1859); Värvningen (after Reder: *Der Landsknecht*), 1859 (1860); Serviska folksånger (J.L. Runeberg) (1871); Digte og sange, i–ii (B. Bjørnson) (1871–3); Tre tyska visor i folkton (1875); others in MS and pubd singly; some ed. A. Helmer, *August Söderman: Sånger med piano* (Stockholm, 1981)

ORCHESTRAL AND OTHER WORKS

Concert ov., F, ?1855–68, pf score (Stockholm, 1881)
Scherzo, E, 1856
Nordiska folkvisor och folkdansar (1870)
2 festival marches, 1869, 1873; 2 funeral marches, 1871, 1872; festival polonaise, 1873
Qt, e, pf, vn, va, vc, 1856
Fantasier à la Almqvist, pf, 1868 (1885)

KATHLEEN DALE/AXEL HELMER

Söderström(-Olow), (Anna) Elisabeth (*b* Stockholm, 7 May 1927). Swedish soprano. Trained at the Royal Academy of Music and Opera School in Stockholm, she made her début as Mozart's Bastienne in the Drottningholm Court Theatre in May 1947. She joined, and remained a member of, the Swedish Royal Opera; she also pursued an international career in a wide variety of roles ranging from Nero in Monteverdi's *L'incoronazione di Poppea*, through Mozart's Countess Almaviva and Susanna, Tchaikovsky's Tatyana, Strauss's Octavian, Christine and Marschallin, Debussy's Mélisande, Britten's Ellen Orford and Governess, to Janáček's Jenůfa, Kát'a Kabanová and Emilia Marty. Her recordings of these Janáček roles with Mackerras remain among her finest achievements. She made her Glyndebourne début in 1957, as the Composer in Strauss's *Ariadne auf Naxos*, and remained a favourite there (singing Strauss, Mozart, Beethoven and Tchaikovsky). Her Metropolitan début was as Susanna (1959) and she first appeared at Covent Garden with the Royal Swedish Opera as Daisy Doody in Blomdahl's *Aniara* (1960); her Australian début was as Emilia Marty (1982, Adelaide). Söderström combined a quick musical intelligence and a vivid and engaging stage personality with a protean voice not especially powerful but well able to express both soubrette mirth and tragic passion. Among her many contemporary roles have been Elisabeth Zimmer in Henze's *Elegy for Young Lovers* (1961), Clitoria in the première of Ligeti's *Le Grand Macabre* (1978, Stockholm) and Juliana Bordereau in the première of Argento's *The Aspern Papers* at Dallas in 1988. In 1999 she came out of retirement to sing the Countess in *The Queen of Spades* at the Metropolitan Opera. She was also a noted concert singer and recitalist, and recorded a memorable series of Rachmaninoff songs with Ashkenazy. From 1993 to 1996 Söderström was artistic director of the Drottningholm Court Theatre. She has published *I min tonart* (Stockholm, 1978; Eng. trans., 1979; as *In my own Key*).

ANDREW PORTER/R

Sodi, Carmen Sordo. *See* SORDO SODI, CARMEN.

Sodi [Sody], **Charles** [Carlo] (*b* Rome, *c*1715; *d* Paris, Sept 1788). Italian composer, active in France. On arriving in Paris around 1749, he obtained a position as violinist in the orchestra of the Comédie-Italienne, performed his mandolin concerto at the Concert Spirituel (6 April 1750) and became music master to Mme Favart. He provided the music for several ballet-pantomimes choreographed by his younger brother Pietro, but enjoyed greater success with his parodies of Italian intermezzos presented mainly at the Comédie-Italienne during the 1750s. He was granted a pension by the Comédie in 1765, thereafter teaching the mandolin but struggling against poverty and failing sight.

Baïocco et Serpilla (1753) was one of the first in a series of works by various librettists and composers parodying the popular repertory of the Bouffon troupe, which performed in Paris between 1752 and 1754. Parody techniques – the borrowing of text or music, or both –

Elisabeth Söderström as Countess Madeleine in Richard Strauss's 'Capriccio', Glyndebourne, 1976

were important in preparing the ground for a more sophisticated type of *opéra comique* in which original librettos were set to original music. The text of *Baïocco* was adapted by C.-S. Favart from *Il giocatore* (performed by the Bouffons in August 1752), and this was set by Sodi as recitative, *ariettes* and dialogue duets. Contemporary reviews of M.-J.-B. Favart's performance and other documents suggest that, during 1753, two versions of the *Baïocco* parody were staged at the Comédie-Italienne: the older (by Biancolleli and Romagnesi, first inspired by performances of Orlandini's original at the Opéra in June 1729) was revived in May but was replaced by Sodi's newer and more vibrant version in either August or September. Sodi composed further parodies, but by the end of the 1750s original composition had superseded parody techniques as the basis for *opéra comique*. He subsequently set a new libretto by Sedaine, *Les troqueurs dupés*, in 1760, but this was a failure.

Pietro Sodi (*b* Rome, *c*1716; *d* Charleston, *c*1775), younger brother of Charles, was a dancer and choreographer active throughout Europe. During the 1740s he partnered Marie Camargo and Mlle Lany at the Paris Opéra. He later moved to the Comédie-Française as *maître de ballet* and also worked at the Comédie-Italienne's *école de danse*. The ballet-pantomimes he choreographed during the 1740s and 1750s were staged at all the major Parisian theatrical venues, including the royal court. From 1756 to 1757 he worked as a *maître de ballet* at the Kärntnertortheater in Vienna, where he met Hilverding and Angiolini. Well known for his spectacular leaps and turns in the then fashionable grotesque style, Sodi's highly pantomimic comic dances may have had some influence on the early *ballet d'action*. He worked for a short period at the Teatro San Samuele, Venice (1757–8) then returned to Paris before his departure to America in 1774.

WORKS

STAGE

all first performed in Paris

Baïocco et Serpilla (opéra bouffon italien, 3, C.-S. Favart, after the Bouffons: *Il giocatore*), Comédie-Italienne (Bourgogne), ? 6 Sept 1753 (Paris, n.d.)

Le charlatan (cmda, 2, J. Lacombe, after the Bouffons: *Tracollo medico ignorante*), Comédie-Italienne (Bourgogne), 17 Nov 1756, excerpts in J. Dubreuil: *Dictionnaire lyrique portatif* (Paris, 1764)

La femme orgueilleuse (parodie, 2, A.-F. Quétant, after the Bouffons: *La donna superba*), Comédie-Italienne (Bourgogne), 8 Oct 1759, excerpts in Dubreuil

Les troqueurs dupés (cmda, 1, M.-J. Sedaine), OC (Foire St-Germain), 6 March 1760

Ballet-pantomimes (choreographed by P. Sodi): Les mandolines, Opéra, 1744; Les vendangeurs (La vendange), Comédie-Italienne (Bourgogne), 26 Feb 1751; Le jardin des fées, OC (Foire St-Laurent), 13 July 1752; Les batteurs en grange, OC (Foire St-Laurent), 12 Aug 1752; Les amusements champêtres, Comédie-Française, 1753; Le bal, Comédie-Italienne (Bourgogne), 14 Feb 1754; La cocagne, ou Les jours gras de Naples, Comédie-Italienne (Bourgogne), 25 Feb 1759; L'amour vainqueur de la

magie, Comédie-Italienne (Bourgogne), 8 March 1759; Le bouquet, Opéra; La noce, Comédie-Française

SACRED

La passione di Gèsu Cristo, 1733; Gioas re di Giuda, 1739; Betulia liberata, 1740: all listed in *SartoriL*

INSTRUMENTAL

Mandolin Concerto, perf. 6 April 1750
6 airs, acc. 2 vn, va, b (Paris, 1780)

ELISABETH COOK

Sodi, Vincenzio (*fl* Florence, 1778–92). Italian maker of harpsichords and pianos. His extant harpsichords, dating from 1778 (Royal Albert Memorial Museum, Exeter) to 1798, are thick-cased, but without the false inner-outer style of some similar Italian instruments. Two, made in 1778–98 (Beurmann collection, Hamburg) and 1780 (America's Shrine to Music Museum, Vermillion, South Dakota) have double-tongued jacks with hard and soft leather plectra in the manner of the CEMBALO ANGELICO. Sodi's activity as a piano maker is known from a description of an instrument published in 1786 (quoted in Rice, 1993) and from two grand pianos dated 1786 and 1789 (both in private collections, USA). While preserving features of his normal harpsichord construction, Sodi modelled this piano, in the shape of its case and type of action, after those of J.A. Stein. South German influence is also evident in Sodi's harpsichords, which frequently have S-shaped bentsides and slanted cheeks. Two harpsichords dated 1791–2 (Tagliavini collection, Bologna) and 1792 (formerly at the Musikinstrumenten-Museum, University of Leipzig), bearing Sodi's production numbers 93 and 95, are thought to be the latest historical Italian harpsichords to have survived into modern times.

JOHN KOSTER

SODRAC [Société de Droits de Reproduction des Auteurs et Compositeurs]. *See* COPYRIGHT, §IV, 2.

Sodré, Joanídia (Núñez) (*b* Porto Alegre, Rio Grandé do Sul, 22 Dec 1903; *d* Rio de Janeiro, 7 Sept 1975). Brazilian composer. She studied the piano from an early age with Alberto Nepomuceno and later went to the Instituto Nacional de Música (later called the Escola Nacional de Música) in Rio de Janeiro, where her teachers included João Nunes for piano and Francisco Braga for composition. She was appointed professor of harmony and form at the Instituto in 1925. For her opera *Casa forte* (with a libretto by Goulart de Andrade) she was awarded a trip to Germany in 1927; she stayed three years, studying composition with Paul Juon and conducting with Ignatz Waghalter in Berlin. After her return to Brazil she founded and conducted the Coral Feminino (1930) and the Orquestra Sinfônica Infantil (1939), later called the Orquestra da Juventude; she also conducted some of the most important symphonic orchestras in the country. She was director of the Escola Nacional de Música of the University of Brazil, 1946–67. Her compositions include, for stage, *A cheia do Paraíba* (1927), and, for chorus and orchestra, *Girassol* and *Incêndio em Roma* (on a poem by Olavo Bilac). She also wrote works on music theory.

IRATI ANTONIO

Soegijo, Paul Gutama (*b* Yogyakarta, Java, 29 Jan 1934). Indonesian composer, active in Germany. Born into a family of artists, he discovered his musical talent at the age of 19 and enrolled himself in the Indonesian College of Music to study the viola. At the Amsterdam Conservatory (1957–62), where a scholarship from the Catholic Mission enabled him to continue his viola studies, Soegijo deepened his understanding of the philosophy, theory and history of music. In 1964 he went to West Berlin and studied composition with Blacher. The critical success in Germany of his *Musik für Vier Posaunen und Schlaginstrumente* (1967) proved a spur to his compositional career. Played frequently in Europe, his works began to be published by Bote & Bock in 1968. In the early 1970s Soegijo began to incorporate elements of traditional Indonesian music in his compositions. He set up Banjar Gruppe Berlin in 1973 specifically to play his own mainly theatrical works. The group's instrumentation, indebted to musical traditions from all over the world, led him towards an ultimately dissatisfying exotic style. When the group bought a set of *pelog* gamelan instruments in 1977, Soeijo travelled regularly to Indonesia for eight years to study Javanese and Balinese gamelan, and trained the members of the group in gamelan performance. Though his subsequent compositions for the group were grounded in the technique and aesthetics of gamelan music, his strength in developing compositional ideas owed much to his experience of Western idioms. These works combining gamelan with Western classical influences became known as 'Musik der Neue Ursprünglichkeit'; an example is *Budal* (1996). Resident in Berlin, Soegijo has begun composing again for Western instruments and has travelled to Indonesia to perform his works.

FRANKI RADEN

Soest, Johannes (Steinwert) von [Susato, Johannes de] (*b* Unna, nr Soest, 1448; *d* Frankfurt, 2 May 1506). German composer and writer on music. He described his career in a rhymed autobiography (ed. in Fichard): as a boy he sang at St Patroklus in Soest, he was briefly kidnapped for his voice by a juggler, and then he joined the ducal chapel in Cleves. He studied in Bruges with two English musicians and subsequently held posts in Hardenbergh (Overijssel), Maastricht and Kassel. In 1472 Soest went to Heidelberg; on 22 November the Elector Palatine Philipp appointed him *Sängermeister* for life and established a choir for him to direct (see Žak). In 1476 Soest matriculated at the University of Heidelberg; he studied there and in Pavia and had become a physician by 1490. In 1495 he became municipal doctor in Worms and later held similar positions in Oppenheim and Frankfurt. He was also active as a poet.

Soest's compositions (some for nine or 12 voices, according to the humanist Rudolph Agricola) are lost, as are a treatise *De musica subalterna* and any other writings

on music. Nevertheless, his significance is clear: he founded the musical establishment at the electoral court in Heidelberg, which at the time was among the most important in Germany; his pupils included Sebastian Virdung and probably Arnolt Schlick.

STEPHEN KEYL

Sofia [Sofiya]. Capital city of Bulgaria. Founded by the Thracian tribe of the Serds and situated on the main route from Constantinople to central Europe, Sofia played an important part in the development of Bulgarian culture. Folk music, the only secular music found in medieval Sofia (Sredets), was directly influenced by the folklore of central western Bulgaria: dances in characteristic metres, songs from the Graovo region and examples of ancient two-part singing have all survived, as has evidence of many ancient folk customs (*see* BULGARIA, §II). Sofia was also an important centre of traditional church singing in the Middle Ages, being near the Rila monastery and the churches and monasteries of Boyana, Zemen, Berende, Poganovo and Kurilo. Despite the unfavourable conditions of foreign rule the ecclesiastical traditions in Sofia flourished during the 16th century.

As in Bulgaria as a whole, the Russian liberation of the country in 1878 heralded new developments in Sofia's musical life which at that time centred on the Vissheto Uchilishte (Higher School) and the Slavyanska Beseda, a cultural and educational society. The first Bulgarian brass bands were formed in the Guards Regiment and, supplemented by strings, began to perform symphonic works in 1885. The Stolichnata Dramatichna Operna Trupa (Sofia Dramatic Opera Company), which staged excerpts from Classical operas, was opened in 1891, paving the way for the Bulgarska Operna Druzhba (Bulgarian Opera Society), founded in 1908 largely on the initiative of Konstantin Mikhaylov-Stoyan (1851–1914); in 1921 this became the Sofiyska Narodna Opera (Sofia National Opera). In 1991 it was renamed Sofiyska Opera.

In 1926 a department of folk music was established at the Ethnographic Museum, and under the guidance of Vasil Stoin (1880–1938) many thousands of folksongs were collected. The Balgarska Darzhavna Muzikalna Akademiya (Bulgarian State Music Academy) was founded in 1921, and the Sayuz na Narodnite Khorove (Union of National Choirs) in 1927; this brought together many choirs, among which were the famous Gusla, Kaval and Rodina Choirs, the Zheleznicharskiya Khor (Railwaymen's Choir) and the Khor na Sofiyskite Uchitelki (Choir of Sofia Schoolmistresses). The first society of Bulgarian composers was founded in Sofia in 1933; it was known initially as Savremenna Muzika (Contemporary Music), but was reorganized in 1946 as the Sayuz na Balgarskite Kompozitori (Union of Bulgarian Composers).

After the socialist revolution in 1944 several new musical institutions were created: the Khor 'Bodra Smyana' pri Dvorets na Pionerite (Pioneer 'Bodra Smyana' Choir; 1946), the Darzhaven Muzikalen Teatar Stefan Makedonski (Stefan Makedonski State Musical Theatre; 1947), the Bulgarian Radio and Television SO (1949), the Pioneer Philharmonia (1953) and the Sofiyski Solisti (Sofia Soloists) chamber orchestra (1962). A music department was organized at the Nauka i Izkustvo publishing house (1949), and an institute of music at the Balgarska Akademiya na Naukite (Bulgarian Academy of Sciences; 1948). The Sayuz na Muzikalnite Deytsi (Union of Musical Activities) was founded in 1965.

In the late 1970s and the 1980s musical life in Sofia flourished. The annual festival Nova Balgarska Muzika (New Bulgarian Music) was organized by the Union of Bulgarian Composers, along with the festival Mladata Balgarska Muzika (Young Bulgarian Music), the New Year Music Festival, the international festival Sofiyski Muzikalni Sedmitsi (Sofia Weeks of Music), the Mezhdunaroden Konkurs za Mladi Operni Pevtsi (International Competition for Young Opera Singers) and other international symposia. By the end of the 1970s Zala Balgariya (Bulgaria Hall) had acquired an organ, replacing one destroyed during the war. A children's choir, a choral ensemble, a symphony orchestra and folk ensembles were founded by Bulgarian National Radio and Television and many chamber groups emerged, notably the Trio za Savremenna Muzika (Contemporary Music Trio). In the 1990s a Bulgarian section of the association for new music, ISCM, was founded, and in 1993 the first annual international contemporary music festival, Muzika Nova (New Music), took place.

The choirs of Sofia's two major churches, St Sofiya and St Aleksandar Nevski, not only did duty at services, but also performed ecclesiastical repertory which was banned outside church until the fall of the totalitarian regime in 1989. With the new political situation after 1989, state institutions no longer had the means to support Sofia's many musical organizations, most of which tried to find ways to support themselves; the sponsorship of foundations ensured the survival of a number of festivals. Bulgarian National Radio and Television reduced their staff, and the only state recording company, Balkanton, collapsed. By the mid-1990s, however, several new private recording companies had been set up, and the city's musical life was showing signs of revival.

Sof-pasuq. Punctuation sign in Hebrew EKPHONETIC NOTATION. *See also* JEWISH MUSIC, §III, 2(ii).

Sofronitsky, Vladimir (Vladimirovich) (*b* St Petersburg, 25 April/8 May 1901; *d* Moscow, 29 Aug 1961). Russian pianist and teacher. His father was a physicist, his mother the great-niece of the portrait painter Vladimir Borovikovsky. In 1903 the family moved to Warsaw, where Sofronitsky studied with A. Lebedeva-Getsevich, a pupil of Nikolay Rubinstein, and with Aleksandr Michałovsky. In 1916 he joined Leonid Nikolayev's class at the St Petersburg Conservatory alongside Dmitry Shostakovich and Mariya Yudina, also studying composition with Maksimilian Shteynberg. He graduated in 1921 and

immediately began his concert career in Russia. From 1928 he performed in Poland and Paris, where he stayed for two years before returning to Leningrad. He was a professor at the Leningrad Conservatory from 1936 and at the Moscow Conservatory from 1942. He married Skryabin's daughter and became the Soviet Union's foremost interpreter of the composer's solo piano music, combining fiery abandon with icy control; his later concerts were given almost exclusively at Moscow's Skryabin Museum. His performances of Schumann were also renowned for their spontaneity and daring flights of fancy, and his influence on succeeding generations of Russian pianists was colossal. In his later years Sofronitsky became addicted to drink and drugs, and he did not live to benefit from the loosening of official restrictions to travel to the West in the Khrushchyov years. His recordings nevertheless document one of the most intense and individual pianistic personalities of the 20th century.

DAVID FANNING

Soft Machine. English rock group. Formed in 1966 by members of another Canterbury-based group, the Wilde Flowers, Soft Machine was the original Canterbury progressive rock group and influenced Gong, Egg, Caravan and National Health, among others. The band was also among the most prominent in London's psychedelic scene (1966–8); along with Pink Floyd and Tomorrow, Soft Machine played frequently at the Roundhouse and the UFO Club. The band recorded its first album, *The Soft Machine* (Probe, 1968), in New York while touring the USA as the opening act for the Jimi Hendrix Experience. The trio of Robert Wyatt (drums and vocals), Mike Ratledge (keyboard) and Kevin Ayers (bass) blended pop and jazz-rock styles, with frequent and extensive instrumental sections set against quiet and whimsical pop songs. *Soft Machine Volume 2* (Probe, 1969) followed in much the same style, with Hugh Hopper replacing Ayers. The band's next two albums, *Third* (CBS, 1970) and *Fourth* (CBS, 1971), featured an increased emphasis on modal and free jazz. Wyatt left to pursue a solo career in 1971. Karl Jenkins (keyboard and saxophone) joined the band for 6 (CBS, 1973), and with Ratledge's departure after *Bundles* (Harvest, 1975), he became principal composer for the group. Soft Machine has remained active with various line-ups that have included Jenkins and John Marshall (drums).

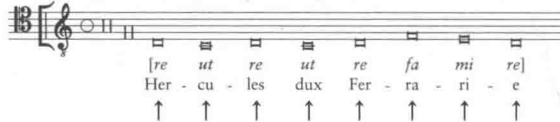
JOHN COVACH

Soft pedal. *See* UNA CORDA.

Soft rock. A term invented in the early 1970s to describe acoustic folk-rock and other tuneful, soothing types of popular music that use electric instruments. James Taylor, Neil Young (the early recordings), and Cat Stevens typify the folk element in soft rock; in Los Angeles the pop-rock groups Bread and the Carpenters made polished, soft-rock recordings that the music industry designated 'middle of the road'. The term is now applied broadly to quieter popular music of all sorts that uses mild rock rhythms and some electric instruments in songs of the ballad type.

STEPHEN HOLDEN

Soft shoe. A variant of the TAP DANCE.



Soggetto (It.: 'subject'). As defined in *Le istitutioni harmoniche* (1558) by Zarlino, who was among the first to apply the word 'subject' to music, a *soggetto* was any existing material on which a piece was based, including either a chosen theme for imitative treatment or a borrowed cantus firmus. A later Italian, G.B. Martini, defined it in part ii of his *Esemplare, ossia Saggio fondamentale pratico di contrappunto* (1775) as a fugue subject of medium or average length, in contrast to ANDAMENTO (a subject of extended length) and ATTACCO (an extremely brief subject). In the latter sense the word remains in use in Italy today. The only musical context in which contemporary English speakers commonly use the Italian form is the term SOGGETTO CAVATO. *See also* SUBJECT.

PAUL WALKER

Soggetto cavato (It.). A term coined by Zarlino (*Le istitutioni harmoniche*, 1558/*R*, iii, p.66) to denote the special class of thematic subjects for polyphonic compositions that were derived from a phrase associated with them by matching the vowels of the words to the corresponding vowels of the traditional Guidonian solmization syllables (*ut re mi fa sol la*). The term used by Zarlino is, literally, 'soggetto cavato dalle parole' – a subject 'carved out of the words'.

The earliest and most famous example is the subject of Josquin's *Missa Hercules dux Ferrariae*, the vowels of which yield the subject *re ut re ut re fa mi re* (ex.1); the

Ex.1 Josquin des Prez: *Missa Hercules Dux Ferrarie*
subject as given in Kyrie I

mass was composed in honour of Duke Ercole I d'Este of Ferrara (1471–1505). Another example by Josquin is the fanfare *Vive le roy*. Among composers after Josquin who used this procedure were Jacquet de Berchem and Cipriano de Rore, in masses for Duke Ercole II d'Este (1534–59). Lupus's *Missa Hercules dux Ferrariae* appears to have a *soggetto cavato*, but it is not the same as the others, and the mass was published in 1532. Similar works were written for the Emperor Charles V by Lupus (*Missa Carolus Imperator Romanorum Quintus*) and for the Emperor Ferdinand of Austria by Vaet (with cantus firmus *Stat felix domus Austriae*). The procedure was used by Willaert in two motets for Duke Francesco II Sforza of Milan, and his untitled mass (*NL-SH* 72A) may also be based on a *soggetto cavato*. Although the only element of choice available to the composer of a *soggetto cavato* was that of selecting *fa* or *la* for the vowel 'a', judicious arrangement of the words of a *soggetto* could influence the interval succession. It is probably not entirely

Ex.2 Cipriano de Rore: *Missa Vivat felix Hercules* (*c*1545)

accidental that Josquin's subject for his Hercules mass has the useful properties of beginning and ending on the modal final, *d*, of using the very small tessitura of a perfect 4th and of forming two units of four notes each embodying different types of linear motion: stepwise oscillation ending on the final in the first half, and a leap followed by conjunct motion in the second half. Rore's *Missa Vivat felix Hercules* has a longer, less symmetrical and less coherent *soggetto* (ex.2). The procedure fell naturally into disuse with the decline of strict cantus firmus treatment.

LEWIS LOCKWOOD

Soghomonian, Soghomon. *See* KOMITAS VARDAPET.

Sogner, Pasquale (*b* Naples, 1793; *d* Naples, 28 Dec 1842). Italian composer and pianist of Spanish descent. He studied with his father Tommaso Sogner in Livorno. By the age of 16 he had already written a comic opera; according to Gervasoni, writing three years later, he had by then become *maestro al cembalo* at the Imperial Theatre in Livorno and had already gained repute as a composer of vocal, keyboard and orchestral music. When he left home he probably went first to Venice and then to Naples, to write music for the comic theatre (usually providing his own librettos), and, according to Fétis, for the ballet. His librettos show that he lived in Naples long enough to learn the Neapolitan dialect. In the 1829–30 season he was reportedly in Malta as *maestro al cembalo* at the Manoel (Reale) Theatre, where he gave his *Elisabetta o sia Il castello di Kenilworth*, only a few months after Donizetti's opera on the same subject; Sogner's 'Danza scozzese' from his ballet *Elisabetta in Kenilworth* was published in Naples by Girard. Despite their melodic distinction, his operas appear to have been only moderately successful, and for a time he supported himself by teaching; among his pupils was the Maltese composer Giuseppe Spiteri Fremond (1804–78). According to a letter of 17 October 1834 sent from Naples to Livorno he had been in Venice earlier that year; the success of his most recent opera there had recalled him to the notice of Neapolitan impresarios, giving him hopes (later substantiated) of a commission for the coming year.

Fétis believed that he finally became so addicted to alcohol that he was obliged to retire to Nola, where he died in poverty in 1839, his talent destroyed; Parisini however has cast strong doubt on this, citing a well-written autograph fragment of a three-voice mass dated 1841, and establishing that he died in Naples in 1842.

Sogner may have been related to the pianist Filippo Sogner (*b* Bologna, 1814; *d* Livorno, 26 Feb 1899), who apparently lived all his life in Livorno and was a popular and successful piano teacher.

WORKS

OPERAS

texts by Sogner and music lost unless otherwise stated

La vedova bizzarra (ob, 2, G. Checcherini), Livorno, Accademia dei Floridi, spr. 1809

JAMES L. JACKMAN/MARCO BEGHELLI

Sogner, Tommaso [Sonyer, Tomás] (*b* Villa S Pedro Pescador, Gerona, 4 Oct 1762; *d* ?Livorno, after 9 July 1821). Italian composer and teacher of Spanish descent. He probably received early training from his father, José Sonyer, an organist. In 1784, with a fellow student, he left Spain for advanced studies in Naples. Prota-Giurleo discovered that he applied for admission to the Conservatorio della Pietà dei Turchini as a tenor and violinist, but failed the entrance examinations and was able to gain entrance only by a royal decree dated 8 August 1784. Around this time he adopted an Italianate form of his name, but a late manuscript still referred to him as

maestro di cappella spagnolo. He remained at the conservatory for five years, studying counterpoint with N. Sala, composition with G. Tritto (also, according to Gervasoni, with P. Guglielmi) and voice with B. La Barbera. His three-voice cantata *Aci e Galatea* (1810) found favour at the court and was twice performed there. By autumn 1791 he was in Rome, where he wrote *I due creduti vedovi*, a comic opera for the Teatro Valle which was apparently unsuccessful. He then became *maestro di cappella* at a church in Livorno, and supported himself further by teaching voice and composition. At its foundation in 1812 he was elected a *socio ordinario* of the music section of the Società Italiana di Scienze, Lettere ed Arti (also called the Istituto di Scienze ed Arti del Regno d'Italia). The last known record of his life is a letter of 9 July 1821 from Livorno, repaying the directors of the 'Teatro Capranica' at Naples 20 ducats for the care of his 'son Pasqualino' during an illness.

Gervasoni described Sogner as a good composer who had written oratorios for Naples and elsewhere, including a setting of Metastasio's *La passione*, and a quantity of church music, with an eight-voice mass and a full vesper service composed for a pontifical beatification ceremony in Rome meriting special praise. Sogner is also said to have written *quartetti concertanti* for strings, and other chamber music. The only works by him known to survive are a set of *Tre sonate per cembalo o pianoforte con violino* (Rome, 1792, in *I-Raf*, *Rc* and *Vc*) and a manuscript sonata for piano and violin (in *I-Fc*).

JAMES L. JACKMAN

Sografi, Simeone Antonio [Antonio Simeone] (*b* Padua, 29 July 1759; *d* Padua, 4 Jan 1818). Italian librettist. He received a degree in law from the University of Padua. After moving to Venice, he devoted himself completely to literary endeavours. He wrote comedies, farces and dramas, as well as serious and comic librettos for many of the foremost opera composers of his time. Spanning the years 1789 to 1816, his libretto output includes the texts for Borghi's *La morte di Semiramide* (1791), Capuzzi's *I bagni d' Abano* (1793), Cimarosa's *Gli Orazi ed i Curiazi* (1796), Mayr's *Telemaco nell'isola di Calipso* (1797), Portugal's *Alceste* (1798), Salieri's *Annibale in Capua* (1801) and Zingarelli's *Edipo a Colone* (1802).

Unlike his contemporaries, Sografi called his comic operas *commedie*, instead of the usual *drammi giocosi*. This choice indicated Sografi's preference for Goldonian-style comedies of character and his rejection of the visual gags and slapstick that had been the legacy of the *commedia dell'arte*. His characters demonstrated a refinement in comedic manners, often expressing their feelings in language and in verse forms that resemble those from serious opera. Sografi's serious librettos far outweigh his comic ones in importance. For subject matter he drew not only on the traditional sources of mythology and ancient history but also from more recent historical material (e.g. Peter the Great and Joan of Arc) and from French enlightenment authors (e.g. Rousseau and Voltaire). These librettos feature many of the characteristics of the French *tragédie lyrique*, and include lengthy scene complexes that exhibit a free dramatic interplay among solos, small and large ensembles, chorus and ballet. Moreover, the serious librettos are rarely without some type of spectacle. With his dramatic approach and keen sense of the spectacular, Sografi brought a new level of theatricality to the Italian operatic stage.

RONALD SHAHEEN

Soh. The dominant of a major scale or seventh degree of a (descending) melodic minor scale in TONIC SOL-FA.

Sohal, Naresh (Kumar) (*b* Harsipind, Hoshiarpur district, Punjab, 18 Sept 1939). Indian composer. The son of a distinguished Urdu poet, Des Raj Sohal, he showed an early interest in Western music, and in 1962 abandoned a course in mathematics and physics at Punjab University. Moving to London, he worked as a copyist and studied with Dale Roberts (1964–5) among others. In his early style, established with *Asht Prahar* (1965) and *Surya* (1966), he combined a sensitivity to tone colour with Indian features such as modality, microtones, melodic variation and an adherence to the poetry of Indian mythology. Remaining unperformed until the beginning of the 1970s, they immediately made his reputation, prompting a creative flowering. Supervised by Goehr, he made a study of quarter-tones at Leeds University (1972–4), and gained commissions from the Proms (*The Wanderer*, 1981) and the New York PO (*From Gitanjali*, 1985). His subsequent success as a composer for films and television led him to direct, and he made his début in this role with *Simla – a Summer Place* (1990), made for Scottish TV with his own music. He lived in Edinburgh from 1983 to 1994. He is also a noted photographer and a writer. As the only Indian composer of Western music to have achieved international recognition, he was awarded the Order of the Lotus by the President of India in 1987.

PAUL GRIFFITHS

Sohier [Soyez, Soyé, Soyer], **Charles-Joseph-Balthazar** (*b* Lille, bap. 6 Jan 1728; *d* Lille, 29 June 1759). French violinist and composer. He was the son of Jean-Baptiste Sohier and Marie-Joseph Hanot, sister of the violinist François Hanot. In March 1750 he played twice at the Concert Spirituel in Paris with 'the greatest success'; the *Mercure de France* mentioned that he was then first violinist at the Concert de Lille. Sohier received a *privilège général* dated 31 December 1749 and the next year published his *Six sonates à violon seul et basse continue*, op.1 in Paris. He published at least two more sets of works: *Simphonies à quatres parties* op.2 (*c*1751) and *Six sonates à deux violons* op.4 (*c*1752–4). There appears to be no trace of an op.3. At the time of his death Sohier was organist at St Pierre in Lille. He was called 'l'aîné' to distinguish him from a younger brother, also a violinist, who was connected with the Théâtre de Lille and who died in 1786.

Sohier's solo sonatas are characterized by the use of an asymmetrical three-movement scheme in the pattern slow–fast–fast. In the symphonies and the two-violin sonatas the three movements are more usually arranged fast–slow–fast. His works are stylistically rather conservative, and the symphonies in particular, for strings and continuo, demonstrate a static tonal quality and an abundance of imitative figurations of an archaic nature; movements in the minor mode predominate. The violin technique required in the sonatas, though not particularly ambitious or difficult, is always competent and idiomatic.

LAUREL FAY

Sohier, Jean. *See* FEDÉ, JOHANNES.

Sohier [Sohi, Sohyer, Soyer], **Mathieu** (*b* Noyon, early 16th century; *d c*1560). French composer and choirmaster. He succeeded Hughes de Caen as director of the Ancien Chapitre at Notre Dame on 5 August 1533 – an appointment offered him, however, only after a master from Clement en Auvergne and then Robert de La Rue had declined it. In 1539 Sohier took on additional responsibilities as canon of St Denis-du-Pas, later assuming the same post at Noyon Cathedral as well as a rectorship in Vincy. He took part in the synod of Noyon in 1546 and in the following year resigned at Notre Dame where he was succeeded by Nicolas Pagnier.

Mathieu and Valentin Sohier are often considered to be the same man on the basis, no doubt, of Du Chemin's ascription of the *Missa 'Vidi speciosam'* to 'Mathaeo Sohier' in 1556 and to 'Val. Sohier' in 1568. Compelling reasons suggest that they are in fact two different composers. Attaingnant, the main printer of works attributed to Sohier, often distinguished between them by adding the appropriate initial 'M' or 'V', even in books that identify all other composers only by surname. The chansons he attributed to Mathieu invariably exhibit a complex, imitative texture with animated rhythms and abrupt, volatile melodies that have little in common with the standard clichés of Parisian chanson style. Those attributed to Valentin on the other hand, are short, chordal pieces – veritable stereotypes of the Parisian chanson. Most of the chansons attributed merely to 'Sohier' resemble Mathieu's compositions stylistically.

The sacred music seems also to be largely by Mathieu. The flexible, short-lived and generally limited character of its imitation reflects a Parisian, rather than Flemish, influence. *Regina caeli laetare*, for five voices, in addition shows characteristics of the Parisian chanson in its relegation of the borrowed chant to the superius and in its reliance on chanson style. Where Sohier used a migrant cantus firmus (as in the four-voice *Salve regina*) a more seamless, less song-like style resulted.

LAWRENCE F. BERNSTEIN

Sohier [Sohi], **Valentin** (*fl* mid-16th century). French composer who has often been confused with MATHIEU SOHIER.

Söhngen, Oskar (*b* Hottenstein [now Wuppertal-Barmen], 5 Dec 1900; *d* Berlin, 28 Aug 1983). German musicologist. He studied philosophy and theology at the universities of Marburg and Bonn, attending Hermann Stephani's lectures on musicology at Marburg and taking the doctorate (on mysticism in Plotinus) at Bonn (1922) and the licentiate in theology at Marburg (1924). After working as a priest in Cologne (1926–32) he became adviser on social questions and church music to the Evangelical Church Synod (1932–3, 1935–69) and vice-president of the Evangelical Church Council (1951); he organized the German Church Music Festival in Berlin (1937) and was largely responsible for the new Evangelical Hymnbook (1949). From 1935 he was also a lecturer in musical liturgy at the Berlin Hochschule für Musikerziehung und Kirchenmusik (from 1945 the Hochschule für Musik), where he became honorary professor in 1959. The University of Marburg awarded him the honorary doctorate of theology in 1952. His particular interests were liturgical music, music and theology, the encouragement of modern church music and the development of church music as a profession.

JOHN TYRRELL

Sohren, Peter (*b* Elbing [now Elbląg], *c*1630; *d* Elbing, 1692). German composer, organist and music editor. His name has sometimes been mistakenly spelt 'Sohr' and 'Sohrer'. From 21 April 1654 to 1659 and again from 1661 to 1665 he was organist of the Dreikönigskirche, Elbing. From 1665 until his death he was Kantor and schoolmaster at Heiligleichnam in the suburbs of Elbing; in 1675 he taught at the local Gymnasium, and from no later than 1683 he was Kantor and schoolmaster at nearby Dirschau (Dzierżgoń) too. He was an assiduous composer and compiler of Protestant hymn tunes. In 1668, five years after Johannes Crüger's death, there was published in Frankfurt what appeared to be another edition of the latter's already famous chorale collection, *Praxis pietatis melica*. In fact the editing had been done by Sohren, who had also himself written more than half of the 888 melodies with continuo that the volume contains; the familiar title may have been retained by the publisher for commercial reasons. Further editions of this book continued to appear, as too did editions of the original *Praxis*. Sohren was no doubt offended at the lack of recognition given to him, and he later produced a second collection under a different title, *Musicalischer Vorschmack der jauchtzenden Seelen* (Hamburg, 1683). This contains 1117 texts and 430 melodies; composers of the Prussian and Hamburg schools predominate. Few of Sohren's own melodies remained in regular use into the 18th century, though they are often varied and colourful, in contrast to the staider examples of the congregational hymn; 185 of them are printed in *ZahnM*, vols.i–v. Sohren also published *Tägliches Morgen- und Abendopffer* (Frankfurt, 1675).

A. LINDSEY KIRWAN

Sohyer, Mathieu. *See* SOHIER, MATHIEU.

Soinu. A name used in the Basque region for the TAMBOURIN DE BÉARN.

Sojka [Soicka, Soyka], **Matěj** [Matouš] (*b* Vilémov, nr Časlav, 12 Feb 1740; *d* Vilémov, 13 March 1817). Bohemian composer. He spent his life in the service of Count Millesimus, the local landowner. He gained fame as an organist and also played the piano and the violin; however his main duties were to direct the count's private orchestra and chapel choir and also to provide new

compositions, both sacred and secular. The story that he was once a pupil of J.S. Bach, who sent him with a letter of high recommendation to the famous Czech organist and teacher Seger, is certainly apocryphal in view of Sojka's date of birth. His style is strongly influenced by Haydn, and tends towards lightness of texture and tunefulness. His large-scale religious compositions have symphonic formal traits and a rather instrumental style of vocal writing. He wrote nearly 300 works including many masses, two requiems, eight litanies and over 100 other small sacred pieces, many organ preludes and fugues, keyboard sonatas, quartets, and some concertos and symphonies. All have remained in MS (*CZ-Pnm*, *Bm*, *A-Wn*). His music circulated widely in Bohemia and Moravia and was slightly known abroad through his pupil Doležálek.

ADRIENNE SIMPSON

Sojo, Pedro. *See* PALACIOS Y SOJO, PEDRO.

Sojo, Vicente Emilio (*b* Guatire, 8 Dec 1887; *d* Caracas, 11 Aug 1974). Venezuelan composer and conductor. He studied in Guatire with Régulo Rico and then, in 1910, took composition lessons with Primo Moschini in Caracas. In 1921 he was appointed professor of theory at the Escuela Nacional de Música, of which he was made director in 1936; there he taught almost all of the Venezuelan composers who came to maturity in the years 1930 to 1960. He co-founded and directed the Orfeón Lamas and the Venezuela SO (1930), and encouraged the production of new works for both groups. After 1935 he devoted his energies almost exclusively to the music school and the Venezuela SO and wrote very little music. His music, though influenced by Impressionism, is rooted in Venezuelan folklore; he collected and published a large number of traditional songs, and a few of his guitar works have become standard repertoire. 1982 saw the foundation of the Instituto Vicente Emilio Sojo, which is devoted to musicological research and which publishes scores, monographs on Venezuelan music and the *Revista musical de Venezuela*, a scholarly periodical.

WORKS
(*selective list*)

Choral: Misa coral, boy altos, TB, org (1915); Misa cromática, solo vv, chorus, orch, 1922; Palabras de Cristo en el Calvario, solo vv, chorus, orch, 1925; Requiem in memoriam patris patriae, male vv, orch, org, 1929; Misa breve, solo vv, low chorus, orch, 1930–33; Misa a cappella, 4vv, 1935; Hodie nos fulgebit lux, cant., solo vv, chorus, orch, 1935; Misa a S Cecilia, solo vv, chorus, orch, 1953; many motets and other sacred and secular pieces

Other works: Str Qt, D, 1913; songs; many gui pieces

Principal publishers: Central University of Venezuela, Escuela Nacional de Música, Sojo, Venezuelan Ministry of Education

ALEJANDRO ENRIQUE PLANCHART

Sokal's'ky, Petro Petrovych (*b* Kharkiv, 14/26 Sept 1832; *d* Odessa, 30 March/11 April 1887). Ukrainian composer, critic and folksong collector. His early interest in science and music was encouraged by his family, for his father was a professor of economic science and his grandfather had been a conductor. Sokal's'ky originally intended to make a career as a scientist: in 1852 he graduated in natural sciences from Kharkiv University, and gained the degree of Master of Chemistry three years later. He was then a secondary school teacher, before going to New York in 1857 as secretary to the Russian consulate. Returning to Russia in 1859 he turned to journalism, writing (often under the pen name Fagot) articles on science and economics for the *Moskovskiye vedomosti*, the St Petersburg *Golos* and the Odessa press; he also wrote often outspoken but perceptive reviews of concerts and new music, edited the *Odessa vestnik* (1871–6) and produced a few fictional works. In 1859 he refounded the Odessa Philharmonic Society, which, with his enthusiastic support, soon began to play an important part in the cultural life of the town. In 1864 he formed a choir, which later became the nucleus of the Odessa Musical Society.

He wrote three operas: *Mays'ka nich* ('May Night', 1876), *Osada Dubno* ('The Siege of Dubno', 1878) and *Mazepa*. He also composed a cantata, orchestral pieces, piano music and about 40 songs. Many of his works, particularly the operas, contain folksongs: some critics hailed *The Siege of Dubno* as an excellent example of nationalist opera, but Serov considered that *May Night* was almost totally devoid of local colour. Sokal's'ky was more important as a pioneer collector and student of Russian and Ukrainian folk music. As a result of his early scientific training he used analytical methods in dealing with the songs he collected, and made statistical surveys of melodic similarities in folksongs from different areas, also undertaking sociological studies of the peoples concerned. He attempted to date the songs more accurately than had previously been possible, and thus tried to disprove the then widely held theory of the universal evolution of folk music. His writings, though occasionally marred by an aggressive attitude, were of great importance at the time and are still of value. His collection of Ukrainian and Belarusian folksongs, *Malorusskiye i belorusskiye pesni*, was published in 1903; he also wrote the book *Russkaya narodnaya muzïka, velikorusskaya, i malorusskaya v yego stroyenii melodicheskom i ritmicheskom i otlichiye yego ot osnov sovremmenoy garmonicheskoy muzïki* ('Russian folk music, Great Russian and Ukrainian, its melodic and rhythmic structure and its difference from the principles of contemporary harmonic music', Kharkiv, 1888; Ukrainian trans., 1959, ed. M. Khomichevsky).

WORKS

Stage: Mays'ka nich [May Night] (op, after N. Gogol'), Odessa, 1876; Osada Dubno [The Siege of Dubno] (op, after Gogol': *Taras Bulba*), Odessa, 1878, extracts (St Petersburg, 1884); Mazepa (op, after A.S. Pushkin: *Poltava*), inc.

Other works: Pir Petra Velikogo [The Feast of Peter the Great] (cant., Pushkin); Na lugakh: otgoloski Ukraini [In the Meadows: Echoes of the Ukraine], orch fantasy, 1861; other orch pieces; Tisyacheletiye Rossii (Russia's 1000 years], pf, 1873; Slavyanskiy al'bom [Slav Album], song cycle, 1873; *c*40 songs

JENNIFER SPENCER

Sokhor, Arnol'd Naumovich (*b* Leninakon [now Gryumri, Armenia], 7 April 1924; *d* Leningrad, 12 March 1977). Soviet musicologist, aesthetician, sociologist and critic. He graduated in 1949 from the faculty of theory and composition at the Leningrad Conservatory, in 1953 from the Research Institute of Theatre and Music, and in 1954 from the philosophy department of Leningrad University. A year later he joined the staff of the Leningrad Institute of Theatre, Music and Cinematography, and in 1968 was also appointed to a professorship at the Leningrad Conservatory. He was awarded the *Kanditat* degree in 1954 for his dissertation on populist song during World War II and received the doctorate in 1965 for his dissertation on Borodin. In 1976 he initiated the formation of the Soviet Union's first department of music criticism, at the Leningrad Conservatory. In the last ten years of his life he was a director of the criticism and music studies divisions of the Leningrad Union of Composers and of the Union of Composers of the USSR.

Sokhor's academic interests were wide-ranging, stemming from his musical and philosophical education. Beyond the music itself, its reception and social function attracted his attention. He wrote significantly on popular forms of music-making, which had previously been thought to be outside the limits of academic musicology: *Russkaya sovetskaya pesnya* (1959), which addresses aesthetic and sociological problems, was the first book of its kind in the Soviet Union. His monographs on Solov'yov-Sedoy (1952) and Sviridov (1956) and his dissertation on Borodin take a primarily historical viewpoint, the latter supplemented with important historiological research, together with the edition of a previously unpublished string quartet and other early compositions, letters and reminiscences about the composer. Sokhor's critical activity was widespread, appearing in journals such as *Sovetskaya muzïka* and *Muzïkal'naya zhizn'*. He was also an editor of *Bol'shaya sovetskaya ėntsiklopediya* and the *Muzïkal'naya ėntsiklopediya*.

LARISA GEORGIEVNA DANKO

Sokola, Miloš (*b* Bučovice, Moravia, 18 April 1913; *d* Malé Kyšice, Bohemia, 27 Sept 1976). Czech composer and violinist. He studied the violin with Oldřich Vávra (1929–36) and composition with Petrželka (1936–8) at the Brno Conservatory before continuing his composition studies under Novák (1938–9) and Křička (1943–5) in Prague. Appointed by Václav Talich, he earned his living as a violinist in the Prague National Theatre orchestra (1942–1973). This financial stability allowed him to adopt a singular and personal approach to composition, which is reflected in his works. Also, during his lifetime he never felt the need to have his works performed publicly. Several of his orchestral works (e.g. *Variace na téma Vítězslavy Kaprálové* ('Variations on a Theme by Vítězslava Kaprálová'), 1952, *Passacaglia, toccata a fuga*, 1943) and the late string quartets have enjoyed popular success, but it is as a composer of organ music that he has been rediscovered, performed and recorded by a younger generation of organists from the Czech Republic and abroad.

All of Sokola's compositions are based on substantive musical ideas. They are technically accomplished and contain strong structures in which themes are logically spun together. His compositions are firmly rooted in the traditions of his teachers who, in turn, developed the ideas of Janáček in Brno and Dvořák in Prague. His works have gained popular appeal among musicians.

WORKS

Stage: Marnotratný syn [The Prodigal Son] (op, V. Renč), 1948

JIŘÍ MACEK

Sokolov, Grigory (*b* Leningrad, 18 April 1950). Russian pianist. He studied with Liya Zelikhman and later at the Leningrad Conservatory with Moisey Galfin. He won first prize, aged 15, in the Russian National Competition and the following year (1966) first prize in the International Tchaikovsky Competition. Political constraints meant that his career was for a long time confined within Russia and the communist satellite countries, but latterly his appearances in the West (French début 1990), and particularly in the USA, have met with overwhelming acclaim. A Romantic virtuoso of true Russian vintage, his recordings include outstanding performances of Chopin's Second Sonata and the Etudes op.25, Brahms's F minor Sonata and Four Ballades, as well as more speculative offerings of Bach (the *Art of Fugue*), Beethoven (the Diabelli Variations and the Sonata in A op.101) and Schubert (the sonatas in G and B♭). The majority of these are taken live from his concerts, since he no longer values the studio recording process. A disc of Tchaikovsky's first and Saint-Saëns's second concertos, made in 1966, recalls his early mastery in the grandest of styles. He began teaching at the Leningrad (now the St Petersburg) Conservatory in 1975.

BRYCE MORRISON

Sokolov, Ivan Glebovich (*b* Moscow, 29 Aug 1960). Russian composer and pianist. He grew up in a musical family and from the age of eight studied composition with Georgy Dmitriyev, and from the age of 12, the piano with Lev Naumov. He then attended the Gnesin Music College and studied in the piano class of Irina Naumova (1974–8) before entering the Moscow Conservatory where he studied again with Naumov, composition with Sidel'nikov, orchestration under Denisov, and counterpoint under Yury Kholopov and Konstantin Batashov. After serving in the army, he was an assistant teacher in Sidel'nikov's composition class (1984–6), then taught composition in the music college attached to the Moscow Conservatory, and from 1988 orchestration and score reading in the orchestration department. In 1987 he became a member of the Composers' Union and in 1995 he became a member of the Society of Bellmanists in Cheboksary. Even in his student years he was interested in contemporary music; this was evident in his piano repertory and interpretation, and also on his own style as a composer. His unusual, sometimes paradoxical, interpretation of Beethoven, Brahms, Chopin, Liszt, Mozart and Schumann was conceived by the pianist as a way of revealing new aspects of their work. He also performs the music of Boulez, Crumb, Stockhausen, and that of Russian composers such as Korndorf, Prokofiev, Skryabin, Sidel'nikov, Tarnopol'sky and Ustvol'skaya.

As a composer Sokolov uses a wide spectrum of resources. He is particularly drawn towards instrumental theatre, conceptualism, minimalism and polystylism. In recent years he has become interested in the idea of possibly greater liberation from a specific stylistic trend: this is expressed in *Ptichka v kletkye* ('Bird in a Cage') for flute, *O zhizni* ('About Life') for piano and *Vdrug* ('Suddenly') for violin.

WORKS

INNA BARSOVA

Sokolov, Nikolay Aleksandrovich (*b* St Petersburg, 14/26 March 1859; *d* Petrograd, 27 March 1922). Russian composer and teacher. He studied under Johannsen and Rimsky-Korsakov at the St Petersburg Conservatory. From 1886 until the Revolution he taught at the court chapel, and in 1896 was appointed to the staff of the conservatory. He became a professor there in 1908, and later taught Shostakovich. For some years he was associated with the Belyayev circle of composers, but he tended to adopt an academic approach to composition, perhaps as a result of his preoccupation with methods of teaching strict counterpoint. In some of his smaller pieces and in his two Hans Andersen ballets, however, he found a suitably light style. He published a series of piano transcriptions of orchestral works by Russian composers. His two published textbooks were widely used in Russia at the beginning of the century.

WORKS

Stage: Dikiye lebedi [The Wild Swans] (ballet, after H.C. Andersen), 1900; Tsvetï malenkoy Idï [The Flowers of Little Ida] (ballet, after Andersen); Don Juan, music to A.K. Tolstoy's poem [final chorus pubd as op.5, Leipzig, *c*1880–90]; The Winter's Tale, op.44, music to Shakespeare's play (Leipzig, 1915)

JENNIFER SPENCER

Sokolovsky, Mikhail Matveyevich (*b c*1750; *d* ? late 18th century). Russian composer. A staff violinist and (probably) conductor at Michael Maddox's theatre (later the Petrovsky Theatre) in Moscow, he also gave singing lessons at Moscow University. He composed and arranged the music (much of it derived from folk and popular tunes) for Aleksander Ablesimov's enormously popular comic opera *Mel'nik – koldun, obmanshchik i svat* ('The Miller who was a Wizard, a Cheat and a Matchmaker'), which had its première at Maddox's theatre on 20/31 January 1779 (ed. I. Sosnovtseva, Moscow, 1984; excerpts in *IRMO*; lib ed. and trans. L. Hughes, *Russian Literature Triquarterly*, xx, 1987, pp.21–49). Sokolovsky's wife and sister were also on the payroll of the theatre and took part in the production: the former sang the role of the Mother (soprano), the latter sang in the chorus and danced. Although the *Dramaticheskiy slovar'*, a dictionary of drama published in Moscow in 1787, informed its readers that the score of *The Miller* 'was arranged from old-Russian [*russkiye*] songs by the contemporary Russian [*Rossiyskiy*] musician of the Moscow theatre Mr Sokolovsky', his name did not appear either in the original printed libretto (Moscow, 1782) or in any surviving performance material (in *RUS-SPtob*); the music, on account of its quality, was attributed to Yevstigney Fomin, the most accomplished dramatic composer of the period, and first published under his name (vocal score, Moscow, 1884). The matter was cleared up in 1927 by Fomin's biographer, Aleksey Finagin, but the correct attribution was initially met with scepticism and the false one has proved hardy.

RICHARD TARUSKIN

Sokołowski, Marek Konrad (*b* Pohrebyszcze, nr Zhitomir, 13/25 April 1818; *d* Vilnius, 25 Dec 1883/6 Jan 1884). Polish guitarist and composer. He was an extremely talented, self-taught musician who became a guitarist of the highest distinction. His first public performance, in Zhitomir in 1841, was received with acclaim. In 1846 he went to Moscow, and in his 12 years' stay visited many Russian towns. In 1856, while taking spa treatments at Gaststein in Austria, he became acquainted with a new type of ten-string guitar (a strong, double-necked instrument made by J.G. Scherzer), and thereafter he performed exclusively on this instrument. In 1858 he played in Vienna, and he later gave highly successful concerts in Warsaw, Kiev, Paris and London. He spent the last years of his life in Vilnius, forgotten and in poverty. His compositions include studies, polonaises, potpourris,

fantasies on themes from popular Italian operas, and Polish and Russian folksongs.

Sol. The fifth degree of the Guidonian HEXACHORD. *See also* SOLMIZATION, §I. In French, Italian and Spanish, the note G. *See* PITCH NOMENCLATURE.

Sola, Andrés de (*b* Tudela, Navarre, bap. 30 Nov 1634; *d* Zaragoza, 21 April 1696). Spanish composer and organist. His entire professional life was associated with the Cathedral of La Seo at Zaragoza. On 20 June 1654 he became assistant to the first organist, José Ximénez, his uncle and probable teacher. He became a priest on 7 April 1656 but continued as assistant until he was elevated to second organist on 16 February 1664. On 12 January 1672 he succeeded Ximénez as principal organist and held that position until his death. In May 1681 he was offered the organist's position at Oviedo Cathedral but chose to remain at La Seo. From 24 April 1687 to June 1692 he was interim *maestro de capilla*.

Sola's small quantity of extant music, all for organ, shows a high standard of craftsmanship: it comprises a set of 28 versos and three tientos, one of which is based on a *tiento de falsas* by Aguilera de Heredia. A *Juego de versos en todos los tonos* displays stylistic inconsistencies between the pieces, suggesting that more than one composer was involved. Indeed, one group of pieces from the collection has been ascribed to Ximénez. The tientos and versos are in L. Siemens Hernández, ed.: *La escuela de órgano de Zaragoza en el siglo XVII*, Orgue et Liturgie, lxxiv (Paris, 1967), and *La escuela de órgano de La Seo de Zaragoza en el siglo XVII: Andrés de Sola y Jerónimo Latorre, versos para órgano* (Zaragoza, 1988).

BARTON HUDSON

Solage (*fl* late 14th century). Composer, probably French. Ten French-texted songs, all but one of which are *unica*, are ascribed to Solage in the Chantilly codex (*F-CH* 564); a further two songs may be attributed to him on stylistic grounds. He is therefore the best-represented composer in the Chantilly manuscript. Texts of some of his songs suggest that he worked close to the French royal court: *S'aincy estoit* praises Jean, Duke of Berry, while *Calextone qui fut* and *Corps femenin* allude to the wedding of a 'Cathelline', possibly Catherine, sister of Charles VI of France, who in 1386 married the son of the Duke of Berry, or Catherine, granddaughter of Philippe, Duke of Burgundy, who was born in 1393. The pun on the name 'Jaquete' found in *Pluseurs gens* may be a reference to another of Philippe's granddaughters, Jacqueline (*b* 1401), who was betrothed to the dauphin in 1403. *Le mont Aon* mentions Phebus, a possible allusion to Gaston Febus, Count of Foix, whose protégée, Jeanne of Boulogne, married the Duke of Berry in 1389. Connection with French royal circles is further suggested by the subject of *Fumeux fume*, which recalls a series of poems about the 'fumeurs' by Eustache Deschamps who worked for Louis, Duke of Orléans. Another song connecting Solage with Louis, who married the daughter of Giangaleazzo Visconti of Milan in 1389, is *Joieux de cuer*. The playful commentary on fashion in *Pluseurs gens* is echoed in a contemporary lyric poem from a poetry anthology originating in Giangaleazzo's court.

The style of Solage's works places them in the last quarter of the 14th century or the very early 15th. *S'aincy estoit* uses the complex rhythmic idiom of the Ars Subtilior but other works are simpler in their rhythmic language. However, they show a concern for structural unity typical of works dating from the 1380s and 90s, using features also found in the works of Jaquemin de Senleches, for instance 'double musical rhyme in the ballades and motivic repetition and variation to interrelate the larger musical sections. Certain motifs, such as the expressive appoggiatura used at half-cadences can be identified as characteristic of his melodies. Particularly striking are his frequent use of sequence and unusually low tessitura. Though sequential repetition also features in songs by his contemporaries, Solage takes the idea much further, particularly in *Fumeux fume* and *Le mont Aon*, where harmonic sequential descents provoke shifts to distant tonal areas. *Calextone qui fut* is similarly unorthodox in its tonal language and features an especially sophisticated musical structure.

YOLANDA PLUMLEY

Solal, Martial (*b* Algiers, 23 Aug 1927). French jazz pianist. He studied the piano with his mother, an opera singer, from the age of seven. After working locally in Algiers from 1942, he settled in 1950 in Paris, where he played with Django Reinhardt, Don Byas, Lucky Thompson and Kenny Clarke and led a quartet with Sidney Bechet. From 1974 into the 1980s Solal played and recorded with Lee Konitz as a duo – for example, *Duplicity* (1977, Horo) – and in small groups, and broadcast throughout Europe. In October 1990 he gave a five-day concert demonstrating his multi-faceted playing and writing at the Théâtre Musical de Paris.

Solal has the rare ability to accommodate his playing to widely varying styles. He was a member of a trio with two double basses (1969–71), and has occasionally worked as the leader of a big band. His best music, however, has been made in a conventional trio of piano, double bass and drums, and shows a grasp of form uncommon among improvisers; *Jordu* (on the album *Jazz à Gaveau*, 1960, Col.), for example, develops entirely from seemingly unimportant melodic, harmonic and rhythmic alterations to the theme, and *Gavotte à Gaveau* (from the same album) gradually integrates dissimilar fragments into a tight structure. Solal has also composed music for more than 20 films. For bibliography and select discography see *GroveJ*.

MAX HARRISON/R

Solana, José (*b* Sieso, Huesca province, bap. 28 March 1643; *d* Toledo, 22 Sept 1712). Spanish organist and composer. From a position as organist at Sigüenza he was elected organist of Toledo Cathedral in 1677; he assumed the post on 19 July 1678 and held it until his death. Among his duties was the maintenance of the organ. Only two of his works are at present known, an organ piece of the tiento type (*E-Bc* M.387) and a vocal work, *Adjuva nos, Deus* (*E-MO* 1782). The former, a long piece in two sections entitled 'Obra 1er tono', uses the divided registers typical of Spanish organ music; the subject is transformed rhythmically and treated in paired imitation between the two hands. The latter work, for four voices *a cappella*, is in the *stile antico*. A Toledo Cathedral inventory of 1793, which survives among the Barbieri papers, includes several eight-part vocal works by Solana which are apparently no longer extant.

ALMONTE HOWELL

Solano, Francisco Ignacio (*b* ?Coimbra, *c*1720; *d* Lisbon, 18 Sept 1800). Portuguese theorist. He studied with Giovanni Giorgi at the S Catarina de Ribamar music school. About 1740 he joined the Lisbon Confraternity of St Cecilia, of which he became assistant secretary in 1763. In addition to his work as a theorist he was a gifted teacher with many titled pupils, and from 1779 directed his own music school which numbered Ignacio Freitas (1779–1815), the finest Lisbon violinist of the period, among its graduates.

Solano dominated Portuguese theory in his century. Though unduly prolix and repetitive by foreign standards, his three major works – the *Nova instrucção musical, ou Theorica pratica* (Lisbon, 1764), *Novo tratado de musica metrica, e rythmica* (Lisbon, 1779) and *Exame instructivo sobre a musica multiforme, metrica e rythmica* (Lisbon, 1790) – nonetheless contain much useful information on 18th-century theory and performing practice. The first, enthusiastically praised by many authorities including Davide Perez, is especially interesting now for its 41 music examples by Giorgi and lesser numbers by Jommelli, Leo and Perez himself. Solano professed to teach a novel application of sol-fa to difficult chromatic music, using only hexachord syllables; a compendium of its first discourse appeared four years later, dedicated to his pupil Thomé de Sousa Coutinho, Marquis of Borba, and underwent a second edition in 1794. The *Novo tratado*, like the first superbly printed by Manescal da Costa, was greatly indebted to Gasparini's *L'armonico pratico al cimbalo*. The *Exame instructivo*, his only work to be translated (into Spanish in 1818), remains an indispensable guide to Portuguese Baroque musical terminology.

Solano also published a short *Dissertação sobre a caracter, qualidades, e antiguidades da musica* (Lisbon, 1780), the opening lecture at his school, and pseudonymously issued a *Vindicias do tono* (Lisbon, 1793), defending the addition of accidentals in plainchant to avoid tritones against the opposing view maintained by José do Espirito Santo Monte in his *Vindicias do tritono*.

ROBERT STEVENSON

Solares, Enrique (*b* Guatemala City, 11 July 1910; *d* Guatemala City, 3 Sept 1995). Guatemalan composer. After early studies in piano and composition in his home town, he was a pupil of Ernst Bacon in San Francisco. He also took advanced courses at the Brussels Conservatory and later in Prague and Rome. For many years he served in the Guatemalan diplomatic service in Brussels, Paris, Madrid and other capital cities. As a composer, he developed a personal style departing from a neo-classical background. His music reflects technical proficiency and well developed imaginative skills. Although many of his compositions were awarded prizes, very few have been published. Among his works, the following deserve mention: the *Te Deum* for chorus and organ (1943), the Partita for string orchestra (1947), the *Estudio en forma de marcha* and *Cuatro ofrendas* for piano (1955), and the Sonata for solo violin (1959).

DIETER LEHNHOFF

Solbiati, Alessandro (*b* Busto Arsizio, nr Milan, 5 Sept 1956). Italian composer. He began to study music on a regular basis in 1975, and in 1977 a meeting with Donatoni led him to abandon his physics degree to devote

himself entirely to music. He took Donatoni's courses at the Accademia Musicale Chigiana in Siena (1977–80) and at the same time attended the Milan Conservatory, where he took his diploma in piano (1981, with Eli Perrotta) and in composition (1982, with Sandro Gorli). He has taught fugue and composition at Bologna Conservatory (1982–95), and since 1996 at Milan Conservatory, and has given postgraduate courses and held seminars in Italy and abroad (Centre Acanthes in Avignon, Paris Conservatoire). Although he sees his roots in Donatoni and Gorli, Solbiati also traces more distant descent from on one hand Mahler, Berg and Bartók, and on the other Maderna and Ligeti. He is concerned to relate his work to a tradition whose inner values and implied possibilities he emphasizes; although believing in the continuity between past and present, he avoids neo-tonal nostalgia. He approaches composition as a journey from darkness into light, a journey taking as its starting point an idea of a musical event which is conceived before it is assigned its constituent notes. In his words, the act of composition follows the pattern of 'creative energy – image – process – figure – formal events – form'. Musical figures take on thematic outlines as they are elaborated but they remain recognizably related to the initial idea however differently articulated in terms of timbre, gesture or dynamic. He has attempted to restore melodic expressivity and sometimes tends explicitly towards lyricism, in cantabile writing for both instruments and voices (as in *Mi lirica sombra*). Working in some cases with a limited number of pitches he constructs harmonic fields which are not reliant on the tonal and non-tonal polarity.

His love for poetry (writers from whom he has taken ideas and titles for his works include Borges, Dickinson, Hölderlin and Rimbaud) and his sensitivity to the relationship between text and music have resulted in a wealth of vocal and choral pieces (of which the most significant is perhaps *Decima elegia*) and in a successful and exclusive collaboration with the Milanese writer Paola Capriolo. His Catholicism has been the impetus behind a number of works including the intense oratorio *Nel deserto*; based on the story of the prophet Elijah, it was first performed at the Beaubourg in Paris in 1989 by the Ensemble 2e2m under Méfano.

He spent some time working at IRCAM in 1995, and has used in electronic compositions the same processes he employed in instrumental and vocal works.

WORKS
(*selective list*)

Dramatic: La partenza (monodrama, F. Kafka), 1991, Fiesole, Scuola di musica, 13 Sept 1991; El canto quiere ser luz (azione teatrale, R.M. Rilke and others), 1994, Sassari, 12 July 1994; Frammenti da 'Il gigante' (racconto in musica for radio, P. Capriolo), 1994; La colomba azzurra (racconto in musica for radio, Capriolo), 1996; Inno (radio op, letter from St Paul), 1996

Orch: So weiss wie Schnee, 1980; Di luce, vn, orch, 1982; Studio, small orch, 1983; The Fire and the Rose, 1989; Gui Conc., 1990; Die Sterne des Leidlands, 1991; Valzer, 1995; Der neue Tag, vc, hn, str, 1997; Raggio, small orch, 1997; Sinfonia, 1998

Choral: Nel deserto (orat, Bible, A. Giorgetti), Tr, Bar, spkr, chorus, 9 insts, 1984–6; Decima elegia (Rilke), S, Bar, chorus, orch, 1991–5; Die Quelle der Freude (Rilke), 5 vv/chorus, orch, 1992; Sphynx (Rilke), 8 vv, 1995; Surgentes (St Ambrose), children's chorus, str trio/pf, 1997; Ingresso e Kyrie (Mass), 2 choruses, 10 insts/chbr orch, 1999

Solo vocal: . . . più sopra le stelle (Giorgetti), S, orch, 1984; So früh? (Ch. Overbeck), S, 8 insts, 1985, rev. 1993; Quartetto con Lied (Overbeck), Tr, str qt, 1992; 3 frammenti (Rilke), S, Bar, orch, 1994; Il Dio narrante (melodrama, Capriolo), spkr, pf, perc, 1996; Il poeta (F. Pessoa), spkr, chbr orch, 1997; Piccoli canti (A. Merini), spkr, 8 insts, 1998

Chbr and solo inst: 6 piccoli pezzi, cl, pf, 1977; Quartetto, str qt, 1980; 3 studi in forma di dedica, pf, 1980; Quelle pause di luce, vn, 1983; Rainawakened Flower, inst ens, 1986; Dawn, fl, hp, 1987; 3 pezzi, gui, 1987; Trio, vn, vc, pf, 1987; Notturno, wind qnt, 1988; As if to Land . . ., fl, 1989; Am Fuss des Gebirgs, fl, b cl, pf, 1991, rev. 1997; Str Trio, 1991; Canto per Ania, vc, inst ens, 1992; Le lac sur les pierres, inst ens, 1992; By my Window, pf, inst ens, 1993; Mi lirica sombra, b cl, inst ens, 1993; A Nameless Pod, 4 early va, 1994; 3 pezzi, perc, inst ens, 1994; 7 pezzi, str qt, 1995; Manet, vc, pf, 1996; Pf Sonata, 1996; Mari, fl, cl, vn, vc, pf, 1997; Straight Out, tpt, 1998; 8 studi, gui, 1999

El-ac: Vox, cl, elecs, 1996; Con i miei mille occhi (racconto in musica, Capriolo), elecs, 1997 [CD enclosed with book]

Arrs: F. Schubert: Moments musicaux D780, inst ens, 1997; F. Schubert: Klavierstück II D946, str qt, 1998; G. Petrassi: Poema, 4 tpt, 24 str, 1999

Principal publisher: Suvini Zerboni

ANNA MARIA MORAZZONI

Solberg, Leif (*b* Lena, Østre Toten, nr Gjøvik, 18 Nov 1914). Norwegian composer and organist. In 1928 he began organ studies with Sandvold, a pupil of Karl Straube, and in 1933 passed his organ exam and made his début to critical acclaim. He then studied counterpoint with Per Steenberg, conducting with Trygve Lindeman and harmony with Karl Andersen. His first major work, the *Variations on the Folktune 'Eg veit i himmerik ein borg'* (1933), already demonstrates unusual contrapuntal mastery, and within the next five years he composed the bulk of his organ masterpieces, including the *Fantasy and Fugue on the Folktune 'Se solens skjønne lys og prakt'* (1936) and the *Chorale Fantasy on 'Av dypest nød jeg rope må'* (1937). In 1938 he became organist of Lillehammer Church, where, geographically isolated, he was also something of a stylistic anachronism. His finely crafted music, written in the Romantic organ tradition of Sandvold, found little place as modernism became widespread in Norway after World War II. He continued to study, with the organist William McKie in London in 1949, and also took composition tuition in Copenhagen in 1951 from Jørgen Jersild.

His Haydnesque String Quartet (1945) was performed a few times in the late 1940s before disappearing from the repertory, and performances of his music outside church circles were rare. Like his organ works, his choral music was largely written for his own use (he directed a chorus in Lillehammer for 30 years), and his large-scale choral work *Langfredagsmeditasjon* ('Good Friday Meditation', 1947) shared first prize in a composition

competition. By the early 1990s Solberg had only local renown. However, a commercial recording of his organ works (1996) and the première in 1998 of his Symphony (1951–2) created renewed interest in his output.

WORKS

Orch, ens, chbr: Pastorale, D, org, 1930, orchd 1937; Berceuse, vn, pf, 1938; Norønnamarsj, military band, 1941; Str Qt, b, 1945; Sonata, vn, pf, 1948; Sym., g, orch, 1951–2; Sang uten ord [Song without Words], b, vn, pf

Org: Pastorale, 1930; Prelude and Fugue, 1933; Variations on the Folktune 'Eg veit i himmerik ein borg', 1933; Introduction and Fugue on the Chorale 'Naglet til et kors', 1934; Fantasy and Fugue on the Folktune 'Se solens skjønne lys og prakt', 1936; Chorale-Fantasy on 'Av dypest nød jeg rope må', 1937; Fugue on the Folktune 'Gå varsomt min sjel', 1940; Introduction, Passacaglia and Fugue, 1941; Prelude, 1953; Ciaconna, 1953; Prelude and Fugue, 1953; A Little Chorale Study on 'Se hvor nu Jesus treder', 1953; Prelude and Fugue on 'Jesus, eg hjarteleg lengtar', 1953; Prelude and Fugue, 1959; Passacaglia; Preludium and Fuge on 'Kirken den er et gamelt hus'; various chorale arrs.

Choral (SATB unacc. unless otherwise stated): Du va ere lovet, Jesu Krist (Luther, trans. M.B. Landstad), 1937–8; Gloria in excelsis Deo, 1937–8; Agnus Dei, 1937–8; La er mig o Herre, 1937–8; Krist stod opp av døde, 1937–8; Fjellkyrkjesongen [The Song of the Church in the Mountains] (I. Hove), 1941–2; Maihaug Cant. (T. Ørjasaeter), S, Bar, SATB, pf, 1941–2; Bønn (T. Vrenvall), 1943; Kyrie eleison, 1946; Ver sacrum (Hellig vår) [Holy Spring] (H. Lie), 1947; Langfredagsmeditasjon [Good Friday Meditation] (S. Nesse), S, Bar, SATB, org, 1947; Ny Dag (Lie), 1961; Ps viii, 1968; Hymne (E. Skjaeraasen), 1978; Sang i skumring [Sing in Twilight] (Skjaeraasen), 1978; Ett hav av frid [A Sea of Peace] (A.L. Jørstad), 1983; Ei naki grein [A Naked Branch] (O. Aukrust), 1984; Ei einsleg stjerne [A Lonely Star] (Ørjasaeter), 1984; Missa brevis, SA/SATB, 1985; Gudbrandsdalen [Gudbrands Valley] (Aukrust), 1988; Bønn for fred [Prayer for Peace] (I. Vibe-Müller), 1992; Magnificat, 1997; Liten kantate (The Hymn of Zacariah), 1998; Ps xxviii, 1998; Kom la oss juble for Herren [Come let us rejoice in the Lord] (Ps xcv)

Other vocal: For seint [Too Late] (Orjasaeter), A, org, 1958; Som eit blakrande ljos (Aukrust), A, org, 1970; Kvifor mi sjel har du byrja på dette [Why, My Soul have you started upon this] (Aukrust), A, org, 1982; vocal arrs.

MARTIN ANDERSON

Soldanieri, Niccolò (di Neri de') (*fl* Florence, 14th century). Italian poet. He came from a Ghibelline family, of whom almost nothing certain is known (details in Miraglia are not reliable). In addition to moral canzoni and sonnets, he wrote many ballatas and madrigals and at least three cacce whose manuscript tradition is strictly linked either to that of Ars Nova or to that of Giovanni Sercambi's *Croniche* (ed. S. Bongi, Lucca, 1892) and *Novelliere* (ed. L. Rossi, Rome, 1974), written in about 1400. There are extant musical settings of his works by Lorenzo da Firenze, Niccolò da Perugia, Donato da Cascia and Gherardello da Firenze. (His poetry is ed. G. Corsi: *Rimatori del Trecento*, Turin, 1969, pp.717–77.)

GIANLUCA D'AGOSTINO

Soldi, Luca Antonio (*b* Pisa, *c*1557; *d* Rome, 13 Jan 1627). Italian music printer. He printed in Rome at Santo Spirito in Sassia and produced over 50 volumes. He was an undistinguished printer with an unattractive typeface, and is most important for his editions of Cifra, G.F. Anerio and Kapsberger and for Frescobaldi's first book of *Capricci*. He printed music, mostly sacred, by other Roman composers, sometimes financed by the bookseller Paolo Masotti. Further research might well show some connection between Soldi and Robletti or Zannetti, both of whose repertories seem to have passed to him.

STANLEY BOORMAN

Soldier, Dave [Sulzer, David Louis] (*b* New York, 6 Nov 1956). American composer and violinist. After growing up in Carbondale, Illinois, he studied botany and genetics at Michigan State University (BS 1979), choosing that institution partly because he could also study with improvising saxophonist Roscoe Mitchell at his nearby farm. Forbidden to pursue his musical activities while completing the doctorate in biology and neuroscience at Columbia University (PhD 1988), he began to compose and perform under the name Soldier.

Despite his primary career as a scientist, Soldier has been prolific as a composer of chamber and theatrical works. In 1985 he formed the Soldier String Quartet in New York, a group that has pioneered a new approach to chamber music by infusing it with jazz, blues and gospel idioms, adding a rock drummer and/or jazz bassist, dancing while playing, and employing homemade instruments. His works for string quartet include arrangements of music by Jimi Hendrix, Wayne Shorter, Muddy Waters and others. Additional influences include the music of the Ars Nova, classical quartet writing and punk rock. Larger compositions, such as *The Apotheosis of John Brown* (1990) and *Chorea lascivia* (1991), have been written on behalf of oppressed peoples. These stylistic and political concerns have placed him at the centre of the 1980s and 90s Downtown scene in New York.

WORKS

Stage: The Apotheosis of John Brown (F. Douglas), nar, S, Mez, T, B, vn, str, hpd, perc, 1990; ice-9 Ballads (K. Vonnegut), 2 S, T, Mez, harmonica, cl, a sax, trbn, gui, hp, mandolin, 3 vn, db, 2 perc, tape/spkr, 1995; Naked Revolution (M. di Niscemi), chorus, ob + eng hn, cl + b cl, accdn, pf, gui, 2 vn, vc, db, tape, synth, 1997

Inst: 3 Preludes, str qt, 1984–5; Five Little Monsters, str qt, drums, 1985–6; Scene from the New World, orch, 1985; Sequence Girls, str qt, drums, 1985; Letter to Gil Evans, fl, cl, bn, tpt, str qt, drums, 1986; Little Andre, b fl, 1986; Romances from the Second Line, pf, 1986–8; Str Qt no.1 'The Impossible', str qt, drums, 1986–7; Hockets & Inventions, org/ens, 1987–9 [arr. fl, ob, cl, bn, hn, tpt, trbn, vn, va, vc, 2 perc, hp, 1997]; A Shot in the Dark, drum kit, 1988; Duo Sonata, vn, vc, 1988; 3 Preludes, fl, pf, 1988; Evil at Midnight, hp, 1989; Lonesome Train, str qt, drums, 1989; Sojourner Truth, str qt, 1989; To Spike Jones in Heaven, accdn, tape, 1989; One Night, vn, accdn, pf, 1990; Utah Dances, fl/sax, 1990; Ultraviolet Railroad, pf trio, orch, 1991–2; Str Qt no.1 'Bambaataa Variations', homemade insts, 1992 [insts by K. Butler]; Sontag in Sarajevo, vn, vc, gui, accdn, 1994; Fanny Brice, vn, pf, elec gui, 1995; The Unfolding Opium Poppy, vn, pf, 1996

Vocal: Chorea lascivia, vv, 2 elec gui, tpt, tuba, perc, 1991; Mark Twain's War Prayer, T, B, gospel chorus, orch, 1993; The Nasadiya, S vv, homemade insts, 1993; The People's Choice: the most wanted music (S, children's chorus, chbr ens)/(vv, sax, gui, tape), 1997

Other works: Matarile, children, elecs, 1993 [insts by Butler]; arrrs. of music by Skip James, Charlie Patton, Muddy Waters, John Cale, Robert Johnson, Sly Stone, Louise Johnson

KYLE GANN

Soleá. Andalusian gypsy song and dance form of flamenco type. *See* CANTE HONDO, FANDANGO and FLAMENCO, §2, Table 1.

Soler (Ramos), Antonio (Francisco Javier José) (bap. Olot, Gerona, 3 Dec 1729; *d* El Escorial, 20 Dec 1783). Catalan composer and organist. At the age of six, after instruction from his father, Marcos Mateo Pedro Soler (a band musician in the regiment of Numancia), he entered the famous music school Escolanía in the monastery of Montserrat. His teachers included Benito Esteve de Capellades, Manuel Espona de Manlleu and Andrés Jaumeandreu de Granollers. He studied the major organ works of Cabanilles and Miguel López and by the age of 14 had already learnt José Elías's 24 works in all the major and minor keys. According to an anonymous obituary at El Escorial he made such progress in Montserrat that he competed for the post of *maestro de capilla* in two cathedrals and was successful at Lérida. This, however, is not supported by documentary evidence: it seems more probable that he was appointed *maestro de capilla* at Seo de Urgel Cathedral, where he was ordained sub-deacon in 1752. On 25 September 1752 he joined the Hieronymite order at El Escorial and became the permanent organist. After his probationary year he was described in the Escorial capitular acts as 'satisfactory in Latin, but has a famous ability at the organ and in composition'. For his profession on 29 September 1753 he composed a *Veni creator* for eight voices and strings, whose manuscript title-page has an illustration of a monk (presumably Soler) prostrate before the altar. The date on which Soler became *maestro de capilla* at El Escorial is not known, but he probably inherited the position after the death of Padre Gabriel de Moratilla in 1757. Despite his heavy duties as a priest and *maestro de capilla* Soler wrote a substantial number of works, spending as much of his recreational time as possible composing. He required little sleep, retiring at midnight or 1 am and rising for Mass at 4 am, and he built a small table so that he could compose even when lying ill in bed.

The royal families of Ferdinand VI and Maria Bárbara and later of Carlos III used to spend each autumn at El Escorial. Their musical entourage included José Nebra and Domenico Scarlatti. Soler studied with Nebra, but whether he received any instruction from Scarlatti (one of whose pupils was Maria Bárbara) remains uncertain; he was certainly very familiar with Scarlatti's compositions and described himself as a disciple of Scarlatti. Nebra wrote a laudatory preface for Soler's momentous theoretical treatise *Llave de la modulación y antigüedades de la música* (Madrid, 1762). The treatise is in two books, the first devoted to modulation, the other to early notation and the resolution of canons. In the first book Soler illustrates how to modulate smoothly from any major or minor key to any other of the 24 keys in the fewest number of bars. His theories were very daring at the time – Nebra described his system as 'the discovery of a secret as extraordinary as it is new' – and were criticized by a number of theorists, notably Don Antonio Roel del Río, author of *Institución harmonia* (Madrid, 1748), who fiercely rejected the *Llave*. Soler's defence was a 67-page booklet, *Satisfacción a los reparos precisos* (Madrid, 1765), in which he cites a number of authorities, including the composers Morales, Palestrina, Gesualdo and Domenico Scarlatti, and the theorists Martini and Nassare. 22 letters from Soler to the 14th Duke of Medina Sidonia, written between 1761 and 1771, have recently been discovered. In a letter of July 1765, Soler mentions that he used to be called 'El diablo vestido de fraile' (a devil dressed as a monk). In 1765 Soler was anonymously accused, in *Diálogo critico reflexico*, of misunderstanding Alonso Lobo's canons and making other mistakes; his response was *Carta escrita a un amigo* (Madrid, 1766). Also in 1765 he began an exchange of letters in Italian with Padre Martini. Six of his letters have survived (in *I-BI*) but none of Martini's. That same year Soler was attacked for his *Llave* by the Catalan *maestro* Bruguera in a *Carta apologética* published in Barcelona. He was finally vindicated by José Vila, organist in Sanahuja, who defended the *Llave* and its author in his *Respuesta y dictamen* (Cervera, 1766) and the controversy was closed.

In 1766 Soler was appointed music tutor to Carlos III's son, the talented Prince Gabriel, who studied with him from the age of 14 until Soler's death. Soler dedicated many keyboard sonatas and two chamber works to him. According to his obituary, Soler also 'undertook the construction of a small rectangular instrument with a compartment containing the keys with their corresponding strings. He called it an *afinador* or *templante*, something which had been attempted a number of times in Italy, and I believe also by the French and English, without success. The purpose was to show the exact difference between a major and a minor semitone, and to distinguish a tone by dividing it into nine portions, giving each what exactly corresponded to it, although this distinction is imperceptible to the ear . . . his powers of application and indefatigable investigation enabled him to succeed and brought him renown for his inventiveness'. Soler left two completed 'afinadors', one to Prince Gabriel, the other to the Duke of Alba. Neither instrument has survived. Soler was also very knowledgeable about organs. His help was solicited by José Casas over a new organ at Seville Cathedral which had received much criticism. Soler's response was a thoughtful 32-side letter, published by Casas in Madrid in 1778. In 1776 Soler proposed a plan for the construction and installation of a new organ at Málaga Cathedral. He was also interested in Castilian and Catalan currency exchange rates, dedicating his writings about them to Carlos III.

Soler is best known for his extensive output of keyboard works, mainly sonatas, most of which survive in manuscript copies. The exact chronology of these sonatas cannot be established as the manuscripts, none of them autograph, are undated. The majority of the sonatas are in binary form. Some stylistically later works have two movements, some three, which end with an 'intento' (tiento). There are also eight four-movement sonatas with Alberti basses, which were probably influenced by Haydn, whose compositions were brought to Spain by Boccherini in the 1770s. Soler's modulations are far more daring than Scarlatti's and his phrase groupings more symmetrical. A Spanish flavour is evident in his works in the use of dance rhythms and sparkling colours. An outstanding example is his *Fandango*, a lengthy work of 462 bars, built on an A major–D minor ostinato bass and rising from a quiet introduction, through dissonances, syncopations and flamboyant variations to a thunderous climax.

In 1772 Soler gave 27 autograph sonata manuscripts to Lord Fitzwilliam at El Escorial to publish in England. This was done by Robert Birchall (London, *c*1796). It is not always clear for which keyboard instrument Soler's works were intended. He had at his disposal an organ, harpsichord and fortepiano, and wrote for all three instruments. Most of the sonatas, however, demand a five-octave keyboard of 61 keys, and some later works required 63 keys – a span greater than that available to Mozart on his fortepiano.

Soler's vocal works also constitute a significant part of his output. Most of these are sacred pieces connected to church services. He also composed eight 'auto sacramentales' (1756–64). All autos were abolished in 1765 by royal decree; they 'offended all standards of good taste and decency and had long failed to fulfill their original purpose, mainly to support the Catholic faith' (E. Clark: 'Letters Concerning the Spanish Nation'). Soler composed many villancicos for major feast days, and particularly for those of St Lawrence and of St Jerome, patron saints, respectively, of El Escorial and the Hieronymite order. The texts of these villancicos are not very religious, reflecting more the life of the peasants; the use of Spanish dance rhythms is also most apparent. Soler was very free with his structures in these villancicos: some have an overture before the introduction, some lack *coplas* and others end with a minuet, march or fugue. Soler's subjects are as varied as his treatment of form, with titles such as *El prusiano*, *La furia del aqilon*, *Un loco y un linajudo*, *Un majo*, the amusing *De un maestro de capilla*, which ends with a joyful *tonadilla* to the Christ Child, and the dramatic *En piélagos inmensos*, which starts with processional trumpet blasts and ends with a triumphant march. Soler also composed some music for the theatre, including for Pedro Calderón de la Barca's *La hija del ayre*, and for various *loas*, *sainetes* and comedies.

Among Soler's other compositions are six original quintets for two violins, viola, cello and keyboard obbligato, which widened the compositional style of chamber music in the 18th century. These were composed for his pupil, Prince Gabriel, in 1776, probably for the musical events at the Casita de Arriba, which Carlos III had built for his son close to El Escorial. Soler also composed six concertos for two obbligato organs for the prince's amusement. Four of these have two movements and one three. Written in true *galant* style they contain great charm and are not technically demanding.

From the recently discovered letters we know that Soler had a brother, Don Mateo Soler, a musician in the King's Guard.

WORKS

VOCAL

MSS in *E-Bc, Boc, E, Mc, Madrid, Institute français, Mm, MO, D-Mbs*

10 masses, incl. Missa in Dominica Septuagesimae, 4vv, ed. L. Villalba (Madrid, *c*1920); 5 requiems; 51 pss; 9 Miserere; 24 hymns; Stabat mater, S, S, bc, 1775, ed. F. Marvin (Vienna, 1970), also ed. in *TSM*, lvi (1973), Veni creator, 8vv, str, 1753; 13 Mag; 14 Benedicamus Domino; 14 lits; 28 Lamentations, incl. Lamentación a solo, 1763, S, vc, db, bc, ed. F. Marvin (Vienna, 1970); 16 Officium defunctorum lessons; 4 seqs; 16 resps, incl. Peccantem me quotidie, SATB, bc, 3 ed. in Rubio (1977), suppl.; 6 motets; 4 Salve, incl. Salve, S, SATB, str, bc, 1753, ed. F. Marvin (Vienna, 1970); cants.; Vespers

132 villancicos, 1752–78; 7 for Corpus Christi, 13 for St Jerome and St Lawrence, 112 for Christmas incl. Congregante y festero, S, T, SSAT, SATB, vns, bc, 1761, De un maestro de capilla, S, A, SSAT, vns, bc, 1763, Contredanza de colegio, S, SATB, vns, bc, 1773, En piélagos immensos, S, S, SSAT, SATB, fl, 2 tpt, vns, bc, 1774: all 4 ed. F. Marvin (Vienna, 1967), others ed. P. Capdepón Verdú (Madrid, 1992)

Other vernacular works, incl. 3 gypsy villancicos: A Belén a ver, 6vv, 1753, Dos gitanas y un gitano, 7vv, 1765, Con garbo muchachos, 4–8vv, 1772; Los negros venen de zumba (negro dialect villancico), 6vv, 1758

INSTRUMENTAL

1st air varié, cl, pf, op.7 (London, *c*1800)

120 keyboard sonatas, incl. XXVII sonatas para clava (London, *c*1796): ed. S. Rubio, *Sonatas para instrumentos de tecla*, i–vii (Madrid, 1957–62) [sonatas 41–2, 45, 54 and 60 ed. as 96 ii, 96 iv, 94 iv, 92 i and 99 i]; 44 also ed. F. Marvin (London, 1957–69), 12 ed, B. Ife and R. Truby (Oxford, 1989), 18 ed. F. Marvin (Munich, 1993)

Fandango, ed F. Marvin (London, 1957–69); ed. S. Rubio (Madrid, 1982)

6 quintets, 2 vn, va, vc, org, 1776, ed. in PBC, ix (1933)

6 conciertos de dos órganos obligados, ed. in MH, ser C (1952–62), also ed. M.S. Kastner (Maniz, 1972)

Liturgical works for org, incl. Versos para 'Te Deum', ed. in *TSM*, lv (1972)

WRITINGS

Llave de la modulación, y antigüedades de la música en que se trata del fundamento necessario para saber modular: theórica, y práctica para el más claro conocimiento de qualquier especie de figuras, desde el tiempo de Juan de Muris, hasta hoy, con algunos cánones enigmáticos, y sus resoluciones (Madrid, 1762/*R*); ed. and trans. FREDERICK MARVIN

Soler, Francisco (*b* ?Gerona, *c*1625; *d* Gerona, 2 May 1688). Spanish composer. He was a choirboy at Gerona Cathedral and on 2 January 1640, after his voice broke,

he became a prebendary and singer there. Later he was choirmaster at the parish church of Reus and at Vich Cathedral, and from 14 March 1682 until his death he held a similar position at Gerona Cathedral. He wrote a certain amount of Latin and vernacular religious music and a little secular music. (F. Civil Castellví: 'La música en la catedral de Gerona durante el siglo XVII', *AnM*, xv, 1960, 219–43)

WORKS

Edition: *F. Soler: Obres completes*, ed. F. Bonastre, Biblioteca de Cataluña: Publicaciones, xxx (Barcelona, 1988–)

7 masses incl. 2 requiems: 1 for 6vv, bc; 2 for 8vv; 1 for 10vv, winds; 1 for 12vv, winds; 1 for 14vv, winds; 1 for 15vv; *E-Bc, G*

Compline, 15vv, theorbo, clavichord, org, 1684 ('For the Feast of 24 May, day on which the most faithful and noble city of Gerona, never conquered, gives thanks for the victory which delivered them from French arms'), ed. F. Bonastre (Barcelona, 1988)

Lamentatio, 2vv; Lectiones (for Holy Week), 9vv; Litaniae, 8vv; 2 Mag, 9vv, 10vv; Nunc dimittis, 6vv, vns, winds; *Bc*

Cum invocarem, Diviserunt sibi vestimenta, 3vv; Dixit Dominus, 9vv; Domine probasti me, 7vv; Domine quando veneris, 5vv; Ecce Virgo concipiet, 4vv; Ego enim accepi a Domino, 4vv; Euge serve bone et fideles, 4vv; Laetatus sum, 7vv; Lauda Deum tuum Sion, 10vv; Laudate Dominum, 9vv; Nos autem gloriari oportet 8vv; Pange lingua, 3vv; Qui ex vobis, 8vv; Qui habitat; Regina caeli, 6vv; Salve regina, 10vv; Veni Sancte Spiritus, 10vv; *Bc*

26 villancicos, 4–14vv, some with winds, 1 ed. F. Bonastre, *Quaderns de música historica catalana*, v (Barcelona, 1988); 12 other works with Spanish texts, 3–12vv, some with bc; *Bc, G*

BARTON HUDSON

Soler, Vicente Martín y. *See* MARTÍN Y SOLER, VICENTE.

Solera, Temistocle (*b* Ferrara, 25 Dec 1815; *d* Milan, 21 April 1878). Italian librettist and composer. Everything about him was larger than life: his Herculean physique, his torrents of words and invective and, above all, his career of almost unbelievable contrasts. While his father languished in the dreaded Spielberg prison, he was educated in Vienna, ran away to join a circus, completed his studies in Milan and Pavia and, in his early twenties, published books of verse. His first operatic task was to rework a text by Piazza for Verdi (*Oberto conte di San Bonifacio*, 1839). Four more librettos followed quickly, two of which he set to music himself, before Verdi's setting of *Nabucodonosor* (*Nabucco*) brought him fame. *I Lombardi alla prima crociata*, *Giovanna d'Arco* and *Attila* continued the collaboration with Verdi but before the last was finished he followed his wife, the soprano Teresa Rosmina, to Spain, where he became director of productions in Madrid (and, reputedly, the favourite of Queen Isabella). *Attila* was completed by Piave, in the face of Solera's bitter recriminations. He was soon back in Italy and after 25 years of extraordinary, picaresque adventures, he died in abject poverty.

He never worked with Verdi after *Attila*, though he pressed several librettos on him. Verdi refused to have further dealings with him, but in 1861 he contributed anonymously to a fund to help him. Solera always spoke of Verdi with the warmest praise, taking credit for his success. Verdi however held that Solera had only himself to blame; had he applied himself to his career, he could have been the foremost librettist of the day. Solera's successful librettos show an eye for a theatrical situation, an unquenchable flow of colourful language, an ability to express emotional and patriotic sentiments in phrases which evoked a strong response from Verdi, and a style of versification which propelled his lines forward. Nothing Solera wrote later matches the force of his Verdi librettos; if the dramatic structure creaks at times, the words carry all before them. He also composed a cantata, *La melodia* (autograph MS in *I-Mr*), and some sacred works, chamber music and songs.

LIBRETTOS

dl – *dramma lirico*

Oberto conte di S Bonifacio (dramma, rev. of A. Piazza), Verdi, 1839 (Graffigna, 1842, as I Bonifazi ed i Salinguerra); *Ildegonda* (dramma), Solera, 1840 (Arrieta, 1845; Morales, 1865); *Gildippe ed Odoardo* (melodramma), O. Nicolai, 1840; *Il contadino d'Agliate* (melodramma), Solera, 1841; *Galeotto Manfredi* (tragedia lirica), C. Herman, 1842; *Nabucodonosor* (dl), Verdi, 1842; *I Lombardi alla prima crociata* (dl), Verdi, 1843

Genio e sventura (dl), Solera, 1843; *Giovanna d'Arco* (dl), Verdi, 1845; *Attila* (dl, Act 3 completed by Piave), Verdi, 1846; *La conquista de Granada* (dl), Arrieta, 1850; *La hermana de Pelayo* (dl), Solera, 1853; *La fanciulla delle Asturie* (tragedia lirica), B. Secchi, 1856; *Sordello*, A. Buzzi, 1856; *Pergolesi*, S. Ronchetti-Monteviti, 1857; *Vasconcello*, Villanis, 1858; *Una notte di festa*, Villanis, 1859; *L'espiazione*, A. Peri, 1861; *Zilia* (dl), Villate, 1877

JOHN BLACK

Soler Sardà, Josep (*b* Vilafranca del Penedès, nr Barcelona, 25 March 1935). Catalan composer. He studied first in Spain with Rosa Lara, and at the beginning of the 1960s went to Paris, where he received advice from René Leibowitz, but his principal teacher, from 1960 to 1964, was Cristòfor Taltabull, an acquaintance of Reger. He was a professor at the Barcelona Conservatory, then became director of the Badalona Conservatory, Barcelona. He has taught many young Catalan composers, including Albert Sardá, Juan José Olives, Benet Casablancas, Miquel Roger, Albert Llanas, Maria Teresa Pelegrí and Agustí Charles.

Soler has produced over 150 pieces, in many of which the voice is prominent. But he has also written music for chamber groups, piano, organ and orchestra, and works with religious themes. More than most of his contemporaries, he has devoted himself to opera. His music is strongly rooted in the tradition of the Second Viennese School, especially Berg, and he has passed through distinct phases in the course of his prolonged musical development. Initially he used a 12-note system that was academic in its method but entirely self-taught and personal, and by 1960 he had arrived at a free atonalism, in some cases strongly tinged with Expressionism. At the beginning of the 1960s he wrote various works based on a modernized version of the modal metrics of the polyphony of the Notre Dame school. Since 1975 he has created an original language blending the 12-note concept with a re-interpretation of the 'Tristan' chord, while at the same time he has established himself as a master of orchestration.

Soler is a member of the Real Academia Catalana de Bellas Artes de San Jorge and he has won prizes from the Monte Carlo Opéra (1964), the City of Barcelona (in 1962 and 1978) and the 13th Oscar Esplá competition (Alicante, 1982).

ANGEL MEDINA

Solerti, Angelo (*b* Savona, 20 Sept 1865; *d* Massa Carrara, 10 Feb 1907). Italian philologist and musicologist. After attending the Istituto di Studi Superiori in Florence, he graduated in arts from the University of Turin in 1887 and spent his career mainly in education. Through his philological studies he made important contributions to the documentation of the origins of opera. *Le origini del melodramma: testimonianze dei contemporanei* (Turin, 1903/*R*) is largely an edition of prefaces and other accounts of early opera, including a list of operas performed before 1640. *Gli albori del melodramma* (Milan, 1904–5/*R*), a history of the opera in the first half of the 17th century, contains critical editions of many early librettos and the complete works for music of Rinuccini and Chiabrera. *Musica, ballo e drammatica alla corte medicea dal 1600 al 1637: notizie tratte d'un diario ... con appendice di testi inediti e rari* (Florence, 1905/*R*) is one of the earliest full-scale archival studies of an aspect of Italian musical life. Solerti contributed many articles to the *Rivista musicale italiana* and other periodicals.

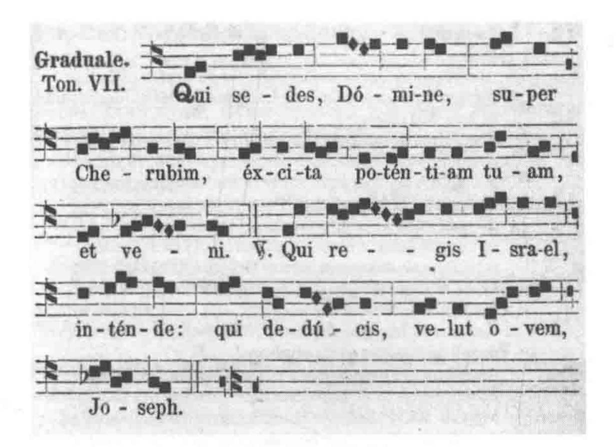
LEONARDO PINZAUTI



Solesmes. A Benedictine abbey in the village of the same name between Le Mans and Angers. It was the centre of the revival of Gregorian chant in the 19th and 20th centuries. A priory existed at Solesmes from 1010 to 1791; in 1833 Dom Prosper Guéranger (1805–75) revived Benedictine life there. In 1901 political events obliged the monks to move to the Isle of Wight. They returned to Solesmes in 1922.

1. THE REVISION OF THE LITURGICAL BOOKS. From the beginning of his time as abbot, Guéranger undertook the restoration of the Roman liturgy and of Gregorian chant, an integral part of it. Going against contemporary practice, whereby each note was heavily stressed and the melodies arbitrarily divided into bars, he succeeded in giving a totally unsuspected suppleness to the performance of Gregorian melodies. He was assisted by Canon Augustin Gontier (1802–81), who wrote a *Méthode raisonnée de plain-chant* (Le Mans, 1859). At an early stage Guéranger formulated the principle that later served as a basis for the reconstructions of melodies according to the manuscripts: 'We have the Gregorian phrase in its pure state in a particular piece ... when examples from several churches at some distance from one another share the same text' (*Institutions liturgiques*, 1840, p.306). With Dom Paul Jausions (1834–70) and, later, Dom Joseph Pothier (1835–1923), he specified, as general principles, the necessity of referring to the manuscripts for melodic line and notation, and of good phrasing in performance. This gave rise to a memorandum which Pothier later expanded in his principal work *Les mélodies grégoriennes* (Tournai, 1880/*R*), a publication that was greeted enthusiastically at the Gregorian Congress in Arezzo in 1882 and was subsequently translated into German and Italian. In 1880 Dom André Mocquereau (1849–1930) joined the team and became its head when Pothier left Solesmes in 1893.

In 1883 Pothier brought out the first edition of the *Liber gradualis* (Tournai), which aroused strong opposition. By way of defending his teacher's work, Mocquereau conceived the grandiose scheme of the series Paléographie Musicale (see §4 below), of which the second and third volumes proved the substantial unanimity of the manuscript readings and the vast gulf between them and Pustet's edition (*Graduale romanum*, Regensburg, 1871), which at that time enjoyed the status of an official version. Some idea of this edition may be gained by comparing an extract from it with the restored version, the authenticity of which is assured by the St Gallen neumes accompanying it (figs.1 and 2).

Pope Leo XIII had given encouragement to the work of Solesmes; Pius X, his successor, appointed a commission to edit and publish a new version, based on the manuscripts. This edition was subsequently declared official and obligatory. Many difficulties arose, however, which prevented the continued collaboration of Solesmes; almost the entire responsibility for the first volumes of the Vatican edition (*Kyriale*, 1905; *Graduale*, 1908; *Officium pro defunctis*, 1909; *Antiphonale*, 1912) fell subsequently upon the president of the commission, Pothier, who had become abbot of Ste Wandrille in 1898.

In 1913, however, Pius X requested that Solesmes edit the remaining books that had not been revised (*Cantus passionis*, 1916; *In triduo sacro majoris hebdomadae*,

1. *'Qui sedes Domine' from the 'Graduale romanum' published by Pustet in 1871*

1922). In 1934 the *Antiphonale monasticum* was published for the Benedictine Confederation. In 1948, Solesmes undertook a critical edition of the Roman Gradual; this work was to receive encouragement from the Second Vatican Council, and later the Libreria Editrice Vaticana accepted responsibility for its publication.

A scholarly journal, *Revue grégorienne*, was founded in 1911 and continued to appear until 1964.

2. The performing practice of Solesmes. The long labours of the monks of Solesmes have always been essentially practical in their intention; the chant books have been improved from one edition to the next in order to enhance choral performance, to bring beauty into the services and to provide an authoritative model for singers of Gregorian chant as well as for the faithful. The latter concern has led to the clear setting out, in a number of works, of the principles for performance on the basis of the manuscripts and practical experience; these works mark the stages in the development of what has been called the 'Solesmes school'.

In *Les mélodies grégoriennes* Pothier explained his conception of free Gregorian rhythm: this is 'oratorical rhythm' similar to that of speech, which achieves coherence through respect for the Latin words and their accentuation, and balance through the proportions existing between the various divisions. Pothier's intuition was basically correct, but he lacked the deep knowledge of the sources which only time can bring.

Mocquereau aimed at greater precision. In his *Nombre musical grégorien* (i, 1908, Eng. trans., 1932; ii, 1927) he expounded a philosophical analysis of the rhythm, which led him to divide Gregorian melody into groups of two and three notes; these groups are in effect short bars of 2/8 and 3/8, to be reassembled by the singer to form the various parts of the piece. Mocquereau's method was applied by the addition of rhythmic signs in the editions, where the so-called *ictus* shows the thesis (rhythmic fall) of the basic two- and three-note rhythms and, at the same time, the first note of the 'bars'.

Dom Joseph Gajard, who became director of the choir of Solesmes in 1914, worked on the simplification of the Solesmes method of teaching in order to facilitate its propagation. In addition he applied the theory in a flexible way in the gramophone recordings made under his direction by the monks of Solesmes, first by HMV in 1930, and from 1953 by Decca.

3. Developments since 1950. In 1952, research began to be based on a comparative and statistical method, and has been concerned with the two fields of composition and notation. Progress has been achieved in the study of early types of notation, their localization and their classification, and the true meaning of the neume and its rhythmic significance have re-emerged. The original differentiation in time value or duration between the various notes represented by the neumes can now be restored, not by means of some abstract, theoretical measure, but through the flexible durations of the syllables that make up the Latin words. In brief, Gregorian semiology has taken flight; it has shown the degree to which Gregorian rhythm is free and cannot be bound in any way to the concept of 'measure' (see E. Cardine: *Is Gregorian Chant Measured Music?*, Solesmes, 1964). Numerous semiological studies have appeared, for example, in the *Etudes grégoriennes* published since 1954.

In another direction, Dom Jean Claire, who succeeded Gajard in 1971, has been investigating the origins of Western modality. Several of his publications appeared (1962–4) in the *Revue grégorienne*, and another major study in *Etudes grégoriennes*.

Thanks to the accumulated documentation (about 900 manuscripts in photocopy or microfilm) and the research tools that have been forged over more than 100 years (in particular the comparative tables in which the manuscripts have been recopied by the monks), the scriptorium of Solesmes now attracts scholars from throughout the world. And the number of people who visit the abbey to hear the chant of the monks in their daily liturgical prayer is equal testimony of the continuing life of Solesmes.

4. Paléographie Musicale. The series was begun in the late 1880s (the first volume was issued in 1889) by Mocquereau, basically in support of the theories of his teacher Pothier as expressed in the latter's *Liber gradualis* and *Mélodies grégoriennes*. These two books advocated a version of the chant based on studies of the early sources, and were opposed to the melodies in the then standard *Editio medicea*. The purpose of Paléographie

2. *'Qui sedes Domine' from the Vatican edition (1908) of the 'Graduale'; restored version, with St Gallen neumes added above the text*

Musicale was to publish a number of important original sources in photographic facsimile, each facsimile preceded by a brief introduction outlining the history of the source and discussing the peculiarities of its notation. It was hoped that the accurate presentation of the actual sources (the first time photographs were used to reproduce musical notation) would prove the correctness of Pothier's theories, and help realize the principal goal of the series: 'to raise Gregorian chant from the abject state into which it has fallen, to pursue the work of its restoration until complete justice is done, and it has recovered its full ancient beauty which rendered it so proper for divine worship' (1st ser., xi).

The battle against the *Editio medicea* was essentially won in 1903 when Pope Pius X issued his *Motu proprio* establishing the *Editio vaticana* according to the principles of the reformers; but controversies, particularly concerning performance, continued. Mocquereau and Pothier disagreed on the question of chant rhythm, and the introductions to several volumes of Paléographie Musicale are concerned with this. In fact, some introductions grew to almost unmanageable proportions. The introduction to volume vii, for instance, contains such a long discussion of the Latin tonic accent that the facsimile itself had to be relegated to the next volume. In 1900 Mocquereau established a second series which consisted of facsimiles with very little prefatory material, and in 1955 it was decided to curtail the introductions to the first series as well.

Mocquereau wrote many of the introductions. After his death in 1930, the editorship was taken up by Gajard. By 1992, 11 graduals, a cantatorium, a noted missal, four antiphoners, one volume of fragments and one each of sources of Ambrosian and Beneventan chant had been published, illustrating a number of different notations and traditions. Volumes ii and iii, on the other hand, were not devoted to a single manuscript, but rather to a single piece: the graduals of the type *Justus ut palma*. These volumes present more than 200 facsimiles of that melody.

PALÉOGRAPHIE MUSICALE

FIRST SERIES

Vol.

i *Le Codex 339 de la Bibliothèque de Saint-Gall (Xe siècle): Antiphonale missarum Sancti Gregorii* (1889/*R*) [general introduction outlining aims of the new publication; history of the monastery of St Gallen and its library; description and dating of *CH-SGs* 339; origin and classification of different types of neumatic notation]

ii, iii *Le répons-graduel* Justus ut palma, *reproduit en fac-simile d'après plus de deux cents antiphonaires manuscrits d'origines diverses du IXe au XVIIe siècle* [ii] (1891/*R*) [study of accented, ordinary and liquescent neumes]; [iii] (1892/*R*) [facs.; the influence of the cursus and the Latin tonic accent on the melodic and rhythmic structure of Gregorian chant]

iv *Le codex 121 de la Bibliothèque d'Einsiedeln (Xe–XIe siècle): Antiphonale missarum Sancti Gregorii* (1894/*R*) [Romanian letters; the cursus and psalmody (continued from iii)]

v, vi *Antiphonarium ambrosianum du Musée britannique (XIIe siècle) codex Additional 34209* [v] (1896/*R*) [the Ambrosian antiphoner and Greek tropers; mutual relationship between Latin and Greek liturgies; 4th-century Latin psalmody; some aspects of the evolution of psalmody]; [vi] (1900/*R*) [transcr.]

vii, viii *Antiphonarium tonale missarum, XIe siècle: codex H.159 de la Bibliothèque de l'Ecole de médecine de Montpellier* [vii] (1901/*R*) [account of discovery of *F-MOf* H.159; description of antiphoner; contents; role and place of the Latin tonic accent in Gregorian rhythm]; [viii] (1902–5/*R*) [facs.]

ix *Antiphonaire monastique, XIIe siècle: codex 601 de la Bibliothèque capitulaire de Lucques* (1906/*R*) [description of *I-Lc* 601; tonary]

EUGÈNE CARDINE/DAVID HILEY (1–3), RICHARD SHERR (4)

Sol-fa [solfa]. General name for sundry English forms of SOLMIZATION, commonly tonic-based. Early use of the English term 'solfyng' was relatively widespread, and is found for example in the preface to Sternhold and

Hopkins' *Whole Booke of Psalmes* (editions of 1572 to 1631); the word appears to derive from Old French ('solfier') and Latin ('solfare'). Systems of sol-fa include:

(1) 'Four-note' (tetrachordal) sol-fa, of FASOLA, in which the major scale runs *fa, sol, la, fa, sol, la, mi*. This early form was popularly known as 'Lancashire' or 'English' sol-fa.

(2) 'Seven-note' sol-fa, using *do, re, mi, fa, sol, la, si*; and a 19th-century refinement, TONIC SOL-FA, using *doh, ray, me, fah, sol, lah, te*.

BERNARR RAINBOW

Solfatio. *See* SOLMIZATION.

Solfeggio [solfège]. A term originally referring to the singing of scales, intervals and melodic exercises to solmization syllables (*see* SOLMIZATION, §I, 1). P.F. Tosi's *Opinioni de' cantori antichi e moderni* (1723) emphasizes the young musician's need to 'solfeggiar la scaletta', while J.F. Agricola's expanded translation, *Anleitung zur Singkunst* (1757), explains that what the Italians called 'solfeggiren' is the same as that which the Germans traditionally called 'solmisiren'. There have been numerous approaches to *solfeggio*, all fashioned to meet the theoretical and practical needs of the time; they include Fulvio Chigi Zondadari's *Riflessioni fatte da Euchero Pastore Arcade sopra alla facilità che trovasi nell'apprendere il canto con l'uso di un solfeggio di dodici monosillabe* (1746), and Giuseppe Baini's *Difesa del solfeggiamento regolato dalla variazione de' tuoni, contro i partigiani delle mutazioni, del setticlave e dell'unica lettura* (MS dated 1808, described in Adrien de La Fage, *Essais de dipthérographie musicale*, 1864, pp.257ff), a treatise that deals elaborately with the matter of inflecting the pitch of accidentals in an age still struggling with the problems of equal temperament. Divergent approaches to *solfeggio* have continued to be a matter for debate in the 20th century, especially between the schools of the 'fixed *doh*' and the 'movable *doh*' (*see* TONIC SOL-FA).

In the 17th century the meaning of the term 'solfeggio' was extended to include textless exercises composed by Italian singing masters to assist their pupils in the development of vocal agility and the art of ornamentation (i.e. 'florid song'). These were related to the vocal ricercares (*see* RICERCARE, §3), exercises in the singing of simple polyphony, usually in two parts. Whereas ricercares were frequently published, the new *solfeggi* rarely came into print, since one of the hallmarks of the competent singing teacher was his ability to compose such exercises himself (a rare exception is *Solfeggiamenti, et ricercari a due voci*, Rome, 1642). Tosi (Eng. trans., 2/1743) recommended that

> If the Master does not understand Composition, let him provide himself with good Examples of *Sol-Fa*-ing [i.e. *solfeggio*] in divers Stiles, which insensibly lead from the most easy to the more difficult, according as he finds the Scholar improves; with this Caution, that however difficult, they may be always natural and agreeable, to induce the Scholar to study with Pleasure.

Solfeggi of this kind were too elaborate to be sung to solmization syllables, and single vowel sounds were used. Zacconi (1592), Cerone (1613), Mersenne (1634) and others had already provided florid exercises (often called *passaggi*) to be sung to the five vowels. G.B. Mancini (*Pensieri, e riflessioni pratiche sopra il canto figurato*, 1774) advocated the use of the vowels 'a' and 'e' only.

Italian pedagogical methods were widely disseminated and emulated in the 18th century, and with the founding of the Paris Conservatoire in 1795 training in *solfeggio* was instituted as a basis of the curriculum. Solfège developed there during the 19th century into an elaborately systematic regimen in basic musicianship. French interest in Italian methods of instruction is coeval with the first publications of *solfeggi*, all of them in Paris. The first important collection was *Solfèges d'Italie avec la basse chiffrée* (containing examples by Leo, Durante, Scarlatti, Hasse, Porpora and others, edited by P. Levesque and L. Bèche), which appeared in 1772 and saw three later editions, as well as several pirated ones. Other early collections were Girolamo Crescentini's *Raccolta di esercizi per il canto all'uso del vocalizzo* (1811) and Rossini's *Gorgheggi e solfeggi* (1827). The most important of the later methods was *Solfège des solfèges* by Danhauser, Lemoine and Lavignac (1910–11), an elaborate course extending to three volumes.

The French solfège tradition has served as a point of departure for numerous methods of teaching basic musical skills developed in other countries, among them the methods of Wedge, Hindemith, Kodály and Villa-Lobos. Since World War II many instruction manuals have been printed in a variety of languages, all of them more or less indebted to *solfeggio* and solfège; the most imaginative of them continue to address instruction to contemporary needs, for example Lars Edlund's *Modus vetus: gehörstudier i dur/moll-tonalitet* (1967) and *Modus novus: lärobok i fritonal melodiläsning* (1963).

OWEN JANDER

Solha [Solla], **Francisco António** (*b* Pontevedra, *c*1720; *d* Guimarães, 23 Oct 1794). Portuguese organ builder of Spanish birth. His early biography is obscure; Gerhard Doderer has identified him with the 'Francisco' who worked as assistant to Simão Fontanes at Braga Cathedral in 1737–8, being paid a quarter of the master builder's rate. Solha then moved to Amarante, building an organ for the church of S Pedro; he may have stayed there for up to two decades. He was twice married, and from 1759 his workshop was in rua da Fonte Nova, Guimarães. According to the inscription on the cartouche of the organ he began in 1781 for the church of the Benedictine monastery of S Martinho at Tibães, he was of Galician origin. The inscription also describes him as 'vice consul of Spain by order of her Majesty Catherine', perhaps a recognition of his philanthropy during later life. He was a member of several holy orders and, through his business success, was able to bequeath at his death considerable sums to five religious houses for perpetual anniversary masses.

Solha left inscriptions on skin in the wind-chests of his organs, and this has helped greatly in the identification of them. They conform to the traditions of the Portuguese Baroque; the influence of his master Simão Fontanes is also discernible. His identified work includes two organs for Lamego Cathedral (1755–7); S Domingos, Guimarães (1758); S Miguel de Refóios, Cabeceiras de Basto (1770); S Marinha da Costa, Guimarães (1778); church of the Misericórdia, Guimarães (1780), and S Martinho, Tibães (1785). On stylistic evidence, combined with the knowledge of Solha's associations with religious orders, it seems reasonable to propose that a number of anonymous instruments in monasteries and nunneries might have been built by him, including those at S Clara, Vila do Conde (*c*1785), and Santa Cruz, Braga.

Soliani, Angelo (*b* Gualtieri, 10 Dec 1752; *d* after 1815). Italian violin maker. He is first known to have been in Modena during the early 1780s; he disappeared from that city some time after 1815. His origins in violin making are uncertain, his profession in 1812 being that of a gunsmith. Instruments bearing his label date from 1787 to 1814. His work is, in every respect, clean and precise, especially the inlay of the purfling and the fine precise carving of the scrolls, even and fairly shallow, with prominent inner turns. His model is vaguely reminiscent of Guadagnini and his arching, while flat, is often very scooped out at the C-bouts, robbing his instruments of some tonal power. He usually selected local woods with a small figure, often cut partly on the slab and covered with a fairly transparent orange to red-orange varnish. Soliani's instruments enjoy a fine reputation and are much sought after. In addition to the label, they usually bear his brand, a small radiant sun, on the inside of the back.

PHILIP J. KASS

Solié [Solier, Sollié, Soulié, Soulier], **Jean-Pierre** (*b* Nîmes, 1755; *d* Paris, 6 Aug 1812). French composer and singer. The son of a cellist in the theatre at Nîmes, he learnt music at an early age and became a choirboy in the local cathedral. For a long time he gave singing and guitar lessons in towns in the south of France and played the cello in theatre orchestras. In 1778 he was in Avignon where Grétry's *La rosière de Salency* was being produced; there he replaced a sick actor and had such success that he was immediately engaged as a tenor. After performing in the provinces he was summoned to the Comédie-Italienne, making his début on 31 August 1782 in Monsigny's *Félix* and Grétry's *L'amant jaloux* with moderate success. He then went to Nancy and to Lyons, where he worked for three years. Recalled to Paris in 1787, he played secondary parts for two years until he was asked to stand in for Clairval in Propiac's *La fausse paysanne* on 26 March 1789. This time he was a great success and established a reputation in his profession; Grétry, in his *Mémoires* (Paris, 2/1797, vol.iii, p.146), described him as an excellent actor. His voice, which had taken on a baritone quality (then novel at the Comédie-Italienne), inspired Méhul to write parts for him in *Euphrosine* (Alibour), *Stratonice* (the Doctor) and *Joseph* (Jakob). In 1790 he embarked on a career as a dramatic composer by introducing some airs from Gluck's *La rencontre imprévue* into *Les fous de Médine*. He produced *Jean et Geneviève* at the Théâtre Favart in 1792; the piece was revived 28 years later.

Although pleasant and facile, Solié's compositional style was not assertive enough to achieve lasting success. He is, however, remembered for *Le secret* (103 performances between 1801 and 1814) and *Le jockey*, works which owe much to the librettist Hoffmann, *Le diable à quatre* (95 performances) and for occasional pieces such as *L'opéra au village* (1807), written for the emperor's return and the signing of the peace. His last work, *Les ménestrels* (1811), was a failure.

Solié's second son, Emile Solié (*b* Paris, 9 April 1801; *d* ?Ancenis, after 1867), was a writer on music. He wrote *Histoire du Théâtre royal de l'Opéra-Comique* (Paris, 1847) and a *Notice sur l'Opéra national* (Paris, 1847) as well as brief biographical studies of Rameau, Gluck and others. Emile's son, Charles Solié (*d* after 1912), was a conductor and director at the Théâtre Graslin, Nantes, in the 1860s and later conductor at the Nice Théâtre Français. He composed a successful *opéra comique, Scheinn Baba, ou L'intrigue au harem* (Nice, 5 April 1879), and light orchestral music.

WORKS

all printed works published in Paris

STAGE

opéras comiques, first performed in Paris unless otherwise stated

Le séducteur (comédie, 5, G.-F. de Bièvre), Fontainebleau, 4 Nov 1783

L'époux généreux, ou Le pouvoir des procédés (1, J.-E.-B. Dejaure), OC (Favart); rev. version, Italien, 1804 (*c*1804)

Les fous de Médine, ou La rencontre imprévue (3, L. Dancourt), OC (Favart), 1 May 1790, with H.-M. Berton and others

Le franc Breton, ou Le négociant de Nantes (opéra, 1, J.-E.-B. Dejaure), OC (Favart), 3 Nov 1792 (n.d.), collab. R. Kreutzer

Jean et Geneviève (1, G.-F. de Favières), OC (Favart), 3 Dec 1792 (*c*1798)

L'école de village (1, C.A. Sewrin), OC (Favart), 10 May 1793

La moisson (2, Sewrin), OC (Favart), 5 Sept 1793

Le plaisir et la gloire (1, Sewrin), OC (Favart), 19 Jan 1794

Le congrès des rois (cmda, 3, Desmaillots [A.F. Evel]), OC (Favart), 26 Feb 1794, collab. Dalayrac, Grétry, Méhul and 8 others

La soubrette, ou L'étui de harpe (1, F.-B. Hoffmann), OC (Favart), 3 Dec 1794

L'entreprise folle (1), OC (Favart), 1795

Le jockey (1, Hoffmann), OC (Favart), 6 Jan 1796 (*c*1796)

Le secret (1, Hoffmann), OC (Favart), 20 April 1796 (*c*1796)

Azelina (3, Hoffmann), OC (Feydeau), 5 Dec 1796, air (1798)

La femme de quarante-cinq ans (1, Hoffmann), OC (Favart), 19 Nov 1798

Le chapitre second (1, E.M. Dupaty), OC (Favart), 17 June 1799 (*c*1799)

Une matinée de Voltaire, ou La famille Calas à Paris (1, J.-B. Pujoulx), OC (Favart), 22 May 1800

Une nuit d'été, ou Un peu d'aide fait grand bien (1, N. Gersin), OC (Favart), 7 June 1800

Oui, ou Le double rendez-vous (opéra, 1, J.-F.-T. Goulard), OC (Favart), 29 Aug 1800

La rivale d'elle-même (1, P.-J.-R. Bins de Saint-Victor), OC (Favart), 3 Oct 1800

La pluie et le beau temps, ou L'été de l'an VIII (vaudeville, 1, Dupaty), OC (Favart), 17 Nov 1800

Le petit Jacquot (1, Alexandre), Jeunes Artistes, 27 April 1801

Quatre maris pour un (1, R.C.G. de Pixérécourt), Jeunes Artistes, 27 April 1801

Plutarque (1, F.-P.-A. Leger Alissan de Chazet), OC (Feydeau), 20 Jan 1802

Le séducteur amoureux (comédie, 3, C. de Longchamp), Français, 25 Jan 1803 (1803)

Henriette et Verseuil (1, Guillet and E. Hus), OC (Feydeau), 30 July 1803

L'incertitude maternelle, ou Le choix impossible (1, Dejaure), OC (Feydeau), 6 Aug 1803 (n.d.); acted without music (Favart), 5 June, 1790

L'oncle et le neveu (1, A.-J. Grétry), Montansier, 26 Nov 1803

Louise, ou La malade par amour (1, Hoffmann), OC (Feydeau), 16 April 1804 (n.d.)

Les deux oncles (opera, 1, A.-J. Grétry, N.J. Forgeot), OC (Favart), 3 Jan 1805

Chacun son tour (1, J. Gensoul), OC (Feydeau), 26 Oct 1805 (n.d.)

L'opéra au village (divertissement, 1, Sewrin), OC (Feydeau), 30 July 1807

L'amante sans le savoir (opéra, 1, C.A. Creuzé de Lesser), OC (Feydeau), 1807

Anna, ou les deux chaumières (opéra, 1, Sewrin), OC (Feydeau), 20 Feb 1808 (n.d.)

Mademoiselle de Guise (3, Dupaty), OC (Feydeau), 17 March 1808 (n.d.)
Le hussard noir (opéra, 1, Dupaty), OC (Feydeau), 10 Dec 1808
Le diable à quatre, ou La femme acariâtre (3, Creuzé de Lesser, after M.-J. Sedaine), OC (Feydeau), 30 Nov 1809 (n.d.)
La victime des arts (2, L.-M. d'Estourmel), OC (Feydeau), 27 Feb 1811, collab. Isouard, H.-M. Berton
Les ménestrels (3, J.M. de Reveroni Saint-Cyr), OC (Feydeau), 27 April 1811
Unperf.: Les trois tantes, 1797 (Pixérécourt); Victor, 1797 (drame lyrique Pixérécourt) [accepted by Théâtre Feydeau, but never perf.]

PAULETTE LETAILLEUR

Solie, Ruth A(mes) (*b* New York, 17 May 1942). American musicologist. She graduated from Smith College with the BA in 1964 and then moved to Chicago University, where she gained the MA (1966) and the PhD with a dissertation on melody analysis (1977), studying with Leonard B. Meyer. She taught at Mary Baldwin College (1972–4), after which she joined the faculty at Smith College and became professor of music there in 1988. She has held visiting appointments at Yale University and Columbia University. Solie approaches 19th-century theory and criticism from a feminist perspective and has been active in the development of women's studies within the discipline of musicology. Her work also focusses on social and intellectual history, particularly in Europe. She has been an active member of the American Musicological Society and was president for the term 1999–2000.

RENATO BOSSA

Soliva, Carlo Evasio (*b* Casale Monferrato, Piedmont, 1792; *d* Paris, 20 Dec 1853). Italian composer, teacher and conductor. He studied with Asioli and Federici at the Milan Conservatory and in 1815 was engaged as a conductor at La Scala, where four of his five operas were produced. In 1821 he moved to Warsaw, where he became one of the foremost figures in musical life. He taught singing and harmony at the conservatory and (from 1827) was director of the School of Singing and Declamation (a section of the old conservatory which included instrumental as well as singing classes). He also conducted many operas and symphony concerts in Warsaw, including Chopin's farewell concert on 11 October 1830. In 1832 he moved to St Petersburg, where from 1834 he was conductor of the tsar's royal chapel, director of the opera and teacher of music theory and head of singing classes at the school of drama. In 1841, after a visit to Italy, he settled in Paris. His other compositions were mainly sacred vocal and chamber works. He also wrote a two-volume textbook, *Szkoła śpiewu konserwatorium muzycznego w Warszawie* ('School of Singing of the Music Conservatory in Warsaw').

WORKS

OPERAS

all operas performed Milan, Scala, unless otherwise stated

La testa di bronzo, ossia La campana solitaria (opera comica, 2, F. Romani), 3 Sept 1816
Berenice d'Armenia (os, 3, J. Ferretti), Turin, Regio, Jan 1817
La zingara delle Asturie (opera semiseria, 2, Romani), 5 Aug 1817
Giulia e Sesto Pompeo (os, 2, B. Perotti), 24 Feb 1818
Elena e Malvina (opera semiseria, 2, Romani), 22 May 1824

ZOFIA CHECHLIŃSKA

Sollberger, Harvey (Dene) (*b* Cedar Rapids, IA, 11 May 1938). American composer, flautist, conductor and teacher. He studied composition with Bezanson at the University of Iowa (BA 1960) and with Beeson and Luening at Columbia University (MA 1964); his flute teachers were Samuel Baron and Betty Mather. He has held professorships at Columbia University (1965–83), the Manhattan School (1972–83) and Indiana University (1983–92); he became professor at the University of California, San Diego, in 1992. At the forefront of contemporary music in the 1960s, he co-founded the Group for Contemporary Music with Wuorinen in 1962, later co-directing and playing the flute in it. A virtuoso flautist, Sollberger has performed and recorded a large repertory of new music, including several of his own works. He moved to Indiana in 1983, after which his conducting career began to assume a greater importance; in 1998 he was appointed music director of the La Jolla Symphony in San Diego. As well as two Guggenheim fellowships (1969, 1973), he has gained awards and commissions from institutions including the Koussevitzky Foundation (1966), the National Endowment for the Arts, the San Francisco Symphony and Music from Japan; his works have been performed by ensembles including the San Francisco SO, the New York PO and Speculum Musicae. Among his writings are two essays under the title 'The New Flute' for *Selmer Bandwagon* (1975) and articles on the contemporary flute repertory.

Much of Sollberger's output uses the flute, and solo works such as the series *Riding the Wind* (1973–4) have incorporated his own innovative extended flute techniques. His music from the 1960s participates in the exuberant exploration of sonic and formal ideas of the time: such works as *Chamber Variations* (1964) and *Music for Sophocles' Antigone* (1966) are distinguished by a sensibility for pacing, drama and instrumental colour. Humour has been a consistent feature of Sollberger's style, symbolizing an understanding of the performer's plight in attempting to communicate from within a contemporary idiom. In *Double Triptych* (1984) and *Trickster Tales* (1995), humour is used both latently and outwardly; in vocal works such as *Passages* (1990), *In Terra Aliena* (1995) and *Grandis Templum Machinae* (1996), the weight of the music's message (for instance the social isolation of immigrants in *In Terra Aliena*) is made engagingly palatable by a wit and artistic elegance that transcends simple theatricality or musical slapstick. Sollberger's commitment to active professional performance remains a substantial influence on his compositions.

WORKS

4–20 insts: Grand Qt, 4 fl, 1962; Solos, vn, 5 insts, 1962; Chbr Variations, 12 insts, 1964; Riding the Wind I, fl, cl, vn, vc, pf, 1974; Fl and Drums, 8 fl, 8 perc, 4 db, 1977; The Humble Heart/CAT Scan, wind qnt, 1982; Interrupted Night, 5 insts, 1983; Killapata/Chaskapata, solo fl, 11 fl, 1983; Three or Four Things I Know About the Oboe, ob, 13 insts, 1986; original/substance/manifests traces, fl, hp, gui, pf, perc, 1987; Mutable Duo, fl, cl, vn, vc, pf, perc, 1991; The Advancing Moment, fl, cl, vn, vc, pf, perc, 1993; Ciao, Arcosanti, 8 insts, 1994

2–3 insts: Duo, fl, pf, 1961; Compositions, fl, vc, pf, 1961; 2 Oboes Troping, 1963; Music, fl, pf, 1964; Divertimento, fl, vc, pf, 1970; Elegy for Igor Stravinsky, fl, vc, pf, 1971; Iron Mountain Song, tpt, pf, 1971; As Things Are and Become, str trio, 1972; The Two and the One, amp vc, perc, 1972; Sunflowers, fl, vib, 1976; met him pike hoses, fl, vn, 1980; 6 Qts, fl, pf, 1981; Angel and Stone, fl, pf, 1981; Double Triptych, fl, perc, 1984; Taking Measures, vn, pf, 1987; Aurelian Echoes, fl, a fl, 1989; Pf Trio '... from winter's frozen stillness ...', 1990; To the Spirit Unappeased and Peregrine, fl, cl, 1998

RICHARD SWIFT/MARK MENZIES

Sollertinsky, Ivan Ivanovich (*b* Vitebsk, 20 Nov/3 Dec 1902; *d* Novosibirsk, 11 Feb 1944). Russian musicologist, and theatre and music critic. He studied at the University of Petrograd (1921–4), specializing in Romano-Germanic philology and Spanish Classical literature. At the same time he studied drama at the Institute for the History of the Arts, graduating in 1923 and later pursuing postgraduate studies (1926–9). Apart from a few lessons in conducting from Malko in the mid-1920s, he was musically self-taught. While still young, his phenomenal memory, wide knowledge and linguistic mastery made him a well-known figure in academic circles. From 1923 he lectured in the history of literature, the theatre, music, psychology and aesthetics in various higher education establishments in Leningrad, including the Conservatory, where he became a professor in 1939. For 12 years from 1929 he was a lecturer at the Leningrad Philharmonic, and was also in charge of its repertory section. Later he became editor of the Philharmonic publishing house (1934–41), and finally artistic director, combining this with the directorship of the repertory section at the Kirov Theatre. While in these posts he gave about 250 popular lectures and introductory talks to symphony concerts, wrote programme notes and reviewed concerts and operas. During the war (1941–4) he was evacuated to Novosibirsk, where he continued to supervise the Philharmonic's concert activities and the arts department of the Leningrad Theatre Institute; he continued to collaborate actively with these and frequently travelled to Moscow.

Sollertinsky was the most important Soviet music and theatre critic of the 1920s and 30s. With a gift for oratory

and polemic he was equally renowned as a lecturer and writer; some of his articles are transcripts of his lectures, and are remarkable for their pointed style and for their attempts to reassess traditional evaluations of the classical artistic heritage. Throughout his career as a theatre critic he was interested in Shakespeare, Stendhal, Romain Rolland and others, but his first major research work was concerned with ballet. In the 1930s music began to be his dominant interest; in the pre-war period he wrote on questions of music-theatre and the symphony, and delivered papers on these subjects at international symposia in Moscow (1940) and Leningrad (1941). He was one of the first in Russia to assess fully the value of Mahler's symphonies and was sympathetic towards Schoenberg, though he rejected some anti-Romantic tendencies of 20th-century music (Stravinsky). He also wrote perceptively on composers such as Offenbach: expressionism, farce and the grotesque were the polar extremes of his interests. His works on Soviet composers were of special significance. He was a lifelong friend of Shostakovich and had a strong influence on the composer's creative outlook; Shostakovich dedicated his piano trio (1944) to Sollertinsky's memory. In 1936, at the time of the musical controversy surrounding Shostakovich's *Lady Macbeth*, Sollertinsky was branded the 'bard of formalism'. During his 17 years as a critic Sollertinsky contributed over 250 items to the newspapers *Krasnaya gazeta* (from 1925), *Leningradskaya pravda* (1937–41), *Sovetskoye iskusstvo* (from 1931), *Izvestiya* (as a permanent contributor from 1934), among others. He also wrote articles for the journals *Zhizn' iskusstva* (1927–9), *Rabochiy i teatr* (1930–35), *Sovetskaya muzïka* (from 1935), besides many other scholarly works.

Sollié, Jean-Pierre. *See* SOLIÉ, JEAN-PIERRE.

Söllner, Johann Gottlieb (*b* Zwickau, 1 Sept 1732; *d* Glauchau, 7 Aug 1798). German Kantor, composer and theologian. He was the son of a weaver and entered the Thomasschule in Leipzig at the time when Ernesti was the director and Fischer the assistant director. Bach immediately accepted Söllner, an excellent singer, into the first choir of the church; he later also became prefect of the same church. After finishing his studies at the university he was employed as a private tutor at the home of the respected merchant Crusius in Chemnitz. As town Kantor of Ernstthal (1758–70) he performed a piece of church music every fortnight. He later took holy orders and was a priest in Schlunzig until 1782, when he became archdeacon of Glauchau and pastor of Gesau. He was industrious and ambitious, an impressive representative of the broadly educated intellectuals of the 18th century. Of his works only the chorale cantata *Herzlich lieb hab ich dich, o Herr* remains (*D-GLAU*).

WALTER HÜTTEL

Sollnitz, Anton Wilhelm. *See* SOLNITZ, ANTON WILHELM.

Söllscher, Göran (Olof) (*b* Växjö, 31 Dec 1955). Swedish guitarist. He began learning the guitar at the age of seven, and studied at the Kalmar Municipal School of Music (1965–70); he later studied with Per Olof Johnson at the conservatories in Malmö (1975–7) and Copenhagen (1976–9). In 1978 he won first prize at the Concours International de Guitare in Paris which launched his international career. His repertory is wide-ranging and is reflected in his many fine recordings, of which those of Bach's works for lute, played on an 11-string alto guitar, are especially notable. In 1991 Söllscher participated in the 'International homage to Joaquín Rodrigo' in Madrid, celebrating the composer's 90th birthday. In the same year he succeeded Per Olof Johnson as professor of the guitar at the Malmö Conservatory and in 1992 he became a member of the Royal Swedish Academy of Music. His duo partners have included Gil Shaham and Michala Petri.

JOHN W. DUARTE

Solmization [solfatio, solmifatio]. The use of syllables in association with pitches as a mnemonic device for indicating melodic intervals. Such syllables are, musically speaking, arbitrary in their selection, but are put into a conventionalized order (such as *kung–shang–chiao–chueh–yü*; *ding–dong–dèng–dung–dang*; *ut–re–mi–fa–sol–la*).

Many systems of this sort exist in the principal musical cultures of the world; they serve as aids in the oral transmission of music, and may be used either for direct teaching or as a means of memorizing what has been heard. A solmization system is not a notation: it is a method of aural rather than visual recognition (*see* NOTATION, §I, 2, and TONIC SOL-FA).

I. European medieval and Renaissance systems. II. Ancient and non-European systems.

I. European medieval and Renaissance systems

1. Syllables. 2. The three basic hexachords. 3. Mutation. 4. Expansion of the hexachord system. 5. Renaissance modifications of the system.

1. SYLLABLES. In the West, the practice was known in classical antiquity (see §II below), but that system was apparently not transmitted to the Latin Middle Ages. The earliest similar system to appear in medieval theory was that involving the *noeagis* type of formula, first used about the 9th century, which seems to indicate the precise psalm *terminatio* that should be sung. Even this system was local and relatively short-lived. Only in the early 11th century was the system that survived into modern Western use first recorded, and this is traditionally associated with Guido of Arezzo (early 11th century), together with the Guidonian hand on which the syllables are placed.

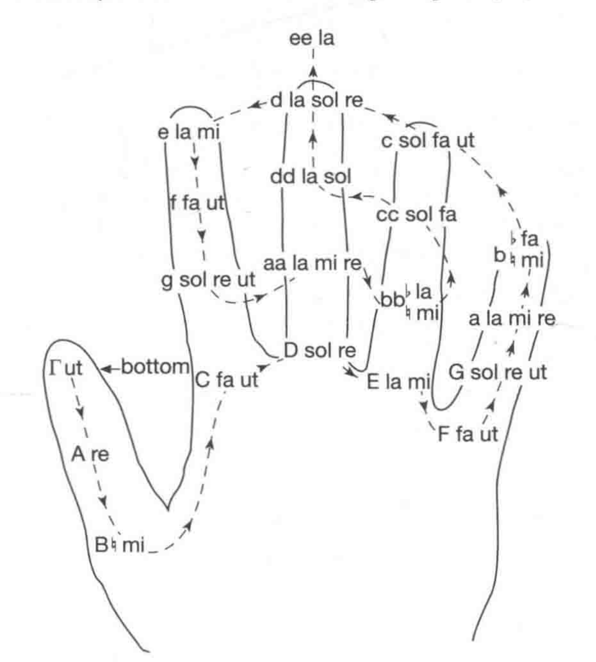
Neither the system nor the hand is explained in any of Guido's extant writings, and only later theorists and commentators attribute the practice to Guido. Nevertheless, in view of his known interest in practical and pedagogical methods, his authorship or adoption of the system may be accepted as likely. The method is based on the text and tune of the hymn *Ut queant laxis*. Frequently at that time, in order to indicate the melody of such texts, their syllables were 'heighted' as shown in Table 1 (ed. Smits van Waesberghe, 1955, p.189).

TABLE 1

F			Jo				to-
E							ri
D		cte			nes	me	
C	San			han			

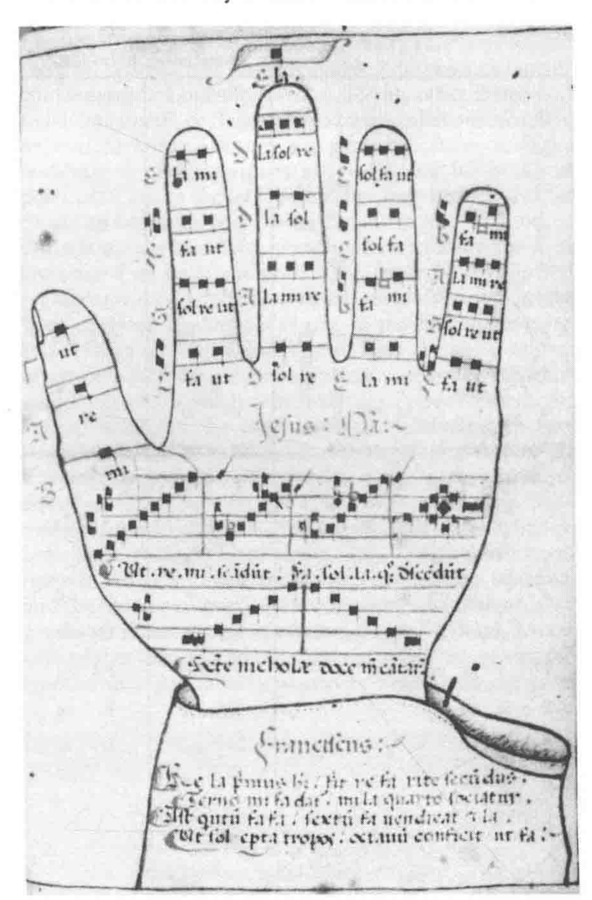
Possibly because of this procedure, a peculiar feature of the *Ut queant* melody was either recognized or deliberately so arranged. The first syllables of the opening six lines of the hymn are *ut re mi fa sol la*, using all five vowels and six different consonants. The coincidence of these alphabetic features with the stepwise rise from C to A of the pitches sung to the syllables has led some scholars to suggest that Guido composed the tune deliberately in this way. The text can be traced to the 9th century, but the tune now associated with it cannot be found before Guido's time.

Smits van Waesberghe has found other texts linked with the tune. One of these gives the syllables *tu rex mi fons sol laus*, another the series *tri pro de nos te ad*. The latter set, which recurs occasionally in later theorists such as Theinred of Dover and Ramis de Pareia, and somewhat changed in Jacobus of Liège, has been partly explained by some scholars as denoting the modes *PROtus–DEuterus–TRItus–TEtrardus* associated with the pitches D–E–F(transposed to C)–G, so that the same series C–A is given; this explanation seems unconvincing in view of the text discovered by Smits van Waesberghe. The *tri pro* syllables, which obviously had some success in the Middle Ages, probably account for the statement of Johannes Afflighemensis, about 1100, that 'there are six syllables ... the English, French and Germans use *ut re* ... the Italians have others' (ed. Smits van Waesberghe, 1950, p.49).



2. THE THREE BASIC HEXACHORDS. Whatever the truth about Guido's role, the association of *ut re* etc. with the pitches C–A soon gained hold, and the system acquired its chief pedagogical principle: that *mi–fa* is always a semitone. The placing of the same syllables on the pitches G–A–B–C–D–E, in which the semitone, now B–C, again appears between *mi* and *fa*, seems also to have been attributed to Guido in the *Liber argumentorum* (*c*1100), a commentary on the *Micrologus*. The association of the syllables with the pitches F–G–A–B♭–C–D was perhaps established a little later. The system inherited by subsequent centuries, then, was that of six syllables spanning a hexachord on C, G or F. Its illustration by means of the Guidonian hand, on which each syllable is allotted to a finger-joint or -tip, also postdates Guido, although the use of such hands for showing calendar computations, tetrachords and the position of semitones is known before Guido.

The exact location of the syllables on the hand varies from source to source, and although some arrangements seem to be more common than others, it is unwise to suppose that there is one correct or even one favoured arrangement until all versions have been compared. A common arrangement is shown in fig.1, which traces the order of syllables on the hand in fig.2.



It is not known how the hand was used, if at all, in practice. It is possible that some form of CHEIRONOMY, or pointing to the raised hand of the teacher, may have helped the singers, but this can have indicated only the letter and syllable names of the pitch, and the intervals that surround it; without some extra sign it could not have shown the exact syllable, nor the hexachord in use unless the pitch B♭ was sung.

The attribution of the system to Guido, the establishment of the hand, and the use of syllables for the hexachord starting on F all date from the early 12th century, as do explanations of how to use the system and how to change from one hexachord to another, known as mutation. Johannes Afflighemensis (*c*1100) was the first major theorist to refer clearly to the system, but he did not explain how it was to be used: 'Through these syllables, he who wishes to know about music may learn to sing any songs and may clearly and fully discover the extent of upward and downward movements and the varieties of them' (ed. Smits van Waesberghe, 1950, p.50). As well as a method of learning to sing unknown chants, the system enabled teachers to distinguish between different species of interval: the minor 3rd D–F *re–fa*, for example, is different in its interval structure from E–G *mi–sol*.

In addition, once the overlapping hexachords and the consequent assignation of more than one syllable per pitch were established, the octave of some pitches could be identified. This can be seen in Table 2, which became the standard method of illustrating the hexachords and their syllables. The hexachords beginning on C, G, and F

1. Diagram tracing the order of syllables on a typical Guidonian hand

2. Guidonian hand from a MS from Mantua, last quarter of the 15th century (GB-Ob Can.Lit.216, f.168r)

received the names 'natural', 'hard' and 'soft' (*naturale*, *durum*, *molle*) respectively.

Rules for using the system began to appear, but these are not complete enough to allow a full understanding of fundamental features. It is obvious that a number of pitches can be sung with any one of three syllables: which syllable is in fact to be sung – on the first note of a chant, for example – is not made clear, although the range of the next few notes would presumably dictate a commonsense solution in many cases. If an opening C continues upwards to G or A, the natural hexachord beginning C *ut* would seem suitable. If it continues upwards only to E and then descends again, the same hexachord will fit, but so also will the hard hexachord, using C *fa* to start. There may thus be a certain ambiguity if the opening range is small. It seems clear that at least beginners would sing the syllables with the pitches when learning: 'the intervals of the syllables may be pronounced completely, so that a semitone is not placed where a tone should be, and vice versa' (*Quatuor principalia*, 14th century, *CoussemakerS*, iv, 250*a*); Gaffurius (1496) considered the intoning of the syllables almost mandatory for the best instruction of young singers. But nowhere is it clearly specified whether all the available syllables for a single pitch were normally sung (or imagined during the singing): common sense suggests that only the syllable of the hexachord in use was enunciated, and Johannes Legrense (*c*1450) stated that

TABLE 2

								Some coniuncte and hexachords added later			
ee							la				
dd						la	sol				
cc						sol	fa				
♮♮							mi			♮♮	la
♭♭						fa					
aa					la	mi	re			aa	sol
g					sol	re	ut	g	la	g	fa
f					fa	ut	(hard)	f	sol	f♯	mi

E	la	mi	(soft)					E♭	fa	E	re
D	sol	re						D	mi	D	ut
C	fa	ut						C	re		
♮	mi	(natural)						♭	ut		
A	re										
Γ	ut										
	(hard)										

'one of these six syllables is sufficient for any given note' (*CoussemakerS*, iv, 378*a*).

3. Mutation. Any chant that exceeds the range of a single hexachord must involve changing from one hexachord to another. This process is called mutation, and numerous treatises give explicit instructions for it. In practice, for the occasional excursion by a semitone outside the hexachord range, a mutation was often not invoked, although this was regarded as a licence. The author of *Quatuor principalia* referred directly to the semitone excursion, for which it is possible either to mutate normally, or *improprie sumere*: 'if from the *fa* [of C *fa ut*] you wish to ascend to the fourth note above, it is necessary to change the *fa* into *ut*, or to adopt incorrect practice' (*CoussemakerS*, iv, 223*a*). Legrense gave an example which (if Coussemaker's print is to be trusted) shows the progression A *la*–B♭ *fa*–A *la* with no reference to mutation (*CoussemakerS*, iv, 380). There are 16th-century statements that excuse the singer from mutation and recommend that he sing semitone extensions as *fa* (above the hexachord) or *mi* (below): 'Toutesfois et quantes que par dessus ces six voix s'en trouvera une seule n'excedante que d'une seconde, elle s'appellera *fa*, sans faire muance, laquelle faudra profferer mollement mesmement sans aucun signe de b mol, pourveu qu celuy de ♮ dur n'y soit mis' (Guilliaud, 1554; quoted in Allaire, 45). It was undoubtedly this practice that led to the eventual formulation of the now too frequently quoted rule 'una nota super la semper est canendum fa'. This cliché does not seem to have been stated explicitly before Praetorius (*Syntagma musicum*, i, 1614–15): the licence, of much earlier date, results in the flattening of B, giving B *fa*, above A *la*, and the sharpening of the note below the hexachord which one sings as *mi*. The *Quatuor principalia* refers to a further abuse in connection with the latter practice, which is obviously allied to the sharpening of leading notes: 'many [singers] in modern times are faulty ... since when they pronounce *sol fa sol* or *re ut re* they place a semitone there instead of a tone, thus confusing the diatonic genus and falsifying the plainsong' (*CoussemakerS*, iv, 250*a*).

When really necessary, correct mutation is governed by these rules: on pitches with only one syllable, there is no mutation (this is self-evident); on pitches with two or three syllables, there are two or six possible mutations respectively; on the pitch B, there can be no mutation between B♭ and B♮ because the sound is not a unison. Thus, on the pitch C *fa ut*, there can be a mutation (which really means a change of syllable) from *ut* to *fa*, or from *fa* to *ut*; on G *sol re ut*, six mutations can occur: *sol* to *re* or *re* to *sol*, *sol* to *ut* or *ut* to *sol*, *re* to *ut* or *ut* to *re*. Mutations 'ending in' *ut*, *re* or *mi* are said to be ascending because the melodic movement continues upwards into the new hexachord: those 'ending in' *fa*, *sol* or *la* are said to be descending because the melody continues downwards. A form of irregular but necessary mutation is recorded by Gaffurius (1496), but must have been common earlier. In this case, even though the melody continues downwards the mutation 'ends in' *fa*, one of the ascending syllables, because mutation is impossible on B♭ *fa*/B♮ *mi*, as may be seen in Table 3. It seems possible, at least in principle, that at points of mutation both syllables were said, as in the above example; and musical illustrations in Tinctoris (*Expositio manus*, *c*1472–3; *CoussemakerS*, iv, 10*b*ff) and Gaffurius show, at least in written form, the presence of both syllables. Rhau's *Enchiridion* (1518) uses the term 'explicit' to refer to mutation in which both syllables are sounded and 'implicit' in the case where one syllable is understood.

Theorists in general agreed on these principles, which are hardly rules since they describe what must happen in order to mutate sensibly and successfully, there being no choice. Many questions of practical application remain unanswered. For example, in the series shown in Table 4 it is obviously possible to mutate on either F, G or A. In deciding which should be chosen two pieces of evidence can help. Many writers, from the 13th century onwards, stated that 'wherever possible we should avoid mutation'

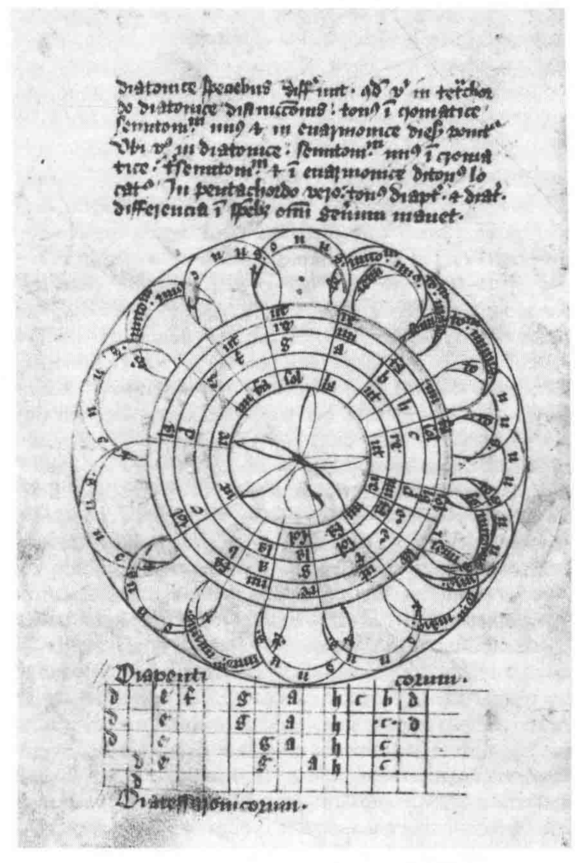
Ex.1 Sic quoque mutandum G-sol-re-ut variandum



The solmization syllables do not appear in the original; notes in parentheses are plicas.

* This is the only occasion on which mutation does not take place on the last possible note, probably because the F is a plica.

(*CoussemakerS*, i, 160*a*), from which it may be inferred that mutation should be delayed until absolutely necessary. Such a principle is confirmed in the useful examples given by Gaffurius and Anonymus 11 (15th century). The latter specified the pitch on which mutation is to take place. One of his examples, in which all six mutations on G occur, may serve to illustrate this point (*CoussemakerS*, iii, 421*b*; ex.1). Jacobus of Liège (early 14th century) maintained that mutation from hard to soft hexachords, or vice versa, was rare; this restriction appeared occasionally up to the 16th century, although many theorists treat such mutation as normal. Later, in a long chapter on irregular mutation, Jacobus referred to the necessity for improper mutation when leaps of a major 6th, 7th and octave were used, since these intervals exceed the range of the hexachord (even the major 6th, strictly within the range, will usually in practice exceed the hexachord being used); unfortunately he did not indicate which improper solution might be used. The tritone, moreover, 'cannot have a place in the same hexachord, whence it must most rarely be used' (*CoussemakerS*, ii, 293–4). Jacobus failed to point out that the direct melodic tritone cannot even be solmized by moving from one hexachord to another, since there is no common pitch on which correct mutation can take place. Such intervals as these are rarely needed in plainsong, in any case, but false mutation is necessary in polyphonic music.

4. Expansion of the hexachord system. Solmization, as well as being constantly used in plainchant, was taken up at least in descriptions of polyphonic music. However, later writers on the latter subject usually took the basic information for granted, probably because solmization belonged with the rudiments, and polyphony with a later stage of learning. The taking over of solmization into polyphonic theory and practice led eventually to the breakdown or modification of the system. The basic reason for this was the necessity in polyphonic music for vertical intervals to be perfect, a principle that leads to the rule that *mi* may not be sounded against *fa* on perfect intervals: 'mi contra fa' is therefore a polyphonic rule concerned with chords. The need to place a perfect 5th above B♮ or below B♭ leads to the introduction of F♯ and E♭, notes that do not exist in the gamut of Table 2. Since the notes of that gamut constituted the total repertory of notes available ('quibus tota musica conformatur'; *CoussemakerS*, i, 254*b*), other notes had to be 'imagined', or 'feigned', and were called *musica ficta* or *musica falsa*. The practice of solmization, and the presence of new semitones above F♯ and below E♭ in particular, led to the introduction of new hexachords, in this case beginning on D and B♭. A circular method of illustrating the standard hexachords, including the *ficta* hexachord on B♭, is shown in fig.3, from the *Breviarium regulare musice* by Theinred of Dover. Writing in the 12th century, Theinred was one of the first theorists to codify such new hexachords, and later theorists, at first often of less than major importance in other respects, continued and expanded the tradition. Petrus frater dictus Palma ociosa, in the 14th century, explained such new hexachords as a matter of course (*Compendium de discantu mensurabili*). Nevertheless the conservative Jacobus of Liège, writing about the same time (*Speculum musice*), condemned the use of more than three syllables per pitch that resulted from the addition of extra hexachords. He called mutation between the standard and the new hexachords false mutation, and that which it produced *falsa musica* (*CoussemakerS*, ii, 293*a*). Mutation of this kind placed adjacent the syllables *sol* and *mi*, from which Renaissance theorists abstracted the term

3. A circular method of presenting the three standard hexachords (including the ficta hexachord on B♭), suggesting the infinite scale of the Renaissance rather than the limited gamut of the Middle Ages; the outer row of arches denotes the intervals as tones or semitones: from a late 14th-century copy of Theinred of Dover's 'Breviarum regulare musice' (GB-Ob Bodley 842, f.40v)

'solmization': medieval writers used only the noun 'solfatio' and verb 'solfare'.

Although difficult to prove conclusively as an accepted medieval theory, there were attempts, probably in the 14th century, to increase the number of chromatic notes available by transposing the original system a 5th or a tone down, transpositions which were indicated by the equivalent of modern key signatures (perhaps better called 'gamut signatures'). Ugolino of Orvieto (*Declaratio musice discipline*, *c*1430) was one of the first major theorists to attempt a combination of expanded original gamut with transposed gamuts. The new chromatic notes, at first restricted to F♯, C♯, E♭ and A♭, were called *coniuncte*. '*Coniuncta* is the making of an irregular tone where a semitone should be, or vice versa; the placing of a flat or natural sign in an irregular place; the immediate joining of one note after another' (*CoussemakerS*, iv, 180*b*); this fairly typical set of definitions, by Tinctoris (*Terminorum musicae diffinitorium*), virtually equates the *coniuncta* with *musica ficta*. But the term perhaps originates from, and more correctly means, the complete range of *ficta* hexachords, which were joined to the standard gamut and into which the chromatic notes fit. Anonymus 11 gave a particularly complete discussion of *coniuncte*. One result of the chromatic expansion was that the accidental signs, which previously had unequivocal meanings (a flat sign calls for *fa* above a semitone, a sharp or natural for *mi* below a semitone), now became ambiguous: to give E♭ *fa*, for example, the beginning of the hexachord was B♭ *ut*. Worse, the accidental need not necessarily stand above or below a semitone, as it had always done previously: E *ut*–F♯ *re*–G♯ *mi*–A *fa* or E♭ *ut*–F *re*–G *mi*–A♭ *fa*–B♭ *sol*–C *la*.

5. Renaissance modifications of the system. Ramis de Pareia's treatise of 1482 (ed. Wolf, 1901) was the first to suggest a break with the Guidonian tradition: Ramos proposed a set of eight syllables associated with the octave *c*–*c*′, *psal–li–tur per vo–ces is–tas*, claiming that the consonant 's' of the last three indicates where the difficult semitones B♭–B♮–C occur. He gave no details of how his system should be used and naturally his opponents, especially Burtius and Hothby, roundly attacked the proposal. Elsewhere in the treatise Ramos adopted the conventional system, with its *coniuncte*, and did not expand it much beyond Ugolino.

No further attempts to add a seventh or eighth syllable seem to have been made before the end of the 16th century, although there were attempts to integrate the hexachords with the modes and to make the system, by now very complex, simpler and more consistent. Gaffurius interlocked two hexachords to form a heptachord. Spangenberg, in his treatise of 1536, said: 'He who solmizes must first consider the mode', while Bogentantz (1515) maintained that the 3rd, 4th, 7th and 8th modes, which use B♮, were termed 'hard'; the 5th and 6th, which use B♭, were 'soft'; the 1st and 2nd, using neither, were 'natural'. Bermudo linked the 1st, 4th, 6th and 8th modes with the natural form and said that the 2nd, 3rd, 5th and 7th were not much used: soft modes were produced by transposition. There seems to have been a strong tendency in the 16th century to reduce the number of hexachords to two, even though three were recognized as more traditional: Heyden (1540) named the three, and a fourth called *fictus*, but said that the hard and soft hexachords were sufficient since every song either did or did not have a flat in the key signature. Morley (1597) in his annotations allowed three hexachords for plainchant but only two for polyphony.

Attempts to simplify mutation occurred. Instead of the choice of three syllables for ascending and three for descending, some 16th-century theorists allowed only *re* for ascent, and *la* for descent (Guilliaud, *Rudiments de musique pratique*, 1554; quoted in Allaire, 47–8). Loys Bourgeois (1550), although his table is erroneous, suggested in his text that only *ut* should be used for ascent, so that instead of the patterns shown in Table 5*a* there were the simpler forms of Table 5*b*. Another simplification, mentioned by Rhau (and probably others) and to be observed in the title of Ockeghem's *Missa 'Mi-mi'*, is the practice of singing leaps of 4ths, 5ths and octaves with the same syllable, apparently either *mi* or *fa*. This usage implies the presence of *ficta* hexachords: C–G sung as *fa*–*fa* necessitates use of the hexachord on D, to give G *fa*; A–D sung as *mi*–*mi* uses the hexachord on B♭, to give D *mi*.

As with the introduction of *ficta* hexachords, innovations such as these appear to have been made mostly by theorists of lesser stature, and even references to solmization by the major writers such as Zarlino and Glarean are usually perfunctory and conventional. By exception, Gaffurius (1496) gave a particularly clear explanation, with examples, although he referred only to the standard three-hexachord system unencumbered with later extensions. Since less attention has been paid to the treatises of less significant writers, it is probably not yet possible to generalize about the changes which took place in the theory and practice of Renaissance solmization.

Detailed rules for the application of solmization are hard to come by; only in the 16th century, when there were modifications of the system, is there information on certain points. As a result, it has become a habit to interpret the medieval system according to principles of the 16th century or even later, whose retrospective application has not been proved. The date of all the evidence presented above should be closely observed, often with the presumption that earlier documentation could not be found. A few points in particular need to be stressed. Until the 16th century, there seems to be no evidence linking the hexachord and modal systems, although the latter, in common with many other descriptions, uses the syllabary of solmization for convenience. The licence of extending hexachords without mutation is clearly of medieval origin, but its formulation into a principle such as the well-known rule 'una nota super la' is difficult to find before the 17th century. The practice of solmization in connection with learning plainchant can be regarded as definite: its use in part-music seems certain, especially from the 14th century, but the wider range and especially the presence of accidentals written into the

II. Ancient and non-European systems

1. General. 2. China and Korea. 3. Japan. 4. India. 5. Indonesia. 6. Arab countries. 7. Classical Greece.

1. GENERAL. Solmization is not a purely Western phenomenon, nor was Europe the first place in which it developed. However, recognition of it as a more ancient and worldwide device depends on a more broadly based definition than that derived from Guido of Arezzo; and also on an extension of the function normally attributed to it. Further, the solmization systems of certain non-European civilizations contain fundamental differences which reflect equally great differences in the nature of melody.

The most essential feature of the Guidonian system was the fact that each syllable indicated the quality of a given pitch. That is, it indicated the function of a pitch within a mode, setting it implicitly in the context of a surrounding interval pattern, and in particular establishing the proximity of the semitone to the pitch in question. It was thus concerned with modal structure, not with absolute pitch; with note functions (*voces*), not with single note identities (*claves*). The system of mutation described above helped further to release the mind from absolute pitch and to encourage an inner orientation within the continuum of sound.

Certain properties of the medieval system hark back to earlier practices in Europe and elsewhere, thus opening new perspectives to a wider dissemination of the concept of solmization in the ancient and Asian world. Among these was the Guidonian hand, which has early parallels, if not forerunners, in the Chinese and Indian reading hands. Another, even more important property was the existence of a model song, in this case *Ut queant laxis*, which supplied the basic material of the solmization system. Model songs of this kind are still used by Arab and Hindu singers and instrumentalists, and are a constant point of mental reference for them while improvising. This constitutes a literary-musical tradition and a psychological approach to music which goes back to ancient times and which has long been common knowledge in East and West. The poem to St John the Baptist that served as Guido's model song was already widely known and used as a daily prayer at least 200 years earlier. (It was probably written by Paulus Diaconus *c*770.) The general familiarity with its text rendered it suitable for use as an acrostic – a device widely used in lyrical poetry during the central Middle Ages. The words containing the acrostic syllables were then coupled to a melody specially constructed for teaching purposes in such a way that the beginnings of successive melodic lines together formed an ascending scale of six notes (*ut–la*). By this means, text and melody came to be associated completely automatically.

This was a mnemonic device of great technical and psychological insight; yet it was not Guido's personal invention, nor was it confined to the West. Counterparts can be found in those civilizations of the East in which notes as single entities form the basic material of music, as in East Asia. In the following survey only those systems whose pitch relationships were built up on measured ratios have been included. Thus none of the many neumatic scripts of Asiatic countries is taken into consideration. Of the two major categories of notation, vocal and instrumental, vocal notations follow the characteristics of the unaccompanied singing voice, as heard in most ritual cantillations and epics. They do not aim at intervals but try to reflect the undulations and mannerisms of the voice, and consequently their script is graphic and irrational, and represents groups of notes by single symbols (neumes; *see* NOTATION, §III, 1). As a

result, there is no possibility of solmizing around discrete pitches, as can be done in any instrumental system with acoustically measured notes. Thus, solmization in the Western sense has no place here. In fact most styles of singing do make use of a system of pitch symbols, which comes into operation as each of the neumatic groups is memorized. But the process is very different from that involving instrumental notation, and the present survey will consequently be limited to instrumentally bound rational theories.

2. CHINA AND KOREA. China developed an abundance of musical notations, some of which come close to being solmization systems. They occur whenever phonetic symbols are employed, or indeed any kind of sound symbols, to represent intervallic movements rather than single notes. On the other hand, intervallic progressions presuppose a pre-set series of basic notes with fixed tuning. The musical system of ancient China fulfilled both these requirements: the ancient doctrine whereby the 12 fundamental notes (*lü-lü*, *c*2700 BCE) are of absolute pitch; and the system of pentatonic modes, all movable in pitch (4th century BCE). The *lü* system, based on the 'tonic' of *huang-chung* ('yellow bell'; the pitch standard of all music), consisted of a row of pitch pipes which were measured, calculated and imbued with cosmological connotations. They were an abstract pitch series rather than a medium for practical use. The system of pentatonic modes, by contrast, was an abstract of everyday musical practice, and as such became the most practical theory in many countries of East Asia. (It was first described in detail by the theorist Cheng Hüan in the 2nd century CE.)

Its tonic, *kung*, was originally fixed by the pitch standard, but later developed as an indication of relative pitch. The system's five characters are shown in Table 6. They became solmization syllables of a kind, rotating through five possible 'inversions', each starting on a different character but maintaining the original order; each of these inversions could also start on any one of the 12 absolute *lü* pitches, making 60 possible pentatonic rows in all.

In Vietnam, too, there has been increasing use of indications of relative pitch, in a system which is capable of being shifted wholesale upwards or downwards in pitch (i.e. 'mutation'), and adaptable even to the singer's vocal compass.

In medieval China, a new notation developed during the Song dynasty (960–1279; earliest source 1093 CE), called *kung-ch'e p'u*. It is almost contemporary with the Guidonian system; like the latter it proved to be the most popular script, and is in use to this day. Not unlike the earlier Chinese systems, Song notation employs ancient ideograms as sound symbols, though the characters are now abbreviated and simplified. While in the north of China the system was expanded to what was theoretically a chromatic series of 19 notes, and was thus brought back to fixed pitch, in the south the more traditional one of nine diatonic steps (originally two conjunct pentachords, *c′–g′*, *g′–d″*) was retained. This scheme of a double

pentachord seemed to be the ideal frame for solmization-like transits, or 'mutations' (Table 7; after Kaufmann, 1967, p.76). 'The shifting of *ho* (Do; C), comparable to the "movable *do*" of the West, led to the creation of a number of scales ... which facilitated transpositions and changes of mode' (Kaufmann, 1967, p.77). It is interesting to note that the two upper-octave notes *c* and *d* are given names different from those of their lower-octave counterparts. The way in which solmization works may provide one of the reasons for this: the upper two notes do not occupy the same position within their pentachord (notes 4–5) as the lower two (notes 1–2), and so do not have the same intervallic value. Song notation can also be found, with local modifications and greatly extended, in Korea, under the name *kongch'ŏk-po*.

3. JAPAN. Together with China and Korea, Japan developed some of the most interesting solmization systems, mainly in connection with two of its most important art forms, *gagaku* and *nō*. As is the case with certain other solmization notations, the sound symbols usually appear in conjunction with a normal notation, or even with two such notations. The wind section of the *gagaku* orchestra illustrates this well. It consists of a *ryūteki* (flute), *hichiriki* (cylindrical oboe) and *shō* (mouth organ). Both the *ryūteki* and the *hichiriki* have three columns of notation, the *shō* two. Of the three columns, the characters in the central column represent solmization syllables, the smaller ones to the left indicate fingering on the instrument, and the dots to the right signify the rhythmic division (fig.4; after Malm, 1959, p.264). Leaving aside the organ notation, it seems as if only the combined forces of solmizing and fingering, together with rhythm marks, were able to assure a faithful realization of the musical idea. The central phonetic symbols are part of 'a solfège system by which the player originally learned the music' (Malm, 1959, p.265), and no more than isolated signposts pointing the way to more complex melismas and melodic tropes. They no longer form a solmization notation moving between definite modal intervals, but a solfège notation of a specific Eastern genre: a guide to improvisation based on a few basic symbols of multiple significance. It is not a script to be read by the uninitiated. Thereby the *gagaku* and *nō* notations moved to the pole of solmization opposite to its function in the West, where it was expressly designed for rudimentary education of the uninitiated. Yet the essential idea behind solmization, of perpetuating a given melody in the learner's mind through a meticulous performance comprising intonations, dynamics and embellishments, continued in *gagaku*, particularly so in its teaching method (Jap. *shōga*: 'sing-song'). This includes 'abstract syllables that suggest phrasing, embellishments, and pitch-wavering (*meri-kari*). ... In this way, the student memorizes his

4. Solmization system as used in the wind section of a Japanese gagaku orchestra; the characters in the central column represent the solmization syllables

entire repertory before he is allowed even as much as to touch his instrument. It is probable that we owe the survival of court music to this painstaking rote method' (Harich-Schneider, 1953, pp.53–4). Thus even in this East Asian art music, hidden for many centuries from the rest of the world, a scheme of sing-song syllables has always been at the root of oral teaching (*see* JAPAN, §VI, 4). As in Western solmization, yet unaware of it, the Japanese syllables became intensely meaningful and aimed at transmitting the melodic style in its entirety – independent and even regardless of the co-existing written documentation in partbooks.

4. INDIA. Similarities between Indian and Western systems of solmization are so obvious that it is tempting to assume some interdependence, but mutual contacts have not been proved.

There is no musical notation in Hindu music culture except for Samavedic chant (*see* INDIA). According to Fox Strangways (1914, p.vi), the system used is a sol-fa notation 'of which the various local scripts and special signs are easily mastered'. For musical education an elaborate system of solmization developed from *c*200 BCE to 500 CE (see Bharata: *Nāṭya-śāstra*, chap.28). This early treatise states that musical science was based on seven diatonic notes within an octave (*svara*) which were marked with solmization syllables as in Table 8. These seven singing syllables are abbreviations of fuller Sanskrit terms which have been symbolically associated with animal cries as a means of determinating their absolute pitch, purity and nature (Daniélou, 1968, p.26):

Shadja [doh] is sounded by the peacock, *Rishabha* is uttered by the *chātaka* bird. The goat bleats *Gandhara*, the heron cries *Madhyama*. ... *Panchama* is softly sung by the cuckoo ... *Dhaivata* is croaked by the frog in the season of rains. At all times ... *Nishada* is trumpeted by the elephant.

In classical times, this basic octave developed into three classes of scale (*grāma*) starting, respectively, on the first, fourth and fifth degrees of the basic scale. This is an interesting parallel to the three intonational degrees of the Guidonian hexachord and mutation scheme including, also, the characteristic change of an interval relation (Guido: B *durum–molle*; India: the microtonal change of one *śruti* on the *dha* [A]). Of this medieval classification, the third *grāma*, later also the second one on *ma* (F) became obsolete, but solmization still has a role in defining the species of melody.

TABLE 8

sa –	ri –	ga –	ma –	// –	pa –	dha –	ni –	(sa)
C	D	E	F		G	A	B	C

Solmizing in modern Indian classical music has developed to a special art form usually performed with great virtuosity towards the end of a rāga-cycle and called *svara*, *sargam* (*sa–ri–ga–ma*), *svarāvarta* or *surāvarta*: here the singer replaces the poetic text with the appropriate sol-fa syllables, reciting them in quick parlando style. This display of lingual dexterity has its parallel in the language of drum-words (*bols*) which reproduces the rhythmic patterns of the drummer. The parlando-movement *svara*, just before the end of the rāga, seems also to serve the purpose of offering the more initiated listener an unadorned modal reduction of the rāga variations, which until this point has been freely improvised and embellished. Ex.2 (from Fox Strangways, 1914, p.285) shows such an interpolation into a rāga section of solmization syllables, the music then reverting without a break to the original poetic text carrying an additional variation.

5. INDONESIA. An interesting variation of the solmization idea is found on the island of Bali which, together with

Java, is considered one of the two main cultural centres of the archipelago. The musical history of the two islands proceeded along different paths. Java was for centuries under Islamic domination, being part of the Sultanate; but Bali escaped Muslim influence (as well as the earlier Buddhist wave), retaining its Hindu traditions. Whereas Java did not develop a musical notation or a solmization scheme until recently, Bali did so centuries ago. One of the reasons why solmization developed may be the decentralization of musical practice in many independent villages or village republics with varying local traditions. Cultural diffusion worked against a unified pitch system and, more specifically, against a fixed pitch, the absence of which often generated solmization schemes based on movable pitch and on structural thought in music.

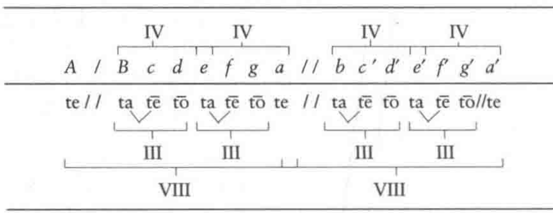
The Balinese type of solmization was probably necessitated by the nature of its tonal system of five near-equidistant notes in the octave, around which certain nuclear themes (Javanese *balungan*; Balinese *pokok*) had become established. With no standard tunings the sol-fa series had to be movable. Five singing syllables using the five vowels of speech form the basic row, with the addition of the (rarely used) half-tones (Table 9; after E. Schlager, 'Bali', *MGG1*).

A number of Balinese *kidung* poems carry a solmization script whose vowels are matched exactly to those of the text (*madu* = *dang-dung*). The vowels of the poem thus reveal the melodic progressions. In this case, melody is not a living tune but an artificially arranged 'cantus firmus' of some fundamental notes which would be counterpointed by a rich canvas of orchestral voices proceeding heterophonically.

6. Arab countries. Arab solmization schemes have been the subject of much discussion. One problem is the difficulty of making a clear distinction between Arab musical notation and solmization (i.e. between the principles of *claves*, providing a note row with fixed single pitches; and *voces*, the aurally perceptible movements between them. Theoretically, Arab music is built on a fundamental note-row (*maqām*) which could be compared to the Greek *systema teleion*, or the Chinese *lü*. Like the latter, however, these root notes are not used melodically; they are thus rather remote from any living practice of music, which can dispense with written symbols, and has always done so. Like most monophonic musical traditions of the East, Arab music is at its best when perceived as a sound continuum. By its very nature it runs counter to the distinct separation of notes which occurs in any letter or staff notation, or even to the concatenation of intervals. As in Islamic art, melodic movement is convolute, literally arabesque.

For these (and many more) reasons, there was no original or regularly practised Arab solmization system. Leaving aside certain historical efforts to formulate such notation systems as, for example, instrumental tablatures (for lute, *ṭanbūr* etc.), one of the true solmization schemes may be cited which had certainly been devised through some contact with, and in imitation of, the Guidonian

TABLE 10



alif	(A)	mīm	lām	(A)	(mi)	(la)

wāw	(W)	dāl	fā	(F)	(ut)	(fa)
zā	(Z)	rā	ṣād	(G)	(re)	(sol)

system. It was reported first in Meninski's *Thesaurus linguarum orientalium* (1680) as an example of the 'notae musicae' and again, 100 years later, in J.-B. de La Borde's *Essai sur la musique ancienne et moderne*, the solmization table from which is given in Table 10 (after Farmer, 1930, p.77). Neither author indicates the origin or use of this scheme. There are seven basic notes (the hexachord is not common in Arab music theory), stretching from *la* to *sol*, with its 'mutation', or transposed version, from *mi* to *re*. The Arab singing syllables are not selected from foreign or acrostic words, nor from abbreviations of ancient (ritual or cosmological) terms, but they are the usual names of the Arabic alphabet used according to their phonetic value and their 'phonetic likeness' to the Guidonian syllables. To emphasize their assonant character they therefore appear in a quite irregular order (the third and fourth columns of Table 10). Their alphabetical order is retained only in the left-hand column, where the Arab letters are in juxtaposition with the Latin ones. This is a rare case where the same symbols are used to represent jointly *claves* as well as *voces*, distinguishable only by the different order in which they appear.

7. Classical Greece. A solmization system from ancient Greece is in the writings of Aristides Quintilianus (late 3rd and early 4th centuries) and J.F. Bellermann's Anonymus (*see* Greece, §I). Because of the pivotal point which Greece occupied between Eastern and Western civilizations, this scheme of solmization has already been closely investigated (by Ruelle, Riemann, Handschin, Wiora and others). It is a simple device of four singing syllables with changing vowels (*te–ta–tē–tō*), bound strictly to the tetrachordal design of the 'perfect system'. The first and main syllable *te* (*genēseos symbolon*) is given to the *proslambanomenos A* (*La*) and to its two octaves enclosing four groups of identically constructed trichords (*B–c–d, e–f–g*, etc.), given here in the Dorian mode, with the decisive semitone (always *ta–tē*) at the start (ascending). So, while each tetrachord does include the four phonetic symbols, the internal order of recurring intervals (½–1–1) is rather the result of paired trichords (Table 11; after Riemann, 1912–13, p.274).

The origin of the Guidonian hexachord remains an open question. In the above distribution of the solmization syllables in two pairs of trichords, or two hexachords, a possible solution of the problem appears. Scholars agree that the Greek *te–ta–tē–tō* system was adopted by the Byzantines, who had many contacts with the west

TABLE 11

Romans, especially during the Carolingian period. Whatever conclusions are drawn, one point in particular is worth noting: the coupling of the early (theoretical) tetrachord system in letter notes with the newer (practical) trichord system, in solmization notes.

There are still other problems to be solved, for instance the possible interrelation of the Greek solmization phonetics with the mnemonic *noeane* formulae of Gregorian chant (*see* ĒCHOS, §2). Riemann (1912–13) explored this question on the basis of one of Hucbald's notated examples, a formula to the 'tonus prōtos' which carries, besides the Greek notation, the mnemonic *noeane* syllables. The obvious similarities between the two, particularly the use of the same vowels as indicators of the modal functions within the tetrachordal species, led Riemann to claim establishment of a link between Asian, Greek, Byzantine and Roman-Guidonian doctrines. Seeing the *noeane* vowels as a step towards a precise solmization system opens a new cycle of questions concerning their origin (see Werner, 1942; Wiora, 1956), their replacement by mnemonic model songs or initial figures, or their use as tropes in alleluiatic songs (Chottin, 1939; Gerson-Kiwi, 1967). A solution demands the knowledge of both music historians and ethnomusicologists.

ANDREW HUGHES (I), EDITH GERSON-KIWI (II)

Sölnerus, Johannes. *See* SELNER, JOHANN.

Solnitz [Solniz, Sollnitz], **Anton Wilhelm** (*b* Bohemia, *c*1708; *d* Leiden, *c*1752–3). Bohemian composer, active in the Netherlands. He probably went to the Netherlands in the mid-1730s; in 1738 one of his symphonies was performed at the centenary celebrations of the Amsterdam Stadsschouwburg, and several of his works were published in Amsterdam around that time. He then moved to Leiden, where he was registered at the university in 1743. In about 1750–51 Walsh published two volumes of trio sonatas as opp.1 and 2; although they lack dedications, they may be first editions, since no Dutch editions have been traced. In 1751 Solnitz was a frequent performer of his own compositions in concerts at the Nieuw Vaux-Hall inn, The Hague. According to Lustig he died in Leiden. This must have been shortly before or in 1753, when music originating from his estate was offered for sale in newspaper announcements.

Solnitz's symphonies opp.1 and 3 are similar in structure to those of G.B. Sammartini. He was probably the first to write and publish such works in the Netherlands. The rapid changes of texture in these compositions are remarkable, foreshadowing later *Sturm und Drang* writing. His trio sonatas fall between the Baroque and the *galant* styles of the middle of the century, with predominantly triadic melodic development and simple bass parts. Most are in three binary movements, with those in the first set (*c*1750) basically following a fast–slow–fast or fast–slow–minuet pattern, and those in the second (*c*1751) following a moderate–fast–faster or moderate–fast–minuet pattern.

WORKS

6 sonates, 2 fl (Amsterdam, *c*1738)
12 sinfonie, 2 vn, va, vc/bc, op.1 (Amsterdam, *c*1738)
Divertissements, 2 hn/cl, op.2 (Amsterdam, *c*1740), lost, mentioned in Witvogel catalogue, ed. A. Dunning (Utrecht, 1966)
6 sinfonie, 2 vn, va, vc/bc, op.3 (Leiden, *c*1745)
6 Sonatas, 2 vn, bc (London, *c*1750), pubd as 'op.1'
6 Sonatas, 2 vn/fl, bc (London, *c*1751), pubd as 'op.2'

Miscellaneous MS music, some or all of which may duplicate printed works: 1 sym., 1738, *NL-Au*; 3 syms., *D-DS*; 2 syms., *SWl*; 12

sonatas, 2 vn, hpd, *DS*; trio, 2 vn, b, *DS*; 4 sonatas, 2 vn, va, b, *S-Uu*, 1 doubtful

Music in Orpheus en Eurydice (pantomime) and Ulysses en Circe, lost, mentioned in 1751 announcements of concerts at the Nieuw Vaux-Hall inn, The Hague

Lost, mentioned in N. Selhof catalogue (The Hague, 1759/*R*): Divertimento, hpd (MS); III sinfonie a 4, str (MS); Concerto, vc, str (MS); Incessus musicus vulgo marche, 2 hn/vn/ob (pubd)

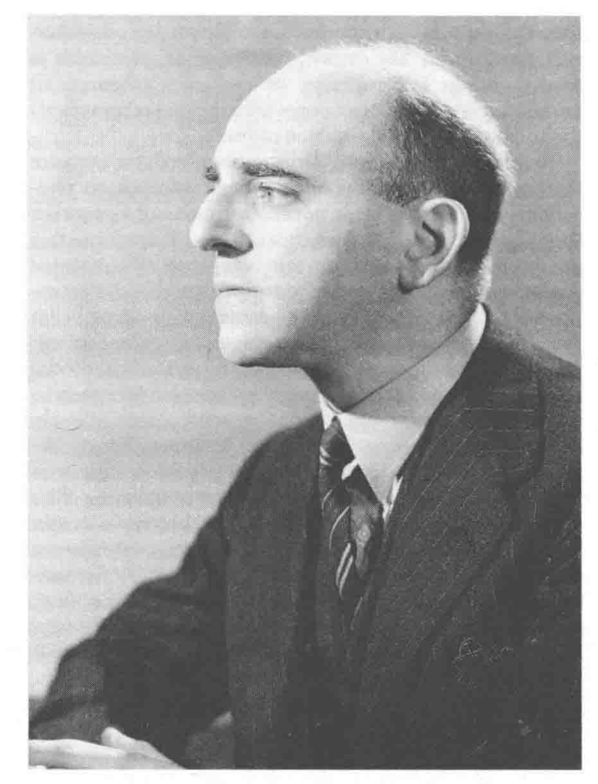
Solo (It.: 'alone', 'only'). (1) A piece played by one performer, or a piece for one melody instrument with accompaniment. In 18th-century English terminology, 'solo' as the designation for a piece of music for a melody instrument with continuo accompaniment was virtually equivalent to 'sonata' and was often so used in titles. 'Solo sonata' may mean either a sonata for one melody instrument with accompaniment or a sonata for an unaccompanied melody instrument, like Bach's sonatas for violin alone; *see* SOLO SONATA.



(2) When found as a direction in scores, 'solo' may mean that a part is to be brought out and should claim most of the attention at that point, or that the parts so designated are to be taken by a single player or singer – a 'soloist' – at that point instead of being doubled by the 'ripienists' or choral singers.

(3) In concertos, 'solo' sometimes heads a section of the composition in which the soloist dominates and the other parts assume a distinctly subordinate role.

DAVID FULLER

Solomon [Cutner, Solomon] (*b* London, 9 Aug 1902; *d* London, 22 Feb 1988). English pianist. His first and principal musical study was with Mathilde Verne, a pupil of Clara Schumann. He made his début, playing Tchaikovsky's First Concerto, at the age of eight in Queen's Hall, London, and appeared widely as a prodigy, billed only by his first name (he never used his surname professionally), admired for his 'wide, soulful eyes' and white sailor suit as much for consummate virtuosity. Study in Paris with Lazare-Lévy and Marcel Dupré and further appearances left him with a revulsion for the piano; Henry Wood advised him to retire for a time and forget about music. He reappeared in 1924 as a no less virtuoso adult pianist and soon conquered Europe and the USA (where he made his début in 1926) by the crystalline clarity, brilliance and poetry of his playing. In 1939 he was the soloist at New York World Fair in the première of Bliss's Concerto, written for him (as was the piano part of Bliss's Viola Sonata). During World War II he toured widely for the fighting forces. For the 1955 Edinburgh Festival he formed a splendid piano trio with Francescatti and Fournier. In 1965 he suffered a paraplegic stroke, after which he did not play again in public.

Solomon was acclaimed, particularly by fellow musicians, as one of the most immaculate pianists of the century. His virtuosity was real and unforced, never drawing attention to itself or to the performer: hearing him play Liszt's Hungarian Fantasy or concertos by Brahms, Tchaikovsky or Bliss, one could not wish to ignore the brilliance and tension engendered, any more than the contained ethereal *ballon* when he played Brahms's C major Intermezzo op.119 no.3 (he practised it in the green room before playing it, even as an encore). But the essential Solomon was an evocative poet, of Mozart's K450 Concerto, Chopin's Berceuse, the last pages of Beethoven's Sonata op.111, the slow movement of Brahms's D minor Concerto, Debussy's *La fille aux cheveux de lin*, who could weave such a spell with his fingers that time seemed to be suspended and a legato line be sustained long after one note had died away and before the next one was miraculously matched with it. He was a classic pianist who had no need to woo audiences with applied beauty or grandiosity because his playing already contained these qualities by its extreme shapeliness and sensibility.

Solomon

WILLIAM S. MANN/R

Solomon, Edward (*b* London, 25 July 1855; *d* London, 22 Jan 1895). English composer, conductor and pianist. A member of a family of theatre musicians, he began his career as a pianist at the Middlesex Music Hall in London; he was later the musical director at the New Royalty, Globe, Her Majesty's and other theatres in London and New York. He wrote numerous parlour pieces for the piano and comic songs, and as a composer of comic

operas he was one of the most accomplished contemporaries of Sullivan. Solomon's melodies are usually in an English ballad or a march style with repeated melodic phrases and simple rhythms. His comic operas, many of which echo Sullivan's, were all performed in London and include *Billee Taylor* (Imperial, 30 October 1880), *Claude Duval* (Olympic, 24 August 1881), *The Vicar of Bray* (Globe, 22 July 1882), *Polly* (Novelty, 4 October 1882), *Pocahontas* (Empire, 26 December 1884), *The Red Hussar* (Lyric, 23 November 1889) and *The Nautch Girl* (Savoy, 30 June 1891). (*GänzlEMT*, incl. list of stage works)

ANDREW LAMB

Solomon, John (*b* London, 2 Aug 1856; *d* London, 1 Feb 1953). English trumpeter. He studied the cornet from boyhood and in 1870 entered the RAM, where, under the professorship of the younger Thomas Harper, the use of the slide trumpet was compulsory (although Solomon, among others, regularly used the cornet for theatre engagements). He began playing first trumpet (on the cornet, with occasional use of the slide trumpet) in the provinces in 1873 and in London (at St James's Hall) in 1876, and quickly rose to eminence. He played first trumpet at the first of the Queen's Hall Promenade Concerts in 1895, was a founder of the LSO, and with the gradual retirement of Walter Morrow towards 1910 was left undisputed master of his field. In 1936 he performed in public for the last time, in St Paul's Cathedral, at the age of 80. He was professor at the RAM from 1894 to 1938, and at Trinity College of Music. He also conducted many bands in the London area.

Solomon's career was during an unsettled time in the structural history of his instrument, and he was concerned in several important innovations, including the use of the long A trumpet for oratorio performances and the adoption of Mahillon's F valve trumpet about 1900. In these he followed Morrow, but their positions were reversed when Solomon was quicker than Morrow to perceive and demonstrate the advantages of the modern B♭ trumpet; from about 1905 Solomon urged its adoption in place of the F, thereby helping to bring about that which Morrow had failed fully to achieve through the use of the F trumpet, namely suppression of the cornet as a substitute for the trumpet in symphony orchestras. He wrote *Twelve Etudes* for B♭ cornet.

ANTHONY C. BAINES/EDWARD H. TARR

Solomon, Maynard (Elliott) (*b* New York, 5 Jan 1930). American musicologist. He graduated from Brooklyn College, CUNY, with a BA in 1950 and pursued graduate studies at Columbia University, 1950–52. In 1979 he was an adjunct associate professor at the Graduate School, CUNY, and between 1988 and 1994 he held visiting professorships at SUNY Stony Brook, Columbia University, Harvard University and Yale University. In 1998 he joined the graduate faculty of the Juilliard School of Music. Solomon was co-founder and co-owner of the Vanguard Recording Society Inc., which issued numerous recordings between 1950 and 1986.

Solomon has specialized in the music of the Classical period, particularly that of Beethoven, Mozart and Schubert. His 1977 biography of Beethoven, which is a psychological study, has been widely praised as a definitive work and has been translated into many languages. His book on Mozart (1995), in which Leopold Mozart is cast in a negative light, has caused debate among scholars, as has Solomon's discussion of Schubert's sexuality (1988–9). Solomon's interest in the life and works of Beethoven has led to close collaboration with German scholars; in 1996 he became a scholarly adviser to the Beethoven-Archiv in Bonn, and he is a member of the editorial committee for the *Neue Ausgabe Beethovens Briefe* (Munich, 1996–8).

PAULA MORGAN

Solomon ben Judah Lunel [Solomon Vivas] (*fl* southern France, 1424). French philosopher and commentator. He referred to music in three short passages in his *Ḥesheq Shelomoh* ('Solomon's Desire', 1424; *GB-Ob* Opp.Add. Qu.114), which was a commentary on Judah Halevi's *Kuzari* (12th century). Music attained great heights in

ancient Israel, where it was practised by an élite (the Levites) and recognized as a therapeutic aid (David playing before melancholy Saul). Solomon relays various commentaries on a statement by Halevi about the measurement and relationship of text and music; the statement has particularly telling musical terminology: *'erekh* (relation), *sidur* (composition), *musiqah* (art music) and *minyan* (numbering or measurement).

Solo organ. Specifically the manual of an organ, usually its fourth, given to strong solo stops (flutes, strings and reeds) which are not normally intended to blend into any traditional manual chorus. Many 16th-century *Brustwerke*, containing only a regal or two, could be considered a kind of Solo organ, as could the new *Récit de cornet* manuals of the 17th (St Séverin, Paris, 1610). While French builders went on to develop their *Récits* (i.e. short-compass melodic manuals), some began to separate off the larger reeds, putting them on their own chest for purposes of steady wind-supply rather than specific music (Notre Dame, Paris, 1733); at the same period, some German builders gave their organs *Solowerke* with more stops than the usual *Petite écho* manuals (*Solowerk* of 16.8.8.8.8.8.8.8.8.4.4.4.4. at Ochsenhausen, 1729). The orchestral idea of organs encouraged by such writers as Vogler and J.H. Knecht (*Vollständige Orgelschule*, 1790) led to the secular organs of the mid-19th century that very often contained extravagant manuals devoted to solo stops. Hill's development of the high pressure reed (Birmingham Town Hall, 1840), Cavaillé-Coll's harmonic registers, and the pungent string-toned stops refined by builders throughout northern Europe and America provided the essential elements and made possible Solo divisions such as those at Leeds Town Hall (Gray and Davison, 1859), Boston Music Hall (Walcker, 1863) and Alexandra Palace, London (Willis, 1873). Later, extensive enclosure (in swell boxes) and extreme tonalities were adopted (Woolsey Hall, Yale University: Skinner, 1928; Royal Albert Hall, London: Harrison, 1934). In the modern eclectic organ the Solo has regained its chorus structure (Royal Festival Hall, London, 1954), sometimes combining this with the role of a Bombarde division (Meyerson Symphony Center, Dallas, 1992).

PETER WILLIAMS/NICHOLAS THISTLETHWAITE

Solo sonata. A term used in the late Baroque period (sometimes simply as 'solo') for a sonata for a single instrument, most commonly violin, and continuo. The title was less often applied to unaccompanied works, such as Bach's for violin. Dario Castello and Biagio Marini were among the first to publish solo sonatas; by 1652, G.A. Bertoli, Uccellini and G.A. Leoni had published entire collections. Before the turn of the century, Biber and J.J. Walther had written violin sonatas at least as demanding as Corelli's, whose op.5 was viewed as archetypal by later violinist-composers (Geminiani, Tartini, Locatelli, Leclair). In the 18th century melodic and chordal instruments usually played the continuo part together, so that a 'solo sonata' required three performers; the continuo rarely matches the upper part in virtuosity. The solo sonata, favoured above the duo or trio by mid-18th-century composers, represented a substantial repertory, not only for violin but also for flute, recorder, oboe, cello and bassoon; Bach, Handel and Vivaldi are among those who contributed to it. From the 1750s it co-existed with the 'accompanied sonata' in which a keyboard instrument was accompanied by a violin or occasionally a flute.

See also SONATA, §I.

SANDRA MANGSEN

Solo stop. An organ stop with solo characteristics. With the development in the 15th century of the slider-chest (*see* ORGAN, §II, 5), organ builders could separate off the medieval BLOCKWERK ranks, and it became possible to incorporate new instrumental or other musical effects into the organ. At the church of Our Lady in Antwerp, for example, van der Distelen's organ of 1514 was said to contain Trumpet, Waldhorn, Schalmei, Zinck, Quintadena, high Flute and Hohlpfeife stops. By Praetorius's time (1619), a wide range of flue and reed stops of all shapes and sizes was available, including overblowing flutes and horizontal regals, all of which might be used alone. The classical term meant 'an uncombined stop', but the oldest example of a Solo stop in the modern sense, being a stop that is accompanied by other softer stops, was the multi-ranked Cornet. This was known as a colourful stop, often appearing more than once in an organ, even before it was given its own treble-compass keyboard (the *Récit de cornet*) in the 17th century. By about 1890 it had become the norm for the louder Solo stops, requiring higher wind-pressures, to be given a separate keyboard (*see* SOLO ORGAN). Music incorporating melodies for solo stops was popular in France (Hautbois, Voix Humaine, Cromorne) and England (Horn, German Flute, Vox Humaine, Cremona, etc.) throughout the 18th century and, in the latter country, well into the next century. In 1840 the first high-pressure Ophicleide was introduced: the precursor of the Tuba and other new Solo stops, notably high-pressure harmonic flutes and free reeds (*see* ORGAN, §III), as well as loudened versions of older chorus or string stops (Large Open Diapasons, Stentors, Violes d'Orchestre, etc.).

See also ORGAN STOP.

PETER WILLIAMS, MARTIN RENSHAW

Solov'yov, Nikolay Feopemptovich (*b* Petrozavodsk, 27 April/9 May 1846; *d* Petrograd (St Petersburg), 14/27 Dec 1916). Russian composer, critic and teacher. His father wanted him to make a career in medicine, but he allowed him to enter the St Petersburg Conservatory (1868), where he studied with Zaremba. He completed an overture in 1869, and in 1872, the year of his graduation, he was commissioned to write a cantata to celebrate the 200th anniversary of the birth of Peter the Great. He taught music theory at the conservatory from 1874, and was later professor of composition (1885–1909). From 1905 he was also Director of Music at the Imperial Chapel. He was an enthusiastic member of the St Petersburg Russian Musical Society, of which he was the official representative at the Paris Exhibition of 1878. From 1870 he was a music critic, working for most of the St Petersburg periodicals, including *Novoye vremya* and the *Sankt-Peterburgskiye vedomosti*.

After the death of Serov, who had intended to write an opera based on Gogol's short story *Noch' pered rozhdestvom* ('Christmas Eve'), a competition was set up for the best setting of the libretto, to be entitled *Kuznets Vakula* ('Vakula the Smith'). Both Tchaikovsky and Solov'yov submitted an opera; Tchaikovsky duly won in 1875, although some of the judges were known to prefer Solov'yov's composition, which was never professionally performed. Solov'yov never forgave Tchaikovsky and, though he praised *Yevgeny Onegin*, his criticisms of his music were often hostile. He was similarly critical of Rimsky-Korsakov's music, and their relationship as fellow professors at the conservatory was strained. Although Solov'yov was a conservative critic, he was by no means as reactionary as Vladimir Stasov described; in addition to critical reviews, he also wrote essays, including one on Borodin, for the Brockhaus Lexicon, and was the author of a textbook on harmony.

Solov'yov's most important composition is the opera *Kordeliya* ('Cordelia'), also known as *Mest'* ('Revenge'), which was first performed in 1885. Excerpts from an unfinished opera based on Pushkin's comic poem *Domik v Kolomne* ('The Little House in Kolomna'), upon which Stravinsky's *Mavra* is also based, were published in a St Petersburg periodical in 1899, though the music was probably written earlier. His orchestral fantasy *Ėy, ukhnem*, performed at the Pan-Russian Exhibition in Moscow (1882), is based on the folksong well known as the 'Song of the Volga Boatmen', first published in Balakirev's original collection of folksongs (1866). He was a good if conservative composition teacher, but he died an embittered man, feeling that he had never been given the chance to flourish as a composer.

EDWARD GARDEN (with JENNIFER SPENCER)

Solov'yov-Sedoy, Vasily Pavlovich (*b* St Petersburg, 25 April 1907; *d* Leningrad, 2 Dec 1979). Russian composer. Folk music, a decisive early influence, largely formed his musical consciousness. At the age of eight he taught himself to play the balalaika, and then he formed a trio – of balalaika, mandolin and guitar – with his contemporaries. Later he attended guitar courses, where he learnt notation, and he also studied the piano by himself. After the 1917 revolution his studies took on a more systematic character. By the age of 13 he was taking part in a young people's amateur theatre group, accompanying its productions with piano improvisations, and for a long time after this he was associated with workers' clubs. In the mid-1920s he was invited to join Leningrad radio as a piano improviser for morning gymnastics lessons. He then studied at the Musorgsky College (1929–31) and at the Leningrad Conservatory (1931–6), where Ryazanov encouraged his interest in folk music. On graduating he essayed various compositional genres, but found his vocation in song. He had emerged at the period when the mass song was at its greatest flowering, and his own pieces, with their close contact with urban working-class music, were successful and much loved both in Russia and abroad. The songs of the 1930s are virile and heroic, but during World War II he stood out as a master of heartfelt lyricism and gentle wit. These wartime songs, which expressed the soldier's feelings of love, fidelity and comradeship, won him the most widespread popularity. Apart from producing more than 60 such pieces, he toured the front ceaselessly with his own variety theatre group.

Solov'yov-Sedoy's postwar songs continued to be in praise of the soldier as hero, but new concerns entered his work as well: workers, students, youth, the peaceful life of the country and the unity of different peoples in their striving for peace. In these years his melodic invention grew still more abundant, and energetic rhythms came to predominate. He regarded the song in all its forms – mass, variety and lyric – as a very serious and elevated genre. Also his creative interest widened: he wrote operettas, did a lot of film work and revised the ballet *Taras Bul'ba*. By the 1960s and early 70s he was still composing many songs, but his work was largely for the theatre. Being for many years (1948–64) the chairman of the Leningrad branch of the Composers' Union at times of harshly ideological dictates, he showed a breadth of views and tolerance to others, sometimes even to distant creative artists and musical trends. He was a laureate of the State Prize (1943 and 1947) and of the Lenin Prize (1959).

M. ARANOVSKY/I. RAYSKIN

Soltan, Wladzimir Yawhen'yevich (*b* Baranovichi, 9 Jan 1953). Belarusian composer. He graduated from Bahatïrow's class at the National Conservatory at Minsk (1979), then after completing his training as an assistant lecturer under his tutorship (1983) taught at that institution. He became a member of the Belarusian Composers' Union in 1980. His first significant works date from the second half of the 1980s and include his Cello Concerto in which he modified the Romantic model with a confrontational dramaturgy. His greatest achievement, which found considerable public resonance, was the opera *Dzikaye palyavanne karalya Stakha* ('The Wild Hunts of King Stakh') after the eponymous historical and romantic tale by the popular Belarusian writer V. Korotkevich. The opera, concerning events in the life of the Belarusian gentry in the 19th century, embodied the ideals of 'national revival' which developed in Belarusian political and cultural life in the early 1990s after the break-up of the USSR; it was the first Belarusian opera free from any communist undercurrent. The opera is a contemporary variant of the 19th-century Romantic opera and is distinguished by its specificity both in terms of historical background and genre, and also by its musical language which combines elements of expressionism, contemporary styles, traditional folklore and domestic music. It was awarded the State Prize of Belarus (1990). In general, national and historical themes predominate in his works which are characterized by a propensity towards thematic ideas of a theatrical character, a heightened tone of expression and a leaning towards dramatic confrontation of a Romantic caste. He belongs to the neo-romantic trend in Belarusian music of the 1980s and 90s.

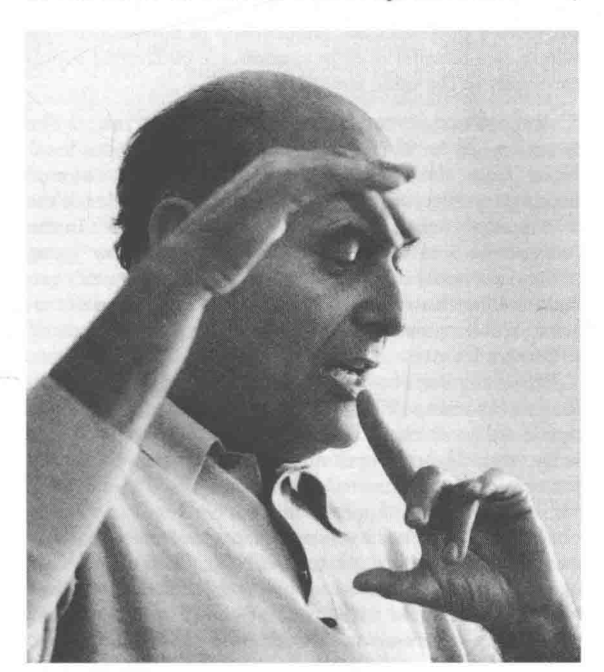
VALENTINA ANTONEVICH

Solti [Stern], Sir **Georg** [György] (*b* Budapest, 21 Oct 1912; *d* Antibes, 5 Sept 1997). British conductor of Hungarian birth. After giving his first piano recital at 12 he studied at the Liszt Academy of Music, Budapest, where his teachers included Dohnányi and Bartók for the piano, and Kodály for composition. After beginning his career as a pianist and accompanist he joined the Budapest Opera as a répétiteur, worked with Toscanini at the 1936 and 1937 Salzburg Festivals and made his début as a conductor at Budapest in 1938 with *Le nozze di Figaro*, on the night the Nazis marched into Austria. As a Jew he faced restricted professional activity in Hungary and left in 1939, spending the war years in Switzerland. Unable to gain a labour permit for work as a conductor there, he returned to the piano and won the 1942 Geneva International Piano Competition. In 1946 he was invited by the American military authorities to conduct *Fidelio* at Munich. This led to his appointment as musical director of the Staatsoper there (1946–52) and the foundation of the company's postwar repertory and reputation under his direction. In Munich he worked with Strauss, conducting *Der Rosenkavalier* in the composer's presence. A recording contract with Decca followed, beginning an association that lasted until his death. He made his first recordings in 1947, as a pianist with Kulenkampff in Beethoven and Mozart violin sonatas. He first went to London to record with the LPO, and made his concert début with that orchestra in 1949. He began to appear in other European cities and in South America, and moved to Frankfurt as Generalmusikdirektor (1952–61), directing the city concerts as well as the opera.



Solti appeared at the Edinburgh Festival in 1952 as a guest conductor with the Hamburg Opera, and the following year made his American début with the San Francisco Opera. He conducted his only Glyndebourne opera (*Don Giovanni*) in 1954, and in 1959 made his Covent Garden opera début with *Der Rosenkavalier*; this led to his appointment as musical director there for ten years from 1961, the longest tenure since Costa's. He announced his intention of making Covent Garden 'quite simply, the best opera house in the world', and in the opinion of many he succeeded. The high standards of orchestral discipline were praised. Asserting his dynamic personality over the orchestra, he dramatically raised standards and hackles at the same time; the musicians called him 'the screaming skull' in response to his autocratic manner and the excited stream of guttural exclamations from the podium. Critics (and segments of the audience who routinely booed his Covent Garden performances) despaired of his relentless drive in Mozart

and Verdi, although his Wagner and Strauss gradually found more favour. His mid-1960s *Ring* cycles were a triumph. While he left most of the modern repertory to his assistant, Edward Downes, he did introduce over 20 new productions to Covent Garden, including the British première of *Moses und Aron*.

Solti's work was recognized by the award of an honorary CBE in 1968; he was advanced to KBE in 1971, and became entitled to the title Sir Georg on taking British nationality the next year. In 1974 he was made a Commandeur of the Légion d'Honneur.

London lured him from the Dallas SO where he had been music director (1960–61), despite his desire to concentrate his efforts on symphony concerts. He fulfilled this goal by becoming musical director of the Chicago SO in 1969. While he maintained his home in Europe, as music director of the Orchestre de Paris (1972–5), music adviser to the Paris Opéra (1971–3), principal conductor (1979–81) of the LPO, and with regular appearances with the Vienna Staatsoper and (with an increasingly boisterous hero's welcome) at Covent Garden, Solti dedicated most of the next 22 years to his fruitful relationship with Chicago, taking the orchestra on tour in the USA and abroad to huge critical acclaim and recording with it virtually the entire standard Austro-German orchestral repertory.

His podium personality, exuberant and forceful, was clearly imprinted upon his music-making as he snarled and ferociously stabbed his baton. Critics found it both glorious and vulgar but never dull, and he always got what he wanted. It became a cliché to say he 'mellowed' as he got older, but his performances remained thrilling right to the end. In his 70s he was still aggravating critics with a new Bayreuth *Ring* with Peter Hall, and in his 80s his performances and recordings of Strauss, Mozart and Verdi's *Otello* were still bold, despite what some critics perceived as a sunnier outlook. He died only days before he was due to conduct the Verdi Requiem at the Proms, and had a busy schedule into the 21st century. His legacy includes over 250 recordings for Decca (with 45 complete operas) and 32 Grammy Awards, more than any other classical or popular performer. Recording *Salome* and then the first complete studio *Ring* (1958–64), with John Culshaw as producer, he became a pioneer in the use of stereo techniques to simulate the theatrical dimensions of opera. Outstanding among his other recordings is a fine Mahler cycle (made with the Chicago SO), including a truly colossal Symphony no.8. Shortly before his death he published a memoir, *Solti on Solti* (London, 1997)

ARTHUR JACOBS/JOSÉ BOWEN

Sołtyk, Count **Franciszek** (*b* Piastów, nr Radom, 13 Oct 1783; *d* Piastów, 24 Sept 1865). Polish violinist and composer. He studied music in Lublin, later in Paris with Charles Lafont and Rudolf Kreutzer (violin) and then in Warsaw with Elsner (composition). Liszt, Thalberg and Vieuxtemps were among the friends who visited him on his estate at Piastów. He was an excellent violinist who retained his technique until the end of his life; every year he spent a few months playing in Warsaw. He composed a *Rondo précédé d'une introduction* for violin and orchestra, op.2 (Leipzig, *c*1828); his other works, all lost, include a Violin Sonata in G minor, a Violin Concerto in D major, and other violin, chamber and orchestral pieces.

BARBARA CHMARA-ŻACZKIEWICZ

Sołtyk, Count **Karol** (*b* 1791; *d* Warsaw, 1831). Polish violinist and composer. He studied in Kielce and Kraków, and then took violin lessons from Joseph Mayseder in Vienna, where he also played for a year in the imperial orchestra. He then settled in Kraków, playing in the orchestra of the Society of Friends of Music and in string quartets. He moved to Warsaw in 1827. He composed about 40 *mazurs* for balls, and numerous other dances and songs. Most of his works, including about 20 piano mazurkas, were published by Brzezina and Klukowski (1823–30).

BARBARA CHMARA-ŻACZKIEWICZ

Sołtys, Mieczysław (*b* Lwów, 7 Feb 1863; *d* Lwów, 11 Nov 1929). Polish composer, conductor and teacher. He studied in Lwów with Mikuli (piano and composition) and in Paris with Saint-Saëns (composition) and Gigout

(counterpoint and organ). On his return to Lwów he became editor of the *Wiadomości Artystyczne*, and in 1899 director of the conservatory and musical society; he held both posts until his death. For the musical society he conducted a great number of orchestral concerts, covering the repertory from Bach to Strauss, and he was also active in the city's musical life as a journalist and organizer. Until 1910 his music was academic and outdated in its early Romantic style influenced by Moniuszko. Later his technique developed, his harmony became more venturesome and his melody richer in a Wagnerian manner.

TERESA CHYLIŃSKA

Solum, John (Henry) (*b* New Richmond, WI, 11 May 1935). American flautist. At Princeton he studied musicology with Mendel, theory and composition with Forbes and Cone, and had private flute lessons with Kincaid. He made his solo début in 1957 with the Philadelphia Orchestra after winning its Youth Award. Since 1962 he has toured in North America, Europe, and Asia as a soloist and in chamber ensembles. His extensive concert repertory and numerous recordings encompass works for both the modern Boehm-system flute (including many pieces dedicated to him by contemporary American composers), and its 18th-century antecedent. Solum is a founding member of Aston Magna, the Bath Summer School of Baroque Music and the Connecticut Early Music Festival. He has taught at Vassar College, Oberlin College and Indiana University, has edited flute music from the 18th to 20th centuries and has written many articles on flute music and a book, *The Early Flute* (Oxford, 1992).

HOWARD SCHOTT

Somalia [Somali Democratic Republic] (Som. Jamhuriyadda Dimugradiga ee Soomaaliya). Country in the Horn of East Africa. It has an area of 637,657 km² and a population estimated at 11·53 million (2000). The Somali Democratic Republic collapsed in a revolution in 1991, and no political state has been formed to replace it, although the Somali National Movement declared the secession of an independent country called the Somaliland Republic in the north-western region. Somalis are the primary ethnic group and inhabit neighbouring parts of Ethiopia, Djibouti and Kenya. These peripheral populations have been separated from the main population since the colonial partition of Africa. A small number of other Bantu-speaking ethnic groups live among the Somalis. Islam, language and ethnic identity unite all Somalis, but there are internal divisions into clan families, lineages and other subgroupings based on an agnatic genealogy. There are also three main linguistic divisions. Most Somalis are nomadic herders of camels, cattle, sheep and goats or small-scale subsistence farmers. The growing urbanization of the country was curtailed considerably by the civil war, which began in 1988. A large diaspora of refugees now lives outside the country in East Africa, Europe, the USA and Canada.

1. General features of Somali music. 2. Relationship between music and poetry. 3. Modern developments. 4. Collections and research.

1. General features of Somali music. All Somali music is pentatonic, and there is a large variance of pitch frequencies and intervals, because they are not standardized. The characteristic, pentatonic gap between the second and third notes of the scale is absent in some poems in which intervals are equidistant. Indigenous Somali music functions as accompaniment to poetry and is limited by 'language internal constraints' (Bird, 1976), where music becomes predictable from scansion. A few melodies partially define each genre, any one of which can be sung to any poem in that genre. The genre will be perceived, rather than the specific poem, if one hears a Somali whistle a tune. On the other hand, the modern *heello*, influenced from colonial models, bears 'language external constraints', and each poem has a unique melody. Consequently, predictable rhythms in the *heello* provide prosody for the poem.

Both language and music depend on duration for rhythm: long and short vowels in prosody and long and short notes in music. The interaction between the two provides a polyrhythmic relationship in Somali scansion where two parallel rhythm systems are performed simultaneously in the same stream of speech.

2. Relationship between music and poetry. The Somali word for music, *muusiko* (or *muusiqo*), is a loanword from the English, Italian and French colonial languages, reflecting the primary use of music prior to the 1940s as accompaniment to poetic performance. In the indigenous Somali tradition, music and poetry (sung poetry) are really the same creative act, though poetry can be recited without singing. Music as a separate performance form became important only after colonial exposure to foreign forms.

Before the use of spoken poetry in the modern Somali theatre (Mumin, 1974), all Somali poetry could be set to music either as chant (melodic but not rhythmic) or as song (melodic and rhythmic). No extensive vocabulary for musical forms existed, but a specialized one existed for over 30 genres of poetry. Indeed, until the early 1940s poetic specialization by Somali artists resulted in music assuming a secondary role to poetry. Traditional melodies existed, as did traditional song and chant forms, but they were not associated with specific poems. Instead, groups of melodies were associated with particular poetic genres. Any melody in a group could be chosen, adjusted in minor ways to fit the words of a specific poem, and the

adjustments could then be applied to any other melody of the same group. Thus, a specific poem of the *wiglo* genre could be chanted to a number of melodies associated with that genre, but a poem from another genre could not be used with *wiglo* melodies. The stock of melodies in each group was increased by regional variations and by the innovations of individual performers. Few poets are remembered as composers of this limited stock of genre melodies, though they are often remembered as composers of specific poems. A notable exception is Sayyid Maxamed Cabdille Xasan, the famous 'Mad Mullah of Somaliland'.

The secondary role of music is also reflected in the paucity of musical instruments in Somali culture. The only instrument played by Somali pastoralists is the drum, and in the north it is used only by women, to accompany their serious genre, the *buraambur*, which is recited principally at weddings and festivals. No instrumental accompaniment of hand-clapping was permitted with the male classical genres of *gabay*, *jiifto* and *geeraar*. Hand-clapping and an occasional drum, very often a simple petrol tin, are, however, used to accompany the less serious and mixed-gender genres associated with Somali dancing in this area. The southern regions are different. At least four styles of drums are used (*durbaan*, *yoome*, *jabbu* and *nasar*), together with a variety of flutes (*malkad*, *siinbaar* and *sumari*). *Buun oo caroog* (conch shells) and antelope horns, especially of the kudu (*gees oo goodir*), are blown rhythmically. Clappers are also used to beat rhythms: a wooden, hand-carved pair (*shanbal*) and a pair of metal hoe-blades (*shagal oo biro*). Finally, one finds the *shareero* (a lyre) in southern Somalia, which is also common in other parts of eastern Africa.

3. Modern developments. In the period just after World War II, Somali musical life underwent drastic changes. The radio was introduced during the war, and Somalis were presented with English, Italian, Arabic and Indian musics. The British colony of Aden, where many Somalis lived or went for civil service training, also contributed to this exposure, with a radio station and several cinemas. In Hargeysa (Hargeisa), capital of the then British Somaliland Protectorate, several Somalis, notably Cabdullaahi Qarshe, formed a theatrical company known as Walaalo Hargeysa ('Brothers of Hargeysa'). They introduced a newly emerging form of poetry in many of their productions and accompanied its recitation with a small orchestra composed of flute, violin, tambourine and drum. The growing drive towards independence, along with other factors, led to the development and popularity of this form, which is almost wholly responsible for the concurrent development of modern Somali music. The novel musical setting of this new genre resulted in the confusion over its naming. The long and powerful tradition that preceded it compelled many Somalis to call it the *heello*, a name derived from an introductory formula that was initially used with it but later dropped. Other Somalis called the new genre *hees* ('song') for several reasons: increasing numbers of foreign musical instruments were employed with its recitation; it had melody and rhythm; its extensive use of patterned refrains made it resemble foreign radio models; and, in distinction to earlier genres that drew from a common stock of melodies, each poem in the new genre had a specific melody, composed earlier by the poets themselves or by a musician.

In the period from about 1943 onwards, more and more innovations were introduced; these applied both to the instruments used and to the music itself. These innovations were soon disseminated through radio stations in Mogadishu (Mugdisho) and Hargeysa, as well as by the burgeoning Somali theatre. An orchestra was formed and trained by an Italian military conductor and it performed on Mogadishu radio and at military parades, also giving public performances. In addition to the groups given official government support, private ensembles playing foreign music (i.e. rock and roll) and Somali music began to perform without texts. A form of the *heello* characteristic of southern composers, notably Axmed Neji, was developed, using still more musical instruments (electric guitars, electric organs and drum sets).

Despite the paucity of indigenous instruments, Somali music has a unique character and cannot be confused with the musics of neighbouring countries. Somali musicians state that a form of Western-influenced Sudanese jazz has been a major external influence on Somali music in recent times. During the period of the Somali Republic, members of the Radio Artistes Association made regular tours to Tanzania, the Sudan and elsewhere, and instrumental groups from abroad performed in the National Theatre in Mogadishu. This state-supported ensemble was retained with a new name Waaberi ('Dawn Players') after the 1969 *coup d'état*, and survived into the 1990s as a private troupe in the European and American diaspora after the 1991 revolution.

4. Collections and research. Extensive collections of tape-recorded Somali music were kept in the country's radio stations at Hargeysa and Mogadishu and at the Academy of Sciences and Arts, Ministry of Higher Education and Culture, in Mogadishu. The current state of these collections is not known, but other collections are located in the radio stations that broadcast in Somali in Addis Ababa, Nairobi, Djibouti, Cairo, Moscow and London. Extensive tape collections can be found today at the School of Oriental and African Studies (University of London), the University of Rome 'Sapienza', and the Archives of Traditional Music (Indiana University).

Until the late 1970s ethnomusicological research was limited to the casual observations of scholars interested in such varied fields as folklore, linguistics and anthropology, and most of these observations were on the music of the pastoral Somali and the modern urban populations. Research in Somali ethnomusicology has increased dramatically since the 1980s, and several articles of substance have been published describing Somali musical context and the relationship between music and poetic scansion. Yet although there are over 30 genres of poetry among the Somali, all of which may be sung, only a few have been analysed. Moreover, since the break-up of the national government in the Horn of Africa, at least a million Somalis now live in the diaspora where their exposure to foreign musical systems is increasing. Much more analysis remains to be conducted.

JOHN WILLIAM JOHNSON

Somers, Harry (Stuart) (*b* Toronto, 11 Sept 1925; *d* Toronto, 9 March 1999). Canadian composer, pianist and broadcaster. Somers was one of the most significant composers to emerge in Canada after World War II. Along with several other postwar Canadian composers, such as Weinzweig and Pentland, he developed a strikingly distinctive style that was influenced by contemporary figures in Europe and the United States, rather than the prevailing English organ and choral tradition of composers such as Willan. Somers left a rich legacy; many of his works have become mainstays of the contemporary Canadian repertory.

1. Life. He independently began studying piano and composing in 1939 and studied at the Toronto Conservatory between 1942 and 1949, with an interruption for military service (1943–5). His teachers were Weinzweig for composition and R. Godden and W. Kilburn for the piano; in 1948 he studied the piano briefly with E. Robert Schmitz in San Francisco. Although Somers showed exceptional promise as a pianist, widely performing his own music as well as that of colleagues such as Pentland, in 1948 he abandoned plans to become a concert pianist in order to devote himself to composition. In 1949 he was awarded a Canadian Amateur Hockey Association Scholarship to study for a year in Paris with Milhaud. Somers never held a teaching position or sought permanent employment. In the 1950s he earned a living in a variety of odd jobs, briefly driving a taxi, working as a part-time music copyist and playing the guitar professionally. From 1960 he supported himself through commissions from major institutions and orchestras. He returned to Paris in 1960 on a Canada Council Senior Arts Fellowship to observe recent musical developments and to pursue his interest in Gregorian chant in a brief period of study at Solesmes.

During the 1960s Somers became involved in broadcasting and music education. He served as a writer, commentator and host on a variety of CBC radio and television music programmes, including an important two-hour documentary in 1962 on the occasion of Stravinsky's 80th birthday; from 1965 to 1969 he prepared and presented the CBC programme 'Music of Today'. In 1968–9 he was special consultant to the North York Board of Education, Toronto, working directly in the classroom to explore new methods of developing musical creativity among children. A grant from the Canadian Cultural Institute in Rome enabled him to spend two years there (1969–71); this was above all a period of reflection and planning. On his way back to Canada in the autumn of 1971 he spent three months visiting India, Nepal, Thailand and Bali, gaining musical experiences which were to influence several important works of the 1990s. Among the many honours he received were honorary doctorates from the universities of Ottawa (1975), Toronto (1976) and York (1977). In 1972 he was made a Companion of the Order of Canada, the country's highest award. Somers's first wife, Catherine Mackie, died in 1963. In 1967 he married the distinguished Canadian actress Barbara Chilcott, whose involvement with theatre and non-Western religions and philosophy exerted a considerable influence on his own artistic development.

2. Works. Somers might be considered an eclectic in that throughout his career he absorbed many influences, among them the music of Weinzweig, Bartók and Ives, Baroque counterpoint and Gregorian chant. However, he always selected those elements most compatible with his own strong creative personality. From the beginning he developed a musical language of great originality, owing in part to Toronto's relative isolation from major 20th-century innovations. Most of the works of the early and middle 1940s (largely piano music) bear descriptive titles. There is considerable rhythmic vitality and sensitivity to instrumental colour; the harmonic language is mildly dissonant within a vertically orientated, tonal framework, with a preference for parallel progressions and for chords built in 4ths and 5ths. These works show the emergence

of an important characteristic of his mature style: the extended, lyrical melodic line, slowly unfolding against a thinly-textured, more active and often ostinato-like accompaniment. Over the years the ever-present 'long line' underwent many internal changes involving range, interval structure and dynamic contour, but it was generally a means of achieving considerable intensity and continuity. The falling semitone is often an important expressive feature of these lines, which have been described as 'personal songs of sadness and perhaps loneliness'.

In the late 1940s, under the guidance of Weinzweig, a more horizontally orientated approach evolved, with thinner textures and greater control over motivic coherence. These developments can be seen most clearly in the outer movements of *North Country* (1948), a four-movement suite for string orchestra. Nervous rhythmic vitality, sparse textures in a relatively dissonant context and lean melodic lines in a high register (often contrasting sharply with a driving ostinato-like accompaniment) subtly evoke the bleakness, loneliness and strength of the northern Ontario landscape. In a sense the work could be considered the musical counterpart of certain paintings by the Canadian 'Group of Seven'. *North Country* and works that followed – the Suite for harp and chamber orchestra (1949), the Symphony no.1 (1951) and the Passacaglia and Fugue (1954) – are classics of Canadian music and document the efforts of a generation to break away from the traditional language of older, European-trained colleagues. These works display another important facet of Somers's language in the individual use of dynamics: a single sustained sound (whether a chord or a single pitch, isolated or prolonged in a melodic line) acquires a dynamic envelope of its own; Somers referred to this as 'dynamic unrest'. Beginning with the Fantasia for orchestra (1958) this device is applied to orchestral blocks, juxtaposed or superposed. By extension, the build-up and release of tension, through a carefully planned crescendo, contributes a sense of drama and coherence to individual movements and even an entire work. This can be traced from *North Country* through major works of the 1950s (notably the Symphony no.1 and the String Quartet no.3) to the orchestral *Five Concepts* (1961), each describing a dynamic arc.

Although Somers had experimented with serial technique as early as 1942, he did not use this method of pitch organization systematically until 1950, preferring instead to work with small interval cells, sometimes drawn from a 12-note series. After *12 x 12*, a collection of 12 fugues for piano, and the Symphony no.1, all the major works up to and including the opera *Louis Riel* employed serial pitch organization. However, Somers's approach to serialism was intuitive. Until about 1959 even those sections in which a series is applied strictly had tonal implications and references, and Somers's application of serialism was always flexible, subordinate to other aspects.

During the 1950s Somers was preoccupied with two main avenues of exploration: the use of fugue-related textures and techniques, and the juxtaposition of different styles and techniques within the same work. The use of fugal devices was an attempt, in his words, to 'unify conceptions of the Baroque ... with the high tensioned elements of our own time'. Well over half of the works written between 1950 and 1961 contain fugal movements or sections. The most characteristic subjects have a sharp, nervous, rhythmic vitality, which often serves as a foil for slower-moving subsidiary melodic lines. Striking examples (in addition to *12 x 12*) are the Passacaglia and Fugue (1954), the last section of the String Quartet no.3 and the second (for percussion alone) of the *Five Concepts*. The counterpoint of styles was used both to create tension by flouting the listener's expectation and to superpose different planes as in Ives. While not entirely successful in his works of the 1950s (e.g. the Piano Concerto no.2 and the Violin Sonata no.1), the device was effectively used in the opera *Louis Riel*. A series of orchestral works of the early 1960s shows increasing experimentation with non-thematic textures and with the visual and spatial aspects of performance. *Stereophony* (1963), commissioned by the Toronto SO, remains Somers's most important and original orchestral score and a synthesis of many elements of his earlier writing. In addition to two string orchestras on the platform, musicians are scattered about the hall; the impossibility of synchronization is deliberate.

One of Somers's most important achievements is the three-act opera *Louis Riel* which focusses sympathetically on the character and aspirations of the *Métis* spokesman who led unsuccessful uprisings in Manitoba in 1869–70 and 1885. Commissioned by the Floyd S. Chalmers Foundation for the Canadian Centennial in 1967, the work received international acclaim. It was performed eight times during the period 1967–8 and was broadcast in 1969 by CBC television. In October 1975 it received its US première at the Kennedy Center in Washington, DC, as part of Canada's contribution to the USA's bicentennial celebrations, thus becoming the first full-length Canadian opera to be performed outside Canada. The text is multilingual (in English, French and Cree) and the music is in four different stylistic areas: lean, atonal orchestral writing (used for dramatic intensity and to evoke the Canadian northwest); popular songs of the Riel period (e.g. 'Orangemen Unite', used for a political gathering in Act 2 scene iv); native folksong (notably Marguerite's beautiful aria 'Kuyas', Act 3 scene i) and electronic sounds (used to create maximum tension, as in the battle scene, Act 1 scene i). (Although he worked extensively in the studios of the University of Toronto, this opera contains one of the few instances of Somers's use of taped material, along with *Zen, Yeats and Emily Dickinson* (1975) and *Magic Flute* (1997).) Among the most intense parts of the work are two virtually unaccompanied arias, one for Louis, the other for Marguerite, his wife. These arias may be seen as a further stage in the development of Somers's masterful and individual extended melody.

From the mid-1960s to the mid-1980s, Somers was chiefly concerned with the exploration of new vocal techniques. In 12 Miniatures, *Evocations, Crucifixion* and *Louis Riel*, devices such as vocalization, vowel and breath sounds, and timbral inflections are used within a traditional framework. *Voiceplay* (1971), commissioned by the CBC for Berberian, is presented in the guise of a non-semantic 'lecture' in which the performer must play four different roles and present symbols of 'objective' and 'subjective' states. The sound material consists largely of voiced and unvoiced phonetic sounds. In *Kyrie* the text is derived almost entirely from the phonetic sounds of the words 'Kyrie eleison, Christe eleison'. Somers believed that 'the meaning of words of ancient origin is in their sound, and not necessarily in the order that has been handed down to us . . . the inner meaning . . . can only be

experienced, not "explained" in the "semantical" sense'. *Kyrie* also contains passages consisting of layers of different but simultaneous tempos (which Somers refered to as 'multi-plane and multi-tempo writing'); this technique is also encountered in other later works such as *Movement for String Quartet* (1982) and *Elegy, Transformation, Jubilation*(1981), the last section of which evolves to five separate tempos simultaneously distributed among five instrumental groups, requiring five conductors using click-tracks.

Somers's interest in vocal writing culminated in four works of the 1970s and early 1980s: *Zen, Yeats and Emily Dickinson*, *Limericks*, *Shaman's Song* and *Chura-Churum*. *Limericks*, for example, a tribute to Healey Willan on the occasion of the centenary of his birth, is a whimsical, rhythmically vivacious setting of three ribald limerick verses for chorus, mezzo-soprano and instrumental ensemble. *Chura-Churum* is, in contrast, an extended, intense work for small ensemble and eight vocalists, each singing into a microphone connected to one of eight loudspeakers located around the hall. (His use of spatial effects can be traced back to *Stereophony*.) The Sanskrit title, meaning 'all manifest-unmanifest creation', appears in the work's text, a *puja* or mystical verse, which is broken into phonemes and combined with a number of other vocal sounds. It is a score of considerable complexity, involving graphic notation and the movement of singers from one microphone to another throughout the piece. Somers said that 'there's a sense of theatre and ritual about the piece, even in the movement of people around the stage'.

In the late 1970s Somers returned to the stage with a chamber opera, *The Death of Enkidu*, the first in a projected trilogy based on the Sumerian-Babylonian *Epic of Gilgamesh*. While this dark, atmospheric work can be seen as a continuation of various extended vocal techniques developed since the 1960s, Somers subsequently turned towards a more tuneful, less complex style in the children's opera *A Midwinter Night's Dream*, set in a tiny Inuit community in the Canadian arctic. Expressing the desire to 'go back to square one . . . use simple tunes and rhythms', Somers drew upon Inuit material and popular music (as well as his own dissonant and rhythmically vigorous style) to create a suitable ambiance for the conflict, embodied in the Inuit youth Jimmy Moonwok, between the values of late twentieth-century Western society and those of the traditional Inuit culture.

Although the opera which followed, *Serinette*, was also based on a Canadian subject (characters and events in Upper Canada in the early 1800s, including David Willson's religious sect, The Children of Peace) and evoked the music of the period, Somers turned, in the early 1990s to an adaptation of Thomas Mann's novella *Mario und der Zauberer*, a parable of the rise of fascism. Somers and his librettist, Rodney Anderson, created a full three-act work, rich in detail and allusion, in which a variety of musical and vocal styles are used to define various aspects of the characters and dramatic situations, much in the manner of *Louis Riel*. In his review in *Opera Canada*, Carl Morey wrote that the opera 'reflects much that is traditional in the lyric theatre while being in every sense contemporary in both subject and style'.

WORKS

STAGE

The Fool (chbr op, 2 scenes, M. Fram), 1953; Toronto, 15 Nov 1956
The Homeless Ones (TV operetta, Fram), 1955; CBC TV, 31 Dec 1955
The Fisherman and his Soul (ballet, choreog. G. Strate), chbr orch, 1956; Hamilton, 5 Nov 1956
Ballad (ballet, choreog. Strate), chbr orch, 1958; Ottawa, 29 Oct 1958
The House of Atreus (ballet, choreog. Strate), orch, 1964; Ottawa, 13 Jan 1964
Louis Riel (op, 3, M. Moore and J. Languirand), 1967; Toronto, O'Keefe Centre, 23 Sept 1967
Improvisation (music-theatre piece), narr, solo vv, ens, 1968; Montreal, 5 July 1968
And (dance score), S, A, T, Bar, fl, hp, pf, 4 perc, 1969; CBC TV, 1969

BRIAN CHERNEY

Somervell, Sir **Arthur** (*b* Windermere, 5 June 1863; *d* London, 2 May 1937). English composer and educationist. He was educated at Uppingham and King's College, Cambridge, where he studied music under Stanford. Two years in Berlin (1883–5) at the Hochschule für Musik were followed by two years at the RCM, after which he became a private pupil of Parry. In 1894 he joined the teaching staff of the RCM and in 1901 began the work which led to his appointment as inspector of music to the Board of Education. He retired from this post in 1928 and was knighted in the following year.

Although Somervell's devotion to the cause of musical education may well have hampered his development as a composer, he wrote consistently throughout his life and made ambitious contributions in every field of musical composition. However, he made his deepest and most lasting impression with the kind of choral music that lay within the capabilities of amateur singers. Church choirs welcomed his short oratorio *The Passion of Christ* (1914) as a more refined, though arguably less powerful, alternative to Stainer's *Crucifixion*. The cantata *Christmas* (1926) met with a similar response. In the secular field, the cantata *The Forsaken Merman* (Leeds Festival, 1895) made a strong impression and it remained in print until long after World War II.

Somervell's most important contribution to English music is to be found in his five song cycles, which include settings of Tennyson, Housman and Browning. *Maud* (1898), to poems by Tennyson, has lasted most successfully and is probably his masterpiece. The piano writing is bold and imaginative, and the strikingly memorable vocal lines do full justice to the words. The genuine and consistent level of dramatic power of this work can still be felt, but in symphonic and chamber music he was less successful. The sincerity and craftsmanship of his most important orchestral works (written immediately before and after World War I) were apparent to all, but so too was the degree to which his style was out of date. His music was grounded in the German classics, lying somewhere between Mendelssohn and Brahms in an area which was perhaps more adequately explored by Parry.

Somervell did pioneer work of great value in helping to establish music as a recognized school subject at all levels. To this end he wrote many educational works, including some half-dozen operettas for children. He lent active support to other musically progressive organizations, including the Church Music Society, the Competitive Festival Movement and the Folksong Movement.

MICHAEL HURD

Somfai, László (*b* Jászladány, 15 Aug 1934). Hungarian musicologist. He studied musicology at the Budapest Academy under Bartha, Bárdos, Gárdonyi and Szabolcsi (1953–8), graduating in 1959 with a dissertation on the development of the Classical quartet by Haydn. He was music librarian at the National Széchényi Library (1958–62) and in 1963 joined the staff of the Bartók Archives (from 1969 the Institute of Musicology of the Hungarian Academy of Sciences), of which he subsequently became director (1972). He joined the musicology faculty of the Budapest Academy in 1969, first as a lecturer, and from 1980 as professor; in 1997 he became director of the PhD course in musicology. He was awarded the doctorate from the Hungarian Academy of Sciences in 1982 for his book on Haydn's piano sonatas. He was visiting professor at CUNY and Berkeley in 1984 and 1989.

Somfai is one of the leading personalities of Hungarian musicology, and has done much to facilitate Hungarian access to the latest international research. One of his main areas of study is the 18th century, especially the works of Haydn. He proved that the quartets op.3 attributed to Haydn are not his compositions; he also produced the first scholarly iconography of the composer. The focus of his 18th-century research is the connection between notation and performing practice; he was among the first in Hungary to promote historically-informed performance styles. His other main area of exploration is 20th-century music, and he is one of the foremost Bartók scholars. In addition to working on the complete edition and preparing the thematic catalogue of Bartók's works, he has written the first systematic treatment of Bartók's working practices, sketches, and the relationship between notation and performance by the composer (1996).

ISTVÁN KECSKEMÉTI/ZSUZSANNA DOMOKOS

Somi, Leone di [Leone Ebreo de]. *See* SOMMI, LEONE DE'.

Somiere (It.). *See* WIND-CHEST.

Somis, Giovanni Battista (*b* Turin, 25 Dec 1686; *d* Turin, 14 Aug 1763). Italian violinist and composer. He came from a family of musicians: his father, Lorenzo Francesco (1662–1736), was a violinist and was once known by the nickname 'l'Ardy' (perhaps referring to some military exploit), which was passed on to his children. Somis's mother, Domenica Canavasso (1663–1706), was the sister of the violinist Paolo Canavasso, who founded a dynasty of musicians. In 1696 Somis entered the service of Duke Vittorio Amedeo II of Savoy as a 'musico suonatore della banda dei violini'. In 1703 he was sent by the duke to Rome, together with A.S. Fiorè to perfect his skills with Corelli. While there he benefited from the patronage of Cardinal Ottoboni, to whom he later dedicated his op.4. Having returned to Turin at the end of 1706, he resumed his post in the court orchestra; in 1715 he was appointed leader of the soprano violins, and in 1736 director of the entire orchestral ensemble. From 1737 to 1757 he also held the positions of musical and stage director at the Teatro Regio, with the obligation to direct the first opera of every season. From 1709 until his death, Somis was a chamber assistant to Vittorio Amedeo, Prince of Carignano, who moved to the Palais de Soissons in Paris in 1718, giving Somis several opportunities to travel to the French capital, where he performed at the Concert Spirituel in 1733. He was admired as a violinist throughout Europe and his many pupils included Jean-Baptiste and Pierre Miroglio, J.B. and Joseph Canavas, Carlo Chiabrano, Guignon, Pugnani, Giardini, the elder Jean-Marie Leclair, Guillemain and Gaspard Fritz. Somis's sister Cristina (1704–85) was an excellent chamber singer, the most famous of her time (see illustration).

Somis left nine printed collections of sonatas for two or three instruments, several other instrumental pieces (ten violin concertos, three sinfonias, seven sonatas) and a single vocal piece. The many works listed in the lost autograph catalogue must, for the most part, have been composed for his own use. The solo concertos are traditional in conception, the solo sections being of no great virtuosity. The chamber works, however, are richer in invention: predominantly tripartite in structure, their slow movements (often placed first, as in all of op.2, and followed by two allegros), with a warm cantabile style and sophisticated harmonic progressions, seem to have been the focus of greatest attention. Having abandoned the archaic *da chiesa* style of the first collection, Somis developed the sonata in directions similar to Vivaldi. The

Lorenzo Francesco Somis (cello) with his son Giovanni Battista (violin) and daughter Cristina (keyboard): drawing by Giovanni Lorenzo Somis, black and white chalk on blue paper, 1730s (Sotheby's, London)

sonatas for two violins (opp.5 and 7) and the trio sonatas (op.8) are essentially amateur in character, but the 12 sonatas for solo cello, probably written for the first cellist of the Regia Cappella of Turin, Salvatore Lanzetti, are more notable.

ALBERTO BASSO

Somis, Giovanni Lorenzo (*b* Turin, 11 Nov 1688; *d* Turin, 29 Nov 1775). Italian violinist and composer, brother of GIOVANNI BATTISTA SOMIS. After studying first probably with his father, he moved to Bologna, where he remained for eight years. While there he completed his studies with G.N. Laurenti, and also studied painting, possibly with Giuseppe Del Sole. After a stay in Rome and in the Kingdom of Sicily, he was accepted in 1722 by the Academia Filarmonica in Bologna. In 1724 he joined the military band of the King of Sardinia, and from 1732 to 1770 he was a violinist in the royal chapel, Turin, a city he left only in 1753 to travel to Paris. Somis was an affluent art collector, the 70 paintings listed in his will including works by himself and by Carle van Loo, Meytens, Magnasco and Seyter. Somis left many examples of his own work in the residences of the House of Savoy and painted portraits of various musicians, including his brother (1732), Antonio Lotti, Giacomo Perti, Giovanni Porta and Salvatore Lanzetti. The portraits of the Somis brothers in the Civico Museo Bibliografico, Bologna (by Gaetano Ottani, a renowned tenor and talented painter), are copies, commissioned by Padre Martini, of originals (made around 1734) by Louis Michel van Loo.

Somis's surviving music consists of three published collections of sonatas for violin and cello, as well as six concertos and an overture in manuscript. The sonatas, unlike those of his older brother, employ the characteristic formal principals of the *sonata da chiesa*. This is especially the case in the four-movement works of op.1 (the three-movement structure is rigorously respected in op.3 and in six of the eight sonatas in op.2). In general terms, the quality of his invention and the search for effects of timbre and particular sonorities are striking. His idiom in the solo concertos, however, is more conventional.

ALBERTO BASSO

Somma, Antonio (*b* Udine, 28 Aug 1809; *d* Venice, 8 Aug 1864). Italian librettist. Following studies at Padua, he settled in Trieste as a poet and playwright. His successful tragedy *Parisina*, written while he was still a student, brought him the superintendency of the Teatro Comunale there. He later practised law in Venice. There he met Verdi, who entrusted him with the libretto of *Il re Lear* on Cammarano's death; when this project collapsed, he prepared the *melodramma Un ballo in maschera* instead. Verdi admired his poetic gifts and patriotic sentiments, but found him ignorant of the requirements of musical setting. Somma wrote several plays, but no other librettos, though he is often credited as one of the authors (with Dall'Ongaro and Gazoletti) of the *melodramma Un duello sotto Richelieu* (set by Federico Ricci, 1839); the extent of his participation is uncertain.

JOHN BLACK

Sommeil (Fr.: 'sleep'). A slumber scene found in many French stage works of the 17th and 18th centuries. Lully introduced the *sommeil* to the French lyric stage in *Les amants magnifiques* (1670), a *comédie-ballet*. The third *intermède* of this work begins with a 'ritournelle pour les flûtes' followed by a vocal trio 'Dormez, dormez beaux yeux'. The source for the latter is clearly the trio *Dormite, begli occhi* from Luigi Rossi's *Orfeo*, performed in Paris in 1647.

At its most simple, the *sommeil* consists of an extended prelude followed by an *air*. The prelude, often scored for flutes (or recorders) and strings, is written in slow duple metre and often uses quaver figures in conjunct motion, which, slurred in pairs, may permeate the *air* as well. At its most complex, a *sommeil* may be an entire scene made up of prelude, *airs*, vocal ensembles (often a trio of sleep deities), dances and a chorus. The most famous example, in Lully's *Atys* (1689; Act 3 scene iv), became the model for others, including the *sommeil* in Desmarest's *Circé* (1693; Act 3 scene iii). *Sommeil* elements are also found in Lully's *Persée* (1682; Act 3 scene ii), in the prologue to his *Amadis* (1684), in the prologue to Collasse's *Thétis et Pélée* (1689), in Destouche's *Issé* (1697; Act 4 scene ii), in Montéclair's *Jephté* (1732; Act 4 scene i), in Rameau's *Hippolyte et Aricie* (1733; Act 5 scene iii), in his *Dardanus* (1739; Act 4 scene i) and in other stage works.

The popularity of the *sommeil* was such that it was not restricted to the stage. It is found in the French cantata (e.g. Bernier's *L'aurore* and *Les songes*, Morin's *Le sommeil de l'Amour*, Campra's *Les femmes*, Clérambault's *La muse de l'opéra*, Elisabeth-Claude Jacquet de La Guerre's *Judith* and Montéclair's *La bergère*), in instrumental ensemble music (e.g. Couperin's *Le Parnasse ou l'apothéose de Corelli*, Montéclair's *Sérénade ou Concert divisez en trois suites*), in the oratorio (e.g. Charpentier's *Judith* and *Judicium Salomonis*) and even in the *grand motet* (e.g. Campra's *Notus in Judea Deus*).

JAMES R. ANTHONY

Sommer, Hans [Zincke, Hans Friedrich August] (*b* Brunswick, 20 July 1837; *d* Brunswick, 26 April 1922). German composer. He studied mathematics at Göttingen, taking his degree in 1858, and from 1859 to 1884 taught at the Technische Hochschule in Brunswick, of which he became director in 1875 and where he founded a Verein für Konzertmusik. In 1883 he gave up science to devote himself entirely to music, and in the following year visited Liszt in Weimar. He moved to Berlin in 1885, to Weimar (where he befriended Richard Strauss) in 1888, and

returned to Brunswick in 1898; in that year he joined with Strauss, Schillings and Rösch in founding the protective Genossenschaft Deutscher Komponisten (from 1903 Genossenschaft Deutscher Tonsetzer).

Sommer was most successful as a composer for the theatre. Several of his operas, to librettos often based on fairy tales, were first produced at Brunswick: *Der Nachtwächter* (1865), *Loreley* (1891), *Rübezahl und der Sackpfeifer von Neisse* (1904), *Riquet mit dem Schopf* (1907) and *Der Waldschratt* (1912). The one-act opera *Saint Foix* was given at Munich in 1894 and *Der Meermann* at Weimar in 1896; *Der Vetter aus Bremen* (1865), *Augustin* (1898) and *Münchhausen* (1896–8) were not performed. His incidental music to Hans von Wolzogen's *Das Schloss der Herzen* (1891) was first performed in 1897 in Berlin, in concert form. He placed great importance on the literary quality of his librettos, and corresponded with numerous librettists and composers. His many songs, at one time known in England, include the cycles *Der Rattenfänger von Hameln*, *Der wilde Jäger* and *Sapphos Gesänge*; he also wrote orchestral works and male-voice choruses. In 1890 he edited G.C. Schürmann's opera *Ludovicus Pius*. Sommer's historical importance rests primarily on his commitment to social and legal improvements in the copyright law, which as it stood dated back to 1870. In 1898 he published the essay *Die Wertschätzung der Musik*, which was behind the founding of the Genossenschaft Deutscher Komponisten.

J.A. FULLER MAITLAND/BERND WIECHERT

Sommer, Johann (*d* Bremen, aut. 1627). German composer, organist and instrumentalist. He may have been a son of the East Friesian court trumpeter Everdt Sommer. In 1584 he was a pupil of the Emden organist Cornelius Conradi. He stated in 1620 that he was subsequently employed 'at the courts of kings, princes and lords and in other such high places'. In 1591 he was a cornettist at the court at Gottorf. From 1602 to 1609 he directed the municipal music of Lüneburg and was active too as an instrumentalist and composer; for the last three years of his stay he was also organist of St Spiritus. In the spring of 1609 he was summoned back to Gottorf, this time as Kapellmeister and organist. In the autumn of 1619 he became director of the municipal music at Bremen and from 1625 was also organist of the Martinikirche there. He remained attached to the Gottorf court, however: on the title-page of his *Fröhlicher Sommerzeit* (1623) he referred to himself as Kapellmeister at the Holstein court. This collection, with its punning title, was intended for convivial music-making and consists of canons, bicinia, chansons and dance movements for any forces that happened to be available to the performers; two are by his teacher Conradi, and two are anonymous. The 11 dances published in 1607 and 1609 generally have polyphonic textures.

HORST WALTER

Sommer, Susan Thiemann (*b* New York, 7 Jan 1935). American music librarian. She graduated from Smith College (BA 1956) and attended Columbia University, where she studied musicology and library science (MA 1958, MLS 1967, MPhil 1975). In 1961 she joined the staff of the New York Public Library, where in 1969 she became head of the rare books and manuscripts section and curator of the Toscanini Memorial Archives in the Library and Museum of the Performing Arts at Lincoln Center. She was appointed lecturer in music librarianship and performing arts bibliography at Columbia University in 1970 and from 1975 to 1981 lectured on opera for the Metropolitan Opera Guild. After serving as book review editor of *Notes* (1978–82), she became editor of that journal in 1982; she has also been a contributing editor for *High Fidelity/Musical America* (from 1979).

PAULA MORGAN

Sommer, Vladimír (*b* Dolní Jiřetín, nr Most, 28 Feb 1921; *d* Prague, 8 Sept 1997). Czech composer. He studied at the Prague Conservatory (1942–6) with Voldan (violin) and Janeček (composition) and at the Prague Academy of Music (1946–50) with Bořkovec (composition). In 1951–2 he undertook postgraduate work, but did not complete it. He then worked as music editor for Czech radio foreign broadcasts (1953), as creative secretary to the Czech Composers' Union (1953–6) and as lecturer in composition at the Prague Academy of Music (1956–60). In 1960 he was appointed lecturer at Prague University, where he became professor of music theory in 1968.

Sommer's outlook and his involvement with socialist development in Czechoslovakia were moulded during his childhood and youth, spent in a mining area. In the immediate postwar years he worked actively with youth folk art groups: he ran courses in choral singing, taught young workers the guitar and mandolin and gave lectures on music history; he also conducted, arranged folksongs

and wrote popular songs. He recognized, however, that his gifts were most suited to instrumental composition, in which he took Prokofiev, Shostakovich, Stravinsky and Honegger as his models. He soon developed a rich, individual style, clear and direct in emotional expression. The Sonata for two violins (1948), a student work in the manner of Prokofiev, already reveals his mastery of expression and form, and his degree composition, the Violin Concerto (1950), is fully characteristic in its idiomatic writing and melodic appeal. It was severely criticized, however, and doubt was cast on the sincerity of his work; partly in answer to this criticism Sommer composed the *Vokální symfonie* (1957–8). This work, like its predecessors the prelude *Antigona* (1956–7) and the D minor String Quartet (1957), is tragic in tone, concerned with the evil and suffering which man has yet to overcome. The first movement, based on Kafka's *Nachts*, is a meditative passacaglia evoking the oppressive atmosphere of a night camp; the second, which quotes Raskolnikov's dream from *Crime and Punishment*, is a dramatic outcry against human brutality; and the third introduces calm in the face of man's natural lot, using Pavese's 'Death will come'. The work was awarded the State Prize in 1965. The more intimate *Symphonia da requiem* (1978) and Seven Songs (1986) issued from the experience of his mother's death. The latter forms a cycle bound not only by text, but by musical structure and mode of expression. The last song freely follows the finale of the *Vokální symfonie*.

Sommer's music in general is tonal and uses functional harmony, though pushed to its limits. The foundation of his orchestral sound is usually provided by the strings, whose finest nuances he exploited to the full. He worked slowly on his compositions, carefully selecting, correcting and integrating ideas so that the final result would be compact in form as well as rich in invention. His self-criticism sometimes led him to make alterations only moments before a performance, and even to withdraw a work at a late stage; as a result many of his compositions are difficult to see as part of a stylistic sequence.

ALENA NĚMCOVÁ

Sommerfelt, Øistein (*b* Kristiania [now Oslo], 25 Nov 1919; *d* 7 Jan 1994). Norwegian composer. He studied the piano, the bassoon, theory of music and composition at the Kristiania Conservatory, where he received a degree in conducting in 1947. He later studied composition with Valen in Oslo, and in Paris with Boulanger, a teacher who exerted great influence on both his artistic and personal development. Sommerfelt was active in several fields of Norwegian music life; he was a board member of the Society of Norwegian Composers and chairman of the evaluating committee of TONO, the Norwegian performing right society. He was also a music critic for several newspapers in Oslo and wrote handbooks for music teachers. He composed about 80 works, mostly in a neo-classical style. He kept to a free tonal style, claiming that this allowed him to maintain a connection with simple melodic revelation as it comes to life through the folk tune. As teaching material his sonatinas and suites for piano in Norway have attained the same level of popularity as Grieg's lyrical pieces; his many sonatinas and divertimentos for other solo instruments are also popular.

HARALD HERRESTHAL

Sommerophone. A type of EUPHONIUM invented about 1843 by F. Sommer of Weimar. Sommer appeared as soloist on the sommerophone with Jullien's orchestra in 1849; he gave recitals on his 'euphonic horn', with organ accompaniment, at the 1851 Great Exhibition, where the instrument won honourable mention. Sommer's attempt to perpetuate his name failed, however, as the term 'euphonium' was generally adopted for this type of brass instrument.

CLIFFORD BEVAN

Sommi, Leone de' [Sommi Portaleone, Leone de; Somi, Leone di; Somi, Leone Ebreo de; Sommo, Yehuda] (*b* 1527; *d* 1592). Italian playwright, theatrical theorist and poet. His literary output comprises the oldest extant Hebrew play ('An Eloquent Marriage Farce', *c*1550), Italian comedies, *intermedi*, Hebrew and Italian poems, and a detailed treatise on theatrical art, *Quattro dialoghi in materia di rappresentazione scenica*, in which he discusses the mechanics of preparing and mounting *intermedi*. Music no doubt played a major role in his productions and, within *intermedi*, in his comedies, although nothing is known of their musical insertions or their composers. His Hebrew play includes various references to singing and playing and may be compared with the first collection of Hebrew music, Salamone Rossi's *Songs of Solomon*. Both works end with 'wedding music' (in the play as an *intermedio*, in the *Songs* as a

wedding ode), and both are concerned with common themes: the play, composed for Purim and on the subject of matrimony, and the *Songs* as a form of rejoicing (Hebrew *simḥah*); the demonstration of learning (*ḥokhmah*); the urge for novelty; yet the need to base this novelty on an older tradition.

Somogi, Judith (*b* Brooklyn, NY, 13 May 1937; *d* Long Island, NY, 23 March 1988). American conductor. She studied the piano at the Juilliard School and conducting with Max Rudolf. For three years she was assistant to Thomas Schippers at the Festival of Two Worlds, Spoleto, then joined the New York City Opera as a répétiteur in 1966. She made her conducting début there with *The Mikado* in 1974, and her European début with *Die Entführung aus dem Serail* at the Saarbrücken Opera in 1979. From 1982 to 1987 she was principal conductor of the Frankfurt Opera, where she led new productions of *Il turco in Italia*, *Un ballo in maschera*, *Les contes d'Hoffmann* and *Das Rheingold*. She also appeared as a guest conductor with the New York PO, the Los Angeles PO and other major orchestras, as well as with the Tulsa Opera. She presided over the New York City Opera in live telecasts of *The Ballad of Baby Doe* (1976) and *Lucia di Lammermoor* (1982), and was herself the subject of a television documentary, 'Onstage with Judith Somogi', first broadcast on 6 April 1981 on PBS. In 1984 she became the first woman to conduct in a major Italian opera house when she directed Gluck's *Orfeo ed Euridice* at La Fenice in Venice.

Sonata (from It. *suonare*: 'to sound'). A term used to denote a piece of music usually but not necessarily consisting of several movements, almost invariably instrumental and designed to be performed by a soloist or a small ensemble. The solo and duet sonatas of the Classical and Romantic periods with which it is now most frequently associated generally incorporate a movement or movements in what has misleadingly come to be called SONATA FORM (or 'first-movement form'), but in its actual usage over more than five centuries the title 'sonata' has been applied with much broader formal and stylistic connotations than that.

From the 13th century onwards the word 'sonnade' was used in literary sources simply to denote an instrumental piece, as for example in the Provençal 13th-century *Vida da Santa Douce*: 'Mens que sonavan la rediera sonada de matinas'. In a mystery play of 1486 the phrase 'Orpheus fera ses sonnades' occurs as a stage direction. Cognate usages appear to be the 'sennets' called for in Elizabethan plays and the term 'sonada' found in German manuscripts of the same period for trumpet calls and fanfares, a later manifestation of which were the more extended *Turmsonaten* ('tower sonatas') of the 17th and 18th centuries. In *El maestro* (1536) Luys Milán referred to 'villancicos y sonadas', including among the latter pavans and fantasias. Gorzanis gave 'sonata' as the actual title for passamezzos and paduanas in the first book of his *Intabolatura di liuto* (1561), and it is similarly employed in later collections of lute music. The rapid development of instrumental music towards the close of the 16th century was accompanied by a plethora of terms which were employed in a confused and often imprecise manner. 'Sonata' was one of them, although it was nearly always applied to something played as opposed to something sung ('cantata').

1. BAROQUE.

(i) Introduction. In the 17th century title-pages often used the term 'sonata' generically to cover all the instrumental pieces in a volume, which might well contain no single work actually called 'sonata'; there are no sonatas, for example, in Buonamente's *Il quinto libro de varie sonate, sinfonie, gagliarde, corrente, e ariette* (Venice, 1629). As a genre label, the term competed with others (especially canzone and sinfonia, but also capriccio, concerto, fantasia, ricercar, toccata) that were applied to individual pieces difficult to distinguish from sonatas, even in the works of an individual composer within a single printed volume. Only after mid-century did 'sonata' finally displace its competitors as the most appropriate term for such instrumental works.

For Brossard (*Dictionaire*, 1703) the sonata was 'to all sorts of instruments what the cantata is to the voice', and was designed 'according to the composer's fancy', free of the constraints imposed by dance, text or the rules of counterpoint. Brossard categorized sonatas as *da camera* or *da chiesa*, a division that has informed much later commentary; however, the former term, while it appeared on title-pages more frequently than the latter, was rarely applied to specific sets of dance movements before Corelli's op.2 of 1685. The mature Baroque sonata did acquire a set of more or less consistent attributes, even if copyists still wavered between 'concerto' and 'sonata' for a work borrowing something from each genre. By 1750 sonatas were independent pieces, usually in three or four separate movements, which could be heard not only in church and chamber, but in concert or as interval music at the theatre, where they might be played orchestrally rather than by the chamber ensembles for which they had originally been written. J.G. Walther's concise definition (*Musicalisches Lexicon*, 1732) is accurate for his time, and indeed for much of the Baroque period: 'the sonata is a piece for instruments, especially the violin, of a serious

and artful nature, in which adagios and allegros alternate'. Here the use of the term and the development of the genre from Gabrieli's *Sacrae symphoniae* (1597) to the *galant* sonatas of Scarlatti and Telemann will be traced. But discussion cannot be limited strictly to sonatas so called, since often enough what are (and were) recognizably sonatas appeared under labels referring to another genre (capriccio), or to the number of parts (solo, quadro), or even to proper names (Cazzati's *La Galeazza*, 1648). The main concerns in what follows will be the origins and stylistic development, sociocultural functions, performing practices, dissemination and reception of the sonata and its near relatives. (For more comprehensive lists of composers, arranged by chronology and geography, see *NewmanSBE*, 4th edn.)

(ii) Origins and early development. The instrumental canzona, which had grown in Italy from instrumental arrangements of imported chansons, has usually been regarded as the most significant precursor of the Baroque sonata. The similarities between many early sonatas and contemporary canzonas are undeniable: sectional structure defined by contrasts in metre and tempo, reliance on imitative contrapuntal texture, and immediate repetition or final recapitulation of the opening section. For Michael Praetorius sonatas and canzonas were so intimately related that he cited the 'canzonas and sinfonie of Giovanni Gabrieli' in his description of the sonata, and noted that 'sonatas are composed in a stately and magnificent manner like motets, but the canzonas have many black notes and move along crisply, gaily and fast' (*Syntagma musicum*, iii, 1618, 2/1619). Although there have been many attempts to distinguish between the two genres, composers and publishers seem to have used the terms interchangeably. Both the generic meaning of 'sonata' (e.g. Tarquinio Merula's *Canzoni overo sonate concertate per chiesa e camera*, 1637), and the close relation between the two genres (e.g. in Cazzati's first two volumes of instrumental works, *Canzoni*, 1642, and *Il secondo libro delle sonate*, 1648) help to explain this interchangeability. Moreover, local usage may have varied: Montalbano, born in Bologna but working in Palermo, published a set of sinfonias in 1629 that might well have been termed 'sonate concertate' had they and he been in Venice with Castello. Even a composer's occupation and training are relevant, since organists tended to write canzonas, while virtuoso cornett players and violinists more often produced sonatas. After 1620, however, the term *canzone* was used less and less, although its stylistic influence remained evident in the sonata's fast imitative movements (actually labelled 'canzona' by Purcell).

The close relation between the canzonas and sonatas of the early Baroque is clearly reflected in Gabrieli's two publications (1597, 1615) and in those of Gussago, Corradini and Riccio. Some early sonatas (Gussago, 1608), are indistinguishable from the most conservative of four- or eight-voice canzonas; others combine old and new features. Gabrieli left sonatas or canzonas for as few as three and as many as 22 parts, often grouped in two or more choirs. Their association with sacred vocal music (in *Sacrae symphoniae*), publication in Venice (which remained central to the dissemination of Italian instrumental music until Bolognese firms began to offer real competition in the 1660s), virtuoso upper parts and precisely specified instrumentation are all typical of the earliest sonatas. The Venetian polychoral style was influential even on works for small ensembles: in one of Nicolò Corradini's sonatas (1624), pairs of unspecified treble and bass instruments engage in dialogue and join together at cadences just as they would in a double-choir canzona. Several canzonas for one to four instruments and basso continuo and a single 'Sonata a 4' from Riccio's 1620 collection descend from the same tradition, although Riccio incorporated more modern elements (tremolo, virtuoso flourishes, precise instrumentation) than did Corradini. Buonamente (*Sonate et canzoni ... libro sesto*, 1636) and Frescobaldi (*Il primo libro delle canzoni*, 1628) wrote similar pieces for one to six instruments. The modern scoring in few parts (for one to three instruments) often invoked the label 'sonata' in these pre-1650 prints; thus, Marini's *Sonate, symphonie, canzoni* op.8 (1629) reserves 'canzone' for larger ensembles, but most composers made no such terminological distinctions. One might compare the instrumental works in few parts to Viadana's *Concerti ecclesiastici* (1602), composed in response to the practice of performing four-voice motets as solos or duos with basso continuo. While evidence that canzonas *a 4* were performed with such reduced forces is lacking (although many do survive as both organ and ensemble pieces), continuo players apparently provided the imitative entries 'missing' in the few-voiced pieces, whose model was still the multi-voice canzona (the entries are actually supplied by Montalbano in the continuo part to his solo sinfonias).

The 'stil moderno' sonatas of Dario Castello (1621, 1629), while still indebted to the ensemble canzona, are even more closely allied to vocal monody. Constructed of sharply contrasting sections, they often begin with an imitative 'canzona', and continue with an instrumental dialogue reminiscent of the polychoral idiom, but these sonatas also incorporate virtuoso solos or duets, candenzas, and 'unmistakable manifestations of Monteverdi's affections, especially the *stile concitato*' (Selfridge-Field, 1975). Riemann was not alone in seeing incipient four-movement designs in Castello's multi-sectional sonatas, but other scholars have rejected such analyses, arguing that predictability itself is 'wholly incompatible with the essential spirit of the *stil moderno* sonata, which sought to overwhelm the listener in a wealth of conflicting emotions' (Allsop, 1992). Castello's inclusion of at least one solo as well as an earlier contrapuntal section is predictable enough, but the four-movement sonata favoured by later composers such as Vivaldi or Albinoni is rather far removed. Farina and Marini wrote sonatas comparable to those of Castello.

The late 16th-century diminution practices described by Bassano, among others, provided another important source of early sonata style, as in the variations constructed around a repeated melody or bass line by Salamone Rossi, Buonamente and, later, Uccellini. Such pieces were called sonatas (Rossi's *Sonata sopra l'aria di Ruggiero*, *Il terzo libro de varie sonate*, 1613) or arias (Uccellini, 1642 and 1645), or simply carried the name of the borrowed tune (Buonamente's *Le tanto tempo ormai*, 1626). A close relation, and one of the few sonatas involving voices, is the 'Sonata sopra Sancta Maria' from Monteverdi's Vespers (1610), in which pairs of violins and cornetts weave a lively commentary around the sopranos' repeated phrase 'Sancta Maria, ora pro nobis', supported by a quartet of bass and tenor instruments.

Corelli's 'Ciacona' (op.2, 1685) and 'Follia' (op.5, 1700), as well the virtuoso variations of Schmelzer, Biber and J.J. Walther, ultimately derive from the same source.

Rossi also used 'sonata' for several short binary pieces, which may have served as introductions to larger compositions; among his contemporaries 'sinfonia' was the more usual name for such works. Their trio scoring arose naturally enough from an identical disposition of voices and instruments in sacred and secular concerted music (e.g. Monteverdi's *Chioma d'oro* for two sopranos, two violins and continuo). Often the two 'solo' instruments move in parallel 3rds, supported by a simpler bass; in some works such trios are juxtaposed with a larger force, as in Bernardi's 'Sonata in sinfonia à 4' (1613). Sonatas 'a due' (for two solo instruments and basso continuo) and 'a tre' (for three soloists and basso continuo) make up most of the sonata literature for a century after 1620, although the earlier variety among solo instruments (ss, sb, bb, ssb, sss) was reduced after 1660 to a focus on the type for two trebles and continuo, and strings increasingly displaced other instruments (cornett, bassoon, trombone) found in the earliest sonatas. Compare Brossard's recognition of the variety of sonata scorings in 1703 ('We have Sonatas from one to seven or eight parts; but usually they are performed by a single Violin, or with two Violins and a thorough Bass for the Harpsichord, and frequently a more figured Bass for the Bass Violin') with Rousseau's focus on the soloist (*Dictionnaire*, 1768: 'The Sonata is ordinarily made for a single instrument which recites, accompanied by a thorough bass'). Solos, more demanding than most duos and trios, were included in several early published volumes (by Castello, Farina, Biagio Marini and Montalbano), but by 1652 only Bertoli, Uccellini and G.A. Leoni had devoted entire collections to solo sonatas.

The foregoing discussion has concentrated on developments in Italy for good reason: while sonatas were composed before 1650 north of the Alps, it was Italian immigrants who were in the main responsible. Buonamente worked in Vienna for a time, as did Valentini and Bertali for much of their careers; Bernardi went to Salzburg; Marini left Venice for Parma and Neuburg, returning only late in his career; and Farina carried the Italian sonata and a virtuoso approach to violin playing to Dresden. These Italian immigrants far outnumbered the few native composers of sonatas (Kindermann, Johann Staden, Vierdanck); only after 1650 did many non-Italian composers begin to interest themselves in the genre, but those who did made technical demands equal to or greater than those in the Italian repertory.

(iii) Development, 1650–1750. Riemann argued that what he somewhat pejoratively called the 'patchwork' canzona (*Flickwerk*) of the early 17th century evolved into the sonata as the individual sections grew in length and were reduced in number, until by Corelli's time they had achieved the status of separate movements. That much repeated view ignores the persistence of multi-sectional alongside multi-movement designs (e.g. in the sonatas of Uccellini, G.B. Vitali, Biber, J.J. Walther, Buxtehude); however, the observation is not unrelated to the mid-century repertory in which many sonatas do consist primarily of tonally closed, if brief, movements. Merula (who called his serious pieces 'canzone' as late as 1651, reserving 'sonata' for a few lighter works), Cazzati and Legrenzi favoured such three- or four-movement structures, although they shared no single pattern, and individual 'movements' are not always tonally closed. Legrenzi left three books devoted entirely to sonatas, and another that included sonatas and dances, published between 1655 and 1673. (A further collection, op.18, published *c*1695, is lost.) A clear division into separate movements (often including one in slow triple time), a focus on duos and trios, and precise specification of instrumentation are all evident in these collections. In some of the sonatas, the opening material returns at the end, as in the canzona; others differ from the 'Corellian' model only in their lack of an opening slow movement. In contrast to these 'church' sonatas, Legrenzi's six chamber sonatas (op.4, 1656) are single movements in simple binary form; G.M. Bononcini used *sonata da camera* similarly, for an abstract single-movement work rather than a dance suite (op.3, 1669). Maurizio Cazzati, controversial *maestro di cappella* in Bologna (1657–71), published eight collections that include sonatas for duos, trios and larger ensembles; three from op.35 include trumpet, a hint of the later association between S Petronio and that instrument. The sonatas in his widely disseminated op.18 (1656) usually consist of four movements: duple-metre imitative, *grave*, fast triple metre and quick imitative finale. Tarquinio Merula favoured a similar plan: fugal opening, fast triple-time movement, slow movement and vigorous finale. Uccellini also moved away from the simple canzona model towards longer and more virtuoso sonatas, usually divided into three or four sections by changes of metre and tempo.

Cazzati's pupil G.B. Vitali, and Vitali's Modenese contemporaries Colombi and Bononcini, continued to focus on duos and trios in some ten volumes of sonatas published between 1666 and 1689. Already steeped in those traditions, Corelli had arrived by 1675 in Rome, where Colista, Stradella and Lonati composed sonata-like sinfonias, usually for two violins, lute and continuo. Since the Roman material circulated in manuscript, it has been somewhat underemphasized in most histories of instrumental music, but Corelli surely adopted the slow introductions (rare before the 1680s), strict fugal movements and triple-metre finales from his Roman colleagues. Despite the many references to Corelli's sonatas (published 1681–1700) as normative, the four-movement model usually attributed to him (slow–fast–slow–fast) is present in only half of his published sonatas.

North of the Alps, Bertali's ensemble sonatas, followed by the solo and ensemble sonatas of Schmelzer, Biber, J.J. Walther and Buxtehude, recall the drama and virtuosity of the Venetian *stile moderno* at a time when sonata composition in Italy had become more standardized. Their virtuoso solos incorporated multiple stops and athletic string crossings; moreover, they continuted to depend on sectional rather than multi-movement designs in which successive events are on the whole less predictable than they are in Corelli's sonatas. They differ from the Italian models in other ways as well: virtuoso writing for the bass viol (Johannes Schenck, Buxtehude), greater interest in scordatura tunings (Schmelzer, Biber), and a continuing devotion to ensemble sonatas *a 5* or more, reminiscent of Venetian polychoral style, but with even more demanding treble parts for cornett, violin or trumpet. The legacy of the ensemble sonata (and perhaps the continued cultivation of the viol) may help to explain the more demanding bass parts: when Corelli and his

north Italian contemporaries were writing duos or trios in which the violone or cello was at best an optional inclusion, Buxtehude composed sonatas for violin and bass viol in which the instruments have equally virtuoso roles. (But it should be remembered that the solo cello sonata did emerge in Bologna at about the same time, in works of Domenico Gabrielli and others.) In addition, the Austrian and German composers devoted more energy than did the Italians to the sonata-suite, in which an abstract introductory movement is followed by a fairly standard set of dances; more than 20 such collections appeared between 1658 and 1698. Rosenmüller's Venetian publication of such chamber sonatas (1667) had found no Italian imitators, despite a growing tendency to group dances by key rather than type. In the northern prints 'sonata' or 'sonatina' was the term most frequently attached to the non-dance preludial movement (Rosenmüller used 'sinfonia'); especially well represented are Biber, Dietrich Becker, J.J. Walther and Schenck. A few native English composers wrote sonatas at mid-century, influenced by the national devotion to the viol and by their acquaintance with Italian and German sonatas. The latter they knew both at home (Jenkins was associated with the family of Francis North, who owned copies of works by Schmelzer, Colista, Cazzati, Stradella and Pietro Degli Antoni), and by virtue of their foreign employment (William Young in Austria, and Henry Butler in Spain). Henry Purcell's two published sets of sonatas (1683, 1697), after 'the most fam'd Italian Masters', shared the growing English market with sonatas by Italian and German immigrants (e.g. Matteis, Finger, Pepusch).

After 1700, Italians continued to produce sonatas for both domestic and international markets; Vivaldi, Albinoni and the Marcellos in Venice, F.M. Veracini in Florence, Somis in Turin and Tartini in Padua were some of the main contributors. Moreover, such Italian émigrés as Locatelli in Amsterdam and Geminiani in London brought the latest sonata fashions to northern Europe. That most were violinists is telling, although the oboe, flute, cello and other instruments are also strongly represented in their collective output. In these volumes the four-movement plan finally dominates (although the third movement may not be tonally closed); the emphasis begins to turn towards the solo sonata (nearly three-quarters of Vivaldi's sonatas, and all of Veracini's are for one instrument and continuo); and the church-chamber distinction disappears. In Corelli's 'church' sonatas, the final two movements are often dances (sarabanda, giga), but in many of Vivaldi's sonatas the first two movements also employ binary forms. The keyboard, relatively neglected by earlier sonata composers, begins to receive some attention, especially from Domenico Scarlatti, who focussed on one-movement binary forms, some of which are paired in the sources. Other composers of keyboard sonatas (most in two or three movements) include Benedetto Marcello, Giustini, Durante and Platti.

According to Brossard, France was overrun with Italian sonatas early in the 18th century, and French composers soon began to contribute. Most notably these include Leclair *l'aîné*, preceded by Dornel and Blavet, and even Couperin, who wrote at least three sonatas in the 1690s (published much later as preludes to *Les nations*). Elisabeth Jacquet de La Guerre left a dozen sonatas for one or two violins and bass; six were published in 1707, but Brossard apparently copied two about 1695, making them among the earliest composed in France. Of special note in France is the 'accompanied sonata' (Mondonville, Rameau) in which the violin or flute accompanies the keyboard. The sonata for unaccompanied solo instrument is associated particularly with Austrian and German composers (Biber, Bach, Telemann), although Tartini may have intended some of his sonatas, published with a bass part, for violin alone (Brainard), and the Swedish composer Roman left about 20 multi-movement works of that type, most called *assaggi*. Some programmatic or narrative sonatas are also associated with composers in Austria or Germany (e.g. Biber's Mystery Sonatas and Kuhnau's Biblical Sonatas), but Couperin's 'grande sonade en trio' *Le Parnasse, ou L'apothéose de Corelli* might also be mentioned.

18th-century Austro-German composers moved more and more towards the multi-movement design already standard in Italy, and played a central role in the mixing and merging of national styles that characterize the high Baroque sonata. Sonatas by Vivaldi, Fasch, Zelenka, Quantz and Telemann placed *galant* idioms (the 'natural' and immediately appealing melody of the Adagio) side by side with more traditional sonata styles (the fugues, whose value for Scheibe in the late 1730s lay chiefly in their contrast with the more expressive movements featuring accompanied melodies). Especially interesting are the new trios and quartets in which the basso continuo participates as a 'real' part. Some, composed 'auf Concertenart', borrow aspects of a typically Vivaldian concerto style; others borrow from the operatic aria or recitative, French dance and overture. If J.S. Bach's sonatas (unaccompanied solos, and several works for one or two instruments with obbligato harpsichord or basso continuo) are better known today than are Telemann's over 200 ensemble sonatas and solos, the situation was reversed in the mid-18th century. Quantity aside, there are parallels between the two composers: both juxtaposed and integrated national styles, and experimented with formal design and scoring; neither abandoned the traditional four movements for the newer three-movement fashion (as did Graun, Fasch, Tartini and Somis). Telemann is often dismissed as over-prolific, but his greater success in the 18th century may be attributable not only to his skill at marketing (he personally printed much of his instrumental music in didactic or encyclopedic collections), but to his serious exploration of the new trio and quartet in the 'mixed' style (combining various national styles) for which contemporaries praised him, and to his avoidance of the most old-fashioned elements of sonata style.

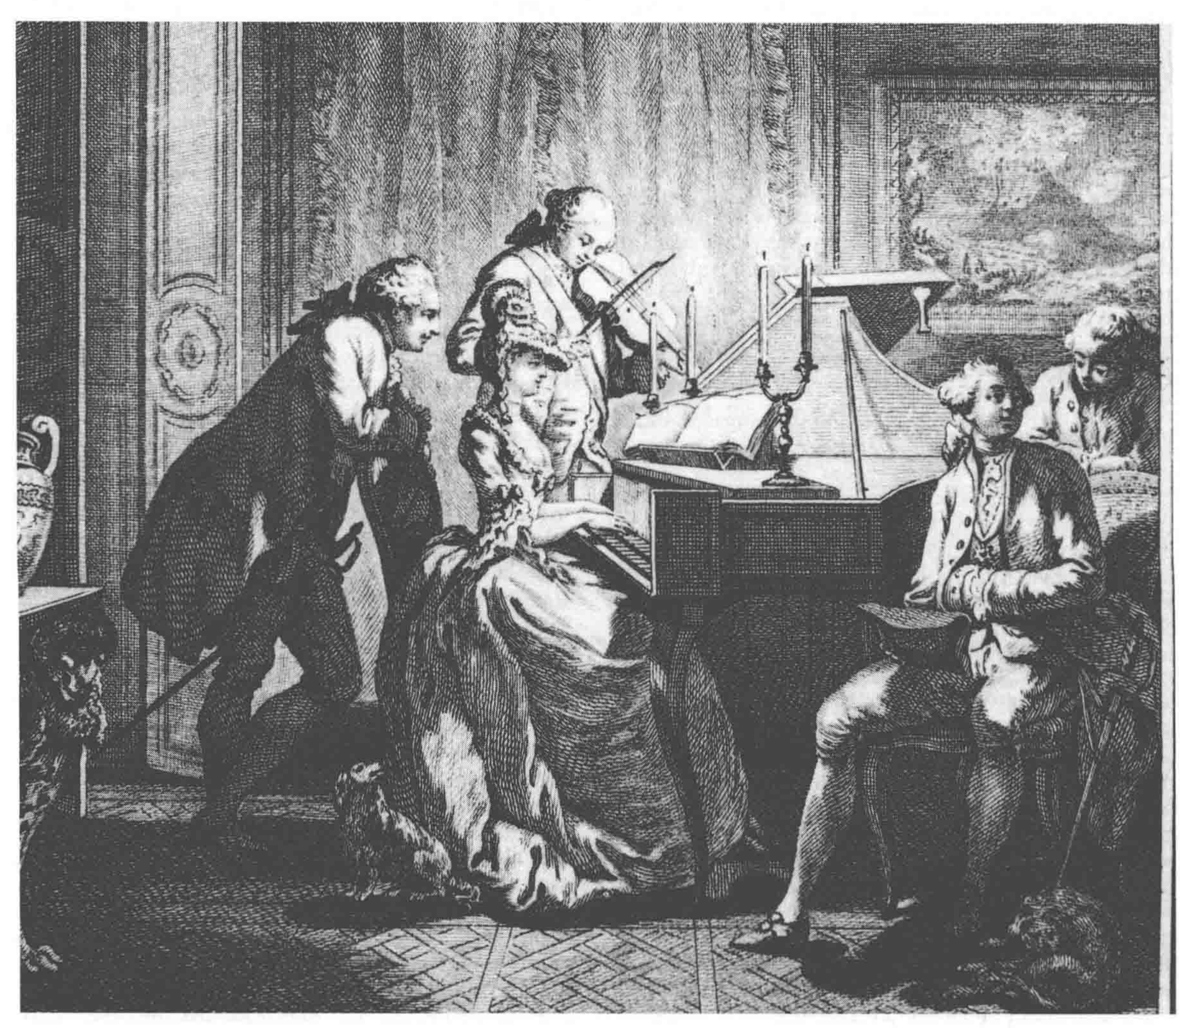
Elsewhere in Europe, sonatas circulated widely in manuscript, as well as in prints both imported and domestic; and musicians left home in search of a better living, taking their music along. Handel was only one of the many foreign musicians whose careers blossomed in London, where imitations of Corelli and the traditional trio sonata long remained fashionable. Handel's contribution to the sonata, like that of Bach, represents but a small portion of his total output; however, it does include more keyboard sonatas (Bach preferred the keyboard suite), as well as traditional solos and trios aimed equally at the large amateur market and concert stage. A focus on Handel's sonatas may have inhibited modern exploration of the many English sonata composers of the time (Babell, Boyce, Arne).

Over the 150 years of sonata composition before 1750, several trends are evident: the emphasis on counterpoint lessened; the texture became increasingly treble-dominated; multi-voice and polychoral sonatas gave way to duos and trios, which in turn yielded ground to solos and quartets; the early multi-sectional design grew to four or more separate movements, and then fell back to three or fewer; what distinction existed between church and chamber sonatas evaporated; instruments were more and more precisely specified and their parts became increasingly idiomatic; a focus on the violin grew stronger, and then was tempered by an interest in sonatas for a variety of other instruments; keyboard sonatas finally began to take their place in the repertory. As the sonata gained popularity outside Italy, its Italian and Austro-German elements were further enriched by a variety of national approaches to instrumental music, from the English division (Henry Butler) to the French emphasis on ornamental detail (Leclair). None of these changes occurred overnight, but they are evident enough when one compares sonatas from 1630 or 1700 with those from 1750. Moreover, by mid-century the function and aesthetic stature of the sonata had changed significantly.

(iv) Socio-cultural context. Brossard (1703) noted that, while there are many kinds of sonatas, 'the Italians reduce them to two types. The first is the sonata *da Chiesa*, that is one proper for the Church, ... The second type is the Sonata which they call *da Camera*, fit for the Chamber. These are actually suites of several small pieces suitable for dancing, and all in the same scale or key'. The liturgical use of Baroque sonatas has been well documented (see Bonta, 1969): 17th-century ensemble canzonas and sonatas replaced the organ solos formerly heard at Mass, and solo violin sonatas were customary at the Elevation; from about 1690, concertos or orchestral performance of trio sonatas might be heard instead. Moreover, 17th-century church musicians may have adapted longer sonatas by performing isolated sections, a practice likely to have encouraged composers to construct independent movements.

Early collections mixing vocal and instrumental music had no need of the *chiesa* and *camera* labels; in sacred collections, sonatas and canzonas are usually found (Riccio), in the secular ones, dances and variation sonatas (Marini, 1620; Turini, 1621). Even purely instrumental collections were so clearly orientated that their uses would have been obvious to the purchaser: in Buonamente's fifth and sixth books (1629 and 1636, cited above) both content and scoring suggest strongly that the former is a secular, the latter a sacred collection (Mangsen, 1990). Merula's 'per chiesa e camera' (1637) was thus unusual both in its label and in mixing serious and lighter instrumental music in one volume. Such mixed volumes, as well as those dedicated to church or chamber, appeared throughout the century, usually without labels indicating function. The editions of Corelli's 'church' sonatas (opp.1 and 3) are entitled merely *Sonate a tre*, whereas most editions of the chamber sonatas are actually labelled *da camera*. This in itself suggests what can be documented by other means, that serious instrumental music, even if conceived primarily for a liturgical context, was regularly heard elsewhere, possibly somewhat transformed: at meetings of the various academies, as domestic chamber music, in concert, and even in the theatre (as overture or interval music). The occasions for which such music was best suited (and where to store the parts) would have been obvious to the musician of the time.

Until 1700, at least in Italy, a sonata was assumed to be serious, and therefore suitable for church; *da camera* marked the special case. Brossard implied as much when, after describing the *sonata da chiesa*, he noted that 'these are what they [the Italians] properly call *Sonatas*'. Chamber sonatas usually 'begin with a prelude or little *Sonata*, serving as an introduction to all the rest'. The long tradition of such sonata-suites in Germany, as well as the growing use of binary movements in place of the more serious fugues (generally associated with sacred music), may explain why Walther (1732) included a separate entry for the church sonata (which merely gives the German equivalent), but not for the chamber variety; *chiesa* was for him the special case, *camera* the norm. Beyond title-pages and dictionaries, the dedicatees and collectors of printed volumes sometimes yield information about the music's use: Telemann dedicated some of his printed volumes individually or collectively to amateurs, but professional musicians are also heavily represented on his subscription lists. Corelli's church sonatas were dedicated to secular patrons, his chamber collections to clerics, perhaps contrary to expectations. But those expectations are probably too narrow, since some of the most significant collectors of sonatas for the chamber were members of the clergy (Franz Rost, Edward Finch).



(v) Performing practice and dissemination. Although some Baroque sonatas may boast a continuous performing tradition, nearly every aspect of their performance has changed since 1750, and even migration across borders within the Baroque era was often attended by marked differences in performance due to local practices. Thus performing practice of Baroque sonatas is intimately connected to matters of dissemination. 20th-century instruments and playing techniques, as well as ideas about pitch, tempo, ornamentation, continuo realization, dynamics and articulation all differ significantly from their Baroque antecendents; even reading from the composer's autograph is no guarantee of a 'correct' performance, since the interpretation of 'standard' notational signs will also have changed. Only a few of these matters can be taken up here.

Many modern editors of Baroque sonatas suggest substituting one instrument for another, a practice with some historical foundation, but not sufficient to condone a completely *ad libitum* approach. While instruments were specified more and more exactly between 1600 and 1750, many sources, some tied directly to the composer, did give the performer a good deal of leeway. Leclair, for instance, indicated that some of his violin sonatas could be played on (and may even have been conceived for) the transverse flute, and he even provided alternate versions of some individual movements. Telemann offered several options for some of his ensemble sonatas, as in the viol and cello parts for the Paris Quartets. Some of J.G. Graun's trio sonatas exist also as works for obbligato harpsichord and one treble soloist; and solo violin sonatas in score were no doubt played as keyboard solos. Italian prints from Rossi and Castello to Vivaldi frequently mention alternative instruments (violin or cornett, theorbo or violone) more or less equally suited to play a part. Even if no instruments were specified, however, it is unlikely that composers were indifferent to questions of

instrumentation, or that no conventions operated among those who played such pieces.

Ornamentation was a concern even in the 18th century: an important selling-point for Roger's edition of Corelli's solo sonatas (1710) seems to have been the inclusion of the ornaments 'as he played them'. Baroque soloists ornamented sonatas according to their ability and to such criteria as genre, national style, context and tempo. Some composers (Handel, Babell, Telemann) supplied ornamented versions of simpler lines, using smaller note heads, or additional staves, probably intended and still helpful as models. Some used particular phrases (*affetti*, *ad libitum*) or signs to encourage departures from the notated pitches. Ornamentation extended to improvisation in sections of sonatas by Colista, Guerrieri and others, who provided only the bass part over which a soloist was to invent a melodic line. Quantz, who included an ornamented Adagio in his flute tutor (1752), warned readers that both tempo and ornamentation should be adapted to suit the context. Mattheson cautioned against performing (and ornamenting) French pieces in the Italian style and vice versa; and Burney noted that (in his day) Corelli's sonatas were ornamented more lavishly on secular occasions, and given a more restrained performance in church (*General History*, ii). The increasing density of the ornamentation supplied for Corelli's solo sonatas in printed and manuscript sources offers one demonstration of the ways in which successive generations of performers embellished the same piece, perhaps slowing the tempo in the process.

When a sonata moves across significant boundaries of time and place, more extensive transformation may be expected. Thus, some English sources of Italian sonatas not only misattribute individual works, but alter the musical content, creating chamber sonatas from dances grouped loosely by key, or merging continuo and melodic bass parts. Spanish guitar transcriptions of Corelli's sonatas simply delete sections whose realization on the guitar was impractical; sonatas in the Rost manuscript (*F-Pn* Rés.Vm^7 653; *see* ROST, FRANZ) omit inner parts to produce trios from quintets. Availability of printed and manuscript copies of sonatas was ensured as agents in northern Europe imported Italian prints, visitors to the Continent returned to England with much sought-after volumes, and sonata prints from northern presses began to outnumber those from Italy. Sonatas remained throughout the period more likely to achieve publication than operas or other large-scale music (among important

A sonata for harpsichord and violin: engraving from Jean-Babtiste de La Borde's, 'Choix de Chansons', ii (1773)

publication centres were Paris, London, Hamburg and Amsterdam), but manuscript dissemination was significant as well, especially outside Italy. Manuscript copies, to the degree that they were aimed at a smaller circle of players, yield information about local preferences in repertory and performing practice, in contrast to the homogenizing influence exerted by publication.

Rousseau's quotation of Fontenelle's remark 'Sonate, que me veux tu?' (*Dictionnaire*, 1768) suggests that, at the end of the Baroque era, sonatas were still less highly regarded than was texted music, at least in France. But by 1739 the ties of abstract instrumental music to narrowly defined social function had already weakened sufficiently for Mattheson to offer a new view of the sonata

> whose aim is principally towards complaisance or kindness, since a certain *Complaisance* must predominate in sonatas, which is accommodating to everyone, and which serves each listener. A melancholy person will find something pitiful and compassionate, a senuous person something pretty, an angry person something violent, and so on, in different varieties of sonatas. (*Der vollkommene Capellmeister, trans. Harriss, 466)*

This picture of the sonata as personal and domestic, intended more for the individual player and a few listeners than for public ceremony or concert stage, is one associated more with the Classical period than with the Baroque. In fact Mattheson's response to the modern sonatas of the 1730s, combined with the long shadow cast by Corelli, suggest a good deal of continuity in the 18th-century approach to the genre.

2. CLASSICAL. Because of the impossibility of establishing clear stylistic divisions between 'Baroque' and 'Classical' sonatas in the 18th century, and between 'Classical' and 'Romantic' sonatas in the 19th century, the period covered in this section extends from about 1735 to about 1820, leading to some overlap between the three style periods.

(i) Contemporary definitions. Numerous definitions of the sonata, in generic, aesthetic and formal terms, were attempted during the Classical period. Earlier definitions such as Rousseau's (*Dictionnaire de musique*, 1768) had described the sonata as 'consisting of three or four movements in contrasting characters ... to instruments roughly what the cantata is to voices', mentioning also the respective roles of the soloist and accompaniment, as discussed above (§I, 1). Such definitions perpetuated the older, Baroque, concept of the sonatas *da camera* and *da chiesa*, although in Rousseau's article there is the hint of an emerging awareness of the solo sonata as something distinct from the trio sonata.

J.A.P. Schulz, writing in 1775, defined the sonata as follows:

> An instrumental piece [comprising] two, three or four successive movements in contrasting characters ... in no form of instrumental music is there a better opportunity than in the sonata to depict feelings without words ... [except for symphonies, concertos and dances] there remains only the form of the sonata, which assumes all characters and all expressions ... . For instrumentalists, sonatas are the most usual and useful exercises, besides which, there are many examples, both easy and difficult for all kinds of instruments ... . Since they require only one performer to a part, they can be played in even the smallest musical gatherings.

Schulz's article, originally printed in volume ii of Sulzer's *Allgemeine Theorie der schönen Künste*, was highly influential, being the basis of later definitions by Schubart (*Ideen zu einer Ästhetik der Tonkunst*, written 1784–5; Vienna, 1806/*R*) and Koch (*Versuch einer Anleitung zur Composition*, iii, Leipzig, 1793, and *Musikalisches Lexikon*, Frankfurt, 1802/*R*).

Some writers sought literary analogies for the sonata. D.G. Türk's *Clavierschule* (Leipzig, 1789) made a comparison between the sonata and the ode, specifically in so far as both depend for their effect upon the regulation of structure by adherence to a well-defined sequence of ideas. In this, Türk was perhaps influenced by Forkel's likening of sonata form to the rules of oratory, expressed in the *Musikalischer Almanach für Deutschland* (Leipzig, 1784):

> one of the foremost principles of musical rhetoric and aesthetics is the careful ordering of musical figures and the progression of the ideas to be expressed through them, so that these ideas are coherently set forth as in an oration ... according to logical principles ... still preserved by skilled orators – that is, *exordium*, *propositio*, *refutatio*, *confirmatio*, etc.

Forkel's comments impinge specifically upon first-movement SONATA FORM, a tacit acknowledgment that this movement was considered the most important within a sonata in the later 18th century. Definitions of sonata form by Koch, Portmann, Kollmann, Galeazzi and others differ in details and in terminology, but agree in the primacy accorded to tonal rather than thematic contrast. (Thematic contrast, often of a dramatic nature, was to gain ground in the sonata as developed by Beethoven, for example in the first movements of his opp.54 and 109.)

Clearly, the sonata signified many different things to 18th-century writers, varying according to the particular standpoint taken – formal, aesthetic or even national. In summary, a definition of the sonata genre as understood and practised in the Classical period might be a work in three (or, less commonly, four) movements, most often for piano solo or else for duo (violin and piano being numerically the most significant type), whose first movement was almost invariably cast in sonata form, perhaps preceded by a slow introduction (Beethoven, opp.13, 27 no.1 and 81*a*; Clementi, op.32 no.2), followed by a contrasting slow middle movement in a related key (often on the flat side of the 'home' tonic), episodic form and cantabile idiom, and a finale (most frequently a rondo – 'too frequently', according to Charles Burney – or sonata-rondo; *see* RONDO) that rounded off the work in a lighter vein. Minuet (or scherzo) and trio movements are sometimes found sandwiched between the slow movement and finale (as in many of Beethoven's sonatas up to op.31). Frequently, mid-18th-century sonatas had featured a minuet as finale (Wagenseil, Štěpán, Haydn). In general, use of dance metres such as the allemande steadily declined in the Classical sonata, being mostly restricted to brief 'topical' allusions (to the minuet, for instance, at the opening of Mozart's K570), although at times Beethoven openly specifies a dance topic (op.54, first movement).

Within such generalized schemes were myriad possible variations, as may be demonstrated by contrasting Haydn's and Mozart's attitudes to the sequence and number of movements in their sonatas. From his earliest efforts Mozart's was a three-movement plan, most frequently fast–slow–fast, a procedure Koch regarded as standard in the final volume of his *Versuch* (1793). Such a succession was never so sacred to Haydn, however: the fifth of the 'Esterházy' sonatas, HXVI:25, is in two movements; HXVI:30 (1776) has no clearly separated slow movement, merely a link between the Allegro and the concluding Minuet. Of continuing significance throughout Haydn's keyboard sonatas is the presence of

the minuet, found in only two of Mozart's sonatas (K282/189*g* and K331/300*i*). Two-movement sonatas (for instance, Haydn, HXVI:40–42, HXVI:52; Beethoven, opp.54, 78, 90, 111) were by no means uncommon. Neither were first movements in sonata form the infallible rule. In Haydn's HXVI:40–42 (1784) only HXVI:41 conforms to that norm; HXVI:49 (1789–90) begins with a set of double variations, alternating major and minor modes, and marked 'Andante con espressione'; Mozart's K331/300*i* in A and Beethoven's op.26 likewise begin with a set of variations; Rutini's op.7 sonatas all begin with preludes, allowing the player to feel his or her way into the *Affekt* of the piece (or perhaps to become familiar with the instrument) before launching into the main business. Sonata form itself, as practised by pre-Classical and Classical sonata composers, was capable of infinite variety. All of Mozart's first-movement expositions in the early set K279–83/189*d–h* and K284/205*b* (1775) are richly polythematic (particularly in the second-subject group), whereas Haydn's roughly contemporary HXVI:21 and 26 are, by contrast, 'monothematic' in the sense that the first and second subjects begin almost identically, although additional melodic material is always introduced during the course of second-subject groups (HXVI:25 is an exception, containing at least nine distinct themes).

Sonatas were typically issued in printed sets of two, three or six works (e.g. Haydn's HXVI:21–6 and 35–9 and 20; Mozart's K301–6, 309–11 and 330–32; Beethoven's opp.2, 10, 12, 27 and 102; and many of Clementi's). As the Classical period wore on, however, the scale was expanding such that a single sonata could justify an opus number of its own, such as Mozart's K533 or Beethoven's opp.7, 22, 57, 96 and 106. Frequently dedicated to a prominent member of the aristocracy, the published sonata, whether singly or in a group, could secure widespread attention for the composer, as Leopold Mozart no doubt realized when arranging for some of his son's early sonatas to be printed.

(ii) Instrumental forces. Sonatas for solo keyboard were to become the most significant type during the Classical period, although, in numerical terms, the sonata 'with violin accompaniment' (see below) was predominant. In 1821 Castil-Blaze noted that 'the sonata suits the piano best of all, on which one can play three or four distinct voices at the same time … It is also on this instrument that it has gone furthest in its astonishing progress' (*NewmanSCE*, 3/1983, p.94). Sonatas were also composed for violin (obbligato), cello (whose role as continuo bass was liberated by Boccherini and extended by Beethoven), flute (Séjan), clarinet (Vanhal), guitar (Sor), baryton (Haydn), horn (Beethoven) and organ (C.P.E. Bach). Duet sonatas were popular for domestic amusement, principally for four hands at one piano, such as those of J.C. Bach, Mozart and Seydelmann; other pairings included two violins (Pleyel), violin and viola (M. Haydn; Mozart) and bassoon and cello (Mozart). It is worth remarking also that sonatas originally conceived for one medium were transferable to others: Beethoven's E major Sonata op.14 no.1 exists in a version in F for string quartet (Schwager, *SM*, xvi, 1987, pp.157–69).

The earliest extant collection of sonatas for piano (i.e. fortepiano) solo is Giustini's 12 *Sonate da cimbalo di piano e forte detto volgarmente di martelletti* (1732), although early examples of the instrument had been developed by Bartolomeo Cristofori by 1709. From the 1760s sonatas for keyboard began to appear in increasing number, among them examples published by Eckard in Paris in 1763 and 1764. The intended instrument is frequently ambiguous in mid-century sonatas. Often the designation is simply 'clavier', although internal evidence sometimes betrays the need for a touch-sensitive instrument: while the fortepiano is not specified on the title-page of J.C. Bach's op.5, certain effects contained in that set are impossible to realize satisfactorily on the harpsichord (but performance on the clavichord remains a possibility). During the 1770s the alternative 'cembalo o pianoforte' was commonplace on title-pages; by the end of the century 'clavecin', 'clavier' and 'cembalo' are only rarely encountered.

During much of the Classical period the genre known as 'accompanied sonata' was very much in vogue. Early forerunners include J.S. Bach's sonatas BWV1014–19, for violin with written-out keyboard parts (rather than realized figured basses), and Mondonville's *Pièces de clavecin en sonates avec accompagnement de violon*, op.3 (1734), the latter almost exclusively in three movements but featuring fugal allegros and binary dance structures typical of the Baroque. The accompanied sonata was specially prevalent in France. In addition to Mondonville's op.3 such sets as Rameau's *Pièces de clavecin en concerts avec un violon ou une flute et une viole ou un 2e violon* were published (1741), soon followed by Guillemain's *Pièces de clavecin en sonates avec accompagnement de violon* (1745), which includes in its preface the following remark:

> my first thought had been to compose these works for keyboard alone, without any accompaniment … but, in order to satisfy the present taste, I felt unable to dispense with [the violin] part, which must be performed very softly so that the keyboard part may be easily heard. If desired, these sonatas may be played either with or without the [violin] accompaniment.

This vogue reached its height in Paris during the 1760s and 70s in the published sonatas of Schobert, Honauer, H.F. Raupach, J.F. Edelmann and Hüllmandel. Mozart was acquainted with the work of the first three (arranging their music in the pasticcio keyboard concertos K37, 39, 40 and 41) and his own early efforts in the genre (K6, 7, 8 and 9) may have been influenced by his discovery of Schobert and his Parisian contemporaries while touring in 1763–4. Schobert's work was especially popular, it seems: a dozen sets of sonatas were published in Paris before his death in 1767. His *Six sonates pour le clavecin … oeuvre XIV … les parties d'accompagnements sonts* [sic] *ad libitum*, originally printed in Paris, appeared again in Amsterdam, published by Hummel, as *Six sonates pour le clavecin, avec accompagnement d'un violon … oeuvre quatrième*. In this latter form they were advertised in the 1770 fifth supplement to Breitkopf's thematic catalogue ('Trii di Schobert a Cemb[alo] e Viol op.IV Amsterd[am]'). In all such works the keyboard part was almost entirely self-sufficient, the accompanimental role of the violin being restricted to thematic doubling in 3rds and 6ths, or the provision of anodyne background figuration derived from 'Alberti bass' patterns transferred to the middle of the texture, or else harmonic 'filling' in the form of long, held notes, similar in function to those often assigned, orchestrally, to the natural horn. This practice may have had something to do with the gradual disappearance of the cello as a supporting continuo instrument from the mid-century, combined with weakness of tone in early fortepianos. Occasionally, as in some of Hüllmandel's

op.6 sonatas or Clementi's op.27 (1791), the violin part acquired greater individuality, even parity with the keyboard. Solo keyboard sonatas (for example, Haydn's HXVI:37 in D or Mozart's K570 in B♭) were sometimes reissued, without the authority of the composer, as sonatas 'with accompaniment for a violin', particularly in England (with violin parts devised by Burney), where the fortepiano rather than the originally non-committal 'clavecin' is often specified.

The violin became an equal partner in the ensemble in Mozart's duo sonatas from at least the late 1770s. K454 in B♭, published in 1784 alongside two solo sonatas, K333/315*c* and K284/205*b*, is one such example, opening with an affective slow introduction. The subsequent Allegro contains many moments of dialogue between the violin and the piano's right hand, a texture that was to become so important a trait in the later Classical duo sonata, a memorable illustration being the opening of Beethoven's Spring Sonata in F op.24. Parity between the instruments is taken a step further in Beethoven's op.30 set: in the G major Sonata op.30 no.1 the slow movement's main theme is shared phrase for phrase between the piano and violin towards the end of the movement. Nevertheless, the 'accompanimental' perception of the violin in such sonatas persisted into the early 19th century, long after it had attained equal status with the piano: Beethoven's Kreutzer Sonata op.47 (1802–3) bears the designation 'per il pian-forte ed un violino obligato' on its title-page.

(iii) Functions. Classical sonatas were known by a variety of generic titles. In England the term 'lesson' was commonplace (Samuel Arnold, op.7); elsewhere 'solo' in Italy (Giardini, op.16), 'pièces de clavecin' in France (Mondonville, op.3), 'divertimento' in Austria (Wagenseil, op.1, several of Haydn's early sets) were common. The diminutive 'sonatina' was particularly associated with keyboard pedagogy and is most obviously linked with the name of Clementi (specifically the op.36 Sonatinas of 1797).

An awareness of the pedagogical connection is fundamental to a proper understanding of the Classical sonata. In 1789 Türk's *Clavierschule* included a list of keyboard composers arranged according to the difficulty of their sonatas. Haydn recalled at the end of his life that he had once earned his living giving keyboard lessons, and his early sonatas arose for use in such a setting. Mozart's letters from Mannheim in late 1777 indicate that the C major Sonata K309/284*b* was composed for Rosa Cannabich, whom he was teaching at the time. Its slow movement (Andante) calls for the utmost sensitivity to dynamic contrast, and a letter to his father of 14 November is valuable in linking the movement with specific pedagogic issues:

> The Andante will give us the most trouble, for it is full of expression and must be played accurately and with the exact shades of *forte* and *piano*, precisely as they are marked. [Rosa] is smart and learns very easily. Her right hand is very good, but her left, unfortunately, is completely ruined … I have told her too that if I were her regular teacher, I would lock up all her music, cover the keys with a handkerchief and make her practise, first with the right hand and then with the left, nothing but passages, trills, mordents and so forth, very slowly at first, until each hand should be thoroughly trained.

Wagenseil, who was tutor to the imperial archduchesses in Vienna under Maria Theresa, probably designed his solo sonata sets specifically for the instruction of his royal pupils; in general, these are straightforward, technically undemanding pieces. The op.5 sonatas of J.C. Bach (1766) were certainly composed with a pedagogical end in view (the title-page trumpets the fact that Bach was 'Music Master to Her Majesty and the Royal Family'), and it is instructive to approach a work such as the third sonata in the set from this perspective, the successive variations of its finale clearly being intended primarily for the demonstration, and eventual mastery, of different technical problems at the keyboard.

The 'English' Bach's elder brother, Carl Philipp Emanuel, must be regarded as one of the most significant composers of 'pedagogic' sonatas (nearly all in three movements). He issued a number of sets, including the 'Prussian' (1742), 'Württemberg' (1744), six sets 'für Kenner und Liebhaber' (1779–87), and two sets of sonatas 'mit veränderten Reprisen' (1760, 1761) whose primary purpose was that of teaching material. Bach's reputation covered most of Europe, and it has been suggested that the taste of his 'public' played a significant role in the design of his later sets (G. Wagner, *Mf*, xli, 1988, pp.331–48). His sonatas were frequently included in the keyboard anthology publications (*Oeuvres mêlées*) of Johann Ulrich Haffner during the 1750s and 60s. Haffner's anthologies (12 volumes, each containing 6 sonatas) offered a wide selection of works by composers from every corner of musical Europe, and were hugely important in the formation of mid-18th-century 'galant' taste. Among the composers represented are, besides C.P.E. Bach (particularly works in the *empfindsamer Stil* replete with impassioned melodic and rhythmic gestures, recitativo declamation and recherché harmonies), Scheibe, Schobert, Benda, Eberlin, Adlgasser, Leopold Mozart (three of whose solo sonatas were published in this collection) and less well-known men such as Bernhard Hupfeld, Rachmann, J.F. Kleinknecht and Jan Zach. Haffner drew attention to each composer's court appointment at the head of each sonata, such as the 'Sonata Vta Composta dal Signor Henrico Filippo Johnsen, Organista della Corte, Direttore di Musica, ed Organista alla Chiesa di Santa Chiara, a Stoccolma', found in volume iii of *Oeuvres mêlées*. Although Haffner was not the only publisher to issue such keyboard anthologies (see *NewmanSCE*, 3/1983, chap.4) he dominated the market that was opening up for sonatas that varied in their technical demands from the easy to the moderately challenging. Anyone owning a complete set of all 12 volumes about 1770 would have had access to a richly varied and comprehensive record of the early Classical sonata.

For the most part, the 'domestic' and 'pedagogic' market for Classical sonatas was female (C.P.E. Bach issued a set of sonatas specifically 'à l'usage des dames' in 1770). Talented female keyboard players were relatively plentiful in the second half of the 18th century; they included Katharina and Marianna Auenbrugger, to whom Haydn dedicated his six sonatas HXVI:35–9 and 20 in 1780. Indeed, the social etiquette of the age virtually dictated a certain degree of keyboard proficiency for ladies: among aristocratic families, for instance, ability in that direction could be important in attracting an acceptable husband. During the 1780s several of Mozart's Viennese pupils were ladies from the higher echelons of society (Countess Thun, Countess Rumbecke). Somewhat lower down the scale were Theresia von Trattner (wife of the prominent bookseller and publisher, and dedicatee of the Fantasia and Sonata in C minor K475 and 457,

published by Artaria in 1785), Barbara von Ployer and Josepha Barbara von Auernhammer; the last two carved out successful careers as performers. Therese Jansen (later Mrs Bartolozzi), a pupil of Clementi, was yet another, to whom Haydn dedicated his famous E♭ sonata HXVI:52 (and perhaps also HXVI:50 and 51) in 1794.

Besides its function as teaching material, the Classical sonata found a place within the aristocratic salon, a forum that became increasingly popular during the second half of the 18th century, especially in France and Austria. Such salons, at which only the upper classes were normally present, were private affairs usually given in the homes of counts and countesses, less frequently in the homes of court officials such as L'Augier, the Viennese court physician, one of whose meetings was attended by Charles Burney in 1772. It is only occasionally possible to recover any programme details of such private gatherings, such as that at Hohen-Altheim, the country residence of Prince Kraft Ernst von Oettingen-Wallerstein (1748–1802), on 26 October 1777, when Mozart performed his sonatas in B♭ K281/189*f* and D K284/205*b*. The most famous of Viennese salons was that of Countess Wilhelmine Thun, a staunch patron of Mozart's during his early years in the capital, who lent her fortepiano for the famous contest with Clementi before Emperor Joseph II on 24 December 1781. Clementi later noted that on this occasion he himself had played his Sonata in B♭ op.24 no.2. Mozart's record of the meeting describes Clementi in less than flattering terms, noting that he was a mere technician, whose 'star passages' were 3rds and 6ths. The association of Clementi's sonatas with empty technical brilliance (as in the op.2 set of 1779, for instance) highlights a weakness that Clementi himself freely acknowledged, and it is noteworthy that Rochlitz, reviewing Clementi's sonatas opp.33 and 37 in the *Allgemeine musikalische Zeitung* in 1798–9, praised Clementi's avoidance of exactly such passages, something that was evidently regarded as a fingerprint of his earlier style. According to Schindler, Beethoven owned almost all of Clementi's works (he had little by Mozart and nothing by Haydn), which he valued for their 'lovely, pleasing, fresh melodies [as well as] the well-constructed fluent forms'.

Throughout much of the Classical period the solo sonata remained a domestic genre. Only towards the end of the 18th century and in the early 19th did it become a concert piece, typically issued with the title 'Grande Sonate', and that trend was inextricably linked with the rise at the time of such virtuoso performers as Beethoven, Hummel and Dussek. Mozart scarcely ever played his own sonatas in public performances, preferring the concerto and variation genres as vehicles for exhibiting his keyboard prowess. The rise of the 'concert' sonata is to some degree linked with increasing length and advancing technical difficulty. Beethoven's sonatas, which cover virtually the whole of his career, tread a steady path away from the kind of piece that could have been played by talented amateurs. Works such as the Waldstein, 'Appassionata' and Hammerklavier sonatas were only ever attainable by professional players, and also demanded a new kind of listener, familiar with the intellectual demands of the other 'public' genres of symphony and concerto and featuring juxtapositions of contrasting themes and textures that demanded the listener's active, rather than passive, attention. In those respects, Beethoven's middle- and late-period sonatas (whether for solo piano or duo, such as the cello sonatas op.102) go far beyond anything that had formerly been the preserve of the aristocratic salon. Also notable in the later concert sonata is a tendency towards more expansive, at times dramatic gestures in such turbulent movements as the first movement of Beethoven's sonatas op.31 no.2 (sometimes associated with Shakespeare's *Tempest*: see Albrecht, 1988) and op.57. A parallel strand is the studied introspection of op.101 or the finale of op.111, an idiom that was to influence Schubert (in the slow movement of the late B♭ Sonata D960, for example).

(iv) Styles. During the mid-18th century the sonata was an important laboratory for stylistic change, from the late Baroque to the *galant*. The characteristics of the former may be summarized as including a continuously spun-out melody, featuring sequential writing and general avoidance of contrasting melodies, a tendency towards polyphony (whether 'real' or 'implied', as in some of J.S. Bach's violin sonatas), and a relatively uniform harmonic rhythm. Some of these elements begin to break down in the sonatas of, for example, Domenico Scarlatti (especially as regards melodic and textural contrast). Scarlatti's single-movement sonatas are closely related in outline to the familiar binary structure of the Baroque dance suite and are notable for a steady movement away from the patterned uniformity of Baroque rhetoric towards the more dynamic interplay of *galant*-style phrase articulation.

The *galant* idiom, which reached its peak during the 1750s and 60s, favoured a wholly different approach towards melody, which proceeded in short phrases of two or four bars, arranged in symmetrical patterns and closing with balancing imperfect and perfect (half and full) cadences along with a use of the 6-4 chord so extensive as to be almost a cliché. Characteristic of *galant* melody was its tuneful, lyrical quality, dotted rhythms (sometimes inverted as the 'Scotch snap'), interruption of the prevailing flow by triplet quavers, affective use of rests and long appoggiaturas, contrast of dynamic and articulation. Textural characteristics include a marked absence of polyphony and especially of fugal imitation, tending instead towards a simplicity and transparency of presentation, which is generally confined to two strands, one for each hand. Variety of harmonic rhythm (a reaction against 'turgid' and 'artificial' late Baroque practice as identified by Scheibe in his critique of J.S. Bach's music) was a fingerprint of the *galant* style, made all the more prominent by recourse to such accompaniment patterns as the Alberti bass. All in all, the emerging *galant* idiom, found in the work of J.C. Bach, Boccherini, Galuppi, Rutini, Sammartini and Schobert, and in early Haydn and early Mozart, captured a deliberately cultivated superficiality of utterance.

The 'high' Classical style has been described by William Newman as 'the peak at which the ideal and most purposeful co-ordination of Classic style traits obtained' (*NewmanSCE*, 3/1983, p.124). Among its features are a clearer sense of individuality and originality in the handling of the elements of the Classical language than in the *galant* idiom. This expresses itself most obviously in thematic terms – a striking opening such as that of Haydn's HXVI:52 or Mozart's K457 – although such opening gambits as the opposition of a *forte* unison statement (often triadic) and a *piano* chordal answer (Mozart's K309/284*b* and K576, for instance) is not infrequent. Other fingerprints of the high Classical style

include the reintegration of counterpoint with periodic phrasing (Haydn, HXVI:47; Mozart, K533, K570); audacious form schemes (as in Mozart's K311/284*c*, whose exposition themes are reversed in the recapitulation); wide-ranging tonal schemes, leading to expansion of movement length (Haydn, HXVI:50 in C, HXVI:52; Mozart, K570; Beethoven, op.2 no.3); use of harmonic colour (especially chromaticism) for effect (Haydn, HXVI:20 in C minor, HXVI:52 in E♭; Mozart, K333/315*c*; Beethoven, op.27 no.2 – one of a pair of sonatas entitled 'quasi una fantasia', partly on the grounds that the movements are designed as 'sections' which follow on in sequence with scarcely any break, but partly also because of recourse to keyboard textures and idioms more closely associated with the fantasia genre than with a sonata) and use of irregular phrase-lengths (Haydn, HXVI:45 in E♭; Mozart, K309/284*b* opening themes). Texturally, the high Classical sonata typically returns to a more fully polyphonic norm in which counterpoint plays an increasingly significant thematic role (Haydn, HXVI:52; Clementi, op.40 no.1, op.50 no.1; Beethoven, op.2 no.2, op.54); elsewhere the texture is enlivened by more confident use of a wider keyboard range than was normal in the earlier *galant* style, sometimes stressing textural variety so prominently as to make it a defining force within the movement structure (Haydn, HXVI:49; Mozart, K457; Beethoven, op.10 no.3, op.13).

At the end of the Classical period the sonata, as hinted earlier, launched itself out of the drawing-room and on to the concert platform. The middle-period sonatas of Clementi and, especially, Beethoven secured the place of the sonata as a public statement in which the composer as individual genius chose to express some of his innermost thoughts. From the early 19th century the sonata trod the parallel paths of grand virtuosity and inward contemplation. Occasionally, as in Beethoven's op.106 (the Hammerklavier), both types meet on a grand scale, leading to the sublime juxtaposition of extreme sound worlds. Both Clementi and Beethoven tend in their sonatas to devote considerable effort to the working out of motifs. (That much is well-known in Beethoven's case from examination of his sketches.) Clementi's op.50 set (published in 1821), including the programmatic 'Didone abbandonata' (no.3 in G minor), is notable for its concentration of motivic usage, frequently over protracted time-spans, as also for complexity of tonal and phrase-structure. A tendency towards the incorporation of quasi-orchestral sonorities at the keyboard is evident in Beethoven's later sonatas (opp.81*a*, 109, 111), although it is only one trait among several that emerge at this stage: others include a renewed interest in fugue (opp.101, 110, 111) and variation chains (opp.109, 111), along with idiosyncratic keyboard patterns such as high-pitched trills as a tonally stabilizing background to culminating thematic statements (as in the finales of opp.109 and 111). At this late stage in the Classical sonata's evolution the 'centre of gravity' no longer necessarily resides in the first movement, as was generally the case in Haydn's and Mozart's sonatas. This trend is especially notable in Beethoven's work. From the earliest set, op.2, the slow movements clearly function as highly expressive individual statements, rather than mere contrast to the quicker outer movements (those of op.10 no.3 and op.57 are particularly outstanding examples). In Beethoven's later sonatas the work becomes a journey, no single movement making sense outside the whole context (op.90, for instance, in two movements of contrasting 'dark' and 'light' character; also opp.106, 109 and 110). In opp.109 and 111 the variation finales (containing, perhaps, a wider range of expression than any previous sonata-form first movement in the Classical sonata literature) truly become the emotional heart of their respective works.

3. 19th century, after Beethoven.

(i) Historical overview. Beethoven's sonatas wielded enormous influence on compositional, pedagogical and performing practices throughout the 19th century. His towering achievements in the solo and duo sonata, as well as the string quartet and the symphony, set a standard that few composers could hope to meet. Sonatas in imitation of Beethoven's nevertheless abound, along with analytical and pedagogical publications on Beethoven's own sonatas. His sonatas featured prominently in the piano recitals that developed as a genre from the late 1830s, with a canon of favourites established early on (although occasionally subject to the virtuoso 'embellishments' that were popular before 1850). By 1861, pianists were performing Beethoven sonatas in complete cycles, a practice that of course survives to this day.

Austria and Germany remained especially important centres of sonata production in the wake of Beethoven, although French and British composers also produced large numbers. Beethoven's influence encouraged a new appreciation of the sonata as one of the most 'distinguished' forms (Schumann); it thus became a staple of piano solo and ensemble recitals alike, its increasing significance reflecting the collective predilections of performers, publishers, students and amateur groups, as well as their often sophisticated audiences. In *The Sonata since Beethoven* (1969, 3/1983), William S. Newman claimed that the 'main cornerstones' of the Romantic sonata were Schubert, Schumann, Chopin and Brahms, the last of these being 'the most important and central contributor to the sonata since Beethoven'. All told, he identified some 625 European and American composers who produced sonatas, in three overlapping phases: 1800–50 (during which Dussek, Weber, Schubert and Mendelssohn were the key practitioners); 1840–85, which started with an alleged decline in the quality and quantity of sonata production, followed after a decade by a revival of interest (this period was dominated by Schumann, Chopin, Liszt and Brahms); and finally about 1875–1914 (when the later Brahms, Reger, Franck, Fauré, Saint-Saëns, d'Indy, Grieg, Medtner, Rachmaninoff and MacDowell were pre-eminent).

While Newman regarded 19th-century sonatas as a 'conservative facet of Romantic music history', Charles Rosen (1980) asserted that compositional styles after 1830 were not 'especially suitable' for dealing with sonata form, which is 'largely irrelevant to the history of 19th- and 20th-century styles', neither generating nor being altered by them. (Richard Strauss for one complained in 1888 of 'a gradually ever increasing contradiction between the musical-poetic content that I want to convey [and] the ternary sonata form that has come down to us from the classical composers', a form in his opinion no longer capable of conveying 'the highest, most glorious content' found in Beethoven's sonatas.) Conversely, Anatole Leikin (1986) identified a dissolution of normative sonata structure in the music of Schubert, Schumann and Chopin, among others, where the elements of the sonata archetype

blend together, the borders between them blurring or disappearing altogether partly because of the influence of other formal paradigms.

(ii) Genre versus form. The sonata as genre must be distinguished from the sonata as form. Arguably, any work bearing the title 'sonata' belongs to the sonata genre, as indeed did such disparate works as the symphony, fantasy and concerto, according to early 19th-century parlance. As generic categories hardened, however, composers and writers alike employed more precise terminology, while descriptive labels such as 'brillante', 'dramatique' and even 'érotique' were appended to the titles of published sonatas by composers or (more often) publishers, either to denote character or simply to enhance appeal.

Sonata-derived procedures and formal properties influenced a vast number of pieces not explicitly designated 'sonatas' – for instance, Chopin's four ballades, which demonstrate a unique application and understanding of the 'sonata principle' as inherited from 18th-century masters. The essence of such a sonata principle was a (usually harmonic) opposition or polarity set up early in a work, which, after a heightening of resultant tensions, experienced eventual resolution and reconciliation in the last third or so of the piece, principally through tonal adjustments. Key 19th-century specimens, as well as 18th-century sonatas, depend on that fundamental dialectic, notwithstanding the increasingly schematic formulae developed by theorists from the 1790s onwards and applied by composers with growing frequency, often at the expense of the music's life.

Francesco Galeazzi (1796) was one of the first to adumbrate a standard 'sonata form' (not referred to as such, however; see Churgin, 1968), while Reicha's 'grande coupe binaire' (*Traité de haute composition musicale*, 1824–6) anticipates many of the features in the most important 19th-century definition of sonata form, that proposed in Czerny's *School of Practical Composition* op.600 (published in German in 1849 and in English translation in 1848, several years after the third volume of A.B. Marx's seminal treatise *Die Lehre von der musikalischen Komposition*, which explicitly addresses 'Sonatenform'). Outlining the basic requirements of a sonata form, Czerny advanced a prescriptive model based less on harmonic relationships than on thematic ones, and although many of the terms in current usage (e.g. 'exposition', 'recapitulation' and even 'sonata form' itself) did not feature in the English translation of Czerny's op.600, its influence on subsequent theoretical thought and actual compositional practice can hardly be overstated. (According to Rosen, sonata form was fixed once and for all after Czerny: even Brahms 'could not change the form as Haydn or C.P.E. Bach had'.)

It is fascinating to trace the process by which textbook sonata form came to challenge or replace the supple 'sonata principle' in the hands of composers. Although contemporary dictionaries and other publications paid little heed to sonata design (George Macfarren's *On the Structure of a Sonata*, 1871, is a rare exception), there was (in Newman's words) an 'increasing recognition and description of an explicit "sonata form" by theorists and other writers' which 'had the levelling effect, at least among the weaker, less imaginative composers, of rigidifying the once fluid form and making it into a stereotype'. One of the great paradoxes of music history is that this new model dominated the vast and highly conventionalized output of most mid- to late 19th-century sonata composers, while the older, even atavistic 'sonata principle' remained potent in the music of their (relatively few) progressive counterparts.

(iii) Compositional practice. This domination of the conventional caused despairing critics to predict the sonata's demise. Schumann for one noted in 1839 that most sonatas by younger composers were little more than a 'study in form . . . hardly born out of a strong inner compulsion . . . [It] seems that the form has run its course'. Typical sonatas reveal a slavish adherence to a predetermined, formulaic and essentially static tonal architecture, as well as an emphasis, sometimes excessive, on melodic and thematic material generally lacking the potential for truly dramatic development. Often the music seems stillborn and predictable, falling short of the ideals associated with 'this noble musical form' (Schumann) – a form which, according to Rosen, was the 'vehicle of the sublime' after Beethoven, indeed the principal means by which the 'highest musical ambitions' could be realized.

Nevertheless, the best 19th-century sonatas contain many novel features as well as variants on compositional procedures found in Classical works. Such innovations include a fluid, expansive melodic handling in which symmetrical periodicity is often sacrificed to broader gestures at various hierarchical levels; a richer harmonic and tonal palette, as well as rapid and extreme shifts between harmonic regions; a pervasive exploitation of motif at the same time as an eclectic blend of disparate materials (a technique possibly deriving from improvisatory practices, which certainly influenced Beethoven's middle-period and late sonatas); overarching cyclical tendencies, whereby reminiscences occur, as in the 'Rückblick' from Brahms's op.5, or such that 'each movement is based on a transformation of the themes of the others' (Rosen); and a fusion of the typical four-movement structure into one amalgam, most notably in Liszt's B minor Sonata, which is often referred to as a 'double-function form'. Although (as Newman observed) 'no front-rank Romantic sonata was identified with a programme, even a vague one, by its composer', a greater range of characterization was achieved through operatic, folk-derived, hymn-like and highly chromatic idioms, which were lavishly and imaginatively used in altogether new contexts.

Most 19th-century sonatas have four movements, the first of which typically subscribes to the sonata-form model, at least in more conventional repertory. But in 'progressive' sonatas, especially Brahms's, the blurring between sectional divisions noted above often occurs, with considerable development outside the formal development section, and an 'influx of expositional traits into the recapitulation' (Leikin). As for the exposition itself, the opposition or polarity so vital to the 18th-century sonata principle is often replaced (in Rosen's words) by 'only a sense of distance', possibly being further 'weakened by a chromatic blurring of the approach to the second tonality' (usually the dominant in major-key movements, often the relative major in minor-key ones). Rosen maintained that, in many Romantic sonatas, 'exposition as opposition and recapitulation as resolution have almost disappeared', because the end-weighted structural thrust of the prevalent 'plot archetype' overshadows and even obliterates the climax point at the close of the development

section as found in most Classical sonatas. The internal compositional dynamic is additionally altered by 'the virtual elimination of full-fledged themes as tonal and melodic landmarks', explained by Newman as an 'extreme consequence of continuous motivic writing'.

Whereas the expectations for first movements proved constraining to many composers, not least Brahms, second movements offered a broad spectrum of formal and expressive possibilities. Typical designs included binary or ternary forms, a compact rondo form (*A–B–A–B–A*) and a theme-and-variations format, taken at a moderate tempo more often than a slow one. Third movements were usually lively scherzos, whether or not they bore that title, while finales tended to have a rondo construction, although other formal templates were also used. Newman remarked that the 'finale posed the chief structural problem, one main reason apparently being a felt need to alter, intensify, and, unfortunately, overcomplicate the traditionally light, gay rondo sufficiently for it to carry more weight'. In Brahms's case, 'the tempo, drive, and melodic intensity of the finale are sufficient to achieve a clear peak in the over-all profile', despite the greater weight given to the slow and scherzo movements in his piano and duo sonatas.

Practical considerations often inspired the composition of sonatas, whether particular performance opportunities, the invitation of a publisher or performer, or the desire to write for students. For younger composers, the sonata offered a perfect first work to launch a career in print: hence Schumann's comments above. Sonatas also appealed to many women composers (perhaps because of a generic 'respectability'), among them Louise Farrenc, Fanny Mendelssohn, Clara Schumann, Luise Adolpha Le Beau, Cécile Chaminade and Ethel Smyth. As already suggested, sonatas were often written as teaching-pieces, perhaps in an old-fashioned 'pedagogic' style or a somewhat reduced format – for instance, a *petite sonatine* as opposed to the *grande sonate* played in public by a virtuoso pianist.

Newman's analysis of the 19th-century sonata settings identified in Hofmeister's *Musikalisch-literarischer Monatsbericht neuer Musikalien* reveals that 41% were for solo piano, 21% for piano and violin, 11% for piano duet, 6% for piano and flute, and 5% for piano and cello, with other combinations occurring less frequently. That the largest group was for solo piano is hardly surprising, given the instrument's central importance throughout the era. But all told, so-called 'accompanied sonatas' – for piano plus one other instrument (which 'accompanied' the piano) – form a considerable corpus. In general, the piano part retained the prominence it enjoyed in early duo sonatas, to the point that the titles to Brahms's sonatas continued to list the piano first. Composers of violin–piano sonatas include Schumann, Franck and Fauré, while Hummel, Onslow and Rubinstein wrote works for viola and piano. Sonatas for cello and piano were composed by Mendelssohn, Chopin, Brahms, Saint-Saëns, Hiller, Reger, Vierne and Fauré; for clarinet and piano by Brahms, Draeseke and Stanford; and for flute and piano by Kuhlau, Reinecke and Pierné. Other sonata settings exist for horn and piano, oboe and piano, bassoon and piano, unaccompanied violin, organ and two pianos. Arrangements or transcriptions of solo sonatas for two or more instruments were also concocted, both to expand ensemble possibilities and to increase the market for new scores. For instance, the 'Marche funèbre' from Chopin's op.35 appeared in well over 100 different formats, including settings for two pianos eight hands, salon orchestra, and a trio comprising harmonium, violin and cello.

(iv) Publishing. Leipzig, Paris and London were the main publication centres for 19th-century sonatas, which tended to be produced in very small print runs (as was also the case with other genres) and occasionally on a subscription basis. The parts in duo sonatas were published separately until fairly late in the century, the piano part having at most a short cue from the other instrument. Newman observed that 'the sonata has always been one of the easier genres to print because so few instruments have been involved', but he quoted Gottfried Fink's complaint from 1839 that 'only the smallest number of new sonatas find a publisher nowadays' – an odd remark, which does not square with the evidence. Not only were arrangements devised to appeal to wider audiences, but publishers resorted to elaborate covers and fancy titles to promote sales, in addition to publishing individual sonata movements separately. Guides on performance also appeared in profusion, of which perhaps the most notable is Czerny's *Über den richtigen Vortrag der sämtlichen Beethoven'schen Klavierwerke*, which discusses articulation, tempo and additional matters with reference to Beethoven's piano sonatas, among other works.

(v) Performance. As already noted, sonatas featured prominently in piano recitals in the late 1830s and beyond, such as those of Liszt, Clara Wieck and Moscheles in the early part of the era; Rubinstein and Bülow in the mid- to late 19th century; and Paderewski, Rachmaninoff and Hofmann at the end of the century. Sonatas were played by such violinists as Joachim, Ysaÿe and Kreisler (Paganini performed only his own highly idiosyncratic examples) and by the cellist Piatti. Public performances of ensemble sonatas took place in all the leading centres, particularly Paris and London, promoted by concert series, music societies, educational establishments and even the musical press. Amateurs also performed sonatas in more private settings, although many preferred 'the lightest, frothiest examples' (Newman) rather than the relatively serious and technically difficult works more typical of the genre. The supremely challenging sonatas of Beethoven were frequently played by serious students and professionals alike (for instance in all-Beethoven recitals), thus indicating his seminal influence up to the end of the 19th century and beyond.

4. 20TH CENTURY. The distinctiveness of the sonata as a genre had, by the end of the 20th century, all but disappeared. The title had lost its traditional implication of a work in several movements for piano alone or with another instrument. A great many neo-classical sonatas follow these conventions, but, as the term 'neo-classical' itself implies, continuity of sonata writing was lost, and perhaps only in Soviet Russia was any new tradition established. It is true that Beethoven has often been cited in connection with piano sonatas by Tippett (no.3, 1972–3), Boulez (no.2, 1947–8) and Barraqué (1950–52), but that means only that those composers approached the solo piano medium with something of the strength and seriousness of Beethoven; the references in the Boulez piece to the Hammerklavier form relationships with a

specific model rather than with a tradition. Paradoxically, the three masters of the Second Viennese School, for whom sonata form was a constant guide, left only one sonata among them: Berg's op.1 for piano (1907–8).

At the beginning of the century, however, the Brahmsian sonata tradition was being perpetuated in the work of Reger. His later compositions include several sonatas for string instrument and piano in which allusion to Bach, formally and contrapuntally, increased, and that tendency is certainly no less obvious in the seven sonatas for violin alone, op.91 (1905), the first significant sonatas for solo melody instrument since the 18th century. Thus Reger's sonatas were not only a culmination of the 19th-century tradition: they looked forward to the classicism, eventually neo-classicism, which was to play an important part in sonata writing for the next 50 years. A similar place, though in a different tradition, might be ascribed to the three late, finely and sparely wrought sonatas of Fauré: the Violin Sonata no.2 op.108 (1916–17), the Cello Sonata no.1 op.109 (1917), and the Cello Sonata no.2 op.117 (1921).

Debussy's three late sonatas (1915–17) also show a purification of style, but here there is little reference to formal archetypes. What is involved is rather a clarification of Debussy's own, individual technique, removing from it any literary or pictorial association (although he gave the unofficial subtitle 'Pierrot angry with the moon' to the Cello Sonata). In the second piece he abandoned conventional sonata scoring, writing the work for flute, viola and harp; that innovation opened the way for such unusually scored sonatas as Ravel's for violin and cello (1920–22) and Poulenc's for two clarinets (1918), clarinet and bassoon (1922) and brass trio (1922).

If Debussy's sonatas refer much more to his own earlier work than to any tradition, those of Skryabin and Ives are equally personal. The late piano sonatas of Skryabin (the last, no.10, dates from 1913) are single-movement structures in which tonal modulation has almost no functional part; in expressive terms they relate to a never completed cataclysmic 'mystery'. Ives, who left four numbered sonatas for violin and piano and two for piano, used the sonata as a container for reminiscences of popular music, responses to literature and nature, and so on. The movements cannot normally be related to traditional formal models, although the total form may be: the four movements of the Piano Sonata no.2 'Concord' (*c*1914–19), for example, include a scherzo as the second and a slow movement as the third.

The various sonatas produced by Debussy, Skryabin and Ives in the decade 1910–20 had already broken almost completely with 19th-century standards of sonata writing. In the next decade there was a widespread attempt to recover tradition, but not directly; instead of following Brahms and Reger, composers looked back to Beethoven and, more commonly, still further. Stravinsky claimed that, in his Piano Sonata 1924, he 'used the term sonata in its original meaning ... therefore, I did not regard myself as restricted by any predetermined form'; nevertheless, he admitted to having made a study of Beethoven's sonatas prior to the composition, and there are distinct traces of Beethoven as well as the Baroque in the work. By the time of the brief Sonata for Two Pianos (1943–4) Stravinsky was even able to use sonata and variation forms.

Bartók also made a return to Baroque counterpoint in his Piano Sonata (1926), where again the shadow of Beethoven can be felt; but the music's rhythmic and harmonic aggressiveness are quite new. The two sonatas for violin and piano (1921, 1922) are more spontaneous in form and feeling, and remarkable for the independence of their instrumental parts. All three of Bartók's sonatas of the 1920s open with movements in sonata form, as do the Sonata for Two Pianos and Percussion (1937), and the Solo Violin Sonata (1944), where the influence of the Bachian sonata is strongest. Other composers who could be said, like Stravinsky and Bartók, to have looked back a century or more in writing sonatas included Poulenc, Martinů and Hindemith. Hindemith, most of whose works in the genre are in the smoothed neo-classical style of his later years, left sonatas for most of the instruments in current use, including harp, english horn and tuba.

What might be called the 'neo-classical sonata' was also widely practised in the USA after 1930, for example Sessions's Piano Sonata no.1 (1927–30). In Sessions's later sonatas, however, the neo-classical frame became hidden in an increasingly complex and individual style; and a similar development in Carter's music took place most swiftly at the time of his three sonatas: for piano (1945–6), for cello and piano (1948) and for flute, oboe, cello and harpsichord (1952). The 'sonata' movements of Cage's *Sonatas and Interludes* for prepared piano (1946–8) are in a two-part, pseudo-Baroque form, yet the oriental modality and character of the music make the description 'neo-classical' less than helpful. Some of Prokofiev's sonatas might with more justice be given that appellation, but those he wrote in Soviet Russia (Piano Sonatas nos.6–9, 1939–47; Violin Sonata no.1, 1938–46; Flute Sonata, 1943; Cello Sonata, 1949) lack the conscious archaism or irony of neo-classicism, perhaps because the model they seem to suppose – a 19th-century Russian sonata tradition – never existed.

Instead they established a tradition of their own, and led towards Shostakovich, whose Viola Sonata (1975) is among those late works in which a sense of the ageing of the musical tradition has a personal reality. Being at once weighty with history and individual in presentation (as the testament of a soloist), the sonata was a natural form for composers who, for whatever reason, felt kinship with the past in terms both of its achievements and of its philosophy of personal expression. Not only Shostakovich's sonatas can be understood in this light, but also Barraqué's Piano Sonata.

Other composers aligned their works rather with earlier traditions: Ferneyhough's plurally titled Sonatas for string quartet (1967) is partly a response to Purcell, and Davies's *St Michael Sonata* for wind (1957), a sonata of a Gabrielian sort (although later sonatas by this composer are aesthetically more on the Shostakovich model). Or the title may be used simply to indicate that the work concerned is for a soloist, abstract and serious, without any implications for its form. Boulez's three piano sonatas (1946, 1947–8 and 1955–7) show a progression from traditional patterns (of two movements in no.1, of four in the post-Hammerklavier no.2) to one determinedly new. Ligeti's Viola Sonata (1991–4), as a set of inventions for unaccompanied soloist, as assertive statement, as virtuoso showpiece and as a sequence of forms not beholden to the past, fits into many of the sonata's histories.

Sonata-allegro form. *See* SONATA FORM.

Sonata da camera (It.: 'chamber sonata'). An instrumental work common in the Baroque era, usually in three or four movements and scored for one or more melody instruments and continuo. The qualification 'da camera' suggests the music's function as domestic diversion, or as more formal entertainment in public settings. According to Brossard (*Dictionaire de musique*, 1703), 'These are actually suites of several small pieces suitable for dancing, and all in the same mode or key. This type of sonata usually begins with a Prelude, or a small Sonata which serves as introduction for all the others'. In the third edition of the *Dictionaire* (*c*1715) Brossard cited Corelli's sonatas as exemplary, but in the period 1650–1700 Austrian and German composers (Biber, Dietrich Becker, J.J. Walther and Johannes Schenck) produced a larger number of such sonatas than did the Italians. Rosenmüller's *Sonate da camera* (Venice, 1667) reflects this German tradition, and found no direct imitators in Italy; indeed, it was only with Corelli's op.2 (1685) that Italians began to favour the term 'sonata da camera' for specific sets of dance movements. Legrenzi's six chamber sonatas (op.4, 1656) are single movements in binary form; in his op.3 (1669) G.M. Bononcini (i) also used the term for sonatas in one movement rather than sets of dances. Corelli's chamber sonatas have three to five movements, usually a slow prelude followed by an allemande or corrente and other binary dances. After 1700, any distinction between the *sonata da chiesa* and the *sonata da camera* disappeared as binary movements took the place of the fugues in church sonatas, and expressive *grave* or *adagio* movements appeared in chamber sonatas. Groups of dances were also called by other names, such as *partita*, suite, *ordre*, *ouverture* and *air* (as in English reprints of Corelli's chamber sonatas).

SANDRA MANGSEN

Sonata da chiesa (It.: 'church sonata'). A Baroque instrumental work, often in four movements. In many churches during the 17th century, ensemble canzonas and sonatas replaced the organ solos that had regularly been substituted for elements of the Proper at Mass and Vespers. Despite the strong evidence for this practice (e.g. in organ tutors), the label 'da chiesa' appears in only about 20% of the volumes containing abstract instrumental works printed between 1650 and 1689; even Corelli's opp.1 and 3 are called simply *Sonate*. It is in this light that Brossard's statement (*Dictionaire de musique*, 1703) that church (as opposed to chamber) sonatas 'are what they [the Italians] properly call *Sonatas*' may be understood.

Mid-17th-century church sonatas ordinarily begin with a fast imitative movement, and include triple-metre sections and expressive adagios, although no single formal design dominates. Musicians may well have adapted such sonatas to the requirements of the service by performing isolated sections, a practice that would have encouraged composers to build sonatas from movements better able to stand alone. The four-movement design that was standard early in the next century is evident in about half of Corelli's abstract sonatas (opp.1, 3, and 5 nos.1–6): a slow introduction, followed by a movement in fugal style, an expressive slow movement (sometimes merely a short transition) and imitative finale. Biber's *Mystery Sonatas* (*c*1676) illustrate his more dramatic and virtuoso approach to the church sonata.

The 'da chiesa' label was little needed, since volumes not suited for church use were obvious from both scoring and content; moreover abstract sonatas, even if conceived for liturgical use, were no doubt heard elsewhere as well. Dances were clearly identified as secular, and some titles proclaimed their mixed content (e.g. Agostino Guerrieri's *Sonate di violino a 1.2.3.4. per chiesa, & anco aggionta per camera*, 1673). The use of organ continuo and the presence of a separate melodic bass partbook were clearly associated with church sonatas, whereas in secular collections the bass was scored for one instrument, either chordal or melodic (e.g. 'violone o spinetta'). Italian composers from Buonamente (1620s) to Corelli (1680s) conformed to this pattern – evidence of the lingering influence of the contrapuntal canzona on sonatas in which the melodic bass participates fully in contrapuntal dialogue. But such distinctions between church and chamber sonatas evaporated in Corelli's lifetime (dances intrude on church sonatas, expressive adagios on chamber sonatas; the melodic bass and continuo share a single line; even the church sonata's fugue could be replaced by a binary movement). Thus when J.G. Walther defined the sonata as a serious piece in which adagios and allegros alternate (*Musicalisches Lexicon*, 1732), the church and chamber distinction had little relevance.

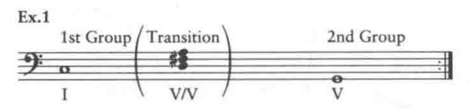
SANDRA MANGSEN

Sonata form. The most important principle of musical form, or formal type, from the Classical period well into the 20th century. This form is that of a single movement, not a 'sonata' as a whole; such a movement is most often part of a multi-movement instrumental cycle such as a sonata, piano trio or quartet, string quartet or quintet, symphony etc., or an independent movement like an overture or tone poem. Sonata form as such is less common in fantasies and the like, small movements, concertos and vocal music, but its principles may influence other features of form in such works. Though most

characteristic of first movements in fast tempo, it often appears in middle movements and finales, and in moderate and slow tempo; hence the synonyms 'sonata-allegro form' and 'first-movement form' are best avoided.



A typical sonata-form movement consists of three main sections, embedded in a two-part tonal structure. The first part of the structure coincides with the first section and is called the 'exposition'. The second part of the structure comprises the remaining two sections, the 'development' and the 'recapitulation'. The exposition divides into a 'first group' in the tonic and a 'second group' in another key, most often the dominant. Both first and second group may include numerous different ideas; the first or most prominent theme may be called the 'main theme', 'first subject', 'primary material' etc., while the most prominent theme in the second group is often called the 'second theme' (or 'subject'), whether or not it actually is the second important musical idea. The development (the misleading term 'free fantasia' is now obsolete) usually develops material from the exposition, as it modulates among one or more new keys. The last part of the development prepares the recapitulation. The recapitulation (or 'reprise'; but see §3 (iii)) begins with a simultaneous 'double return', to the main theme and to the tonic. It then restates most or all of the significant material from the exposition, whereby the second group is transposed to the tonic. The movement concludes either with a cadence in the tonic paralleling the end of the exposition, or with a coda following the recapitulation.

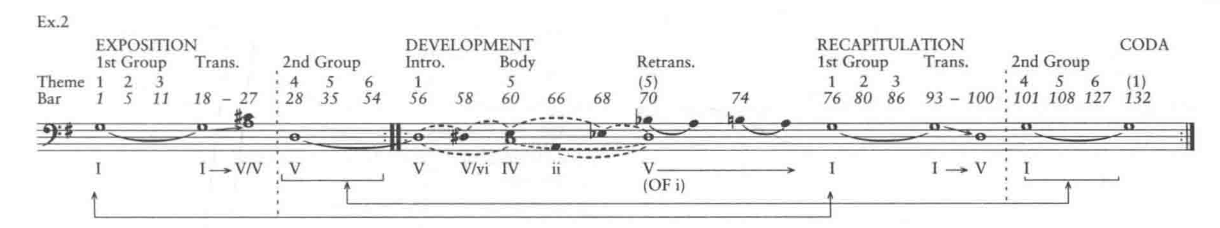
1. Principles: (i) Intrinsic (ii) Distinctions from related forms. 2. Origins. 3. The Classical period: (i) The Exposition (ii) The Development (iii) The Recapitulation (iv) Introduction and coda. 4. The 19th century. 5. The 20th century. 6. Theory: (i) 18th century (ii) 19th and early 20th centuries (iii) Modern interpretations. 7. Other forms: (i) Sonata without development (ii) Sonata rondo (iii) Concerto (iv) Vocal music (v) Variation, fugue, fantasy.

1. Principles.

(i) Intrinsic. Like any form in tonal music, a sonata-form movement creates its designs in time. The form is a synthesis of the tonal structure, the sectional and cadential organization and the ordering and development of the musical ideas. In addition, most sonata-form movements depend on 'sonata style' (Tovey), i.e. the articulation of events in 'dramatic' or 'psychological' fashion. Sonata form is not a mould into which the composer has poured the contents, but at most an 'ideal type' (Dahlhaus); each movement grows bar by bar and phrase by phrase, with the meaning of each event depending both on its function in the structure and its dramatic context; its true form becomes clear only on close analysis in terms of its effect in performance.

The old dispute, whether sonata form is binary or ternary, is idle and superficial; the form is a synthesis of binary and ternary principles. It is bipartite, in that the exposition has the same tonal structure as a half-cadence or the first half of a binary form: it is open, poised on the dominant, tonally incomplete (ex.1). Hence, notwith-

standing the effect of closure at the end, the exposition requires resolution by a balancing second part that closes in the tonic. Most sonata-form movements articulate the tonal polarity of the exposition by contrasting material, or contrasting treatment of the material, in the second group. The modulation out of the tonic usually occurs in a dramatic fashion; the establishment of the new key is an event of aesthetic as well as tonal significance. The paragraphs of about eight to 32 bars that create these sections vary in phrase rhythm, level of activity, harmonic structure and cadential strength; this sense of varied pace is essential to the style. (If a first movement begins with a beautiful, self-sufficient melody in square rhythm which closes in the tonic, for example Haydn's String Quartet op.76 no.5, it may not be in sonata form at all; a slow movement or finale can afford a more relaxed beginning.)



The second part of a sonata-form movement is longer than the first; it comprises two sections, the development and the recapitulation. The central structural event, distinguishing sonata form from all others that begin with an exposition, is the simultaneous return of the main theme and the tonic key in the middle of the second part. Neither a simple restatement of the main theme alone, nor a simple return to the tonic alone, has the intense impact of this simultaneous return. It creates a parallelism between the beginning of the movement and the beginning of the recapitulation; there is no such relationship in binary form.

In order to give the simultaneous return its maximum effect, the development delays and prepares it. Structurally, the development is a (gigantic) transition from the end of the exposition to the beginning of the recapitulation, analogous to the first section of the second half of 'rounded binary' form (see §1(ii)). But the development is also a middle section in its own right, with its own aesthetic: it modulates widely, develops the material and increases the complexity of texture. Hence, when the return finally arrives, it functions as a relaxation of tension or as a triumph over difficulties. The development and reprise are thus dialectically related: without the reprise, the development has little point; the larger and more complicated the development, the more satisfying is the reprise.

The second group in the exposition presents important material and closes with a sense of finality, but it is not in the tonic. This dichotomy creates a 'large-scale dissonance' (Rosen) that must be resolved. The 'sonata principle' (Cone; the term is misleading, insofar as this is only one of several relevant principles) requires that the most important ideas and the strongest cadential passages from the second group reappear in the recapitulation, transposed to the tonic. The subtle tension of stating important material in another key is thus grounded, and the movement can end. But the recapitulation has now also become a complete section, whose material parallels that of the exposition. The sections thus have the pattern *ABA*. (In a true ternary form, by contrast, the first *A* is complete in itself, closing in the tonic, *B* is merely a contrasting section and the last *A* merely a restatement.) The power and sophistication of sonata form lie in this synthesis of a three-part design and a two-part tonal structure.

To illustrate these points, exx.2 and 3 show an analysis of the first movement of Mozart's *Eine kleine Nachtmusik* K525. The form as a whole is summarized in ex.2; ex.3 shows the material (occasionally simplified), the harmonic content, and the phrase structure. Each new staff corresponds to a new sentence in the music.

Ex.2

(ii) Distinctions from related forms. Sonata form belongs to the larger class of 'binary' (Tovey) or 'key-area' forms (Ratner), i.e. forms in two structural parts whose first part ends out of the tonic (see ex.4, where many of these formal types are vertically aligned with respect to their structurally equivalent elements). Within this class, sonata form alone exhibits all three of the following features: a distinct development section, including a retransition; the simultaneous return of the initial theme and the tonic; and a more or less full recapitulation of the second group.

In binary form proper the second part is, at most, modestly longer than the first, adds no new material and exhibits neither a tonic reprise nor a distinct development section. The 'quatrain' and *A B–A* forms are especially characteristic of minuets and of main themes in variation movements and rondos; their second parts are more highly organized than in binary form. The important but little-studied 'quatrain' (Bartha) approximates (on a small scale) Ratner's 'key-area' form. Each of the two main parts is symmetrically subdivided, producing four phrases or sections, *a b x {ab}*. The third phrase combines development and retransitional elements, while the last, although beginning as a reprise, often synthesizes both phrases of the first part (Haydn, String Quartet op.33 no.3, trio: bars 47 to 49 (first beat) correspond with bars 35 to 37 (first beat), but the cadential bars, 49–50, correspond with the cadential 41–2); the dialectical relation between the last two phrases is a source of real power. On the other hand it includes neither a true development nor a full recapitulation, and the second part remains roughly the same length as the first. *A B-A* form (here with a close on the dominant in the first part) exhibits the same run-on, dialectical relation between *B* and *A*. Although often called '(two-part) song form', it has no particular connection with vocal music. Even when its initial *A* closes on the tonic (a non-binary form not otherwise relevant in this context), it must be distinguished from the three-part *A B A* or 'ternary' form, in which *B* is independent and there is no dialectical *B–A* relation. When executed on a large scale and with dense musical argumentation, *A B–A* movements are indistinguishable from small-scale sonata forms (Mozart, String Quartet K387, minuet, trio) or indeed fully fledged ones (Beethoven, Symphony no.9, scherzo).

Among the larger forms, in 'expanded binary' form the middle section or development leads, not to a retransition and reprise of the opening, but directly to the second group in the tonic (often prepared by the original transition, also transposed down a 5th); there is no 'simultaneous return' and hence no full recapitulation. This form is especially characteristic of Domenico Scarlatti. In 'rounded binary' form there is a complete middle section, usually including discussion of important ideas from the exposition in transposition, and sometimes genuine development as well; this section ends with full closure in a related key (most often the relative minor). The final section either is a full recapitulation beginning in the tonic (J.S. Bach, Two-part Invention in E; Haydn, Sonata in B♭ HXVI:18) or, as in expanded binary, begins in some other key (most often the subdominant) and moves to the tonic during its course (this is especially characteristic of J.S. Bach, but also occurs later, e.g. Haydn, Sonata in G HXVI:6). Such movements must be distinguished from those with an off-tonic reprise following a true development and retransition (see §3(iii)). In the 'sonata without development', finally, there is no middle section (see §7(i)).

These distinctions, admittedly, are often difficult to sustain in analytical practice and are far from universally acknowledged (although many apparent disagreements are largely about terminology). Many authorities emphasize the common reliance of all these forms on an *Ursatz* structure (Schenker) or key-area form (Ratner). Nevertheless, sonata form proper was central compositionally throughout the period under discussion and remains so in our reception of music. In this article it is assumed that only movements exhibiting all three criteria noted above (development and retransition, simultaneous return, full recapitulation) exhibit this form.

2. Origins. The rise of sonata form must be understood in the context of the broad stylistic changes during the 18th century. A movement from before 1750 is usually based on a single main idea, and governed by a single *Affekt* (psychological state, rhythmic profile, texture etc.). It develops this idea motivically, in uniform texture with a linear bass line (basso continuo) and in metrically orientated rhythms which change only at the cadences. Contrast appears only between opposing planes (solo and tutti, loud and soft etc.). A movement from the late 18th century, on the other hand, usually exhibits several contrasting ideas (often including contrast within a single idea), which develop dramatically in passages of tension and resolution. Its rhythm is that of the bar, the phrase and the antecedent–consequent period. It is essentially melodic in conception (when not downright popular or sentimental), clear in structure, with relatively thin textures, subordinate accompaniments and harmonic basses.

Numerous Baroque stylistic features affected sonata form. Formally, its roots lay in binary form, which had arisen in various French dance movements. This form has already been described (see ex.4); it was important also for its rhythmic organization in phrases and periods based on two-bar units. By the time of Bach, most movements of this type were in expanded or rounded binary form.

The second half of these forms resembles sonata form, in that it is longer than the first, and divided into two subparts; indeed this expansion was one origin of the later development section.

The origins of the 'simultaneous return' are more complex. A return of the opening music in the tonic was common following a 'trio', and in the da capo aria, the Italian opera overture, the concerto and the simple aria (final ritornello in the tonic). But none of these is equivalent to a true simultaneous return following a development; rounded binary form lacks both this feature and a full recapitulation in the tonic. Sonata form transformed the division within the second part of rounded binary form into a return to the original theme in the tonic. Once this integration of tonality and material had been achieved, the other novel elements of sonata form – the focus on the simultaneous return as an event, the role of the development as preparation for that return, and the repetition of the entire essential contents of the exposition in the recapitulation – inevitably followed.

The simple, phrase-orientated melody of the pre-Classical period developed in song and *opera buffa*. The principle of contrast developed in the concerto, the French overture, the da capo aria and pairs of dance movements. Contrapuntal elaboration, which during the pre-Classical period survived in fugues and French overtures, eventually revitalized the melodic style: it returned both in entire fugues (Haydn, String Quartets op.20 nos.2, 5, 6, finales) and, more characteristically, in the synthesis of contrapuntal texture and sonata style (Mozart, String Quartet K387, 'Jupiter' Symphony, K551, finales). It also led to 'thematische Arbeit' or, in Beethoven's preferable expression, 'obbligato accompaniment'. This essential new technique gave the inner parts and the bass rhythmic and motivic independence, while maintaining the aesthetic subordination of the melody. It thus allowed a synthesis of the melodic style and phase-orientated rhythm with sophisticated part-writing and complex textures. It was first fully achieved in Haydn's quartets op.33 of 1781 (ex.5: op.33 no.1, opening).

Sonata form developed in instrumental music. Indeed its rise was part of the unprecedented triumph of instrumental music – especially the new genres of the keyboard sonata, string quartet and symphony – as the leading type of Western music in the later 18th and the 19th centuries. For sonata form, the most important of these genres seems to have been the symphony. Even the earliest Italian symphonists (before 1740) exploited the driving quaver rhythms, the homophonic texture and the phrase-orientated rhythms of the early Classical style. They often wrote a clear second group in the dominant including a contrasting lyrical theme and closing group, and a clear recapitulation. Where contrast in the exposition was lacking, however, the middle section was often little more than a 'trio' in reduced scoring or in the minor (Sammartini, Symphony in A, J–C16; here and in all succeeding citations, reference is to the first movement of the cited work unless otherwise indicated). The more elegant symphonies of J.C. Bach, whose cantabile second themes influenced Mozart, are a later refinement of this style.

The Mannheim symphonists, famous for their orchestral technique, developed a more dramatic style with higher pretensions. But they often omitted the simultaneous return, preferring that variant of rounded binary called 'mirror' form (occasionally described as sonata form with 'reversed recapitulation'), in which the main theme returns at the end of the movement: *A* (tonic),*B* (dominant), development, *B* (tonic), *A* (tonic). Mozart also occasionally used this form in the 1770s (Violin Sonata K306/300*l*. The Mannheimers' brilliant orchestration often masked a certain poverty of invention and incoherence of structure. In Vienna, Monn and Wagenseil often included all the features of sonata form. These composers transferred the *piano* episode in the minor from the development to the second group, freeing the section following the double bar for true development. However, this mid-century repertory was short-winded and unpretentious.

In the solo sonata, which 18th-century theorists often described as more expressive or 'rhetorical' than the brilliant, festive symphony, large and complex rounded binary forms remained common well into the second half of the 18th century. Most of Domenico Scarlatti's sonatas are in this form. C.P.E. Bach's multifarious sonatas often adopt a quasi-improvisatory style with abrupt contrasts. His development section often does not differ markedly from his exposition; a full recapitulation appears more often than not. The string quartet and allied genres of chamber music developed later than the symphony and sonata; their formal designs adopted characteristic features of both those other genres, along with a tendency towards contrapuntal elaboration.

In sum, although all the elements of sonata form, and occasional movements in complete sonata form, can be traced from the 1730s on, neither the form itself nor its combination of dramatic style, structural rigour and thematic logic appeared consistently before Haydn (who mastered it from his earliest works). Its unchallenged reign in instrumental art music on a large scale did not begin until the last quarter of the 18th century.

3. The Classical period.

(i) The Exposition. In 18th-century works, the second group of a movement in a major key almost invariably stands in the dominant. If the movement is in a minor key, the second group usually stands in the relative major, less often in the dominant (minor). Beethoven occasionally used 'third-relationships' for the second group: including closely related keys like the submediant or relative minor (String Quintet in C op.29), the mediant minor (Sonata in G op.31 no.1, coloured by the mediant major) and the submediant (String Quartet in F minor op.95); and remote keys including the flat submediant (String Quartet in B♭ op.130), the mediant major (Waldstein Sonata in C op.53) and the submediant major (Archduke Trio in B♭ op.97, Hammerklavier Sonata in B♭ op.106). The second group usually establishes one single key. The apparent exceptions usually reveal themselves as expanded transitions (Beethoven, Symphony no.8, bars 34–45; finale, bars 48–59). Two real exceptions, both in the minor, are Haydn's 'Farewell' Symphony, no.45, and Beethoven's *Coriolan* overture op.62. Much more common are temporary contrasting modulations within the second group, often to a remote key such as the flat submediant (Mozart, String Quartet K499 in D, bars 57, 65).

Depending on the scale and the style, the first and second group may each have one idea or many, organized in a single paragraph or in several. The first group in Haydn's String Quartet op.1 no.1 consists of a single eight-bar antecedent–consequent period; the second group comprises two eight-bar periods. In Mozart's *Nachtmusik* (ex.3) the first group and transition, and the second group, each comprise a single large paragraph with several different themes; but the first group is tightly bound by elisions and question–answer relationships, while the second group is more relaxed and periodic. In the 'Eroica' Symphony, the first group comprises three paragraphs, each beginning with the main theme (bars 3, 15, 37); the last of these moves to the dominant of the dominant, where the important theme beginning at bar 45 appears. The second group proper contains seven paragraphs, beginning respectively at bars *57*, 65, *83*, 99, *109*, 132 and *144* (the italicized bar numbers indicate the strongest, section-defining cadences). At the same time the rhythm varies enormously, from the square main theme, through the offbeat accents and syncopations of bars 25, 28, 45, 83, 109, 113 and 119 to the climax in bars 123–31. Most large-scale expositions include a cadential closing group or 'codetta' following the largest paragraph of the second group (Mozart, 'Jupiter' Symphony K551, bars 101, 111; Beethoven, Sonata op.27 no.2 ('Moonlight'), finale, bars 43, 57).

Especially before about 1780, the relationship between the first group and the second can be simply that of antecedent and consequent on a large scale, without an independent transition. This boundary is marked by the (poorly named) 'bifocal close': the first group ends with a half-cadence on (but not in) the dominant, followed immediately by the second group actually in the dominant (Haydn, String Quartet op.33 no.3, bars 26–7; Mozart, Paris Symphony K297/300*a*, bars 51–2; Beethoven, String Quartet op.18 no.5, bars 24–5). More often, especially after 1780, a clear transition appears. The transition often develops out of a restatement of the main theme (Mozart, Symphony in G minor K550, bar 22; Beethoven, Waldstein Sonata, bar 14). In any case it modulates beyond the dominant to the dominant of the dominant (ex.3) in order to establish the dominant itself more strongly and to make the home tonic 'sink below the horizon' (Tovey). In these cases a caesura on the dominant of the dominant may still separate the exposition into two parts (Mozart, 'Jupiter' Symphony, bar 55). Not all expositions are divided into two parts. An important exposition form in Haydn comprises three parts: first group in the tonic; transition elided to an active second group avoiding firm cadences; contrasting closing group (Symphony no.99, bars 19–34, 34–70, 71–89).

The second group often begins with or includes a contrasting lyrical theme (Haydn, String Quartet op.33 no.5, bar 49; Mozart, Symphony in G minor K550, bar 44; Beethoven, Waldstein Sonata, bar 35). Haydn often began the second group with an adaptation of the main theme, usually varied in harmonization, texture, contrapuntal accompaniment, scoring or phrase rhythm (Sonata no.49 in E♭, bar 25). Such movements are often called 'monothematic'; but since they almost always bring new material later in the second group (ibid., bars 28, 42, 53, 60), that term is better restricted to those very rare movements that are based entirely on only one theme. A new theme may appear towards the end of the first group, still in the tonic, dominating not only the ensuing transition but other sections as well (Mozart, String Quintet K516, bar 30). The closing group often restates the main theme in varied form (Mozart, String Quartet K465, bar 91; Beethoven, Symphony no.2, bar 112). Many expositions have little or no thematic contrast (Haydn, 'Farewell' Symphony; Beethoven, Sonata op.101).

In 18th-century music the exposition is almost always directed to be repeated, with or without a transition back to the opening. This repetition lends the material greater solidity and familiarity; and it allows the exposition, whose tonal structure motivates the entire form, a chance to make its full effect.

(ii) The Development. It is important to distinguish between the process of development (Ger. *Entwicklung*) and the part of a sonata-form movement called the development section (*Durchführung*). This section is by no means devoted exclusively to the development of the material; conversely, this process is not restricted to development sections. Still, thematic development characteristically reaches its culmination here. Typical techniques include fragmentation of a theme into shorter motifs, often combined with rapid modulations based on sequences (Mozart, 'Jupiter' Symphony, bars 133, 171), combination of a theme with a counterpoint (Mozart, Symphony in G minor K550, bar 115), contrapuntal combination of originally separate themes (Beethoven, 'Eroica' Symphony, bar 186), juxtaposition of contrasting themes originally stated separately (Haydn, Symphony no.102, bars 116–17), increased complexity of texture ('Eroica', bar 220; cf 45), extension by sequence (ibid., bar 178), alteration of the rhythmic structure (Haydn, 'Surprise' Symphony, no.94, bar 107), and so forth indefinitely. When combined with excursions to remote tonal areas or passages of tonal instability, these techniques can make the development section a passage of great tension. In a psychological sense, this tension is the climax of the movement. At the same time, it prepares the structural climax, the simultaneous return which begins the recapitulation.

Hardly any rules can be laid down regarding the choice or treatment of material. The development may use only one theme from the exposition (Mozart, Symphony in G minor K550) or several (Haydn, Symphony no.102). In many works before 1780, the development still begins with a statement of the main theme in the dominant (Haydn, Symphonies nos.6 and 8), sometimes proceeding to the main theme in the tonic before the development proper (Haydn, Symphony no.36). Beethoven even occasionally began with the main theme in the tonic, soon breaking off in new directions (Sonata op.31 no.1; String Quartet op.59 no.1). After 1780, if the main theme opens the development, it is usually transformed in key, motivic content, phrase structure etc. (Haydn, Symphony no.94; Mozart, Symphony in G minor K550; Beethoven, Symphony no.9). The development may also begin with a theme from the second group (Mozart, Symphony in E♭ K543, bar 145; cf 110) or the closing group (Mozart, 'Jupiter' Symphony; Beethoven, Sonata op.10 no.2).

Especially before about 1780, restatements of material without substantial change save for the key are common (Haydn, Symphony no.47, bars 90–101; cf 36–47). Fairly often, especially in Mozart's works from the late 1770s and early 1780s, the development begins with a new theme; this theme usually provides a point of repose following an exposition of unceasing activity (String Quartet K458). A new theme elsewhere is always a special effect (Haydn, 'Farewell' Symphony, bar 108; Beethoven, the famous E minor theme in the 'Eroica', bar 283). In a finale, however, a new theme often functions analogously to a rondo episode (Mozart, String Quartet in A K464, finale, bar 114).

After the opening sentence, the development usually avoids repetition of material in the same key in which it originally appeared. An exception is Haydn's 'false recapitulation', i.e. a seemingly misleading statement of the main theme in the tonic as if the return were at hand, followed by further development and, eventually, the true return (Haydn, String Quartet op.17 no.1, bars 62, 76); in later years, the false recapitulation may appear in a foreign key (Haydn, Symphony no.102, bar 185).

Before 1780, many developments reflect their origins in rounded binary form by centring on one closely related key, most often the relative minor (Haydn, String Quartet op.17 no.5), less often the supertonic or mediant. Towards 1800, it became increasingly common to include more keys, and more remote ones (Mozart, Symphony in G minor K550, both outer movements), or to create a sense of instability by modulating rapidly or by virtually being in no key at all (Beethoven, Symphony no.4, bars 257ff). The tonal plan of a development is often a bridge prolonging the dominant by a neighbouring key such as the relative minor or subdominant (ex.2), or by a transformation of the dominant triad into the dominant 7th, impinging on the home tonic. If the home tonic is minor and the second group is in the relative major, the development will complete the large-scale arpeggiation of the tonic triad by proceeding further from the mediant to the dominant.

Mozart's developments are fairly short, perhaps 50–60% of the length of the exposition. Most centre on a single process in the middle, introduced by a contrasting passage and followed by the retransition (Symphony in G minor K550, bars 101–14, 115–38, 139–65; *Nachtmusik*, ex.3). Haydn's typical developments are perhaps 75% of the length of the exposition, Beethoven's perhaps 90%; occasionally, they wrote developments longer than the exposition (Haydn, Symphony no.102; Beethoven, 'Eroica' Symphony). Both Haydn and Beethoven divided the development into a number of distinct sections; Beethoven further integrated these into a single psychological progression which, belying the outward diversity and adventure, prepares the recapitulation with unparalleled power and excitement.

The development almost always arouses expectations of the simultaneous return. Most characteristic is a passage of dominant preparation, with or without references to the main theme (Haydn, Symphony no.102, bars 217–26; Mozart, Symphony in G minor K550, bars 153–65; Beethoven, Waldstein Sonata, bars 136–55). Often this dominant is coloured by the tonic minor (Haydn and Beethoven, ibid.; Mozart, *Nachtmusik*). The tonic may be approached indirectly by a sequence (Mozart, Symphony in E♭ K543, finale, bars 181–4) or following a half-cadence in a related key, usually the dominant of the relative minor (Haydn, String Quartet op.64 no.6, bars 97–8). When Haydn and Beethoven opened with a theme lying off the tonic (Mozart avoided this), they usually aimed the return at the other sonority (Haydn, Symphony no.94; Beethoven, Sonata op.81*a*).

(iii) The Recapitulation. It is useful to distinguish between 'recapitulation', in the sense of the entire third section of a sonata-form movement or any large part thereof (e.g. the second group), and the return of a given idea or passage, for which 'reprise' can be employed.

The recapitulation almost always enters unambiguously with the 'simultaneous return' of the opening theme in the tonic. When two or more themes occur in the first group (not the transition), the return to the tonic may coincide with the second of these; the opening theme then appears earlier in a foreign key (Beethoven, Sonata op.10 no.2), immediately afterwards in the tonic (Beethoven, String Quartet op.59 no.1), or as a coda following the second group (Haydn, String Quartet op.50 no.3). The main theme may return transposed in mode (Haydn, Symphony no.47). But if the main theme never returns, or if the return to the tonic is delayed until the second group, the movement is in one or another version of rounded binary form. In the pure type, the first group never returns (Haydn, Sonata in G HXVI:6); or it may follow the second group, producing 'mirror' form (Mozart, Sonata K311/284*c*). Still closer to sonata form is a full recapitulation in which the main theme returns in the subdominant (Mozart, Sonata K545; Beethoven, *Coriolan* overture; Schubert, Symphony no.5). In masterworks, the recapitulation does not then simply repeat the exposition mechanically, transposed down a 5th; thus in K545 the transition is expanded and leads, as did the exposition, to a half-cadence on the dominant.

In recapitulating the remaining material of the exposition, the sonata principle always applies: material first presented outside the tonic is repeated in the tonic. But in Haydn, Mozart and Beethoven these repetitions are never mechanical. Their regular procedure was to repeat the main theme, to refer to the other first-group themes and the transition with an appropriate harmonic orientation, and to repeat the chief ideas from the second group in the same order (Mozart, Symphony in E♭ K543; Beethoven, Symphony no.5).

Within this framework, substantial alterations in the latter part of the first group and the transition are common. Material may be omitted (Mozart, Symphony in D K297/300*a*, bars 40–47), expanded (Mozart, Symphony in G minor K550, bars 191–216, cf 28–33; Beethoven, Waldstein Sonata, bars 167–74, cf 12–14), or wholly recomposed (Beethoven, 'Eroica' Symphony, bars 402–39; cf 7–36). These expansions often take on a similar character to the development (Rosen: 'secondary development'), as if the issues raised there also require recapitulation (Mozart, ibid.). If there is a transition, it must be altered so as to prepare the tonic, not the dominant (Mozart, 'Jupiter' Symphony, bars 225–43; cf 36–55; see also ex.2). More remote keys, usually on the flat side (Beethoven, String Quartet op.59 no.1, bar 279; cf 30), and changes of mode (Mozart, 'Jupiter' Symphony, bar 212, cf 24; Beethoven, 'Appassionata' Sonata op.57, bar 152, cf 17) may also occur in these passages; such flat-side or minor-mode emphasis often creates a quasi-subdominant feeling.

In the second group proper, Mozart almost always introduced subtle alterations, such as expansion of a sensitive harmonic area (Symphony in G minor K550, bars 245–53; cf 62–5), additional repetitions (Symphony in D K504, bars 259–64; cf 112–15), or enrichment through contrapuntal elaboration, fuller scoring, obbligato inner parts etc. (Symphony in E♭ K543, bars 254–62, horns and second violins; cf 97–105). Beethoven is much more likely to recapitulate the second group literally (even in the gigantic 'Eroica'); presumably his larger developments and codas require this symmetry.

In later Haydn, the recapitulation does not necessarily follow either the course of the exposition or any other definable pattern. Even where more or less the same events occur in more or less the same order, every sentence may be rewritten (String Quartet op.33 no.3). In other cases paragraphs appear in reverse order (Symphony no.47, bars 127–49; cf 36–46, 13–21), subsidiary material is expanded (Symphony no.99, bars 157–90; cf 71–87 and the development), or the whole simply rewritten ('London' Symphony, no.104). But the most important material from the second group is still recapitulated in the tonic (ibid., bars 247 and 267; cf 65 and 100). And the material following the simultaneous return usually approximates in length to the second group, thus preserving the proportions and the tonal balance of the whole.

Important new tonal relations within the second group are usually prohibited by the necessity of grounding the material in the tonic. Temporary excursions to other keys usually recur in appropriate transposition (Mozart, String Quartet K499), often expanded (Mozart, String Quartet K465, finale). An apparently arbitrary modulation may refer to the development, as in Haydn, Symphony no.100 in G, where in bar 239 E♭ resolves the juxtaposition of the dominant and B♭ at the beginning of the development. A special situation arises when a movement in the minor has originally placed the second group in the relative major. Mozart, and Haydn in his early and middle-period music, normally recapitulated these second groups in the tonic minor, i.e. altered in mode. In his late music Haydn transposed the second group (not the first group) to the tonic major, thus ending cheerfully with a change of mode within the recapitulation. Beethoven combined both procedures: the second group is transformed (at least in part) to the tonic major, with an air of release which reveals itself as 'tragic irony' (Tovey) when 'catastrophe' strikes in the coda (Symphony no.5). In finales and overtures, the second group may remain in the minor, so that the coda can 'triumph' in the major (String Quartet op.95, finale).

Before 1780, the entire second part (development and recapitulation) was usually directed to be repeated – another indication of the binary structure of the whole. After 1780, this repetition became increasingly rare, even when the exposition was repeated. After the finale of Beethoven's 'Appassionata' Sonata, this practice had become obsolete.

(iv) Introduction and coda. Many first movements and an occasional slow movement and finale are preceded by a slow introduction. Its primary function is to strike a more serious or grander tone, and to establish a larger scale of motion, than would be possible by the Allegro alone. Tonally, almost every introduction first establishes the tonic, and then cadences on the dominant to prepare the Allegro. Occasionally, the goal is a half-cadence in another key (Haydn, Symphony no.103, 'Drumroll') or a chord other than the dominant (Haydn, Symphony no.92, 'Oxford'; Beethoven, Sonata op.81*a*). The Allegro which follows an introduction can begin with a squarer melody than is otherwise possible (Mozart, Symphony in E♭ K543; Haydn, no.104 in D). Before 1790, there was little thematic or psychological connection between introductions and allegros. From then on such connections became increasingly common (Haydn, Symphony no.103; Beethoven, 'Pathétique' Sonata op.13). Beethoven eventually integrated introductory material into the movement so completely that a separate section can no longer be distinguished (Symphony no.9; String Quartet op.130).

The conclusion of a sonata-form movement follows either of two main principles. The first is to end with the same music as concluded the exposition (Mozart, String Quartet K428/421*b*; Beethoven, Sonata op.22). Mozart and Haydn often combined this formal symmetry with an expansion late in the second group (Mozart, String Quartet K464, bars 234–62, cf 73–83; String Quintet K515, where bars 320–52 replace the single bar 130). Often this expansion involves a new statement of the main theme, the end of the exposition still returning to round off the whole (Mozart, Symphony in G minor K550, bars 283ff; Haydn, Symphony no.102, bars 282ff).

These expansions give something of the effect of a coda while maintaining the symmetry of binary form. A true coda, by contrast, follows the recapitulation of the closing group (or breaks off from the pattern of the exposition, the omitted material not returning). Save for the functions of expansion (equivalent to the examples just cited) and 'peroration' (Tovey), and notwithstanding several recent studies, the structural significance of codas is not well understood. The German expression 'second development' is applicable only to certain parts of certain Beethoven codas; and in any case the structural function of the development, to prepare the return, cannot be repeated. In rhythmic terms, the coda has been called a gigantic 'afterbeat' to the form as a whole; in Schenker's theory, it consists of the music following the background descent to the tonic.

Almost every coda restates the main theme; this restatement is often transformed into a climax. In some Beethoven works, every previous statement of the theme

will have been incomplete or deprived of strong root-position tonic support (String Quartet op.59 no.1, bars 1, 242, 250–55). In these cases, the coda provides 'thematic completion' (Kerman) by presenting the definitive or climactic version (op.59 no.1, bar 348). As befits the end of a large tonal structure, most codas include some emphasis on the subdominant, especially if none has occurred in the recapitulation.

In his late music Haydn often rewrote the recapitulation so thoroughly that the concept 'coda' makes little sense, unless one accepts Tovey's interpretation that these sections synthesize the functions of recapitulation and coda. Mozart wrote a coda about as often as not; it is usually a single short paragraph centred on a restatement of the main theme, often in altered or contrapuntally enriched form (*Nachtmusik*; String Quintet K516). A transitional passage often prepares this climax (String Quartet K465; 'Jupiter' Symphony, finale); cadential passages, whether on the main theme itself (Quartet K465) or on less highly charged material (Quintet K516; 'Jupiter' finale), then conclude the movement. Beethoven almost always wrote a large coda, often as long as the development (Symphony no.5), occasionally as long as the rest of the movement (Symphony no.8, finale). A typical Beethoven coda might begin by turning away to new questionings, often in new keys ('Eroica' Symphony, bars 557–80). Eventually a climax is reached on the main theme in the tonic (Symphony no.5, bar 478) or alternating tonics and dominants ('Eroica', bars 631–73). The final cadences, perhaps preceded by the lyrical theme (Waldstein Sonata, bar 284), comprise a separate paragraph following the climax proper. The coda may also recapitulate events from the development. In the 'Eroica' development, the E minor theme establishes the minor Neapolitan (flattened supertonic), and appears later in the tonic minor (bars 284, 322). In the coda it returns in the ordinary supertonic, F minor, and, again, in E♭ minor (bars 581, 589); the ensuing crescendo on V is related to the retransition (bars 338–61, 603–20). Thus the remote key is 'grounded' by its diatonic equivalent, at the same time as the whole section gains an appropriate subdominant emphasis.

4. THE 19TH CENTURY. Two broad strains may be identified in 19th-century music: a 'Romantic' one, focussing on vocal music, programme music and the characteristic piece for piano; and a 'classicizing' one, focussing on the traditional genres of absolute music. Only the latter tradition gave sonata form much prominence. The relatively uncommon sonata-form movements in the former tradition (and some in the latter) often treat the form in an academic manner, as a mould, not a process, or as a 'vehicle for the sublime' (Rosen). Many large instrumental works in this repertory, while referring to sonata form, seem also to be searching for different forms altogether (Berlioz, *Symphonie fantastique*; Liszt, Sonata in B minor).

Changes of style in the 19th century lent new meaning to many aspects of sonata form. The most important of these was the Romantics' attitude towards musical material. Their programmatic and self-expressive tendencies focussed on the explicit content of music in unprecedented fashion. The primary focus of 19th-century compositional 'inspiration' comprised striking and original themes, often harmonized with chromatic or apparently free harmonic progressions. This concentration on themes for their own sake was related to the rise of the lied and the characteristic piano piece, where the quality of the theme was the chief raison d'être of the composition. A related phenomenon was the tendency to favour square phrasing in four-bar phrases – perhaps a side-effect of the concentration on themes and harmonic progressions – in place of the supple Classical phrase rhythms.

All these features led to the central importance of the second theme in Romantic sonata form. Following a noble, stormy or in some way difficult first paragraph, and an agitated transition, composer and listener alike welcomed the chance to indulge in a beautiful melody in the new key. This became legitimized in the 19th-century doctrine that sonata form was based on the duality of two contrasting themes (often characterized as 'masculine' and 'feminine') rather than on the tonal duality of the exposition. Even the classicizing tradition almost always included a contrasting second theme (Schubert, String Quintet in C D956; Mendelssohn, Overture, *Fingal's Cave*; Brahms, Symphony no.3). Indeed, many opening themes in this style are complete paragraphs in themselves, preceding the 'drama' (Schubert, Sonata in B♭ D960; Brahms, Sextet in B♭ op.18). These self-sufficient themes alternate with impassioned climactic passages; despite the presence of many features drawn from the sonata-form tradition, many such movements do not exhibit sonata form as a whole (Chopin, Ballade in G minor).

Related to these tendencies was the Romantic bias against literal repetition. The second half of a sonata-form movement (development and recapitulation) is never repeated, the first half but rarely. The main theme is often varied on each return; new themes are derived by 'thematic transformation' (Berlioz, Liszt as above; Schumann, Symphony no.4). The continual thematic development, combined with the bias against repetition, diminished the importance of the recapitulation. The main theme may not be recapitulated (Weber, Sonata no.1 in C; Schumann, Symphony no.4, finale; Chopin, Sonata in B minor); the second group may be omitted, the coda following directly on the return of the main theme (Schumann, Symphony no.4, first movement); or the main theme may crown the work in an 'apotheosis' (Cone) or 'transfigured' recapitulation (Chopin, Polonaise-Fantasy). Conversely, the coda increased in importance; indeed the climax often comes not at the simultaneous return but in the coda (Schumann, Symphony no.2, finale). This is one aspect of the 19th-century tendency to displace towards the end the weight of every form, single movements and whole cycles alike; but few 19th-century composers other than Beethoven achieved such climaxes within an overall sonata-form aesthetic.

The other principal difference in 19th-century sonata form is the greatly expanded system of tonal relations. The basis of this expansion is the acceptance of major and minor as equally valid representations of the tonic (Schubert, Quartet in G D887, opening, beginning of the recapitulation, final bars; also the finale). Schubert commonly used remote keys in the second group: flat submediant (Grand Duo in C for piano, four hands); flat submediant minor (Sonata in B♭ D960); flat mediant (String Quintet in C); and even the leading-note minor ('Reliquie' Sonata in C). As in these cases, such second groups often fall into two distinct sections: the first, devoted to the obligatory lyrical theme, stands in the remote key; the second appears in the dominant, often

following a developmental transition, and contains business-like and cadential paragraphs. In Brahms – the only 19th-century composer whose mastery of form was comparable to Haydn's, Mozart's and Beethoven's – the special key in the second group may lead to the dominant (Symphony no.2, D–f♯–A) or stay in its own orbit (Piano Quintet, f–c♯–D♭; Symphony no.3, F–A–a), but in either case these contrasts are always integrated into the whole. Schubert's developments often consist of little more than a gigantic sequence (String Quintet); his preparations for the return are always masterly (Sonata in B♭ D960). Mendelssohn's and Brahms's developments, though lacking Beethoven's illusion of teleological 'necessity', always seem logically related to what has gone before. All three composers give full recapitulations which tonally resolve the second group, generally in the tonic or in the keys a 5th below those in the exposition (Schubert, Symphony no.9, C–e–a♭–G becomes C–c–c♯–C; Brahms, Piano Quintet, f–c♯–D♭ becomes f-f♯-F). They also resemble Classical sonata form in usually requiring only a final paragraph or two as coda, keeping the weight of the form centred on the beginning of the recapitulation. This divergence in treatment of recapitulation and coda is the chief distinction between classicizing and Romantic sonata forms.

5. THE 20TH CENTURY. Sonata form still appeared in tonal music on conventional models by composers of all nationalities, persuasions and styles: Richard Strauss and Hindemith, Elgar and Britten, Copland and Piston, Roussel and Milhaud, Prokofiev and Shostakovich. Except for the increasingly dissonant harmonic style and widely ranging tonality, the outward features of form in these repertories do not differ significantly from 19th-century ones.

More interesting are the reinterpretations of sonata form by the great 20th-century innovators who, after World War I, re-established contact with traditional styles: Stravinsky and Bartók. In his 'neo-classical' period (*c*1920–50) Stravinsky often adhered to the outward conventions of traditional forms, but – as in all his music – re-created them anew. Thus the Symphony in C articulates the leading-note B as a stronger 'dominant' than the orthodox G; the resulting implications of E minor create Stravinsky's characteristic multiple tonality in interlocking planes (cf the *Symphony of Psalms* and the *Symphonies of Wind Instruments*). The internal relations among the parts of the form are not dynamic, but more nearly circular, symmetrical and static – in keeping with other aspects of Stravinsky's style. Bartók's wild, dissonant style based on unusual diatonic scales renounces the perfect triad as the basic sonority in favour of (often dissonant) primary intervals (for example C–E and C–F♯ in the String Quartet no.4). But since these intervals can still imply directional motion and articulate tonal areas, they have the power to create a sense of tonal potential (exposition), conflict (development) and resolution (recapitulation).

More surprising, and more problematic, is the use of sonata form in atonal repertories. With the development of the 12-note method in the 1920s, Schoenberg, Berg and Webern returned to large instrumental movements based on traditional formal plans. Sonata and related forms appear, for example, in Schoenberg's Piano Piece op.33*a* and String Quartets nos.3 and 4; Berg's *Wozzeck* (Act 2 scene i), Chamber Concerto, Lyric Suite for quartet, and *Lulu* (Act 1 scenes ii and iii); and perhaps in Webern's Trio op.20, Symphony op.21, Quartets opp.22 and 28 and Concerto op.24.

In these cases the form can be articulated only by the sectional structure and the development of the musical ideas. Such techniques as inversion or complementation of the set (Schoenberg's Quartet no.4, slow movement), emphasis on the perfect 5th and varying segmentations of the set (his op.33*a*), or the repetition of characteristic intervals or specific pitches in different transpositions of the set (Webern's Symphony op.21) can clearly articulate pitch groupings and intervallic complexes. But these distinctions hardly function analogously to that between tonic and dominant in Mozart or Brahms; insofar as tonality is the essential force governing sonata form, then 12-note 'sonata form' is necessarily different in practice. Even if the material and its development articulate sections which mimic exposition, development etc., the unity of (developmental) process and (tonal) structure that had characterized tonal sonata form is exploded; the form is an abstract norm of coherence, independent of the 12-note procedures. But this dissociation is a typical 20th-century solution to an artistic problem, comparable in its own way to Stravinsky's dissociation of textures and tonalities. Webern's unique forms based on canon, variation and retrogrades seem more organically related to the 12-note material; here too, however, if sonata form is implied, it is hardly audible in any traditional sense.

With the decline of heroic musical modernism following World War II, and especially in the heterogeneous musical world of the last quarter of the 20th century, sonata form ceased to be a major aspect of the structuring of significant music. It made perhaps its last meaningful appearance in, or rather with respect to, a work of Boulez (the last great modernist figure), in his programmatic comment that the first movement of his second piano sonata was conceived as a project in its 'destruction'.

6. THEORY.

(i) 18th century. No adequate description of sonata form appeared before the 1790s. Most 18th-century speculative and literary writing on music focusses on traditional subjects (opera, continuo, counterpoint) or on aesthetic rather than formal matters. Binary form is described in Mattheson's *Das neu-eröffnete Orchestre* (1713) and F.E. Niedt's *Musikalische Handleitung*, ii (2/1721). Scheibe's *Der critische Musikus* (1745) describes 'rounded binary' form with modulations within the (longer) second part. Quantz's *Versuch* on the flute (1752) clearly describes the second group in the dominant. The best early account of musical form appears in Joseph Riepel's *Anfangsgründe zur musicalischen Setzkunst*, ii: *Grundregeln zur Tonordnung insgemein* (1755). Riepel's essay gives a detailed account of phrases and cadences; it describes the development section, complete with modulatory plans; and it analyses a complete movement in terms of his new criteria. On the other hand, Riepel did not describe the simultaneous return to the main theme and the tonic as a constituent of the form.

The fullest 18th-century description of sonata form occurs in vol.iii (1793) of Heinrich Christoph Koch's *Versuch einer Anleitung zur Composition*. Koch expanded and refined Riepel's phrase-rhythmic analysis; he applied these principles to ever larger segments of music, culminating in an analysis of an entire sonata-form movement as an expansion of the form of a minuet. Koch also gave

the first adequate description of the twofold division of the second half into development and recapitulation and also described various types of development section. Comparable but less detailed accounts appear in other works from this decade: Francesco Galeazzi's *Elementi teorico-pratici di musica*, ii (1796), A.F.C. Kollmann's *An Essay on Practical Musical Composition* (1799) and Carlo Gervasoni's *La scuola della musica* (1800).

With only scattered exceptions, these 18th-century writers described sonata form as binary, not ternary (even when the recapitulation was clearly distinguished from the development). They understood its organization primarily in terms of the tonal structure of the exposition, as well as the phrase rhythm and cadence plan. Similarly, they described the form in terms of a single main theme (which may, to be sure, lead to derived subsidiary themes). Only Abbé Vogler, in *Betrachtungen der Mannheimer Tonschule*, ii (1779), and Burney in his description of J.C. Bach in the *General History of Music*, iv (1789), referred to a cantabile, contrasting second theme in a sonata-form exposition. Neither is an important theorist; neither goes beyond simple description of a particular case. The notion of a second theme as a vital constituent of the form did not arise until the 19th century.

(ii) 19th and early 20th centuries. The prescriptive or textbook doctrine of sonata form arose simultaneously with many composers' acceptance of an academic or abstract version of the form. This doctrine described the form primarily in terms of the material and its development, that is as an *ABA*: the exposition, consisting of a ('masculine') main theme in the tonic, a transition to the new key, a contrasting lyrical ('feminine') second theme, and perhaps a closing group; the development, whose function was to attain a climax by developing the material in remote keys; a full recapitulation; and a coda.

This model arose in part as an attempt to explain the difficult works of Beethoven, in part as a recipe for use in teaching composition and in popular analysis. It was influenced by analyses in the Leipzig *Allgemeine musikalische Zeitung*, by the writings of E.T.A. Hoffmann, and by Heinrich Birnbach's article 'Über die verschiedenen Formen grösserer Instrumentalstücke' (*Berliner Allgemeine musikalische Zeitung*, 1827–8). An early influence in France was J.-J. de Momigny's treatise *Cours complet d'harmonie et de composition* (1806). The theory appeared fully developed in Reicha's *Traité de haute composition musicale*, ii (1826), in A.B. Marx's *Die Lehre von der musikalischen Komposition* (1837–47) and in Carl Czerny's *School of Practical Composition* (1848–9).

(iii) Modern interpretations. In the 20th century, new methods of analysis and fresh historical investigation have brought about numerous reinterpretations of sonata form. There have been six main currents. (1) Tovey persuasively ridiculed the textbook model, meanwhile producing an immense body of penetrating individual analyses. He also reinterpreted the whole theory in terms of 'sonata style', i.e. the dramatic and tonal effects obtainable in the form. (2) Schenker's structural theory of tonal music, while not overtly concerned with form as such, demonstrated in a long series of profound analyses that every exposition is a single 'half-cadence', tonic-dominant, every development a prolongation of the dominant (or the equivalent). Thus the binary structure and the primary role of tonal forces in sonata form were laid bare. (3) A renewed interest in rhythmic analysis (Ratz, Georgiades, Cooper and Meyer, Cone, Morgan, Schachter, Rothstein and others) has fostered appreciation of the central role of phrase and period in sonata style. (4) Revived appreciation of the rhetorical and referential dimensions of 18th-century music, in both theory and practice, has led to rhetorical and semiotic analyses of large instrumental forms by Ratner, Agawu, Bonds and others; interest in literary theory has fostered narratological and Bakhtinian analyses, primarily of 19th-century works, by Newcomb, McCreless, Maus, Edwards and others. An analogous trend is the recognition of the lack of closure in certain sonata-form movements and, consequently, their larger-scale function within entire works (Webster, Kinderman, Haimo and others). (5) Recent interest in music 'as cultural practice' (L. Kramer: *Music as Cultural Practice, 1800–1900*, Berkeley, 1990, for example) has led to interpretations of large-scale instrumental movements in terms of their composers' real or supposed social, cultural and sexual orientations; the relation of such interpretations to more traditional analytical results is not yet clear. (6) Finally, with the postmodernist suspicion of any kind of formalism (perhaps also related to the decline of sonata form in compositional practice), some theorists and analysts have begun to contest the importance of sonata form in genres (notably vocal music) to which it had been uncritically applied.

Since World War II, Newman, Ratner, Feil, Ritzel, Churgin and others have made the first systematic studies of 18th-century writings on rhythm and form, as, more recently, have I. Bent and others of 19th-century writings. Meanwhile Fischer, Tobel, Larsen, Newman, Kamien and others have begun to draw careful distinctions among various types of Classical sonata form. These perspectives have, for the first time, laid the foundations for a historically and analytically differentiated history of sonata form – which, admittedly, remains to be written.

7. OTHER FORMS.

(i) Sonata without development. Closely related to sonata form is the common form comprising an exposition and recapitulation but no development (and usually no repeats). As it often occurs in the first movements of sonatinas, and in slow movements, it is often called 'sonatina form' or 'slow-movement form'; but it also appears in other contexts, so the more neutral term 'sonata without development' is preferable. (In binary form, the second part begins in the dominant, not in the tonic.) The form is common in slow movements (Haydn, String Quartet op.50 no.5; Mozart, Symphony in E♭ K543; Beethoven, Sonata op.31 no.2; Brahms, Symphony no.4), overtures (Haydn, *Orlando paladino*; Mozart, *Le nozze di Figaro*; Beethoven, *Die Geschöpfe von Prometheus*) and finales (Mozart, String Quartet in E♭ K428/421*b*; Brahms, Symphony no.1). The return may enter immediately on the final cadence of the exposition (Mozart, String Quintet K516, Adagio), after a brief transition on a dominant pedal (Mozart, String Quartet K465, Andante), or following a brief modulating passage (Haydn, String Quartet op.33 no.3, Andante, bars 59–64). In the last case the dividing-line between transition and development is not always clear (Beethoven, Sonata op.10 no.1, finale, bars 46–57). Often one or more paragraphs will be considerably expanded in the recapitulation, giving the satisfaction of a 'secondary' development in an appropriate context (Mozart, String Quartet K465, Andante, bars 57–74, 85–96; Brahms, Symphony

no.1, finale, bars 204–19, 232–300, including material from the introduction). Some movements of this sort resemble Mozart's favourite sonata-rondo form, *A–B–A–C*/(development) *B–A*.

(ii) Sonata rondo. Classical rondos often place the first episode in the dominant, like a second group; it then is almost always recapitulated in the tonic as the third episode (the middle episode begins in a different key, usually of the opposite mode to the tonic, and functions like a development): *A* (tonic) –*B* (dominant) – *A* (tonic) – *C* (various keys) [?= development] – *A* (tonic) – *B* (tonic) – *A* (tonic) – coda (tonic). This is sonata rondo form *par excellence*; the only essential difference from sonata form is the return to the main theme in the tonic immediately following the second group (or first episode). But most sonata rondos also exhibit the lighter style characteristic of finales, with squarer phrasing and complete rounding off of the main theme in the tonic. (*See* RONDO.)

(iii) Concerto. Most 18th-century concerto movements are based on the 'ritornello principle'; that is, an alternation of tutti (T) sections with solo (S) ones (the latter often modulating), most commonly:

T	S	T	S	T	S	T
Th	a	Th	b	Th	c	Th
I	I–x	x	x–y	y	y–I	I

Though often on a larger scale, the initial tutti was structurally equivalent to the opening ritornello of an aria. The 'little returns' to the main theme in the subsequent tuttis, and especially the rhyme between the cadence of the initial tutti and the final cadence, define the principle. During the second half of the century, the three solo sections increasingly took on aspects of exposition, development and recapitulation: Mozart synthesized the ritornello principle with sonata form, producing a new form altogether. (It appears only sporadically in other composers.)

In Mozart's concertos, although the opening orchestral tutti presents much of the material that will later be stated during the solo exposition, it is not a 'first exposition' (as it is often called), for it remains in the tonic throughout, and it retains the aesthetic function of preparing the entry of the soloist, who enters with either the main theme (K488), a transition (K467) or a new theme (K466). Soloist and orchestra then execute a complete exposition together, with first group, transition, and second and closing groups in the dominant. The second group often includes one or more new themes (K503, bar 170) and omits one or more themes from the ritornello (ibid., bars 51, 59 omitted). An orchestral passage in the dominant, based on the opening ritornello, concludes the exposition. The development is structurally equivalent to that in sonata form, but it is often more sequential or episodic in style. The recapitulation, all in the tonic, is a synthesis of the exposition and the opening ritornello, combining soloist and orchestra; ritornello themes omitted from the exposition are usually restated here (K503, bar 365). At the close of the recapitulation, an orchestral passage leads to a tonic 6-4 chord over a fermata; the soloist then executes a cadenza, which leads through the dominant to a cadence on the tonic. The orchestra enters on this tonic and closes the movement with material from the ritornello, most often its closing paragraph. The form of the soloist's portions are thus comparable to sonata form, but the form of the whole is still governed by the ritornello.

(iv) Vocal music. Form in vocal music was until recently little studied. In larger and through-composed works the text and considerations of rhetoric often seem to determine the form. Although full sonata form is found (Mozart, *Don Giovanni*, 'Ah taci, ingiusto core'; Haydn, *The Creation*, 'With verdure clad'; Beethoven, *Missa solemnis*, Benedictus; Brahms, *German Requiem*, 'Ihr habt nun Traurigkeit'), it is neither as common nor as characteristic as has traditionally been supposed. In particular, the majority of vocal movements that begin with a clear exposition closing in the dominant proceed more freely and less 'formally' in their later stages, with less emphasis on the return to the tonic, than instrumental movements. Even in the Classical period, simpler and more flexible forms are commoner: binary form (Mozart, *Die Zauberflöte*, no.10, 'O Isis und Osiris'), sonata without development (Mozart, *Le nozze di Figaro*, Act 3, sextet; Haydn, partsong *An die Frauen*), and a richly varied repertory of ternary, rondo and ritornello forms.

(v) Variation, fugue, fantasy. In sonata style, even these forms and genres often incorporate sonata-form procedures. Variation movements often return to the main theme at the end, following an Adagio variation or a climax, with the clear import of a reprise (Mozart, String Quartet K464, Andante, bar 164; Beethoven, Diabelli Variations, nos.33–4); in the 19th century, analogous effects may follow contrasting sections or even entire movements (Beethoven, Symphony no.9, finale). Haydn's 'double variations' and *ABA* movements often break off in favour of developmental passages which return to the original theme as if to a recapitulation (Piano Trio HXV:27, Andante). Fugues often betray the influence of sonata style, whether in relaxation of the contrapuntal texture towards the end (Haydn, String Quartet op.20 no.2, finale), quasi-recapitulation of the subject (Mozart, String Quartet K173, finale, bars 52, 61–2), or division into large sections reminiscent of four-movement cycles (Beethoven, *Grosse Fuge*). Many pieces entitled 'fantasy' and the like are in sonata form (Mozart, K396/385*f* – unfinished, but the intention is clear), and many others include reprises: Mozart's K475 has a simultaneous return at bar 161, and recapitulates bars 6ff and 10ff at bars 165ff and 171ff; Haydn's Fantasy HXVII:4 (a rondo) recapitulates bars 29–69 at bars 357ff and 423ff.

JAMES WEBSTER

Sonatina (It. diminutive of 'sonata'). A short, easy or otherwise 'light' SONATA, especially a piece whose first movement, in SONATA FORM, has a very short development section (the term 'sonatina form' has occasionally been used for a movement with no development section). The sonatina flourished in the late Classical era, mainly as a work for piano solo or with violin accompaniment. Among the more famous representatives of the genre are Mozart's K545 in C, called 'a little piano sonata for beginners' and published as *Sonate facile*, Beethoven's op.79 in G (the designation 'sonatinas' or 'leichte Sonaten' for his op.49 is not original), and Schubert's three works for violin and piano D384–5, 408; but the genre is most associated with contemporaries of these composers, particularly Clementi, Diabelli, Dussek and Kuhlau. The sonatina was virtually forgotten by the Romantics – Dvořák's op.100 (for violin and piano) and Sibelius's opp.67 (three works for piano) and 80 (for violin and piano) are among the few that survive – but has been revived in the 20th century, notably in works for piano (Ravel, Busoni, Bartók, Prokofiev and others) or for flute and piano (Boulez, Conrad Beck).

In the 17th and early 18th century 'sonatina' was often used to designate an instrumental introduction, e.g. the first movement of a suite or a multi-movement choral work. Its diminutive character seems to have been first noted by Walther (*Musicalisches Lexicon*, 1732).

Sondheim, Stephen (Joshua) (*b* New York, 22 March 1930). American composer and lyricist. Inescapable if contentious doyen of the American musical, he assimilated its stylistic traditions early and has subsequently developed its potential for innovatory and serious theatrical expression, notably in partnership with the directors Hal Prince and more recently James Lapine, the orchestrator Jonathan Tunick, the musical director Paul Gemignani and writers including Hugh Wheeler, John Weidman, Arthur Laurents, James Goldman and George Furth. Some of Sondheim's professional work has been as lyricist for the music of others, particularly at the start of his own career, but it is as a theatre songwriter who moulds his own music and lyrics in order to convey dramatic character that he is recognized as unsurpassed. This he does in unusually fecund collaboration with his 'book' authors, drawing on their material and investing their ideas and vision with his own authority, but never commandeering them (Weidman's voice in *Assassins* remains quintessential).

With a dozen Broadway shows to Sondheim credit he seems to have outstripped all other postwar composers in quantity, though he challenges audiences too much to be as popular as his Broadway predecessors. Several of his works contain much continuous music, with complex thematic cross-references and motivic developments, yet he has eschewed the influence of rock opera, with its all-sung dialogue, and continues to favour the older naturalistic mode of speech and sung lyrics. Despite his frequently ambitious musical demands (notably in ensembles), his approach to wit, verbal clarity, pacing and teamwork remains that of Broadway with its singing actors and the need for long commercial runs based on immediate critical approval. Nevertheless, *Sweeney Todd* has been produced successfully by the New York City Opera (1984) and other companies, *Pacific Overtures* somewhat less so by the ENO (1987).

Four of his early musicals were written as part of an intensive course of private study with Oscar Hammerstein II, a family friend. Later the award of the Hutchinson Prize for music at Williams College enabled him to study analysis privately with Milton Babbitt. His first professional assignments included co-writing television scripts for the 'Topper' series, but it was as lyricist for Bernstein's *West Side Story* (1957) and Jule Styne's *Gypsy* (1959) that he made his name. As a composer recognition came more slowly, since *Saturday Night* (1955), his first Broadway assignment, never reached the stage, the music for *A Funny Thing Happened on the Way to the Forum* (1962) was seen as a utilitarian part of the show's success, and *Anyone Can Whistle* (1964) failed after nine performances. *Company* (1970) and *Follies* (1971), marking the start of Sondheim's collaboration with Prince, established his pre-eminence in the musical theatre, the former (with its songs of incisive criticism of contemporary mores) a landmark in the development of the plotless 'concept musical', the latter a masterpiece of pastiche with deep layers of irony. *A Little Night Music* (1973), containing Sondheim's most popular song 'Send in the clowns', explored not so much European operetta as the 19th-century genre piece (étude, barcarolle, waltz etc.) as index of romantic sensibility, while *Pacific Overtures* (1976) broke new ground with its use of Japanese *kabuki* theatre techniques and modal nuances. *Sweeney Todd, the Demon Barber of Fleet Street* (1979) is his biggest work, and over three quarters of the drama is set to music. Highly characterized numbers, including intricate duets, ensembles, parlour pastiches and comedy songs (prime among them the Act I waltz finale, 'A Little Priest'), are interwoven with much 'symphonic' material in the form of transformational motifs which give clues to the story. The whole is bounded by the rondo theme of 'The Ballad of Sweeney Todd', which is based melodically on the Dies irae.

Sondheim's structuralist propensity not to dissociate form and content attacted him to melodrama in *Sweeney Todd* as it had to farce in *A Funny Thing Happened on the Way to the Forum*. A similar emphasis on musical 'plotting' informs the score of *Merrily We Roll Along* (1981), whose chronology and musical development operate in reverse. *Sunday in the Park with George* (1984), inspired by the painting *Dimanche, après-midi à l'île de la Grande Jatte* (1884–6) by the artist Georges Seurat, found Sondheim conveying his images of the pointillist style through passages of musical minimalism, an idiom with which he had first shown clear affinities in *Pacific Overtures*. But this technique has receded in *Into the Woods* (1987), in whose fairy-tale enactments, complex enough as a theatrical plot, a new simplicity of

musical material is attained in accordance with the show's message of universality and rebirth. Different again is *Assassins* (1991), in which his critique of disaffection in American history is also a critique, often harsh, of vernacular American music, including Sousa marches, gospel, folk and pop music. *Passion* (1994), a single-minded love story in which titled musical numbers are abandoned, develops a romantic if introverted lyricism in more sustained musical terms than previously, though the style is familiar; described by the composer as a rhapsody, it is his most symphonic score, if not necessarily supporting sonata analysis.

Assassins appeared to mark a withdrawal from the three-hour, two-act Broadway show after *Sunday in the Park with George* and *Into the Woods*, both of which have striking symmetries between their acts that, however integral, have proved burdensome to some audiences. *Assassins* proceeds in a single span of less than two hours, as does *Passion*, and though *Passion* ran on Broadway in this format (*Assassins* did not), it was somewhat by default, for it had originally been intended to form half of a double bill on aspects of beauty, its twin, *Muscle*, remaining unwritten. In other words, there is evidence that Sondheim and Broadway are becoming incompatible, though *Wise Guys*, another 'documentary vaudeville' with Weidman, may eventually disprove this.

Sondheim has composed songs for plays and films, though *Stavisky* (1974) is his only extended film score. He has never orchestrated his own work, with the exception of some early incidental music. The first of several revues of his songs, *Side by Side by Sondheim*, entered the repertory in 1977; another, *Putting It Together*, dates from 1992. Both originated in England, where his work has sometimes been more positively received than in the USA, though unlike Lloyd Webber's it is not familiar to the broadest public. (Sondheim productions in translation have also spread to Spain, Germany, the Netherlands and elsewhere.)

Sondheim's musical language, in which melody and harmony are closely argued, retains strong affinities with Ravel and Copland, while making sophisticated use of jazz and dance idioms; it is intensely personal, often bittersweet, in its expression. He is a member of the Dramatists Guild and has served as its president (1973–81); he was elected to the American Academy and Institute of Arts and Letters in 1983. He became the first Visiting Professor of Contemporary Theatre at Oxford University (1990), received the Kennedy Center Honours (1993) and was awarded the NEA's National Medal of Arts (1997). Most of his scores have won Tony and New York Drama Critics' Circle Awards, 'Sooner or Later' from *Dick Tracy* won an Academy Award, and *Sunday in the Park with George* was awarded the 1985 Pulitzer Prize for Drama.

WORKS

DRAMATIC WORKS

musicals unless otherwise stated, all to lyrics by Sondheim; dates those of first New York productions (not including workshop performances) unless otherwise stated

By George (2), Bucks County, PA, George School, 25 May 1946, collab. M. Dubin and J. Lincoln, *US-MAhs*
Phinney's Rainbow (2, J. Horton), Williamstown, MA, Williams College, 30 April 1948, 3 songs (1948)
All That Glitters (2, Sondheim, after G.S. Kaufman and M. Connelly: *Beggar on Horseback*), Williamstown, MA, Williams College, 18 March 1949, *MAhs*, 5 songs (1949)
High Tor (Sondheim, after M. Anderson), 1949, inc., *MAhs*
Mary Poppins (Sondheim, after P.L. Travers), 1950, inc., *MAhs*
Climb High (2, Sondheim), 1950–52, unperf., *MAhs*
The Lady or the Tiger (television musical, 2, after F. Stockton), 1954, collab. M. Rodgers, inc. *MAhs*
Saturday Night (2, J.J. and P.G. Epstein, after *Front Porch in Flatbush*), 1955, London, Bridewell, 17 Dec 1997; orchd J. Tunick, Chicago, O'Rourke Center, 19 May 1999, *MAhs*, 3 songs (1987) [incl. Class, Isn't it?, So Many People, What more do I need?]
Mizners (after A. Johnston: *The Legendary Mizners*), inc., *MAhs*
Girls of Summer (incid music, N.R. Nash), Longacre, 19 Nov 1956 [incl. The Girls of Summer]
The Last Resorts (J. Kerr), 1956, inc., *MAhs* [incl. Pour le sport]
I Believe in You (television musical, 2, E. Carrington), 1956, inc., *MAhs*
The Jet Propelled Couch (S. Roberts), 1958, inc., *MAhs*
Happily Ever After (television musical, 2, J. Stein), 1959, inc.
Invitation to a March (incid music, A. Laurents), orchd Sondheim, Music Box, 29 Oct 1960
Passionella (minimusical), Clinton, NJ, Hunterdon Hills Playhouse, 2 July 1962, *MAhs*, 1 song (1990) [in *The World of Jules Feiffer*; incl. Truly Content]
A Funny Thing Happened on the Way to the Forum (2, B. Shevelove and L. Gelbart, after Plautus), orchd I. Kostal and S. Ramin, Alvin, 8 May 1962, *MAhs*, vs (1964) [incl. Comedy Tonight, Everybody ought to have a maid, Lovely, Pretty Little Picture]
Anyone Can Whistle (3, A. Laurents), orchd D. Walker, Majestic, 4 April 1964, *MAhs*, vs (1968) [incl. Anyone can whistle, Everybody says don't, There won't be trumpets, There's a parade in town, With So Little to be Sure Of]
Evening Primrose (television musical, 2, J. Goldman, after J. Collier), ABC, 16 Nov 1966, 4 songs (1980, 1987, 1997) [incl. I Remember, Take me to the world]
Company (2, G. Furth), orchd J. Tunick, Alvin, 26 April 1970, vs (1970) [incl. Another Hundred People, Barcelona, Being Alive, The Ladies who Lunch, Little Things, You could drive a person crazy]
Follies (1, Goldman), orchd Tunick, Winter Garden, 4 April 1971, vs (1971); rev. (2), London, Shaftesbury, 21 July 1987, orchd Tunick, selections (1987) [incl. Ah, Paris!, Beautiful Girls, Broadway Baby, Could I leave you?, I'm still here, Losing my Mind]
Twigs (incid music, Furth), 1971
A Little Night Music (2, H. Wheeler, after I. Bergman: *Smiles of a Summer Night*), orchd Tunick, Shubert, 25 Feb 1973, vs (1974) [incl. Every Day a Little Death, The Glamorous Life, The Miller's Son, Send in the clowns, A Weekend in the Country]
The Enclave (incid music, Laurents), Theater Four, 15 Nov 1973
The Frogs (play with music, 1, Shevelove, after Aristophanes), orchd Tunick, New Haven, Yale U. Paine Whitney Gymnasium swimming pool, 20 May 1974, 2 songs (1987) [incl. Fear no more]
Pacific Overtures (2, J. Weidman, with Wheeler), orchd Tunick, Winter Garden, 11 Jan 1976, vs (1977) [incl. A Bowler Hat, Pretty Lady, Someone in a Tree]
Sweeney Todd, the Demon Barber of Fleet Street (musical thriller, 2, Wheeler, after C. Bond), orchd Tunick, Uris, 1 March 1979, vs (1981) [incl. The Ballad of Sweeney Todd, By the Sea, Green Finch and Linnet Bird, Johanna, A Little Priest, Not While I'm Around, Pretty Women]
Merrily We Roll Along (2, Furth, after Kaufman and M. Hart), orchd Tunick, Alvin, 16 Nov 1981, vs (1984) [incl. Good Thing Going, Not a Day Goes By, Old Friends]
Sunday in the Park with George (2, J. Lapine), orchd M. Starobin, Booth, 2 May 1984, vs (1987) [incl. Finishing the Hat, Putting it Together, Sunday]
Into the Woods (2, Lapine), orchd Tunick, Martin Beck, 5 Nov 1987, vs (1989) [incl. Agony, Giants in the Sky; Hello, little girl; Last Midnight, No one is alone]
Assassins (1, Weidman, after C. Gilbert), orchd Starobin, Playwrights Horizons, 27 Jan 1991, vs (1992) [incl. Another National Anthem, The Ballad of Booth, Unworthy of Your Love]
Passion (1, Lapine, after I.U. Tarchetti: *Fosca*), orchd Tunick, Plymouth, 9 May 1994, vs (1996)
Wise Guys (2, Weidman), in progress

OTHER WORKS

Revue compilations of existing material: Side by Side by Sondheim (N. Sherrin), London, Mermaid, 4 May 1976, New York, Music Box, 18 April 1977; Marry Me a Little (C. Lucas and N. René), New York, Actors Playhouse, 12 March 1981; You're Gonna Love Tomorrow (P. Lazarus), New York, Whitney Museum of American Art, 3 March 1983; Putting It Together (J. McKenzie),

Oxford, Old Fire Station, 27 Jan 1992, New York, City Center, 1 April 1993
Score and song contribs to films, incl. Stavisky, 1974; The Seven Percent Solution, 1976 (I never do anything twice); Reds, 1981 (Goodbye for now); Dick Tracy, 1990 (Back in Business, Live Alone and Like It, More, Sooner or Later, What can you lose?); Singing Out Loud, 1992, unproduced (Water Under the Bridge); The Birdcage, 1996 (Little Dream)
Lyrics: West Side Story, L. Bernstein, 1957; Gypsy, J. Styne, 1959; 1 song for Hot Spot, M. Rodgers, 1963; Do I Hear a Waltz?, R. Rodgers, 1965; 1 song for The Mad Show, M. Rodgers, 1966 (The Boy from ...); A Pray by Blecht, Bernstein, comp. 1968; addl material for Candide (rev. version), Bernstein, 1973
Non-musical works, incl. The Last of Sheila, film, 1973, collab. A. Perkins; Getting Away with Murder, play, New York, Broadhurst, 17 March 1996, collab. Furth

STEPHEN BANFIELD

Sondheimer, Robert (*b* Mainz, 6 Feb 1881; *d* Hanover, 7 Dec 1956). German musicologist. He studied at Cologne Conservatory and at the universities of Bonn and Basle, and was a composition pupil of Humperdinck in Berlin. He took the doctorate at Basle in 1919 with a dissertation on Franz Ignaz Beck and received a prize from the university with his book *Die Theorie der Sinfonie*. He served as lecturer at the Berlin Volkshochschule and as music critic for the *Börsenkurier*, and was director of Bernoulli (Berlin, 1922–33; Basle branch, from 1933; London branch, from 1939). His collection of 18th-century music (whose 57 volumes include works by J.C. Bach, Beck, Georg Benda, Boccherini, Christian Cannabich, Corelli, Anton Fils, Gossec, Leo, Johann Gottlieb Naumann, Franz Xaver Richter, Henri-Joseph Rigel, Sammartini, Tessarini and Wagenseil), has been superseded by modern scholarship but it did much to revive interest in figures such as Sammartini (for list of volumes, see *Grove's Dictionary*, 5th edn, 'Sondheimer Edition').

ALFRED GRANT GOODMAN

Sone. A subjective unit of LOUDNESS. *See also* SOUND, §4.

Soneto (Sp.). The Spanish equivalent of 'sonnet', sometimes used to designate musical settings of the poetic form. The Petrarchan sonnet was widely cultivated by Spanish poets from the 16th century, and from about 1530 to about 1600 some Spanish musicians set the sonnet without according it any distinct musical form. Milán included half a dozen Italian sonnets set for solo voice and vihuela in *El maestro* (1536); later vihuela composers such as Mudarra, Enríquez de Valderrábano, Pisador and Daza made similar arrangements of sonnets written in both Italian and Spanish. In 1560 Juan Vásquez published a number of his compositions explicitly as musical *sonetos*, and settings of Spanish sonnets were included in collections such as the Cancionero Musical de Medinaceli of about 1600 (*see* CANCIONERO). The vague way in which the term 'soneto' was used by Spanish musicians may be gauged by Valderrábano's 'soneto a manera de ensalada', which is not a sonnet in any sense. In vihuela books the *soneto* tended to be in *AAB* form, but in the latter half of the 16th century it became essentially a madrigal, either through-composed in the *sonetos* by Vásquez or in two sections, the *prima pars* setting the quatrains and the *secunda pars* the sestet. Although the *soneto*, like the

madrigal, was one of the more refined types of composition, it was scorned by Tomás de Santa María (*Arte de tañer fantasia*, 1565) as 'a thing of little art' on a par with the villancico. But unlike the villancico, the *soneto* lost favour with Spanish musicians from the beginning of the 17th century.

JACK SAGE

Sonetto (It.). A form of Italian poetry. That nobody appears to have composed music for the sonnet in the age of Petrarch is one of music history's oddest phenomena; the *madrigale*, very popular with Trecento composers, had a similar design and length. The earliest musical sonnets are Gaffurius's *Lascera ogni ninfa el parnaso colle* (*c*1475) and the anonymous *Pace non trovo* (on Petrarch's poem) in *F-Pn* fr.15123 (*c*1485). With the advent of the frottola generations, however, the form became common, most often with an *AABB* form; *see* FROTTOLA, §2. In the hands of the madrigalists it gained spectacular favour.

DAVID FALLOWS

Son filé (Fr.: 'spun-out sound'). (1) In vocal music, a term that has come to be the French equivalent of MESSA DI VOCE: a long note that is sung quietly at first, swells to full volume, and then diminishes. It is defined this way, for example, in Bérard, *L'art du chant* (1755) and J.F. Agricola, *Anleitung zur Singekunst* (1757). The earliest definition of *son filé* in Montéclair's *Principes de musique* (1736, p.88) defines it as a sustained tone sung with no change of volume, but that meaning is more generally attached to the term FILAR IL SUONO (or *fil di voce*). In the 19th century, García (1847) describes four kinds of sustained tones (*sons soutenus*): those having (1) no change of volume ('d'une force égale'), (2) *messa di voce* (or *son filé*), (3) a series of *messa di voce* ('sons filés avec inflexions'), and (4) repeated tones ('martellement ou répétition du même son').

(2) In instrumental playing, the term was also first used to describe a long sustained tone with no dynamic change. Boyden (*The History of Violin Playing*, 1965/*R*) traces the change in meaning to 'no later than' 1803 when Baillot, Rode and Kreutzer in their *Méthode de Violon*, define *son filé* as a *messa di voce*. Although mutually exclusive, both meanings are still found in contemporary writings on the violin.

OWEN JANDER/ELLEN T. HARRIS

Song. A piece of music for voice or voices, whether accompanied or unaccompanied, or the act or art of singing. The term is not generally used for large vocal forms, such as opera or oratorio, but is often found in various figurative and transferred senses (e.g. for the lyrical second subject of a sonata, in J. Stainer and W.A. Barrett: *Dictionary of Musical Terms*, 1875).

1. GENERAL. Song may well represent an attribute of all human beings in every age; but the present article is restricted to the song repertory of Renaissance Europe and those repertories that preceded it and developed from it. (For discussion of song in other places, see the articles on the relevant geographical areas.) The area thus defined is very wide and disparate and evidently not in every sense self-contained. Yet there seems some justification in treating it as a unit: nearly all post-Renaissance song may be judged according to its fidelity to the declamation of the text and according to its expressiveness, and these criteria are not generally relevant to any other song repertories.

It would not be true to claim that no attention was paid to word-setting during the European Middle Ages. Nevertheless, a new attitude developed during the 15th and 16th centuries towards declamation (i.e. the mirroring in the musical setting of the rhythm of the text as it would be declaimed), which tended to make song texts more comprehensible to listeners; this occurred in isolated pieces as early as the first half of the 15th century (e.g. in the motet *Quam pulchra es*, attributed to Dunstaple but unusual within his output). Some late 16th- and early 17th-century musicians championed a declamatory style and claimed for it the authority of Greek antiquity; and attention to declamation has since that time never been far from European song theory.

Similarly, expressiveness in song has been a constant concern for musicians since the Renaissance. Songs in the tradition are capable, for instance, of being criticized on the grounds that the music constitutes a misreading of the text. Steiner (1975) has drawn out some of the implications of this view, placing it within a larger 'theory of translation'. He pointed out that 'the composer who sets a text to music is engaged in the same sequence of intuitive and technical motions which obtain in translation', and that, while a poem is fully eclipsed in a verbal translation, a poem and its musical setting together establish 'a new whole which neither devalues nor eclipses its linguistic source'.

Views of song dependent, like this one, on ideas that music is a language, or at least an expressive medium, bind together the repertory covered in the present article from the 16th century onwards. (The article is not concerned with the difficulties inherent in such ideas: they raise issues too wide to be discussed here.) These views originated in the song repertory in the desire of some 16th-century composers to 'imitate' the text in musical settings, often in small-scale word-painting: the adoption of stereotyped musical figures associated with certain words. Towards the end of the 16th century this interpretation of the idea of *imitazione della parola* seemed to some to be increasingly inadequate. Accordingly, theories were constructed requiring the music to be subservient to the text and advocating solo song accompanied by the lute (seen as a parallel to ancient Greek lyric monody) and in some cases a return to homophony or even monophony. The results in practice, like the theories themselves, varied both in their nature and in the success with which they were applied; but a general tendency may be observed to match texts to music as a whole rather than word by word and to make settings generally more expressive and 'emotional' in their impact on the listener. Of the various theories, that of Zarlino was perhaps the most impressive and influential, both at the time and subsequently. It is arguable that the limitations placed on song by 16th- and 17th-century Italian theorists paradoxically freed composers in an unprecedented way to realize the full potential of post-Renaissance song.

The persistence of word-setting theories ultimately deriving from 16th-century Italy represents the chief reason why the Renaissance holds central historical importance in European song. (A view of this type still underlies Hugo Riemann's definition of song as 'the union of a lyric poem with music, in which the sung word replaces the spoken word, while the musical elements of rhythm and cadence inherent in speech are heightened to ... rhythmically ordered melody' (*Musik-Lexikon*, Leipzig, 1882, 'Lied').) It also, however, suggests a powerful reason for beginning this article with an account of ancient Hellenic song, for this was regarded as the period of the 'origins' in the Renaissance, and Renaissance theorists constantly appealed to the authority of Greek antiquity. 16th- and 17th-century theorists did not of course always shed light on ancient Greek practice: little is known about the latter even today, less was known in the 16th century, and even the evidence available to them was not always approached critically by the theorists.

Renaissance or Renaissance-derived theory does not suffice to appreciate all song in the repertory – even since the 17th century – however, and it is useless for judging medieval song; some alternative criteria are suggested in the course of the historical account below, where they seem appropriate. Certain areas of song have sometimes seemed inadequate when judged by it; one such is 18th-century song, much of which may be termed 'absolute' song – i.e. song in which the melody follows a strict musical logic without necessarily reflecting the features of the text, such as dance-songs. The latter are an inheritance from the Middle Ages at least and have never been superseded completely by 'declamatory' songs.

Another problematic category is that of the strophic song. Even if the music is carefully fitted to one strophe, it may fail to suit other strophes equally well. Strophic songs, nevertheless, may well represent the most fundamental song type of all, and they have been cultivated by every type of song composer, even the most literary-minded. Moreover, they have for centuries formed a basic part of the repertory of popular song, notably of the (often sizable) part of the popular repertory originating in the theatre.

A rather different area of song, which presents difficulties in the light of Renaissance standards, is 20th-century experimental song, such as Schoenberg's *Pierrot lunaire*. Those who experimented in this way later turned away from song; and in the 20th century, song has flourished mainly among conservative composers. So far, indeed, non-tonal music would not appear to have produced a medium for song of equal potential to that of the Renaissance; that, however, would be much to ask.

2. Antiquity. It is generally agreed that words, rhythm, melody (in the most general sense) and movement were closely associated in ancient cultures. Taken together, these elements formed song, which is 'an essential, inseparable element in primitive life and cannot be isolated from the conditions that are its cause, its sense, and its reason of being' (Sachs, 1961, p.16). The relationship between, song, magic, science and religion (and, by extension, state ritual) was very strong in all known ancient cultures, and this considerably complicates the study of ancient song as a discrete entity.

Most evidence for ancient song comes from pictorial and literary sources, some of which are specifically devoted to the theory or science of 'music'. These sources are complemented by some archaeological remains of musical instruments and a relatively small amount of musical notation that survives on materials such as clay tablets, stone and papyrus. Some later manuscripts also contain the notation for earlier pieces of music, generally though not always considered to be authentic.

Ancient cultures in, for example, Egypt, Greece, Rome, the Middle East, Mesopotamia, India and China developed a variety of musico-poetic types of song to be used on specific religious occasions and to accompany processions, lighten routine tasks of the day and celebrate or solemnize events such as weddings or funerals. Ancient song eventually developed into the highly complex forms found in epic, in the national festivals of the Greeks and in Chinese and Indian court entertainments. The available evidence does not permit generalization of detail across all these cultures, but for further details *see* China, §§I, II and IV; Egypt, §I; India, §I; Mesopotamia; Ode (ii), §1.

Almost all surviving ancient song is Greek and of the Hellenistic period, and the quantity is very small. Literary and pictorial sources, however, permit certain limited conclusions about the categories of song cultivated in antiquity, and the instruments used to accompany them; in Greece further information is sometimes available concerning the metre and modality favoured in them.

An oral bardic tradition of epic song accompanied by the phorminx in the archaic Greek period, perhaps sung to simple traditional formulae, no doubt underlies the Homeric epics, and may have been the chief type of song cultivated in Greece before 700 BCE. Besides epic, simple functional songs, perhaps unrehearsed and often sung by a leader with choral refrains, are attested throughout Greek and Roman literature, and also in the Old Testament. They include work songs, lullabies, victory songs, songs for weddings and funerals, mocking and satirical songs and so on. These simple songs were later taken up into the art music of ancient Greece.

An extensive development of accompanied song began in the 7th century BCE in Greece. Solo lyric or monody (e.g. of Sappho and Alcaeus) may have corresponded to modern strophic songs: it expressed the personal feelings of the composer in a series of shortish stanzas identical in metre. By contrast, choral lyric, which included dancing and was mainly religious in character, expressed the communal feelings of a group, which might be as large as the whole city-state. Solo and choral lyric were important also in Greek drama from the 5th century BCE, and were originally the main element in it. Both lyric song as such and drama were the subject of competition at Greek festivals such as the Pythian Games, and lyric song also formed part of the general education of 5th-century Greeks, so that amateurs as well as professionals were able to participate in choral lyric. A new musical style of the late 5th century BCE, the 'new music', had, according to contemporaries, far-reaching effects on song: for example, unprecedented modal and rhythmic variety was tolerated, instrumental interludes were introduced and texts were set melismatically, in contrast to previous practice, where the music was subservient to the text.

During the Hellenistic period, the song of the Greek theatre spread to Rome and elsewhere, and song composition reached a highpoint in the *cantica* of the comedies of Plautus. New categories of song, including mime and pantomime, were introduced, some under foreign influence.

Of the music mentioned here, it is the song of the period up to the early 5th century BCE which, understood or misunderstood, exerted the greatest influence on European and European-derived music of later centuries, the music of the Hellenistic age usually being stigmatized as decadent, as it had been by some Hellenistic writers. The apparent cultivation of originality by Greek poet-composers (although there is no way of assessing how far Greek composers remained faithful to musical tradition, even in 5th-century 'new music', when the melodies have not survived) and the concern with the relationship between text and music expressed by Greek writers (e.g. Plato) have often suggested new lines of departure to later composers.

For further details *see* AOIDOS; BACCHYLIDES; BARD, §I; CANTICA; CHORĒGIA; EPICS, §I; EPITHALAMIUM; EURIPIDES; FESCENNINI; HESIOD; HOMER; HYMENAIOS; HYMN, §I, 1; MELANIPPIDES; MONODY; NENIA; PANTOMIME; PARTHENEIA; PHERECRATES; PINDAR; PLATO, §§4, 5 and 6; PLAUTUS; PROSODION; PYRRHIC; ROME, §I; THRĒNOS; TIMOTHEUS; and TRAGŌIDIA.

3. LITURGICAL SONG TO THE 9TH CENTURY. Any assessment of the relationships of early liturgical musical practice, whether Jewish or Christian, is fraught with problems. Ancient Jewish song is represented chiefly by the texts of the book of *Psalms*; and though various styles of performance seem to be implied by their textual structure, corresponding to the direct, responsorial and antiphonal psalmody, and the litanies with refrains, of later Christian practice, any notion of direct connections is hazardous at best. Nonetheless, psalmody eventually formed a staple part of the liturgies of Jews and Christians; and it is possible that the skeletal forms of the psalm tones may contain some of the most plausible links between Jewish and Christian practice.

In the early Christian church, hymns (in this context, sacred songs other than those with Old Testament texts) appear to have been sung from a very early date. A fragmentary Christian hymn survives uniquely with melody in Greek notation in a late 3rd-century papyrus, but its ritual significance remains unclear, and its singular survival does not allow us to judge how representative it may be. In any event, links between Christian and ancient Greek song are likely to have been tenuous. Apart from the hymns whose texts are in the New Testament itself, the earliest surviving hymn texts were mostly in Syriac but were soon translated into Greek (e.g. the psalm-like *Odes of Solomon*, 1st century, and the heretical hymns of Bardaisan, *d* 222, and Ephrem Syrus, *d* 373, who wrote orthodox contrafacta to Bardaisan's melodies). The isosyllabic, strophic principle underlying Ephrem's hymns appeared in subsequent Greek hymnody and thence in the Hebrew religious songs or *piyyuṭim* cultivated from the 6th century, though these were later influenced by Arabic songs. From the 5th century a rich variety of hymnody developed in the Byzantine and the other eastern churches (for details see the articles on the various eastern rites).

The texts of Christian liturgical song often reflect the structure of prototype hymns, such as those from the Bible, regarded as of divine origin (e.g. the Psalms, Sanctus, Trisagion etc.). They function as 'types' (paradigms) of heavenly praise within the liturgy which is itself representative of heaven. It is not known how this idea of hymnody may have affected the melodies in the early Christian centuries, but the use of a limited number of melodic archetypes was a characteristic of later Byzantine hymnody, and legends of divine origin were later attached to Christian chant traditions such as the Gregorian and Ethiopian (there are modern parallels to these legends, for example in the Kimbanguist church).

Various categories of chant developed subsequently, possibly through contact with regional musical styles. Some liturgical song may have been influenced by popular song, but even if this is so, the popular style was so thoroughly assimilated in time that the evidence of surviving melodies is useless for reconstructing it. Most of the categories of song found in the later Gregorian repertory, whose texts are attested from sources earlier than the 9th century, developed ultimately, however, from psalmody.

From the 4th century, quantitative metrical hymnody is attested in the Latin West; the texts survive of hymns by Hilary of Poitiers, St Ambrose and many later hymnographers. A vast repertory of monophonic hymn melodies survives from later centuries, which no doubt influenced other Latin and vernacular song in the Middle Ages.

For further details *see* ALLELUIA, §I; BARDAISAN; CHRISTIAN CHURCH, MUSIC OF THE EARLY; EPHREM SYRUS; GREGORY THE GREAT; HYMN, §II; JEWISH MUSIC, §III; and PSALM, §II.

4. MEDIEVAL LATIN SONG FROM THE 9TH CENTURY. The first notated song melodies, sacred and secular, since Hellenistic antiquity, in both East and West survive from the 9th century. The introduction of notation seems to have coincided with far-reaching attempts to impose as well as to reorganize and classify several of the repertories of liturgical song: in Latin, Greek, Syriac and Armenian chant this classification was done according to systems, varying from repertory to repertory, of eight modes. The Gregorian repertory, as a result, was also subjected to a stylistic revision that decisively established the special characteristics of Gregorian word-setting and melodic style, not necessarily found in other chant repertories, even those of the Latin West. Some of them remained current for centuries and may therefore seem essentially to represent 'medieval' song characteristics; but paradoxically the interest in flexibility of melody and the increased attention to word-setting commonly thought to distinguish the Renaissance coincided at first, in the first half of the 15th century, with a renewed interest in Gregorian style rather than a preoccupation with Greek lyric song.

Factors affecting the style of Gregorian word-setting and melodic contour include the liturgical function of the particular chant: thus the antiphons of introits, for example, share certain stylistic features that set them apart from other categories such as graduals. The melodies largely consist of carefully shaped melodic curves of great sophistication. Higher notes may generally be regarded as having more weight than lower, and melismas as carrying more weight than single notes, and frequently the text was set with these factors in mind; yet the attention given to the relationship between text and music may be obscured for modern listeners by the tendency to place melismatic passages also on unimportant syllables, where they will not obscure the text, or in places with a structural significance for the chant form (such as sectional endings): in recent centuries the opposite principle has generally been adopted. Repetition of words or phrases within the text, and word-painting, were almost wholly avoided; no attempt was made, of course, at 'expressing' the text, which was a much later concern. The greatest elaboration in terms of melismatic style occurs in the

responsorial chants following the reading of lessons; these chants are in a sense 'meditative'.

New categories of liturgical song besides the classic original corpus of Gregorian chant, such as sequence, trope and rhymed Office, also arose in the Frankish monasteries and elsewhere from the 9th century, and throughout the Middle Ages the chant repertory continued to be extended with new pieces, sometimes differing in style from that described above. Sometimes the changes tend towards less systematization than is found in true Gregorian chant, as when there is an apparently arbitrary juxtaposition within the same piece of melodic styles kept separate in Gregorian chant. Sometimes, on the contrary, they represent new systematic chant dialects different from the Gregorian dialect, as in some 13th-century versified Offices composed in accordance with the poetic and melodic modal theory of the time.

Together with the composition of new chants, there took place occasional systematic changes to the chants in the existing Gregorian repertory in accordance with reforming movements, such as that of the Cistercians in the 12th century. The revision of songs or song repertories in order to bring them up to date or to purge supposed excesses of range and melismatic ornamentation, with the underlying implication that songs do not exist in an absolute sense independent of fashion or function, even when they are of as much value and authority as the songs of the Gregorian repertory, is characteristic of medieval European music. It tended to disappear in art music in the Renaissance.

In post-9th-century chant, repetition structures were created comparable to those of secular song, especially in the alleluia and sequence repertories. The sequence, with its $ABB^{1}CC^{1}$... structure, offers parallels with certain types of secular music such as the lai and *estampie* of the Middle Ages, which were built on the same principle; this type of structure may be much older still.

Much of the secular song of the Middle Ages, as well as much non-liturgical religious song, has disappeared, although it is sometimes attested by passing literary references; not only was notation the preserve of clerics, but its introduction is directly tied to the imposition of the liturgical corpus over most of Europe, rather than arising as a means of preserving extant utterances. The distinction between sacred and secular is, however, not easy to carry through logically, and the same styles and forms appear in settings of both kinds of text. Even a distinction between Latin and vernacular song is not watertight, for a number of medieval songs are contrafacta – songs in which new texts are joined to old melodies, either by associating sacred Latin texts with melodies originally conceived for secular vernacular texts or the reverse.

A small quantity of non-liturgical Latin song survives, mostly in non-diastematic neumes, in 10th- and 11th-century manuscripts, and comprises settings of ancient Latin poets (one such is a contrafactum of the liturgical hymn *Ut queant laxis*), *planctus* in honour of Carolingian and Visigothic royalty, dating in part perhaps from as early as the 7th century, and other types. Larger repertories are those associated with the goliards of the 12th century (e.g. in the famous 13th-century Benediktbeuren manuscript known as the *Carmina burana*) which are also, however, notated in non-diastematic neumes, and the contemporary conductus repertory of the late 12th century and the 13th; the evidence suggests that these songs, like many monophonic hymns, are settings of Latin verse now scanned according to the number of syllables per line and the placement of the final stress rather than, as in the ancient world and again in Carolingian Renaissance times, by length of syllable (quantity). Conductus, whether sacred or secular, came to signify strophic or through-composed songs generally with Latin texts; the simpler conductus resemble syllabic hymns, but the most elaborate examples have stanzas whose poetic structures are very complex and which may be considerably melismatic in musical style.

In nearly all medieval song (Latin or vernacular) the modern listener or performer is hampered in gaining a complete idea of the music above all because of the problems of rhythm, which was not notated without ambiguity until the latter part of the 13th century. Some of the earlier melodies appear in a rhythmic interpretation in late sources, yet even here certainty of interpretation cannot be absolute, since the melodies may in these sources have been remodelled according to later taste (see above). Another contested point is instrumental accompaniment: the variety of evidence suggests that a single, overriding practice for all such songs did not exist.

From the 12th century, conductus were set also in two-, occasionally three- and rarely four-voice polyphony; some of these polyphonic conductus represent some of the largest-scale achievements in the whole of medieval song. Polyphonic conductus are generally distinguished from other categories of polyphonic song by their use of the same text sung simultaneously in all voices and the lack of a plainchant tenor, although some conductus drew on various types of pre-existing material.

By the mid-13th century the composition of conductus in active centres such as Paris and the Artois gave way to a concentration on the motet. The latter is the other chief category of Latin medieval song, apart from the Notre Dame organum, i.e. large-scale polyphonic settings of the solo parts of responsorial chants sung at Mass and at the Divine Office on certain high festivals. Unlike the conductus, the motet was based on plainchant or other tenors and its constituent voices are very often distinct from one another in their rhythmic, melodic and verbal context.

13th-century motets are generally of small but concentrated dimensions; the rhythms used in them often recall those of the rhythmic modes, even though these no longer served as a basis for the notation. In the 14th century, however, the introduction of isorhythm expanded the rhythmic palette as well as the structural dimensions and complexity of the motet. Some late 14th-century motets display the rhythmic subtleties of the Ars Subtilior.

For further details *see* ALLELUIA, §I; ANTIPHON, §5; ARS SUBTILIOR; CANTIONAL; CONDUCTUS; EARLY LATIN SECULAR SONG; ECHOS; GOLIARDS; ISORHYTHM; MODE, §I–III; MOTET, §I; ORGANUM; PLANCTUS; VERSIFIED OFFICE; RHYTHMIC MODES; SEQUENCE (i); TONARY; and TROPE (i).

5. MEDIEVAL VERNACULAR SONG. In the early Middle Ages, traditions of heroic and historical epic song appear to have been more widespread among the Germanic and Celtic peoples than would appear solely from the few surviving epic texts (e.g. *Beowulf*, the *Hildebrandslied*, the *Nibelungenlied* and the Scandinavian sagas). One such Old High German epic, the *Petruslied*, which may date from before 850, survives with musical notation (*D-Mbs* lat.6260, f.158*v*) and is the oldest known song from

Germany. Musical evidence in unambiguous notation, though slight and late, survives for the comparable *chanson de geste* in France: simple musical formulae were repeated over and over again.

Vernacular religious songs existed from an early date, although no large coherent repertory survives until after the rise of the cantional and the carol. Bede, for example, mentioned a Christian epic (of which a fragment of text survives) sung by Caedmon in the 7th century; the text survives of a 9th-century German lyric by Otfrid von Weissenburg, apparently connected with the sequence; the earliest vernacular song of Bohemia, *Hospodine, pomiluj ny* (ascribed to Adalbert of Prague), may have been sung as early as the 11th century, although it survives only in a much later source; some English songs were 'composed' in the 12th century by St Godric.

Vernacular secular lyrics also survive in small numbers before the 12th century; an example is the *alba* (dawn song) *Phebi claro* with Latin and Provençal text, surviving, with melody, in a late 10th- or 11th-century manuscript, *I-Rvat* Reg.lat.1462. A parallel has been drawn between this melody and that of a liturgical hymn. From the 12th and succeeding centuries a large body of secular lyric song survives, which was probably transmitted orally at the time and codified in later sources. This, the repertory of the troubadours, trouvères and Minnesinger, comprises songs with Provençal, French and German texts respectively. Its origins are problematic: few clear links are discernible with earlier secular lyric. Some scholars have suggested Arabic influence, but without evidence (Arabic music survives only from the 13th century); Chailley suggested an origin in Aquitanian *versus* ('Notes sur les troubadours, les versus et la question arabe', *Mélanges de linguistique et de littérature romanes à la mémoire d'István Frank*, Saarbrücken, 1958, pp.118–28).

The repertory comprises settings of 'courtly love' lyrics. Some 2600 troubadour poems survive, but only 264 melodies; of the slightly later trouvère repertory, however, some 2000 melodies are known. Despite the difference in the language of the texts of the two repertories, there was much give and take between them and they have much in common. The songs vary in structure from great simplicity, with repeated formulae almost as simple as those of surviving *chanson de geste* melodies, to forms in which flexible repetitions are incorporated to create a subtly balanced structure.

These songs differ from any earlier medieval song especially in their cult of originality, leading sometimes to the creation of novel and unprecedented formal structures and the cultivation of abstruse styles and obscure vocabulary in the poetry. Gregorian modal theory has little direct bearing on the modality of troubadour and trouvère melody. Possible relationships with, or at least resemblances to, liturgical song exist, however: the form of the sequence is reflected not only in the LAI repertory but also in the repetition of half-stanzas of some troubadour songs; and structures resembling psalm recitation occur in troubadour and trouvère song. The influence of folksong has often been claimed, largely owing to the simplicity and lilt of many of the songs when interpreted in modal rhythm, but is of course no more than conjectural.

The repertory of Minnesang – a term generally referring to all settings of German courtly love poems from their beginnings in the 13th century until the early 15th century – was in turn influenced by the trouvère repertory and, like it, was probably at first orally transmitted. The so-called bar form frequently found in this repertory (*AAB* and variants) corresponds to a similar form in the trouvère repertory (and indeed appears in much song of all periods); it was the form obligatory for constructing strophes in Meistergesang, the monophonic song cultivated in bourgeois German song schools in the 15th and 16th centuries.

Other categories of late medieval vernacular monophonic song were mostly regional, popular 'by destination' and connected with popular religious movements. They include German and Czech vernacular *cantiones* – the Czech repertory was greatly extended about 1420–30 by the adherents of the Hussite movement, and almost superseded Latin religious song in Bohemia. A repertory survives of 13th-century Spanish sacred cantigas; of the secular cantigas, very little music survives. 13th- and 14th-century flagellant movements of popular origin in Italy and Germany gave rise to song repertories; the music of Italian flagellant songs has almost entirely perished, but German *Geisslerlieder* survive. Italian popular religious songs of the late Middle Ages and Renaissance are generally termed *laude*; a large *lauda spirituale* repertory survives, including polyphonic settings from the 15th and 16th centuries. A comparable repertory in England, surviving from the late 14th century and the 15th, was the carol; surviving examples are nearly all polyphonic. A further repertory, apparently dependent on French and German secular vernacular monophonic song, is represented by the medieval Ashkenazi Jewish *mi-sinai* melodies; after this time, Ashkenazi Jewish song tended to be an eclectic combination of elements drawn from diverse musical traditions. All these repertories generally must have remained unknown, and must have exerted no direct influence, outside their own regions.

In all the monophonic repertories mentioned here dating before the 14th century (later in some cases), there is uncertainty concerning the interpretation of the rhythm. In most cases there is uncertainty also about the use of instruments; van der Werf and Page have pointed out that there is uncertainty on the latter point even in troubadour and trouvère song.

Courtly love continued to influence 14th- and 15th-century French song, but after 1300 composers set mainly the fixed poetic forms (*formes fixes*) of the ballade, rondeau and virelai. These forms became almost exclusively polyphonic after the work of Machaut, in a structure comprising a freely composed melody with text in the top voice, and two accompanying voices (tenor and contratenor) which generally lack texts in the original sources. The French monophonic secular song appears to have been relegated, after Machaut, to the sphere of entertainment music, as was the *chanson rustique* (a term found from about 1550, but useful for the earlier repertory). This popular category is distinguished mainly by a simple style with strophic structures and simple repetition schemes; it has much in common with the virelai (see Brown, 1963). Towards the end of the 14th century, in the main chanson repertory, there was a temporary vogue (mainly in southern France) for much rhythmic and other complexity, and virelais were occasionally set as large-scale genre pieces, with imitations of birdcalls, fanfares and so on.

A repertory of polyphonic music comparable to that of France existed in 14th-century Italy, but this was not preceded by an equivalent monophonic repertory as had occurred in France. The chief categories of song were the ballata, caccia and madrigal (the latter category is a formal definition and should be distinguished from the 16th- and 17th-century madrigal). The caccia, corresponding to the less numerous category in France known as the chace, represents the first considerable song category based on canon: the latter device, attested as early as the 12th century, arose first from the technique of 'voice-exchange' (*Stimmtausch*); it is behind the medieval techniques of rondellus and rota (the latter may be seen in the famous *Sumer is icumen in*) and remained popular, especially in England, in later centuries.

Some of the songs in these repertories seem to owe much to dance rhythms: this is most marked in some of the monophonic virelais of the French repertory, or the ballatas of the Italian repertory. In the most complex songs, the music has a life of its own, seemingly independent of the text, whose distribution over the music might conceivably be different without losing its validity. Although this latter feature is found only in some songs, secular and sacred, of the period, it has sometimes seemed a generally 'medieval' characteristic.

Polyphonic songs with texts in languages other than French or Italian occur in only small numbers: there are from the 14th and 15th centuries a small number in Dutch and English (the latter, in the early 15th century, generally simple in style). Since English was not internationally familiar, some English songs such as Frye's *So ys emprentid* were copied outside England with French or Latin texts. Throughout the repertory songs were very often turned into sacred Latin contrafacta; thus some motets (in the later loose sense of a non-liturgical polyphonic sacred song) which survive only as sacred songs, but which are cast in the usual three-voice structure of secular songs with the chief melody in the top voice and clearly divided into two sections like secular songs, may be suspected of having originated as secular songs.

6. 1450–1580. In the second half of the 15th century, leadership in song composition was held by French and Netherlandish composers; during the 16th century it passed to Italians. During the 15th century, three-part secular song settings were slowly supplanted by four-part settings (and in later madrigals etc. by still more voices). Polyphony for choirs had been almost unknown in the Middle Ages, when it was performed by soloists or instrumentalists; after 1450, motets were increasingly sung by small choirs, but secular polyphony was still generally performed by ensembles of soloists or by a soloist accompanied by one or more instruments.

Whereas the voices within a song in the 14th and early 15th centuries had at times been contrasted in rhythm and in melodic material and style, with pairs of voices such as tenor and contratenor often sharing a similar range, from the middle of the 15th century all the voices of polyphonic songs came to be increasingly sharply contrasted in range and tessitura, but decreasingly so in melodic material and rhythm. Imitative textures, attested in some songs as early as the beginning of the 15th century, became increasingly common in song, as did close attention to declamation (see §1 above), particularly in the Italian and English traditions.

Monophonic song became less and less important within art music after about 1450, although collections of sacred contrafacta such as the *Souterliedekens* (1540), a collection of metrical psalms, and occasional secular songs, show the persistence at a popular level of the monophonic song of courtly love. The medieval tradition of syllabic song based on the dance (as in the virelai or carol) also continued to flourish, at every level of sophistication, as in the frottola and related forms.

The *formes fixes* and the imagery of courtly love associated with them retained their popularity and importance in the polyphonic songs of French and Netherlandish composers as late as the 16th century but gradually disappeared in favour of free song or chanson. The repertory of the latter part of the 15th century is represented by the song collections published in the early 16th century by Petrucci, with works by such composers as Compère, Alexander Agricola, Japart and Josquin. In the early 16th century, three- and four-part polyphonic arrangements of popular melodies were cultivated at Paris by composers such as Févin and Mouton, and these were succeeded in the second quarter of the century by a new type of Parisian chanson, characterized by a strongly rhythmic, syllabic style. The latter continued to be cultivated even after some chansons had begun to reflect an Italian madrigalian style (*c*1560–75). From about 1550 the vaudeville repertory began to appear: simple strophic homophonic songs, often performed as lute-songs, which later formed the basis for the *air de cour* repertory. Towards the end of this period an isolated repertory is represented by the songs composed to *vers mesurés à l'antique* – attempts to re-create the music of antiquity by pursuing logically theories of poetic rhythm according to syllabic quantity, parallel with some song composition in Italy.

Late 15th-century Spanish song survives chiefly in the manuscript known as the Cancionero de Palacio, a collection of songs mainly with the melody in a soprano or mezzo-soprano register and largely homophonic and non-imitative in texture. The categories of song represented notably include the villancico in its earliest form and the *romance*. These songs were cultivated in the 16th century in solo settings accompanied by the *vihuela de mano*; such settings appear first in Luys Milán's *Libro de música de vihuela de mano intitulado El maestro* (1536) and lasted until Esteban Daza's collection *El Parnaso* (1576). Songs accompanied by single polyphonic string instruments like these became very important in the 16th and 17th centuries (see §1 above and §7 below).

The beginnings of polyphonic song in Germany date from the late 14th and early 15th centuries, with a few polyphonic songs by the Monk of Salzburg and Oswald von Wolkenstein within a mainly monophonic repertory. A more substantial repertory of *Tenorlieder*, however, survives from the second half of the 15th century and the first half of the 16th, and this began to displace the monophonic repertory in importance. (The *Tenorlied* may be said to have survived into the 18th century in the form of the German Protestant chorale elaboration.) *Tenorlieder* are mainly non-imitative, with the melody line in the tenor part. Some were sung as solo songs, with

the other parts allocated to instruments, some as partsongs; in those intended to be sung in the latter way all the voices are provided with the text. It is possible that surviving two-part arrangements of songs by 16th-century German lutenists were intended to be performed with the melody sung in the same fashion as in Spanish songs to the *vihuela de mano*, but there are no published collections of lute-songs in Germany parallel to those from other European countries. A further category of German song of this period is represented by the quodlibet.

The monophonic religious song repertory of Germany was in the early 16th century extended by the creation of the Lutheran chorale, as that of Bohemia had been in the 15th century by Hussite song, and the Lutheran chorale, like Hussite song, was to some extent derived from pre-Reformation song and dependent on the style of plainchant. The chorales in due course gave rise to a very fruitful tradition of polyphonic elaborations by a great variety of composers, as to a lesser extent did the comparable versifications of the psalms in the Genevan Psalter of the Reformed (Calvinist) tradition.

Secular polyphonic song in early 16th-century England included a distinctive tradition of so-called freemen's (? 'three men's') songs, which superseded the French-influenced English polyphonic song of the 15th century: these are partsongs for three voices, all provided with the text in the sources. Lute-songs, though known to have been cultivated as early as the reign of Henry VIII, scarcely survive in England from before the late 16th century. Partsongs exist also from the mid-16th century, before the rise of the consort song (see §7 below).

Italian song in the late 15th and early 16th centuries is represented by the frottola, a type of light, homophonic song, with the melody usually in the highest of four parts; 11 volumes of frottolas were published in the early 16th century by Petrucci. They appear to have been sung either as partsongs or as solos with instrumental (e.g. lute) accompaniment. The last known collection of frottolas was published in 1531, by which time fashion had turned to villanella, villotta and madrigal. The madrigal, only indirectly influenced by the frottola, appeared in published collections from 1530. It represents the chief form of 16th- and early 17th-century song in general; in it the chief composers worked out the techniques (including word-setting) that most fully realized the potential of the musical language of the age.

For further details *see* CANTI CARNASCIALESCHI; CHANSON; CHORALE; FROTTOLA; LUTHER, MARTIN, §2; MADRIGAL, §II; PASTORAL, §3; PSALMS, METRICAL; QUODLIBET; ROMANCE, §1; TENORLIED; VAUDEVILLE; VERS MESURÉS; VILLANCICO; VILLANELLA; and VILLOTTA.

7. 1580–1730. The English madrigal repertory was created during some 30 years, from the publication in 1588 by Nicholas Yonge of his *Musica transalpina*; it was perfected by such composers as Byrd, Weelkes and Wilbye. The English madrigal owed much to the Italian madrigal repertory, but the other categories of secular song cultivated at the time grew out of indigenous traditions, such as the solo song accompanied by a string consort, composed since the middle of the 16th century and dependent on a domestic tradition of consort playing before that time; the largest collection of all is Byrd's *Psalmes, Sonets, & Songs* of 1588, and the consort song still survived in Gibbons's *Madrigals* of 1612.

The consort song, and also no doubt lute-songs that have not survived, underlie the tradition of published English lute-songs beginning with Dowland's *First Book of Songes or Ayres* (1597) and ending with John Attey's *First Booke of Ayres* (1622). Dowland is the supreme master in this tradition of music written by professional composers for both professional and amateur performers. Most of the repertory comprises strophic songs; elaborate introductions and interludes are generally avoided. In the best of these songs, the principles of word-setting that had been applied to Italian settings in the madrigal were now worked out thoroughly in terms of English verses.

The progressive tendencies of the period, towards increased expressiveness and heightened emotion, are more fully reflected in the solo songs devised specifically as a vehicle for these tendencies in Italy. Some, like the members of Bardi's Camerata, believed that these Italian monodies reproduced ancient Greek practice, apart from the language of the texts. Some of the most distinctive features of these songs are apparent as early as the 1580s and 90s, for example in songs from the Bottegari Lutebook (*I-MOe* C 311). Monodies are mostly for high voice, and the more madrigalian ones have wayward, highly expressive vocal lines over relatively static basses and simple chords on a lute or other instrument; individual expressive words and exclamations in the text are apt to carry elaborate ornamentation and to give rise to unusual harmonies. Aria-like songs are more flowing and diatonic. Monody is an extreme example of a general tendency in many 17th-century songs – even arias, including those based on dances – towards throwing the melody line into sharp relief and reducing the musical elaboration of the accompaniment.

The 1630s saw the development in Italy of a longer form divided into short sections, the cantata, which subsequently became the most important category of secular song both in Italy and elsewhere. The rise of tonality later in the century allowed the sections of the cantata to be increased in scale and contributed to the development of the da capo aria used in operas, oratorios and cantatas by Italian composers such as Alessandro Scarlatti and subsequently by Germans, including Bach and Handel.

Italian song became widespread in late 16th-century Germany and Austria, and its influence may be seen in the adoption from 1567 of the villanella by Regnart and of the canzonetta by H.L. Hassler (*Canzonette*, 1590). These songs, modelled on the simpler Italian homophonic songs of the late 16th century, came increasingly to supersede the older polyphonic tradition of German song, notably in the *Musica boscareccia* (1621–8) of Schein. In 1623 Johann Nauwach introduced monody to German song (*Libro primo di arie passeggiate*), and the continuo lied was established in Heinrich Albert's eight books of *Arien*, a term analogous to the French *air* and the English ayre; these *Arien* include simple strophic songs as well as some in a declamatory style. The tradition of German strophic continuo songs persisted at various regional centres in the work of Adam Krieger, Philipp Erlebach and others, up to about the end of the century, when composers turned increasingly to the italianate da capo aria, as can be seen in Bach's cantatas. (For details see Thomas, 1963.)

In Bohemia, sacred strophic continuo songs, many based on dances, appear in the collections of A.V. Michna (*Česká mariánská muzika*, 1647) and J.J. Božan (*Slavíček rajský*, 1719); da capo arias are found in the *Opella*

ecclesiastica of J.A. Plánický (1723). Collections of secular vernacular song, of purely local importance, appeared also in the Low Countries (e.g. J.A. Ban: *Zangh-Bloemzel*, 1642); the monodic style was reflected there as early as 1626 in the *Neder-landtsche Gedenck-clanck* of Adriaen Valerius. Sacred song collections for both Catholics and Protestants appeared throughout this period and long afterwards; in the publication of Dutch song Etienne Roger played a leading part, as he did in international music publication.

In the late 16th century French chansons could be sung as solo songs, with the soloist taking the top part and the lower parts either taken by a group of instruments or arranged for a single instrument (e.g. lute). This practice influenced the development of the *air de cour*, which is first encountered with the *Livre d'airs de cour miz sur le luth* of Adrian Le Roy (1571) and was taken up particularly in the 17th and 18th centuries. Such songs are mainly strophic settings of love-poetry, often characterized by a simple note-against-note style (though sometimes with considerable embellishment of the solo line) and an irregular metre influenced by the *musique mesurée* of the period, with note lengths dependent on syllabic quantity. Within the repertory a simpler category of *airs à boire* and a more complex category of *airs sérieux*may be distinguished, and, from the late 17th century, a category of simple pastoral songs termed *brunettes*. Muted traces of the Italian monodic style can be detected in songs of the repertory, especially those of Pierre Guédron. Greater polyphonic complexity is represented in the elaborations, for domestic rather than church use, of the Geneva psalm tunes by Claude Le Jeune and others. Another category of French song of this period is the noël.

The Italian monodic style became known in England about 1610 and was imitated in masque and theatre songs and in dialogues. Throughout the century the repertory of the English ayre contained both declamatory and 'tuneful' or dance-like songs; in the first half of the century, Henry Lawes was the most successful exponent of the declamatory style, which he based on the rhythm of English speech without being constricted by the theories of syllabic quantity underlying the French *musique mesurée*. From the mid-century, song collections published by Playford were very popular; these contained ayres, glees (short tuneful partsongs, mainly homophonic) and catches (canons, mainly in three parts, often featuring obscene *double entendre*). Towards the end of the century, English song was dominated by Purcell (and to a lesser extent Blow). Purcell grafted the Italian style on to the native tradition; he raised the declamatory style to new heights and made it the vehicle for intense expressiveness. For some of his large-scale songs, such as the *Evening Hymn* and *O solitude my sweetest choice*, he used the device of a ground bass, but from the late 1680s he came to prefer large-scale forms, such as the da capo aria, which depended on tonality. The influence of major–minor tonality may be seen towards the end of the century also in the smaller 'tuneful' ayres of other composers, now constructed from regular balanced strains with cadences on the tonic and dominant.

8. 1730–1815. The 18th century is often represented as a low-point in the history of European song; and it is true that the high degree of unity between text and music achieved earlier by Dowland and Purcell, or later by Schubert and Wolf, is found in few songs of the period. Moreover, as far as is known, songwriting in Italy, Spain, the Low Countries and France was very largely diverted into theatrical and church music. Many songs have a transparent simplicity, even naivety, in several of the national traditions.

This simplicity can often, however, be ascribed to the increasing importance attached by composers and their public to sincerity, lack of affectation, accessibility and, sometimes, sentimentality. The search for these qualities led musicians in various directions. First, folksongs were now for the first time collected and valued as a survival of the past, possessing a unique artistic force related to their simplicity and capable of serving as models for art song (see the arguments advanced by JOHANN ABRAHAM PETER SCHULZ in *Lieder im Volkston*, ii, 1785). The folk repertories of Europe and elsewhere served to open up new musical horizons. A seemingly opposite movement, paradoxically, sprang out of similar roots: many simple songs of the period, placed like those in earlier periods in the service of didacticism and propaganda, were made available to a public larger and more diverse than ever before, and in the process they helped to suppress some genuine folk repertories. Hymnody, for example, enjoyed an enormous flowering, especially in the Protestant churches, which, beginning from the German Moravians, began to export hymnody to non-European indigenous populations which had not previously cultivated European song. Thirdly, in art song – as in the songs of Gluck – a distinct reaction can often be seen against what was thought over-elaborate, especially in operatic song.

During the 18th century art song came to have its predominant modern meaning of solo song with an independent keyboard accompaniment. In England, Playford had mentioned the possibility of harpsichord accompaniment as early as the middle of the 17th century; throughout this period the guitar, formerly an alternative to the lute, was increasingly, though as yet never completely, superseded by a keyboard instrument. Even when a keyboard instrument was used, however, songs were generally notated simply as a melody and bass; fully realized right-hand parts for keyboard, though still not always independent of the vocal line, began to appear in the second half of the century (in France in *Plaisir d'amour* by J.-P.-G. Martini, 1784; in England in Haydn's 14 canzonets in the 1790s).

During the 18th century the old cantional hymn tradition diminished in importance in Germany, and, in the 'songless period' of that language area at the beginning of the century, secular song had been channelled almost entirely into operatic arias. New traditions appeared, however, and since the splendid promise of English 17th-century song remained unfulfilled, Germany came to enjoy primacy in the composition of art song by the 19th century. German secular song began afresh in the 1730s with such collections as Rathgeber's *Tafel-Confect* (from 1733), in which the quodlibet achieved renewed importance, and Sperontes's *Singende Muse an der Pleisse* (1736). This repertory of secular song increased notably after the mid-century, centring particularly on the Berlin lied schools, and continued without a break into the lied tradition of the 19th century. Slightly earlier, in Catholic Austria, Germany, Bohemia, Moravia and Poland, a

widespread tradition of church songs had been inaugurated, including such categories as the pastorella, which continued to be composed by local organists and schoolmasters into the 19th century.

Some of these songs, both sacred and secular, are cantatas, but most are strophic songs governed by tonality and constructed from balanced strains. Songs in the style of this period, based on dances, even penetrated into the Ashkenazi synagogues of eastern Europe and, before folksong came to occupy collectors at the end of the century, into Russia (G.N. Teplov: *Mezhdu delom bezdel'e*, published during the 1750s).

A deliberately simple style was adopted by some German composers in songs from the Singspiel repertory and in so-called 'folklike songs' (*volkstümliche Lieder*), student songs and so on; the simple 'classical' songs of Gluck, Zelter and Reichardt may be mentioned. A simple style of vernacular Czech secular song, related to that of his vernacular sacred music, was inaugurated also in Bohemia by J.J. Ryba in the early 19th century. Some simple songs in Germany were intended for religious or quasi-religious groups (e.g. the Moravians, whose hymnody influenced that of England and America and who published a hymnbook for the indigenous Greenland population as early as 1772; and the freemasons, whose collections appeared from the 1740s).

In England, Handel was the most eminent figure in theatrical song; da capo arias predominate in his operas, although they are not universal, and their proportion is smaller in his oratorios. A simple popular style, derived from that of the collections of Playford and D'Urfey, appears in *The Beggar's Opera* (1728) as in the broadside ballads of the period. Elegance rather than depth of passion generally came to colour the hundreds of songs, some still well known, that were sung at the pleasure gardens in London (e.g. Marylebone and Vauxhall) and elsewhere. These songs were mainly strophic; later in the century many were composed in rondo form. Among them Scottish and Irish 'folksongs' enjoyed a wide vogue and were imitated by many composers (including Boyce and Arne in their theatre music); towards the end of the century various publishers, notably George Thomson, commissioned arrangements of folksongs from well-known continental composers, including Haydn and Beethoven. A related offshoot of the 18th-century British song tradition began to appear during the 1770s in New England.

Generally speaking, the 18th-century secular British song repertory, unlike that of Germany, did not lead directly to a repertory of serious Romantic song; its inheritance is to be found much more in popular 19th-century drawing-room ballads. Similarly, the widespread tradition of hymns and sacred songs that flowed from the 18th-century evangelical revival in England remained without serious artistic pretensions in the 19th century. Both these repertories were widely known, however, and must have exercised a strong influence on the musical sensibility of the population in general.

French 18th-century song outside opera is represented not only by the cantata and *cantatille* but also by the new category of the *romance*, which may have originated from the *brunette*. *Romances* were another category seeking freedom from affectation and are characterized by a certain degree of conscious archaism. They flourished particularly towards the end of the 18th century and declined after about 1815; some, like the famous *Un pauvre petit savoyard*, which recurs at various points in Cherubini's *Les deux journées* (1800), appear in operas. Noske (1954) distinguished between expressive *romances*, where the vocal line is closely related to the text and where the keyboard part may be relatively important, and 'abstract' *romances*, where the melody is to some degree independent of the text, and the keyboard part is simple and plays a subordinate role. The influence of French song extended in the late 18th century to Poland and Russia.

For further details *see* BALLAD, §I, 7; LIED, §III; MOTET, §IV; OPERA, §IV; PASTORAL, §5; PASTORELLA; QUODLIBET; ROMANCE, §2; SINGSPIEL; TONADILLA; VILLANCICO, §2–3; and ZARZUELA, §I.

9. 1815–1910. A far-reaching division occurred in the early 19th-century song repertory between a very large 'popular' category (i.e. including recreational song for a mass middle-class amateur market, song for edifying the lower and poorer classes, as well as folksong) and a much smaller 'serious' category (i.e. of songs written for connoisseurs and regarded as avoiding the vulgarity of the mass market). The two categories overlap in all European countries (the same composers contributing to both) but are distinct.

The whole repertory, serious or popular, consists mostly of solo songs with piano accompaniment, occasionally with the addition of a second voice or obbligato instruments, including arrangements of theatre songs, as well as hymns and partsongs. The nature of the piano accompaniment, where there is one, is often one of the chief features distinguishing the serious and popular repertories: popular song was generally content with a simple harmonic accompaniment, whereas serious song sometimes gave to the piano a role of equivalent importance with the voice, so that it became a representative of the natural forces surrounding the poet-singer, which themselves were taken to reflect the turmoil of his feelings. This could be done because the piano, by the beginning of this period, was capable of producing a resonant, legato, cantabile tone, but the cantabile tone had not yet been developed to the point where it interfered with the ability of the piano also to provide a discreet guitar-like accompaniment where required. About 1815 a solo voice with piano accompaniment was the medium which for song best combined economy of means with expressive potential.

Another rough means of distinguishing serious from popular song lies in the approach of the composer to declamation. The popular repertory very often adhered to foursquare abstract melodies comparable to those of 18th-century songs, repeated for all the stanzas of the text, whereas serious composers – while never jettisoning the strophic song, however – were often inclined to write through-composed songs, and to reflect the declamation of the text correctly – even to the precise small-scale details of the text – to a degree unmatched since the repertory of monody in the early 17th century. But this did not always lead, as then, to austerity and starkness of setting (though this can be seen, for example, in some of the songs of Dargomïzhsky and Musorgsky): ideas like those of Wagner were influential in Germany and elsewhere, and the accompaniment was often seen as a means of reinforcing the emotional force of the text (see Wagner's *Oper und Drama*, 1851). These distinctions are far from watertight, however; and a type of 'modified

strophic' song – i.e. strophic song, but with musical changes made in successive stanzas for the sake of the text – representing a middle course between the strophic and the through-composed song, is often to be found in both the popular and the serious repertories.

Serious 19th-century song in all Europe took its point of departure primarily from Schubert; though he was not personally responsible for all the novel developments in serious song, he first showed their potential. Although the relatively small song output of Beethoven was crowned in the song cycle *An die ferne Geliebte* (1816), the Viennese Classical composers did not influence the course of 19th-century solo song as they did 19th-century instrumental music; Schubert's models were lesser composers such as Zelter and Zumsteeg. His songs are very diverse, including simple and modified strophic settings of great variety and through-composed songs, and reflect the adoption of operatic elements (for example, sections of recitative, as also in Zumsteeg), as well as the tunefulness of the 18th-century lied tradition.

Some later lied composers extended the rhapsodic element in Schubert's songs, notably Schumann, as in the piano epilogues to the cycles *Dichterliebe* and *Frauenliebe und -leben*. Others, in particular Mendelssohn and Brahms, were concerned to perfect the musical shape of their songs, and Mendelssohn demonstrated the same concern even without texts in his *Lieder ohne Worte*; despite the abstract nature of much 18th-century song, this concern is scarcely a sign of conservatism. Attention to declamation reached its height in Germany towards the end of the century in the songs of Wolf, which reflect Wagner's word-setting theory (see Kravitt, 1962); at this time the piano was no longer the only obvious choice for the accompanimental medium, and orchestral lieder, anticipated by Wagner's *Wesendonck Lieder*, gained a new importance: examples include the lieder of Mahler and arrangements of some of Wolf's songs. Throughout the century, songs from German (as from Italian and French) opera enjoyed widespread popularity outside their operatic contexts.

German influence predominated in this period in the serious art song of Bohemia (Tomášek, Smetana, Dvořák etc.), the Netherlands and Scandinavia (Grieg), in some cases coupled with a certain degree of local colour derived from folk music. In Britain (as also elsewhere), large numbers of drawing-room ballads, many originally theatrical songs, mainly strophic, with separate introductions and simple chordal accompaniments, were produced for a domestic amateur market; in them composers focussed their interest primarily, as in 18th-century song and in early 19th-century Italian operatic song, on producing well-turned and singable melodies, and mostly ignored the potential of the piano accompaniment. Ballads remained popular, even if despised by some cognoscenti, until well after the beginning of the 20th century. They were cultivated also in America (notably by Foster) and elsewhere in the English-speaking world. Some British and American composers created a small serious repertory of song with English texts, modelled on the German lied, sometimes also with a certain degree of French influence (Sterndale Bennett, Macfarren, Parry, Stanford, Parker, MacDowell).

Another widely familiar song repertory is represented by Protestant hymnody, produced in large quantities in 19th-century Britain and, together with other partsongs and choral music, made available to an increasing cross-section of society, both at home and overseas, especially after the introduction of the tonic sol-fa system of notation. In some places outside Europe this tradition of choral song became established among the indigenous populations and has not yet disappeared (e.g. in some Pacific islands, or among the Africans of South Africa). It is comparable to the song traditions established among black Americans after emancipation from slavery, for example by the Jubilee Singers.

In France, the *romance* was channelled from the 1820s into drawing-room songs (sometimes called 'chansonettes') comparable in style and popularity to the drawing-room ballads of 19th-century England. From the 1830s Schubert's songs became known in France and contributed to the rise of the *mélodie*, a song category in which the symmetrical and strophic structure of the earlier *romances* is sometimes jettisoned and the piano accompaniment given greater attention; it is thus the French counterpart to the lied. Berlioz was the first major composer to be associated with the *mélodie*; his most important contributions to the genre are the six songs of *Les nuits d'été* (1840–41), which he later orchestrated. The *mélodie* was subsequently developed in the songs of Fauré (e.g. the cycle *La bonne chanson*, 1892–4), Duparc, Chausson and Debussy (e.g. the *Chansons de Bilitis*, 1899).

From the late 18th century the *russkaya pesnya* ('Russian song', understood as being 'folklike') had gained popularity in opera and thence in domestic music-making in Russia, and collections of folksongs were published in the last quarter of the 18th century. Together with romances in the French style, and often with French texts, which were favoured from the 1790s, 'Russian songs' continued to be cultivated by amateurs in the 19th century. The romance persisted in Russia until the 20th century in the work of Rachmaninoff and Medtner. The importance of 19th-century Russian song derives primarily, however, from the songs of The Five, especially Musorgsky, who developed the declamatory style of Dargomïzhsky to express a starkly direct realism; Musorgsky was the first eastern European composer to achieve a declamatory style tailored to his language, as Bartók and Janáček were to do later.

Polish song developed initially from Polish theatrical music and French song in the late 18th century; it was later modified through contact with the German lied, notably in the song output of Moniuszko.

19th-century Italian secular song was almost entirely operatic, apart from drawing-room songs, which also drew on the elements of operatic style; Italian operatic songs were popular in the domestic market as in the theatre. Spanish secular song during this period is also represented chiefly by the Italian operatic repertory.

For further details *see* BALLAD, §II; GASSENHAUER; LIED, §IV; MÉLODIE; and SPIRITUAL, §I.

10. FROM 1910. Immediately before World War I the established traditions of serious song were subject to far-reaching experimentation, as in Schoenberg's Second String Quartet and *Buch der hängenden Gärten*, representing settings of Stefan George (1908), and his *Pierrot lunaire* (1912), Stravinsky's settings of Japanese lyrics (1913) and Ravel's *Trois poèmes de Stéphane Mallarmé* (1913). Tonality was largely jettisoned, chamber groups rather than the piano or the full orchestra were used for accompaniment, vocal lines were of extreme virtuoso

difficulty, and song was turned – as it seemed unprecedentedly – into 'absolute' music. At the same time, in these and other songs, experiments were made with declamation: Schoenberg and others overturned established notions of declamation; Bartók established in his songs new conventions of declamation suggested by folksong; Ives experimented, even before 1910, with spoken text and with the realistic imitation in music of the patterns of spoken texts.

From the early years of the century German composers after Schoenberg, Berg and Webern largely abandoned song as such in favour of opera; exceptions include Hindemith (*Das Marienleben*, 1922–3, rev. 1936–48) and Richard Strauss, whose *Vier letzte Lieder* (1948) represent the final, glorious sunset of the Romantic lied. French art song was still represented at the beginning of this period by Fauré; it subsequently continued along broadly traditional tonal lines in the work of Poulenc and Milhaud, though with satirical elements and a certain degree of influence from the music hall. Messiaen contributed to the repertory from the 1930s.

After 1910, German and French influences remained the most important to affect art song outside Germany and France and were supplemented in most countries by native traditions – either rediscovered historical repertories or that of folksong. Composers everywhere drew both on the 19th-century German and French traditions (the Romantic lied, and the *mélodie* of Fauré) and those of the 20th century, represented respectively by Schoenberg and Les Six.

New song repertories, largely along traditional lines, developed in several European countries, such as Finland and Lithuania, in the early 20th century. Collectors of folksong were active in Great Britain (Cecil Sharp, Vaughan Williams) and Hungary (Bartók) from at least the first years of the century, and their activity led not only to the rediscovery of folk repertories but also to the renewal of the composition of art song. The British song repertory (Vaughan Williams, Warlock, Frank Bridge, Ireland etc.) was marked by close attention to declamation in the traditional manner (this partly deriving from French influence) and to the quality of the poetry set; it reached a peak in the songs of Britten and Tippett. Similarly, new repertories of Italian, Spanish and Latin-American song, outside opera, developed in the early years of the century, inspired in Italy primarily by the rediscovery of Renaissance music (Casella, Pizzetti etc.) and in Spain and Latin America also to some extent by folk music (Albéniz, Granados, Falla etc.). In Italy Dallapiccola combined a lyrical style in song with serialism.

In Poland Szymanowski successfully combined French and other influences. In Russia, the romance continued to be cultivated (Grechaninov, Rachmaninoff, Medtner); songs in a style comparable to that of Musorgsky were produced by Prokofiev. In the early 1930s Russian composers were required by the state to avoid Modernism, subjectivism and formalism in music, and solo song was considerably simplified by most composers. Both in Russia and elsewhere in Europe (e.g. Nazi Germany) unison political songs for massed singing were cultivated; these have been used also in communist China, in a broadly European-derived musical style.

Popular song underwent a major change of emphasis through the 20th century. At the end beginning of the 1990s, ragtime from America gave new impetus to popular song, which gradually replaced the earlier drawing-room ballad with forms more orientated towards new types of social dance. This, combined with the beginning of recorded sound and the rise of popular music theatre, allowed the rapid and wide dissemination of new trends. After World War I the widespread commercial popular music characterized by TIN PAN ALLEY was established (*see also* SONGWRITER). While remaining almost exclusively strophic and tonal, with clear distinctions of verse and chorus, the forms of the songs gradually became more sophisticated through, for example, the chromatic inflections in both melody and harmony used by George Gershwin or through structural developments as in the extended form of Cole Porter's *Begin the Beguine*. As the commercial (and geographical) boundaries of popular music widened, so did the range of styles that were subsumed within the popular song, such as developing jazz styles, Latin American features, blues, country music and later hybrids such as soul (*see* POPULAR MUSIC and POP).

The growing importance of recordings and the establishment of radio broadcasting caused popular songs to become increasingly identified not only with particular performers (as had long been the case through theatre appearances) but with specific performances. Indeed, the identification of the performer with the song in a quasi-autobiographical context – the singer as auteur – has been the most important shift in the context of the popular song in the 20th century. Ultimately it led through the SINGER-SONGWRITER developments of the 1960s, particularly identified with Bob Dylan, to the situation at the end of the century where the writing of songs by performers for themselves had become the standard, and the separation of the roles of songwriter and performer had become the exception. Thus, the recording has become the primary form of the pop song (consequently with instrumental textures also integral to that song's identity) rather than a notated and printed version as at the start of the century.

Serious song in the USA reflects a generally heterogeneous variety of styles (experimentalism, serial technique, late Romantic style, American popular music, Stravinsky's neo-classical style etc.). Many composers have contributed to this repertory (Ives, Virgil Thomson, David Diamond, Copland, Babbitt, Barber etc.), though as in other countries song composition has generally not been in the forefront of composers' attention.

Song cycle. A group of individually complete songs designed as a unit (aptly described in German as 'zusammenhängender Complex'), for solo or ensemble voices with or without instrumental accompaniment. Song cycles can be difficult to distinguish from song collections, which were frequently presented in a planned design. They may be as brief as two songs (dyad-cycles) or as long as 30 or more (e.g. Schoeck's *Das holde Bescheiden* op.62). The term 'song cycle' did not enter lexicography until 1865, in Arrey von Dommer's edition of Koch's *Musikalisches*

Lexikon, but works definable in retrospect as song cycles existed much earlier. The coherence regarded as a necessary attribute of song cycles may derive from the text (a single poet; a story line; a central theme or topic such as love or nature; a unifying mood; poetic form or genre, as in a sonnet or ballad cycle) or from musical procedures (tonal schemes; recurring motifs, passages or entire songs; formal structures); these features may appear singly or in combination. Because the elements that provide cohesiveness are so many and variable, however, exceptions abound: Schumann's *Myrthen* is unusual in setting the words of more than one poet, and Schubert's songs from *The Lady of the Lake* are exceptional in mingling choral numbers and solo song.

1. Beethoven. 2. Schubert. 3. Schumann and other composers.

1. BEETHOVEN. Song cycles are associated primarily with the 19th century (a view arising from and consonant with Romanticism's claims of uniqueness) but existed much earlier. Groups of madrigals, chansons or partsongs may be considered cyclic in cases where modes, affects, textual topics or recurring musical gestures lend cohesion (as in Schein's *Venus Kräntzlein*, 1609, with its exploration of love, or Heinrich Albert's 'death-cycle' *Musicalische Kürbs-Hütte*, 1645). Song cycles were not uncommon in 17th- and 18th-century Germany and England; they include John Danyel's *Grief Keep Within* (1606), James Hook's *The Aviary* (*c*1783) and *The Anchoret* (*c*1792) and J.C.F. Bach's *Die Amerikanerin* (1776, Gerstenberg). The 20 years surrounding the turn of the 19th century saw an explosion of song publications, including topical cycles such as F.F. Hůrka's *Die Farben* (1795, poetry by C. Müchler), Reichardt's *Musikalischer Almanach* of 1796, which contains choral settings, solo and chorus settings, and a trio, Kuhlau's *Die Blumen* (1805, Scholz), and Weber's *Die Temperamente beim Verluste der Geliebten* (1816, F.W. Gubitz). In some cases, a number of brief songs in folksong style (*Lieder im Volkston*) were strung together to produce a cycle, as in Neefe's *Bilder und Träume* (1798). The tradition of the thematic cycle, its formal structure analogous to a 'spoked wheel' whose individual parts radiate from a central conception, is evident as late as 1820, in Friedrich Schneider's *Die Jahreszeiten* (T. Heinroth). Still other early 19th-century song cycles on patriotic themes, by Weber, F.H. Himmel and others, have historical significance for the light they shed on the Napoleonic wars and as evidence of nationalism in art.

Beethoven's *An die ferne Geliebte* (1815–16, A. Jeitteles) is the first known cycle with *Liederkreis* in its title, although his six Gellert songs op.48 (1802) have some claim to be considered a cycle. Beethoven originally designated the Jeitteles set as *Sechs Lieder*, but perhaps the need to explain six songs with a single final cadence and the desire for novelty as a marketing ploy played a role in the new title. (*Liederkranz*, *Liederzyklus*, *Liederreihe*, *Liederstrauss* and *Liederroman* were also used later, the last carrying the clearest implication of a plot or story.) It has been speculated that the 'lean years' Beethoven was experiencing at the time of composition resulted in an openness to experimentation and a turn to hybrid genres; it is notable that he composed no further works in this novel format (although he had perhaps been influenced by Ferdinand Ries's *Verschiedene Empfindungen an einem Platze*, *c*1815). The innovations are striking: the key succession is planned and rounded, the beginning melody is recalled at the end, the music is continuous, and the piano is given a more prominent role than in other contemporary song cycles. The poetic text even anticipates the exploration of psychological-emotional states in later works. But this was not a model followed by later composers, who preferred the concept of cycle found in Conradin Kreutzer's settings of Uhland's *Wanderlieder* and *Frühlingslieder* (*c*1820), works that Schubert was said to admire.

2. SCHUBERT. The narrative poetic cycle did not become common until about 1815; its predecessor was the *Liederspiel*, pioneered by Reichardt in 1800 with the highly successful *Lieb' und Treue*. Himmel's *Alexis und Ida* (1814), a pastoral idyll setting 46 poems by C.A. Tiedge, is an early example, lasting three hours or so in performance, its problematic length not helped by the slow-paced narrative. The early 19th-century insistence in German-speaking countries on *Einheit* (coherence) and *Vielfältigkeit* or *Mannigfältigkeit* (variety) in a song cycle is, albeit awkwardly, demonstrated in this work. The transition from *Liederspiel* to song cycle is embodied in *Die schöne Müllerin*, which began as a song-play devised by the young members of a Berlin salon at the home of the state councillor Friedrich von Stägemann; Wilhelm Müller took the part of the young miller, the Stägemanns' daughter was the miller maid, the artist Wilhelm Hensel the hunter, and other members of the circle played subsidiary roles. With the poems completed, the circle asked the pianist and composer Ludwig Berger to set selected poems, the result a cycle entitled *Gesänge aus einem gesellschaftlichen Liederspiele 'Die schöne Müllerin'* op.11. Müller later revised and augmented the poems as a monodrama with all but two numbers (a prologue and epilogue by 'The Poet') in the miller lad's voice; it was that version Schubert set to music, omitting five poems, in 1823. Despite recourse to pairing songs with the same keys (e.g. *Des Müllers Blumen* and *Tränenregen*, nos.9–10, in A major), the cycle's coherence does not depend on a unifying tonal scheme – it ends a tritone away from the beginning key – or thematic recurrence, since musical means of cohesion did not become widespread until later. It is now known that Schubert experimented with song cycle before and after *Die schöne Müllerin*. His 20 settings of poems by the north German poet Ludwig Theobul Kosegarten in June–October 1815 have been identified as a cycle; there has been speculation that Schubert originally designed the Heine songs as a cycle but then abandoned the idea (see R. Kramer, *19CM*, viii, 1984–5, pp.213–25); and it is possible to perform the ten songs to poems from Ernst Schulze's posthumous *Poetisches Tagebuch* as a cycle, although they were not published as such.

Song cycles with a plot fall into at least three categories in the 19th century. *Die schöne Müllerin* epitomizes those with an internally cohesive narrative, as, more problematically, does the setting of Müller's *Die Winterreise* (1827); Schubert drew on two textual sources, the first (earlier) one incomplete, the second complete. *Winterreise* is a psychologically profound study of alienation and melancholia, of Romantic consciousness in disintegration. Neither its tenuous narrative nor its music conforms to later expectations of 'organic unity', but its self-sufficient coherence is unquestionable. A second category consists of cycles setting poems or songs extracted from a larger narrative framework such as a novel or play, and therefore

without the same degree of narrative coherence as the internal-plot cycles (e.g. Conradin Kreutzer's and Leopold Lenz's *Faust* cycles, each with a different approach to Goethe's drama, and Bernhard Klein's posthumous *Sieben Gesänge aus den Bildern des Orients und der Frithjofs-saga*, from an orientalizing poetry anthology by H. Stieglitz and a neo-Norse epic by E. Tegnér). Schubert's *Gesänge nach dem Ossian*, published posthumously in 1830, and his *Sieben Gesänge* (1825) from Scott's *The Lady of the Lake* are notable examples of this type, which could be used in various ways: as companions to the literary work, as music for amateur parlour performance, or as a cycle of songs assuming the audience's knowledge of the external literary context. Eduard Mörike, for example, compiled a supplement with settings by three composers to accompany his novel *Maler Nolten* in 1832. Among the later distinguished specimens of this type is Brahms's *Romanzen aus Ludwig Tiecks Magelone* (1865–9). The third category of narrative is that of the ballad cycle; among Loewe's many contributions are several tracing the history of the Hohenstaufen dynasty (e.g. *Kaiser Karl V* op.99 and *Gregor auf dem Stein* op.38), in which the boundaries between ballads (which tell a story and are multi-sectional) and songs are suggestively blurred (Loewe also composed song cycles, including *Bilder des Orients* op.10 and *Frauenliebe* op.60).

3. Schumann and other composers. Such minor composers as Carl Banck responded to the earlier model of Schubert's two cycles, but it is Schumann's return to song composition in 1840 that marks a watershed in the history of the song cycle. It was at that point that composers shifted from conveying poetry through vocal mimesis to a focus on poetic interpretation by means of harmony and the structure of the whole, through formal coherence borrowed from instrumental cycles such as is found in Schumann's 12 Kerner settings op.35, *Dichterliebe* op.48 (Heine), the two *Liederkreise* to texts by Heine (op.24) and Eichendorff (op.39) and the *Maria Stuart Lieder* op.135, as well as smaller cycles. Notable in several of his cycles is Schumann's way of reordering the poetic material, thus assuming (in part) the role of *Dichter*. Such musical features as unification by tonal design, recapitulation of passages from earlier songs, and links between songs are prominent, as is the recurring significant use of certain harmonies (the diminished 7th chord in *Dichterliebe*, for example). Song cycles poured off the presses in German-speaking countries during Schumann's lifetime and after, including Marschner's *Bilder des Orients* opp.90 and 140 (Stieglitz) and *Osterlieder eines Musikanten im schlesischen Gebirge* op.86 (Hoffman von Fallersleben), Ferdinand Hiller's *Reimer von Bingen* and Cornelius's *Brautlieder* and *Weihnachtslieder*; Brahms, more given to 'collections' and 'sets' than cycles, nonetheless composed the superb *Vier ernste Gesänge* (1896) near the end of his life (the last song was composed earlier, the first three as a musical memorial to Clara Schumann).

In France, Berlioz's *Les nuits d'été* (1840–41, T. Gautier) is among the best-known cycles from the earlier half of the century; his *Neuf mélodies* (*Irlande*) op.2 (1830) exemplifies the blurring of the distinction between 'collection' and 'cycle'. Later in the century the lied (primarily in the form of translations of Schubert's songs) began to exert an influence, and cycles became increasingly prevalent; Massenet was among those particularly attracted to the genre with his series of *Poèmes* (1866–95) and the experimental *Expressions lyriques* (1913), which includes passages of spoken declamation. Gounod composed only one song cycle, during his extended stay in London: *Biondina* (1872, G. Zaffira), to Italian, not French, poetry, subsequently influenced Hahn's cycle *Venezia* (1901). Fauré's works belong among the best of the late 19th- and early 20th-century efflorescence of the French song cycle, including *La bonne chanson* (1894, P. Verlaine), *La chanson d'Eve* (1906–10, C. Van Lerberghe), *Mirages* (1919, Brimont) and *L'horizon chimérique* (1922, J. de La Ville de Mirmont). Other notable cycles include Chausson's single foray into the genre, *Serres chaudes* op.24 (Maeterlinck), Koechlin's *Rondels* (1890–94, T. de Banville), Roussel's *Odes anacréontiques* (1926), and Ravel's contributions written between 1903 and 1934, including *Shéhérazade* and the *Chansons madécasses*. Debussy favoured the three-song format for his sets and cycles: such works as *Fêtes galantes* (1891, 1904, Verlaine), *Chansons de Bilitis* (1897–8, P. Louÿs) and *Trois poèmes de Mallarmé* (1913) raise interesting issues about the relationships between 'sets' and 'cycles'. Song cycles by Les Six include Poulenc's *Airs chantés* (1927–8, J. Moréas), *Tel jour, telle nuit* (1936–7, P. Eluard) and *Calligrammes* (1948, G. Apollinaire) and Milhaud's *Catalogue de fleurs* (1920, L. Daudet).

In the Russian repertory, Musorgsky's *The Nursery* (1870, texts by the composer), *Sunless* (1874, A. Golenishchev-Kutuzov) and *Songs and Dances of Death* (1875–7, Golenishchev-Kutuzov) exemplify his mature style of flexible, asymmetrical melody and an idiosyncratic tonal language, masterfully deployed. Dvořák wrote a number of song cycles, between 1865 and 1894, and a remarkable later addition to the repertory from Czechoslovakia is Janáček's *The Diary of One who Disappeared* (1917–20, on anonymous Wallachian dialect poems), for tenor, alto, three female voices and piano. Mahler gravitated to cyclical composition almost from the beginning; such works as *Lieder eines fahrenden Gesellen* (1883–5, texts by Mahler, after *Des Knaben Wunderhorn*), *Kindertotenlieder* (1901–4, Rückert) and the song cycle-symphony *Das Lied von der Erde* (1908–9, H. Bethge, after Chinese poems) are notable for progressive tonality (each of the four wayfarer songs ends in a different key from that in which it began) and other Mahlerian hallmarks including the 'death-lullabies' which typically conclude his cycles. Richard Strauss enriched the genre with *Mädchenblumen* op.22 and, most famously, *Vier letzte Lieder* (1948); Zemlinsky and Szymanowski also made their mark. The contributions of the Second Viennese School include Schoenberg's atonal masterpieces *Das Buch der hängenden Gärten* (1908–9, S. George) and *Pierrot lunaire* (1912, A. Giraud, trans. O.E. Hartleben), as well as various vocal sets and cycles by Webern. Hindemith's best-known work in the genre is *Das Marienleben* (1922–3, R.M. Rilke); the composer believed so strongly in musical unification in song cycles that he added a lengthy preface to the revised version (1935–48) explaining how he had achieved greater cyclical unity.

Among other 20th-century song cycles may be mentioned Stravinsky's French-influenced *Three Japanese Lyrics* (1912–13) and Bartók's *Village Scenes* (1926), as well as works by Vaughan Williams, Britten, Tippett, Copland, Ginastera, Falla and Villa-Lobos; later in the

century Boulez (*Pli selon pli*), Berio (*Circles*), Foss (*Time Cycle*) and Crumb (*Ancient Voices of Children*) contributed works that have secured a place in the repertory. The 'concept' album in rock music may also be considered a type of song cycle as defined here; *see* ALBUM.

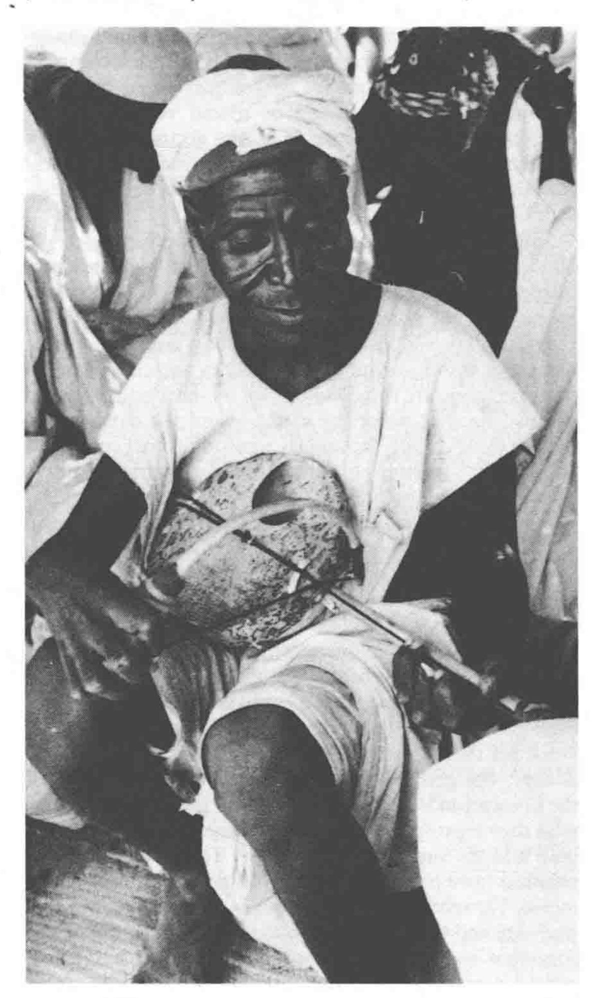
SUSAN YOUENS

Song form. English equivalent of the German term LIEDFORM, used in translations of German writings, initially that of A.B. Marx's manual of composition by August Wehrhan (1852), and subsequently adopted by English-speaking writers on music (e.g. Goetschius, 1898).



IAN D. BENT

Songhai music. The Songhai (also known as the Songhay and Sonrai) live on both sides of the great bend of the Niger river, from Mopti in Mali to Gaya on the borders of Niger and Benin. As a people with a single common language and, with minor variations, a common music culture, they are composed of three groups: the Songhai proper, who form the largest group; the Zarma or Zabarma, the second-largest group, adjoining the Hausa in the east; and the Dendi, centred on Gaya (fig.1).

The similarity of many aspects of Songhai music to HAUSA MUSIC, especially in its instruments, is probably a result not only of historical links but also of continuing cultural contact. In the 16th century the empire of Songhai extended its influence in the east to Agades, and in the process conquered the intervening Hausa states of Gobir, Zamfara, Kano, Zaria and Katsina. The long metal KAKAKI trumpet, now used in Hausa ceremonial music, is probably only one of a number of musical relics of Songhai dominance in this period. Other similarities, probably later in origin, include those between the Songhai *kuntiji* and the Hausa *kuntigi* (single-string plucked lutes); the Songhai *moolo* and the Hausa *molo* (three-string plucked lutes); the Songhai *goje* (fig.2) and the Hausa *goge* (single-string fiddles); the Songhai *bamboro* and the Hausa *bambaro* (both jew's harps); and the Songhai GANGA and the Hausa instrument of the same name (double-headed cylindrical drums with snares).

1. *Map showing the distribution of the three Songhai groups*

2. *Goje (fiddle)*

3. *Two gaasay (percussion vessels) used in the follay ritual*

Songhai secular music includes solo and choral songs, as well as primarily instrumental music. Solo songs are sung by men and women to accompany such activities as planting crops, harvesting, pounding cereals and canoeing; they are also sung by children and adolescents in games and riddles, and by adolescents when courting. Choral songs (male, female or mixed voices) may be unaccompanied or performed to the accompaniment of the *kuntiji*; their texts are mainly centred on historical traditions and politics, legends and fables, or praise and satire.

Solo instrumental music includes performance by children on the *dilliara* (idioglot clarinet) and the *bamboro*; by children and men on the *kuntiji*; by men on the *moolo* and the *goje*; and by children and adult men on the *jidiga* (lamellophone). The two most common instrumental ensembles, which may at times accompany vocal performances, are three *kunce* (double-headed cylindrical drums), used at wrestling matches and for dances; and two or three *doodo* (hourglass tension drums) combined with one or two *ganga* (double-headed cylindrical drums), used to accompany praise-songs or dances.

Songhai liturgical music shows close links with Hausa *bori* music. The animist religion of the Songhai distinguishes a hierarchy of divinities, each corresponding to a natural force such as the sky, rain, thunder, the earth, a river or rainbow. A second set of divinities, dating from French and British colonization of West Africa, includes the locomotive, doctor, corporal and so on. A specific musical theme is associated with each divinity so that their genealogical and other relationships form a framework for the musical liturgy and its associated liturgical dances. The gods are invoked through their music, and if the invocation is successful a god will possess the dancer, who then represents that god, making a dialogue between man and the supernatural possible. The dancer is finally released from possession through the intermediacy of the music. The whole ritual, involving invocation, possession, dialogue and release, is known as *follay*. The instrumental ensemble used for the performance consists of a *goje*, consecrated for this purpose with the blood of three cocks, and a set of from two to ten *gaasay* (percussion vessels; fig.3) consisting of inverted hemispherical gourds, each struck with a pair of fan-shaped wooden beaters; each beater has at least seven rigid spokes.

Songmakers' Almanac. English ensemble. The founding members were Graham Johnson (piano and director), Felicity Lott (soprano), Ann Murray (mezzo-soprano), Anthony Rolfe Johnson (tenor) and Richard Jackson (bass). The ensemble adopted its name after its first concert in 1976, and continued to give concerts in the succeeding seasons, celebrating its 20th anniversary at the Wigmore Hall in 1996. It has also appeared regularly at the Aldeburgh Festival. Johnson's aim has been to present solo song collaboratively (with a wide variety of guest artists), working around a different theme for each concert. These themes fall into two main categories: the recital centred on a 'songmaker' – a poet, composer or performer – with readings relating to him or her; and the recital treating various aspects of a general theme (e.g. war, the seasons) with appropriate readings of poems.

ALAN BLYTH

Songster (i). An anthology of secular song lyrics, popular, traditional or topical (occasionally with melody lines), designed to fit in the pocket. Songsters were aimed at either genteel or vulgar audiences, and appeared in many hundreds of printings in the USA between the mid-18th century and the end of the 19th. Adapted from English models, they ranged from eight to several hundred pages in length. The John Hay Library at Brown University, Providence, possesses a collection of over 1500 American songsters, but the total number published may far exceed this and can only be estimated. To the modern historian, songsters are useful mainly as guides to the prevailing tastes in their periods; but they can also contain the only known copies of songs mentioned in newspapers, diaries or novels of the times.

Distinct types may usefully be classified according to their contents, to the social groups to which they catered and to the periods in which they flourished. Before 1821 the largest group, 'genteel' songsters, such as *The Skylark* (1795; Lowens, no.101), used texts from British sheet music, anthologies and theatre sources. 'Topical' songsters, such as *Loyal and Humorous Songs* (1779; Lowens, no.30) and *The American Republican Harmonist* (1803; Lowens, no.242), dealing with war and politics, contained many American texts or reworkings of British originals. 'Ballad' songsters, such as *The Mountains High* (1804; Lowens, no.278), were at first simply eight-page chapbooks which drew on British broadsides and oral

tradition, with some borrowings from genteel and topical sources. After 1820 the ballad songsters grew larger, but they retained the same general content, while incorporating American additions, as *The Green Mountain Songster* (1823) and *The Ballad Songster* (?1828) show. These early ballad songsters as well as later publications of a similar type, such as *The Forget me not Songster* series of the 1850s, are useful supplements for the study of Anglo-American oral tradition up to the 1860s. Later songsters contain little traditional material.

Topical songsters devoted to a single cause such as temperance, abolition or labour became common after 1840. Presidential campaign songsters, mostly made up of parodies, proliferated in the 1840s, but their importance gradually declined until they were supplanted by professionally composed sheet music around 1900.

The most important songster types after 1860 were those devoted to a single performer, like *Tony Pastor's Comic Songster* (*c*1872) and *Billy Emerson's Nancy Fat Songster* (1866), or those named after a specific song, such as the *Put me in my Little Bed Songster* (?1875) and the *Johnny I Hardly Knew ye Songster* (1870). Both types commonly had illustrated covers which were sometimes hand-coloured. Lowens located 540 exemplars of 650 songsters published before 1821; 26 of these included music, a larger proportion than that for later songsters. No published study comparable to Lowens's exists for songsters after 1820, but Young's checklist of the John Hay Library's songster holdings and desiderata could be a starting-point for a comprehensive bibliography to 1900. Besides that collection, there are large holdings of songsters at the Library of Congress and the American Antiquarian Society, Worcester, Massachusetts.

A. SCHRADER

Songster (ii). A black American musician of the post-Reconstruction era who performed a wide variety of ballads, dance-tunes, reels and minstrel songs (a repertory overlapping with that of white rural singers) to his own banjo or guitar accompaniment. Songsters were sometimes accompanied by 'musicianers', or non-singing string players. By generally favouring the guitar instead of the earlier banjo and fiddle, the second generation of songsters stands as a link between the older song tradition and the BLUES, §2. Some songsters were recorded, among the oldest being Henry Thomas (1874–*c*1950) of Texas, whose *John Henry* (1927, Voc.), sung and played on both guitar and reed pipes, was one of the first recorded versions of this earliest of black ballads. Of the same generation was the Memphis blacksmith Frank Stokes from Tutwiler, Mississippi, whose *You shall* (1927, Para.) may date from before the Civil War. He recorded with Dan Sain (or Sane), an expert guitarist, and as the Beale Street Sheiks they made many recordings, including the old minstrel song *Chicken, you can roost behind the moon* (1927, Para.). Younger than Stokes, Jim Jackson from Hernando, Mississippi, played the guitar simply but was extremely popular with such songs as *He's in the jailhouse now* (1928, Voc.) and *Traveling Man* (1928, Vic.). Such pieces were in the repertory of every songster, and the tradition was extremely widespread: Papa Charlie Jackson, who recorded bowdlerized versions of the more earthy songs of the black tradition, including *Shave 'em dry* (1925, Para.), came from New Orleans, whereas the high-voiced, instrumentally brilliant Luke Jordan came from North Carolina; his *Pick poor robin clean* (1927, Vic.) was outstanding. The great breadth of the songsters' repertory is indicated by the recordings of Mance Lipscomb and Mississippi John Hurt, and by Leadbelly, who could recall some 500 songs. Lipscomb was not recorded until 1960 and Bill Williams (1897–1975) from Virginia not until 1970; their isolation confirmed the survival of this tradition in the rural South.

PAUL OLIVER

Son guatemalteco (Sp.). The synonymous terms *son guatemalteco* and *son chapín* (from *chapín*: 'heavy sandal', a nickname for a Guatemalan) designate the national dance of Guatemala, with its *zapateado* steps and accompanying music both reflecting Hispanic origins. The *son guatemalteco* is played by marimbas, singly or in ensembles, or by *zarabanda* or guitar ensembles. It is sometimes sung. Regional variations are numerous and differentiated. Although characteristically in rapid to moderate 6/8 metre, some village *sones* are in 3/4, 2/4 or complex, irregular metres (ex.1). The *son barreño* from

Ex.1

the department of San Marcos, a local variant of the *son guatemalteco*, has typical melodic motifs and a constant quaver pulse in a somewhat quicker tempo.

LINDA L. O'BRIEN-ROTHE

Song whistle. *See* SWANEE WHISTLE.

Song without words (Ger. *Lied ohne Worte*; Fr. *chanson*, *chant* (or *romance*) *sans paroles*). A short piece of a lyrical nature. It is thus like the romance, but unlike it in being confined to piano music. Liszt believed that Field's

nocturnes were the direct precursors of the song without words (and other lyrical Romantic character-pieces). The German form of the term was invented by Mendelssohn and is almost exclusively used of the 48 pieces in eight books that he composed between 1829 and 1845. These pieces are very varied in mood, though not in style; all are melodious, and most begin and end with a few bars of the accompaniment corresponding to the prelude and postlude of a song. A few of the most popular have nicknames, but apart from the three (nos.6, 12 and 29) called *Venezianisches Gondellied* (*see* BARCAROLLE), the *Duetto* (no.18) and the *Volkslied* (no.23) these names were not given by the composer and do not represent his intentions. Tchaikovsky composed two piano pieces entitled *Chant sans paroles*; in each a 'duet' effect is produced by a second voice in canonic imitation with the main melody.

MAURICE J.E. BROWN/KENNETH L. HAMILTON

Songwriter. A composer (or lyricist) who writes songs. The term is particularly applied to writers of popular songs in the 20th century. Songwriters began to be distinguished from other composers who wrote songs once it became possible for them to earn their living largely from the outright sale of, or royalties from, their works. Stephen Foster, whose income was derived solely from his songs, is generally regarded as the first successful songwriter in the USA, even though he died in poverty. The formation of performing rights organizations, such as ASCAP and BMI in America and PRS in Britain, and the passage of protective copyright laws enhanced the financial gain that songwriters could make from their works.

With the rise of the popular song market, allied to the creation of the musical comedy from the mid-1890s onwards, the process of writing and the industry of selling songs became standardized. Some of the most successful songwriters of the Tin Pan Alley period, Irving Berlin among them, had only a meagre facility with musical notation and arrangement and relied on trained musicians to write their songs down. Many songwriters gained experience by first working as song-pluggers for publishers, demonstrating new songs for customers. Some songwriters founded their own publishing firms in order to allow them to control the distribution of their songs; among them were Paul Dresser and Harry Von Tilzer in the USA and Noel Gay in Britain. Songs that achieved enough popularity to repay the publisher's investment and to provide income for the songwriter were termed 'hits'; those that have stayed in the repertory, principally of jazz and popular singers, have become 'standards'. Although many songwriters are known as teams, combining a composer and a lyricist – from Richard Rodgers and Lorenz Hart through to Elton John and Bernie Taupin – the roles have been combined by such leading figures as Cole Porter, Frank Loesser, Noël Coward and Vivian Ellis.

Particularly through the rise of the SINGER-SONGWRITER from the 1960s onwards and the expansion of studio recording techniques, the boundaries between the writing and performing of popular songs have become increasingly blurred. Through the early examples of groups such as the Beatles and solo performers such as Bob Dylan, most pop performers now combine both roles. While in the 1960s such songwriting teams as Lieber and Stoller, Jeff Barry and Ellie Greenwich or Holland, Dozier and Holland could be known in their own right, today non-performing songwriters remain largely unacknowledged by the general public.

DEANE L. ROOT/R

Sonic art. *See* ELECTRO-ACOUSTIC MUSIC.

Sonic Youth. American alternative rock group. It was formed in 1981 by Thurston Moore (*b* Florida, 25 July 1958; vocals and guitar), Kim Gordon (*b* Rochester, NY, 28 April 1953; vocals, bass and guitar) and Lee Ranaldo (*b* Glen Cove, NY, 3 Feb 1956; vocals and guitar); its best-known line-up took shape in 1984 with Steve Shelley (*b* Michigan, 23 June 1962; drums). Influenced by the Velvet Underground and the Stooges, as well as by performance art and the avant-garde compositions of Glenn Branca, Sonic Youth explored dissonance, feedback and alternate tunings to expand the sonic landscape of popular music. 'Teenage Riot' from *Daydream Nation* (Blast First, 1988) was a college radio hit, but the band is often credited with opening up options for what became known as 'alternative music' and thus having an impact far beyond its own direct popularity with fans. Songs were often written for specific guitars with different tunings so as to avoid conventional chords and progressions. Their punk influences and attitudes were clear from the noisiness of their music, yet their lyrics often articulated leftist sentiments and addressed women's issues. (A. Foege: *Confusion is Next: the Sonic Youth Story*, New York, 1994)

ROBERT WALSER

Sonin, Aleh Barïsavich (*b* East Berlin, 10 April 1948). Belarusian composer. In 1953 his family moved to Minsk, where Sonin attended a music school, then the preparatory section of the National Conservatory, studying with N. Aladaw (until 1971) and later the Conservatory itself, where he graduated from A. Bahatïrow's class in 1974. He has taught composition and orchestration at the Minsk Music School since 1980 and in 1992 became the president of the first Belarusian branch of the ISCM. His enthusiasm for German philosophical thought of the 18th to 20th centuries, and his absorbtion in the teleological aesthetics of Rilke and the work of Mahler has lent his music a highly charged psychological nature and a propensity towards emotional confrontation. The content of his conceptual works is emphasized by the philosophical symbolism of the programmes; a recurrent feature is the image of the poet, represented as an integral personality engaged in moral conflict with the age (Sappho, Ovid, Lorca and Mandel'shtam). As a musician, Sonin strives towards a balance of traditional and contemporary means but generally eschews classical forms in favour of structures which rely on an improvisational sense. His music sometimes exhibits features of social journalism (the Fourth Symphony for piano and orchestra dedicated

to Osip Mandel'shtam, the *Sonata quasi una Sarabanda* in memory of those who perished on the ferry *Estonia*).

Sonnailles (Fr.). *See* COWBELLS.

Sonneck, Oscar G(eorge) T(heodore) (*b* Lafayette [now part of Jersey City], NJ, 6 Oct 1873; *d* New York, 30 Oct 1928). American musicologist, librarian, editor and composer. As a boy he was sent to Germany to study; he was a piano pupil of James Kwast (1883–93) and later attended courses at the universities of Heidelberg and Munich, developing his interests in philosophy and, especially, musicology. He studied composition in Munich with Melchior Ernst Sachs, composition and orchestration with Iwan Knorr in Frankfurt, and conducting with Carl Schröder at the Sondershausen Conservatory.

In 1899 Sonneck returned to the USA and for three years travelled from New England to South Carolina, collecting references to American musical life before 1800, primarily from newspapers. He also did much work in the new Library of Congress building, and in 1902 the librarian Herbert Putnam made him head of the newly formed music division, where he organized and developed what was to become one of the most comprehensive collections of music, manuscripts and books on music in the world. He established its unrivalled archive of opera scores and librettos, and in 1908 acquired the Albert Schatz collection of about 12,500 opera librettos and additional documentation. In 1917, embittered by the neglect of his American studies and harassed by the government (because of his German education and anti-war sentiments), he resigned from the library and immediately became director of the publication department of the firm of G. Schirmer, whose *Musical Quarterly* he had edited since its first issue (1915). In addition he became secretary and librarian of the Beethoven Association of New York (founded by Harold Bauer in 1918). Subsequently he became vice-president of G. Schirmer (1921), remaining there, despite Putnam's invitation to return to Washington, so that he could support contemporary American composers. In this capacity he directed the publication of new music, including that of Ernest Bloch, John Alden Carpenter, Charles Tomlinson Griffes and Charles Martin Loeffler.

Sonneck's work for American music scholarship was much undervalued during his life. His monumental and wholly original *A Bibliography of Early Secular American Music*, the result of his initial research, was eventually published in an abridged form and at his own expense (1905), and his fundamental *Early Concert-Life in America (1731–1800)* was first published (1907) by Breitkopf & Härtel. In his books and essays he set a standard of objective and documentary historical writings on American music that was not matched until after World War II. In 1975, in recognition of his pre-eminence, a society was formed 'to help disseminate accurate information and research dealing with all aspects of American music and music in America', and was named the SONNECK SOCIETY (now the Society for American Music).

Sonneck's scheme of music classification (1904, the basis of the organization of music collections in the Library of Congress) and his work on opera librettos before 1800 remain the outstanding reference works of their kind. His other publications include *Beethoven Letters in America*, numerous articles, several compositions (mainly songs) and some poems.

Sonnenburg, Friedrich von. *See* FRIEDRICH VON SUNNENBURG.

Sonnenfeld [Adolfson], **Adolf Gustaw** (*b* Wrocław, 19 Sept 1837; *d* Warsaw, 28 May 1914). Polish conductor, violinist and composer, probably of German descent. He studied the violin with W. Lüstner and M. Schön in Wrocław, and theory with J. Seidel; from 1854 he took violin lessons from Ferdinand David at the Leipzig Conservatory, and studied composition with M. Hauptmann and E. Richter. In the autumn of 1857 he went to Warsaw as conductor of the Edward Braun Orchestra, and in 1867 formed his own Warsaw Orchestra which performed popular music in Warsaw and other Polish towns, and in Odessa and Riga. Sonnenfeld wrote five operas and six operettas (which were performed in Warsaw), incidental music, the ballet *Pan Twardowski* and much light orchestral music. Under the pseudonym Adolfson he rearranged popular works by Polish and foreign composers.

ZOFIA CHECHLIŃSKA

Sonnerie (i) (Fr.). (1) A military signal or short march sounded by trumpets (for cavalry) or *clairons* (for infantry and *chasseurs*) and restricted to the notes of the harmonic series (usually in the low register, 2nd to 8th partials). The term is opposed to both *batterie* (a signal or short march sounded by drums) and *air*. The latter signifies a signal or (more often) march, played either by fifes or oboes, usually with a drum *batterie*, by *clairons*, utilizing the 2nd to 6th partials of the harmonic series, or by *trompettes d'ordonnance*, occasionally ascending to the 12th or 13th partials). Many *sonneries* and *batteries* are given in the appendix to G. Kastner: *Manuel général de musique militaire* (Paris, 1848/*R*).

(2) In a wider sense, a hunting signal sounded on *trompes de chasse*.

EDWARD H. TARR

Sonnerie (ii). (1) The arrangement of bells in a church belfry or tower.

(2) A signal given by bells.

Sonnet. *See* SENNET.

Sonnette (Fr.). *See* HANDBELL.

Sønnichsen, Søren (*b* Copenhagen, 9 June 1765; *d* Copenhagen, 5 Nov 1826). Danish music publisher and printer. He matriculated at the University of Copenhagen when he was 15 and soon devoted his time and effort to music. Having started business as a music dealer (1783), he embarked on a publishing career in 1784 by issuing 12 minuets for small orchestra by P.M. Lem, printed from plates engraved in London. He took an interest in the process of printing from movable type after the model of Breitkopf, and in June 1787 he finally obtained a privilege as a music printer. Thereafter he published about 300 works, all in type print, securing him a lasting position in Danish music history. He was closely connected with the Royal Theatre and worked as the prompter at the opera from 1788 to 1799, partly overlapping with J.A.P. Schulz's time as director (1787–95). Concurrently he produced several important vocal scores such as Schulz's *Høstgildet* ('The harvest home'), *Peters bryllup* ('Peter's wedding') and the oratorio *Maria og Johannes*, operas by F.L.A. Kunzen and others and piano scores of several early ballets by Schall, as well as outstanding song collections, for example those by Haydn (1785), Pleyel and Mozart.

Sønnichsen also initiated the music periodical *Apollo*, which became an influential element of Danish musical life. Between 1795 and 1808 six volumes were published, containing abundant examples of Danish and foreign works of that period. As a music dealer and importer he was also remarkably active, frequently advertising new shipments of music from Amsterdam, Paris, Vienna, London and elsewhere, for which he printed small catalogues. His music hire library, begun in 1786, contained over 550 keyboard items by 1808. After 1809 Sønnichsen's activity apparently decreased, although there were occasional publications until 1816. After his death certain of his editions appeared in the catalogues of the firm of Lose.

DAN FOG

Sonninen, Ahti (*b* Kuopio, 11 July 1914; *d* Helsinki, 28 July 1984). Finnish composer. After graduating from the Kajaani training college he studied theory and composition at the Sibelius Academy (1939–47). He taught in an elementary school (1936–43) and in the school-music department of the Sibelius Academy (1957–77) and was director of the East Helsinki Music Institute (1965–84); he was made an honorary professor in 1974. His best-known compositions are the smaller ones, but he had a great success with the ballet *Pessi ja Illusia*, which premièred in Helsinki (Finnish Opera, 23 October, 1952) and was also staged in Stockholm (Swedish Royal Opera, 2 February, 1954) and broadcast on Finnish television. Sonninen's early works, particularly *Sinfonisia tuokioita* (Symphonic Moments, 1946–7) and *Rhapsody*, were bold experiments in modernism, but neo-classical impulses and the influence of archaic Finnish music came to dominate. He wrote much music for young performers.

WORKS
(*selective list*)

Dramatic: Merenkuninkaan tytär [Daughter of the Sea King], radio op, 1949; Pessi ja Illusia, ballet, 1952; Ruususolmu [Wreaths of Roses], ballet, 1956; Rajakarjalaiset häät [The Karelian Wedding], ballet, 1965; Se [It], ballet, 1971; Haavruuva [Lady of the Sea], op, 1971; music for the theatre and cinema

Orch: Vn Conc., 1943–4; Pf Conc., 1945; Sinfonisia tuokioita [Symphonic Moments], 1946–7; Finale furioso, 1950; Rhapsody, 1958

Vocal works with orch, incl. Suomalainen messiadi [Finnish Messiah], 1972, *c*70 solo songs, *c*60 choral songs, *c*15 cants., a few chbr pieces

Principal publishers: Finnish Broadcasting Corporation, Fazer

HANNU ILARI LAMPILA/ERKKI SALMENHAARA

Sonnleithner [Sonnleitner]. Austrian family of musicians and writers.

(1) **Christoph Sonnleithner** (*b* Szeged, 28 May 1734; *d* Vienna, 25 Dec 1786). At the age of two he was taken to Vienna, where he learnt music from his uncle Leopold Sonnleithner, a suburban choirmaster. Having trained as a lawyer, he was employed as a barrister by Prince Esterházy, through whom he came into contact with Haydn. His compositions include several symphonies, 36 string quartets (most written for Emperor Joseph II; four published, 1802), and some sacred music. His daughter Anna was mother of the poet Grillparzer.

(2) **Joseph Sonnleithner** (*b* Vienna, 3 March 1766; *d* Vienna, 25 Dec 1835). Librettist, archivist and translator, son of (1) Christoph Sonnleithner. From 1787 he worked at Emperor Joseph II's court, also editing the *Wiener Theater-Almanach* (1794–6). In 1802 he became a partner in the Kunst- und Industrie-Comptoir, and from February to August 1804 was artistic director of the Theater an der Wien. From 1804 to 1814 he was secretary to the court theatres in succession to Kotzebue. In this post he wrote a number of librettos, including those for Gyrowetz's *Agnes Sorel*, Weigl's *Kaiser Hadrian* and *Die Weihe der Zukunfts* and Cherubini's *Faniska*. Many were adaptations of French models, including his most famous libretto, the reworking of Bouilly's *Léonore, ou L'amour conjugal* for the first version of Beethoven's *Fidelio* in 1805.

His philanthrophic enterprises were crowned with the official foundation of the Gesellschaft der Musikfreunde in 1814. He acted as honorary secretary until his death, and bequeathed to the society his large collection of instruments and musical portraits, together with material assembled for an unwritten history of music.

(3) **Ignaz (von) Sonnleithner** (*b* Vienna, 30 July 1770; *d* Vienna, 23 Nov 1831). Lawyer and amateur singer, son of (1) Christoph Sonnleithner. A lawyer by profession, he also lectured from 1814 at the University of Vienna and was author of several well-received legal texts. Though he had no formal musical training, he was an enthusiastic singer and took bass roles in many amateur Viennese performances of both opera and sacred works. On 26 May 1815 he presented a musical soirée at his house in conjunction with his son (4) Leopold, inaugurating a series of occasional concerts that took place up until his wife's death in 1824. These brought together professional and amateur performers and featured an eclectic repertory of both instrumental and vocal works. Several of Schubert's songs and partsongs received their first public performance, including *Erlkönig* and *Das Dorfchen*.

(4) **Leopold von Sonnleithner** (*b* Vienna, 15 Nov 1797; *d* Vienna, 4 March 1873). Lawyer, musician, patron and writer, son of (3) Ignaz Sonnleithner. A distinguished lawyer, he studied music with Josef Preindl and was an accomplished performer on several instruments. From 1815 to 1824 he was the guiding light behind the celebrated concerts that his father held at the family home. He first met Schubert in 1816, while taking part in a student performance of his cantata *Prometheus*, and soon became an ardent champion of his music. He played a major role in the Schubert circle, numbering Schwind and the Fröhlich sisters among his closest friends, and in 1821 was one of the small group that underwrote the costs of Schubert's first publications, including that of *Erlkönig*. He also promoted Schubert's music at his father's concerts, and in the three concerts he conducted for the Gesellschaft der Musikfreunde in 1821 and 1822. Sonnleithner's recollections of Schubert are reflected in many early biographies, while his other extensive writings remain a valuable source of information on artistic life in early 19th-century Vienna. He also assisted Otto Jahn in the preparation of his Mozart biography.

EWAN WEST

Sonntag, Henriette. *See* SONTAG, HENRIETTE.

Sono [sonus]. A melismatic chant sung at Matins and Vespers in the Mozarabic rite; also (according to a description attributed to Bishop Germanus of Paris) the chant in the Gallican Mass liturgically equivalent to the Roman offertory. *See* GALLICAN CHANT, §7(xi), and MOZARABIC CHANT, §3(vi).

Sonoramente (It.: 'sonorously'; adverb from *sonoro*, 'sonorous', 'resonant'). An indication found particularly in violin music using the lower part of the register and most characteristically used in the years around 1900. It is also found in the form *sonore*, which is not orthodox Italian (though it is, of course, the appropriate word in French) but may derive from the commonly found abbreviation *sonor*[e]. Elgar made extensive use of both *sonoramente* and *sonore*.

ERIC BLOM/DAVID FALLOWS

Sonore. *See* SONORAMENTE.

Sons, Maurice [Mozes] (*b* Amsterdam, 13 Sept 1857; *d* London, 28 Sept 1942). Dutch violinist and teacher. He began his training in Amsterdam and later attended the Brussels Conservatory, where he studied under Colyns and Henryk Wieniawski. In 1877 he was made a *pensionnaire* by King Willem III of the Netherlands and sent to Dresden for two years, where he was taught by Eduard Rappoldi and won first prizes for violin playing and harmony. Sons was appointed violin professor at Schaffhausen in Switzerland in 1880, and remained there until 1885 when he was offered the leadership of the Glasgow Choral Union Orchestra. He also taught at the Athenaeum School of Music in Glasgow. In 1904 he became leader of the Queen's Hall Orchestra in London, continuing in that post until 1927; Henry Wood found him touchy, but greatly admired his 'grip and vitality' and enormous tone.

Sons was also a frequent solo performer; he made his London début before 1900 playing Dvořák's concerto so successfully that he was re-engaged the following season. Well known as a teacher, he was a violin professor at the RCM from 1903 to 1927 and was made a Fellow of the college on his retirement. He was eulogized as 'the first of the line of modern orchestral leaders whose relations with the conductor are those of a colleague'.

Sønstevold, Gunnar (Johannes) (*b* Elverum, 26 Nov 1912; *d* Oslo, Oct 1991). Norwegian composer and administrator. He studied music theory and composition with Karl Andersen in Oslo. During the 1930s he was pianist in Norway's most famous jazz band, Funny Boys, but he wounded his hand when fleeing to Sweden during World War II. As a refugee in Stockholm he joined Hilding Rosenberg's circle. Sønstevold returned to Norway in 1945 with his wife, Maj Sønstevold, and wrote much music for the growing film industry there, notably for the war films *Englandsfarere* ('A Boat for England') and *Kampen om tungtvannet* ('Operation Swallow'). In 1949 he began a 20-year collaboration with the director Arne Skouen, and in 1955 he received an award from the Norwegian Film Critics' Guild for his music to Skouen's *Det brenner i natt* ('Tonight it Will Burn'). The music of these scores often contrasts with the action, and it shows an inventive use of percussion. Sønstevold spent most of the period 1960–67 in Vienna, where he studied 12-note theory and composition with Hanns Jelinek; the works he composed after this are more consistent in style and expression, and his concert works gained broader and larger forms. From 1966 to 1974 he was head of the music division of Norwegian television, in which he promoted modern Norwegian music and experimental drama. He later founded a community music school with his wife.

Sønstevold composed ballet scores and incidental music for theatrical and broadcast productions, including Jens Bjørneboe's *Semmelweiss*, Henrik Ibsen's *Catilina* and Georg Büchner's *Woyzeck*; his music for Shakespeare's *The Tempest* (1957) was the first Norwegian work involving electronics.

One of his best-known works is *Litani i Atlanta* ('Litany in Atlanta', 1971), written in memory of Louis Armstrong and scored for a combination of amateur and professional musicians, reflecting Sønstevold's wish to create a common platform and understanding; it includes passages of jazz and improvisation. Sønstevold was the joint author (with Kurt Blaukopf) of a study of popular music, *Musik der einsamen Masse* (Vienna, 1968).

ARVID O. VOLLSNES

Sønstevold, Maj (*b* Soleftea, 9 Sept 1917; *d* Oslo, May 1996). Norwegian composer and teacher of Swedish birth. She studied the piano in Stockholm and studied jazz, improvisation and composition in London with Billy Mayerl. In 1945 she settled in Norway with her husband, the composer Gunnar Sønstevold, but between 1960 and 1967 she studied in Vienna, with Hanns Jelinek and Karl Schiske. From 1970 to 1985 she taught at the University of Oslo. Known for her ability to compose at speed, she was in demand for films, radio and the theatre, and by 1970 she had composed music for as many as 50 dramatic productions, some in collaboration with her husband. These are eclectic in style, matching the subject in hand, and show a fine sense of characterization. Her other works, by contrast, have a distinctive personal lyricism. Her love for jazz is often evident, and some pieces, such as the beautiful *Neun Haiku* ('Nine Haiku Poems'), use strict 12-note technique, but without lapsing into academicism. Sønstevold was especially successful at writing and promoting music for children and young people. Her writings include a piano method, *ABC-jazz* (Drammen, 1947), and *Veien min vise vil vandre* (Oslo, 1977).

WORKS

Orch: 6 par sko [6 Pairs of Shoes], 1962; Sørlandssommer [Summer at the South Coast], 1966; Den gamle majors forunderlige drømme [The Strange Dreams of the Old Major], 1969; Festival Ouverture, 1983

Chbr: Sweet and Swing, 3 pf, 1947; Theme with 5 Variations, 2 descant insts, perc, 1965; Prelude and Fugue, for B♭ clar, t trbn, pf, 1964, rev. 1990; Theme with Variations, hp, bn, cel, hpd, 1968; 3 Spanske akvareller [3 Spanish Aquarelles], fl, hp, ?1972; Insektlek (Play of Insects), fl, hp, cel, perc, vc, 1979; Men det var min melodi! – sa kontrabassen [But this was my melody! – the bass said], chaconne, db, pf, 1983; Erindring [Remembrance], ob, hp, 1986; I takknemlighet [In Gratitude], fugue, a fl, bn, 1993

Dramatic (some in collab. with G. Sønstevold): at least 10 film scores; music for plays, radio and TV dramas

ARVID O. VOLLSNES

Sontag [Sonntag], **Henriette (Gertrud Walpurgis)** (*b* Koblenz, 3 Jan 1806; *d* Mexico City, 17 June 1854). German soprano. The daughter of the actor Franz Sonntag and the actress and singer Franziska Sonntag (née Martloff, 1798–1865), and sister of the actor Karl Sonntag, she first studied with her mother. Her earliest public appearance was in Darmstadt aged six in Kotzebue's play *Die Beichte* (5 March 1811), her first in opera as Salome in Kauer's *Das Donauweibchen*; and she continued to appear in juvenile parts, including some in Prague, where her mother settled after Franz's death in 1814 and was engaged by Liebich. Though under age, she was accepted by the conservatory (1815), studying singing with Anna Czegka, theory with Josef Triebensee and the piano with Pixis. Her juvenile appearances in Prague were an annoyance to the conservatory, and according to one story, she was expelled in 1821, the year in which she made her mature début as the princess in Boieldieu's *Jean de Paris*. She moved to Vienna in 1822, where she sang in German and Italian opera and greatly benefited from the influence of Joséphine Fodor-Mainvielle. In 1823 Weber heard her in Rossini's *La donna del lago*: clearly she had greatly developed, for when he had heard her in Prague the year previously he had thought her, 'a pretty girl, but ... still very much a beginner, and rather goose-like', but now he offered her the title role of *Euryanthe*. On 25 October 1823 she triumphed; she also sang with great success, and to the composer's pleasure, in the premières of Beethoven's Ninth Symphony and *Missa solemnis* (7 and 13 May 1824). After a brief but triumphant season in Leipzig (1825), when she sang in *Der Freischütz* and *Euryanthe*, she was engaged for the Berlin Königstädter Theater, making her début on 3 August 1825 as Isabella (*L'italiana in Algeri*).

Sontag's international career dates from her brilliant Paris début at the Théâtre-Italien in 12 roles, initially as Rosina on 15 May 1826. After further German appearances, she returned in January 1828, including Donna Anna and Semiramide in her repertory. At Weimar, she greatly impressed Goethe, who wrote the poem *Neue Siren* for his 'fluttering nightingale'; in Berlin, enthusiasm reached the proportions of a *Sontagsfieber*, much derided by her opponents. Her English début was also in 1828, as Rosina at the King's Theatre on 19 April. In London her repertory included Carolina in *Il matrimonio segreto*; and she herself contracted a secret marriage with Count Carlo Rossi, hoping thereby not to compromise his career in the Sardinian diplomatic service. When the King of Prussia conferred on her a patent of nobility (as Von Lauenstein), the obstacle of her low birth was removed, and she joined her husband openly in The Hague. But she was obliged to renounce the stage in 1830, and for some years made only select private and concert appearances in The Hague, Frankfurt, St Petersburg, Berlin and other cities to which her husband was posted. She eventually returned to the stage when financial difficulties intervened and when the abdication of the King of Sardinia ended Rossi's career in 1849. Lumley offered her £6000 for a six months' contract at Her Majesty's, where she sang Rossini, Donizetti and Mozart. After an English tour (1849), she went to Paris, returning to create Miranda in Halévy's *La Tempesta* (Her Majesty's, 8 June 1850) and again singing in Paris and London in 1851. She renewed her triumphs in Germany, and in 1852 went with her husband to America. In 1854 she toured Mexico with an Italian company, and her last appearance was as Lucrezia Borgia on 11 June. The following day she was taken ill with cholera, of which she died.

In spite of the long interruption to her career, Sontag was one of the most consistently successful and popular German sopranos of the first half of the 19th century. Of great personal beauty, she possessed a lively and attractive voice which she used with great skill: her range was from *a* to *e'''* and technically she was said to be the equal or superior of any singer of her day, including Catalani and her bitter rival Malibran. But she was essentially a vocalist, a singer of light and brilliant parts which

Henriette Sontag as Agathe in Weber's 'Der Freischütz', Act 3 scene ii: lithograph by Kloje and Alsleben

demanded little in the way of dramatic feeling beyond her natural charm of presence. J.E. Cox gives a description of her 1828 London appearances:

Without being deficient in strength, [her voice] is not powerful, and its quality is anything rather than disagreeable, though not remarkable for its purity. Its greatest merit consists in its wonderful flexibility.... Execution is with her everything, expression as nothing ... that coolness of temperament which her acting seems to denote has most likely exercised a joint influence in determining the character of her singing. ... She had cultivated the imagination and the fancy to a degree they had never reached before. No singer had ever combined so variously, or executed in the light, brilliant, inventive, fresh and above all in the pleasing manner she attained. In these particulars she stood alone.

However, in the course of an eloquent obituary tribute, Berlioz described her as possessing

all the gifts of art and nature: voice, musical feeling, dramatic instinct, style, exquisite taste, passion, reflectiveness, grace, everything and still something more. She sang bagatelles, she played with notes as no Indian juggler has ever juggled with golden balls; but she also sang music, great and immortal music, as musicians sometimes dream of hearing it sung.

On her return to the stage in 1849, Sontag's vocal powers appear to have been undiminished, her artistry more mature; though she had kept her voice fresh in the years of retirement, she had also always refused to sing any part that did not lie easily within her range, declining, for instance, to sing Spontini in Berlin. In her final years in America, she benefited from the climate and was able to sing two operas in an evening without fatigue. Her repertory comprised much Rossini (including contralto roles transposed for her), Donizetti especially, Bellini and Mozart: Berlioz gave a vivid and detailed appreciation of her Susanna in the last act of *Figaro*.

JOHN WARRACK

Sony. Japanese record company and general electrical manufacturer. It was founded by Akio Morita and Masaru Ibuka as the Tokyo Tsushin Kogyo electronics company in 1946 and developed the first Japanese tape recorder four years later. In 1958 the name was changed to Sony Corporation, and in the following decades the company found international markets for its pocket-sized radio, Trinitron TV set, Walkman cassette player, CD and other consumer products.

Sony entered the music industry in 1968 by becoming the Japanese partner of CBS Records of the USA, owner of the Columbia and Epic labels. CBS-Sony eventually became the largest record company in Japan, selling both local popular music and American pop and classical recordings. In 1988 Sony purchased CBS Records for $2 billion. The corporate name became Sony Music Entertainment soon afterwards, although Sony retained the Columbia and Epic symbols around the world for its popular music recordings. Under Norio Ogha (a former concert singer), Sony continued to run the record company from New York and maintained its position as an all-round record company with strong coverage of classical music and jazz. Sony Classical took on a more populist approach when Peter Gelb succeeded Gunther Breest as president in 1995, and in 1998 it had the world's biggest-selling album in James Horner's soundtrack music for the film *Titanic*.

Sonzogno. Italian firm of publishers. It was founded by Giovanni Battista Sonzogno at the end of the 18th century, but was involved in music publishing from the last 30 years of the 19th century only, under Edoardo Sonzogno (*b* Milan, 21 April 1836; *d* Milan, 14 March 1920). Edoardo started publishing in 1861, but his first music series was La Musica per Tutti (piano reductions of operas by Rossini, Bellini, Donizetti, etc., with prefaces by Amintore Galli), which came out in 1874. The decision to publish low-cost collections of enormously popular music was in line with the company's policy in book publishing, and continued with the series Teatro Musicale Giocoso (piano reductions of operettas, from 1874), Repertorio di Opere Comiche, Valzer Celebri and Pantheon dei Pianisti (from 1875) and Florilegio Melodrammatico (from 1888). Also from 1874, Sonzogno began to acquire from different French publishers the rights to perform and publish *opéras-comiques*, operettas and operas by French composers such as Adam, Auber, Jonas, Lecocq, Maillart, Offenbach, Hervé, Delibes, Thomas (*Mignon* and *Hamlet*, 1875), Bizet (*Carmen*, 1876),

Halévy, Gounod, Massenet, Lalo, Reyer and Berlioz. French pieces predominate in the 1887 catalogue, with a smaller number of works by Italian composers (such as Auteri-Manzocchi, Bottesini, Galli, Alberto Giovannini, Spiro Samara and Usiglio).

In 1875 Sonzogno took on the role of impresario with a season of operettas at the Teatro S Radegonda in Milan. He continued this activity in the 1880s in theatres in Milan, Rome, Naples, Genoa, Nice, Florence and Venice. The years 1888 to 1892 at the Teatro Costanzi in Rome were the most important. In the 1880s Sonzogno added the publication of two music periodicals to his activities, both edited by Galli: *Il teatro illustrato* (from 1881) and *La musica popolare* (from 1882). In 1886 they were merged as *Il teatro illustrato e la musica popolare* which survived until 1892.

The company announced four competitions for one-act operas in 1883, 1888, 1890 and 1902, aimed at discovering new composers and new works; the second competition was won by Mascagni's *Cavalleria rusticana*. The triumph of *Cavalleria* marked an important watershed in the history of the company: Sonzogno became the supporter of the *verismo* composers (Giordano, Cilea, Mascagni and Leoncavallo). The character of the company's list changed, and in the 1904 catalogue works which Sonzogno controlled were divided equally between French operas and those by young Italian composers.

In the 1890s Sonzogno's work as an impresario also increased. From 1894 to 1907 he concentrated on the Teatro Lirico Internazionale in Milan (a restored Teatro della Cannobiana), which Sonzogno himself had constructed. These years also saw fierce competition between Sonzogno and Ricordi.

In December 1909 Edoardo Sonzogno decided to retire, and entrusted his business to his two nephews: the printing and book publishing side to Riccardo (*b* 1871; *d* 7 July, 1915) and music publishing to Lorenzo (*b* Milan, 21 Jan 1877; *d* Milan, 3 April 1920). However at the beginning of 1911 Edoardo took back full power from Lorenzo and handed it over to Riccardo. Lorenzo then established the Casa Musicale Lorenzo Sonzogno which acquired the Italian rights to new operas by Humperdinck, Richard Strauss, Rimsky-Korsakov, Pizzetti, Wolf-Ferrari, Franchetti and Mascagni. When Riccardo died in 1915, Lorenzo amalgamated the two Sonzogno companies under the name Nuova Casa Musicale Sonzogno Società Anonima. He acquired operettas by Kálmán, Lehár, Leoncavallo, Giuseppe Pietri, Lombardo and Mascagni, and founded a film company. In 1920, when both Edoardo and Lorenzo died, the management of the company was handed on to Edoardo Banfi and then Leopoldo Barduzzi, but financial difficulties brought it to the brink of bankruptcy in 1923.

At the end of that year, the company was acquired by the industrialist Piero Ostali who undertook its reorganization. He maintained the company's historic legacy, adding new operas and composers (Wolf-Ferrari, Smareglia, Erardo Trentinaglia, Lattuada, Pratella, Lualdi and Porrino), and acquired new pieces for publication in Italy (by Musorgsky, Debussy, Ravel, Milhaud, Honegger and Ibert). From 1924 to 1926 the company published the journal *Musica e scena*. A considerable part of the company's property was destroyed in 1943, but reconstruction was carried out by Enzo Ostali, who set the company's activity back on the same lines as those of his father. In recent years the company, now known as Casa Musicale Sonzogno, has been involved in promoting the *verismo* repertory, as well as supporting young Italian composers.

BIANCA MARIA ANTOLINI

Soot, Fritz [Friedrich] **(Wilhelm)** (*b* Wellesweiler-Neunkirchen, Saar, 20 Aug 1878; *d* Berlin, 9 June 1965). German tenor. He studied with Scheidemantel in Dresden and made his début there in 1908 as Tonio (*La fille du régiment*). While at Dresden he created the Italian Tenor in *Der Rosenkavalier* (1911). He was a member of the Stuttgart Opera (1918–22), then moved to the Berlin Staatsoper, where his creations included the Drum Major in *Wozzeck* (1925). He was also the first Berlin Laca in *Jenůfa* (1924), Mephistopheles in *Doktor Faust* (1927) and Babinski in *Švanda the Bagpiper* (1929). But it was as a Wagner tenor that he was best known; in 1924 and 1925 he sang Siegmund, Siegfried, Tristan, Erik and Walther at Covent Garden, and later sang Parsifal. His repertory also included Palestrina and Otello. He returned to the Berlin Staatsoper after World War II and continued to sing character roles there until 1952, taking part in the première of Dessau's *Die Verurteilung des Lukullus* (1951).

HAROLD ROSENTHAL/R

Sopeña (Ibáñez), Federico (*b* Valladolid, 25 Jan 1917; *d* Madrid, 22 May 1991). Spanish musicologist and music critic. He received his early musical education in Bilbao and Madrid (1927) and continued it while studying law at Madrid University; he took the doctorate in theology at the Università Gregoriana, Rome. As a music critic he worked for the newspaper *Arriba* and later for *ABC*. He was secretary (1940–43) and later head (1971–2) of the Comisaria General de la Música and director (1951–6) and professor of aesthetics and musicology at the Madrid Conservatory. In 1952 he became director of the Sección de Música Contemporánea of the Instituto Español de Musicología, and founded its journal *Música*. In 1958 he became a member of the Real Academia de Bellas Artes de S Fernando, serving as its director from 1969 until his death; he also directed the Academia de España, Rome (1977–81) and the Museo del Prado, Madrid. Sopeña has written many sociologically focussed books on music as well as essays on religion; he was an indefatigable lecturer and journalist, covering the major musical events throughout Spain.

ISRAEL J. KATZ

Sophie Elisabeth, Duchess of Brunswick-Lüneburg (*b* Güstrow, 20 Aug 1613; *d* Lüchow, 12 July 1676). German composer and poet. She received a musical training at the court of her father, Duke Johann Albrecht of Mecklenburg-Güstrow, where the orchestra was noted at the time for its employment of outstanding English instrumentalists, among them William Brade. In 1628 she was obliged to flee from the Thirty Years War, and for some years she lived at the Kassel court, a lively centre of music. In July 1635 she married Duke August the Younger of Brunswick-Lüneburg, the learned founder of the Wolfenbüttel library. The court orchestra, established for their Brunswick residence in 1638, twice required reorganization, in 1644 after the move to the ancestral castle at Wolfenbüttel and again in 1655; on each occasion Sophie Elisabeth was responsible for it. Heinrich Schütz, who was connected with the court for almost 30 years and was a frequent guest at Brunswick and Wolfenbüttel, was her musical adviser. Chrysander described the correspondence between them. Sophie Elisabeth was responsible for Schütz's initial engagement as *absentes* Kapellmeister in 1655. In 1644, referring to 'newly despatched arias' (probably for the *Theatralische neue Vorstellung von der Maria Magdalena*, on which they possibly collaborated), he commended her noticeable improvement 'after a little guidance from me'. In 1661 he called her a 'uniquely accomplished princess, particularly in the worshipful calling of music'.

Sophie Elisabeth's compositions, the earliest of which date from her youth at Güstrow, have for the most part survived anonymously. Most are hymn melodies, a genre that continued to occupy her during her widowhood at Lüchow, where she lived from 1666. The melodies of the two printed collections (1651 and 1667) are aria-like in idiom and more suited to private than to congregational worship. Sophie Elisabeth also contributed to numerous secular celebrations and theatrical performances, although the extent of her creative contributions to these events is not known in detail. Allegorical celebratory plays, ballets and masquerades were performed annually, most of them in honour of Duke August's birthday and with the participation of the ducal family. Sophie Elisabeth played an essential part in establishing this tradition (*Seelewig* by G.P. Harsdörffer and S.T. Staden was given in 1654) and apparently composed the music for most of the productions up to 1656; only a little of it has survived. In *FriedensSieg* the spoken voice, solo and choral singing, instrumental music and dance are combined within an operetta-like action, while *Freüdensdarstellung* is conceived in the manner of a 'Gesangsaufzug' (Geck, 347–9), with instrumental pieces, lieder and a *Schlusschor*.

WORKS

Edition: *Sophie Elisabeth, Herzogin zu Braunschweig und Lüneburg: Dichtungen*, i: *Spiele*, ed. H.-G. Roloff (Frankfurt, 1980)

SINGSPIELE

Neu erfundenes FreudenSpiel genandt FriedensSieg (J.G. Schottelius), solo vv, chorus, insts, Brunswick, 1642 (Wolfenbüttel, 1648, 2/1649); music exx. repr. in Schneider
WaldGott Pan (Schottelius), 1643, music lost; text in J.G. Schottelius, *Fruchtbringender Lustgarte* (Lüneburg, 1647/*R*)
Die Gebuhrt unsers Heylandes (Schottelius), 1645, music lost; text in J.G. Schottelius, *Fruchtbringender Lustgarte* (Lüneburg, 1647/*R*)
Glückwünschende Freüdensdarstellung Dem . . . Herrn Augusten Hertzogen zu Brunschwig und Lüneburg, 4vv, chorus 4vv, 4 str, bc (Lüneburg, 1652, 2/1655); facs., incl. score, in Bircher and Bürger, 114–29; two sections in *MGG1*, xiv, pls.43–4; text in Roloff, 9

HORST WALTER

Sophocles [Sophoklēs] (*b* Colonus, nr Athens, *c*496 BCE; *d* 406 BCE). Greek tragic poet.

1. Sophocles and music. 2. Later treatments.

1. SOPHOCLES AND MUSIC. According to an anonymous *Life* (Pearson, 1917), he received a thorough traditional training in *gumnastikē* (rhythmic, often dance-like exercises), and *mousikē* (poetry with accompanying music), in which the celebrated Lamprus was his teacher (*see* EDUCATION, CLASSICAL, and PAIDEIA). At 16, an unusually apt pupil, he was chosen to lead the choral paean that celebrated the defeat of the Persians at Salamis (480 BCE). When he entered the tragic competitions in 468 BCE he defeated Aeschylus. Of more than 100 tragedies and satyr plays, only seven tragedies have survived intact, and a considerable portion of a satyr play, the *Trackers*; the tragedies date from the last 35 to 40 years of his life. It must have been much earlier in his career that he played the kithara in the production of the *Thamyras* and, consequently, was depicted with a kithara in the Stoa Poikile, the 'Painted Porch' at Athens (*Life*, 5): the Stoa was completed in or soon after 460 BCE. The weakness of his voice (*mikrophōnia*) caused Sophocles to abandon his appearances as an actor (*Life*, 4). Sophocles' kithara playing, noted as exceptional by the author of the *Life*, was probably uncharacteristic in stage practice at that time. The Byzantine treatise *On Tragedy*, 5 and 12 (ed. Browning), however, regards the use of the kithara in tragedy as a characteristic of the tragedies of Sophocles and Euripides. The treatise also attributes to Sophocles the first use of the Lydian and Phrygian *tonoi* (the latter used 'dithyrambically') in tragedy.

Throughout the seven extant tragedies, the scattered references to music bear markedly less symbolic weight than the references in the plays of Aeschylus. They occur almost invariably in choral or monodic lyric; two exceptions are Creon's contemptuous comment on the futility of songs to ward off death (*Antigone*, 883: *aoidas*) and Electra's description of how Clytemnestra celebrates the anniversary of her husband's murder with singing and dancing (*Electra*, 280: *chorous*).

In the *Ajax*, the earliest surviving play (probably before 441 BCE), Ajax has suffered unendurable shame; the chorus asserts that his mother's mourning will be no nightingale's lament but a scream of 'ailinon ailinon' and the high-pitched singing of dirges (627–31; *thrēnēsei*, 'she will sing a *thrēnos*'). Before long the chorus, typically imperceptive, has come to hope that a happy outcome may be possible after all. It cries out joyously to Pan as *choropoios*, 'maker of dances' that are 'self-taught' (698, 700: *autodaē*; cf *Odyssey*, xxii.347: *autodidaktos*). Here Pan is the rustic equivalent of Apollo *Mousagētēs* among the Olympians.

Musical references in the other surviving plays similarly express sorrow or ill-founded joy. In the *Antigone* (441 or 442 BCE) Sophocles speaks of the Muses as 'fond of the aulos' and associates them with Dionysus (955–65); more than 80 years later, Plato declared musical consciousness to be a gift from 'the Muses, Apollo and Dionysus' (*Laws*, ii.672c8–d3). The choral climax of the *Antigone* is a brilliant hyporcheme (*huporchēma*, dance-song, 1115–52), astonishing even for Sophocles, in honour of Dionysus, who is invoked as *chorag' astrōn*, 'leader [literally 'chorus-leader'] of the choir of stars' (1146). The *Oedipus tyrannus* (*c*430 BCE) has one passage that illustrates the importance of choral songs in Greek life. The chorus, now suspicious of Oedipus and musing on bold and godless acts, cries out: 'If such deeds are in honour, wherefore should we join in the sacred dance?', that is, 'why maintain the solemn rites of public worship?' (895–6, trans. Jebb). The sacred *choroi* referred to here in *choreuein* represent, for Sophocles, the heart of Greek religious observance.

The music of the panpipe in the *Philoctetes* (409 BCE; 213, *molpan suringos*) serves only as a contrast with the wounded hero's cries of pain. The *Women of Trachis* (possibly as early as 430 BCE) has a remarkable statement (216–17) by the chorus: 'and I will not disdain the aulos, O master [*tyranne*] of my soul'; the vocative phrase must refer to the aulos, which is here associated with the wild Bacchanalian dance to express the chorus's feelings of joy.

The *Oedipus at Colonus* (401 BCE; posthumously produced) contains a famous ode to Colonus, 'where the clear-voiced nightingale sings constantly' and 'choirs of Muses' love to come (671–2, 691).

The extensive fragments (see especially Pearson, frags.238–45, from the *Thamyras*) show that Sophocles could deal with technical details as knowledgeably as any Hellenic poet; however, the material is too diverse and complex to be summarized without thorough examination. (On the actual use which Sophocles may have made of musical accompaniment, *see* EURIPIDES, §1.) In general, the references to music in Sophocles are used to strengthen the emotional impact of a scene and to heighten the dramatic contrasts of the plot.

2. LATER TREATMENTS. The three 'Theban' plays of Sophocles, *Oedipus tyrannus*, *Oedipus at Colonus* and the *Antigone*, are his only surviving trilogy, though originally presented at separate festivals of the Great Dionysia. All have inspired memorable music. The compelling power of *Oedipus tyrannus*, with its close-wrought plot, and a tragic heroine such as Antigone have appealed greatly to opera librettists and composers. The *Electra* has offered similar inspiration, whereas the remaining three tragedies and the satyric *Trackers* (*Ichneutae*) have been the source mainly of incidental music, with the notable exception of Handel's Hercules drama based on *The Women of Trachis*.

WORKS BASED ON SOPHOCLES' PLAYS
(selective list)

OPERAS

Antigone: Orlandini, 1718; Galuppi, 1751; G.B. Casali, 1752; Latilla, 1753; Giuseppe Scarlatti, 1756; Bertoni, 1756; Vincenzo

Ciampi, 1762; G.F. de Majo, 1768; Traetta, 1772; Mysliveček, 1774; Mortellari, 1776; Bortnyansky, 1776, as Creonte; Giuseppe Gazzaniga, 1781; Zingarelli, 1790; Peter Winter, 1791; Francesco Bianchi, 1796; Honegger, 1927; Pallandios, 1942; Orff, 1949
Oedipus tyrannus: N.-J. Méreaux, 1791, as Oedipe et Jocaste; Leoncavallo, completed by Pennacchio, 1920; Enescu (tragédie lyrique, 3), 1921–31, Act 3 only; Stravinsky (opera-oratorio), 1926–7; Partch, 1952; Orff, 1959
Oedipus at Colonus: Guillard, 1786; Sacchini, 1786; Zingarelli, 1802; Radoux-Rogier, 1901; Enescu (tragédie lyrique, 4), 1921–31, Act 4 only
Electra: Lemoyne, 1782; Haeffner, 1787; Strauss, 1909

SEMI-DRAMATIC, CHORAL, SOLO VOCAL, ORCHESTRAL, INSTRUMENTAL

Ajax: Cless, 1587, Ajax lorarius; Sterndale Bennett, 1875; Macfarren, 1882; van Lier, 1933
Antigone: Mendelssohn, 1841; Saint-Saëns, 1894; C.F.A. Williams, choruses, *c*1900; Gnesin, 1913; Honegger, 1922; Pijper, 1922; Väinö Raitio, sym. poem, 1922; Mulè, 1924; Georges Lonque, cant., 1929; Carlos Chávez, 1932 and 1933; Binet, 1937; Chailley, 1939; Patrick Hadley, 1939; Oboussier, 1939
Electra: Cannabich, musical declamation, 1781; Richard Strauss, chorus, ?1881; Gouvy, dramatic scenes, *c*1890; Bantock, 1909
Oedipus tyrannus: Andrea Gabrieli, choruses, 1585; J.K. Paine, 1881; Stanford, 1887; Il'yinsky, *c*1890; von Schillings, sym. prol, 1900; Pizzetti, 3 orch preludes, 1903; Flor Alpaerts, 1906; Gnesin, 1915; Glier, 1921; Frank Martin, 1923; Gaito, 1926; Antheil, 1928; Toch, radio music, 1932; Madetoja, 1936; Delvincourt, 1939; Virgil Thomson, 1941; Messiaen, music for an Oedipus scene, 1942; Akses, 1943; Willy Burkhard, 1944; Honegger, 1948
Oedipus at Colonus: Rossini, 1817; Mendelssohn, 1845; Gouvy, dramatic scenes, *c*1882; Bantock, ov., 1911; Frank Martin, 1924; Antheil, 1928; Karel, 1931; Toch, radio music, 1932; Pizzetti, 1936; Robin Orr, 1950
Philoctetes: Il'yinsky, *c*1890; Elliott Carter, 1936
The Women of Trachis: Handel, *Hercules*, 1745; J.F. Reichardt, Hercules Tod (melodrama), 1802; Hauer, choral songs, 1914
Trackers: Roussel, La naissance de la lyre, 1925; Mulè, 1927; Capdevielle, 1943–8

WARREN ANDERSON/THOMAS J. MATHIESEN (1), ROBERT ANDERSON (2)

Sopra (It.: 'above'). A word used in piano music to indicate in passages for crossed hands which hand should be above the other. *See also* COME SOPRA.

Soprano (It.). A term signifying in normal practice the highest musical range, used both in instrumental and vocal music: thus, 'soprano clef', 'soprano part', 'soprano register', 'soprano saxophone'. In vocal music, where it is most common, the word generally refers directly to the singer: with female voices, it is frequently modified to describe the specific type of voice, such as 'lyric soprano' or 'dramatic soprano'; it is also used for a boy's treble voice ('boy soprano') and in the 17th and 18th centuries was used for the adult male CASTRATO with a high range.

The range of the soprano voice normally lies between *c′* and *a″*, but can be extended at either end, particularly in solo writing. The word itself is built on the root 'sopra' or 'sovra' ('above', 'over') and derives (through such forms as 'supremus', 'supranus', 'sovranus' and 'sopranus') from the Latin 'superius', the commonest term for the top voice in 15th-century polyphony. Pietro Aaron (*Thoscanello de la musica*, 1523) used it as the equivalent of 'canto'. Zarlino (*Le istitutioni harmoniche*, 1558, p.281) remarked that the canto is 'a voice called by some the soprano because of its supreme position', and used the two terms with almost equal frequency, writing the canto mostly in the mezzo-soprano clef and the soprano mostly in the soprano clef. Vicentino (*L'antica musica ridotta alla moderna prattica*, 1555) used only the word 'soprano' and almost exclusively the soprano clef, reflecting the interest of the Ferrarese court (where he worked) in music for female sopranos.

1. History to *c*1600. 2. 1600–1800: (i) Italy (ii) France, Germany and England (iii) Mozart's sopranos. 3. 19th century. 4. 20th century: (i) Dramatic sopranos (ii) Lyric sopranos (iii) Revivals (iv) 20th-century music.

1. HISTORY TO *c*1600. In the earliest Western polyphony, top vocal parts were written for male voices, either high tenors or falsettists. Although the use of boys' voices in the performance of polyphony is mentioned as early as the 9th-century *Scolica enchiriadis*, no music was written before the early 16th century that regularly carried top voices above *d″* and would require either boys or female sopranos. By the late 1520s, however, particularly at Florence, a motet repertory came into existence that depended on an élite corps of boy sopranos capable of reaching notes as high as *g″*, inaccessible to adult falsettists. Moreover, in Florence during the ensuing decades music was composed for secular festivities that specifically required female voices. The music for the festivities attending the marriage of Cosimo I, Duke of Florence, in 1539 included some compositions in which two or even three parts ascend to *f″* and are notated in the soprano and treble clefs.

Except in convents, where women actively performed and composed (Kendrick, 1996), women singers were excluded from participating in ecclesiastical music in the early centuries of the Christian church, and only during the first half of the 16th century began to appear as regular participants in entertainments at various north Italian courts. Among powerful and influential noble families there were women who distinguished themselves as keenly talented and deeply committed musicians, notably Isabella d'Este, Marchioness of Mantua (1474–1539), avid patron of the arts and of music in

particular, instrument collector, lutenist, keyboard player and singer. Even in Isabella's generation, however, secular music (notably the frottola repertory) was published in versions suited for all-male ensembles. Only towards the middle of the century did composers begin to publish a repertory – that of the madrigal – that called for the newly cherished sound of the female voice (e.g. Cipriano de Rore's first and second books of madrigals, 1542 and 1544, which clearly require a soprano for the top line, and Luca Marenzio's second book of five-part madrigals, 1581, which often requires two sopranos).

The late 16th century saw the beginning of the cult of the soprano diva. At the Ferrara court the sopranos Lucrezia Bendidio, Laura Peverara and Tarquinia Molza were praised by the poet Torquato Tasso in over 100 *rime d'amore*; large numbers of madrigals were dedicated to Peverara (Newcomb, 1975), and Molza is probably the earliest singer for whom there exists a published biography (D. Vandelli: *Opuscoli inediti di Tarquinia Molza modenese*, Bergamo, 1750). Similarly admired was Vittoria Archilei, star of the Florentine *intermedi* of 1589; she apparently sang the title role in Peri's *Euridice* (1600, Florence) and was praised by Peri as 'the Euterpe of our age'. It was with the expressive power of Caterina Martinelli in mind that Monteverdi composed the lament for *Arianna* (1608, Mantua), but as she died before the first performance the virtuosa Virginia Andreini [née Ramponi] performed the role at short notice and distinguished herself; Federico Follino reported how after the first performance 'there was not a woman who did not shed tears' (A. Solerti: *Gli albori del melodramma*, 1904, ii, 145).

2. 1600–1800.

(i) Italy. Throughout the 17th century, most female roles in opera were written in the soprano range, the exception being the occasional character part (older women, nurses and the like, which were sometimes written for contraltos, sometimes for male tenors or even basses; *see* TRAVESTY); however, the term 'soprano' was most often applied to the high castrato singer (*see* PRIMO UOMO and PRIMA DONNA) who might take the leading male role or, in papal states where women were still not permitted to perform publicly, the leading female role. The female roles of Bradamante and Angelica in the first performance (1642, Rome) of Luigi Rossi's *Il palazzo incantato* were both taken by castratos, Marc'Antonio Pasqualini and Loreto Vittori. Leading female sopranos included Anna Renzi, who created Octavia in Monteverdi's *L'incoronazione di Poppea* (1643, Venice) and about whom a book of laudatory poems was published (*Le glorie della signora Anna Renzi*, 1644), and Giulia Masotti, active in Rome in the 1660s and later in Vienna, praised by the contemporary tenor Nicola Coresi as 'the most superb woman in the world'. In the 17th century, solo parts for both female sopranos and soprano castratos were most usually written in the range c' to g''; Carissimi's cantata *Apritevi inferni* (before 1663) provides one of the earliest instances of a soprano being called on to sing the note c'''.

Female sopranos were also sometimes cast as men. The soprano Margherita Durastanti specialized in male roles; she created the title role of Handel's *Radamisto* (1720, London) but was replaced in the first revival by the castrato Senesino, when she moved to the role of Radamisto's wife. This interchangeability of sopranos and castratos applied to female as well as male roles. After singing Mary Magdalene in the première of Handel's *La Resurrezione* (1708, Rome), Durastanti, because of the continuing papal ban in Rome on public singing by women, was replaced by a castrato. Two of the most important sopranos of this period were Francesca Cuzzoni (who created, among her many Handelian parts, Cleopatra in *Giulio Cesare*, 1724, and Rodelinda, 1725) and Faustina Bordoni; the two appeared on stage together in operas at the Royal Academy of Music from 1726 to 1728. Their intense competition, fuelled by partisan fans and a spate of broadsides in favour of one or the other, erupted into an onstage fight in Bononcini's *Astianatte* (1727). Their vocal styles were complementary: Cuzzoni had a range of c' to c''' and excelled in slow, legato arias, while Bordoni's speciality was rapid passage-work and she had a somewhat lower range. Of Handel's later Italian sopranos the most important was Anna Strada del Pò, whose roles included Ginevra (*Ariodante*) and Alcina.

(ii) France, Germany and England. The use of castratos (soprano or contralto) in female roles was not widely adopted outside the Italian papal states, even in Catholic cities. Le Cerf de la Viéville wrote (*Comparaison de la musique italienne et de la musique française*, 1704–6) that 'a third of the leading roles in the Operas of Lully are those of ordinary tenors; our women are always women'. Castratos were not used in French opera but they did appear in Italian opera productions: in Cavalli's *Xerse* (1660, Paris) the female role of Amastre was taken by the castrato Francesco Maria Melani. In France, the term 'soprano' was applied only to Italian singers (male or female) well into the 18th century; DESSUS was preferred as late as the first edition of Rossini's *Guillaume Tell* (1829). The most famous soprano (or *dessus*) of Lully's era was Marie Le Rochois, who created six of Lully's leading female roles and was noted for her powerful acting and fine declamation.

In Rameau's operas the leading soprano was Marie Fel, who was noted by Grimm (*Le petit prophète de Boehmischbroda*, 1753) for her 'light and brilliant voice, its tone ringing like silver, as pure as gold from the furnace'. She sang at the Académie Royale de Musique in over 100 roles, 1734–57, creating nine for Rameau. Her successor and pupil Sophie Arnould created Iphigénie in Gluck's *Iphigénie en Aulide* (1774) and in the same year sang in the première of his *Orphée*; the more powerful Rosalie Levasseur took the principal soprano roles in *Alceste* (1776), *Armide* (1777) and *Iphigénie en Tauride* (1779).

Italian singers dominated the stage in German-speaking countries, especially at Dresden and Vienna. In sacred music for the Lutheran service, including cantatas, passions, masses and motets, the soprano solos as well as the choral parts were intended for boys; Bach's cantata *Jauchzet Gott* may be his only work for soprano not intended for a boy – its virtuoso demands and its range (up to c''') suggest that it may have been intended for a Dresden opera singer, a castrato or a female soprano (see R. Marshall, 'Bach the Progressive', *MQ*, lxii, 1976, pp.313–57).

In Anglican service music, the choral treble parts by Blow, Purcell and Handel were written for boys, the solo parts for boys or countertenors. In the theatre, after the Restoration, a succession of singing actresses took the leading female (and sometimes travesty) roles. First was Anne Bracegirdle, around 1700, who probably sang Purcell's Dido when the opera was given in a production

of Shakespeare's *Measure for Measure* in 1700 and was particularly known for her performances of John Eccles's songs; in the next generation, Kitty Clive dominated the stage, excelling in ballad opera, singing in works by Arne (such as *Alfred* and *Comus*) and creating Dalila in Handel's *Samson* (1743); and following Clive was Cecilia Young, who sang much of the music of her husband Thomas Arne, was a soloist at Vauxhall Pleasure Gardens and Drury Lane Theatre and was one of the few English singers to appear in Handel's operas (*Ariodante*, 1735; *Alcina*, 1735) as well as his oratorios (*Saul*, 1739).

(iii) Mozart's sopranos. When an operatic singer achieved fame in the first half of the 18th century it was usually because of an ability to perform elaborately difficult music with great technical precision. The most skilful soprano was accorded the title of 'prima donna' and to her were assigned the greatest number of arias in an opera and the most showy, difficult music. In this period *a″* was usually the top note in music for the soprano and little merit was attached to any ability to sing higher. Such ability, according to Burney, 'seems a trick which persons gifted with a fine voice of common compass may learn', but 'such cork-cutting notes . . . are unworthy of a great singer' (*History*, iv, 1789, p.481). The Mozarts, father and son, did however admire Lucrezia Aguiari, whose compass, they noted, extended from *g* to *c′′′′*. Anna De Amicis, Gluck's first Alcestis, also earned the Mozarts' esteem for her agility and her range in the role of Junia (*Lucio Silla*, 1772).

During the later 18th century, composers came not only to appreciate the extended upper range but also to make dramatic distinctions among female dramatic roles in the soprano range in terms of compass, technical demands and character. Mozart, above all, created soprano roles of notable variety: bravura roles in the grand tradition often with an element of parody (Fiordiligi, Donna Elvira and Donna Anna), serious roles of a pathetic character without bravura display (Pamina) and primary roles of a soubrette character (Susanna, Zerlina). Although in bravura roles Mozart usually demanded *a″* or *b♭″* as the highest note, in the unusually brilliant role of the Queen of Night (written for Josepha Hofer, his sister-in-law), the voice is carried as high as *f‴*. (Mozart's better known sister-in-law, Aloysia Lange, also had a brilliant and strong top register). These distinctions were, by and large, more for dramatic reasons than a result of vocal categorization; for example, Luisa Laschi created the role of Countess Almaviva in *Le nozze di Figaro* and also sang Zerlina in the 1788 *Don Giovanni*, roles that now would be considered impossible for one singer. However, when Adriana Ferraresi del Bene, who created Fiordiligi in *Così fan tutte*, sang Susanna in the 1789 revival of *Figaro*, Mozart carefully deleted parts of the original role and composed two new, more showy arias especially for her.

Mozart composed the brilliant sacred motet *Exsultate, jubilate* (1773) for Venanzio Rauzzini, a soprano castrato also renowned for his own compositions; Rauzzini had just sung the Cecilius in the première of Mozart's *Lucio Silla*. Mozart also wrote for soprano castratos in his later serious operas, including *Idomeneo* (1781) and *La clemenza di Tito* (1791). Of the female sopranos for whom Mozart wrote in his mature operas, probably the most notable were Nancy Storace, the English soprano who created Susanna (1786) and many other roles in Viennese *opere buffe* of the time, and Caterina Cavalieri, Konstanze in *Die Entführung* (1782) and Donna Elvira in the Viennese première of *Don Giovanni* (1788), an Austrian who sang primarily in German opera and oratorio (including Mozart's *Davidde penitente*, 1785).

3. 19TH CENTURY. In the 19th century, a consolidated international repertory began to develop. Singers were increasingly called upon to sing music that had not been written for them, and this new diversity of styles led to the categorization of the soprano (and indeed the other voices too) into types: among them the coloratura soprano (or in France the 'soprano à roulades'), the lyric soprano, the two characteristic French voices known as the 'Falcon' and the 'Dugazon' (named after particular singers), the Italian, more dramatic *spinto* and *lirico spinto*, and the dramatic or heroic soprano, primarily a German type of voice.

In Italy, the lyric coloratura was central to the works of Rossini, Bellini and Donizetti. The voice type was first personified by the Spanish soprano Isabella Colbran, and then by a remarkable pair of sopranos, Giuditta Pasta and Giulia Grisi. Colbran created leading roles in ten of Rossini's serious operas, 1815–23 (the two were married in 1822), including *Elisabetta, regina d'Inghilterra*, *Otello*, *Mosè in Egitto*, *La donna del lago*, *Maometto II* and *Semiramide*. Her flexible and powerful voice was said to extend from *g* to *e‴*. Pasta created the title role, Amina, in *La sonnambula* (1831); Bellini also wrote the more dramatic title roles of *Norma* (1831) and *Beatrice di Tenda* (1833) for this singer's magnificently vibrant voice, which extended from *a* to *e‴*. Another opera composed around Pasta's talents was Donizetti's *Anna Bolena* (1830), his first opera to achieve wide international acceptance, quickly reaching London and Paris with Pasta in the title role. Grisi created Adalgisa in *Norma* at its première; later she was majestic as Norma herself. It was also for Grisi that Bellini composed Elvira in *I puritani* (1835); although less dramatic in character than the roles for Pasta, Elvira nonetheless embodies stylistic elements of a typical Bellini soprano heroine, combining vocal agility with long-breathed melodic lines. In operas by Donizetti, Grisi created the tragic role of Elena in *Marino Faliero* (1835) and the comic role of Norina in *Don Pasquale* (1843).

In Germany, Wilhelmine Schröder-Devrient and Henriette Sontag typified an increasingly common contrast in vocal types. Sontag, like Pasta and Grisi, specialized in the coloratura roles of Rossini, Donizetti and Bellini. She also created the title role in Weber's *Euryanthe*, performed Agathe in his *Der Freischütz* and sang with great success in the premières of Beethoven's Ninth Symphony and *Missa solemnis* (both 1824). Berlioz especially appreciated her performance of Susanna in *Figaro*. Her range was from *a* to *e‴* and she was highly praised for her technical abilities. However, J.E. Cox said of her London performances in 1828: 'Execution is with her everything, expression is nothing'. Schröder-Devrient offered a voice of a different type. She studied the role of Leonore in *Fidelio* – originally sung by Anna Milder, later Milder-Hauptmann, much admired for her power and intensity – with Beethoven and performed it to great acclaim from the composer and others. It was her performance that so inspired Wagner, who observed approvingly that she sang 'more with the soul than with the voice' (as opposed to the vocal skill required in *bel canto*), and she created the

Wagner roles of Adriano (*Rienzi*, 1842, a trouser role), Senta (*Der fliegende Holländer*, 1843) and Venus (*Tannhäuser*, 1845). Weber preferred her interpretation of Agathe to all others. Henry Chorley (*Modern German Music*, London, 1854) described her voice as: 'a strong soprano – not perfect in quality . . . but with an inherent expressiveness of tone, which made it more attractive on the stage than a more faultless organ'. Schröder-Devrient also excelled in lieder, and it was she who persuaded Goethe of the merits of Schubert's *Erlkönig*.

In France, the coloratura demands of the early 19th century were met in the voice of Laure Cinti-Damoreau (1801–63), the leading soprano at the Opéra. The soprano roles in Rossini's operas written or adapted for Paris (1826–9) were created for her, as were Elvire in Auber's *La muette de Portici* (1828) and Isabelle in Meyerbeer's *Robert le diable* (1831), both extremely florid. From 1836 to 1841 she appeared at the Opéra-Comique in a succession of roles by Auber. Cornélie Falcon (1814–97) made her debut at the Opéra in 1832 as Alice, the true heroine of *Robert le diable*; although her career was brief she left an indelible mark on French opera, lending her name to the type of lyrico-dramatic soprano personified by Alice as well as by Rachel in Halévy's *La Juive* (1835) and Valentine in Meyerbeer's *Les Huguenots* (1836), two roles written expressly for her. Falcon's emotional and dramatic power opened up new compositional avenues in France, much as Schröder-Devrient did in Germany, and it was her success at the Opéra that drove Cinti-Damoreau to the Opéra-Comique. It was in operetta that the lyric soprano and lyric coloratura continued to be favoured, as in works by Offenbach, Johann Strauss, Suppé and Sullivan.

A heavier lyrico-dramatic soprano voice combined with dazzling coloratura was also cultivated in the mid-century. In Verdi's first major success, *Nabucco* (1842), the role of Abigaille, the villainous female protagonist, requires a wide compass and great violence of emotion expressed through torrents of coloratura. The role was created by Giuseppina Strepponi. Other sopranos with voices powerful enough, especially in the middle register, to penetrate Verdi's orchestration and yet flexible enough to cope with *fioriture* include Sophie Loewe, the first Elvira (*Ernani*, 1844) and Odabella (*Attila*, 1846), Erminia Frezzolini, the first Giselda (*I Lombardi*, 1843) and Joan of Arc (*Giovanna d'Arco*, 1845), and Marianna Barbieri-Nini, the first Lucrezia Contarini (*I due Foscari*, 1844), Lady Macbeth (1847) and Gulnara (*Il corsaro*, 1848). In Paris, Caroline Carvalho (née Marie Miolan) created the role of Marguerite in Gounod's *Faust* (1859), in which her smooth, light lyric voice and excellent coloratura were well displayed. Adelina Patti was also a fine Marguerite and excelled as Amina in *La sonnambula* and as Donizetti's Lucia. She made her La Scala début in 1877 as Violetta in *La traviata*, a role demanding power as well as an extended upper compass (her voice rose easily to *f'''*) and flexibility. That she also sang the title role of Verdi's *Aida* and Leonora in *Il trovatore* indicates again how singers in earlier periods sang a greater variety of roles than is normal today.

The increased size of concert halls and opera houses and the heavier orchestration of the mid-19th century led to a demand for greater volume from singers. For the Wagner repertory, the demand for larger tone was already great even at the Bayreuth Festspielhaus, with its hooded orchestra pit; as Wagner's music dramas came to be performed in other theatres not so designed, the challenge to the soprano voice was even more formidable. Not surprisingly, as maximum power became the priority less emphasis was placed on coloratura singing and in the second half of the century there were many sopranos associated chiefly with dramatic roles. The Danish singer Malvina Schnorr von Carolsfeld, the first Isolde (1865), Sophie Stehle, the first Fricka (*Das Rheingold*, 1869) and first Brünnhilde (*Die Walküre*, 1870) and a conspicuously successful Senta, and Therese Vogl, creator of Sieglinde (1870), a famous Isolde and the first London Brünnhilde, were among the first generation. Amalie Materna sang Brünnhilde in the first *Ring* cycle at Bayreuth (1876) and Kundry in the première of *Parsifal* (1882) and became the first Metropolitan Brünnhilde; she also created Goldmark's Queen of Sheba (1875). Lilli Lehmann, who had begun her career in such florid roles as Philine (*Mignon*) and Violetta, became a fine Isolde and Brünnhilde while continuing to sing Donna Anna and Norma.

The 19th-century love of the dramatic soprano ultimately affected even Italian opera. Verdi, in his later works, produced several roles in which the essence of virtuosity was less a matter of agility than of prodigious tone control. Teresa Stolz, a Bohemian soprano described as 'vigorous, flexible, dramatic, limpid, brilliant', was the ideal interpreter of Verdi's later roles. In 1867 in Italy she created Elisabeth de Valois (*Don Carlos*) and, in 1872, Aida. The rise of *verismo* in the next generation sustained the demand for sopranos with the generous voices required to surmount the luxuriant orchestration of Mascagni, Leoncavallo, Giordano and Puccini, and also with the dramatic force and conviction that those composers demanded. Gemma Bellincioni sang the first Santuzza in Mascagni's *Cavalleria rusticana* (1890) and created the title role in Giordano's *Fedora* (1898); she was also the first to sing Strauss's Salome in Italy (1906) and went on to sing the role over 100 times. Her greatest rival was the French soprano Emma Calvé, who triumphed particularly in the role of Santuzza. Mascagni composed Suzel in *L'amico Fritz* (1891) for Calvé and Massenet wrote Anita in *La Navarraise* (1894) and Fanny in *Sapho* (1897) for her. Massenet composed the title roles of *Esclarmonde* (1889) and *Thaïs* for the American soprano Sybil Sanderson.

4. 20TH CENTURY. A major development in the 20th century, accelerating in the second half, was the lessening of national differences in singing style. Early recordings clearly illustrate such differences, for example the richness of the chest register favoured by the Italian school but not the French. Ironically, the recording industry probably played a significant role in the reduction of such differences. National or geographical categorization is therefore less useful, and vocal typing, although still applicable to individuals, does not relate in any consistent fashion to the work of 20th-century composers as it did in the 19th century. Rather, singers are identified primarily by their repertory: late 19th century, *bel canto*, early music, modern music or popular styles including music theatre.

(i) Dramatic sopranos. The type of late 19th-century soprano comfortable in the Wagnerian and *verismo* repertory continued into the 20th with such singers as the Czech soprano Emmy Destinn, the first Covent Garden Tatyana and Butterfly. Destinn also sang Minnie in the

première of *La fanciulla del West* (1910) at the Metropolitan and was the first Salome at Berlin and Paris. Other favourite Strauss singers included Lotte Lehmann, who created the Composer, the Dyer's Wife and Christine (*Intermezzo*, 1924) and was also a renowned Marschallin; Elisabeth Schumann, a fine Mozart singer and an ideal Sophie; Elisabeth Rethberg, the first Egyptian Helen (1928), who also excelled in Italian roles, particularly Aida and Desdemona; and Viorica Ursuleac, creator of Arabella (1933 and the Countess (*Capriccio*, 1942). The supreme interpreters of Strauss after World War II were Sena Jurinac, Lisa Della Casa and especially Elisabeth Schwarzkopf, whose command of tone and line coupled with extraordinary musicianship won her almost unalloyed praise. Early 20th-century Wagnerian sopranos included Olive Fremstad, the Swedish-American singer whose superb Sieglinde, Brünnhilde and Isolde dominated the Metropolitan in the years 1902–14; Frida Leider, her successor; and especially Kirsten Flagstad, the Norwegian soprano whose golden-toned, seamless voice was of unsurpassable richness and unprecedented volume. Birgit Nilsson, in the same Nordic tradition, was her natural successor: her penetrating, secure and brilliant-toned voice was well suited to Donna Anna, Tosca, Salome, Electra and Turandot as well as Isolde, Brünnhilde and other Wagner roles. After 1965 the Welsh soprano Gwyneth Jones succeeded in a similar repertory, which has been inherited by the English soprano Jane Eaglen.

In Verdi opera, the Yugoslav soprano Zinka Milanov had few equals in the mid-20th century; she sang a wide repertory but specialized in Verdi and Puccini at the Metropolitan from 1937 to 1966. A generation later, Maria Callas, with her unique dramatic power and musical command, was the dominant figure, but Renata Tebaldi, Victoria de Los Angeles and Leontyne Price were also heard to great advantage in Verdi. A favourite role of Tebaldi's was Cilea's Adriana Lecouvreur, and she also excelled in Puccini; in addition to her Desdemona, Los Angeles was particularly admired for her Puccini and Massenet, but also sang Eva (*Tannhäuser*) and Elsa (*Lohengrin*) as well as Weber's Agathe; Price was involved in 20th-century opera, being chosen by Virgil Thomson for a Broadway revival of *Four Saints in Three Acts* (1952), singing Bess in a world tour of Gershwin's *Porgy and Bess* and creating Cleopatra in Barber's *Antony and Cleopatra* at the opening of the new Metropolitan (1966).

The range of dramatic soprano and *spinto* repertory was later covered by a trio of sopranos born in the 1930s: Hildegard Behrens, a dramatic soprano, in Strauss and Wagner; Renata Scotto, a *lirico spinto*, in Puccini especially, but also Bellini, Donizetti and Verdi; and Mirella Freni, a lyric soprano who moved into the heavier repertory of Puccini and Verdi. Kiri te Kanawa, who began her career in Mozart and moved on to heavier roles, was a creamy-voiced Countess Almaviva and Elvira, who also sang Desdemona, Amelia (*Simon Boccanegra*), Arabella and the Countess (*Capriccio*). Jessye Norman, whose repertory ranges from Rameau's Phaedra (*Hippolyte et Aricie*) and Gluck's Alcestis to Wagner's Elisabeth and Strauss's Ariadne, combined a powerful, mezzo-tinted voice with a noble stage presence.

(ii) Lyric sopranos. Lyric sopranos claim a largely different repertory, ranging from Mozart to Bizet's Micaëla and to such lyric roles in Strauss as Sophie in *Der Rosenkavalier*. The French repertory, both in opera and song, has been particularly well served by these sopranos. On 10 April 1900 a young Scottish soprano, Mary Garden, yet to make her official début at the Opéra-Comique, caused a sensation when she took over the title role of Charpentier's *Louise* in the middle of a performance. Two years later, on Debussy's insistence, she became the first Mélisande. Massenet, who admired Garden as Manon, wrote the title role of *Chérubin* for her (1905). The great British lyric soprano, Maggie Teyte, was also most admired for her French roles, especially Mélisande, and for her singing of French song.

By the early years of the century the traditional skills in florid singing had largely fallen out of favour with 'serious' musicians, but coloratura sopranos still retained a certain popular following: witness the acclaim granted to singers such as Luisa Tetrazzini, Amelita Galli-Curci or Nellie Melba: *Norma* survived in the repertory as long as a soprano such as Rosa Ponselle was available for the title role, but *Lucia di Lammermoor* became the property of coloratura sopranos with light voices such as Toti dal Monte and Lily Pons. The repertory of the lyric coloratura differed little from the lyric soprano except for the addition of such favourite virtuoso roles as Mozart's Queen of Night and Strauss's Zerbinetta. Erna Berger was especially admired for just these roles in the 1930s and 40s, as was her prize pupil and successor, Rita Streich, in the 1950s and 60s. The Austrian soprano Sena Jurinac and the Swedish singer Elisabeth Söderström, both born in the 1920s, excelled equally in lieder and stage roles. Jurinac's repertory emphasized Mozart operas and Strauss lieder; Söderström, in contrast, made a speciality of the more modern operatic repertory of Strauss, Janáček and Britten, and of the 19th-century lieder of Schubert and Rachmaninoff. An astonishing generation of lyric and lyric coloratura sopranos born between 1938 and 1940 claimed the stage in the years following: Elly Ameling, one of the most admired lieder singers of the late 20th century; Ileana Cotrubas, especially admired for her Mozart characterizations; Helen Donath, who shone in oratorio and lieder; Edith Mathis, who sang Mozart, Strauss and oratorio; Benita Valente, who displayed her superb musicianship and diction in operas by Handel and Mozart, as well as in oratorio and lieder; Arleen Augér, greatly admired for her noble singing of Mozart and Handel; Lucia Popp, a vivacious singer of Mozart, also admired in the high-lying soprano solos of Orff's *Carmina Burana*; and Edda Moser, known especially for her Queen of Night. In the same tradition is Edita Gruberová, who has combined the lyric coloratura roles of Queen of Night and Zerbinetta with the more dramatic parts of Donna Anna, Lucia and Violetta, and Kathleen Battle, who has excelled in the light coloratura and lyric repertory from the Baroque to the 20th century; while Renée Fleming's richness and brilliance of tone establish her in the tradition of dramatic lyric sopranos.

(iii) Revivals. The *bel canto* revival, and with it the revival of a more dramatic coloratura and the reinstatement of Bellini as a serious composer, can be dated to 1949, when Maria Callas sang Elvira (*I puritani*) between series of performances as Brünnhilde (*Die Walküre*) and alternated Norma with Turandot. After Joan Sutherland, who had sung Agathe, Desdemona and Eva and created Jenifer in Michael Tippett's *The Midsummer Marriage* (1955), earned a spectacular success in *Lucia di Lammermoor*, Donizetti's rehabilitation was also on the way, a

process continued by Callas and by Montserrat Caballé, whose early repertory included Elsa, Elisabeth, Eva and Salome. These three sopranos, all with voices of dramatic weight as well as great flexibility, revived many other long-neglected *bel canto* operas. The revival continued with lighter-voiced Beverly Sills, whose intelligent musicianship and dramatic ability made her especially prized for her Lucia, the three Tudor Queens (especially Queen Elizabeth I in *Roberto Devereux*) and French repertory. June Anderson has won renown in similar roles.

Both Sutherland and Sills were important in the 1960s revival of Handel's operas, but in later years this and earlier repertory stretching back to the Middle Ages was claimed by musicians of the early music movement. Vocal production before the end of the 18th century involved the production of a lighter tone with little or no vibrato, a clear distinction between head and chest registers and, for much repertory, great flexibility. Judith Nelson was among the first true professionals specializing in this type of tone production and became particularly known for her interpretations of 17th-century opera. Emma Kirkby became a leading exponent of Renaissance and Baroque music in the 1970s, noted for her purity and sweetness of tone, without vibrato, and unaffected style; her performances and recordings include works by Dowland, Monteverdi, Schütz, Purcell, Handel and Mozart. A 1985 recording of Handel's *Athalia* brought together the very different voices of Kirkby and Sutherland as Josabeth and Athalia, respectively, to striking dramatic effect. In Germany, Barbara Schlick was especially admired for her light and stylish singing in Bach and other Baroque repertory.

(iv) 20th-century music. A light, flexible voice with little vibrato was also cultivated for the performance of 20th-century music, where emphasis is placed less on volume than on the precise focus of pitch, which for most singers is best achieved when the tone is unforced. The relationship between these styles of performance is sometimes clear in the repertory of singers. Nelson, for example, although specializing in early music, also gave the premières of many British and American works. Similarly, Cathy Berberian, best known for her remarkable performances of works by Stravinsky, Henze, Cage, and especially Berio (her husband, 1950–66), also performed 17th-century opera, and Bethany Beardslee, who gave premières of works by Schoenberg, Berg, Stravinsky, Krenek and Babbitt, was a principal singer of medieval and Renaissance repertory with the New York Pro Musica. Heather Harper, one of the most musical and versatile of postwar sopranos, also combined early and modern music, extending her repertory from Monteverdi and Bach through standard classical and Romantic roles to the 20th-century ones in which she specialized; she sang the Woman in the British stage première of *Erwartung*, created the role of Mrs Coyle (*Owen Wingrave*) on television and sang in the early performances of Britten's *War Requiem*. Evelyn Lear created several roles, including Lavinia in Levy's *Mourning becomes Electra* (1967), Arkadina in Pasatieri's *The Seagull* (1974) and Ranyevskaya in Kelterborn's *Kirschgarten* (1984); her repertory ranged from Monteverdi's Poppea and Handel's Cleopatra to Marie (*Wozzeck*) and Lulu. *Lulu* in the three-act version was first sung by Teresa Stratas, whose repertory includes works by Menotti and who sang in the premières of Peggy Glanville-Hicks's *Nausicaa* (1960) and Falla's *Atlántida* (1962).

Sopranos who have specialized in performing 20th-century music include Joan Cross, for whom Britten wrote the roles of Ellen Orford (*Peter Grimes*, 1945), the Female Chorus in *The Rape of Lucretia* (1946), Lady Billows (*Albert Herring*, 1947) and Queen Elizabeth I (*Gloriana*, 1953). Poulenc wrote Thérèse in *Les mamelles de Tirésias* (1947), Blanche in *Dialogues des Carmélites* (1957) and Elle in *La voix humaine* (1959) for Denise Duval. Josephine Barstow, whose voice defies categorization but is specially effective in 20th-century music, created Denise in Tippett's *The Knot Garden* (1970) and Gayle in his *The Ice Break* (1977), and became an ideal exponent of Shostakovich's Lady Macbeth. The American soprano Phyllis Bryn-Julson has specialized in particularly difficult orchestral song repertory and was especially valued for her clarity of tone and excellent intonation by such composers as Boulez, Crumb, Ligeti and Foss.

Operetta and musical theatre in the 20th century also had their share of remarkable sopranos, beginning with Jeanette MacDonald, famous for her performances in works by Rudolf Friml, such as *Rose-Marie* (1924), and Sigmund Romberg. Irene Dunne and Helen Morgan were both associated with the music of Jerome Kern and especially *Show Boat* (1927), and Elisabeth Welch was a particularly fine interpreter of Cole Porter. The Broadway sopranos Mary Martin, Julie Andrews and Barbara Cook were all classically trained singers: Martin's roles included Peter Pan and Nellie Forbush (*South Pacific*), Andrews (widely admired for her central role in the film *The Sound of Music*) played Eliza Doolittle (*My Fair Lady*) and Guinevere (*Camelot*), and Cook created the coloratura role of Cunegonde in Bernstein's *Candide*. Although sopranos associated with popular music rarely perform classical music, one exception has been Marni Nixon, who appeared in *The Sound of Music* and sang for Audrey Hepburn in the film of *My Fair Lady*; she has also performed widely in opera as a lyric coloratura in such roles as Zerbinetta and Konstanze and is particularly acclaimed for her musical, extremely accurate interpretations of such 20th-century composers as Webern, Stravinsky and Hindemith.

OWEN JANDER, ELIZABETH FORBES, STANLEY SADIE, J.B. STEANE/ELLEN T. HARRIS (with GERALD WALDMAN)

Soproni, József (*b* Sopron, 4 Oct 1930). Hungarian composer. He studied composition with Viski at the Budapest Academy of Music (1949–56). From 1957 he taught solfège and composition at the Budapest Conservatory, and in 1968 he was made professor of counterpoint, solfège and theory at the academy, where he would later serve as rector (1988–94). In 1992 he co-founded the Széchenyi Academy of Arts and Literature. He is a recipient of the Erkel (1974), Bartók-Pásztory (1987) and Kossuth (1999) prizes, and was made Artist of Merit and Outstanding Artist in 1981 and 1990 respectively.

All his work shows a high degree of technical control and a breadth of cultural interests. After the 1950s he turned his attention to the music of Bartók and to Bachian polyphony, interests which gave rise to such clear and complex scores as the First Quartet. In 1962 Soproni attended the Darmstadt summer courses and for the next three years composed only studies. The first of the mature works that followed this period was the String Quartet no.3, a cycle of brief movements. During this later phase he composed dodecaphonic music – but without employing serial principles – and in *Eklypsis* (1969) reached the culmination of his interests thus far. In the 1980s he began drawing on a range of historical styles, from plainchant to Stravinsky, while avoiding various trends towards tonality. In his masses and Latin motets, or in the choruses and Rilke songs, his sensitive work-setting and Classical sense of form unite in an expression that is both individual and impulsive. In the string quartets and piano sonatas (genres central to his output) his easily intelligible style incorporates mystical lyricism and a distancing element typical of Stravinsky.

WORKS
(*selective list*)

Op: Antigone (3, J. Anouilh), 1987
Syms.: no.1, 1975; no.2 'The Seasons', 1977; no.3 (Sinfonia da Requiem) (L. Nagy), solo vv, chorus, orch, 1979–80; no.4, 1994; no.5, 1995; no.6, 1995

F. ANDRÁS WILHEIM/ANNA DALOS

Sor [Sors], **(Joseph) Fernando (Macari)** (*b* Barcelona, bap. 14 Feb 1778; *d* Paris, 10 July 1839). Catalan composer and guitarist. He was educated at the choir school of the monastery of Montserrat, and then attended the military academy in Barcelona. His opera *Telemaco* was produced at the Teatro de la S Cruz, Barcelona, in 1796. In 1799 he moved to Madrid, and from then until 1808 he held administrative sinecures in Barcelona and the vicinity of Málaga, making occasional visits to Madrid. During this period he composed symphonies, string quartets, a motet and many boleros and *seguidillas boleras* for voice with guitar or piano accompaniment. Some of his works for solo guitar were probably also written at this time. Sor fought against the French during the invasion of 1808 and composed patriotic songs, of which *Vivir en cadenas* and *Venid, vencedores* (both with words by J.B. Arriaza) became famous. But in about 1810, like many Spanish intellectuals, he accepted an administrative post under the French. When the French retreated in 1813, he was obliged to leave Spain, and went to Paris.

In 1815 Sor moved to London, publishing there 11 sets of three Italian ariettas for voice and piano, of which the *Repository of Arts* wrote (1 March 1820): 'Mr. Sor's vocal compositions have gained such favour that a new set of arietts, from his pen, causes almost as much sensation as the publication of a new novel by the author of *Waverley*'. At this time he also published vocal duets and two English songs, as well as pieces for piano solo, piano duet and solo guitar. Four of his ballets were produced in London between 1821 and 1823, the most successful of which was *Cendrillon*. At its première the famous dancer Maria Mercandotti achieved her first big success in England. *Cendrillon* was danced at the Paris Opéra over 100 times and chosen for the grand opening of the Bol'shoy Theatre in Moscow in 1823. Sor went to Russia in that year with the ballerina Félicité Hullin, who danced the title role in the Moscow production. In 1826 he returned to Paris, publishing there immediately six guitar compositions probably written while he was in Russia and later his *Méthode pour la guitare* (1830) and further compositions for the instrument. He continued to teach and play the guitar until his death.

Sor achieved fame as a concert performer on the guitar and is best known for his more than 65 compositions for that instrument, which form an important part of the classical guitar repertory. He took from Moretti the idea of playing on the guitar not merely chords but music in parts, and acknowledged his debt to Haydn and Mozart

in matters of style. His *Méthode* has been called 'easily the most remarkable book on guitar technique ever written' (Grunfeld, 182). As well as his guitar compositions, his songs and ballet music were admired throughout Europe. His vocal music influenced his guitar music, above all in its treatment of melody.

BRIAN JEFFERY

Sorabji, Kaikhosru Shapurji [Leon Dudley] (*b* Chingford, 14 Aug 1892; *d* Winfrith Newburgh, nr Dorchester, 15 Oct 1988). English composer, pianist and writer on music. The son of a Spanish-Sicilian mother and a Parsi father, he disliked being labelled as English. He was educated privately in London, receiving several years' training in music. He was a self-taught composer, his known works dating from 1914 to 1984. Between the world wars he was a music critic, notably for the *New Age* and the *New English Weekly*. He remained an outsider as a critic and composer, owing to his anti-establishment views, private training, racial origins, homosexuality and self-described 'mania for privacy'. This last led him to mislead or turn away people enquiring after personal data such as the year and place of his birth.

Because he was financially secure, Sorabji did not need an income from his music criticism and felt no pressure to make it tactful. His colourful prose writings, comprising articles mostly on music and copious letters to the press and to individuals on many subjects, often project polemical attitudes and extreme opinions. They display caustic censure as well as effusive praise, coruscating wit as well as solemn contemplation.

For neo-classicism, serialism, electronics, indeterminacy and other 20th-century musical innovations he had no patience, similarly for music of many established and especially German masters, and for vernacular music of any kind. He championed many composers little known in England, for example Alkan, Mahler, Busoni, Godowsky, Reger and Szymanowski. Of these, Busoni as composer and pianist drew his strongest admiration.

A nervous and introverted person, Sorabji played the piano only seldom in public, gradually developing a fear of audiences and a desire to play only for appreciative friends. His last public performance was probably in 1936. Public and private commentators wrote of marvellous technique, beautiful sound and unparalleled energy. But his pianism suffered from impatience with practising and inconsistent attention to detail. The extant tape recordings of him playing his own music are mostly read-throughs, made privately when he was in his 70s.

The music he commended often shared features of his own: Baroque structure, post-Romantic grandeur and scope, complex and free harmony and tonality, continuous evolution of long melodies, asymmetrical phrases unaffected by dualistic formal patterns, Impressionistic colour, bountiful ornamentation and virtuosity, and deep mystical or religious qualities. He considered the acts of composition and performance intensely sacred, and the best music to be suitable only for initiates, not the uncultured masses.

Nearly all of his music includes the piano, with solo pieces the most prominent. Works range from musical aphorisms of a phrase or two to some lasting several hours. In the larger keyboard works are found expansive sections based on Baroque models such as variation, fugue and toccata next to luxurious nocturnes or other free, almost improvisatory fantasies. The latter style dominates some remarkable shorter pieces, for example *Le jardin parfumé*, *Jāmī* and *Gulistān*. Sorabji also composed musical paraphrases and freer treatments of pre-existing material, from the uproarious early *Three Pastiches* to his last major work, *Passeggiata arlecchinesca sopra un frammento di Busoni*. His principal transcriptions are of Ravel's *Rapsodie espagnole* and the closing scene of Strauss's *Salome*. His solo organ works, which require large Romantic instruments, consist of three symphonies, the shortest lasting two hours.

Almost all his songs date from the first quarter of his career. Most set French texts and are in a French style.

More impressive, despite some problematic orchestration, are his works for voices and orchestra, especially his huge *Jāmī* Symphony and *Symphonic High Mass*. Sorabji also wrote 11 works for piano and orchestra and five pieces of chamber music. None of his works with full orchestra has been played.

In the 1920s he began to distance his music from ordinary performers and listeners. It became more intricate in detail, more fluid in rhythm and phrasing, more complex in counterpoint and harmony, and more extreme in length and difficulty. This culminated in his longest published piano work, *Opus clavicembalisticum*, which remained unperformed for over 50 years after Sorabji's rushed first performance in 1930. Modelled after Busoni's *Fantasia contrappuntistica*, it lasts over four hours. Some piano compositions, such as the Fifth Piano Sonata, Symphonic Variations, *Etudes transcendantes* and the exalted *Sequentia cyclica* (27 variations on the *Dies irae* chant), last much longer. Absolute durations, however, are uncertain, because so few of Sorabji's works have been performed and because many have only sparse indications of tempo, dynamics and articulation. Almost never using sketches, he wrote his music in its final form quickly. His piano music generally uses three or four staves, and as many as seven.

The extreme technical and interpretative difficulty of his music, together with his disdain for the public and its for him, led Sorabji eventually to forbid public performance of his works without his permission. Between the early 1940s and 1976 very few performances occurred. The first to perform his music with permission after this hiatus were the pianists Yonty Solomon (1976) and Michael Habermann (1977). Since then, a few works have been played by others, including eminent keyboard performers such as Ogdon, Madge, Bowyer and Hamelin.

Most of Sorabji's manuscripts are hard to read or rely on. Copying and editing of portions or indeed all of a composition have been necessary in order to provide usable notation. Nearly all of the 16 printed publications of Sorabji's music issued in his lifetime also contain many mistakes. Editions produced after his death by Roberge and others solve numerous problems. In 1988 the Sorabji Archive was founded in Bath by Alistair Hinton, Sorabji's residual legatee, to be the central resource for Sorabji's music and writings; in 1994 many of his original manuscripts went to Paul Sacher Stiftung in Basle.

WORKS

INSTRUMENTAL

works in chronological order of composition

9 pf concs.: no.1, op.3, 1915–16; no.2, op.10, 1916–17 [2 pf score remains]; [no.3], pf, chbr orch, 1918; [no.4], 1918; [no.5], 1920 [pubd as no.2]; [no.6], 1922 [orig. no.3]; [no.7] 'Simorg-Anka', pf, chbr orch, 1924; no.8, 1927–8 [orig. no.5]; [no.9] 'Opus clavisymphonicum', 1957–9

Sordo Sodi, (María del) Carmen (*b* Mexico City, 11 Nov 1932). Mexican ethnomusicologist, singer, percussionist and music administrator. She studied at the Colegio Juan de Dios Peza in San Luis Potosí (BA in philosophy and letters), the National Conservatory of Music in Mexico City (singing and percussion, 1959–67) and the Idyllwild School of Music of the University of Southern California, Los Angeles (1965–70). Concurrently she lectured extensively on Mexican folk music in the USA and Europe and pursued a career as a performer. In 1966 she became head of the Sección de Investigaciones Musicales and in 1974 director of the Centro Nacional de Investigación, Documentación e Información Musical of the Instituto Nacional de Bellas Artes and of the instrument museum of the same institute, where she also inaugurated the annual courses in ethnomusicology (1967–72). As an official researcher of the institute, she has studied and published in the areas of Mexican music history, folklore, dance, and ethnomusicology.

GERARD BÉHAGUE

Sordun (Fr. *sourdine*; Ger. *Sordun*; It. *sordone*, or possibly *dolzaine*). A double reed instrument of the late 16th and early 17th centuries in which the cylindrical bore doubles back on itself inside a single wooden column, so that this short instrument has a relatively low pitch. Zacconi (1592) was the first to mention *sordoni*. Praetorius (1619) wrote that they sounded like *cornamusen* (*see* WIND-CAP INSTRUMENTS) or crumhorns, that is, fairly soft even though they did not have a wind cap. He described five sizes – the largest three with bassoon-like crooks – each with a range of about an octave and a 6th above their lowest note, *F* (Gross Bass), *B♭* (Bass), *c* (Bass), *e♭* (Tenor/alto) and *b♭* (Cantus). According to him they had 12 finger-holes – though some have two more controlled by keys – in addition to a hole at the bottom end for moisture and a hole above from which the sound issued. Mersenne (1636) and Trichet (*c*1640) described a similar instrument which they called 'courtaut', that is, a shortened bassoon or *fagot*. The *courtaut*, unlike the sordun, had short projecting tubes called *tétines* (teats), to simplify fingering the rear bore; three *tétines* were added to each side of the instrument, but one set was stopped with wax according to whether the performer played with his left hand above his right, or vice versa. Mersenne wrote that *courtauts* were used as basses to *musettes*.

The five surviving boxwood sorduns, each with six brass keys, are probably the work of the same maker and date from the late 16th or early 17th centuries. Four are in Vienna (see von Schlosser) and one in the Museo degli strumenti musicali, Rome (see Cervelli). They are very similar to each other in construction, but differ in a number of details from the sorduns described by Praetorius. The Viennese instruments comprise two great basses (of the same size as each other) and two basses of different sizes. The larger of the two basses is preserved almost complete. It has two cylindrical bores which are connected at the bottom (the closure at the lower end is missing). The slightly S-shaped mouthpiece was to be fitted into a side hole in the descending bore, which has six finger-holes at the front and a thumb-hole at the back. A closed key is operated by the forefinger of the upper hand, while the little finger of the lower hand can close an open key. The rising bore has four keys in all: two for the thumb of the lower hand, one for the little finger of the upper hand and one for the thumb of the upper hand. The air column ends in tone-holes at the top of the instrument, to the side. The turned foot section could be used to support the instrument or to store reeds or the crook. The great bass sorduns each have a short third bore in order to create a longer air column.

These instruments could not have been part of the consort of 'sordani' made up of two basses, three tenors, two descants and one small descant mentioned in the 1596 Innsbruck inventory of Archduke Ferdinand of the Tyrol (von Schlosser, 1920). There are copies of the Viennese sorduns in museums in New York (The Metropolitan Museum of Art, 1902) and Brussels (Mahillon, 1909). The incomplete sordun now in Rome is very

Sordun: detail from a painting by an unknown Italian artist, c1600

similar to the larger of the two bass sorduns in Vienna. An instrument by W. Kress, now in Salzburg, was formerly thought to be a sordun but has been identified variously as a bass chalumeau, bass clarinet or basset horn (Birsak, 1973; Young, 1993).

The illustration shows a detail from an Italian oil painting of about 1600; a great bass sordun similar to the two surviving examples in Vienna is being played. A 17th-century engraving also shows a sordun being played with two cornetts, a shawm, and a trumpet at a ballet for Louis XIII; and a pavan by Francisco Segario in *GB-Lbl* Add.33295, a MS of 17th-century music from the court in Kassel, is scored for recorder ('fiauto'), mute cornett, trombone, viola da gamba and 'sordano'.

Sørensen, Bent (*b* Borup, 18 July 1958). Danish composer. Initially self-taught as a composer, in his first works he was inspired by folk music, but this influence faded as he undertook more formal composition studies. From 1983 to 1987 he studied with Nørholm at the Royal Danish Conservatory in Copenhagen and from 1988 to 1990 with Nørgård at the Jutland Conservatory in Århus. These composers' influence led to a stylistic openness and attention to detail in Sørensen's work, and, in advance of his début as a composer in 1991, he achieved some recognition with works in which these features are prominent. His first string quartet 'Alman' (1984) was both his final break with folk music and the first notable example of the dissolved contours, the suggestions and hints, that are characteristic of Sørensen's music.

Sørensen's fascination with the disintegration and degeneration of the manifestations of life characterizes both his compositional technique and choice of titles. Behind titles such as *Funeral Procession* (1989), *The Deserted Churchyards* (1990) and *Schreie und Melancholie* (string quartet, 1993–4) there are sophisticated studies in the erasing of contours and the crackling of time. Sørensen chooses his structures according to what he wishes to express. Recurring devices include quarter-tones, glissandos, tremolos and rapid staccato notes, generally in a densely intertwined setting. Through this almost polyphonic method, Sørensen manages to create the perception that musical events are taking place which never entirely come into focus, and this is reinforced by the often weak dynamic nuances. The many collisions of expression lead to a new, overall expression, which partly explains why Sørensen's music has often been compared to the technique of the pointilliste painter Seurat.

After having expressed himself for several years primarily through the medium of chamber music (in which the four string quartets occupy a special position), and in works of rarely more than 15 minutes' duration, Sørensen has increasingly turned to larger works from 1992, first with *The Echoing Garden* for orchestra with choir and soloists to texts by Shakespeare, Cohen and Rilke (1992), and in 1993 with the violin concerto *Sterbende Gärten*, which was awarded the Nordic Council Music Prize in 1996. He has written works for the Arditti Quartet, the London Sinfonietta, Ensemble Modern, the Gulbenkian Foundation and Danish Radio.

ERIK H.A. JAKOBSEN

Sørensen, Søren (*b* Copenhagen, 20 Sept 1920). Danish musicologist. He studied the organ with Finn Viderø at the Royal Danish Conservatory (diploma 1943) and musicology with Abrahamsen and Larsen at Copenhagen University (MA 1945), where he took the doctorate in 1958 with a dissertation on Buxtehude's cantatas. In 1943, with the conductor Lavard Friisholm, he founded the Collegium Musicum, a chamber orchestra with which he was associated as organist and harpsichordist until it was disbanded in 1976. He succeeded Jeppesen as organist at Holmens Kirke, Copenhagen (1947–58) and as professor of musicology at the University of Århus (1958–90). He was also a lecturer in the history of church music at the Pastoral Seminary in Århus (1977–88).

Sørensen's wide experience and sound judgment have led to his appointment to many positions of administrative responsibility: he has been chairman of the Danish Society of Organists and Choirmasters (1953–9), a member of the IMS council (1964–72), rector of Århus University (1967–71), the Scandinavian representative on the board of the International Association of Universities (1970–75) and the Council of Europe's Committee for Higher Education and Research (1967–73), chairman of the Programme Committee of the 11th IMS International Congress (Copenhagen, 1972), chairman of the Danish Council for Research in the Humanities (1974–7) and chairman of the board of the Jyske Opera in Århus (1973–86; 1990–92). He was also editor, with Nils Schiørring, of the *Dansk årbog for musikforskning* (1961–76).

Sørensen's research has been largely concentrated in the 17th century, especially in the music of Buxtehude, in recognition of which he was awarded the Buxtehude Prize of the Hanseatic City of Lübeck in 1972. He has, however, also interested himself in later Danish church music, in the music of Carl Nielsen and in the cultural relations between Denmark and the former Danish provinces of north Germany. He was visiting professor at the University of Kiel in 1973 and was awarded the Bartók Medal of the Hungarian State in 1982. He became a member of the Royal Danish Academy of Sciences and Letters in 1977 and the Norwegian Academy of Science and Letters in 1989. On his retirement he was honoured with the *Festskrift Søren Sørensen*, ed. F.E. Hansen and others (Copenhagen, 1990).

JOHN BERGSAGEL

Soresina, Benedetta. *See* SOROSINA, BENEDETTA.

Sorge, Georg Andreas (*b* Mellenbach, Schwarzburg, Thuringia, 21 March 1703; *d* Lobenstein, Thuringia, 4 April 1778). German organist, composer and theorist. According to his autobiography (in Mattheson) Sorge first received singing lessons from a local Kantor and organist, Nicolas Walter, and his substitute, Caspar Tischer. When Tischer moved to Schney (Franconia) in 1714 to become court organist, Sorge followed him and continued to study keyboard and other instruments with him for another two years. Returning home in 1716, Sorge became a pupil of Pastor Johann Wintzern for theology, Latin, oratory, German poetry, mathematics and especially musical composition. He 'composed in his 18th year various church pieces to texts he had prepared himself' (Mattheson, p.338). After a brief episode as private tutor in Burg (Vogtland), Sorge was appointed at the age of 19 court and civic organist at Lobenstein, a position also entailing teaching in the local school. Although on more than one occasion he was offered other attractive positions, he remained committed to his employer at Lobenstein for the rest of his life. He established himself throughout central Europe as a talented composer, an authority on organ building, and particularly as a prolific writer of music treatises. In July 1747 he was elected the 15th member of Mizler's Societät der Musikalischen Wissenschaften, a Leipzig corresponding society of musical scholars and composers (which Bach had joined a month earlier as the 14th member).

Sorge published most of his compositions and treatises at his own expense. The majority of his pamphlets and books are devoted to a lifelong preoccupation with the practical and theoretical problems of tuning and temperament. Among his major works in other areas of music

theory, attention should be drawn to *Anleitung zur Fantasie* (1767), an informative guide to teaching a keyboardist to play extempore, or 'aus dem Kopfe', with skill and musicianship. Unlike writers earlier in the century who taught improvisation from the principles of thoroughbass practice, Sorge prescribed a course in harmony, emphasizing the central importance of chords, their inversions, scales, the concept of modulation, various applications of dissonances, the improvising of fugues and finally the concept of the Affections. According to Sorge, major and minor are the only modes, and he developed his concept of a circle of tonalities in which each key centre has a primary relationship to a set of 'Nebentonarten' (auxiliary keys). C major, for example, has as its auxiliary key centres G major, A minor, E minor, F major and D minor. He ridiculed Mattheson's well-known doctrine of key affects, published in *Das neu-eröffnete Orchestre* (Hamburg, 1713), contending that in describing the affects of keys one can only state that major keys are suited to joyful and pleasant emotions, and minor keys to sad and longing ('sehnlichen') emotions. With this attitude, as with so many of Sorge's theoretical and aesthetic viewpoints, one sees clearly the waning influence of the Baroque and the developing principles of the Classical style.

Another major work is his *Vorgemach der musicalischen Composition* (1745–7), which Benary evaluated as 'one of the most important manuals on composition from the late Bach period'. Ostensibly, Sorge presented rules of thoroughbass practice, but, as had become well established decades earlier (for example with Heinichen's *Der General-Bass in der Composition* of 1728), learning thoroughbass practice was equivalent to studying the art of composition. The central significance of this treatise is Sorge's application of the principles of harmony to composing. He continued to accept the theological foundation of the triad as a musical symbol for the sacred Trinity (which he correctly attributed to the 17th-century theorist Lippius). However, triads, including diminished and augmented forms, now become structural entities and the basis of musical composition. Sorge considered triads the foundation of all other musical factors including dissonances, melody ('the daughter of harmony') and modulation. Although he does not seem to have derived his ideas directly from the treatises of Rameau, his emphasis on the triad and the construction of all chords by 3rds echoed and at times duplicated Rameau's similar theoretical principles.

Throughout his long career Sorge published a considerable amount of keyboard music, little of which is accessible for study today. However, his greatest contributions were as an assimilator of theoretical currents of musical thought in a period of rapidly changing musical tastes.

WORKS

Soriano, Alberto (*b* Santiago del Estero, 5 Feb 1915; *d* Concepción del Uruguay, 16 Oct 1981). Uruguayan composer and ethnomusicologist of Argentine birth. While he was still a child his family moved to Salvador, Brazil, where he studied at the conservatory (violin with Dante de Souza and harmony, counterpoint and composition with Silvio Deolindo Froes). He taught harmony and music theory at the Salvador Conservatory (1934–8) and music history at the Montevideo Conservatory. From 1952 he taught music ethnology at the Institute of Musicology of the Universidad de la República in Montevideo, serving as the Institute's director until 1974. In 1959 he became an Uruguayan citizen.

Soriano's compositions include works for orchestra, soloist and orchestra, chorus, chamber ensembles, piano and guitar. His works have received premières in Brazil, Germany, Mexico, Norway, Romania, the former Soviet Union, USA and Uruguay. At the South American Music Festival in Caracas (1954, 1956) his works were performed alongside those of Villa-Lobos, Juan José Castro, Carlos Chávez and Orbón.

LEONARDO MANZINO

Soriano [Suriano, Suriani, Surianus], **Francesco** (*b* Soriano, nr Viterbo, 1548 or 1549; *d* Rome, 19 July 1621). Italian composer. He was a choirboy at S Giovanni in Laterano under Palestrina. He became a priest in about 1574 and from May 1570 to January 1581 was *maestro di cappella* at S Luigi dei Francesi, Rome. Having been dismissed from there because of frequent absences, he moved to the Mantuan court where he served as *maestro* from 1581 to 1586. He seems to have been less than satisfactory there too, and the duke tried to replace him in 1583, consulting Palestrina in the process. The latter supported Soriano, saying that he was at least as good at composing and organizing a choir as Marenzio, whom the duke was considering for the post. Victoria must also have thought well of him: he included Soriano's earliest published sacred piece, the double-choir *In illo tempore: assumpsit Jesus*, in his own *Motecta festorum totius anni* of 1585 (Soriano published a considerably revised version in 1597). He returned to Rome in 1586, serving as *maestro* at S Maria Maggiore from October that year to May 1589 and subsequently for part of 1595, and from May 1601 to March 1603. He also held a canonry at the basilica, which he actively filled in the intervening years. From May 1599 to June 1601 he served as *maestro* at S Giovanni in Laterano and from January 1603 to his retirement in 1620 as *maestro* of the Cappella Giulia; during his tenure the new basilica of S Pietro was completed and Girolamo Frescobaldi was appointed organist (from 1608). He died a relatively wealthy man (see Burke) and endowed a chapel in S Maria Maggiore with provision of two chaplains and an annual Requiem Mass and *Libera me* to be sung in polyphony for his soul. He was buried under the nave of that basilica. He was a major figure in Roman musical life after Palestrina's death, being appointed as arbitrator (with G.A. Dragoni) in a dispute over pay between Asprilio Pacelli and the Arciconfraternita della SS Trinità in 1595. In 1611 he and Felice Anerio were appointed by papal commission to complete the revision of chant books begun in 1577 by Palestrina and Annibale Zoilo. Called the *Editio medicaea*, it was published in 1614 and widely used thereafter, though it never obtained papal sanction as the sole authorized version.

As a composer Soriano remained on the conservative wing of the generation after Palestrina. He seems not to have written any small-scale concertato motets, for example, and his *Canoni et oblighi* of 1610 continue the contrapuntal tradition of Costanzo Festa and G.M. Nanino. His most notable achievements are his sacred polychoral works for up to four choirs, written for Vespers services on the two major feast days at S Pietro: the feast of Sts Peter and Paul (29 June) and the Dedication of the Basilica (18 November). Published in 1616, they are suited to the large acoustic of the completed basilica, with their full texture and multiplicity of figurations, doubling of major 3rds and large-scale tuttis. He also contributed the 'Christe' section, for double choir, to the *Missa 'Cantantibus organis Cecilia'* written in the 1580s as a combined work by some of the most prominent members of the Compagnia dei Signori Musici di Roma. Among his 1609 masses was a version of Palestrina's *Missa Papae Marcelli* reworked for eight voices in two choirs, in which he realized the implied polychorality of Palestrina's voice-groupings and clarified the harmonic tendencies by the addition of accidentals. The other masses are exercises in contrapuntal display, particularly the *Missa super voces musicales*. His four-voice *Magnificat* settings of 1619, on the other hand, typify the short, largely homophonic settings of liturgical texts which became popular after 1600; his settings of the turba sections of the Passions (also 1619) make some effective use of a variety of textures and vocal groupings to express the text, and include *si placet* polyphonic settings of the seven last words of Christ.

As a composer of madrigals Soriano was undistinguished. DeFord found that, of all Roman composers, he paid least attention to the appropriateness of his music to the text; his textures remain heavy and contrapuntal and the rhythms often dull and unvaried. Still, he was widely anthologized and the single madrigals included in the two collections issued by members of the Compagnia dei Musici (*Dolci affetti*, RISM 1582[4] and *Le gioe*, 1589[7]) show some lightness of touch, if no great sensitivity to the words. In general, in all his music, Soriano was preoccupied with fullness of sound and with using his strong contrapuntal training to that end. That may not have found favour in Mantua, but it achieved its best expression at S Pietro in Rome during the papacy of Paul V (1605–21).

WORKS

SACRED

Motectorum, 8vv (Rome, 1597); ed. S.P. Kniseley (Gainesville, FL, 1980)

Missarum liber primus, 4–6, 8vv (Rome, 1609) [incl. arr. Palestrina's Missa Papae Marcelli]; 2 ed. K. Proske, Selectus novus missarum, i (Regensburg, 1857); ii (Regensburg, 1861)

Psalmi et motecta, 8, 12, 16vv, bc (org) (Venice, 1616)

NOEL O'REGAN

Soriano Fuertes (y Piqueras), Mariano (*b* Murcia, 28 March 1817; *d* Madrid, 26 March 1880). Spanish composer and writer. He received his early musical training from his father, Indalecio Soriano Fuertes (1787–1851), the music director at the royal chapel in Madrid and a composer. Abandoning a career in the military, in 1841 he helped found the periodical *La Iberia musical*. His first theatrical success was the zarzuela *Jeroma la castañera*, to a libretto by Mariano Fernández and first performed in Madrid at the Teatro del Príncipe in 1842. This was followed in 1843 by two more zarzuelas, *El ventorillo de Alfarache* and *La feria de Santiponce*. In 1843 he became professor of solfège at the Madrid Conservatory and published a popular solfège method. In 1844 he assumed directorship of the Liceo Artístico y Literario in Córdoba, where he composed the zarzuela *A Belén van los zagales* as well as a *Stabat mater* and Requiem. In 1849 he moved to Seville to become the director of the Liceo and the Teatro de San Fernando, and in the same year the theatre gave the first performance of his *El tío Caniyitas, ó El mundo nuevo de Cádiz*, a two-act zarzuela composed during a brief stay in Cádiz. In Seville Soriano Fuertes also composed the comic opera *La fábrica de tabacos de Sevilla*, then returned to Cádiz as director of the Teatro Principal and La comedia, composing the zarzuela *Lola la gaditana*. In 1852 he became director of music at the Gran Teatro del Liceo in Barcleona. His final and collaborative stage work, *Buen viaje señor don Simón*, was produced at the Liceo in 1853. After this time he devoted himself to scholarship, founding *La gaceta barcelonesa* and writing the first history of Spanish music, *Historia de la música española desde la venida de los fenicios hasta el año 1850* (Madrid and Barcelona, 1855–9). However, his historical writings have been justly criticized for their inaccuracy, and his reputation rests on his theatrical and sacred works, as well as his many songs. He received numerous awards for his accomplishments, including the Order of Carlos III and honorary memberships in learned societies in Spain, Italy and France.

WORKS

(selective list)

Stage (zars unless otherwise stated): La pastora de Manzanares, Madrid, Instituto, 1842, collab. J. Sobejano and F. La Hoz; Jeroma [Geroma] la castañera (1, M. Fernández), Madrid, Príncipe, 3 April 1842; El ventorillo de Alfarache (F. de Montemar), Madrid, 1843; La feria de Santiponce (Montemar), Madrid, 1843; A Belén van los zagales (2), Córdoba, 1844; La venta del puerto, ?Cádiz, 1847, collab. C. Oudrid y Segura; El tío Caniyitas, ó El mundo nuevo de Cádiz (ópera cómica, 2, J. Sans Pérez), Seville, S Fernando, Nov 1849; La fábrica de tabacos de Sevilla (ópera cómica, S. Albarrán), Seville, S Fernando, 1850; Lola la gaditana, Cádiz, Principal, 1850; Buen viaje señor don Simón, Barcelona, Liceo, 1853, collab. C. Puig, N. Manent and T. Solera

Choral: Misa de Requiem; Stabat mater

Vocal collections, 1v, pf: El arpa de oro, collab. J. Sobejano jr; Ecos de Guadalquivir; Recuerdos de Andalucía

WALTER AARON CLARK

Sorkočević, Antun [Sorgo, Antonio] (*b* Dubrovnik, 25 Dec 1775; *d* Paris, 14 Feb 1841). Croatian composer, son of LUKA SORKOČEVIĆ. A member of an old, distinguished aristocratic family, he studied music in Dubrovnik with his father and then in Rome (1789–91). In 1794 he became a member of the Great Council, the parliament of the Dubrovnik Republic, went to Paris as the last consul to be accredited there, and continued to live in Paris after the fall of the Dubrovnik Republic. His music often shows the limitations imposed by the provincial character of musical taste prevalent in Dubrovnik. Nevertheless, some of his works show considerable dramatic intensity (e.g. the setting of I. Gjorgjić's Croat translation of Psalm cxxxvi).

WORKS

BOJAN BUJIĆ

Sorkočević, Luka [Sorgo, Luca] (*b* Dubrovnik, 13 Jan 1734; *d* Dubrovnik, 11 Sept 1789). Croatian composer, father of ANTUN SORKOČEVIĆ. In 1752 he became a member of the Great Council, and he negotiated with France on behalf of the Republic in 1776 and with Joseph II in 1781–2. He studied music with G.A. Valente in Dubrovnik and then for some time around 1757 with Rinaldo di Capua in Rome; his entire compositional activity falls between the years 1754 and 1770. He was acquainted with Metastasio, Haydn and Gluck. His symphonies, written for the orchestra he maintained in his household, are in three movements, conceived in the standard Italian idiom of the time.

Soro (Barriga), Enrique (*b* Concepción, 15 July 1884; *d* Santiago, 3 Dec 1954). Chilean composer. He studied the piano and theory with his father, José Soro Sforza, an Italian composer who had settled in Chile by the late 19th century. His training was completed at the Milan Conservatory (1898–1904), where he was a pupil of Coronaro; on graduation he received the grand prize in composition. After an extended concert tour of Italy and France, he returned to Chile in 1905 and was appointed supervisor of public school music education. In 1906 he was made professor of the piano and composition at the Santiago National Conservatory, of which he became sub-director (1907–19) and director (1919–28). He was a member of the Board of the Instituto de Extensión Musical from 1942 until his death. His compositional style was always traditional and eclectic, and the solid craftsmanship of his work appealed to Chilean audiences brought up on a repertory of Tchaikovsky, Dvořák, Grieg and Italian opera. The *Sinfonia romántica* (1921) was the first full-length symphony written in Chile. Among the awards he received were a first prize in the Pan-American Composition Competition (1912), the order of Officer of the Crown of the King of Italy (1931) and the Chilean National Arts Prize (1948).

JUAN A. ORREGO-SALAS/LUIS MERINO

Sorosina [Soresina], **Benedetta** (*fl* 1722–32). Italian soprano. She was a Venetian in the service of the Elector Palatine. She sang in operas at Venice in 1722–3 (C.F. Pollarolo's *Arminio* and two others) and 1727–8 (four, three of them by Vivaldi), Naples in 1723 (three, including Vinci's *Silla dittatore*), Genoa in 1726–7, Florence in 1728 (Porpora's *Arianna e Teseo*), and was engaged for Milan in the winter of 1731–2. Early in 1725 she paid a short visit to London, singing in a few performances of Handel's *Giulio Cesare* (as Nerina, a female part expanded from the eunuch Nirenus) and in Ariosti's *Dario* and the Vinci-Orlandini *Elpidia*. Handel's two arias for her have a compass of *d′* to *g″* and a mezzo-soprano tessitura. There are caricatures of her by A.M. Zanetti in the Cini collection (*I-Vgc*) and at Windsor Castle.

WINTON DEAN

Sorozábal (Mariezcurrena), Pablo (*b* San Sebastian, 18 Sept 1897; *d* Madrid, 26 Dec 1988). Spanish composer and conductor. He studied first in his native city and later under Alfredo de Larrocha (violin) and Beltrán Pagola (harmony and composition). He became a member of the Orfeón Donostiarra and later the orchestra of the Casino, playing under his violin teacher and Enrique Fernández Arbós. In 1918 he moved to Madrid as a member of the Philharmonic Orchestra and in 1920 he went to Leipzig. There he studied with Hans Sitt (violin) and Stephan Krehl (composition), supporting himself by playing in symphony orchestras and as a café musician, and made his conducting début in 1922. In 1931 he returned to Spain for the first performance of *Katiuska*, which remained one of the greatest of many successes in its genre. With Federico Moreno Torroba he was one of the last major exponents of the zarzuela, bringing to it technical refinement and a distinctive grasp of regional styles. He also composed chamber, choral and orchestral music, and was conductor of the Madrid Municipal Band, the Madrid PO and of many zarzuela recordings.

ANDREW LAMB

Sors, Fernando. *See* SOR, FERNANDO.

Sorte, Bartolomeo (*b* ?Padua; *d* in or after 1601). Italian composer and instrumentalist. Although he is definitely recorded as a trombonist at S Antonio, Padua, after 28 April 1574, Mischiati conjectured that he may have been 'Prete Don Meo dal Trombone', who on 2 March 1566 was appointed an instrumentalist there, and 'Bartolomeo dal Trombone', whose post at S Antonio was confirmed on 28 February 1567 and who was reappointed for a further three years on 28 February 1571. He is recorded at S Antonio on 1 March 1577 when his annual salary was increased, and on 19 June 1582 and 18 May 1585. After the *cappella* was temporarily dismissed on 14 August 1589 he was a singer and trombonist. On 6 March 1593 he presented and dedicated his *Vespertina omnium solemnitatum psalmodia* to the cathedral chapter and on 1 May 1593 his post was confirmed and his salary increased. There are further records of his employment at the cathedral until the end of 1600, during which period he also served as organist; but he seems to have left his appointment after the chapter's decision to reduce the salaries of the more highly paid members of the *cappella*.

PIER PAOLO SCATTOLIN

Sortes [Sortis]. Designation of two liturgical settings of the Ars Nova. The 'Sortes' Credo is the most widely disseminated Credo setting of the period. It carries the designation in three of its 11 sources (*F-Pn* n.a.fr.23190, *F-APT* 16bis, *E-Bc* 971); *I-IV* 115 calls it 'de rege', and the other seven manuscripts transmit it without caption. A Gloria headed 'sortes' in Solsona, Archivo diocesano, MS 109 appears without designation in *I-IV* 115. In *F-APT* 16bis it carries the designation 'depansis'. Since the 'Sortes' Credo was contained in the same gathering of the Solsona manuscript as the 'Sortes' Gloria, the possibility of a misattribution cannot be ruled out.

An identification with the organist Steve de Sort, an Augustinian traceable at the royal court of Aragon between 1394 and 1406, was proposed by Gómez but has met with scepticism on stylistic grounds. A second proposed identification (Tomasello, 1991), with Nicholas Sortes, canon of Laon and procurer of the Bishop of Tournai at Avignon (*d* 1376), is less problematic chronologically but is hampered by the fact that no evidence to connect Nicholas Sortes with musical activities has been found.

Meanwhile, there are sufficient grounds to doubt whether designations such as 'sortes', occasionally found in the margins of French and Spanish sources of the 14th and early 15th centuries, should be considered composer attributions at all, at least *a priori* and in the absence of corroborating evidence. Such designations appear to have served primarily as mnemonic devices in order to distinguish textually identical compositions from one another. This being the case, 'sortes' may refer not to a composer but to an as yet undetermined feature of the compositions in question.

KARL KÜGLE

Sortisatio (Lat.). A word for improvised counterpoint, and especially for florid melodies added to a *cantus prius factus*, used in Germany from *c*1500 to the middle of the 17th century. The word first appeared in a German MS of *c*1476 (*D-Rp* 98 th.4°) and shortly afterwards in Nicolaus Wollick's *Opus aureum* (1501) and *Enchiridion musices* (1509), where *sortisare* ('the improvised joining of various melodies to some chant') was contrasted with *componere*, the premeditated combination of melodies interrelated by consonances but not necessarily with any reference to a cantus firmus.

The concept was described in varying degrees of detail by many 16th- and 17th-century theorists, including Andreas Ornithoparchus (1517); Heinrich Faber (1548), who divided *musica poetica* into *sortisatio* and *compositio*, but who rather disdained the former as more fit for the vulgar than the learned; Gallus Dressler (1563); Claudius Sebastiani (1563); Johannes Nucius (1613), who pointed out that good musicians practise the craft as well as simple people; Joachim Thuringus (1625), who cited *villanelle* of Regnart and even Josquin's *Stabat mater* as examples of *sortisatio*, or at least imitations of *sortisatio*; and so on down to J.G. Walther (1732), in whose dictionary the term still occurs.

HOWARD MAYER BROWN

Sosa, Mercedes (*b* San Miguel de Tucumán, 9 July 1935). Argentine singer. In the 1960s she moved to the province of Mendoza and, with her husband Oscar Matus, started the Nuevo Cancionero, a folkloric musical movement whose objective was to be the voice of poor Argentines. In 1965 she was invited to participate in the most important folkloric event in Argentina, the Festival de Cosquín, rapidly becoming a very popular artist recording with some of the most significant musicians of her time. She was the main protagonist of two of the most ambitious folkloric projects of the 1960s and 70s, Mujeres Argentinas and Cantata Sudamericana. During this period her career became international and she performed on the most important stages of the world, receiving innumerable international awards. In 1978 she was forced by the Argentine military dictatorship of the time to abandon her country. On her return in 1982, her career shifted to another plane, as she expanded her folkloric repertory to sing 'rock nacional', the music developed by young musicians during the dictatorship as a way of resisting oppression. Mercedes Sosa not only sang rock compositions but participated in innumerable joint endeavours with the most important rock musicians of the time, bridging different musics and different audiences. She continues a hugely successful and popular international career.

PABLO VILA

Sosaya (Wekselman), José (Roberto) (*b* San Pedro de Lloc, 29 May 1956). Peruvian composer. He studied composition with Valcárcel and Hurriaga at the National Music Conservatory in Lima (1976–82). In 1981 he was awarded the prize for choral composition by the municipality of Lima for his *Terceto autóctono*. From 1984 to 1986 he lived in France where he studied at the Ecole Normale de Musique de Paris with Taira, Louvier, M. Zbar, and in the Groupe de Recherches Musicales, with P. Moin and Lejeune. He began to teach composition and analysis at the National Conservatory in Lima in 1989, and since then he has also begun to show an increasing interest in electro-acoustic music.

J. CARLOS ESTENSSORO

Sospiro (It.). A crotchet REST.

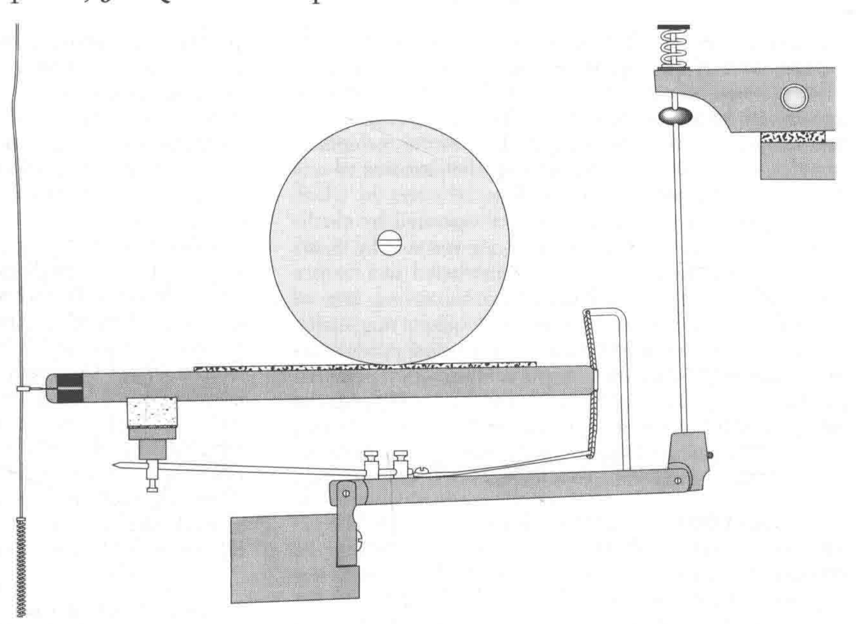
Sostenente [sostinente] **piano.** A term used to include a broad range of strung keyboard instruments capable of producing a sustained sound in which the volume can be controlled by the performer. First used by Isaac Henry Robert Mott to describe his instrument of 1817, the term sostenente piano may be usefully applied to instruments dating from as early as Hans Haiden's *Geigenwerk* of 1575. Until the late 18th century most were of bowed type, designed to imitate the violin or human voice. Other means of sound production (such as compressed air or transmitted vibrations) began to be used in the late 18th century as part of a general trend for making expressive, ethereal instruments. In the 19th and early 20th centuries such instruments were generally intended to emulate the sound of a string quartet or orchestra.

1. Bows. 2. Compressed air. 3. Transmitted vibrations. 4. Quick and repeated movements of the hammers. 5. Combination of a hammer striking the string and free vibrating reeds. 6. Electric and electronic principles.

1. BOWS. Bowed keyboard instruments vary in shape, stringing and bowing device. Those shaped like harpsichords and pianos usually have at least one string per key, while other designs are fretted, more closely resembling a keyed monochord, HURDY-GURDY or automatic violin player. The earliest report of a bowed string keyboard instrument is in the notebooks of Leonardo da Vinci (in *F-Pi*) and also in his drawings in the Codico Atlantico (in *I-Ma*), which depict versions of his *viola organista* with four melody strings fretted by five to nine tangents, or unfretted with one or more strings for each note, using wheels or bows to stroke the strings (for illustration *see* LEONARDO DA VINCI). Since Leonardo, more than 90 makers of bowed string keyboard instruments have been documented, most of them in Europe. The instruments may be categorized according to bowing device: the three types are straight (back-and-forth) bows, continuous bows and wheels.

One of the few instruments that incorporated straight bows was a four-octave invention by Le Voir of Paris in 1742, in which a harpsichord case contained a cello and a viola with several bridges of varying height, bowed by seven separate horsehair bands. William Mason of England is said to have described in 1761 a celestinette with one to three wire or gut strings, with a player-operated bow controlled by weights or springs and composed of silk, wire, flax, leather etc., which could be placed above or below the strings. A *Bogenflügel* with a compass of four and a half octaves constructed in 1794 by Carl Andreas von Meyer had horsehair bands secured on a vertical rectangular frame. This bow-frame was placed in the middle of the instrument so that the bands passed between and perpendicular to each string. When the pedal-operated bow-frame moved up and down, a lever on the tail of the key brought the moving band to

the appropriate string. In Vienna in 1801 Karl Leopold Röllig and Mathias Müller modified the design by placing the strings in a vertical position, as on a clavicytherium, and using a horizontal bow-frame. Their *xänorphica* was imitated by Anton Friedl six years later. Ole Breiby's claviola of 1897 (now in the Metropolitan Museum of Art, New York) also uses a straight bow. The design of the instrument is that of a keyboard attached to an upright zither, with a normal violin bow. The player fingers the keys with one hand and manipulates the bow with the other.



Instruments using a continous bow include the earliest known bowed keyboard, the GEIGENWERK invented by Hans Haiden of Nuremberg in 1575. Shaped somewhat like a harpsichord, it used hooks to bring the selected gut strings down to a pedal-operated revolving horsehair band. A spectacular combination instrument built in 1673 by Michele Todini of Rome was said to include a harpsichord and *Geigenwerk* coupled to an organ, a virginal and two octave spinets. It is not known whether Todini's *Geigenwerk* used a continuous band or wheels or both. Johann Georg Gleichmann produced a clavier-gamba in 1709 which was smaller than a harpsichord, using the string scale of a viol. Johann Hohlfeld's *Bogenflügel* (Berlin, 1711), akin to Haiden's invention, was admired by C.P.E. Bach and Marpurg, but it was probably Johann Carl Greiner's *Bogenhammerklavier* of 1782 (similar to Hohlfeld's instrument, but combined with a hammer piano) that inspired Bach's 'Sonata für das Bogenklavier' H280 (W65.48). Francisco Flórez of Madrid added a register of sustained voice to a glass harmonica and a piano about 1795, much like the CELESTINA stop already patented in England by William Mason and Adam Walker. Several continuous-bow instruments survive in museums. The Germanisches Nationalmuseum in Nuremberg houses an unsigned instrument with a compass of two and a half octaves and dimensions similar to those of a 4′ harpsichord, its string lengths comparable to those of string instruments rather than of keyboard instruments. The pedal-operated band passes beneath the keys; rollers attached to the underside of the keys press the band down onto the strings. Nearly identical in principle is Djmenjuk's bowed keyboard of 1965, now in the Glinka Museum of Musical Culture, Moscow. Instead of pedals, the Russian instrument uses a motor. A variation on the continuous band can be seen in a six-octave instrument belonging to the Technisches Museum für Industrie und Gewerke, Vienna, which was invented by Franz Kühmayer in the 1890s and built by the Hofmann and Czerny piano firm about 1915. Rather than having one continous band, the instrument uses a number of shorter leather bands, each of which bows adjacent chromatic strings. It is double-strung, with unison strings mounted one above the other. The bands are pressed against the strings by means of rollers fixed on vertical levers which move when keys are depressed. Another notable instrument was the 1909 *Streichharmonium* made by Karl Beddies in which a satin-covered leather band pressed each gut string against its individual, violin-shaped resonator. Formerly part of the Heyer collection in Leipzig, it was lost during World War II.

Wheels have proved an even more popular bowing device, having a precedent in the hurdy-gurdy. 26 years after building the first *Geigenwerk*, Haiden produced a slightly altered version using five iron wheels covered with resined parchment and iron and brass strings. The wheels protruded through the gap and the selected strings were brought against them. A woodcut of this four-octave instrument appears in Praetorius's *Theatrum instrumentorum* (1620; for illustration *see* GEIGENWERK). A similar Spanish invention by Raymondo Truchado dated 1625 and having four wheels is now in the Brussels Conservatory. Other instruments vary more in detail than in principle. Two early examples of a one-wheeled bowed keyboard were Athanasius Kircher's 'wonderful harpsichord' of 1650, which looked like a large domed box and combined an organ, harpsichord and 49-string *Geigenwerk* and the 'arched viall', mentioned by Pepys in his diary on 5 October 1664. Cuisinié's *clavecin-vielle* (Paris, 1708) had one wheel for six strings with 29 keys. Roger Plenius's English lyrichord (1741) had 15 wheels for 59 strings; instead of using pedals, he varied the drive mechanism by using a clockwork action with a large weight on the back part to operate a flywheel. Le Gay of Paris produced a bowed keyboard instrument in 1762 in which gut strings conformed to a hollow cylinder in the body and were bowed by a leather-covered wooden wheel operated by the foot. John Isaac Hawkins developed a 'claviol' (1802) that, when closed, resembled a large wardrobe. It was based on the same principles as the *Geigenwerk*, but the stringing was vertical and the four pedal-operated wheels were horizontal (*see* CLAVIOLA (i)). In the last quarter of the 20th century at least three makers, Kurt Reichmann in Germany, William Morton in the USA and Akio Abuchi in Japan, constructed imitations of the early wheel *Geigenwerk*. The American maker Bob Bates has built and performed on three fretted instruments which use a metal finger to stop the string. Close in principle to instruments using wheels are those that use cylinders to rub appendages attached to strings (see §3 below). Instruments that have keys and bows but do not use strings include the late 19th-century *Stimmgabelwerk* of the Munich cittern virtuoso Ubelacker, which was sounded by vibrating metal prongs or tuning forks, and Luigi Russolo's *piano enarmonico* (1931), which used vibrating coiled springs.

The sound of the bowed keyboards varies greatly depending upon design and materials. The descriptions recorded for many of the instruments indicate a wide dynamic range – from soft violins to full organ – and a timbre that varies from the sound of a glass harmonica to a whole orchestra, with special effects including tremolo (*bebung*) and imitation of trumpets and bagpipes. The fact that no single design became standard may be due to the stringent acoustical challenges inherent in a bowed string instrument that lacks the immediate correction of a player-controlled bow or fretted string. Makers attempted with varying degrees of success to overcome problems of grating attacks, noisy wheels, and unstable intonation.

See also VIOLIN PLAYER, AUTOMATIC.

2. COMPRESSED AIR. A number of sostenente pianos, sounded by jets of air directed at the strings, were devised from the late 18th century. They are essentially aeolian harps controlled from a keyboard. The first of them was the *anémocorde* (or *aéro-clavicorde*), an instrument of secret design, made in 1789 by the German piano builder in Paris, Johann Jakob Schnell. Only the bare essentials are known: by means of two pedals connected to bellows the air was driven through jets against the strings. The keyboard had a compass of five octaves, and pedals

1. Action of a harmonichord built by Friedrich Kaufmann, c1900 (Deutsches Museum, Munich)

operated by the knees of the musician served to increase and decrease the volume of the tone. Thus, the general impression was that of approaching and receding tones. The sostenente device could be switched off to allow the musician to play on the *anémocorde* as on an ordinary piano. Schnell tried in vain to extend the use of his new instrument in his own country, where he otherwise built small pianos called 'pantalons', which became the forerunners of modern grand pianos. Schnell's instrument was followed by the *piano éolien*, built by Isouard in 1837 and patented by Henri Herz in 1851. In France (1840 and 1850) and in England (1850) the piano maker Jean Henri Pape patented a device for swelling the tone of a piano by a jet of air, after the string had been struck by the hammer. Other patents of similar devices are those of Johnson and Anderson (1861) and of Tongue (1871).

3. Transmitted vibrations. The phenomenon of transmitted vibrations involves setting up vibrations in a secondary body or substance that is connected to the sounding strings, as opposed to the strings being excited directly. In 1799 the acoustician Ernst Chladni developed his Klavizylinder, in which a revolving cylinder stroked wooden bars attached to the strings. Thus the friction from the cylinder set up vibrations in the bars, which in turn travelled to the strings. The concept was successfully applied by Gottfried Kaufmann and his son Friedrich in their harmonichord (1809; a similar action, used by Gottfried's grandson, is shown in fig.1). This resembled an upright piano, and had pedals that activated a long rotating cylinder above the keyboard. Its tone appealed even to Weber, who composed for it an Adagio and Rondo with orchestra (J115). Kratochvil's 'coelison', constructed in Bohemia in 1821, had the shape of an upright pyramidal piano; its strings were connected to long fixed keys, which the musician touched with his fingers. In 1817 Isaac Henry Robert Mott of Brighton constructed his sostenente piano, which used a set of rollers to activate silk threads that transmitted vibrations to the strings. In Paris, Gustave Baudet's *piano-violon* (1865) and *piano-quatuor* (1873) were built in the shape of upright pianos. In both cases the sound was produced by means of a revolving cylinder that rubbed small bundles of plant fibres attached to the strings (fig.2)

4. Quick and repeated movements of the hammers. The production of apparently sustained tones by rapid repetition is the only technique to exploit the existing mechanism of the piano. This method was used in the

2. Piano-quatuor by Gustave Baudet (Württembergisches Landesmuseum, Stuttgart)

sostenente piano made by the Paris engineer Philippe de Girard, who in 1842 patented his *piano trémolophone*. This was a grand piano with two keyboards, one of them exclusively for tremolando notes. The firm of Caldera & Bossi in Turin started the manufacture of the *melopiano* in 1873. This had a device that could be attached to any piano to make possible the swelling of notes by quick repeated strokes of a small hammer operated by clock-springs. A similar instrument was made and sold by Henri Herz in Paris, and the system was borrowed and further improved by the London piano-manufacturing firm of Kirkman & Son. Two variants of a mechanism that struck the strings with strips of leather or cloth were patented in France in 1849 by Roeder. In the *armonipiano*, invented by Ricordi and Fanzi and improved by V. Hlavéč, the tone could be sustained by a second set of hammers, which maintained vibration in the strings modified by means of three pedals and two levers.

5. Combination of a hammer striking the string and free vibrating reeds. This hybrid method of producing sustained tones depends on the sympathetic vibration of reeds set in motion by strings struck in the usual way by hammers. It was used in the *piano à prolongement* built by Alexandre of Paris in the 19th century, and in the *piano scandé* invented in 1853 by Lentz and Houdart in Paris, which had various pedals that swelled the tone in each octave. The *piano à sons soutenus*, made by Jean-Louis Boisselot of Marseilles in 1843, also belongs in this category, as does the Canto, an electromagnetic device, invented around 1927 by Marcel Tournier and Gabriel Gaveau, which fitted inside a piano and transmitted the vibrations of the strings to a set of tuned reeds.

6. Electric and electronic principles. The use of electricity provided the means for making other kinds of sostenente pianos. As early as 1759 static electricity was used in the *clavecin électrique* to activate a clapper that struck two bells in rapid alternation for each note, producing a sustained sound as long as the key was held down. Several instruments used electromagnetism: in Richard Eisenmann's *elektrophonisches Klavier* (developed 1885–1913) electromagnets controlled by tuning-fork oscillators activated and sustained vibrations in normal piano strings; for the musical exhibition in Vienna in 1892 Kühmayer constructed a bowed piano in which an endless bow was pressed to the strings by electromagnets; the Choralcelo (1909) and the Crea-Tone (1930) used electromagnets to sustain the vibrations of the strings for as long as the keys were depressed; an electropneumatic approach was adopted in the *Palsiphone électro-magnétique* patented in 1890 by Emile Guerre and Henri Martin, further developments of which were patented from 1913 by Martin with Alcide Maître; and in the Variachord (1937) the strings were both activated and amplified electromagnetically, and a mandolin-like repetition was possible. An early amplified sostenente piano, which exploited the continuous bowing mechanism, was the monophonic Radiotone (*c*1929–30), in which a wheel driven by an electric motor rotated against a single metal string, the vibrations of which were amplified by means of an electromagnetic pickup. In 1977 Stephen Scott developed a 'bowed piano' technique whereby as many as ten players use miniature solid and flexible bows to excite the strings of an open grand piano. He extended this technique with the development of an electromagnetic system (1982–3) which assigns an oscillator to each note; depressing the keys silently lifts the dampers, allowing the strings to vibrate. Five small electromagnets create sustained sounds in Alvin Lucier's *Music for Piano with Magnetic Strings* (1995). In all these instruments the sounds could be sustained for as long as the player desired.

While many electric pianos can produce more sustained sounds than normal pianos, the sounds decay in the usual way; they can therefore be regarded as sostenente pianos only to a limited extent. Some of the earliest electric pianos, such as the Förster Elektrochord (1933) and the Everett Piano Company's Pianotron (mid-1930s), were normal pianos whose sounds were electrically amplified. At about the same time electrically amplified pianos without soundboards (thus increasing the maximum possible duration of sustained sound) were first marketed; these included the Neo-Bechstein-Flügel (1931), Variachord and several instruments based on a patent by Benjamin F. Miessner. (*See* Electric piano.)

Sostenido (Sp.). *See* Sharp.

Sostenuto (It.: 'sustained'; past participle of *sostenere*). A direction that has been used both to designate a style of playing and as a tempo mark or modification; the abbreviation *sost.* is common. It is occasionally used to indicate a slowing down (e.g. in Brahms and Puccini;

Brahms wavered, for the slow movement of his first symphony, between *poco adagio* and *andante sostenuto*). The words 'sostenende' and 'sostenente' (present participle) are also found and are perhaps more precise. The 'sostenuto' pedal on a piano is the one that sustains notes by lifting the dampers from the strings.

See also TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Sostenuto pedal. An optional middle pedal provided on some pianos that enables the performer to sustain the sound of a note held down at the moment the pedal is depressed. The principle of selective sustaining was addressed by Jean Louis Boisselot in a mechanism exhibited at the Paris Exposition of 1844. Boisselot's ideas were subsequently taken up by Claude Montal, who exhibited his *pédale de prolongement* at the London International Exhibition of 1862. Other inventions designed to achieve the same effect were developed by Lentz of Paris and Zachariae of Stuttgart. The modern sostenuto pedal, however, owes most to Steinway's mechanism, patented in 1874. The sostenuto pedal should not be confused with the SUSTAINING PEDAL, the normal 'loud' or 'damper' pedal that removes the dampers from all the strings of the instrument.

EDWIN M. RIPIN/DAVID ROWLAND

Sostinente piano. *See* SOSTENENTE PIANO.

Sotin, Hans (*b* Dortmund, 10 Sept 1939). German bass. He studied with Friedrich Wilhelm Hezel and Dieter Jacob. His début was in Essen in 1962, as the Police Inspector in *Der Rosenkavalier*; in 1964 he joined the Hamburg Staatsoper, taking small roles, but soon graduated to virtually all the leading bass roles in the Hamburg repertory, as well as singing Wotan in *Das Rheingold* and *Die Walküre*. He made his Glyndebourne début as Sarastro in 1970, subsequently appearing at the Chicago Lyric Opera (début as the Grand Inquisitor, 1971), the Metropolitan (Sarastro, 1972), Bayreuth (the Landgrave, 1972), the Vienna Staatsoper (King Mark, 1973), Covent Garden (Hunding, 1974) and La Scala (Ochs, 1976). He also sang Pogner, Don Alfonso and van Bett (*Zar und Zimmermann*). Sotin was a distinguished soloist in choral works, notably the *Missa solemnis*, which he recorded. His operatic recordings include the roles of Alfonso, Rocco, King Mark, Pogner and Gurnemanz. His rolling, voluminous tones, his sympathetic stage presence and interpretative independence made him one of the most valuable German basses of his generation.

MARTIN BERNHEIMER/R

Soto de Langa, Francisco (*b* Langa, province of Soria, 1534; *d* Rome, 25 Sept 1619). Spanish singer, music editor and composer, active in Italy. After making a name for himself as a musical prodigy in Spain, where he perhaps began as a choirboy at Burgo de Osma Cathedral, he joined the papal chapel as a soprano on 8 June 1562. He may have been the first castrato hired by that institution. He remained in the papal chapel until his retirement in 1611, serving as *maestro* five times. In 1566 he began attending the oratory recently founded by S Filippo Neri and he formally joined the group in 1571. He was involved in early negotiations surrounding the establishment of the Compagnia dei musici di Roma, though the papal singers eventually declined to participate in the group. In the years 1566–7 Soto served as chaplain to the church of S Giacomo degli Spagnoli, and by 1582 he was a member of the Confraternity of the Resurrection attached to that church (established in 1579 and created archconfraternity in 1591). He was active in the confraternity for the rest of his life, often holding responsibility for the musical arrangements for important occasions; in 1601 for example, he organised the music for the confraternity's celebration of the birth of a daughter to Philip III of Spain.

Soto was renowned for his singing. His voice was praised as late as 1640 by Pietro delle Valle, and his singing of *laude spirituali* composed for him at Neri's request by Animuccia and others was said to draw great crowds to the oratory. A series of five important anthologies of *laude spirituali* (1583–98) has been attributed to Soto's editorship; he certainly edited the last (RISM 1598^{4}) and he signed the dedications of the previous two (RISM 1588^{11} and 1591^{3}), but information concerning the two collections of 1583 is not explicit. The first of these (RISM 1583^{3}) is a modified edition of a volume published in 1577 and also attributed to Soto; this collection was itself the third of another important series of *lauda* anthologies begun by Animuccia. Of more than 200 pieces in these collections only a few are by him, but several more by him were printed in two well-known *lauda* anthologies of 1599 and 1600. The text of one of his *laude* is in Latin, the remainder are in Italian. They are characterized by block chords, treble-dominated harmony and symmetrical phrases, and they are suffused with the charms of homely fervour and devout and unaffected simplicity.

WORKS

23 laude spirituali, 3, 4vv, 1599^{6}, 1600^{5}

EDITIONS

all containing laude by Soto de Langa

Il terzo libro delle [33] laudi spirituali, 3vv (Rome, 1577^{3a}) [attrib. Soto]

Il primo libro delle [30] laude spirituali, 3vv (Rome, 1583^{3}; modified edn of Il terzo libro delle laudi spirituali, 1577^{3a}) [attrib. Soto]

ROBERT STEVENSON/LAURA MACY

Sotto (It.: 'below'). A word found in various musical contexts, for example *all'ottava sotto* ('an octave lower'; *see* ALL'OTTAVA). It is particularly used in the word 'sottovoce' ('an undertone') or in the less orthodox and particularly musical orthography *sotto voce*, a direction indicating that a passage is to be performed in an undertone. Rousseau (*Dictionnaire de musique*, 1768), in

one of his more obscure definitions, equated *sotto voce* with *mezzo-forte* and *mezza voce*. *Sotto voce* was used originally in connection with vocal music, but was equally applied, by analogy, to instrumental performance. As such it is often found in Haydn and Mozart; and Beethoven used it in his quartets in the slow movements of opp.130, 132 and 135, and also at the opening of op.74. In many similar contexts he used *mezza voce* (*see* MEZZO, MEZZA). Used in string music, *sotto voce* is often a specific direction to play nearer the fingerboard where the sound is gentler.

Soubies, Albert (*b* Paris, 10 May 1846; *d* Paris, 19 March 1918). French writer on music. After abandoning his law studies at the University of Paris, he entered the Conservatoire to study harmony with Bazin and Savard and organ with Alexandre Guilmant. His first journalistic undertaking was the continuation of the *Almanach Duchesne*, retitled the *Almanach des spectacles*, which he edited from 1874 until his death. Equally interested in theatre and music, he wrote many knowledgeable books on both subjects and soon became one of the most renowned critics of his time. His most important work is a 12-volume history of music arranged by country. He also contributed valuable articles to several papers under the pseudonym 'B. de Lamange'.

YVONNE TIÉNOT

Soubre, Etienne-Joseph (*b* Liège, 30 Dec 1813; *d* Liège, 8 Sept 1871). Belgian composer and conductor. After studying mathematics, he entered the Ecole Royale de Musique in Liège, where he studied solfège, the bassoon, piano, harmony and composition. He began composing during the 1830s, and the first major concert of his work took place in January 1836. At the same period he conducted the orchestra of the Opéra and performed in front of Liszt. After winning the Belgian Prix de Rome with his cantata *Sardanapale*, Soubre travelled in Germany and Italy and visited Paris. He settled in Brussels at the end of 1844, and although he had entered upon a teaching career he devoted most of his time to composing choral works and melodies. On 16 April 1855 his three-act opera *Isoline, ou Les chaperons blancs* was performed at the Théâtre de la Monnaie. In November 1858 he was engaged as conductor by the Société Philharmonique of Brussels. In March 1862 he succeeded Daussoigne-Méhul as director of the Liège Conservatoire, and threw himself enthusiastically into teaching. He contributed to the development of the conservatory by increasing the classes and diversifying the subjects offered, and making musical activities more dynamic for both teachers and students. At the same time he continued his career as a conductor both in Brussels and in Liège, where he was particularly active with the La Legia choral society. He was elected to the Royal Belgian Academy in 1871, but died suddenly that year.

Soubre published pieces for men's and women's choirs, songs, duos and a solfège method, but most of his larger works were never printed. His *Hymne à Godefroid de Bouillon* was performed at Antwerp in 1850 by 500 singers and instrumentalists. His works exhibit good craftsmanship, particularly in the vocal writing.

WORKS
(*selective list*)

Sacred: Ave verum, 5vv, orch, 1841; Tantum ergo, 3 female vv, org, 1849; Messe des morts, 5vv, orch, 1859; 10 hymnes sacrés, 2 S, org; Messe des morts, 2 male choirs, orch; Stabat mater, SATB
Operas: Burchard d'Avesnes; Isoline, ou Les chaperons blancs (3, J. Gaucet), Brussels, Monnaie, 16 April 1855
Orch: Sym. fantastique, 1833; Ov. des brigands de Schiller, 1837; Adagio symphonique, 1842; Hymne á Godefroid de Bouillon, 1850; Sym. triomphale, 1853

JOHN LADE/PHILIPPE VENDRIX

Soubrette (Fr.: 'servant girl'). A stock character of 17th-century French theatre: the clever but impertinent servant girl who comments wryly on the behaviour of the ladies and gentlemen of the household, and who often becomes an agent of intrigue. Originally derived from a character type in the plays of Marivaux and Molière, the term has been adopted for operatic soubrettes of all later periods, examples of whom include Serpina in Pergolesi's *La serva padrona* and Adele in Johann Strauss's *Die Fledermaus*. Although often a rather superficial secondary character, the soubrette in some cases is endowed with unusual breadth of character, as in Mozart's *Le nozze di Figaro* (Susanna) and *Don Giovanni* (Zerlina). By association with the light, agile soprano normally used for such roles, 'soubrette' has also come to mean this voice type and, in addition, any role demanding it, such as Papagena in Mozart's *Die Zauberflöte*, Olympia in Offenbach's *Les contes d'Hoffmann*, Zerbinetta in Strauss's *Ariadne auf Naxos* and a range of operetta roles including those by Sullivan. In France the *soubrette* voice is sometimes called

a *dugazon* after the singer LOUISE-ROSALIE DUGAZON, famous for her interpretations of such roles.

Souesby. *See* SOURSBY.

Souez [née Rains], **Ina** (*b* Windsor, CO, 3 June 1903; *d* Santa Monica, CA, 7 Dec 1992). American soprano. She trained at Denver and then in Milan. Her début as Mimì at Ivrea in 1928 led to engagements in Palermo and London, where she sang Liù to Eva Turner's Turandot in 1929. Her repertory also included *Trovatore*, *Faust*, *Mefistofele* and *Madama Butterfly*, but it was in Mozart at Glyndebourne that the most enduring part of her reputation was made. She sang Fiordiligi in the opening season of 1934, added Donna Anna in 1936, and appeared regularly in both roles until 1939. She also sang at the Stockholm Opera and later became a comedy vocalist for Spike Jones and his City Slickers. Her voice, light for Covent Garden, developed a hardness that sometimes limited enjoyment of her work at Glyndebourne, yet hers was probably the greatest personal success there in the early seasons, and her singing of Micaëla in the Covent Garden *Carmen* of 1935 was described as a 'joy to hear'. She recorded both Mozart operas with Fritz Busch.

J.B. STEANE

Soufflleur (Fr.). *See under* ORGAN STOP (*Kalkant*).

Souffriau, Arsène (*b* Brussels, 26 Feb 1926). Belgian composer. After studying the clarinet at the Brussels Conservatory, he took lessons in composition and orchestration from Francis de Bourguignon (1942–8). Besides his activities as a composer, he founded the Brabant Chamber Orchestra and was an opera conductor until 1956, the year in which he became director of the sound department of RTB. In 1962 he was one of the founders of the Institut National Supérieur des Arts du Spectacle, where he lectured until 1970 to sound engineers and film editors.

He is a very prolific composer and has written almost 500 works in all genres except opera. His work falls into two periods. His early output (from 1943) is dominated by instrumental music, written mainly for cinema (58 works) and for the stage (37 works), and demonstrates his early adoption of serial and aleatory techniques. His meeting with Cage and Varèse at the Brussels Exposition Universelle in 1958 led to his decision, after a period spent working in the APELAC studio set up by Henri Pousseur, to found his own studio, BIMES, that year: also influenced by the music of Xenakis and Pierre Henry, he has since composed some 350 pieces of electro-acoustic or computer music there.

ANNETTE VANDE GORNE

Souhaitty, Jean-Jacques (*b c*1650). French theorist. He lived in Paris as a Franciscan monk. He devised and published a novel musical notation which was intended primarily as a means of simplifying the singing and teaching of plainchant but which could also be applied to other vocal and instrumental music. He based his system on the use of the numerals 1–7 to represent the notes of the diatonic major scale. By altering them in certain ways and by appending to them various symbols (some borrowed from language, others from prosody), different features of the music could be indicated: altered notes, specific pitches and vocal range, as well as mode, time signatures, mensuration and the application of ornaments. Souhaitty illustrated the notation by examples drawn principally from the liturgy, including music by Du Mont and Nivers, in from one to four parts. Although his system (like others of the time) appears not to have taken hold, interest in it was briefly reawakened about a century later through a dispute set off by Jean-Benjamin de La Borde (*LaBordeE*), who alleged that Jean-Jacques Rousseau (in his 'Projet concernant de nouveaux signes pour la musique, lu par l'auteur à l'Académie des sciences, le 22 août 1742') had plagiarized Souhaitty in presenting the system as his own.

ALBERT COHEN

Soukous. Generic term for Central African dance music. More specifically in the Democratic Republic of Congo (see CONGO, DEMOCRATIC REPUBLIC OF THE, §III, 4) *soukous* refers to a dance style first popularized in the late 1960s. The style developed directly from Congolese rumba that was introduced in the 1950s. The first period of *soukous* in the 1960s can be characterized by heavy arrangements; highly orchestrated horns and vocals fill the sounds of early *soukous*, while large numbers of guitars and rhythm instruments support these arrangements. Tabu Ley ROCHEREAU, Dr Nico (*see* KASANDA, NICOLAS), Kiamanguana Verckys, Sam Mangwana and Joseph 'le Grand Kalle' Kabasele contributed greatly to early *soukous* efforts. A second wave of *soukous* occurred in the 1970s led by the group Zaiko Langa Langa and by Papa Wemba and Bozi Boziana, both former members of Langa Langa. Groups such as Quatres Etoiles and artists such as Mbilia Bel and Abeti Masekini were at the forefront of these new Paris-based recording efforts. In the 1980s there was a broadening of the international *soukous* market, introducing a smoother, cleaner and more produced *soukous* sound. Artists of the newer Parisian *soukous*, such as Kanda Bongo Man, Pepe Kalle and Kofi Olomide, developed a dance party music that was heavily guitar driven. Perhaps the greatest instrumentalist to emerge during the latest incarnanation of *soukous* was Diblo Dibala whose guitar playing was a critical feature in the success of Kanda Bongo Man's bands. His

own bands, loketo and Matchatcha, have brought the appeal of *soukous* to worldwide audiences.

Soulié [Soulier], **Jean-Pierre.** *See* SOLIÉ, JEAN-PIERRE.

Souliotis, Elena (*b* Athens, 25 May 1943). Greek soprano. Her family emigrated to Buenos Aires; she studied there and in Milan. Her début was in 1964 as Santuzza (*Cavalleria rusticana*) in Naples, and her American début was at Chicago in 1966 as Helen of Troy in Boito's *Mefistofele*. The same year she made her first appearance at La Scala, as Abigaille (*Nabucco*), and in 1968 caused a sensation in the same part at a concert performance in London. Her first appearances at Covent Garden and the Metropolitan were both in 1969 as Lady Macbeth; at Covent Garden, Abigaille and Santuzza followed in 1972 and 1973. Souliotis's career proved short-lived, largely because she lacked the discipline to make the best use of her appreciable resources. On stage she was a vivid though controversial performer. She made a brief come-back as a mezzo in the 1980s.

ALAN BLYTH

Soul jazz [funky jazz, funk]. A type of hard bop dating from the mid-1950s. Played most often in small groups led by a tenor or alto saxophonist, a pianist or a Hammond organist, it is characterized by simple, tuneful themes and improvisations, modelled on the speech inflections of black preachers in the sanctified churches. Its leading exponents were Cannonball Adderley, Gene Ammons (late in his career) and Charles Mingus.

The terms funk and soul later became more widely known in connection with styles of popular music; once established these genres were in turn combined with jazz. Hybrids of jazz and soul music, and of jazz and the popular style funk, however, have little in common with soul jazz.

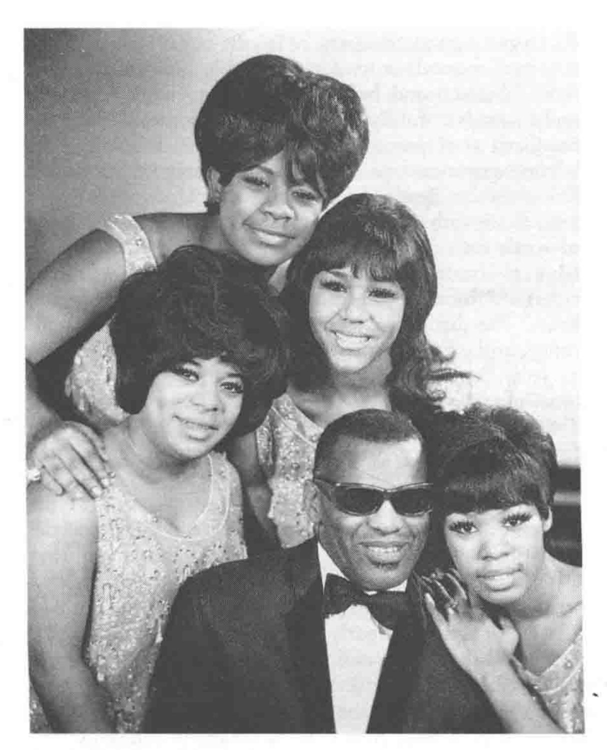
BARRY KERNFELD



Soul music. A black American popular music style. The term soul in black American parlance has connotations of black pride and culture, but its usage in conjunction with music has a complicated genealogy. Gospel groups in the 1940s and 50s occasionally used the term as part of their name, as in the Soul Stirrers. In turn, jazz that self-consciously used melodic figures or riffs derived from gospel music or folk blues came to be called soul jazz by the late 1950s. As singers and arrangers began using techniques from gospel music and soul jazz in black popular music during the 1960s, soul music gradually functioned as an umbrella term for the black popular music of the time, with gospel music in particular providing a rich foundation for the singing styles of many stars. In addition to its association with a cluster of musical practices, the ascendancy of the term is inextricably linked to the Civil Rights movement, and to the growth of black cultural and political nationalisms of the period.

1. Origins. 2. The 1960s. 3. Later developments.

1. ORIGINS. The fact that the term soul was used in conjunction with gospel music, jazz and rhythm and blues points to the interconnection between these different black American musical practices, all of which already shared approaches to harmony, rhythm, melody and timbre. Nevertheless, the genres do differentiate themselves by the way and degree to which these musical elements are deployed and by the subject matter of the lyrics. Thus, the emergence of soul music from rhythm and blues in the early 1960s is more of a shift in emphasis than an importation of new elements from gospel music, as sometimes claimed. However, the increased use of vocal techniques used to signify spiritual ecstasy, intensity and devotion in a secular context intensified both the sense of passionate identification of the singer with the song and the sense of connection between the style of music and the black community. The first rhythm and blues singer to attract attention for his indebtedness to gospel technique was Clyde McPhatter, who was the lead singer on many hit recordings made in the early to mid-1950s with Billy Ward and the Dominoes and with the Drifters. These recordings featured McPhatter's impassioned melismas and call-and-response alternations with other singers in the band to a greater extent than had been evident in previous rhythm and blues recordings. What distinguished McPhatter from singers in earlier gospel-derived groups such as the Ink Spots and the Mills Brothers was the way in which he adopted the dynamic solo style of singers such as Mahalia Jackson and Clara Ward to songs with gospel-derived harmonic progressions in which the change of a single word could transform the song back into a gospel number, such as *Have mercy baby* to *Have mercy Lord*. Also important during the late 1950s was McPhatter's successor in the Dominoes, Jackie Wilson, a dynamic performer who employed gospel-derived vocal techniques in a pop-orientated idiom.

Ray Charles brought many of McPhatter's innovations into focus in a series of recordings beginning in 1954. Many of these songs used transparently gospel models, as with *I've got a woman*, which was based on *I've got a savior*. On these recordings Charles sings in a raspy, exuberant tone full of whoops, cries, bent notes, melismas and shouts, accompanied by his gospel-styled piano and call-and-response patterns between his voice and either the horns or a female backing group, the Raelettes (fig.1). The apotheosis of this approach comes in his 1959 recording *What'd I say*, which not only imported musical elements from gospel music, but which produced a condensed simulation of a black American Holiness religious service. James Brown similarly employed elements from gospel music with the fervour of a Holiness preacher in songs such as *Please, Please, Please* (1956) and *Try me* (1958). In contrast, Sam Cooke used a smooth and sophisticated vocal technique, developed in the popular gospel group the Soul Stirrers, to record *You send me*, a major crossover hit in 1957. His approach to ballads, which conveyed an understated spirituality and sensuality, was a major influence on soul singers of the 1960s and 70s, such as Otis Redding and Al Green.

2. THE 1960S. The early 1960s saw a dramatic increase in gospel-influenced recordings when a confluence of performers, songwriters and record companies began producing recordings in a consistent style that would become known as soul. The early work of Solomon Burke

1. Ray Charles and the Raelettes

(*Cry to me*, 1962), Otis Redding (*These Arms of Mine*, 1963), Wilson Pickett (*I found a love*, with the Falcons, 1962), recorded on independent record labels such as Atlantic and Stax and directed to a largely black audience, combined with the work of veterans such as Charles, Cooke, Brown and others such as Bobby 'Blue' Bland, to mark the stirrings of a recognizable genre. In addition to the melismas, bent notes, and wide range of timbres employed by the lead vocalists, these songs, all of which were in a slow tempo, prominently featured triplet subdivisions that were often articulated in arpeggiations played by piano or guitar. They also frequently featured interjected 'sermons' that usually took the form of romantic advice addressed to the audience.

As the term soul music began to enter mainstream usage, black popular music increasingly cut its ties with 1950s rhythm and blues to establish a distinctive 60s soul style. Differences began to emerge between a down-home, Southern soul style identified with the STAX and ATLANTIC recording companies and with studios based in Memphis and Muscle Shoals, Alabama, and a northern, smooth, or uptown soul style identified primarily with MOTOWN Records based in Detroit. Between the years 1964 and 1966, the gospel techniques employed by lead vocalists continued, while the accompanying instruments acquired added definition through the use of rhythmic riffs. The bass in particular gained added prominence through the increasing use of syncopated patterns, and horns began to be used in syncopated, staccato bursts. Mid- and up-tempo songs such as James Brown's *Out of Sight* (1964), Otis Redding's *Mr. Pitiful* (1964), Wilson Pickett's *In the Midnight Hour* (1965), Jr Walker and the All Stars' *Shotgun* (1965) and Fontella Bass's *Rescue me* (1965) all displayed an increased reliance on these features as well as a move away from the shuffle rhythms of the 1950s to the even subdivisions that characterize latter-day styles such as funk, disco and hip hop. Ballads continued to feature triplet subdivision, but with more elaborate arrangements and greater use of horns, particularly in 'Southern soul' recordings, or orchestral instruments, especially in recordings produced by Motown. Examples include Otis Redding's *I've been loving you too long (to stop now)*, Joe Tex's *Hold what you've got*, and the Miracles' *Ooh Baby Baby*, all from 1965. All these artists convey the feeling that they identify passionately with what they are singing about, whether the topic is spiritual uplift, devotion to a mate, troubles in love, or conflicts in the community or broader society. This sense of identification created the effect of fusing the spiritual, the personal, and the political.

During the period 1965–6 recordings by the already successful Motown artists, especially the Supremes and the Four Tops, reached new heights of popularity. Recordings by Southern soul artists such as Redding (fig.2), Pickett and Percy Sledge (*When a Man Loves a Woman*) crossed over into the pop market. James Brown also began a long string of crossover pop hits and the Chicago-based Impressions had a series of hits with thinly disguised topical themes (*Keep on pushing*, *People get ready* and *Amen*). In 1967–8 Aretha Franklin's *Respect*, a cover version of a song by Otis Redding, and James Brown's *Say it loud – I'm black and I'm proud* signalled soul music's entry into a new phase of political engagement. The emergence of Franklin, one of the first solo female stars in the genre (fig.3), had a huge impact: her tremendous range, mastery of all aspects of gospel singing technique, and driving gospel piano playing, applied to consistently excellent material, resulted in a series of brilliant recordings in 1967–70. During this time she sold more records than any other black American artist.

2. Otis Redding

3. Aretha Franklin

The phenomenal popularity of Aretha Franklin, the ongoing success of James Brown and the grittiest practitioners of Southern soul, and the continued ubiquity of the pop-orientated productions of Motown attested to soul music's continued relevance to a broad cross-section of the US audience in the late 1960s. Musically, many of the characteristics of the 1964–6 period persisted, although in mid- and up-tempo songs bass lines became more active, arrangements became fuller with greater use of multiple guitar parts, orchestral instruments and auxiliary percussion (especially at Motown). Individual parts became increasingly syncopated, especially in the music of James Brown, which in turn led to FUNK. A new type of soul ballad, exemplified in songs such as Linda Jones's *Hypnotized* (1967) and Marvin Gaye and Tammi Terrell's *If this world were mine* (1968), began to emerge that broke the previous reliance of ballads on triplet subdivisions and began to incorporate more of the textural and rhythmic innovations of the faster songs.

Otis Redding died in December 1967 on the eve of his greatest success, *Sittin' on the Dock of the Bay* (1968), and the activity and popularity of many of the first wave of soul practitioners declined thereafter. The producers and songwriters Holland, Dozier and Holland, who had been responsible for the bulk of the hits for the Supremes and the Four Tops during the peak 1964–7 period left Motown, while Stax underwent administrative reorganization and became increasingly inconsistent in both artistic and commercial terms; by 1975 the company filed for bankruptcy. As soul music's popularity decreased with the pop audience the industry belatedly recognized its importance in 1969 when *Billboard* changed the name of the chart for black popular music from Rhythm and Blues to Soul, a name retained by the chart until 1982.

3. LATER DEVELOPMENTS. In the 1970s soul music diverged towards a 'sweet' soul style that took its cue from Motown and balladeers such as Curtis Mayfield, and towards a 'funky' soul style, after James Brown, the Southern soul practitioners and Aretha Franklin. The leading exponents of the sweet soul category resided in Philadelphia. Producers Gamble and Huff, and Thom Bell, along with a core of studio musicians, created a body of work that dominated soul music in the early 1970s. Musical trademarks included crisp, clear recordings enhanced by the generous 'sweetening' of strings and brass. The distinctive drum sound emphasized the mid-range, and often accented every beat; in evidence as early as Jerry Butler's *Only the strong survive* (1969), these musical trademarks reached maturity in the O'Jays' *Love Train* (1973) and Harold Melvin and Blue Notes' *The Love I Lost* (1973), creating a rhythmic and sonic approach that set the stage for DISCO. The unabashedly romantic sound of the ballads of groups such as the Delfonics (*La La means I love you*, 1968; fig.4) and the Stylistics (*Betcha By Golly Wow*, 1972), usually featuring falsetto voices and rich orchestration, also enjoyed crossover success. Recording in Memphis, Al Green had a string of hits in the early 1970s beginning with *Tired of Being Alone* (1971), and that represented a synthesis of the 'sweet' and the 'funky'.

By the early 1970s the funky stream of soul began to cohere into a style that was increasingly differentiated from soul music. Brown's influence and the influence of bands such as Sly and the Family Stone, who blended Brown's funk style with elements of psychedelic rock, was felt by many soul artists. At Motown the producer Norman Whitfield recorded a series of songs with the Temptations, among others, that showed the company moving in new directions, and clearly displayed the influence of Brown and Sly and the Family Stone. These included *Cloud Nine*, *Ball of Confusion* and *Papa was a rolling stone*, all from 1968–72. The early work of the Jackson Five also falls into this category, as with *I want you back* (1969). Long-established Motown artists also moved in new directions with concept albums, such as Marvin Gaye's *What's Goin' On* (1971) and Stevie Wonder's *Talking Book* (1972).

By the mid-1970s the up-tempo numbers in the sweet style began to be called disco. Ballads formed the most obvious aural connection to soul music of the late 60s and early 70s, but by 1982, even *Billboard* had to concede that Soul was no longer an adequate label for black

4. The Delfonics

American popular music in general, and changed the name of the soul chart to Black Music. Aspects of soul music live on in contemporary rhythm and blues, and in the samples of many hip-hop tracks: Salt 'n' Pepa's *Tramp* (1987) pays homage to Otis Redding and Carla Thomas's *Tramp* of 20 years earlier. Contemporary usage of the term, however, refers to a style that began with a few scattered efforts of the pioneering singers in the 1950s, gathered momentum throughout the 60s with the twin streams of Southern soul and Motown, and eventually diverged into funk and disco in the 70s.

Soul II Soul. English pop performers. They can be best thought of as a collective of ever-changing personnel rather than as a pop band, and in the 1980s were harbingers of the looser confederation of working units which typified certain areas of dance music in the 90s. Soul II Soul was formed in 1982 by Jazzie B (Beresford Romeo; *b* London, 26 Jan 1963; rapper) and Phillip 'Daddae' Harvey (multi-instrumentalist) as a reggae sound system unit. They first played at street parties and youth clubs, but by the mid-1980s the collective had become one of the leading promoters of warehouse raves in London. Jazzie B was as much a pop entrepreneur and guru as musician, with a shop in London selling band merchandizing and fashion accessories; he later became a radio DJ on the then pirate station Kiss FM and produced an album for James Brown in 1993. In 1985 the band was joined by Nellee Hooper, who later went on to record with Massive Attack and become a producer, and in 1987 Soul II Soul finally became a recording band with two underground dance hits, *Fairplay* and *Feel Free*. In 1989, however, they entered mainstream pop. Their singles *Keep on movin'* and their UK number one *Back to Life (However do you want me)* both featured vocals by Caron Wheeler and blended Chic-inspired disco string arrangements with 1980s rap and hip hop. Their first album, *Club Classics Volume 1* (Ten, 1989) was an international success and sold 2 million copies in the USA under the title *Keep On Moving*. In the 1990s Soul II Soul's innovative hybrid dance sound was subsumed by the mainstream and, although the band continued to have hit singles and albums, their critical and commercial stock declined. They released their sixth album, *Time For Change* (Island), in 1997, but the critical consensus was that the band had failed to heed the title's directive to any good effect.

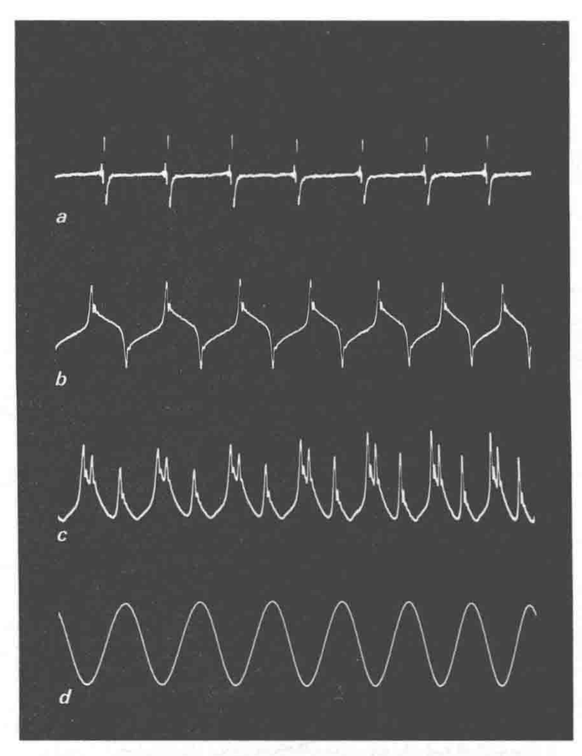
DAVID BUCKLEY

Sound. This article gives an introduction to the scientific aspects of sound. For information on related topics *see* ACOUSTICS (for matters connected with rooms, instruments and the human voice), HEARING AND PSYCHOACOUSTICS, PSYCHOLOGY OF MUSIC and RECORDED SOUND; for the history of the study of sound, *see* PHYSICS OF MUSIC.

Methods of analysis and study: (i) Experimental (ii) Theoretical. 9. Tones in sequence and combination. 10. The effect of acoustic environment. 11. Prospect.

1. HISTORY. Greek and Roman sources include numerous references to scientific reflections on the nature and origin of sound, and these seem to be the earliest recorded thoughts indicating any attitude to music other than the purely aesthetic. Many classical observers, however, followed the Aristotelian method of thinking about an experiment and imagining the results, a method which, though of undoubted value as a starting-point, usually led to conflicting conclusions if not checked against real experiments. Also, a great deal of mysticism, especially concerning numerical relationships, tended to obscure more scientific ideas.

There followed a gap of 15–16 centuries during which there was no development in the scientific study of sound. But during the 16th and 17th centuries almost all of the great scientists of the time devoted at least some of their attention to the subject. Galileo made the first serious study of vibrating strings and gave a plausible explanation of the origin of consonance and dissonance, one that remains generally acceptable. He also introduced the idea of demonstration by analogue, including the use of pendula to demonstrate harmonic ratios. Boyle performed the classical experiment to show that a medium is needed for sound transmission; Descartes made studies of resonance; Hooke recognized that a sound of definite pitch can be derived from a rotating wheel; Mersenne formulated laws of vibrating strings (though Galileo had laid firm foundations in unpublished work); and Newton was the first to make a theoretical derivation of the velocity of sound and to compare it with experimental results.



In the 18th and 19th centuries discoveries came rapidly. Young made full studies of the modes of vibration of strings; Chladni studied vibrations of plates; Fourier established the mathematical theories on which all modern wave analysis is based; Wheatstone developed methods of making sound waves visible; Faraday investigated singing flames; the equal-tempered scale appeared; Koenig studied the human ear's pitch range; and Helmholtz gathered all the studies together in a magnificent volume. Bell produced the telephone and Edison the phonograph; John Tyndall lectured in Britain and the USA, using demonstrations that still have great impact and for which much of the apparatus remains at the Royal Institution in London. During the first half of the 20th century there was a decline in progress, partly because scientists were preoccupied with atomic physics. In the second half, new

technological advances, largely deriving from these studies (particularly those concerned with electronic measuring devices), gave the study of sound a new lease of life. (For further material on the history of the science of sound see Miller).

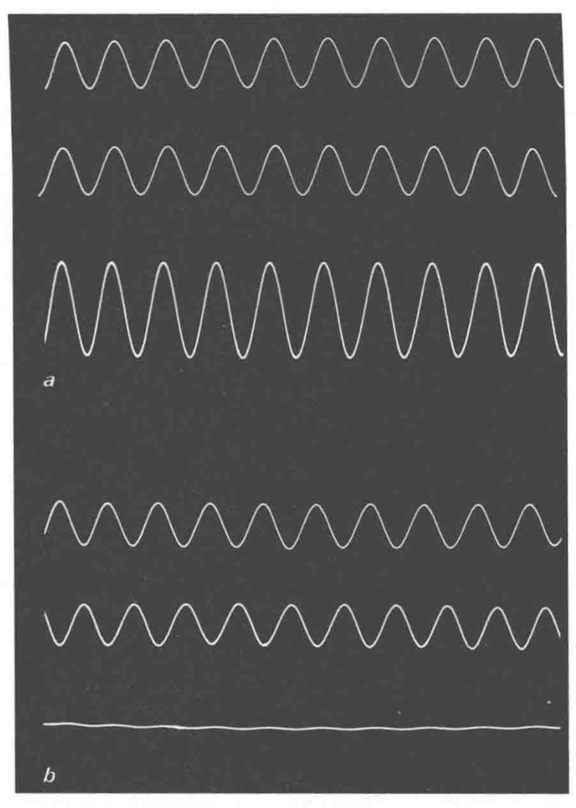
2. THE NATURE OF SOUND. One of the earliest applications of the air pump was to show that sound cannot be heard from a source in an evacuated vessel: intervening air is necessary for transmission. But the air does not have to travel; sound can pass through walls and windows. The idea emerges, then, of transmission by means of waves, that is by transfer of energy from point to point without permanent change in the medium. Sound waves involve tiny disturbances or changes in the pressure of the air. The amount of the disturbance is small; a quiet musical instrument might create changes in the atmospheric pressure of only about one part in a million. Each disturbance, which may be an increase or decrease in pressure but is usually a complicated succession of both, then travels out through the surrounding air creating spherical wave surfaces round the origin of the sound – a three-dimensional counterpart of the circular ripples produced by a pebble striking the surface of a pond. The waves in the air travel outwards at approximately 340 metres (m) per second.

Because the energy associated with a particular sound is spread out over the surface of a sphere, it follows that the fraction of the total energy that falls on a human ear reduces as the square of the distance from the source. Assuming that the area of sound-wave surface picked up by an ear is 12·5 cm², if the listener is 1 m away from the source, the surface area of the sphere is then just over 125,000 cm² and so only about one ten-thousandth of the energy is received by one ear; at 5 m the proportion would be one quarter-millionth. In this calculation it is, of course, assumed that the source is far from any objects that would reflect or diffract the sound – in other words that it is in empty space (except for air). Usually there is an environment, even if it is only the ground, and in a room the whole wave pattern is different. The effect of room acoustics is discussed in §10 below and in ACOUSTICS, §I.

Sound, then, arises and is transmitted as tiny pressure changes in the air. When any two hard objects collide they produce a sound that might be described as a click or a crash depending on its loudness. The simplest click corresponds to a sudden rise in the pressure of the air, produced by the air that was between the colliding objects being forcibly squeezed out. The pressure then reduces, usually overshoots the mark and after a few oscillations falls to normal. Clicks may be combined in two ways. If they follow each other in a random fashion, as for example when an audience applauds, the resulting sound is described as 'noise'. It may be continuous and of uniform loudness, but cannot easily be assigned a pitch. However, if the clicks follow each other regularly they are heard separately if well spaced in time (e.g. the ticks of a clock), but if they are speeded up they begin to produce a sound of definite musical pitch. The most obvious example is the circular saw in which the teeth successively strike the wood: as the speed of rotation rises, so does the pitch of the sound. Any regularly repeated sequence of pressure changes will give rise to the sensation of musical tones of constant pitch if the sequence repeats at a frequency between 18 and 15,000 times a second approximately; the exact limits depend on individual variations in hearing, and especially on the age of the listener (see §4 below).

1. Pressure variations in four different types of wave, all giving rise to the same pitch but of different timbre; (d) is a pure tone or sine wave

What has been said concerns steady, unchanging sounds; complications arise in the case of varying sounds. Also, it is the regularity of repetition that gives a sound the musical sensation of pitch; the repeating unit does not matter. For example, fig.1 shows the pressure variations (i.e. plots of amplitude against time) in four quite different sorts of wave; all four would give rise to a steady sensation of the same pitch, but the quality of the sound, or timbre, would be quite different in each case. Fig.1*d* is a sine wave (so called because the mathematical equation from which it is derived is $y = a \sin\pi x$); a treble recorder playing a note steadily and fairly quietly with no trace of vibrato gives a close approximation to a sine-wave tone. It is important scientifically for two reasons. First, sine-wave oscillation occurs naturally in a large number of systems that are normally balanced in equilibrium and are then slightly displaced. A child's swing, the pendulum or balance wheel of a clock, the air in a bottle when one blows across its neck and the metal reed of a mouth organ are all examples. Second, any wave, no matter how complicated, can be represented by adding up the effects of a large number of sine waves. This is the basis of Fourier analysis and synthesis (see §8 below).

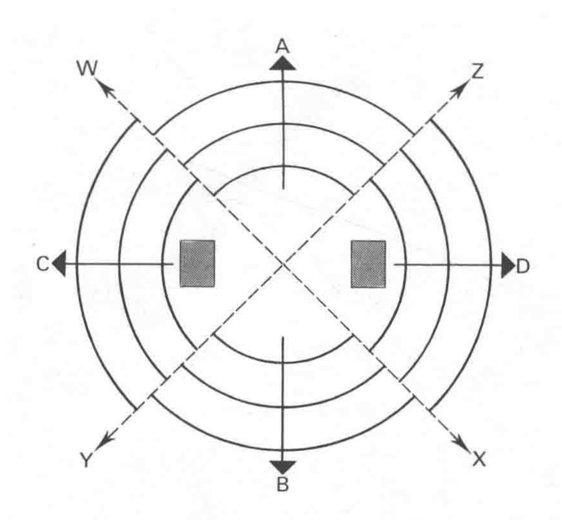


The question arises whether transmission through the air leaves sound waves unchanged. Clearly, if the waves are being created inside a room there are effects (see §10 below); and changes may occur in sounds transmitted through electronic systems (radio, telephone, recording). Here discussion is limited to some of the important effects that can arise in the process of transmission through the air. First, the speed of sound varies with the temperature, humidity and pressure of the air, and with its exact

composition (though this last factor is unlikely to vary significantly except in highly artificial conditions, such as those inside a spacecraft or diving bell). But uniform changes in velocity of the magnitudes likely to arise in nature can be detected only by precise measurement, though non-uniform changes may produce quite noticeable effects: the waves may travel along a curved or bent path, that is, they may be 'refracted'. For example, the velocity of sound is greater at higher temperatures. Suppose one listens to sounds in the open air near noon on a hot summer day. The earth will have heated up and the layers of air next to it will be correspondingly warm; higher up the air will be much cooler. A sound wave travelling towards an observer will thus tend to travel more slowly some distance above the earth and more quickly nearer to the ground, so the whole wave slews round and goes up into the air. Sound cannot therefore be heard at great distances, and this contributes to the muffled and drowsy effect at midday in summer, so often described by poets. On a clear night, however, the earth cools rapidly, the blanket of air remains relatively warm and the effect is reversed: sound waves tend to curve down towards the earth and hence 'carry' much further. Similar effects occur over water, and a combination of the down-curving effect and good reflection at the water surface can make audibility over a lake or pond excellent.

If a wave meets an object, various kinds of interaction may occur. If the object is very small compared with the wavelength of sound, the wave is hardly affected at all. (The wavelength corresponding to *c′* is about 1·25 m or 4 feet.) If the object is approximately the same size as the wavelength, the waves tend to move in towards each other again after passing on either side of it, and so, effectively, go round corners; the sound is said to be 'diffracted'. If the object is much larger, the main effect is that the waves are reflected.

Diffraction or reflection can, under certain special circumstances, lead to problems. Suppose, for example, that sound finds its way to an observer by two routes of different lengths. The extreme example is the 'specific echo' heard in tunnels or before mountains, in which the sound is repeated one or more times. But if the path difference is not so great and the sound is a continuous musical tone, the net result depends to a great extent on the amount of 'slide' between the two waves. If it happens that when the paths join up a peak of one coincides with a peak of the other (i.e. if the waves are 'in phase'), they merely add to each other; but if a peak of one lies on a trough of the other (i.e. if the waves are 'out of phase'), the waves effectively neutralize each other and no sound is heard (fig.2). The easiest way to demonstrate this effect is to listen to a high-pitched, steady note in a room; sound will be received direct from the source and also by reflection from the walls and the relative path lengths will depend on position, so that the sound heard can be made to rise and fall in loudness by moving the head. Phase is important, and one can, for example, make or mar the effect of a stereo system by feeding the loudspeakers in or out of phase. It is essential that compressions received by both microphones are reproduced as compressions by both loudspeakers. If this is not so, the resulting sound is diffuse and difficult to locate in space, because the ears rely on phase differences to help in localizing sound.

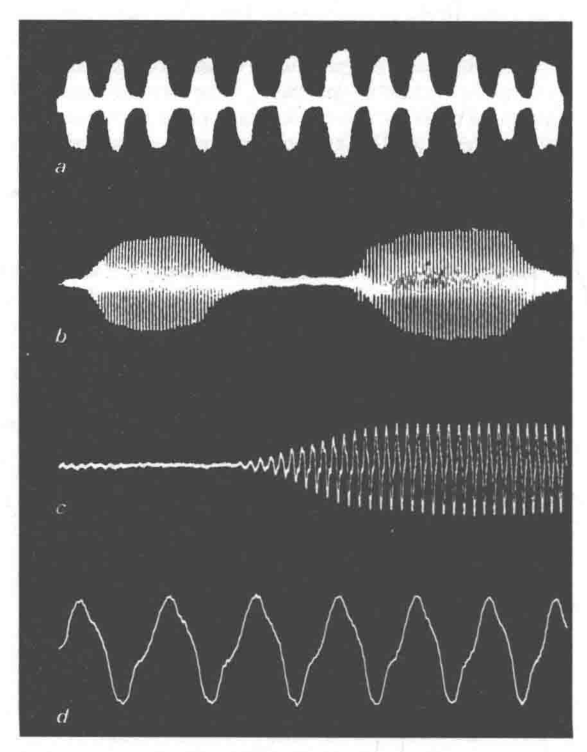


The addition or diminution effect of two waves with a phase difference is called 'interference'. Perhaps the most striking demonstration is that which can be performed with a tuning-fork. If a fork is struck and held about 5–8 cm from one ear, the sound will be found to rise and fall in loudness as the fork is rotated. The following explanation refers to fig.3, which represents a view looking down on to the end of the fork. When the prongs move together a compression moves out along directions A and B but in directions C and D the result is a rarefaction. When the prongs move apart again compressions move out along C and D and rarefactions along A and B. Thus the waves in directions A and B are exactly out of phase with those along C and D, as is shown by the quadrants of circles. If one listens in directions W, X, Y or Z one receives simultaneously two waves exactly out of phase with each other; they effectively neutralize one another, and practically no sound is heard.

2. (a) Two waves 'in phase', adding to each other; (b) two waves 'out of phase', neutralizing each other so that no sound is heard

'Diffusion' is a term sometimes used in discussing the distribution of sound waves in a hall, implying a mixture of reflection and diffraction from specially shaped panels or reflectors so placed that sound waves that would otherwise be 'wasted' can be deviated into more useful directions. All the processes discussed above – refraction, reflection, diffraction and interference – affect the direction, distribution and loudness of sounds but have relatively little effect on their quality; the shapes of the waves remain unchanged.

3. VISUAL REPRESENTATION OF SOUND. In any serious research it is important to be able to describe the object of study precisely, but in the case of sound this is exceedingly difficult. It is possible to describe sounds in words, in pictures or by association with colours, but none of these representations can be called precise.



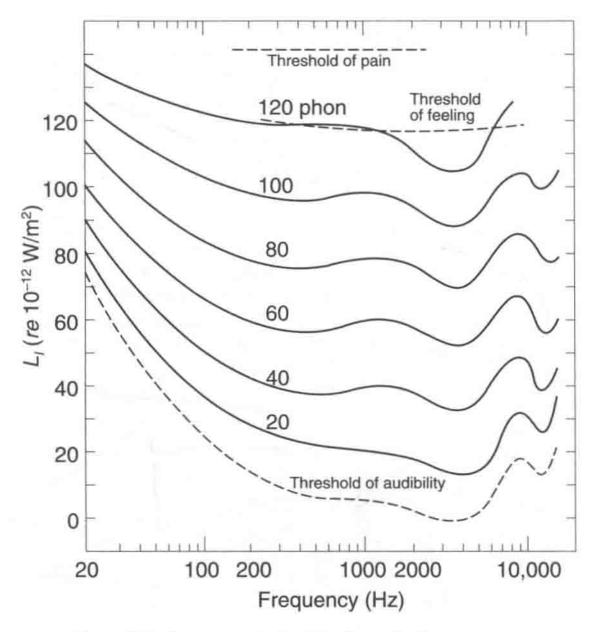
3. *View looking down on to the end of a vibrating tuning-fork, showing interference; there is no sound in directions W, X, Y and Z*

Musicians have traditionally used a symbolic notation that is satisfactorily specific as far as the pitch and duration of each required sound is concerned but is not nearly good enough for scientific purposes, especially when the quality of sounds is involved. On a musical score quality is determined almost exclusively by giving the name of an instrument; but there are almost as many qualities associated with a particular category of instrument as there are instruments, and it is rare to find a composer specifying even in the most general way the kind of violin, clarinet, bassoon etc. called for. Furthermore, interpretation of a score depends on precise knowledge of the instruments. It is therefore necessary to look for much more exact visual representations.

What is required is a means of portraying the exact pressure at a point in the sound wave at every instant of time. One of the earliest ways of doing this was very direct; it consisted simply of letting the sound fall on a thin diaphragm or membrane in the side of a gas pipe feeding a flame. If the pressure on the membrane increased a little the flame jumped and if it decreased the flame sank. The flame was then viewed by reflection in a set of mirrors arranged on the faces of a rotating block of hexagonal or octagonal section. The effect was to spread the images of the flame out horizontally and the variations in height could be seen. Many elaborations and variations of this device have been used during the last century or so, and the device in current use is merely a sophisticated version. The membrane is replaced by a microphone that converts the pressure variations into variations in an electric current instead of into variations of gas pressure. This varying current is then fed to a cathode-ray oscilloscope to give a graph of pressure against time. Variation of the speed of the trace makes possible the examination of the pressure variations in different degrees of detail.

Fig.4 shows the wave trace of a series of staccato notes (*a′*) on a treble recorder at the rate of six notes per second. In fig.4*a* the trace lasts two seconds and 12 separate notes can be seen. In fig.4*b* the trace lasts a third of a second and two notes can be seen. In fig.4*c* the trace lasts 0·1 seconds and shows the beginning and middle of one note. In fig.4*d* the trace lasts 0·014 seconds and the regular waveform in the middle of the note can be seen. Many important points are illustrated by these traces, and they will be referred to again.

4. HUMAN RESPONSE AND PHYSICAL MEASUREMENT. One of the most difficult problems in scientific study is to devise methods of measuring quantities to which the human senses respond in such a way that the measurements bear some relationship to the subjective response. In sound the first difficulty is the enormous range of pressure variations to which the ear is sensitive. The smallest disturbance of the air that can be detected as sound by the average person involves atmospheric pressure differences of about two parts in ten thousand million; the largest disturbance that can be tolerated without the sensation of sound turning into pain is about a million times larger. A range of a million to one in pressure variation is far beyond the scope of any single physical instrument. The range of audible frequencies is not quite so great – about a thousand to one. For both pressure change and frequency the relationship between stimulus and sensation is complicated. If a pure tone of about 20 cycles per second, or 20 Hertz (Hz), which can just be heard as a very low note by most people, is slowly increased in frequency, the perceived sensation of pitch gradually rises, and there is a sensation of 'coming to rest' periodically at certain points during the process. These points are, musically speaking, an octave apart in pitch and turn out always to correspond to an exact doubling of the frequency, at least over the middle range (see below for some complications). If two notes are played together it is easy to adjust them by ear so that one is exactly double the frequency of the other; if the ratio is not quite



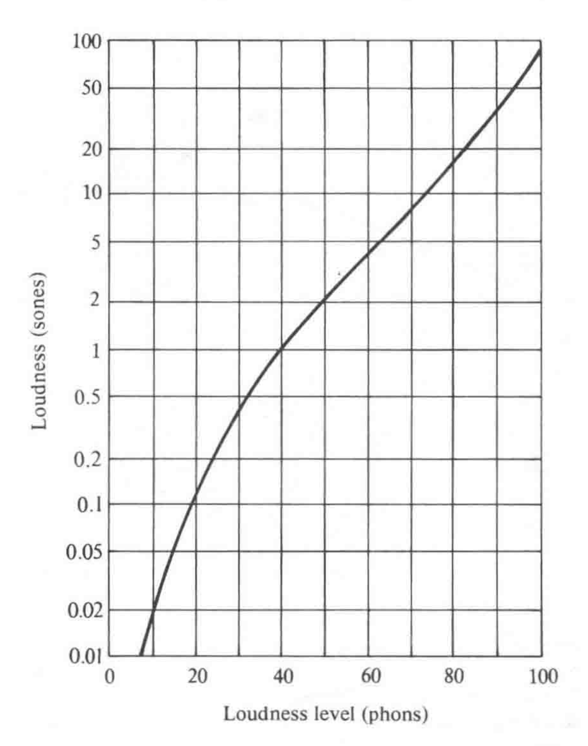
4. *Wave traces of a series of staccato notes (a′) on a treble recorder at the rate of six notes per second; in (a) the trace lasts two seconds, (b) a third of a second, (c) 0·1 seconds, (d) 0·014 seconds*

2:1 the result is harsh and unpleasant (the phenomenon of the 'stretched octave', however, is discussed under PSYCHOLOGY OF MUSIC, §II, 1(iii)). This logarithmic relationship of doubling the stimulus to give equal increments of sensation is quite common in relating subjective and objective measurements; something like it is found in relating pressure changes with loudness.

It is customary to work not in terms of pressure changes but in terms of the energy associated with a wave. The physical quantity most often used is the sound intensity, and it is measured as the energy flow per second through one square metre in units of watts per square metre. The intensity of a sound is related to the square of the pressure difference involved, and so the range of intensity to which the ear is sensitive is a million million to one. The quietest sound that can be heard has an intensity of one million-millionth of a watt per square metre and the 'threshold of pain' is one watt per square metre. Again the law relating stimulus and sensation is roughly logarithmic, and doublings of the intensity give something like equal increments of loudness, though again there are complications (see below). These logarithmic laws are aspects of the Weber–Fechner Law, whose most important result is that to produce a noticeable increase in sensation the extra stimulus required depends on the stimulus already present. The idea is, of course, familiar: in conditions of absolute silence one can hear a pin drop, whereas in a noisy machine shop a hammer might fall unheard.

It is not possible to disentangle intensity and loudness from frequency entirely; the ear's response to sounds of different intensities depends to a considerable extent on their frequencies. Fig.5 shows a set of graphs that are usually called equal loudness curves. They are produced by asking a wide range of subjects to match in loudness pairs of pure tones of differing pitch. Any one of the curves on the diagram represents the actual intensity that has to be produced as a physical quantity in the sound wave to give the same sensation of loudness to the ear. It is quite clear, for example, that for quiet sounds (the lower curves) it requires a great deal more intensity at low and at high frequencies to produce a given loudness than it does in the middle around 1000 Hz (approximately *b″*). At higher sound levels the curves are much flatter. This is why uniform amplification in reproducing apparatus is satisfactory when the volume of reproduction is high, but at lower levels bass and treble boost is needed. A special 'loudness' control is incorporated in some amplifiers to make this correction automatically.

The curves in fig.5 are labelled in decibels (dB) and phons. The decibel is a measure of level, either of sound energy or of power in an electric circuit, and it relates to the ratio of two quantities. It arises from the logarithmic relationship already discussed and is an attempt to provide a unit which, though based on physical measurement, bears some relationship to perceived sensation. If the ratio of two physically measured sound intensities is I_1:I_2, then I_1 has a level *n* decibels above I_2 if $n = 10 \log_{10} (I_1/I_2)$. Thus since $\log_{10} 2$ is 0·3010, if the ratio I_1:I_2 is 2:1, I_1 is approximately 3 decibels louder than I_2. Decibel levels can, of course, be added, so for example a sound that starts at a level of 10 dB above some fixed standard and is then amplified by a factor of two will finish up 13 dB above the standard. In measuring sound or noise levels it is usual to take the minimum sound that can be just heard – the threshold of audibility already mentioned – as the

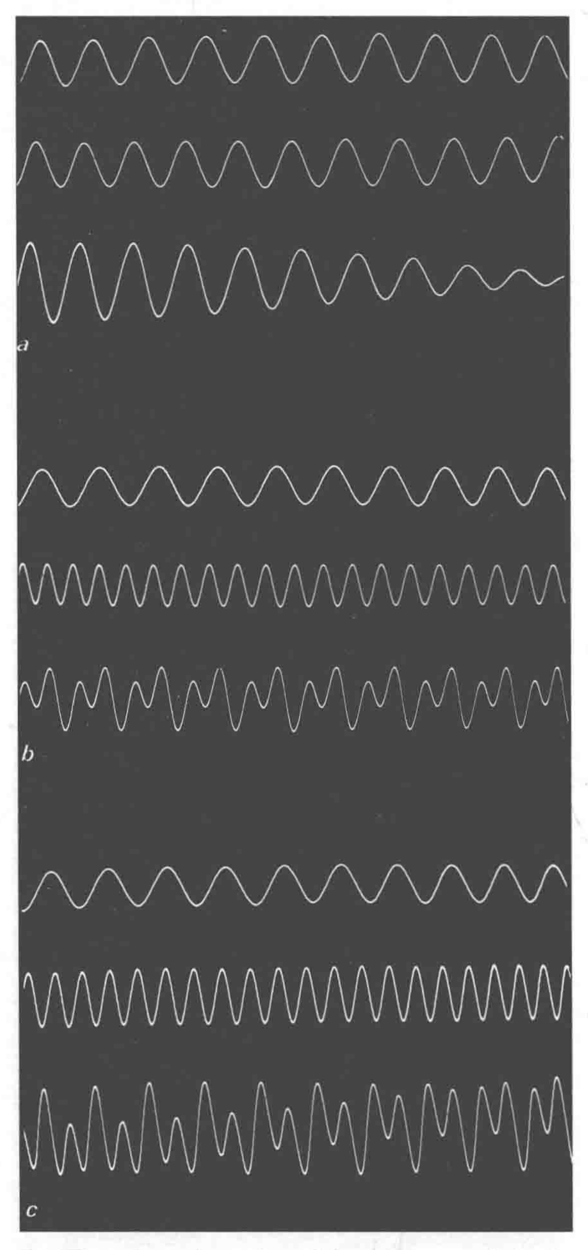


5. Set of equal loudness curves after Kinsler and others

standard (usually defined as one million-millionth of a watt per square metre). It will be obvious from fig.5 that the frequency of the sound will have an influence, and indeed the threshold is not the same at all frequencies. By convention sound levels are measured by comparing them with a 1000 Hz pure tone. If the sound being measured seems to be as loud as a standard 1000 Hz tone when they are heard in alternate bursts, and if the 1000 Hz tone has an intensity level of *n* dB, the sound being measured is described as having an equivalent loudness of *n* phons. Thus the curves of fig.5 show the intensity level at different frequencies required to give a constant equivalent loudness; the dB level at 1000 Hz can be seen to equal the equivalent loudness in phons for each curve.

Difficulties begin when, instead of relating all measurements to intensity as a physical quantity, one tries to produce an entirely subjective scale (all the measurements so far described, though they involve subjective matching, always end up with intensity being measured on a meter). One might, for example, assume that, if a sound A when heard by only one ear seems to match in loudness a sound B when heard by both ears, then B is half as loud as A. Or one might try to estimate subjectively when one sound is twice as loud as another. Using this sort of strategy yet another quantity has been introduced, the sone. It is a truly subjective unit, and the complexities of trying to relate, for example, the loudness in sones produced when ten violins play together if separately each one has an equivalent loudness of 60 phons are beyond the scope of this article. Fig.6, however, shows the approximate relationship between equivalent loudness of a sound in phons and its loudness in sones. One sone is arbitrarily defined as 40 phons and, roughly, an increase of nine phons is needed to give an increase of one sone.

To return to the impossibility of disentangling frequency and intensity, it is often stated that there is a direct relationship between frequency and pitch, and that the physically measurable frequency completely defines the sensation of pitch. The subjective sensation of pitch can,

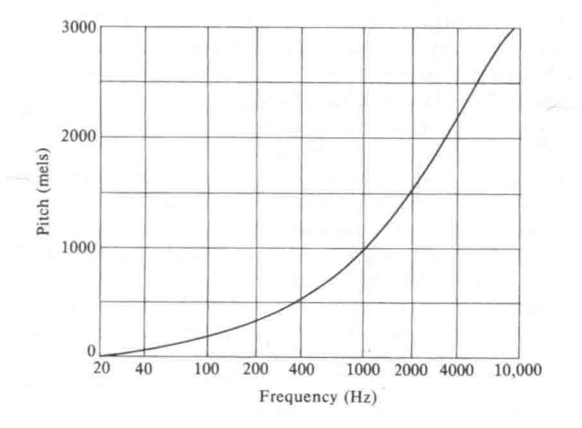


6. Graph showing the approximate relationship between equivalent loudness of a sound in phons and its loudness in sones (after Kinsler and others)

however, under certain circumstances, depend on the intensity as well as the frequency. Fortunately the effect is strong only when pure tones are involved; real instruments produce much less striking changes. There seems to be confusion over the exact nature of the effect. Some have given quite specific relationships, but Taylor's experiments with a wide range of audiences produce variable results. If a pure tone of absolutely constant frequency is suddenly increased in intensity then, whatever its frequency, some listeners think that it has risen in pitch, some that it has stayed the same, and others that it has gone down.

The problems of relating pitch to frequency, however, are of greater importance. It is convenient to introduce a system of dividing the octave that takes note of the logarithmic aspect of sensation, and then the various intervals judged subjectively can be translated into this physically measurable quantity – a division analogous to the decibel for loudness measurements; the one in common use is the cent, a 100th part of an equal-tempered semitone. As was the decibel, the cent is a logarithmic measure of ratio, and intervals in cents may be added together. If the interval ratio between two notes is $I_1{:}I_2$ then their interval is n cents if $n \log_{10} 2 = 1200 \log_{10} (I_1/I_2)$. Thus if the interval is one octave, I_1/I_2 is 2 and n is 1200. A perfect 5th has the interval ratio 3:2 and a perfect 4th 4:3, so together they give an octave since 3/2 x 4/3 = 2/1. Expressed in cents the 5th is 702 cents and the 4th 498 cents, and the sum of these is 1200, an octave. (For further remarks on scales and intervals see §9 below.) The cent, then, relates directly to physical measurement of frequency, but it is important to recognize that the system depends on tuning experiments in which two notes are listened to simultaneously.

As was seen in §2 above, if two pure tones of identical frequency and intensity are added together the net result will depend on their phase difference. If the two waves are just a little different in frequency then, even if the source-to-ear distance remains fixed, the waves are alternately in and out of phase along their lengths, and the loudness rises and falls to give the familiar 'beat' phenomenon (fig.7*a*). The elimination of beats provides a precise method of adjusting two notes to identical frequency. If the notes are exactly an octave apart, they will add to give a steady waveform and the resulting impression is smooth and steady (fig.7*b*); if they are not



7. (a) Waves alternately in and out of phase, giving rise to the 'beat' phenomenon; (b) waveform of two notes exactly an octave apart, giving a smooth and steady impression; (c) waveforms of notes not quite an octave apart, 'changing step'; in each case the lowest graph is the sum of the other two

quite an octave apart again they will 'change step' and the change can be detected by the ear though it is not as marked as the beat effect (fig.7*c*). If, however, two notes are played successively rather than simultaneously and observers are asked to judge when the pitch of one note is twice or half the pitch of the other, estimates of intervals are considerably different. A scale of pitch based on this melodic judgment is measured in mels. Fig.8 shows the relationship between frequency measured in Hz and corresponding pitch measured in mels. The pitch of a 1000 Hz note is defined as 1000 mels. (For further information on psychoacoustics *see* HEARING AND PSYCHOACOUSTICS and PSYCHOLOGY OF MUSIC.)

5. MEANS OF PRODUCING MUSICAL TONES.

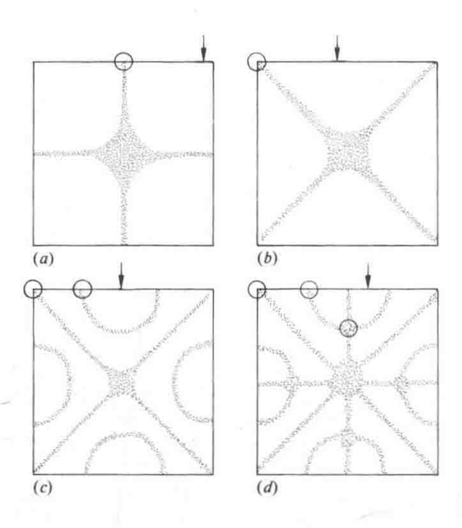
(i) Mechanical rotation. Since tones of specific frequency have a repetitive waveform, the most obvious way to generate them is from some system that is rotating, so that the same sequence of events occurs in every revolution. Most of the hums and whines associated with machinery arise from this, and it is a familiar fact that as the rotational frequency rises so the pitch of the tone goes up. The only device constructed with the deliberate intention of deriving a tone mechanically from a rotating object is the siren, which in its simplest form is merely a disc with a ring of equally spaced holes near its outer periphery. The wheel is so arranged that a jet of air from a pipe is alternately interrupted and allowed to proceed through one of the holes as the disc is rotated. If the speed of rotation is high enough, a succession of puffs of air at a rate audible as a musical tone can be produced. Such a wheel may be provided with several rings with different numbers of holes in each. If the jet of air is directed at different rows then, even though the rotational speed of the disc remains constant, a sequence of notes can be produced and simple tunes played. For example, if eight rings of 24, 27, 30, 32, 36, 40, 45 and 48 holes are used, a diatonic major scale results. The pitch ratio of a tone to any other tone stays constant at any given rotational speed (i.e. the siren will always produce a diatonic major scale) but the absolute pitch depends on the speed of rotation.

Such devices have only rarely been used as musical instruments, but they do give useful frequency standards, as it is relatively easy both to produce and to measure

8. Graph showing the relationship between frequency measured in Hz and corresponding pitch measured in mels (after Kinsler and others)

steady rotational speeds. There are, however, several devices that use rotating systems as the basis of their tone-generators but make sound by electrical means, for example the Hammond organ and the Compton electrone.

(ii) Mechanical vibration. Almost anything can be made to vibrate, but the frequency may be outside the audio range, or it may be so heavily damped that the vibration does not persist long enough for it to be heard. It is impossible to separate the idea of vibration from the idea of waves, and the time taken for a wave to travel from one point to another is all-important in discussing vibrations. Consider, for example, an open tube of about 2 cm internal diameter and 37·5 cm in length. If a puff of air is sent in from one end, it will travel along until it reaches the other; there it will suddenly find itself free to expand into the open air and the resultant pressure difference will cause more air from inside the pipe to move out of the end. The result is that an expansion or negative pulse – a momentary lowering of the pressure – travels as a wave back to the front end. As soon as it arrives back at the beginning, air from the outside is pushed in to fill up the low pressure region, will overshoot the mark and another compression will travel outward along the tube as did the first. The total time taken to travel from one end to the other and back again is the distance (75 cm) divided by the velocity (say 330 m per second) and hence the number of double trips in a second is 440, so the tube will produce the note *a′*. If the palm of the hand is used to strike one open end, a 'pop' at this pitch can clearly be heard; and if a tuning-fork producing 440 Hz is held near the open end, the pulses produced by the fork are exactly in time with the pulses travelling up and down the tube, and so the phenomenon of resonance occurs: the fork appears to produce a much louder note.



If a vibrating system is to be used as a musical instrument, it must be possible to change its pitch, and therefore to change the time it takes for a pulse to travel through one cycle. This can be done either by changing the dimensions of the object or by changing the velocity of the pulse. To begin with the former, if the air tube had been only 18·75 cm long, the pulse would make the double journey in half the time; if it had been 75 cm long it would take twice as long. The resultant notes would thus be *a″* (880 Hz) and *a* (220 Hz) respectively. Thus by far the simplest way of making a musical instrument is to take a collection of vibrators of different sizes and use one for each required note. The piano, organ, harp, xylophone etc. all follow this principle. The next simplest way is to use one vibrator but to change its length or the velocity of the pulse each time a new note is required. In string and woodwind instruments the effective length of the vibrator is changed, and in the strings the tension also can be changed; the tension alters the velocity of the wave along the string, and hence the pitch of the note.

A difficulty that sometimes arises is that of relating compression waves travelling up and down hollow pipes with transverse waves travelling along a string. The simplest way out of the difficulty is always to think of 'disturbances' travelling up and down. A disturbance may be an increase of pressure in the air in a pipe, a decrease of pressure in the air in a pipe, a sideways movement of a stretched string, a longitudinal movement of the coils of a spring, an increase or decrease in voltage or current in an electrical circuit, and so on. It is customary to draw

graphs of these disturbances showing time along the direction of travel and the magnitude of the disturbance vertically. Thus fig.1*d* might represent any of these kinds of wave, with the vertical coordinate representing pressure, voltage, lateral displacement etc. as appropriate. The scientific quantity 'amplitude' is simply the amount of the disturbance from the undisturbed state.

Before considering the third common method of pitch changing it is necessary to note a complication in the simple picture of pulses travelling up and down a pipe. If a tuning-fork at *a''* (880 Hz) is held to the 37·5 cm pipe, resonance still occurs, because although twice as many wave crests are being sent into the tube, they travel at the same velocity as before, and the first arrives back as the third one goes in. Resonance will also occur at roughly all integral multiples of the basic frequency. These frequencies are usually called 'harmonics' of the basic frequency. For many of the long thin vibrators used in real musical instruments (pipes, strings etc.) the sequence of frequencies at which vibrations will easily occur has this harmonic relationship. In more complex shapes – pipes of non-uniform bore, plates, cups, bottles etc. – the times taken for pulses to travel in different directions and to return are not so simply related, that is, the 'modes of vibration' are not necessarily harmonic. The third basic way of altering the pitch of an instrument involves changing the mode of vibration. The brass family provides the obvious examples and, to a first approximation, the notes produced by a simple brass instrument without valves (e.g. a bugle) have the harmonic frequency relationships 1 : 2 : 3 : 4 etc. But there are considerable complications (see §6 below).

Vibrational modes can be demonstrated on the piano. If a single note is struck and released while the key corresponding to the octave higher is held down to release the damper, the octave string will be heard resonating strongly: clearly it must be responding to the second harmonic of the original note. Similarly, if the key corresponding to a 12th higher is held down, the third harmonic will be heard, and so on. A second demonstration involves a brass plate, firmly clamped on a pillar at its midpoint and bowed on its edge with the finger placed in various ways round the edge. A large number of modes – each with a precise and characteristic frequency, though not harmonically related to the lowest – can be produced and the pattern of vibration can be revealed by scattering sand on the plate. The sand moves away from the more violently vibrating areas and patterns result (fig.9). In general, the higher the frequency the more complicated and detailed is the pattern. This experiment was originally performed by Chladni in about 1790.

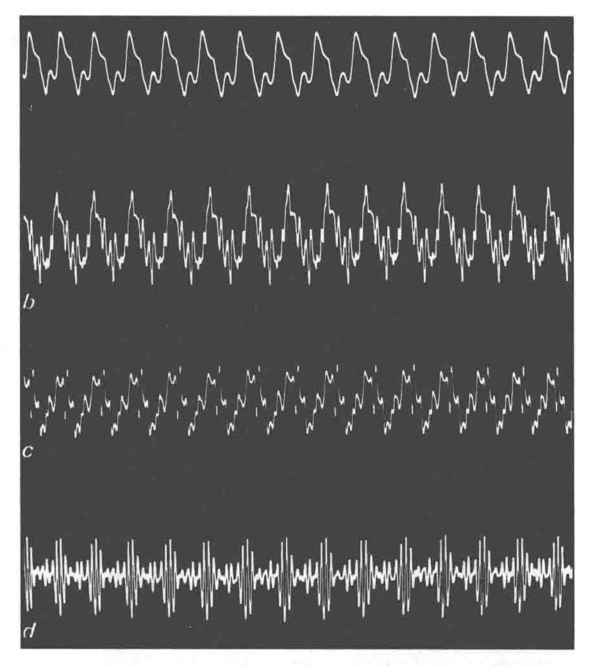
9. Four modes of a Chladni plate, showing patterns formed by sand moving away from the more violently vibrating areas

The term 'mode' simply refers to a particular pattern in which an object may vibrate. One can refer to vibration in a single mode or to vibration in several modes simultaneously. The term 'harmonic' is strictly a mathematical one and should be kept solely to describe modes having frequencies that are exact multiples of some fundamental frequency (the first harmonic), and the number of the harmonic is always the number of the multiple, even if all the harmonics are not present. Again one may speak of a single harmonic or of a complex mixture. The term 'overtone' always refers to modes of frequency higher than that of the fundamental; they may be harmonic but are not necessarily so, and they are numbered in sequence as they occur with the one next above the fundamental as the first. 'Partial' is almost synonymous with overtone in that it refers to a component of a mixture that may or may not be harmonic but its numbering starts from the fundamental; the fundamental is the first of the partial vibrations but is not an overtone. To illustrate the nomenclature, consider a more-or-less cylindrical pipe closed at one end that can be excited in some way to give a sequence of modes, either separately or simultaneously, that have frequencies 220, 660, 1090 and 1540 Hz. The mode of frequency 220 Hz is the fundamental, the first harmonic and the first partial; the mode of frequency 660 Hz is the first overtone, the second partial but the third harmonic. The mode of frequency 1090 is the second overtone and the third partial – but is not a harmonic (1100 would have been the 5th harmonic if present) unless one sees the whole series in terms of an absent fundamental of 10 Hz.

(iii) Electronic devices. Two electrical methods were mentioned above with rotation; this section concerns methods in which the actual timing is electrical in origin. Two categories will be considered: the first involves electronic processes somewhat analogous to the mechanical oscillations in traditional instruments; the second involves the entirely artificial process of creating waveforms of the required shape by digital computer.

The howl produced when the volume control on a public address system has been turned up too high is produced by oscillations in the electric current that depend on precisely the same phenomena as the kinds of vibration already discussed. Any small sound picked up by the microphone is amplified and passed to the loudspeaker, from which it emerges only to fall on the microphone again. But there is a delay because of the time taken for the electric current to flow and for the sound itself to travel from loudspeaker to microphone. All these times stay constant, however, and so the sound goes on being passed back and forth in a regular way (closely analogous to movement of a compression wave in a pipe); therefore, since the times are short, a tone or howl is produced. The pitch can be varied by altering the distance between the

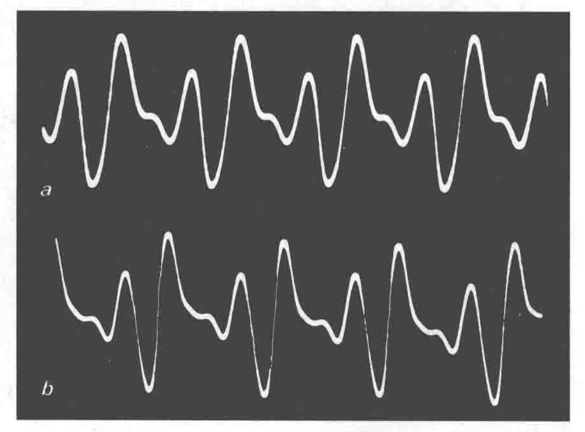
microphone and loudspeaker, or by altering elements in the electrical circuits to change the time delay there. This is not a practical method, but in essence it is exactly the same as that used in an electronic tone generator; there a portion of the output current is effectively fed straight back into the amplifier input instead of through a microphone and loudspeaker. Modern electronic technology makes it possible to produce oscillating systems that are remarkably small and compact.



There are three principal ways in which such tone generators can be used to produce musically usable sounds, though these are now of little more than historical interest. The least complicated, but rather cumbersome, system is to use generators that will produce pure tones and to mix these in various ways to produce the variation in final waveform; quite a few early electronic organs were built on this principle. The second way is to generate much more complex waveforms, by suitable design of the electronic circuits, and to modify these by means of various filters to produce tonal variations. Again this system has been used in electronic organs. The third way is to use both types of generators and a wide variety of modifying circuits all of which can be interconnected in a flexible way, and this is the basis of early synthesizers.

In order to use a digital computer to produce a required waveform, five distinguishable steps are needed. First, the computer must be programmed to calculate the sequence of pressure changes in the required wave at a large number of points, probably 40,000 every second. The next step involves generating a uniformly regular sequence of electrical pulses at the same intervals of time. The third step is to make the height of each successive electrical pulse correspond to the calculated pressure in the sound wave at that point. (These last two steps are usually performed by a single device known as a 'digital-to-analogue converter'.) The fourth step is then to pass the sequence of pulses through a filter system that effectively smoothes out the steps between the successive pulses and leaves the required waveform. The fifth and final step is to play the waveform through the usual amplifier and loudspeaker system. This technique does of course, presuppose that the waveform for a given sound is known.

In the 1980s and 90s there was a complete revolution in the development and use of electronic devices in music (*see* ELECTO-ACOUSTIC MUSIC). Among many innovations is the system known as MIDI (Musical Instrument Digital Interface), which permits the control of one instrument by another or of a complete set of instruments by a computer. The technique of sampling involves recording in digital form a fragment of real sound which can then be modified, changed in pitch and mixed in an infinite range of ways; it could be said to be the direct descendant of *musique concrète*.



6. ORIGINS OF QUALITY AND TONAL DIFFERENCES.

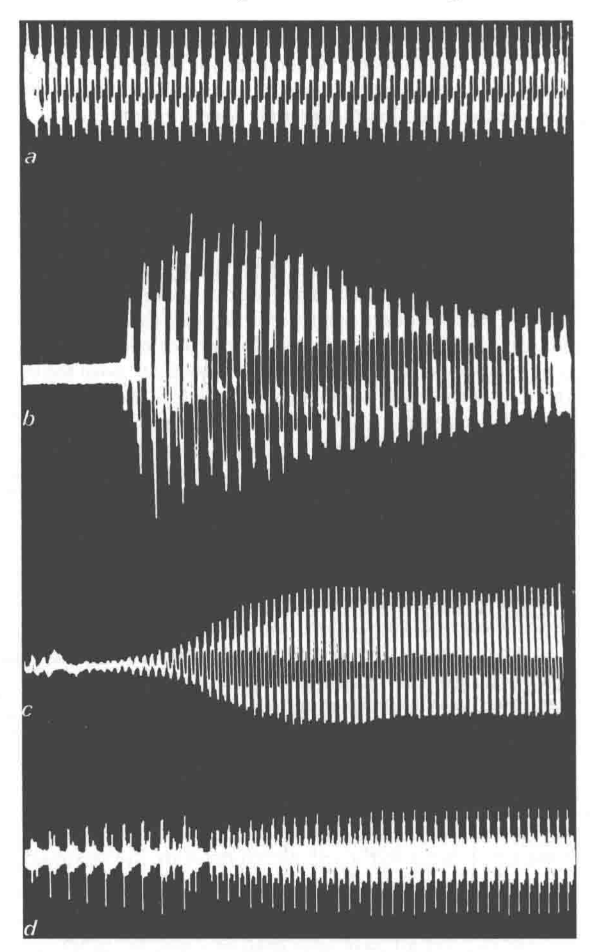
(i) Complex mixtures of pure tones. Most of the simpler kinds of mechanical vibrators tend to produce a waveform not very different from that of a pure tone. Fig.10*a* shows the waveform produced by a treble recorder sounding *c″* (523 Hz) played rather loudly; fig.10*b* shows the same note bowed on a violin; and fig.10*c* the same note on a clarinet. The waveform of fig.10*d* sounds to be of the same pitch, though it is produced by mixing a group of high-pitched tones, none of which individually is below about 2000 Hz. This last tone is sometimes described as a tonal complex, and is said to produce a 'residue' effect,

10. *(a) Waveform produced by a treble recorder sounding c″ (523 Hz) played rather loudly; (b) the same note bowed on a violin; (c) the same note on a clarinet; (d) waveform made by mixing a group of high-pitched tones, none below about 2000 Hz, producing an apparent c″ in the ear as a 'residue' effect*

the apparent *c″*, in the ear (see §9 below). In quality these notes sound quite different, though basically of the same pitch, and the earliest attempts to account for the variations were based on the idea that each was a different mixture of pure tones with harmonically related frequencies. Since many conventional instruments use vibrators which, as already mentioned, have many modes of vibration with frequencies that are harmonically related, it is reasonable to ask whether vibration in several of these modes simultaneously could give rise to the more complex waveform and richer quality of real instruments as opposed to those of simple vibrators. This turns out to be a reasonable hypothesis, provided attention is confined to steady, continuous tones; fig.11 shows a synthetically produced waveform made by adding three electronically

11. *Synthetically produced waveform made by (a) adding three electronically produced pure tones, and resembling the waveform; and (b) produced by a note on an oboe*

produced pure tones: its resemblance in general form to that of an oboe is obvious. It is not surprising, therefore, that the earliest attempts to synthesize sounds were aimed merely at producing the right harmonic mixture; but the sounds made were quite different and distinctively electronic. The reasons for this arise from the fact that in any real musical performance the notes used are not steady and continuous but have to start, stop grow louder, decay and change in all kinds of other ways.



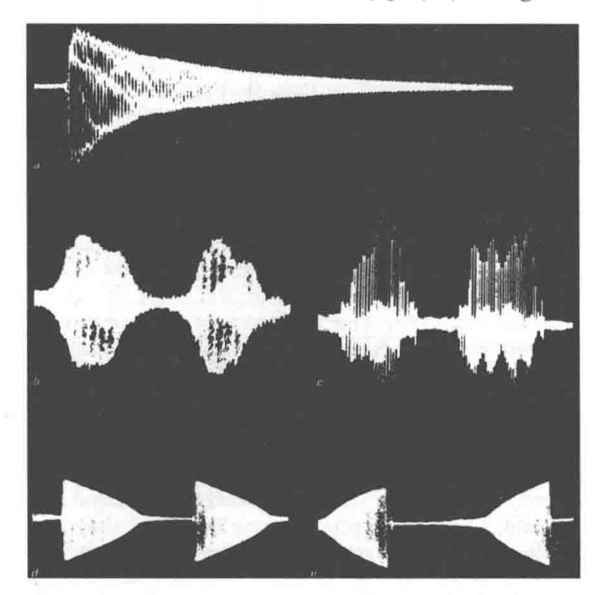
(ii) Starting transients. No vibration can start instantly, but the total time taken for it to build up depends on a number of factors. Only two will be considered here: the effect of the method of excitation (plucking, bowing, blowing etc.) and the effect of the size and complexity of the vibrating system.

Plucking a string is one of the more rapid methods of setting up a vibration, which, other things being equal, should only take one or two cycles to be properly established; if the note is *a′* (440 Hz), this happens within 0·005 seconds. But there are two factors that work against this pattern: damping effects due to the air surrounding the string and to the losses of energy that arise from the bending of the material of the string cause the vibrations to die away; and a string on its own is far too quiet to be of any use as a musical instrument, so it is usually connected to an amplifier of some kind that may be mechanical (soundboard or soundbox) or electrical (pickup, amplifier and loudspeaker). This second effect is part of the size and complexity factor to be discussed below.

Bowing leads to a much slower start, and indeed the whole pattern of vibration of a bowed string is different from that of a plucked string. Bowing falls into the category of 'stick-slip' motion and permits energy to be fed in continuously so as to produce a continuous note. For a detailed discussion *see* ACOUSTICS, §II, 7.

The air in wind instruments of the flute family, which includes many kinds of organ pipes, is set in motion when a jet of air is directed at a sharp edge. Crudely speaking, a series of eddies is formed, as when a stick is drawn through water, and these travel down alternate sides of the edge. If the edge is the mouthpiece of a flute or recorder, or part of an organ pipe, the jet of air can be imagined as waving smoothly back and forth sending alternate eddies up the inside and outside of the pipe. The resultant sequence of pressure waves travelling up the inside may match one of the resonant periods of the pipe and so build up a strong vibration pattern. The reflected waves travelling back down the pipe of course interact with the eddies and so the frequency of eddy production and the natural resonant frequency of the pipe are not independent of each other. When the first few eddies are produced, however, the behaviour of the waves in the pipe may be quite erratic and so the starting transient can be very complicated.

In reed instruments (and brass, where the player's lips form the reed) the basic initiating mechanism is a sequence of puffs of air produced by the opening and closing of the reed. It takes a number of cycles for the natural frequency of the pipe to react back on the behaviour of the reed and to arrive at a steady state, and so reed instruments generally have a rather erratic starting transient that gives the sound a characteristic feature. Fig.12 shows the initial

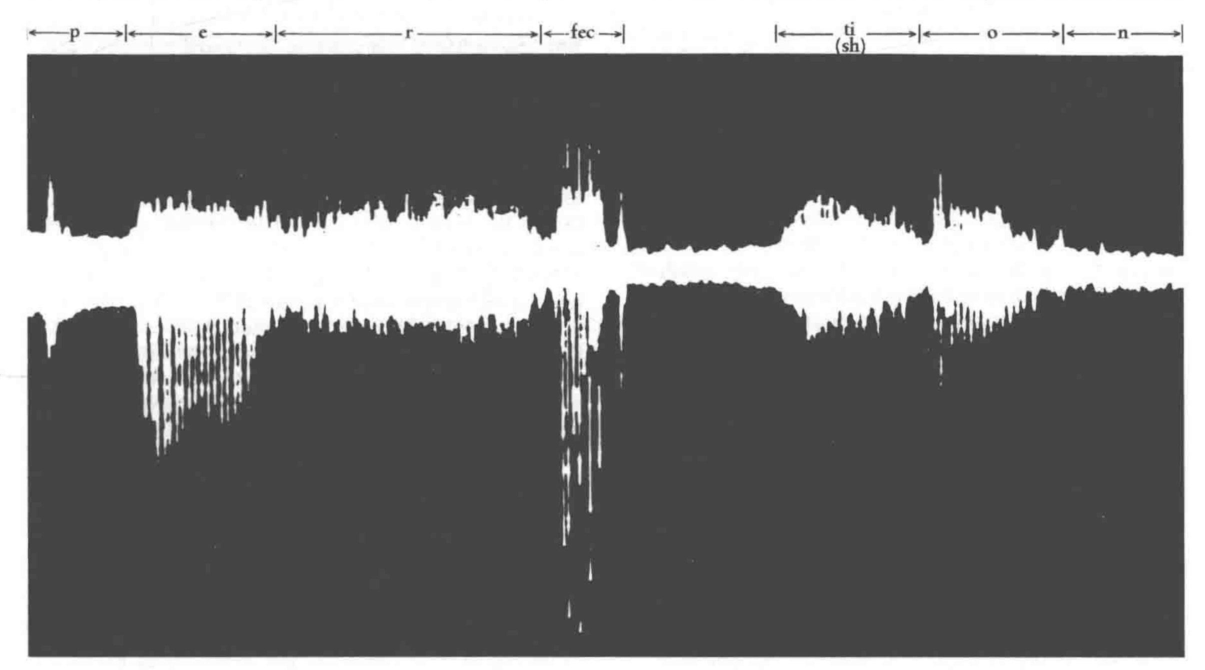


12. Initial waveforms of (a) a bowed string, (b) a plucked string, (c) a note on a flute, (d) a note on a reed-driven pipe

waveforms of a bowed string, a plucked string, a flute and a reed-driven pipe.

Few primary vibrators are loud enough on their own to be used as musical instruments, so amplification is usually needed. For example, the string of a violin without the body can hardly be heard, and the vibrations in the pipe of a brass instrument are muffled without the horn at the end. But if instruments become 'coupled systems', then odd effects occur during the starting period. The reed and pipe are examples of this. What happens, in general terms, is that one of the two parts of the system starts to vibrate and passes some of its energy to the other; then there may be a 'difference of opinion' as to the frequency at which vibration should take place, and it may be many cycles before the vibration is stably established. The period of 'argument' is the starting transient.

The aural effect of the starting transient – whether it is caused by the method of initiation or by the coupling of two systems or, as is usual, by both processes – is pronounced. It can best be demonstrated in a negative manner by listening to a recording of a note from which the first quarter of a second or so has been erased. The whole character of the note is changed. If, therefore, the sound of a particular instrument is to be synthesized it is not sufficient to produce the right steady-state waveform; the right starting transient must be produced as well.



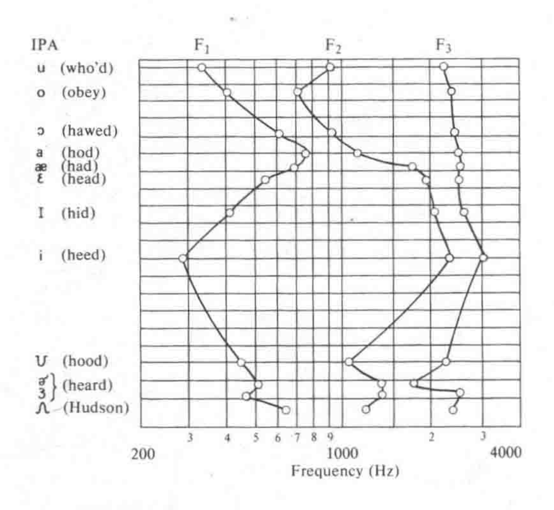
13. Envelope shapes on a cathode-ray oscilloscope showing (a) a harpsichord note, (b) a staccato note on a flute, (c) a staccato note on a french horn, (d) and (e) synthetic staccato notes sounding respectively like a plucked string and a harmonium

(iii) Envelope shapes. Even after the note has started there are usually further changes: a plucked string may give vibrations that gradually die away, a bowed string may vary in loudness with the pressure and velocity of the bow, a reed instrument may rise and fall slightly in loudness, and a complex mixture of modes of vibration may change the sound's composition with time. The changes in amplitude of the waves associated with a note are usually called the 'envelope'. A cathode-ray oscilloscope with its spot moving slowly horizontally compresses the waves so much that the individual vibrations cannot be seen, but the envelope becomes clearly visible. Fig.13 shows the envelope of a harpsichord note (*a*), a staccato note on a flute (*b*), and a staccato note on a french horn (*c*).

In synthesizing sounds electronically the 'envelope shaper' is an important element; fig.13*d* and *e* show synthetic staccato notes with triangular envelopes. The waveform is the same for both, but the envelope has simply been reversed, and the aural effects are totally different: *d* sounds vaguely like a plucked or struck instrument; *e* like some kind of harmonica or harmonium. Trace *e* could equally well be produced by playing the tape for *d* in reverse. The well-known trick of recording a piano piece and playing it backwards is a good way of illustrating how important the envelope is: reversing the tape can have no effect on the harmonic content, and yet the tone of the instrument is completely changed.

Envelope shapes play an essential part in human speech. The consonants are usually fairly drastic changes in envelope shape. A plosive, like 'p', makes a fairly rapid initiation of random noise (air escaping when the lips are opened) leading on to a vowel, a steady note. If the noise is allowed to rise in amplitude more slowly, the result is an 'f'. Fig.14 shows the sequence of shapes in the word 'perfection'.

(iv) Formants. As has been noted, most instrumental sounds involve some kind of source, usually rather weak, and some means of making it louder. Unfortunately, because it complicates matters – or fortunately, because it adds such richness and variety to instrumental tone – this amplification is never done without also changing the waveform to some extent. It is difficult to indicate with any degree of precision the kind of change that is made to the wave, but if the distribution of harmonics contributing to the wave before and after amplification is examined, it is usually possible to find a characteristic that can be specified. If a graph of the degree of amplification at each frequency is plotted the result is sometimes described as the 'formant characteristic' of the amplifier or instrument.



14. The sequence of envelope shapes in the word 'perfection'

For example, increasing the treble gain on an electronic amplifier makes any hiss on the recording louder and increases brilliance; turning up the bass gain emphasizes any turntable rumble and muffles the tone. In each instance a different formant is being imposed. For a given setting of the treble and bass controls the formant characteristic is constant, but the frequencies present in the emerging wave still depend on those present beforehand. The amplifier imposes something of its own character on all sounds passing through it. The concept of the formant characteristic is important in many branches of acoustics.

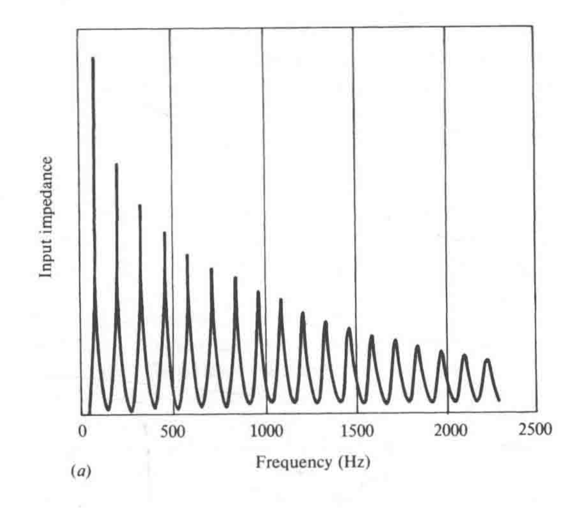
In musical instruments the basic vibrator produces the initial set of harmonics, but these are modified by the formants of the amplifier (which may be a horn, the body of a string instrument, the side holes in a woodwind instrument etc.). The net sound emerging is then modified by the formant of the room. If the sound is being recorded or transmitted elsewhere, the microphone, transmitting apparatus or recorder all impose further formants, and then the ears and hearing mechanism in the brain have their own formants. (Deafness over some part of the frequency range is surprisingly common.) The result of all this is, of course, that the wave that is finally perceived by the brain may be very different from the one that started out from the basic vibrator.

Formants are important in all instruments, though, strictly speaking, for some they may be difficult to identify as they may change from note to note. Some would argue that the phenomenon is then no longer properly called a formant effect, but one may speak of constant or variable formants to take both types into account. An example of a constant formant with a powerful influence on tone is that of the body of a string instrument; some changes may occur as the player moves from one string to another, or from changes in the tension of the strings reacting on the body, but these are usually small and the main amplifying characteristic of the body remains the same over the range. An example of a variable formant is that of a clarinet, where the formant comes from a complex mixture of effects controlled by the bore variations, the positions of the finger-holes, the number of holes or keys that are depressed and so on. The art of the clarinet maker is to ensure that the formant characteristic does not change too violently as the player moves from one note to another.

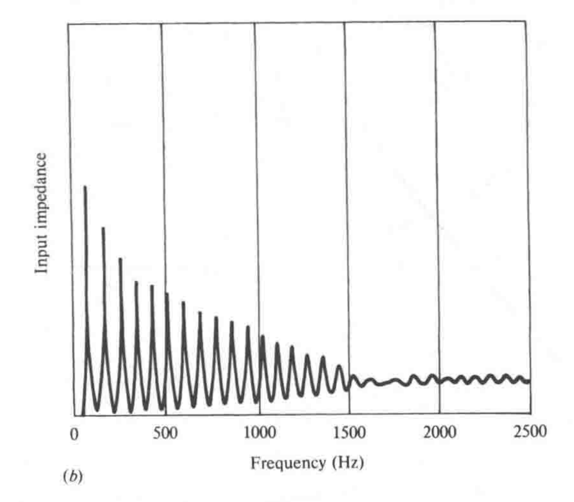
One of the most essential aspects of formants for human beings is their part in the control of the voice. The vocal cords produce a basic tone that can be varied, as already described, in envelope, but the tone can also have many different formants imposed on it by the amplification and resonances of all the various cavities of the nose, throat and mouth. Some of these are not variable and impose several of the characteristics that distinguish one speaker from another, male from female, youth from age and so on. Others are variable and allow the vowel sounds to be produced. It is now usually held that there are four fairly sharply defined peaks in the frequency distribution curve of any vowel, and that it is the position of these peaks that determines the vowel; their positions, for a given vowel, are the same whether the voice is high or low in pitch and whether the vowel is being spoken or sung. Fig.15 shows the generally accepted centres of the three main peaks for some common vowels. The middle formant is probably the most important one, as may be

15. Diagram showing the generally accepted centres of the three main peaks for some common vowels (after Winckel)

demonstrated if one holds the mouth in the shape required for saying 'Ooh', whispers loudly, and then changes the shape to 'Ah' and back a few times; there is an apparent change in pitch that may be anything from a 5th to an octave depending on the particular quality of vowel sounded. This change corresponds to the big change in position of the middle formant peak.



7. THE PHYSICS OF TUBES AND HORNS. The elementary acoustics of pipes introduced in §5 above needs some amplification, since the previous treatment relates only to open cylindrical tubes. In real instruments an end might be partly closed in a number of ways; also, a pipe might have a succession of conical bores with different cone angles interspersed with cylindrical sections of different diameters.



To reconsider first the simple picture given earlier of the way in which waves build up to resonance in a pipe, suppose there is some kind of plate, driven like the piston of a steam engine so that it alternately compresses and rarefies the air just outside the end of a pipe in a sinusoidal way (such a device, called a pistonphone, is sometimes used as a source of sound for testing microphones), and suppose that the piston cycle has a frequency n and the pipe which is open at both ends has a length equal to half a wavelength for that frequency. The first compression will travel the half wavelength, be reflected as a rarefaction and arrive back at the initial end, where it would usually create a compression ready to start again. Since it has travelled one wavelength altogether it will be exactly in step with the next compression. Suppose, however, that the length is something other than a half wavelength. The initial wave will then arrive back at some other point of the cycle; the effect will be like pushing a swing at the wrong moment, and the wave will die out. If the length is a quarter wavelength (or if the first pipe is excited at $2n$), the first wave will arrive back exactly halfway between two compressions and the rarefaction produced by the plate will completely neutralize the wave in the pipe. However, if the excitation is not sinusoidal but consists of a very brief compression pulse, then at $2n$ there will be a build up, as there will be at $\frac{1}{2}n$ or $\frac{1}{3}n$. Sinusoidal excitation excites resonance at only one frequency in a simple system;

pulse excitation may excite resonance at a great many multiples and sub-multiples of this frequency.

In a reed instrument such as the clarinet, it can be shown (without going into detail) that the reed, which sets up oscillations in a pipe, is not a linear device. Its behaviour is not symmetrical: relatively small forces in one direction completely close the reed, whereas much larger forces can be applied in the opposite direction and the reed goes on opening. Thus the form of air control exerted by a reed is rather more like a succession of pulses than a sine wave; it is the right sort of excitation to set up resonance in several modes, and so to produce the characteristic tonal complex that would not be possible with pure sinusoidal excitation.

The last matter to be considered is reflection from the end. In woodwind instruments the reflection is not from the end except for the lowest note; it is more likely to be from a side hole, and there will be other, regularly spaced, side holes open beyond this. There may be a bell, and it can easily be shown that this affects the tone colour for only the lowest one or two notes; for the higher notes most of the sound is escaping through the side holes. Finally, in a brass instrument there is a bell that is always operative. The way the wave is reflected is critically dependent on the shape and spacing of the holes and on the shape of any bell. If a high proportion is reflected, good oscillations are set up in the pipe but little sound emerges; if the proportion reflected is low, it may be difficult to set up oscillations, but those that are set up emerge quite strongly. Benade has made a close study of all these phenomena, and has measured the 'input impedance' of pipes. In general terms, the higher this is at a given frequency the greater is the tendency for there to be oscillations maintainable at that frequency. Fig.16*a* shows this property plotted against frequency for a plain cylindrical pipe closed at one end only. The peaks are all at odd multiples of 63 Hz and correspond to the harmonics predicted by simple theory. For fig.16*b* a trumpet horn has been added to the open end. Two obvious things happen: the sequence of frequencies changes to become quite different from the odd-harmonic sequence; and there are practically no peaks above 1500 Hz. This is because the horn-shaped end ceases to act as a reflector above this frequency, and nearly all the energy leaks out into the air instead of maintaining oscillations within the pipe. The cut-off frequency above which waves are not properly reflected also occurs in woodwind instruments and is related to the spacing and size of the open finger-holes below the one defining the note. It is possible to change the frequency of one particular peak independently of the others by changing the bore diameter at certain critical points. Instrument makers need all the variables of hole position, hole size, bore size etc. in order to produce instruments that play in tune, give the required harmonic mixture and produce components that are in tune and cooperate well. (For further information on wind instrument sounds *see* ACOUSTICS and articles on individual instruments.)

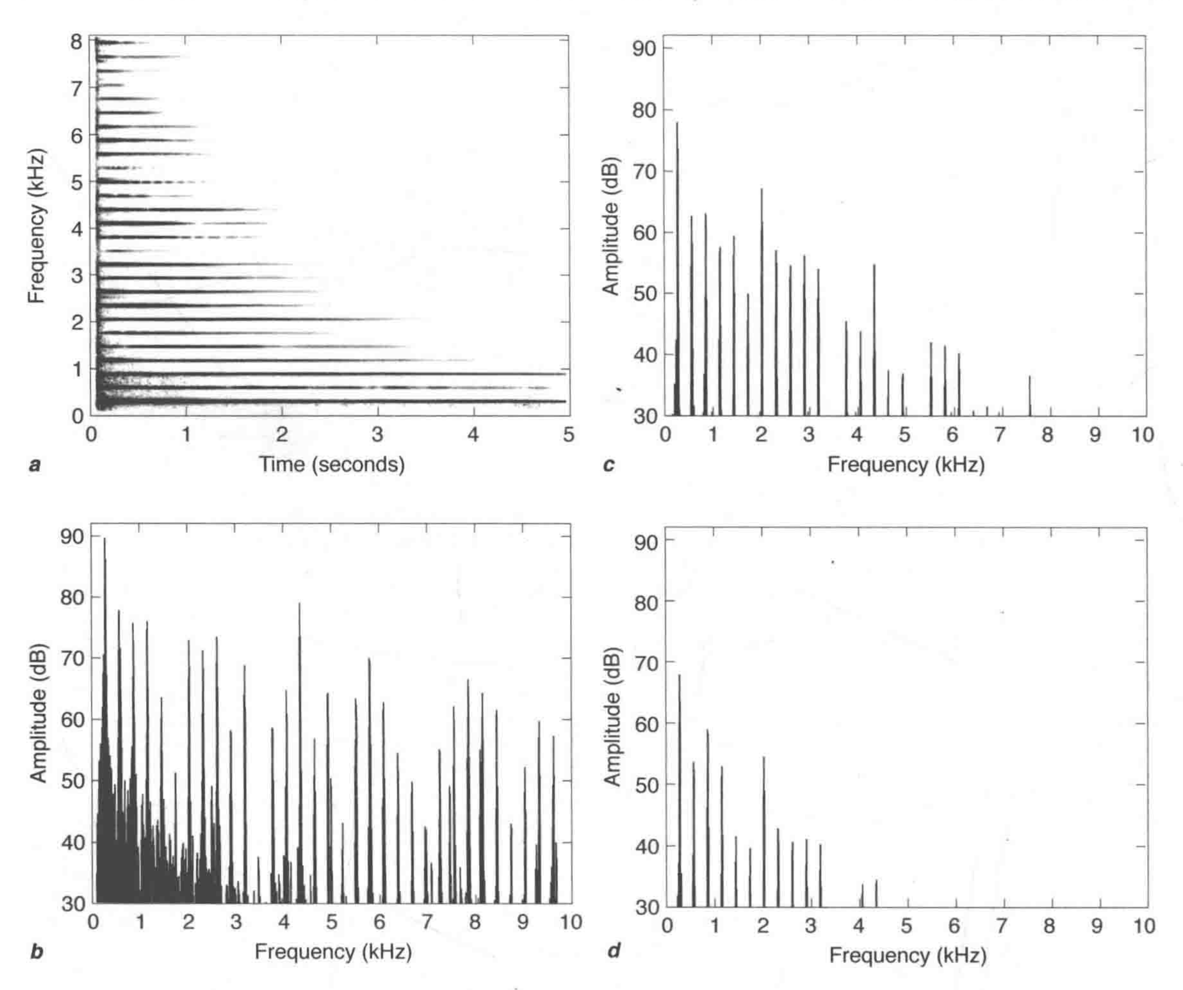
16. Graph showing the 'input impedance' plotted against the frequency (a) for a plain cylindrical pipe closed at one end and (b) for the same pipe with a trumpet horn added (after Benade, 1973)

8. METHODS OF ANALYSIS AND STUDY.

(i) Experimental. The measurement and analysis of musical tones is not easy. For a steady, unchanging tone the quantities that are most useful are the predominant frequency associated with it, the intensity or loudness, and the relative amplitudes and frequencies of the other components of the complex. If, however, the note is changing with time, then the way in which all these separate quantities change must also be recorded.

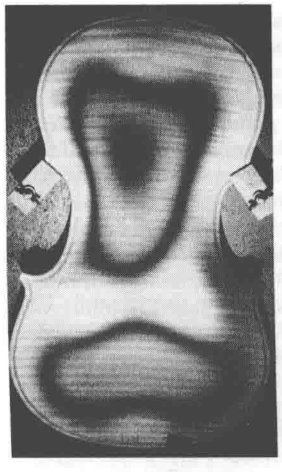
Intensity, or loudness, is usually measured by means of a microphone, amplifier and meter, but careful calibration is necessary and the relative positions of the microphone and source, the surroundings and many other factors affect the result. Sound level meters are available with built-in filters that have a frequency characteristic resembling that of the average human ear, but for an accurate estimation of the loudness of a sound it is necessary to measure the amplitude at a series of frequencies over the audio spectrum.

The ready availability of cheap and powerful computers and microprocessors has led to the almost universal adoption of digital techniques for the analysis of rapidly varying waveforms. An analogue-to-digital converter samples the magnitude of the disturbance at intervals that may be as short as desired (usually around 40,000 per second), yielding a sequence of numbers. Once in digital form, the signal can be processed by a mathematical technique known as Fourier analysis (see §8(ii)) to show

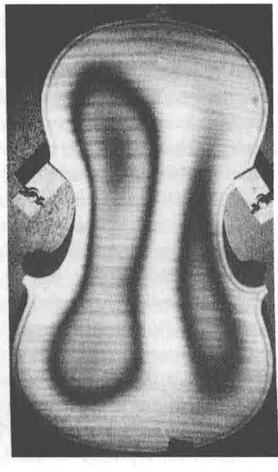


how the amplitude of each frequency component changes over the duration of the signal. Information about the frequency content of a signal can be displayed in a number of ways. One is the sonagram, a two-dimensional diagram with frequency on the vertical scale, time on the horizontal scale, and intensity represented either by colour or by a grey scale. Fig.17 shows a sonogram of the first five seconds of a harpsichord note. Each of the vertically equidistant horizontal bars represents one of the almost exactly harmonic frequency components of the harpsichord sound; the different rates of decay of the components can clearly be seen.

The sonagram is generated by dividing the digital sound sample into a series of short time slices, on each of which the Fourier analysis is performed. The frequency spectrum of each slice can be individually displayed if desired, and the information contained in the frequency spectrum can be used to compute the loudness of the sound or the predominant frequency at the chosen time. Fig.17*b*, *c* and *d* show the frequency spectra at the beginning, middle and end of the harpsichord sound sample in Fig.17*a*.

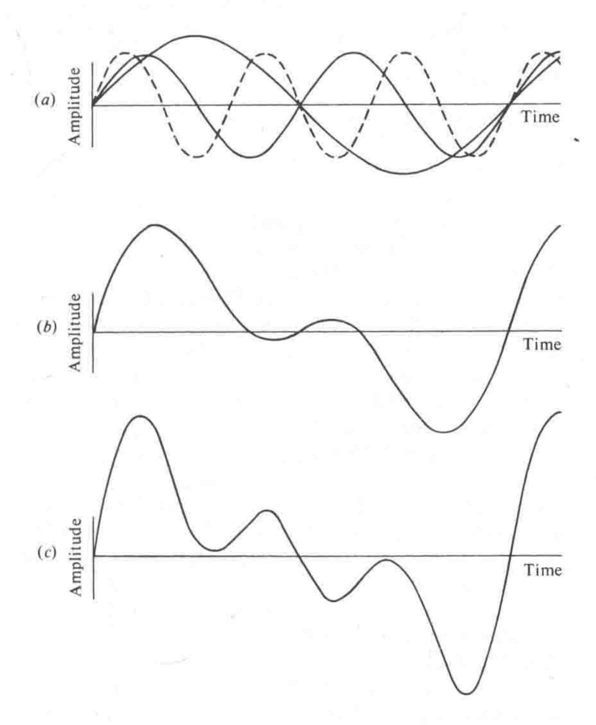


With a suitably fast processor, the frequency spectrum can be displayed on a screen within a small fraction of a second of the data capture, and the display can be updated several times a second. The system is then described as a real-time analyser. Using a real-time analyser, a performer can see immediately how a change in the method of sound production affects the frequency spectrum of the sound.



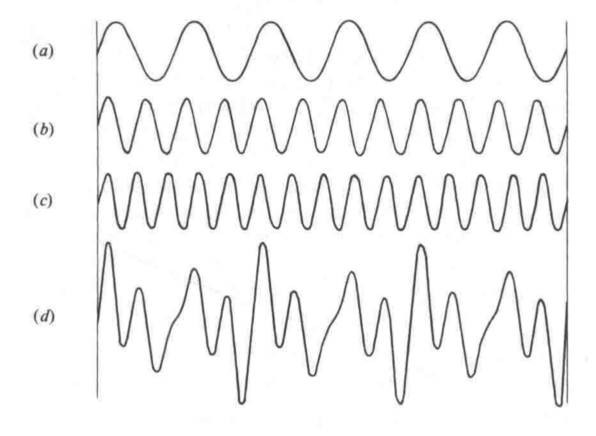
Other modern but non-electronic techniques are also used in studies of musical sounds. High-speed cinematography can reveal a great deal of useful information and has played an important part, particularly in understanding the behaviour of reeds and of vibrating strings. The modern optical technique of holography is playing a part in revealing the way in which the body of a violin or other string instrument is vibrating. The patterns produced are something like those of the Chladni plate, but to produce sand figures on violin back plates large vibrators are needed and, though useful, measurements probably do not correspond to the behaviour of the instrument when it is played normally. Holographic techniques show up the vibration patterns even when the notes being played are extremely quiet. Fig.18 shows holographically produced vibration patterns for a violin back plate.

(ii) Theoretical. No discussion of the theoretical aspects of sound would be complete without some mention of the ideas of Fourier analysis and synthesis, though it is not easy to discuss these topics in any detail without fairly complicated mathematics. The basic notion, first formulated by Fourier in about the 1820s in relation to his



17. (a) Sonagram of a harpsichord note showing the different rates of decay of the frequency components; (b), (c) and (d) show the beginning, middle and end of the harpsichord note shown in (a) (after H.A. Wright)

18. Holographically produced vibration patterns for a violin back plate (after Jansson, Molen and Sundin)



19. Examples of summations of harmonics in building up complex waves: (a) the first three harmonics, (b) the sum of the first two, (c) the sum of the first three (after Backus, 1969)

studies of heat flow, is that any periodic variation in a quantity, no matter how complicated, may always be represented as the sum of a number of simple sine waves with frequencies that are multiples of the basic repeat frequency of the wave (the fundamental). The components (or harmonics) have different amplitudes and phase relationships, and there may be an infinite number of them. The basic notion is not difficult to accept; fig.19 shows some examples of summations. The point that is difficult to accept, and indeed for which there is no formal proof though it is clearly true in practice, is that for any given wave there is only one combination of amplitudes and phases. The consequence of this is that it is possible in principle to take any complex periodic wave and to analyse it into a specific set of components, though it is a process that has only really become practicable for complex waves since the introduction of computer analysis. Fig.20 shows the result of summing three components that are the 2nd, 4th and 5th harmonics of the same fundamental. If the signal shown lasts for one second, the three components have frequencies of 6, 12 and 15 Hz respectively. Though no fundamental component is present, the combined wave repeats at intervals corresponding to the fundamental frequency of 3 Hz. This is an important point to which reference will be made in §9 below. The essence of this kind of analysis, however, is that the basic wave is periodic.

But a single note from a piano or harpsichord, for example, has no part that is strictly periodic, since the amplitude after the initial transient section is decaying all the time, and indeed different components, as has been observed, decay at different rates. Fig.20 may help to show how the analysis can be extended to cover this problem. If the diagram was drawn with three components which were the 200th, 201st and 202nd harmonics, and if the same frequency were used for the first component (i.e. 6·00 Hz), the second component would have a frequency of 6·03 Hz and the third 6·06 Hz. It is not difficult to see that the waveform would now repeat with a fundamental of 0·03 Hz. Thus by making the harmonics very close together it is possible to take care of a wave that repeats only after long periods; and making the harmonics infinitesimally close will enable one to deal with a wave that never repeats precisely. So the same technique of analysis can be used for non-periodic waves, provided one takes harmonics that are so close together that they form a continuous sequence. This kind of analysis of transients, using the digital techniques mentioned, is yielding important information about the transient behaviour of real instruments. In this form it is usually termed 'Fourier transform' or 'Fourier integral' analysis.

9. TONES IN SEQUENCE AND COMBINATION. It has often been implied that the reason why some sequences or combinations of notes sound pleasant and acceptable whereas others are disturbing or unpleasant is simply that the brain 'likes' simple frequency ratios, such as the octave (1:2), the 5th (2:3), the 4th (3:4). The numbers themselves,

20. (a)–(c) Calculated curves for pure tones of the 2nd, 4th and 5th harmonics of the same fundamental; (d) sum of the three

of course, cannot have any significance, but a study of the combined waveforms produced by adding two pure tones shows that the combination itself changes at a rate that depends on how close the component frequencies are to each other. For the 5th, as an example, with tones of 400 and 600 Hz the combined wave repeats at a frequency of 200 Hz: exactly half the lower tone. For the 400:413 ratio (just under a semitone) the frequency of repeat of the combined wave form is 13 Hz. In other words, the combined wave is far more complicated and goes through a complex sequence of different patterns taking nearly 16 times as long to repeat as does that for the 5th. It may be that the ear and brain find this complicated sequence much more difficult to cope with than the simple rapid alteration that occurs with the 5th.

If the tones are close to each other in frequency the phenomenon of beats can be heard clearly. Tones of 400 and 402 Hz, for example, give a pattern that completes a cycle twice every second. The beat effect is identical with the sequential effect described above for the 5th or the 400:413 ratio, but, because for these the repeat is rather rapid, it is not heard as a beat. Helmholtz suggested that beats cause the unpleasantness of dissonant intervals, and he went on to show that if two tones, themselves a long way apart in frequency, have upper partials that happen to be close enough to give beats, a 'roughness' in the sound is still heard. For example 400:600 is the perfect 5th, and the 3rd harmonic of the lower tone and the 2nd harmonic of the upper tone are both 1200 Hz. If the 600 Hz is raised to 605 Hz, the harmonics become 1200 and 1215, and these give rise to beats at 15 Hz that would be quite unpleasant.

In practice it is found that even when two pure tones are added a harsh effect can result, though there are no upper partials to beat with each other. In such cases a great many other tones can be heard as well, especially if the basic tones are loud. The standard experiment demonstrating this is to sound one tone (say, for example, 1320 Hz) steadily, and to sound a second tone (say 880 Hz) and allow its frequency to glide slowly up until it reaches 1320 Hz. A strong 'difference tone' that descends in pitch from 440 Hz to zero is clearly heard. The whole range of additional tones are called 'combination tones' and, for basic tones of frequencies f and f_2, they have frequencies such as $f_1 + f_2$, $f_1 + 2f_2$, $2f_1 + f_2$, etc., and $f_1 - f_2$, $f_1 - 2f_2$, $2f_1 - f_2$, etc. It can be shown mathematically that they can arise from non-linearity in any part of the system, and it is now accepted that very loud tones produce non-linear effects in the ear itself. Perhaps consonance is perceived because the number of combination tones is small, whereas for a dissonant interval a vast array of combination tones arises. This can be shown simply by making the calculations for combination tones with the ratios 400:600 and 400:413 (Table 1). For the perfect 5th they form a series neatly spaced at 200 Hz apart; but for the second pair the collection is a motley one, and more and more unrelated tones arise as the series is developed. However, dissonance still occurs when the notes are sounded quietly, so one must look for other explanations of the additional tones than that of non-linearity.

TABLE 1

f_1	f_2	$f_2 - f_1$	$f_2 + f_1$	$2f_1 + f_1$	$2f_2 - f_1$	$2f_1 - f_1$	$2f_1 + f_2$
400	600	200	1000	16000	8000	2000	1400
400	413	13	813	1226	426	387	1213

This is an area of considerable controversy, but one fact makes it obvious that combination tones do not provide the answer to the problem of dissonance. If three tones of 400, 600 and 800 Hz are combined, a difference tone of 200 Hz is heard whether the tones are loud or quiet. If the frequencies are 430, 630 and 830 Hz, the difference tone is still 200 Hz and is heard when the tones are sounded loudly; but if they are sounded quietly a higher tone is heard: about 210 Hz in this example. This clearly is not a difference tone; it is usually called a 'residue tone'. The fact is unquestioned; but the origin of the tone and its contribution to the consonance–dissonance problem is still a matter of dispute.

As for musical scales, it is enough to note that they contain many possible combinations that blend together in a consonant way. It is not surprising, therefore, that the intervals involved in scales tend to be the rather simple ones and that, at least from the standpoint of physics, there is a close link between the sequence of ratios in a scale and the ratios for consonant intervals. (For further details *see* SCALE and TEMPERAMENTS.)

10. THE EFFECT OF ACOUSTIC ENVIRONMENT. If two people were to try to conduct a conversation while suspended by some hypothetical device in a region far removed from all solid objects, they would find difficulty unless they were quite close together. Fortunately people at least normally stand on solid ground when they converse. Immediately the problem is reduced: some of the sound waves strike the ground and are reflected – not so precisely as is light from a mirror, but nevertheless in broadly the same way – and so the hearer receives two sets of waves, direct and reflected. Provided the total distances travelled by each are not too different this leads to a louder sound. If the difference in distance is great the brain recognizes the time difference and the result is an echo.

If a single wall is added behind the speaker, some waves will still travel direct to the hearer, some will be reflected from the floor, some from the wall, and some first from one and then the other; the result is four times as much energy in the direction of the hearer. This process goes on as surfaces are added. If the reflection is good, as it is when the walls are smooth and hard, the result may be quite intolerable because any sound created is reflected round and round from one surface to another and takes a long time to die away; each syllable spoken is blurred by those immediately before, and all intelligibility is lost. Some swimming baths in which there are large glass and tile surfaces, as well as the water surface itself, all acting as good reflectors, demonstrate well this effect of 'reverberation'. It is usually measured in terms of the 'reverberation time', roughly the time taken for a loud sound to become inaudible.

The first essential scientific problem in acoustic design is thus to achieve a compromise between the need to introduce reflecting surfaces to strengthen the sound produced and the need to keep reflection within bounds to maintain intelligibility. The way in which this can be done is discussed under ACOUSTICS, §I. Scientifically the question is not difficult: the problem is to agree on the characteristics that one is trying to achieve, and also to design a hall that will perform many different functions,

each of whose acoustic requirements may be quite different.

Just as the body of a violin amplifies non-uniformly and so 'colours' the sound produced by the string as well as merely making it louder, so the resonances in a room can colour musical tones. It has been shown how the Chladni plate demonstrates modes of vibration for two-dimensional devices, and that as the frequency of the mode goes higher so the size of the regions between the nodal lines becomes smaller and the number of nodes increases. The same kind of thing happens in three-dimensional boxes, and nodal surfaces exist. As the frequency goes up, so the spacings between these surfaces shrink. Thus even a large room may break up into a large number of regions and hence provide resonances at frequencies well within the audio range. A classic example of this can be heard by listening to a high note while moving the head sideways rather slowly. The nodal surfaces are close together and the loudness goes up and down quite rapidly as one moves through them. Thus the frequencies at which resonant modes are present will be amplified and a formant effect arises. The pleasure of singing in the bath is largely caused by the fact that the room is small and has hard surfaces, and hence has a number of well-separated resonances in the audio region; quite a modest singer can produce a fine ringing tone to his own satisfaction as a result of modification by the formant. Clearly this factor is of great importance in studios from which recordings or radio transmissions are produced. The placing of the microphones and performers in relation to the walls and other surfaces changes the particular modes excited and provides ways in which the sound engineer can vary the coloration to achieve a desired effect.

Various techniques have been developed for artificially changing the acoustic environment in a room. These are described under ACOUSTICS, but the essence of them all is to modify the way in which the reflections occur (decreasing them by covering surfaces with absorbent material or increasing them by providing microphones and loudspeakers, and introducing artificial time delays to simulate the acoustic path differences), or by modifying the formant characteristics. The latter method involves artificially amplifying certain frequencies corresponding either to specific modes that are not being stimulated or to modes of desirable frequencies that do not occur because of the particular disposition of the elements of the hall. All these techniques are fraught with difficulties, mainly because it is not easy to avoid the feed-back howl previously described, but also because again it is hard to decide on the required features. A formant characteristic and reverberation time that suits a solo performer may not necessarily suit the audience and vice versa. However, some fascinating results have been achieved.

11. PROSPECT. The question often arises whether it will ever be possible to synthesize precisely the tone of a given instrument, or even of a complete orchestra. The answer is that it is possible now; given the necessary time and a large enough computer one can match exactly the required waveform of any instrument or combination of instruments. But it can take a long time, even with the biggest computers, to produce even a few seconds of complicated music, and so in practice such an operation is of limited use. The relative success of synthesizers as opposed to computers is because of the speed at which they can operate.

The biggest problem in the production of synthetic sounds is principally that of devising methods of control, and methods of scoring that can permit the techniques to be used with the same flexibility as traditional instruments; the use of MIDI and other techniques led to enormous advances in the 1980s and 90s. Computers and synthesizers provide a great deal of information about the important features of the waves produced by traditional instruments, and a fruitful collaboration between instrument makers and scientists is possible. Physics is beginning to produce much more realistic explanations of the behaviour of real instruments, and in many cases these give the instrument maker ways of predicting with much greater precision the modifications needed to improve tone quality.

Developments in material science may possibly have something to offer the instrument maker. Materials such as cane for reeds, the various woods used for the bodies of string instruments etc. are not susceptible to control. The range of naturally available material must be scanned and selections made on the basis of experience. If it becomes possible to manufacture materials with the desired properties, predictable in advance and liable to much less change with time than natural materials, this would be a great boon. It seems that costs might be prohibitive for all but the simplest mass-produced instruments, but there may well be rapid advances in the near future.

There remain many problems in understanding the mechanism of hearing, the origins of consonance and dissonance, the precise way in which the ear and brain respond to transients, and the phenomena of aural illusions. In the last category the rapid developments in stereophony, quadraphony and the creation of complete sound environments are uncovering almost as many fascinating problems as they solve, and psychoacoustics is again an area where many new insights are appearing.

CHARLES TAYLOR (with MURRAY CAMPBELL)

Sound archives. Repositories for recorded sound data produced or received by public or private entities. Existing primarily in the 20th century, they were initially designed using principles, similar to those found in manuscript archives, that have existed since the establishment of a unified administration of archives in Paris in the late 18th century (Archives Nationales, 1789; Archives Départementales, 1796). The 18th-century concern for establishing repositories for records of agencies, recognizing institutional responsibility for the care of documentary heritage, and the responsibility to provide public access, have remained the primary concerns for archives of recorded sound.

For a comprehensive list of SOUND ARCHIVES with significant musical holdings see volume 28.

1. HISTORY. The invention of a device for reproducing sound took place in 1877 when THOMAS EDISON patented the cylinder phonograph. By the late 1880s a method for recording and reproducing discs had also been developed by Emile Berliner. Researchers in anthropology and linguistics took advantage of the new technology first, recognizing that the recordings would allow them to preserve the sounds in musical performances that could only be partially represented by written transcription. In 1890 the ethnologist JESSE WALTER FEWKES recorded the songs of the Passamaquoddy Indians in Maine, the earliest gramophone recording of songs. In the 1890s songs were recorded by other ethnographers in North America and Europe, including Béla Vikár in Hungary (1892), Waldemar Jochelson in Siberia (1897) and C.S. Myers at Torres Strait (1898). The phonograph was also used during this period to record Western art music. As early as 1889 recordings were made of short instrumental and operatic selections in the USA and Europe for the Edison Library and other agencies. Notable in this period were Gianni Bettini, who recorded operatic performances in the mid- to late-1890s, and Lionel S. Mapleson, who recorded a number of Metropolitan Opera performances between 1900 and 1903. (*See* RECORDED SOUND, §I, 2.)

The popularity of sound recording spread quickly to researchers who took portable wire, cylinder and disc recorders to the field in Europe, Asia and the Americas during the early 20th century: Bartók and Kodály recorded traditional music in Hungary and Romania before 1915; Čecil Sharp recorded folksongs in England and North America between 1903 and 1918; Janáček and his associates recorded Moravian traditional music between 1909 and 1912; Jaap Kunst was recording in Indonesia in the 1920s and 30s, and Constantin Brăiloiu in Romania between 1929 and 1932.

The commercial recording industry began the mass production of cylinder and disc recordings in the late 19th century. Collected in music libraries, historical sound archives and institutional archives for radio stations and recording companies, commercial recordings also became important sources for historical research later in the 20th century. Today many sound archives include field recordings, commercial recordings dating from the early 20th century, and recorded documents (usually on tape) of radio programmes and concerts, all of which play a role in musicological and ethnomusicological research.

Concern for preserving valuable recordings led to the establishment of sound archives in Europe and North America. In 1899 the first sound archive, the Phonogrammarchiv of the Akademie der Wissenschaften, was founded in Vienna, at the prompting of the physiologist Sigmund Exner. This was followed by the Berlin Phonogrammarchiv, founded in 1900 by Carl Stumpf, and served as a model for other archives in Europe and North

America. George Herzog, who had worked at the Berlin Phonogrammarchiv, set up an archive at Columbia; this moved in 1948 to Indiana and became the Archives of Traditional Music.

Between 1900 and 1945 other archives were established in Europe and the USA, including the Discoteca di Stato, Rome (1928), the Musée de l'Homme, Paris (1930), The M.I. Glinka State Central Museum of Musical Culture, Moscow (1937), the Phonothèque National, Paris (1938) and the Recorded Sound Section of the Library of Congress, Washington DC (1940).

As recording technology became increasingly portable after 1945 a greater number of archives were established, notably the British Institute of Recorded Sound, London (1948; later the National Sound Archive), the INTERNATIONAL LIBRARY OF AFRICAN MUSIC, Roodepoort, South Africa (1954; in Grahamstown from 1977), the Stanford Archive of Recorded Sound, Palo Alto, California (1958), the Rodgers and Hammerstein Archives of Recorded Sound, New York (1965) and the Yale Collection of Historical Sound Recordings, New Haven, Connecticut (1961). From about 1980 local and regional sound and audiovisual archives have been established throughout the world.

2. CONTENTS. While sound archives generally retain a name and designation that indicates their primary focus is on sound, many contain materials that include a variety of historical data that plays an important role in researching music history. Few sound archives include sound data without written documentation, and today many accept and encourage deposits of visual data, such as video and film, that can document a musical event more completely.

The history of sound and visual recordings and their retention in archives parallels the intellectual development of the scholarly disciplines that have been responsible for establishing, building and maintaining their archives. The function and content of collections in these archives have evolved to reflect changing attitudes towards the use of archival materials. Many sound archives were established to house collections of recordings made by ethnographers in Europe and the USA, and for the benefit of the recording industry. While established and maintained primarily to preserve, today many of these repositories also provide research data for students and scholars. The gradual shift in function in the second half of the 20th century has affected the nature and format of materials collected, as well as the archives' means of access.

Sound archives today serve the musical community by retaining recordings of musical events in commercial and non-commercial form. Comprehensive collections include historical recordings on cylinder, wire, disc, tape and film, as well as contemporary recordings of both audio and visual media on analogue and digital tape and compact disc.

3. TYPES OF ARCHIVES. Over the years sound archives have been established in various organizations, including independent collections, educational and research institutions, historical society collections, government organizations, commercial or public institutions such as radio and television stations or museums, and personal collections. The institutional structure surrounding an archive affects the kind of material collected and the means of access to information, and even the accessibility of recordings. Sound archives that are part of an educational institution generally include commercial recordings to support the institution's curriculum, and also act as research repositories for field recordings made by scholars and students connected to the institution. Public or governmental sound archives act as historical research resources for recordings produced within a region or country – their primary goal is to preserve evidence of local and regional events. Similarly, a sound archive connected to a recording company or radio station is concerned with preserving recordings and programmes of that organization. Institutions concerned mainly with preservation invest fewer resources in providing access to the materials for outside researchers.

Regardless of the institution to which it is attached, the scope of a sound archive can range from local to regional, from national to international. The largest and most comprehensive sound archives hold recordings from around the world and include many hundreds of collections in a variety of formats. A sound archive such as the Archive of Maori and Pacific Music at the University of Auckland holds recordings of traditional music largely of the Pacific, while the NATIONAL SOUND ARCHIVE at the British Library holds an extensive collection of Western art music, jazz and popular music, as well as traditional music from around the world. Valuable collections of sound recordings are also found in small regional or local archives attached to colleges and universities or to historical societies. While the collections and scope may be small, the recordings and their documentation often represent the only documentary sources for musical information of that region.

4. MEDIA. Media represented in sound archives includes tinfoil, wax and celluloid cylinders (1877–*c*1940), wire, glass, zinc, aluminium, shellac, acetate discs (1890s–1990s), non-magnetic (paper) and magnetic wire (1930s–40s) and paper or plastic tape (1930s–90s) on open reels and cassettes, compact discs (from 1983), and digital audio tape (DAT, from 1987). In addition, many archives collect film, videotape and optical video discs storing both audio and visual data. Original recorded sound and image media require specific equipment for playback, creating a technologically complex environment for archivists and researchers. The preservation process in sound archives encourages dubbing sound recordings to a common medium for patron use. Magnetic tape has been considered a stable preservation medium, although increasingly archives are preferring digital media (DAT and compact discs) for their superior sound quality.

5. RESPONSIBILITIES. Sound archives today collect, preserve, organize and disseminate the contents of collections for scholars, students and performers. These archives hold keys to information on musical practice for historical research and for supplementing current research. Professional standards and ethics in archives dictate that individual privacy, confidentiality and discretion are respected but also ensure access to information and materials. Most archives have published guidelines for the use and duplication of materials that respect the informants, donors and communities from which the materials were originally taken. Especially as regards ethnomusicological materials, ethical standards used during collecting in the early 20th century differed from those used today, when there is more awareness of issues

relating to access and dissemination. A greater concern for the cultural property of indigenous peoples has encouraged the redistribution of songs and music along with other cultural artefacts from archives and museums throughout the world. From collections derived from the native peoples of the Americas some song traditions previously lost have been returned to communities in the form of historical recordings from archives.

6. ORGANIZATIONS. There are several organizations that support and promote sound and audiovisual archives through meetings, publications, published standards and directories. Foremost among them is the INTERNATIONAL ASSOCIATION OF SOUND AND AUDIOVISUAL ARCHIVES (IASA). Established in 1969, the IASA is involved in the preservation, organization and use of sound recordings, techniques of recording and reproducing sound in all fields in which the audio medium is used. The ASSOCIATION FOR RECORDED SOUND COLLECTIONS (ARSC), founded in 1966, is an American organization whose purpose is to develop and disseminate information related to all aspects of recording and sound media.

Other organizations with sound archive membership include the INTERNATIONAL ASSOCIATION OF MUSIC LIBRARIES (IAML), the Fédération Internationale des Archives du Film (FIAF), the International Council on Archives (ICA), the International Federation of Library Associations (IFLA) and the Society of American Archivists (SAA). All professional organizations are concerned at some level with administration, procedures and standards for access, preservation and ethics, as well as with the dissemination of information on the contents of archival collections.

JENNIFER POST

Soundboard (i) (Fr. *table d'harmonie*; Ger. *Resonanzboden*; It. *piano armonico*, *tavola armonica*). The thin sheet of wood in a piano, harpsichord, clavichord, zither, or the like, that serves to make the sound of the strings more readily audible and helps to form the characteristic tone quality of the instrument. A string presents so small a surface to the surrounding air that its vibrations cannot set the air into vibration with any great efficiency; as a result, the sound produced by a string in the absence of a soundboard, although it may well sustain for an appreciable time, is hardly loud enough to be used for any musical purpose. The soundboard, coupled to the strings by means of one or more bridges over which they pass, provides a larger vibrating surface so that the air can be set into vibration more efficiently and a louder sound can be heard. The soundboard does not serve as an amplifier in the same sense as an electronic circuit or device, since it adds no energy from an outside source; rather, it enables the energy already imparted to the string by a hammer, plectrum, tangent, or the like, to be dissipated more rapidly, so this energy is converted to a sound of higher intensity that lasts for a shorter time. The particular resonance and vibrational characteristics of the soundboard determine which components of the complex vibration of the string will be given particular prominence, and the rate at which they will be dissipated; consequently the shape, thickness and ribbing of the soundboard are of primary importance in determining the quality of the instrument of which it is a part.

EDWIN M. RIPIN

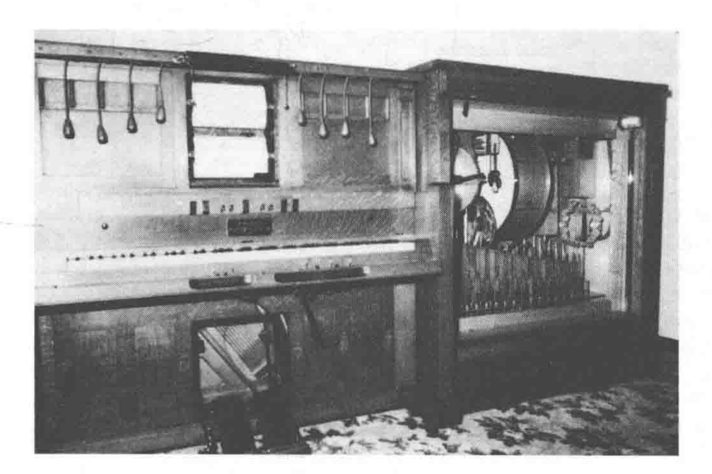
Soundboard (ii). A term sometimes used in Britain to refer to the WIND-CHEST of an organ.

Sound effects. Sounds and noises, primarily percussive, included in dramatic or musical performances. They range from sounds made off-stage in theatre, film and television productions to the many uses by composers of noise-making objects that would not normally be regarded as musical instruments.

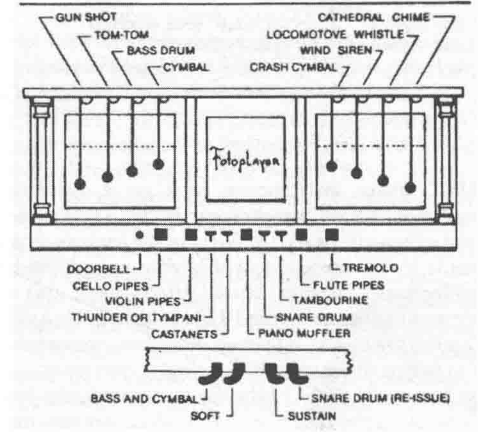
1. Dramatic sound effects. 2. Musical sound effects to 1950. 3. Musical sound effects after 1950.

1. DRAMATIC SOUND EFFECTS. Off-stage sound effects have been employed since drama began, but their complete integration into theatrical forms is comparatively recent. In the Japanese kabuki theatre (popular since the early 17th century) off-stage music (*geza-ongaku*) is played behind a curtain or screen to one side of the stage (*see* JAPAN, §VI, 3). The concealed musicians play, sing and make sounds to create a sense of location or mood appropriate to the drama; the large *ōdaiko* drum, in particular, is used to evoke natural sounds such as wind, waves, rain and thunder. In Western theatre from the same period until the 19th century the principal sound effects were also those of weather, produced by specially constructed devices such as the WIND MACHINE; some old theatres still have a sloping wooden 'thunder run' or 'thunder gallery' with irregularly spaced transverse ridges, down which heavy balls are rolled; a more portable machine, the 'bronteron', consists of a hand-operated revolving barrel containing heavy balls. From the 1890s various devices for creating sound effects formed part of the 'traps' (contraptions) of the percussionists in many theatre orchestras.

Since the beginning of the 20th century sound effects have come into their own with the advent of recorded art forms such as the (originally 'silent') cinema, radio and television. A number of elaborate machines were constructed to create sound effects, but humbler devices (coconut shells for horses' hooves, bells, creaking doors etc.) have been and continue to be used. Percussion instruments were first used for such purposes as long ago as the 1790s: large automatic instruments of the ORCHESTRION type, which imitated the instruments of the orchestra, included percussive sounds, and 'Janissary' effects in the form of a drumstick striking the base of the soundboard, cymbals and tuned bells, were added to some pianos in the early 19th century. But it was not until around 1910 that special machines and instruments were made in any numbers. The Allefex, invented by A.H. Moorhouse and manufactured in Britain from 1909 by



A. & H. Andrews, produced some 50 different effects (many operated by crank handles); it was followed slightly later by a machine for the cinema, the Kinesounder, and in the 1920s by another, invented by R. Effner in Berlin. From the same period many keyboard instruments incorporating sound effects were produced for use in the cinema with silent films and in the theatre; many of them were automatic instruments such as the player piano and mechanical organ (they included the Biorkestra, Cinechordon, Cinfonium, Clavitist-Violina, Filmplayer, Fotoplayer (fig.1), Movieodion, One-Man Motion Picture Orchestra, Orchestrion and Pipe-Organ Orchestra), but devices were also added to cinema and theatre pipe organs in the 1920s and 30s. The effects these instruments could produce ranged from the sounds of pistol shots, flames, wind, waves, thunder, breaking china, steam engines, trains, cars, chains, animal cries and horses' hooves to conventional percussion, whistles, bells and Morse code buzzers.



Parallel to the development of special machines, percussionists and later sound-effects men (often working in teams) used a great variety of objects and materials to create realistic sounds for films (both silent and with soundtracks) and radio shows; by the 1940s the Walt Disney sound-effects department had assembled 8000 objects and musical instruments. From around 1930, in the early days of sound film, film makers and musicians explored creative applications of the newly available resources in the cinema: early sound collages on film included Walter Ruttmann's *Weekend* (*c*1930), a film without visuals, in Arthur Honegger and Arthur Hoerée's soundtrack for *Rapt* (1934), and in several Russian films, such as Dziga Vertov's *Entuziazm: Simfoniya Donbasa* (1930). Musical sound effects were also used: a night-club scene in the film *Ball of Fire* (1941) features the jazz drummer Gene Krupa playing on heating pipes and drumming with matchsticks on a matchbox.

After World War II commercial gramophone recordings increasingly replaced other methods of producing sound effects. Several electronic instruments were devised that could be used for the purpose, including the Singing Keyboard (*c*1936) and the Mellotron (1962–3), which used respectively lengths of pre-recorded film soundtrack and magnetic tape; the Kantaphon (*c*1934), invented by Brandt, in which a microphone placed against the throat picks up the operator's humming and passes it to filters and volume controls; the similar Sonovox (*c*1939), by means of which human vocal quality could be imparted to any sound; and the Shumofon (*c*1955), which synthesizes a wide range of natural and man-made sounds. Synthesizers can also be used to produce sound effects, though not specifically designed to do so.

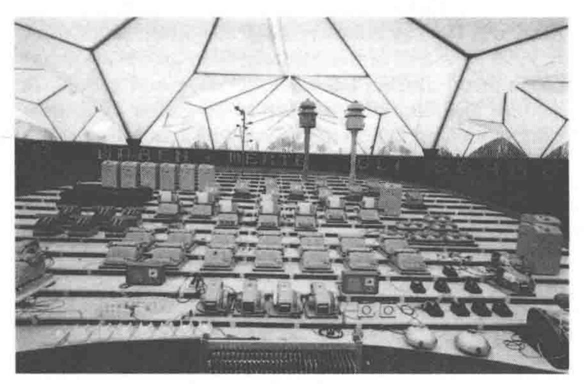
2. Musical sound effects to 1950. While instrumental and vocal imitations of non-musical sounds may be found in music of all ages, the introduction into the orchestra of special instruments to create sound effects occurred only rarely before the 20th century. One of the earliest examples is in Marc-Antoine Charpentier's music for Molière's *Le malade imaginaire* (1673), which makes percussive use of apothecaries' pestles and mortars. The first widely-used sound effects instrument was the anvil, found in Western music from the early 16th century; it appears in several 19th-century opera scores, including Wagner's *Das Rheingold* (1853–4), and is featured in anvil choruses by Verdi (*Il trovatore*, 1851–3) and in Riccardo Zandonai's *I cavalieri di Ekebù* (1923–5). Leopold Mozart included rifle shots in his *Sinfonia da caccia*, and Johann Strauss (ii) featured both gunshots and jingling spurs in some of his dances. In Rossini's overture to *Il Signor Bruschino* (1813) the violinists are instructed to tap the tin reflectors of their candlesticks with their bows. In 1840 the conductor Louis Antoine Jullien added a 'rattle', consisting of dried peas shaken in a tin box, to performances of Beethoven's Pastoral Symphony to imitate the sound of hailstones; he also used sound effects extensively in his own compositions and in arrangements, including rattles, crackers, fireworks, cannon, muskets and revolvers. Thunder and wind machines have become comparatively familiar in dramatic works (for illustrations *see* Thunder machine and Wind machine). Other musical sound effects are related to folk traditions of banging kitchen utensils in celebrations and protests, and many such found or home-made instruments feature in Swiss folk music.

From about 1900 burlesque orchestras and American comedy 'corn bands' often made use of sound effects, and this style of playing may still be seen in humorous cartoon

1. *(a) Fotoplayer (Style 20) by the American Photo Player Co., 1920–25 (private collection); an automatic instrument for theatres and cinemas, consisting of a player piano with organ pipes, percussion and sound effects; (b) diagram of the Fotoplayer, showing the position of the controls for the different sound effects and percussion instruments*

TABLE 1

Composer	*Work*	*Date*	*Sound sources*
Maurice Ravel	L'heure espagnole	1907	three clock pendulums (MM 40, 100, 232) operating simultaneously (opera introduction)
Carol-Bérard	Symphonie des forces mécaniques	1908	motors, electric bells, whistles, sirens, noises on gramophone records
Manuel de Falla	El amor brujo [Love the Magician]	1915	metal bars, clock chimes ('Sortilegio (A media noche)' [Midnight: Witchcraft], in original *gitanería* version, not its better-known revision as a ballet)
Erik Satie	Parade (ballet)	1916–17	lottery wheel, typewriter, Morse key, two sirens, pistol, 15-note bouteillophone
Arthur Honegger	Le dit des jeux du monde (incidental music)	1918	bouteillophone
Edgard Varèse	Amériques	1918–22	original version incl. steamboat whistle, crow call, two sirens (prem. 1926); 1929 rev.: one siren
George Antheil	Ballet mécanique (originally for a film)	1923, rev. 1925, 1927, 1953	two aeroplane propellers (manually rotated against ratchets), car horns, electric doorbells, buzz-saws, anvils
Ottorino Respighi	Pini di Roma	1924	Gramophone record of a nightingale
George Antheil	Mr Bloom (opera)	1925	motors, amplifiers
Ernest Bloch	America	1926	car horn, wooden box
Aleksandr Vasil'yevich Mosolov	Zavod [Iron Foundry]	1927	steel sheet
Jacques Ibert	Divertissement	1927	football and police whistles (final movement)
Michel Brussmans	Bruits d'avion	1928	recording of aeroplane noises
George Gershwin	An American in Paris	1928	car horns
Ernst Toch	Bunte Suite	1928	radio sound effects
George Antheil	Transatlantic (opera)	1928–9	typewriters, telephones
Werner Janssen	New Year's Eve in New York	1929	car horns, siren, klaxon
Heitor Villa-Lobos	Suite sugestiva	1929	metronome
Michel Brusselmans	Scènes provençales	1931	car horn
Henry Brant	Music for a Five and Dime Store	1932	kitchen hardware
Ferde Grofé	Tabloid Suite	1933	typewriter
Benjamin Britten	Coal Face (film music)	1935	compressed steam, sandpaper, miniature rails
Harold Davidson	Auto Accident	*c*1935	siren, smashing glass
Benjamin Britten	Night Mail (film music)	1936	blocks of wood, chains, cups of water, film rewinders
Ferde Grofé	Symphony in Steel	1937	locomotive bell, pneumatic drill, compressed-air tank, two pairs of shoes, two brooms
William Russell	Made in America	1937	found object percussion, tin cans, suitcase, washboard, brake drums
Sergey Prokofiev	Cantata for the 20th Anniversary of the October Revolution	1936–7	two cannons, machine gun, alarm bell, marching footsteps, siren (partial premiere in 1966, complete in 1992)
Kurt Weill	You and Me (film music)	1938	tuned glasses and bottles
John Cage	Fads and Fancies in the Academy	1940	washtub, waste basket, alarm bell, metronome, whistling, handclaps (score lost until 1992)
John Cage	Living Room Music	1940	furniture, books, papers, windows, walls, doors
Francisco Mignone	O espantalho [The Scarecrow] (comic ballet)	1941	steam siren, police sirens, train whistle
John Cage	The City Wears a Slouch Hat (for radio play)	1942	orig. version (lost) for live and recorded sound effects; revised version (not broadcast; lost until 1990): alarm bells, tin cans, steel coil (spring), washboard, pod rattle, whistles, car horn, foghorn, metronome, steel pipes, music stands, 'variable frequencies'
Vieri Tosatti	Concerto della demenza	1946	noise ensemble
Leroy Anderson	The Typewriter	1950	typewriter
Jón Leifs	Sinfónia nr.1 (Söguhetjur) [Saga Symphony]	1950	large struck stones, anvils



films, using instruments such as a galvanised iron washboard with attached car horns, saucepans and lids and a SWANEE WHISTLE. Early in the century street organs made by Gasparini incorporated a xylophone-like 'bouteillophone'. Musical sound effects were also exploited by popular bands: in the 1920s British music halls Edward Stanley De Groot, a trained musician, presented his Horn Orchestra of Stanelli, consisting of two dozen car horns; and from the early 1940s the drummer Spike Jones made prominent use of unusual and jokey instruments, including tuned car horns, based on his experience as a session musician. Special effects, such as train noises and animal and bird sounds, have been produced on the Hawaiian guitar and on the pedal steel guitar, particularly models with multiple necks.

From around the beginning of the 20th century many composers were inspired by new industrial sounds. In 1913 Debussy wrote of 'the incredible sound' of a steel mill; similar sentiments were expressed by Ravel in an article 'Finding Tunes in Factories' (1933). Among other composers, Michel Brusselmans composed short works for chamber orchestra in 1927–8 with such titles as *La foule*, *Dans la jungle*, *Bruits d'usine*, *The Railway* and *Bruits d'avion*. The Italian futurists fiercely advocated industrial sounds; from 1913 Luigi Russolo constructed an ensemble of *intonarumori* ('noise intoners'), and

TABLE 2

Composer	Work	Date	Sound sources
John Cage	Imaginary Landscape no.4	1951	12 radios
John Cage	Speech	1955	five radios (with newsreader)
John Cage	Radio Music	1956	one–eight radios
David Ahlstrom	See you can say – Oh	1959	three radios, vacuum cleaner, amplified metronome, alarm clock, electric shaver, toy gun, birdcall (with six singers)
John Cage	Cartridge Music	1960	amplified small objects
Toshi Ichiyanagi	Music for Electronic Metronome	1960	three or more electric metronomes
La Monte Young	Poem for Chairs, Tables, Benches, Etc.	1960	chairs, tables, benches, etc.
György Ligeti	Poème symphonique	1962	100 metronomes
Rolf Lieberman	Symphonie 'Les échanges'	1964	156 office machines, including typewriters, calculators, telephones, telex machines, tape punchers, cash registers (fig.2)
Joji Yuasa	Kansoku	1964	amplified dice (with breathing)
Maurico Kagel	Pas de cinq – Wandelszene	1965	five performers with walking-sticks on a stage made of various materials
Walter Marchetti	La caccia	1965	birdcalls
Robert Moran	Titus no.1	1967	amplified automobile (five–15 performers)
Mauricio Kagel	Synchronstudie	1968–9	sound effects (with one or more singers)
Christian Wolff	Sticks	1969	sticks
Christian Wolff	Stones	1969	stones
David Bedford	Balloon Music 1	1973	two–1000 balloons
Mauricio Kagel	Bestarium	1974–5	birdcalls
György Ligeti	two fanfare preludes in Le grand macabre (opera)	1974–7	12 car horns
John Cage	Child of Tree	1975	amplified plant materials
John Cage	Branches	1976	amplified plant materials
Hugh Davies	Natural Images	1976, rev. 1992	amplified plant materials, stones, pebbles, sand, sea shells, toy instruments, two electronic oscillators, tape
Paul Panhuysen	Engines in Power and Love	1991	five amplified dot-matrix computer printers
Alvin Lucier	Two Stones	1994	two pieces of basalt (solo performer)
The User [=Thomas McIntosh and Emmanuel Madan]	Symphonies #1 and #2 for Dot Matrix Printers	*c*1998	network server computer controls 12 PCs and associated amplified printers

around 1919 he developed a method of controlling the volume and timbre of an aeroplane engine for use in Fedele Azari's futurist 'aerial theatre'. In the 1920s Russolo developed four versions of the *rumorarmonio*, which combined elements of his earlier individual noise instruments. Two motorcycles accompanied one of the futurist *Balletti meccanici* of Ivo Pannaggi in 1922. Two dadaist works from 1919 featured kitchen utensils, Jef Golysheff's *Antisymphonie (Musikalische Kreisguillotine)* and Hans-Jürgen von der Wense's *Musik für Klarinette, Klavier und freihängendes Blechsieb*. In 1918–23 several open-air performances in the Soviet Union commemorated the October 1917 revolution with 'noise symphonies', for at least one of which Arseny Mikhaylovich Avraamov composed his *Simfoniya gudkov* ('Symphony of Factory Sirens', 1922), which included a calliope-like steam-whistle machine. In the same period the theatre director and choreographer Nikolay Mikhaylovich Foregger introduced his *Machine Dance*, featuring his Noise Orchestra, which combined drums, jew's harps and vocal sounds with broken glass, packaging, scrap metal, etc. Similar noise ensembles played in a variety of theatrical productions and in concert works such as Grigory Smetanin's symphonic poem *Fabrika* ('The Factory', ?1923), the collectively composed oratorio, *Put' oktyabrya* ('The Path of October', 1928), by the group Prokoll, and in Vladimir Mikhaylovich Deshevov's opera *Lyod i stal'* ('Ice and Steel', 1930). In films, factory hooters and klaxons accompanied a scene featuring Lenin's funeral in *Plan velikikh rabot* ('Plan of Great Works', 1930), factory klaxons and the whistle of a steam turbine appeared in *Vstrechnyi* ('Counterplan', 1932), similar noise makers in *Dela i lyudi* ('Men and Jobs/Deeds and People', 1932), and six ship's klaxons in *Desertir* ('Deserter', 1933).

2. Automatically controlled office machines assembled for the première of Rolf Liebermann's 'Symphonie "Les échanges"' (Swiss National Exposition, Lausanne, 1964)

John Cage was particularly eclectic in his choice of instrumentation for his works. From 1939 he used all sorts of percussive devices in pieces such as *First Construction (in Metal)* and *Imaginary Landscapes nos.1–3* (1939–42); the last of these was the first work to use a radio receiver, and Cage extended the idea in *Imaginary Landscape no.4* (1951) and later works (see Table 2 above). The earliest studies by Pierre Schaeffer in what he later called *musique concrète* (*see* ELECTRO-

ACOUSTIC MUSIC) were produced in 1948 as an attempt to compose a noise symphony (*Symphonie de bruits*) and were presented under the title 'Concert de bruits'. Table 1 shows some of the unconventional 'instruments' used to create sound effects in concert works before 1950; other works featured a SIREN.

3. MUSICAL SOUND EFFECTS AFTER 1950. Since 1950 the range of unusual sounds introduced into their works by composers has grown enormously, especially in the area of percussion. The sounds produced by all sorts of objects – from radios and typewriters to motorcycles – and materials – both natural and man-made – have been added to those of conventional instruments. Many of the objects listed in Table 1 have continued to be used, including the typewriter (by Krzysztof Penderecki, Peter Maxwell Davies and others), the siren, and the metronome (in works by William Russell and John Tavener; a set of four metronomes in works by Davies and David Bedford, in Per Nørgård's *Unendlicher Empfang*, 1998, and, on tape, in Alfred Schnittke's *Lebenslauf*, 1982). Car horns, which are of two types: staccato (operated by squeezing a rubber bulb) and sustained (electromechanical), continue to be used, for example in Ennio Morricone's music for the 'spaghetti Western' film *Il mio nome è nessuno* ('My Name is Nobody', 1973), in which they play a version of Wagner's *Ride of the Valkyries* or in Wendy Chambers' performances on a specially-constructed car horn organ. An 'anvil effect' may be obtained by striking a length of railway track, as in three works by Penderecki from the early 1970s and Giya Kancheli's Symphony no.4 (1974), while other composers call for a large metal bar such as a length of scaffolding (Davies and Mark-Anthony Turnage). A wooden cube is struck in Galina Ivanovna Ustvol'skaya's Composition no.2 'Dies Irae' (1972–3) and Symphony no.5 'Amen' (1989–90), and in all three parts of James MacMillan's *Triduum* (1995–7). Stones are struck in works by Jón Leifs, Xenakis, Bedford, Alberto Ginastera and Tan Dun, and feature, with whistles, güiro-like scrapers and other small percussion devices, in Cornelius Cardew's *The Great Learning* (1968–70). Other noise makers include clickers, gun shots, chains (used earlier by Schoenberg, Havergal Brian and others), a bursting paper bag (György Ligeti) and many different types of whistle. Toy instruments and similar simple instruments, such as the kazoo, swanee whistle and bird whistle have also been specified by a number of composers.

R. Murray Schafer's orchestral work *North/White* (1973) features a snowmobile (as a protest against its extreme noisiness), while a motorcycle appears in Ferde Grofé's *Hudson River Suite* (1955), Simon Desorgher's *The Infernal Clanking of the Chains and Cogs of Beelzebub* (1982), which includes amplified sounds played percussively, and, on tape, in Jan Sandström's *A Short Ride on a Motorbike* (1989). Stockhausen's *Helikopter-Streichquartett* (1992–3) features the members of a string quartet aloft in four helicopters, the amplified sounds of both elements being mixed together for listeners on the ground. In Misha Mengelberg's *Methwelbeleefde groet van de kameel* (1971–3) the orchestra plays while the composer saws a wooden chair into several pieces, which are then reassembled in the form of a camel. Broken glass is rattled in a tin in works by Peter Maxwell Davies, glass fragments are crushed while others are dropped into a 'bottle tree' in Annea Lockwood's *Glass Concert* (1966) and crockery is smashed in Ligeti's *Nouvelles aventures* (1962–5) – which also includes the destruction of a plastic cup, a tin can, a wooden lath and large sheets of paper – and in his opera *Le Grand Macabre* (1974–7). A selection of sound effects is called for in Wilhelm Killmayer's opera *Yolimba* (1964), and a vocal 'sound effects chorus' is specified in Bedford's *The Rime of the Ancient Mariner* (1975–6). Cars are played percussively in Robert Moran's *Titus No.1* (1967) and Hans Werner Henze's *Der langwierige Weg in die Wohnung der Natascha Ungeheuer* (1971), while in Mathias Spahlinger's *Ephémère* (1977) and the percussion consists largely of 'veritable' instruments (household objects such as saucepans and bottles); other composers have specified that the performer be a 'bruitiste' or noise maker, as Julio Estrada in 'Mictlan' from his opera *Pedro Páramo* (1992). Several percussionists have specialized in 'junk' percussion, including Donald Knaack, Roger Turner and the Zero group in Leningrad. Comparable examples are found in lighter music. On a record album made in 1973 the singer Barbra Streisand is accompanied in the song *The World is a Concerto* by over 20 domestic (mainly electric) appliances, including orange juicers, electric toothbrushes, a pop-up toaster and a kettle. Tom Waits has employed in song accompaniments the humming of a sewing machine, a squeaking door and a spinning washing machine.

Not only have composers combined sound effects with ordinary instrumental sounds, they have composed works scored solely for noise-making devices and objects (though in some cases voices are included). Table 2 shows some of these. A simple list of objects used in this way does not, of course, give any clue as to how fully the work is notated and structured, or the degree of imagination exercised by the composer. In many instances it is impossible to distinguish between an array of such devices assembled for one composition and a newly invented instrument. Where a single sounding object may produce a noise or sound effect, several like objects of different sizes or tuned to a scale may become an instrument (a set of tuned coconut shells or anvils, for example); the same is sometimes true of groups of heterogeneous objects. Some of the new instruments and sound sculptures described elsewhere in this dictionary are borderline cases, as are certain examples of Cage's work.

Several successful theatrical shows in the 1990s were based on choreographed highly energetic group percussive music performed on stage. Tap dance (which dates back to the mid-19th century and derives from earlier stepping dances such as clog dance) is the main element in the Australian group Tap Dogs; the British team Stomp (formed in 1991 by Luke Cresswell and Steve McNicholas) by 1998 consisted of five eight-member groups, performing on metal dustbin lids and buckets, metal and plastic dustbins and larger barrels (up to 50-gallon oil drums), broomsticks, rattled matchboxes and assorted crockery in water-filled steel kitchen sinks worn around the performers' necks, as well as clapping and foot-stamping; the latter two, as well as body percussion, are prominent in performances by Gumboots, from South Africa.

Many humorists have produced versions of familiar instruments that are made from everyday materials, have an unusual appearance, are outsize or miniature (favoured by the clown Grock), or are played unconventionally. Some acts are formed around music played on such instruments. The Argentine group Les Luthiers, for example, uses a tin violin ('Latín'), the 'vibromatófono di amore', and the 'cello leguero' (the body of which consists

of a *bombo leguero*: a type of drum audible up to three miles away), as well as a typewriter for a keyboard, a cardboard trombone on wheels and a hosepipe trumpet, all constructed by Carlos Iraldi. Three musical humorists have specialized in adapted and invented instruments and sound effects. The band of Spike Jones, which first became popular in the early 1940s, used such ad hoc instruments as washboard, doorbells, cowbells, anvils, saws, tyre pumps and toy whistles. Gerard Hoffnung realized some of the unusual instruments he had depicted in cartoons at two concerts in London (1956 and 1959); they included rifles, three vacuum cleaners and an electric polisher (in Malcolm Arnold's *A Grand Grand Overture*), a length of hosepipe (on which Dennis Brain played a movement of Leopold Mozart's Concerto for alphorn), tuned stone hot-water bottles and the hiss of compressed air. Peter Schickele has invented a number of instruments for the works of his imaginary composer P.D.Q. Bach; they include the Hardart (consisting of strings, balloons, shotguns, whistles, bicycle horn, blown and struck bottles and a cooking timer, all mounted on a frame), 'showerhose in D' and 'lasso d'amore' (one of the corrugated whirler tubes sold as toys during the 1970s).

The human body has been used to make many percussive sounds, from the tongued glottal click of the Xhosa language (made famous in the singing of Miriam Makeba, and borrowed by Stockhausen in *Refrain*, 1959) to whistling, hand-clapping, finger-snapping, foot-stamping and knee-slapping found in flamenco and other folk music and dance (and included by Stockhausen in the earliest sections of *Momente*, 1962–4). Hand-clapping is the only sound source used in Yasunao Tone's *Clapping Music* (1963) and in Steve Reich's *Clapping Music* (1972) for two performers, and is often used by singers and audiences in light music – so much so that some ELECTRONIC PERCUSSION devices include a synthesized hand-clap facility. Percussionists who have specialized in body percussion include Nana Vasconcelos and Knaack; Vinko Globokar's *Corporel* (1984) is performed by a percussionist on his own body. Sounds produced by the body have also been used for humorous purposes: in the French music halls between about 1891 and 1914 Joseph Pujol, 'Le Pétomane', made farting melodious; melodies have been played by creating an air pocket with a wet hand held under the armpit and squeezing with the free arm; and a number of entertainers (sometimes ensembles) have tapped out tunes on their teeth, or, by blowing through them strongly (often making use of gaps), have imitated musical instruments.

Instruments based on animal sounds have been described and illustrated since the time of Athanasius Kircher in the 17th century; in several instances they have been realized with trained animals. Several 19th century newspaper reports, as well as earlier illustrations, describe instruments, primarily with keyboards, that consist of cats, pigs, mice or other animals ordered inside separate compartments according to the pitch of their squeals when they are hit or picked or their tails are pulled; a sequence in the television series *Monty Python's Flying Circus* showed such an instrument in which white mice were struck by mallets. Since the early 1950s an ensemble of trained canaries – some specially bred for the lower voice parts – has existed in Kharkiv in the Ukraine; its repertory consisted of over 80 works of classical and light music. Training of a far humbler order is required to teach mynah birds and members of the parrot family to mimic human speech, or domesticated canaries, blackbirds, bullfinches, curlews and parrots to sing; various types of mechanical bird organ (*see* BIRD INSTRUMENTS) were invented for this purpose in the 18th century. Wild birds are still taught to sing in certain parts of the world, such as China.

HUGH DAVIES

Soundhole (Fr. *ouïe*; Ger. *Schalloch*; It. *occhio*). An opening cut in the body of an instrument to enhance or vary its tone quality, to increase the volume of sound or to affect the pitch. The number, shape, positioning and function of soundholes vary widely.

1. String instruments and acoustics. 2. Other instruments.

1. String instruments and acoustics. Very early in the history of string instruments makers evidently discovered that soundholes modified the tone and increased the volume, and that a certain type of soundhole gave best results for a given instrument. In short, they found empirically that a soundbox which completely enclosed a volume of air was generally a less satisfactory resonator than a soundbox with soundholes. The truth of this may be confirmed by playing a violin or guitar with its soundholes covered or plugged; a marked deterioration of tone and volume results, especially at low frequencies.

The two most significant acoustic functions of soundholes are first, that in conjunction with a resonant cavity they have the effect of reinforcing certain areas of the instrument's tone range (a resonant cavity of this sort is called a 'Helmholtz resonator'); and secondly, when cut into the belly, that they provide a freer movement of the belly, which in turn acts as a more or less flexible support for the feet of the bridge (when present), the result being a further reinforcement of the vibrations. In guitars, lutes and other instruments with centrally placed round or variously shaped soundholes, only the first of these functions is effective, i.e. the creation of a Helmholtz resonator. Bowed instruments with C-holes, f-holes or flaming-sword holes function in both ways.

In good violins the frequency (pitch) of the Helmholtz, or air, resonance is close to that of the open *d′* string. The frequency of the air resonance helps to strengthen and reinforce the tones of the lowest octave of the instrument, and depends primarily on the relationship of the volume of the enclosed air to the area of the soundholes, but is affected also by the flexibility of the wooden shell.

The second function of the soundholes (to provide a freer movement of the belly) is also well illustrated by the violin. The soundholes make the top of the instrument, especially in the area between them, much easier to flex in connection with the rocking and torque-like motions inherent in the acoustical system. In this system the vibrations of the bowed strings are transmitted through the feet of the bridge to the top plate and thence, aided by the Soundpost and the Bass-bar, to the rest of the soundbox (*see* Violin, §I, 2(ii)). These flexing motions of the top are essential in all frequency ranges.

There are instances among the many different string instruments of the world where such acoustical rules are ignored, either because of the aesthetic tonal preferences of the musicians in a particular tradition or because they are irrelevant in other ways. Many of the bowed instruments described in this dictionary under the category Rabāb are not provided with soundholes. Parchment soundtables already provide for much greater flexibility than in the case of wood and are usually more fragile and would be further weakened if pierced. Where they are present in such instruments the soundholes tend to be small and widely spaced around the belly of the instrument well away from the bridge or made in the back of the resonator and not the belly. In the case of East Asian long-necked lutes such as the Shamisen, where the back as well as the belly are of skin, soundholes are evidently regarded as unnecessary and their absence may account for the rapid decay of the tone after plucking – clearly an aesthetic preference (which is further emphasized by a plucking technique which at times requires the plectrum to come to rest on the belly after plucking the string). One class of lute notable for the absence of soundholes is the sitār. The makers may consider that its long hollow neck and gourd resonator provide sufficient resonance already and that adding soundholes would amplify lower frequencies at the expense of the more favoured upper frequencies.

In instruments of the violin family the soundholes are f-shaped (a true 'f' on the bass side of the bridge, and a reversed 'f' on the treble side). In modern violins the bridge is located on an imaginary line connecting small notches cut roughly in the middle of the f-holes on either side. In the 16th and 17th centuries the bridge was often placed lower down towards the tailpiece, as is shown by a number of contemporary paintings.

Other bowed string instruments use different types of soundholes. Viols, for instance, generally have C-shaped soundholes, while the viola d'amore ordinarily has soundholes of a 'flaming-sword' pattern. Like violins, however, both viols and the viola d'amore have their soundholes in the central area of the instrument, the bridge being approximately halfway between the soundholes and roughly at right angles to them (although some viol players place the bridge between the lower ends of the soundholes). In all these instruments soundholes are essential for the insertion and adjustment of the soundpost (where present).

Most plucked string instruments (e.g. guitars and lutes) have one circular soundhole in the upper part of the body towards the fingerboard. However, some zithers have two soundholes; and large lutes (e.g. theorbos and chitarroni) sometimes have three holes. The soundholes of plucked string instruments are often highly decorated and are then called 'rose' holes (occasionally rose holes are found, primarily for decorative purposes, in viol and viola d'amore bellies). Similar soundholes (including rose holes) are occasionally found on harpsichords and large clavichords, but on these keyboard instruments, whose air cavities are in any case not enclosed, soundholes are used for aesthetic rather than acoustical reasons.

The size, shape and positioning of the soundholes are determined by the acoustical factors mentioned above and by the character of the instrument concerned. As already explained, the size of the soundholes is determined by that relationship between volume of soundbox and area of soundholes best suited to producing the optimum resonance in the Helmholtz resonator. Shape and positioning are affected by the available space and (in bowed instruments) by the need for maximum flexibility of the top plate without unduly weakening its structural strength. For instance, the soundholes of the violin must be in the area of the bridge, they must avoid cutting into or weakening the area bounded by the bass-bar and the soundpost and they must not go too near the edge of the instrument. The resulting slit-like, f-shaped form, capable of numerous graceful variants, cuts along and across a considerable amount of grain in a slightly diagonal direction, without substantially weakening the structure. Soundholes cut in the centre, the back or in the ribs have been tried in violin making but with unsatisfactory results.

While f-holes are evidently the best design for the soundholes of violins, it is not at all clear why C-holes

have generally been preferred for viols or flaming-sword holes for the viola d'amore. In plucked string instruments, the position and typical circular shape of the soundhole are related to the fact that there is no bass-bar (which is replaced by a system of struts) or soundpost to restrict its placement or to suggest its shape. Other possible factors are the flat belly and the far lower tension on the bridge and belly.

Bamboo tube zithers of Malaysia and some parts of Indonesia have two types of soundhole. One (a feature of the *Karanting*) is simply cut through a natural node inside one end of the tube. The other type is often rectangular and over it is mounted a rectangular plaque, held between a pair of taut strings by means of a groove down either side; an example of this is found in the *Gendang Kacapi*. When the plaque or either of the strings is plucked the vibrations of the plaque produce a resonant booming tone from the instrument (*see* ZITHER and MALAYSIA, §§I, 2, II, 1 and III, 2 and 3). To some extent the principle resembles that of tube-resonated xylophones (marimbas) and metallophones where the vibrations of the wooden or metal key are amplified by the air in the tube below, acting as a Helmholtz resonator. On the related *valiha* zither of Madagascar, however, the soundholes are long thin slots which are not covered.

2. OTHER INSTRUMENTS. Box-resonated African lamellophones of the *likembe* type are usually given two soundholes, one on the underside of the box which can be opened and closed with a finger to produce a vibrato-like effect, and another in the end of the box facing the player's body (*see* LAMELLOPHONE, fig.6).

Many flageolets, early oboes, shawms and bagpipe chanters have extra holes (out of reach of the fingers) drilled in or near the 'bell'. Variously called soundholes, vent holes, timbre holes and (in the case of the Turkish *zūrnā*) 'devil's holes', their musical or other function has not been satisfactorily explained, though it is clear that their position and size largely determines the pitch of the lowest notes. Some East Asian flutes also have similar holes and in the case of the *di* an extra non-fingered hole (near the embouchure hole) is covered with a thin membrane which acts as a mirliton, giving a nasal quality to the timbre of the flute.

Soundpost (Fr. *âme*; Ger. *Stimmstock*; It. *anima*). A small spruce dowel inserted vertically between the belly and back in bowed string instruments, located under the treble side of the bridge. The usual position for the soundpost for optimum tone is at a distance of half the thickness of the bridge behind it, and slightly inside the outermost edge of the bridge foot. The soundpost is placed so that its grain runs at right angles to that of the belly, and is wedged in position – never glued – between the converging curves of the belly and back. Generally the soundpost should be fitted snugly enough that it will not fall even when there is no string tension on the instrument, but can be loosened by a light pressure across the middle bouts. However, a wide range of adjustments to the sound of the instrument can be made by appropriate changes in position and tightness of the soundpost.

Early instruments seem to have been designed to function without either soundpost or BASS-BAR. It is not known when the modern arrangement was devised, but it is probable that both soundposts and bars were introduced as different answers to the same problem of making the belly thinner and more responsive, but strong enough to support the string pressure. A musician by the name of James Soundpost appears in Shakespeare's *Romeo and Juliet*, written before 1596, so the idea must have achieved common currency by that time, but the earliest surviving description is by Mersenne in 1635–6 (*Harmonicorum libri*). In the Talbot manuscript (*c*1695, *GB-Och* Music 1187), the soundpost of a violin is described as being as thick as a goosequill. The diameter has increased through the years; an example belonging to a violin made by Richard Duke in 1766 is 4·1 mm thick, and modern practice is to use as large a post as can be fitted through the soundhole, i.e. about 6·5 mm for a violin. This is as much as anything to broaden the area of contact with the fragile grain of the front, lessening the possibility of cracks in this heavily stressed and delicate area of the instrument.

The acoustical function of the soundpost is quite complex. It helps to transmit the vibrations of the belly to the back of the instrument, but more importantly, its off-centre position makes the belly vibrate in an asymmetrical manner. The vibration of the strings tends to produce a rocking motion of the bridge in its own plane. If the instrument were symmetrical internally, the belly would vibrate with the bass side moving in opposite phase to the treble side, and the sound waves generated by the two sides would tend to be cancelled out and diminished. The soundpost produces a relatively immobile point on the belly, so that the bridge rocks about this point rather than the centre line. Thus the tendency to cancellation is reduced and the sound is stronger. With the post removed the sound becomes thin and nasal, especially in its lowest register. The importance of the soundpost to the sound of bowed instruments is reflected in the fact that in both French and Italian it is referred to as 'the soul' (*see* AME).

JOHN DILWORTH (with J. WOODHOUSE)

Sound sculpture. A sculpture or construction that creates sound, not always of a musical nature, by means of its own internal mechanism, or when it is activated by environmental elements such as wind, water or sunlight, or when it is manipulated. This article also discusses newly invented instruments intended for display or permanent installation indoors or out of doors, since it is not always possible to draw a clear distinction between these and true sound sculptures from the method of sound production employed or appearance. For lack of suitable terms in northern European languages to match the French 'lutherie nouvelle' and the Italian 'nuova liuteria' (in the English-speaking world a 'luthier' builds only string instruments), other newly invented instruments that less closely resemble sound sculptures are surveyed in other entries; *see* INSTRUMENTAL MODIFICATIONS AND

EXTENDED PERFORMANCE TECHNIQUES; *see also* ELECTRONIC INSTRUMENTS, §IV, 6; MICROTONAL INSTRUMENTS and TOY INSTRUMENTS.

1. History. 2. Methods of activation: (i) Fire, water and wind (ii) Mechanical systems (iii) Electronic circuitry (iv) Other systems. 3. Vibratory mechanisms. 4. Musical performances. 5. Environmental sound installations.

1. HISTORY. Although sound sculptures were probably created in prehistoric times, the earliest datable example is the statue of one of the Colossi of Memnon, Amenhotep III, erected around 1375 BCE in Thebes; it became famous throughout the ancient world when an earthquake in about 27 BCE dislodged the head, which then 'sang' through its cracks every sunrise, until the Romans repaired the statue around 200 CE. Legends exist in many countries of similar singing and speaking statues. Other pre-Christian examples of sound sculpture, such as the water clocks of Ctesibius (3rd century BCE; *see* HYDRAULIS and WATER ORGAN) and that attributed to Archimedes, employed hydraulic mechanisms, often with moving automata; hydraulic principles continued to be applied, as in the astronomical clock (976–9 CE) of Su Sung (or Chang Ssu-Hsün), the mechanical devices of al-Jazari (13th century, Mesopotamia), musical fountains of Renaissance gardens (such as the Singing Fountain, 1564, outside the Belvedere, Prague Castle) and the many versions of the WATER ORGAN. Several of the curiosities illustrated in Bonanni's *Gabinetto armonico* (1722, partly based on the work of Athanasius Kircher in the mid-17th century) border on sound sculpture, as do the AEOLIAN HARP, various speaking machines, Charles Wheatstone's Acoucryptophone and Diaphonicon (1821 and 1822), which were systems for conducting musical sound from one room to another, Joshua C. Stoddard's Calliope of 1855 (*see* CALLIOPE (ii)) and other 19th-century instruments using steam, G.F.E. Kastner's Pyrophone (1869), which was based on gas flames, and some of the earliest electric instruments (*see* ELECTRONIC INSTRUMENTS, §§II and III, 1).

Such isolated examples, however, have had little to do with the explosion of activity that occurred in the area of sound sculpture in the 20th century. The tone for these developments was set by the futurists in the early years of the century, and in particular by LUIGI RUSSOLO, whose 'noise intoners', housed in brightly coloured boxes with large horns projecting from them, explored the sounds produced by systems based on that of the hurdy-gurdy. Environmental sound performances that harnessed industrial noise began to be mounted shortly after World War I, and are most spectacularly represented by the series of events organized in the USSR between 1918 and 1923 under the general title Concert of factory sirens and steam whistles.

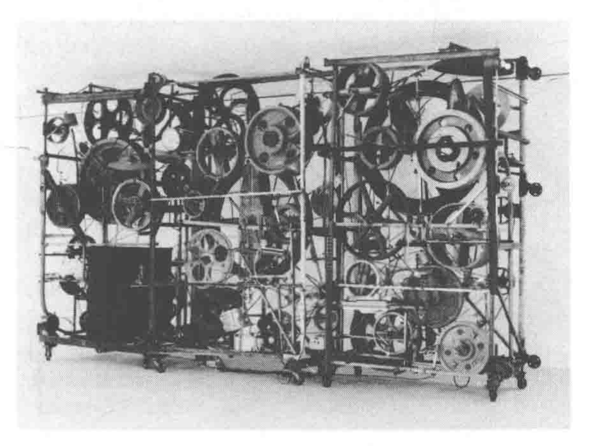
The 1930s saw a gradual expansion of involvement by musicians and composers in the invention of new instruments and sound-producing constructions. The instruments of HARRY PARTCH, though intended for concert use, were created not only as sound makers but also as works of visual art; Partch's approach to the choice and use of materials for their sculptural as well as sonorous qualities has been perpetuated by a growing group of musicians in California who construct and perform on their own instruments (*see* MICROTONAL INSTRUMENTS, §4(i)). I.A. MacKenzie went further than Partch in that he altogether abandoned composition and performance and devoted his energies to the construction of open-air sound sculptures that exploited the elements of wind (in particular), water and fire. The earliest works of the Swiss sculptor Jean Tinguely to include sound date from around 1938, though it was the mid-1950s before he began to concentrate on this aspect; it is interesting to note that his sound sculptures of this period were compared with the recently introduced *musique concrète*. Also in the 1950s the Baschet brothers produced the first of their *structures sonores* (in which steel rods are set in vibration by rubbing, with wetted fingers, glass rods that are attached to them), and David Jacobs and (slightly later) Harry Bertoia created isolated works in the medium, though neither began to specialize in it until the mid-1960s.

The rapid growth and popularity of kinetic art in the 1960s marked a move away from the traditional concept of the fixed and unalterable work of sculpture (just as in music new freedoms such as aleatory aspects, improvisation and all the resources made available by electronic technology gave rise to new attitudes to composition and performance). Sounding elements were soon adopted by several sculptors previously involved in kinetic techniques, who decided to exploit rather than ignore or attempt to disguise the incidental sounds produced by mechanisms and materials. The practitioners in this area have not only been sculptors: musicians have been responsible for much highly original work on sound environments and even some sculpture.

The first exhibitions to survey a range of activities related to sound sculpture were mounted in Vancouver, Edinburgh, Ghent, and Oakland, California, in the mid-1970s, since when such events have become increasingly frequent and popular. Most sound sculptures function independently (by means of one of the driving forces described in §2(i–iii) below), but a few are designed to be operated by the public, or incorporate controls so that the visitor may modify their operation (see §2(iv)). Works of this type must be robust and able to survive minor damage, but a number of sculptors have explored this area because of the rewards that the active participation of the 'consumer' can offer.

2. METHODS OF ACTIVATION.

(i) Fire, water and wind. Considerable use has been made of two of the three volatile elements for operating sound sculptures. Fire has, not surprisingly, found little application, though it was used in one work each by I.A. MacKenzie and Annea Lockwood, as well as in constructions based on the Pyrophone including ones by the Bow Gamelan Ensemble, Norman Andersen, Andreas Öldorp, Trimpin (Fireorgan), Michel Moglia (Orgue à feu) and Bastiaan Maris (Large Hot Pipe Organ).



Water has regained the importance it had up to the Renaissance, both in gallery exhibits and in open-air environments. Rain falling on resonant surfaces is the basis of Luis Frangella's *Rain Music II* (which has antenna-like beaters) and Peter Appleton's *Rain Microphone* (based on amplified strings); water dripping on resonant objects forms the basis for Trimpin's computer-controlled *Liquid Percussion* and, from melted ice, in Mineko Grimmer ('audible sculptures'). Flowing river water activates the strings of the *Hydrophone* by Max Eastley, and the rising tide varies the pitch of his aeolian *Marine Organ*. Water inside a sealed container produces pitch and timbre glissandos in Richard Water's *Waterphone*, while containers with small holes produce patterns

of drips in environmental installations and performances by George Brecht, Brian Eno and Eastley. Modern versions of more traditional applications of water are found in the fountains of the Baschet brothers and the water clock of Andy Plant and Tim Hunkin. Water is pumped through tubing in Max Neuhaus's *Water Whistle* (1971) and has also been used in sound sculptures and installations by I.A. MacKenzie, Douglas Hollis and Jacques Dudon (over 100 works).

The aeolian principle has been very widely employed, mostly in variants of the AEOLIAN HARP. Reinterpretations of the traditional design have been executed by Robert Archer, Douglas Ewart (in bamboo, metal and plastic), Sverre Larssen and Richard Waters. Giant versions of the aeolian harp have been constructed: an early example was Abbot Giulio Cesare Gattoni's 'armonia meteorologica' (*c*1783), a giant 15-string aeolian harp that functioned as a barometer, strung from his house to a nearby church tower. Recent ones are by Douglas Hollis, Bill and Mary Buchen (the quadrant-shaped, 60-string Wind Bow, which stands 3·5 metres high, and the Wind Antenna), Giuseppe Chiari, Ward McCain (who built a harp about 6 metres high on Cape Cod), Ron Konzak's Puget Sound Wind Harp (7 metres high), William Louis Soerensen's two 2 Hanstholm Vindharper (1985) with 6 strings of 15 metres and 3 strings of 17 metres and the Gigantic Aeolian Harp of Thaddeus Holownia with Gordon Monahan (8 strings of 18 metres) by the Bay of Fundy; Mario Bertoncini made a group of aeolian harps up to 7 metres high, of unusual shapes and tunings, for his composition *Vele* (1974). Eastley has also made ground harps and tree harps, as well as aeolian monochords.

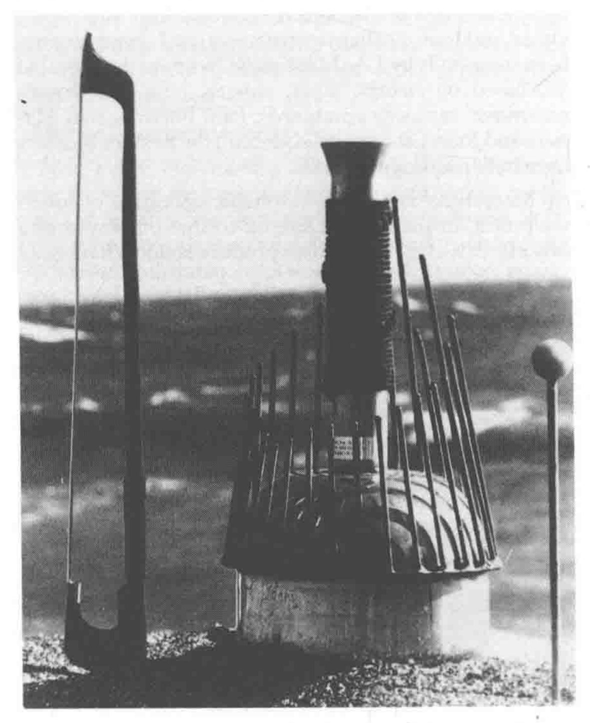
Besides string constructions, the aeolian principle has been applied in sculptures based on pipes (as in Eastley's 'aeolian flutes', which consist of sets of up to 27 pipes) and various types of chime (such as the 'swinging bars' of Harry Bertoia and Skip La Plante's wind chimes assembled from found household objects including keys and forks). Other outdoor aeolian instruments and constructions have been built by I.A. MacKenzie (who made a total of 53, based on strings, pipes, chimes, bells and drums, sometimes variously combined), Paul Burwell, Kan Masuda and John Gibbon (Bell Garden); the Baschet brothers have built musical windmills.

(ii) Mechanical systems. Automatic operation of sound sculptures, in many cases similar to that employed in a MECHANICAL INSTRUMENT to produce sounds, have been achieved in a variety of ways. Mechanisms involving punched paper tape, pinned barrels and drawn sound notation, as well as computer programmes, have been used to control electric, especially electropneumatic, systems (sometimes adapted from vacuum cleaners), and to operate percussion devices; artists who have explored such methods include Norman Andersen, Stephan von Huene, David Jacobs, Martin Riches, Stephen Goodman, Trimpin, Chico MacMurtrie's lifelike musical robots, Godfried-Willem Raes' ensemble of Pneumafoons and installations by Peter Bosch with Simone Simons. Pipe organ-like installations have been constructed by Horst Rickels, Yoshi Wada, Günter Demnig (infrasonic sounds), Ivan Levasseur and Hans van Koolwijk. Electromechanical timers are an essential part of the sound-producing process in some of Jacobs's work and in the Electromagnetic musical series by Takis.

1. *Jean Tinguely's Méta-harmonie II, 1979 (Kunstmuseum, Basle)*

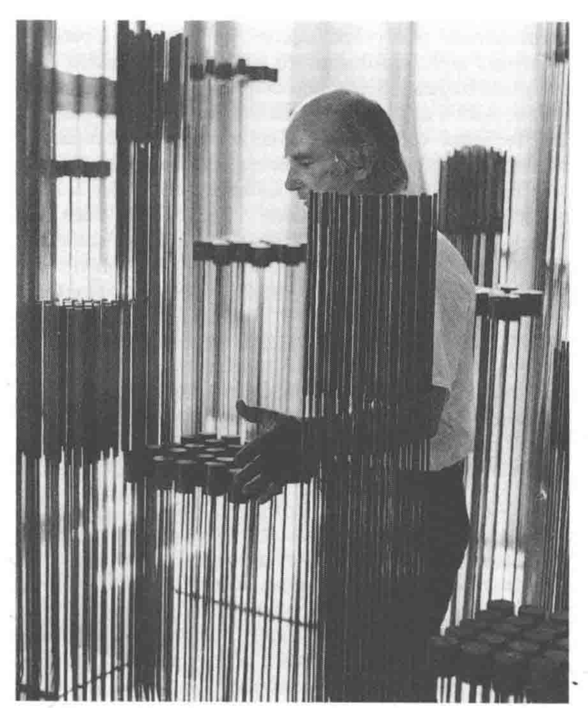
Electric motors have proved a versatile source of motive power, and some of the ways in which they have been applied are represented by the work of Joe Jones, Jean Tinguely, Eastley (including the Centriphone family), and in individual works by Bertoncini and others. In some cases the supreme regularity possible with a motorized system is tempered by suspending the motor itself so that its changing momentum or the striking action of a suspended beater (especially where this is more distant from the motor, such as more than one metre) affects its position relative to the sounding element; in others the interaction of various parts of the sculpture, not all controlled directly by the motor, may provide a random element. Motors have been used to create a wide range of sounds and visual effects, from Eastley's dancing stick figures to the often comical cavortings of Tinguely's cumbersome machinery in, for example, the four enormous *Méta-harmonie* constructions (fig.1) and the slowly rotating steel strips used by Len Lye. In the music machines of Remko Scha suspended electric guitars are played by ropes that are rotated by means of electric drills. Since the early 1980s electromechanically or computer controlled (sometimes keyboard-operated) motorized 'orchestras' have been constructed by Jacques Rémus, Peter Sinclair, Pierre Bastien, Frédéric Le Junter, Kent Tankred, Ernie Althoff, Peter Vogel, Ken Butler, Matt Heckert, Erwin Stache and the sounding robots of Maxime de la Rochefoucauld (Maxime Rioux). Sound is more incidental in the work of artists like Rebecca Horn, in whose *Concert for Anarchy* (1990) the keys of an inverted suspended grand piano are alarmingly disgorged and then retracted, and the visually-designed Fonics string instruments of Jean Weinfeld.

(iii) Electronic circuitry. Electronic oscillators and sound-modification and -patterning circuitry are used in many sound sculptures. Among the earliest were the *Musikmaskin I* (1961), the prototype for the equipment in the Elektronmusikstudion in Stockholm, and the series of electrically powered mobiles, incorporating oscillators, built by the French composer Marcel van Thienen from 1963. Most systems of this sort are either fully automatic, using sequencers, memories or microcomputer control (as in the work of Stanley Lunetta and Max Neuhaus), or their operation is modified by changes in the environment. Solar panels are used to produce varying amounts of electrical current to power the sound-generating systems in Alvin Lucier's Solar Sounder installation and in work by Peter Appleton, Liz Phillips and James Seawright, and sensors such as photoelectric cells that respond to changes



in the level of light they receive, whether caused by the varying intensity of daylight or by shadows cast by passing people, have been used to supply variable resistance in other works by Appleton, Phillips and Seawright, as well as by Dale Amundson, Eastley, Howard Jones and Lunetta (for descriptions of other similar environmental installations, *see* DRAWN SOUND); sensors for wind speed and direction control aspects of pieces by Lunetta, Neuhaus, Phillips and Seawright. The Pygmy Gamelan of Paul de Marinis and works by Juan Downey respond not only to movement but also to radio transmissions. The arrays of loudspeakers in Dick Raaijmakers' *Three Ideofonen* (1967–71) are activated not by electrical signals but by rolling balls and swinging plates coming into direct contact with their cones. Felix Hess' 100 suspended electronic 'frogs' become more vocally interactive in quiet situations. More self-contained are the small installations of Rolf Julius and Takehisa Kosugi. Large-scale electronic installations such as David Tudor's *Rainforest IV*, despite their sculptural quality, are closer in function to musical instruments and are discussed in ELECTRONIC INSTRUMENTS, §IV, 6.

(iv) Other systems. Sound sculptors have explored various possibilities for involving exhibition visitors interactively in the creation or modification of the sounds produced by their constructions. At their simplest such systems require only a touch to set them going: of this type are the pieces by the Baschet brothers, Bertoia, Kan Masuda and Charles Mattox in which motive power is derived from springs, curved surfaces or pendulum-like mechanisms that run for a certain time until they lose momentum. In Manos Tsangaris's *Kugelbahn* installations (Bowling Alley, 1997), pulling a handle activates a rolling ball which triggers a variety of sounds in a three dimensional labyrinth. Various sound makers are activated by stepping on different parts of a carpeted surface in Horst Gläsker's *Tret-Orgel-Teppich-Objekt* and the Association Cerf-Volant's *Musique au sol.* Edmund Kieselbach's sound works mostly consist of pairs of large wheels (up to 84 cm in diameter) which have rattles, chime bars and cymbals mounted on the crossbar that connects them; the sounding devices are set in motion or struck as the wheels rotate. In both concert and 'promenade' versions of Richard Lerman's *Travelon Gamelon* (1979), and Raes's Dudafoon (modelled on Marcel Duchamp's dadaist sculpture *Roue de bicyclette*, 1913), the sounds made in various ways by the spokes of the wheels as they turn are amplified; in the *Fietskraker* of Michel Waisvisz dynamos activated by bicycle wheels power small oscillator circuits.

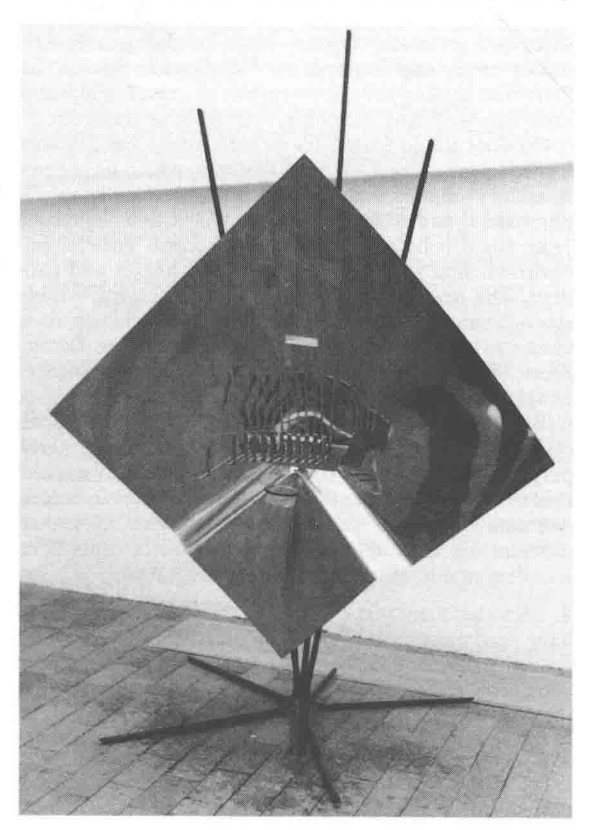


A number of electronic and electro-acoustic systems have been designed in which members of the public play some part in generating or modifying the sound. Waisvisz constructed several such pieces, some based on his Kraakdoos synthesizer, in which the operator makes connections by means of touch-plates between different parts of oscillator circuits; Ken Gray's perspex sculptures function in a similar way, while individual works by Downey and Mattox are controlled by photoelectric cells or theremin antennae. In some of the works of Vogel and Walter Giers the electronic circuitry is meticulously arranged in parallel lines – for example, vertically or as a square – and framed like a picture, with controls for parameters such as speed and volume mounted on the front. In cases where the operator not only initiates the activity of the sound sculpture but continues to interact with it, the sculptor sometimes adds another dimension in the form of different surfaces to give variety of tactile experience. Both Waisvisz and Gray have included such elements in their work, as has Hugh Davies in his acoustic and electro-acoustic sculptures, in particular the series of Feelie Boxes constructed in collaboration with John Furnival.

3. VIBRATORY MECHANISMS. The devices used by sculptors to generate sound are inherently no different from those at work in musical instruments, but since the nature of sound sculpture is to please the eye as well as the ear, artists have often exploited more unusual vibratory mechanisms or the most extreme aspects of familiar principles. Materials include those developed in the 20th century, such as new metallic alloys, plastics, nylon and other fibres, as well as traditional materials little used in more standard Western instruments, such as bamboo, glass, ceramics and stone.

The friction rod principle on which the NAIL VIOLIN is based is one that has been little applied in conventional instruments, but it has proved a fertile source of ideas for sound sculptors. Metal, wooden or glass rods, fixed at one end, which may be rubbed, struck or plucked, have been used in many different ways, notably by the Baschet brothers in their *Structures sonores*, in the Waterphone (fig.2), the series of Bow Chimes and Buzz Chimes constructed by Robert Rutman, the 'Sonambient' sculptures of Bertoia (fig.3) and Reinhold Marxhausen's small sea-urchin-like brass and stainless steel doorknobs and 'headphones' against which the listener's ear is pressed, as well as small sculptural boxes in which, when inverted, small stones (Robert Rauschenberg's *Music Box*, 1953, two versions) or balls (Joseph Sorrell, various) fall past protruding internal nails. In some cases the rods are as much as 6 metres long and very thin in proportion to their length. Another aspect that contributes to the visual

2. Waterphone with bow and mallet, by Richard Waters, 1967



3. *Harry Bertoia playing one of his Sonambient sound sculptures, c1978*

aspect of certain works of this kind is the resonator, which may be quirky and ingenious or simply aesthetic: the metal sound radiators sculpted by the Baschet brothers are beautiful as well as functional (fig.4).

A good example of an extreme application of traditional principles is the use of very long strings (see also the giant aeolian harps discussed in §2(i) above). A long string cannot achieve the tension of the strings of a conventional instrument; this means that though the fundamental and some of the lower harmonics may be too low to be audible, a rich overtone spectrum (based on normally inaudible longitudinal vibrations) is created by the imbalances between the tension, gauge and length of the string. In some instances the strings are at a very low tension, as in Eastley's aeolian Elastic Aerophone, which has strings of extruded latex between 20 cm and 15 metres long, and one version of Akio Suzuki's Analapos, in which the vibratory mechanism is a coiled spring at least 8 metres long. Long monochords, having strings of about 10–15 metres, made of piano wire, with suspended resonators at one or both ends, have been set up by Paul Burwell, while albrecht/d. has installed similar constructions about 11 metres long in outdoor sites. Ellen Fullman has developed several forms of her Long String Instrument since 1981, the principal version consists of 175 strings of up to 30 metres in length, tuned to 43 divisions of the octave. Amplified strings are used in Kagel's Rahmenharfe, which has five electric guitar strings 6 metres long, Gordon Mumma's *Megaton for William Burroughs* (1963), in which they are set in motion by small objects that move along them, this also occurs with loudspeaker 'cable cars' in Rolf Lange bartels's *Seilbahnmusik* (1987) and model railway engines in Nicolas Collins's *When John Henry was a Little Baby* (1993–6), an engine's pantograph varies the sounding length of a struck string in Collins's *Under the Sun* (1984), and some of the *Snareninstallaties* of Paul Panhuysen, originally with Johan Goedhart, in which strings of twine, dental floss, nylon or steel, up to 100 metres long, are stretched across a floor or between floor and walls or ceiling in parallel or fan shapes. A monochord about 27 metres long is driven by an electronic oscillator in Lucier's *Music on a Long Thin Wire* (1977), and a similar technique is used with shorter strings in several sound sculptures by Appleton. Several artists have installed string environments in gallery rooms: *Magic Carpet* (*c*1970) by Alvin Curran and Paul Klerr has strings of cotton, waxed wool, gut, nylon and steel, from some of which are suspended groups of tube and bar chimes; and Terry Fox (several since 1976). In William Louis Soerensen's *La Fonction Sonore* (1982) the public plays long string instruments from 30 to 70 metres in length. Appleton's Wind Harp (1985) is a 40-metre flat sprung steel strip stretched over a Volkswagen Beetle car as a resonator. Alan Lamb made a number of impressive aeolian recordings (1976–84) of the wind blowing through abandoned and subsequently disintegrated telephone wires in his 'Faraway Wind Organ'. Other long string installations made of 'found' materials include Atle Pakutsch Gundersen's bowed and struck 'transport wires' (typically 200 metres long) for remote Norwegian farmhouses high up on mountainsides (*c*1990) and Jon Rose's wire and barbed-wire fences (up to 20 metres).

Sounds produced by percussive means, using both new versions of traditional instruments and materials that have not for the most part been exploited in musical contexts, have been very widely explored. Gongs of different shapes, sizes and materials have been made by

4. *'Cristal', one of the 'orgues de cristal' by François and Bernard Baschet, 1979 (Musée des Arts Décoratifs, Paris)*

Bertoia, Frederick Kiesler, Arthéa (Franky Bourlier and Goa Alloro), John Grayson, Bob Wilhite and Annea Lockwood (in her *Glass Concert*), while Takis built electromagnetically struck gongs up to 3 metres across and applied the same principle to a series of found objects in Big Tube and to giant wooden beams in a number of works made since the 1970s. Paul Fuchs' Ballastsaite and Holzblockwagen expand the scale of concert instruments for outdoor installation, and Robert Rutman's Steel Cellos are large upright monochords with steel resonators. Bells, klaxons, car horns, sirens and other sound signalling devices have been incorporated in many sound sculptures, including the Bellenorgel of Raes, Wendy Chambers's Car Horn Organ, and Arthur Frick's Beep Mobile, a three-wheeled construction to which over a dozen car horns are attached. Bell-like sounds are produced by stroking, hitting or 'sweeping' the suspended brass and aluminium tubes up to 3 metres long in Bruce Fier's series of works called *Soundings*, one of which, the Sound Spiral, has 254 tubes. More conventional applications of bell-like objects are found in the bell-towers of the Baschet brothers. Scrap materials and found objects have been widely used in sound sculptures, mostly to make percussive sounds. Much of Tinguely's work uses such materials, as do the 'adventure playground' constructions of Volker Harlan and David Sawyer's work with Echo City, John Gibbon's Bell Garden and the 24-note Musical Carillon by Tony Price, which consists of tubular bells about 6 metres long made of scrap material. Long plastic tubes function as sounding tubes or resonators in outdoor installations by Soerersen. More incidental sounds are produced by some sculptures, including several works by Yaacov Agam. Stone sculptures are struck or rubbed: Elmar Daucher slices dark green serpentine or black Swedish granite into square or rectangular 'rods' or 'bars', while Amalia del Ponte has created several ensembles of carved sculptural lithophones, mostly in marble, serpentine or travertine.

Outdoor sound sculptures include Alfons van Legelo's Dance Chimes (*see* TOY INSTRUMENTS) which have been installed in many countries, and Bill and Mary Buchen's four-acre sound sculpture at Lake Placid, NY. In recent years small bells and chimes have become popular for environmental situations like domestic homes and gardens. The percussionist Garry Kvistad founded Woodstock Chimes, which manufactures wind chimes in a choice of tunings (including Gregorian, Ancient Greek, Blues, 'Partch', four 'Feng Shui' scales – Fortune, Energy, Imagination and Peace – and several oriental scales), as well as small temple bells and garden bells (flower-shapes on stalks); other companies have produced similar general purpose wind chimes. The Hiroshima and Nagasaki Peacebell and the Cosanti Bronze Windbell (Paolo Soleri; Arcosanti, Arizona) fulfil similar functions. A rather different use of simple environmental instruments is in jewellery of miniature harps and percussion such as bells.

4. MUSICAL PERFORMANCES. A number of composers have used existing sculptures as percussion instruments in their works or have commissioned from sculptors new constructions for use as instruments. In 1944 John Cage included sounds played on mobiles by Alexander Calder in his soundtrack for the film *Works of Calder*, and 20 years later Calder created the mobile *Chef d'orchestre* for Earle Brown's *Calder Piece* (1966). Performance on sculptures by Armand Vaillancourt is accompanied by a tape based on similar sounds in each of Pierre Mercure's compositions *Structures métalliques* (1961); the same combination with tape occurs in Herbert Deutsch's *Contours and Improvisations* (1963, with welded steel sculpture by Jason Seley) and Leo Nilson's *Skulpturmusik* (1966, with a sculpture by Olle Adrin). Three performers are required to play the Artaudofoon, a percussion sculpture amplified by 40 contact microphones, which was built by Frans de Boer Lichtveld for Peter Schat's music theatre work *Electrocutie* (1966). Taped electronic compositions based on sounds produced by sculpture include Toshi Ichiyanagi's *Mixture* and *Music for Tinguely* (both 1963, based on works by Jean Tinguely) and Andrés Lewin-Richter's *Baschetiada* (1980, using sound sculptures by the Baschet brothers), as well as Roberto Gerhard's *Sculpture I* (1963, John Youngman) and Josep M. Mestres Quadreny's *Peça per a serra mecanica* (1964, Moises Villelia). Since 1987 Derek Shiel's percussive sound sculptures have been featured in works by Julia Usher and others.

5. ENVIRONMENTAL SOUND INSTALLATIONS. Outdoor installations of a sculptural nature that produce musical sounds are known in many cultures. Typical examples are the water-powered systems found in East Asia in which tuned bamboo tubes on pivots fill with water until they topple over, striking stones or other bamboo tubes as they fall or as they return empty to their starting position (e.g. the *tang koa* of Central Vietnam), and wind chimes of different materials used for scaring birds or simply for decoration.

Many Western musicians and artists, especially since 1960, have designed not only instruments for permanent installation in or out of doors, but special sound environments carefully tailored to the specific location; an exhibition of documentation on such projects, some of which have been extremely ambitious, was held in Rimini in 1982. The development of interest in the creation of new sound environments (often linked with the various visual equivalents that are known by names such as 'land art' and 'arte povera') has been matched by an increasing concern with the quality of the existing sound environment; this has been fostered particularly by the work of the World Soundscape Project, founded in 1971 by R. Murray Schafer at Simon Fraser University in Vancouver, which has issued a number of publications.

Specially constructed sound environments are of several types. In many cases sound-producing systems (such as those discussed in §2 above) are permanently installed or exhibited and function constantly, intermittently or when manipulated, depending on their design. Of this type are various special parks containing simple sturdy instruments such as gongs and large ground harps, a permanent environment for handicapped children installed in Vancouver in the mid-1970s by John Grayson (who also published plans for a sonorous Exploratorium), unusual acoustic situations designed by Hugh Davies, Bow Gamelan Ensemble's scrap metal installations, the work of Echo City, and the soundscapes that result whenever sound sculptures are exhibited together. Other projects, such as those presented at festivals in Essen and Linz, the seaside, forest and town events mounted by Trevor Wishart, and presentations organized by composers such as Charlie Morrow and Pauline Oliveros in which many participants interact with the sounds of a certain environment by making musical sounds of their own, are more in the nature of outdoor concert performances. Stuart Dempster, Oliveros and others have explored the long natural echoes (over ten seconds' duration) in old

buildings and various underground spaces such as water reservoirs that have been temporarily emptied (e.g. for cleaning). Max Eastley began to build whirled instruments (like the BULLROARER) from 1978, assembling with the group Whirled Music over 200 appropriate instruments and sounding objects. Llorenç Barber composes town-wide church bell pieces that involve groups of performers.

A different approach is found in permanent or semi-permanent sound environments based on multiple tape recordings (often in the form of tape loops or cassette tapes), digital recordings, radios, gramophone recordings or electronic sound-generating devices. Sculptures and environments of this type by Lucier, Michael Brewster, MAX NEUHAUS, Seawright, Christina Kubisch and others have been set up in airports, train stations, banks, streets, pedestrian and road tunnels, at busy traffic intersections and other locations.

Soupir (Fr.). A crotchet REST.

Sources, MS. A manuscript source is one that is written by hand. Before the invention of printing, music was preserved either by oral transmission or by MS copies. There is no reason to believe that oral transmission

preserves the same music for more than a few centuries, at least in the West, so that all our knowledge of medieval and early Renaissance music depends on MSS. From the start of printing until the work of Petrucci in 1501, almost all printed music was monophonic, mostly chant: even thereafter, however, there has remained a living tradition of the MS copying of certain repertories where printing would not have been economically feasible.

The present article comprises a preliminary discussion of the nature of MS sources and their significance for present-day musical research, followed by a series of sections that review the character and repertory of the main classes of MS in use before 1600. These are arranged by subject matter and also chronologically. Three further categories are discussed in adjacent articles: SOURCES OF INSTRUMENTAL ENSEMBLE MUSIC TO 1630, SOURCES OF KEYBOARD MUSIC TO 1660 and SOURCES OF LUTE MUSIC; *see also* PRINTING AND PUBLISHING OF MUSIC.

I. Introduction. II. Western plainchant. III. Secular monophony. IV. Organum and discant. V. Early motet. VI. English polyphony, 1270–1400. VII. French polyphony, 1300–1420. VIII. Italian polyphony, *c*1325–*c*1420. IX. Renaissance polyphony.

I. Introduction

1. The nature of manuscripts. 2. The functions of manuscripts. 3. Preparation and copying. 4. Historical survey: up to 1600. 5. Historical survey: from 1600. 6. The study of manuscripts. 7. The content of musical manuscripts. 8. Manuscripts in musical society.

1. THE NATURE OF MANUSCRIPTS. The most obvious distinction between a manuscript and a printed source is, of course, that one is prepared by a writer, using pen and ink or similar tools, while the other involves the use of a printing press. Indeed, this is the only distinction that seems to have any absolute validity. It is not, however, one that is of much value to the student of either type of source.

A more useful distinction, which can stand as a generalization, is that the MS is a unique object, while printed sources exist in many copies; that a manuscript represents the requirements of a single purchaser or owner, while printed sources must cater to many purchasers with diverse interests; as a corollary, that a manuscript contains a distinctive set of versions of the music it contains, while each copy of a printed edition purports to contain exactly the same material; and that a manuscript is normally produced to order, and passed to its owner by some personal contact, while printed sources require almost industrial connections between printer, publisher and subsequent owners. In practice, however, each of these distinctions is no more than a generalization and is subject to so many exceptions that it cannot be used as a general yardstick.

A discussion of these distinctions, and of their value for musical manuscripts, provides the central argument of much that follows in this introduction. But the more central distinction that they imply needs to be addressed: that the manuscript lays claim to being unique (not the same as any other manuscript, in form or content), while the printed copy sets out to be the same as other copies of the same edition. This distinction, while the most generally received one, is fatally flawed on both sides, and particularly so for musical documents. With MSS, the pattern of mass-production of standard works, common when dealing with commentaries to the scriptures or with newsletters during the 17th and 18th centuries, can also be found in the preparation of chant books and (much later) copies of operas. Even more significantly, during the early 19th century, scribes made multiple copies of Italian opera arias, which were placed on sale exactly in the manner of printed copies. (Aspects of this issue are covered in Love, 1993, dealing with musical and other MSS prepared in England in the 17th century.) On the other hand, many printed editions conform in intention and style to the pattern presented by manuscripts, as gifts for individuals, at weddings or funerals, even on the occasion of election to a mayoralty or receiving a degree. More generally, while multiple copies of a printed edition will have the contents arranged in the same order and with an attempt at internal consistency, very rarely before the mid 18th century can they be assumed to be identical. (For some discussion of these points as they affect printed books, *see* BIBLIOGRAPHY OF MUSIC and PRINTING AND PUBLISHING OF MUSIC, §1.)

In practice, however, the distinction works in most cases: only rarely are two MSS identical, even in intention. One chant MS might well be intended to cover the same material as an earlier one, being written for the same institution and containing essentially the same music. In the same manner, the central copies of Machaut's music, or replacement copies of polyphony (such as survive for the Vatican Chapels), might contain the same repertory arranged in the same order. But the nature of the manual copying process ensures that there was rarely any attempt to match the precise arrangement on the page or the placing of notational details of the earlier source. This was an essential result of the process: the scribe's hand was unlikely to match that of his predecessor, in size or writing, in his practice, or in his arrangement of details; as a result, in most cases the layout on the page would be different, and so would the number of pages. Further, no scribe could hope or expect to copy any MS without variation or the addition of errors. Finally, in many kinds of music (among which chant seems to have been the most important exception), the scribe was apparently accorded a more important role than that of a mere copyist: the freedom with which he was expected to make substantive changes in the musical text being copied was a reflection of the extent to which that text was not seen as being sacrosanct in all its aspects.

This apparent uniqueness of MSS and their content is made more evident by the almost random pattern of their survival. Very few polyphonic sources dating from before 1600 can be shown to contain holograph copies of music (though see Owens, 1997), or even to lie close to the composers whose works they contain (*see* MACHAUT, GUILLAUME DE): similarly, relatively few can be shown to have been copied from other surviving MSS. (One instance concerns the MSS *D-Rp* A.R.62 and 65, apparently copied from the same library's A.R.886.) As a result, each manuscript comes to be seen as representing something itself unique – a moment in the history of music, in the history of performing practice, and in the history of the composer of the music, or of the institution or patron who owned the manuscript. The study of manuscripts, therefore, has had to face the problem of relating them to other sources – as perhaps copied by the same scribe, and therefore connected even when they contain different music. Other manuscripts have the same works in very similar readings, and so presumably represent similar moments in the history of the music. Yet others show

signs of having been prepared for the same institutions, or for specific performances. Such manuscripts tell us something about their function, the reason why they were copied in the first place. And it is this aspect – the function of the MS – that most clearly distinguishes it from a printed source and from other MSS.

2. THE FUNCTIONS OF MANUSCRIPTS. A printed source, almost by definition, cannot fulfil a specific, different function for each of its readers. It is mass-produced, and arranged according to a scheme that the publisher believes will appeal to the greatest number of purchasers.

In the period of copying by hand, each book was more laborious to produce. There were scriptoria, from as early as the Carolingian renaissance, both in monasteries and university towns, which produced multiple copies of the standard legal, classical and theological texts, and also scribes employed as specialists at court. This idea of mass-production undoubtedly had an effect on styles of script, an effect that is not found in music, for music scribes were seldom concerned with making more than one copy of a text at a time. Even in other fields, while MSS were bought or ordered for many of the reasons that still prevail, fewer people bought them other than for study. Rich patrons could afford to commission lavishly copied volumes, illuminated with miniatures and floriation, which were then handsomely bound, either as additions to their collection, or as a valuable gift for a neighbouring prince; probably a disproportionate number of these have survived. Such volumes apart, however, books were meant for hard use. Scholars and priests, students and the devout, all owned a few books that they needed (the average private library was much smaller than today), often copied in a routine script with a regular and mechanical though no less well-balanced layout to the page, and with no use of colour beyond the occasional necessary rubrication.

The same range of situations appears to apply to musical MSS. Some were apparently presentation copies: there are such sources from the hand of PIERRE ALAMIRE and others, which survive in most of the erstwhile court libraries of Europe (*D-Ju* 4, for example, was probably intended as a gift to the English ruler; for illustration *see* ALAMIRE, PIERRE). There is usually no way of telling whether such gifts were intended for use unless clues are provided by occasional marks in them. Similar to these are MSS prepared for a specific institution, written by someone employed there. The Vatican has many MSS written by the scribes attached to the Sistine Chapel, and later the Cappella Giulia also employed a full-time scribe. The Old Hall MS (*GB-Lbl* Add.57950; for illustration *see* OLD HALL MANUSCRIPT) appears to have been copied for a rich English institution, although which is not known. There are similar MSS copied for the Duke of Berry in the 14th century or the Holy Roman Emperor in the 16th. Lavish polyphonic MSS seem to be a new phenomenon, emerging, generally speaking, in the 15th century; decorated chant MSS survive from earlier. So, too, do other basically monophonic and secular MSS. Chansonniers of the 15th century are often finely prepared, perhaps for presentation or for the collection of the purchaser; Machaut's works are preserved in several finely worked copies, comparable to the beauty of the one musical source of the *Roman de Fauvel* (*F-Pn* fr.146; for illustration *see* FAUVEL, ROMAN DE).

Later, many of the richer cathedrals and monastic foundations had MSS of the Office with as much decoration as those owned by the chapels of contemporary princes. It is reasonable to suppose that these must have been prepared for some range of use, for they cannot have been designed solely for display: but it is impossible to know whether they were ever used in the choir stalls before the 16th century, whether they were used merely for learning the music and as a guide to the memory of the chapelmaster, or indeed whether they were used at all except when a new singer had to learn the chant. During the 14th century and later, there are many more illustrations of church musicians standing at a lectern, apparently reading from the music. While earlier illustrations often show the performing of chant by one man or by a very few, these later, particularly after 1500, begin to suggest that polyphony was being read (see also Page, 1997). They probably represent a trend in the use of MSS, itself almost certainly the result of two related phenomena, a growth in musical literacy and the rapid and sudden increase in the use of a choir for polyphony, instead of the soloists whose prerogative it had been earlier.

There were, of course, other levels of MS production. Many MSS survive, often in a fragmentary state, that confirm the existence of a continuing market for the 'functional' MS, one that was not heavily decorated but would serve the purpose of transmitting or preserving a repertory. Some were apparently copied for performance use, and often they are composite, copied over a period of time, perhaps by several scribes, and bound when the collection was large enough. This is true of the cathedral MSS still at Bergamo and Casale Monferrato, copied in the early 16th century, and, among earlier MSS, perhaps the Ivrea Codex (*I-IV* s.s.) or the Cambrai fragments. (Such sources are equivalents of the 19th-century album.) Others were copied more or less at one session, either because the total repertory was known and available (this is true of most chant sources) or because the MS became large enough and perhaps included all the future owner wanted – such may include the Chantilly MS (*F-CH* 564) and the early 15th-century source at Bologna University (*I-Bu* 2216), as well as some of those 15th-century chansonniers that were not made as presentation copies.

There are also MSS that appear to have been compiled for reference or study. This is certainly true of the anthologies made by Tschudi and Glarean when young, and perhaps also of some of the German keyboard collections of the early 16th century. For many others, the true function cannot be determined: they may have been compiled quickly or over a lengthy period, may be lavish or cheap, may be aimed at the scholar or patron, and indeed may look like any other sort of MS. The three early Notre Dame sources now at Wolfenbüttel (*D-W* 628 and 1099: W_1 and W_2) and Florence (*I-Fl* Plut.29.1: *F*) carry a repertory that was in part old and only in part up to date, and that cannot have been planned for performance directly from the source. There are many places in all three where that would have been impossible, and the music contained could not all have been intended for use, even from memory. The MSS also are composite, copied from several earlier ones (which do not survive), and it may be that they were designed as repositories collecting and preserving a corpus of music. This is perhaps also true of the Squarcialupi Codex (*I-Fl* Med.Pal.87), where the music, in a style that, it seems,

was already largely superseded when the source was copied, is arranged by composer, as if presenting an early attempt at an *opera omnia*. Alongside these may be placed those copies of a composer's works that seem to have been planned by the composer (although they are not autograph): examples are Jehannot de L'Escurel, Thibaut of Navarre, Adam de la Halle, perhaps Machaut, Festa and Isaac. Also belonging here are the MSS written for those lesser churches where the *maestro* was also the principal or only composer; Bergamo is a case in point with Gasparo Alberti.

Once music printing became cheaper, during the 16th century, the range of MSS produced began to decline. There are significant changes in what has survived from after the beginning of printing. Presentation and chant MSS continued to be written well into the 19th century, and many were copies of earlier MSS written for the same institution. The present-day market in single leaves from such MSS, especially of Spanish provenance, is fuelled by the vast number of them that were copied, and that often can hardly be dated, so consistent and long-lasting were the detailed techniques of production. But with the expansion of the use of printing for standard repertories and for music that would have a market, MSS came to be used more as working documents. Among those that survive are an increasing number of private anthologies, copied over long periods, sometimes by professionals for their own use (as had been some of the lute and keyboard MSS of earlier times) but more often by amateurs with a repertory that either pleased them or seemed to be within their capabilities (Wendel, 1993). Such MSS continue long into the 19th century, and present the music in often idiosyncratic form, and with attributions and other identifications that sometimes tell more about the owner's taste than about the music's origins. These MSS eventually died out as the cheap songsheet and piano folio saturated the market. It is unlikely that such MSS will ever again become the norm, with the advent of photo-reproduction. Similarly, occasional MSS copied for didactic purposes have virtually ceased to exist. While modern examples are again unlikely to appear in any number, earlier MSS of this sort were more often used and then thrown away. Some have survived because they were the work of distinguished composers (such as Bach, with his Anna Magdalena Book), or because they were then retained in the Amerbach collection in Basle: see Kmetz, 1994.

Working MSS continued to be produced well into the 20th century and seem to have survived. During the Baroque period they include study of other composers' works and also performing scores and parts. Bach's autographs of Italian music are well known and several copyists' scores survive, for example, of Handel's *Messiah*, with markings from different performances. A number of operas from the period survive in printed form only as vocal scores with MS full scores and parts. During the 19th century, manuscript parts and conducting scores of operas, especially in Italy, provide the most reliable evidence of an opera's performing history: at the same time, MS vocal scores of popular numbers were prepared in bulk and published for sale.

A final group of working MSS, that of composers' drafts and sketches, has survived in increasing numbers for recent centuries. To some extent this is a result of the new view of the composer's supreme authority and the desirability of any later version to be as close an approximation as possible to his own; but it is also a result of the views of history and scholarly antiquarianism that developed during the 18th century, to be bolstered by Romantic concepts of genius during the 19th.

It is almost impossible to generalize about the style and appearance of a composer's sketches and drafts. Much will depend on the place of any individual MS in the line of progression from the initial idea (usually in a sketch), through expansion, development, the linking together of ideas (often in a draft), to orchestration and fair copy. Many such MSS undergo changes in function, as certain ideas fall into place in the composer's mind during the process of copying, or as sections seem to need further revision. Individual composers respond to these needs in different ways, so that, while it is possible to create a typology of compositional MSS (Bailey, 1979), we can not generalize about the detailed form and appearance of any one type. Comparison of the sketches, drafts and fair copies written by Mozart, Beethoven, Chopin, Brahms, Mahler, Berg and Webern will reveal a complete range of possibilities. On one hand, the first sketches may appear as no more than a few notes, or a serial row, both of which then undergo major transformations. On the other, complete melodies with partial orchestration may appear to have been perceived very quickly. In the same way, potential fair copies can be subjected to changes in scoring, occasional changes of octave transposition or of individual pitches, and every possible level of change up to major rewriting or changing the order of sections of a work.

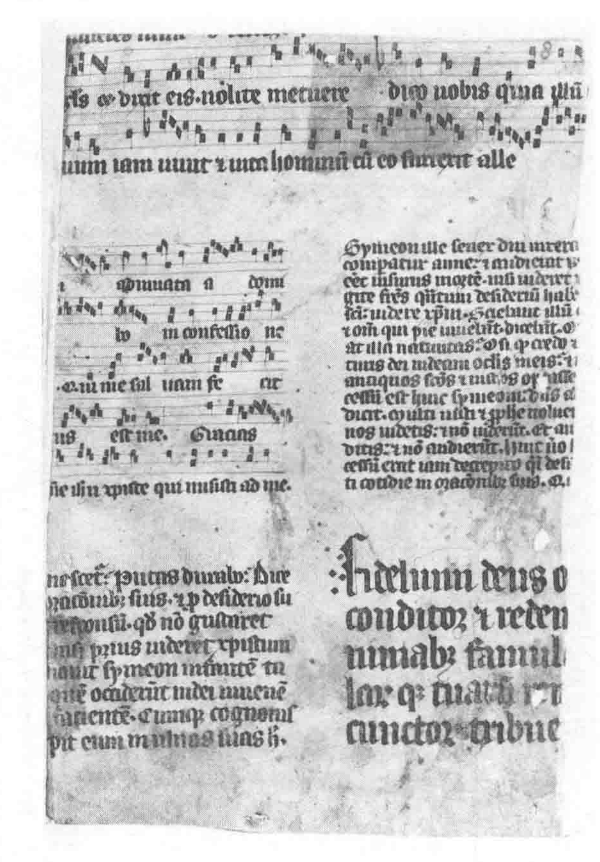
Each function, as outlined in the preceding paragraphs, leads to specific physical characteristics in the sources: while we may know nothing about the detailed patterns of MS use, the evidence of the MSS themselves shows that they were prepared in different ways for different presumed uses. Some MSS also indicate changes in function during their history: some are now merely composite MSS, layers with different dates (and even purposes) that happen to have become bound together; one example is the famous 'keyboard' MS at Faenza (*I-FZc* 117); another is perhaps the set of *Vier ernste Gesänge* of Brahms (*A-Wgm*), where the last song was written on a different paper. In others, the original plan is to some extent obscured by additions of different types of music: such is the case with the early 15th-century MS at the university library in Bologna, where secular songs were fitted into empty spaces in an otherwise sacred MS. Yet others (such as *I-Bc* Q15; fig.1) show changes in plan during their making: this MS apparently arose from a commission for an attractive, carefully written MS, but it was not completed in that form, deteriorating into a working MS, roughly copied by the same man, on poorer paper and without the use of the coloured initials that grace the earlier layers. The various layers of work were carefully intertwined, so that they now present a fairly coherent sequence of repertories. In this case, as in others, the changes of plan left their mark on the physical appearance of the MS, showing the tight connection that exists (for all MSS) between the intended use and the processes of preparation and copying.

3. PREPARATION AND COPYING. The manual copying of music was a highly regarded skill, and was until the 19th century almost always the province of professionals, copyists or musicians. During the Middle Ages scribes were often members of guilds, or else composers and

1. Bologna, Civico Museo Bibliografico Musicale, Q15, ff.123v–124r (originally 119v–120r), c1420–30: last section of a Credo by Johannes de Lymburgia and a Kyrie by Du Fay. F.123v marks the end of a section in the construction of this MS, with nine staves to the page, calligraphic initial letters (some, as here, pasted in) and a distinctive text hand. The next section was inserted into the MS late in its preparation: it has a different number of staves, is less carefully prepared (note the absence of decorative initials) and lacks the original folio numbers. The '120' at the head of the page appears on several subsequent folios, showing that all were to be inserted at this point

musicians employed by noble or monastic establishments. They were therefore working in a milieu which encouraged standardization, and they developed different patterns according to the character of the music to be copied and the needs of the destination of the MS.

The nature of the copying process governs many of the detailed aspects of the finished MS; but the reverse is equally true. The more formal a MS is to be, the more carefully will its layout be planned, and the less will it show of the nature of its own origin, or of the exemplars from which it is copied. A MS for presentation to a ruler will require a higher standard of visual quality, while one for the church lectern will be concerned with legibility. Both may be intended to be lavish in production, worthy tributes to the destination, and both therefore will require a high level of non-musical organization. A similar process of planning, though dealing with very different factors, governs MSS prepared for performance or for study. At the same time, the copyist is always (at least potentially) in the position of an editor: consciously or not, he is always changing the material being copied, either by providing different emphases with the different arrangements he adopts (the placing of an accidental in a Renaissance source), or by error (the omission of a bar in the only MS copy of Schubert's Sonata D505/625, second movement, which can be supplied only from the otherwise defective Diabelli first edition), or by deliberate editorial decisions (there exist three different endings to ?Compère's *O bone Jesu* in three Spanish sources, none of them found elsewhere). In many cases, such decisions are taken by someone other than the scribe, though they are still important for tracing the function and date of the specific copy, as in study of the scores of Donizetti and Bellini (where the decisions were presumably dictated by the singers employed for the performance concerned).

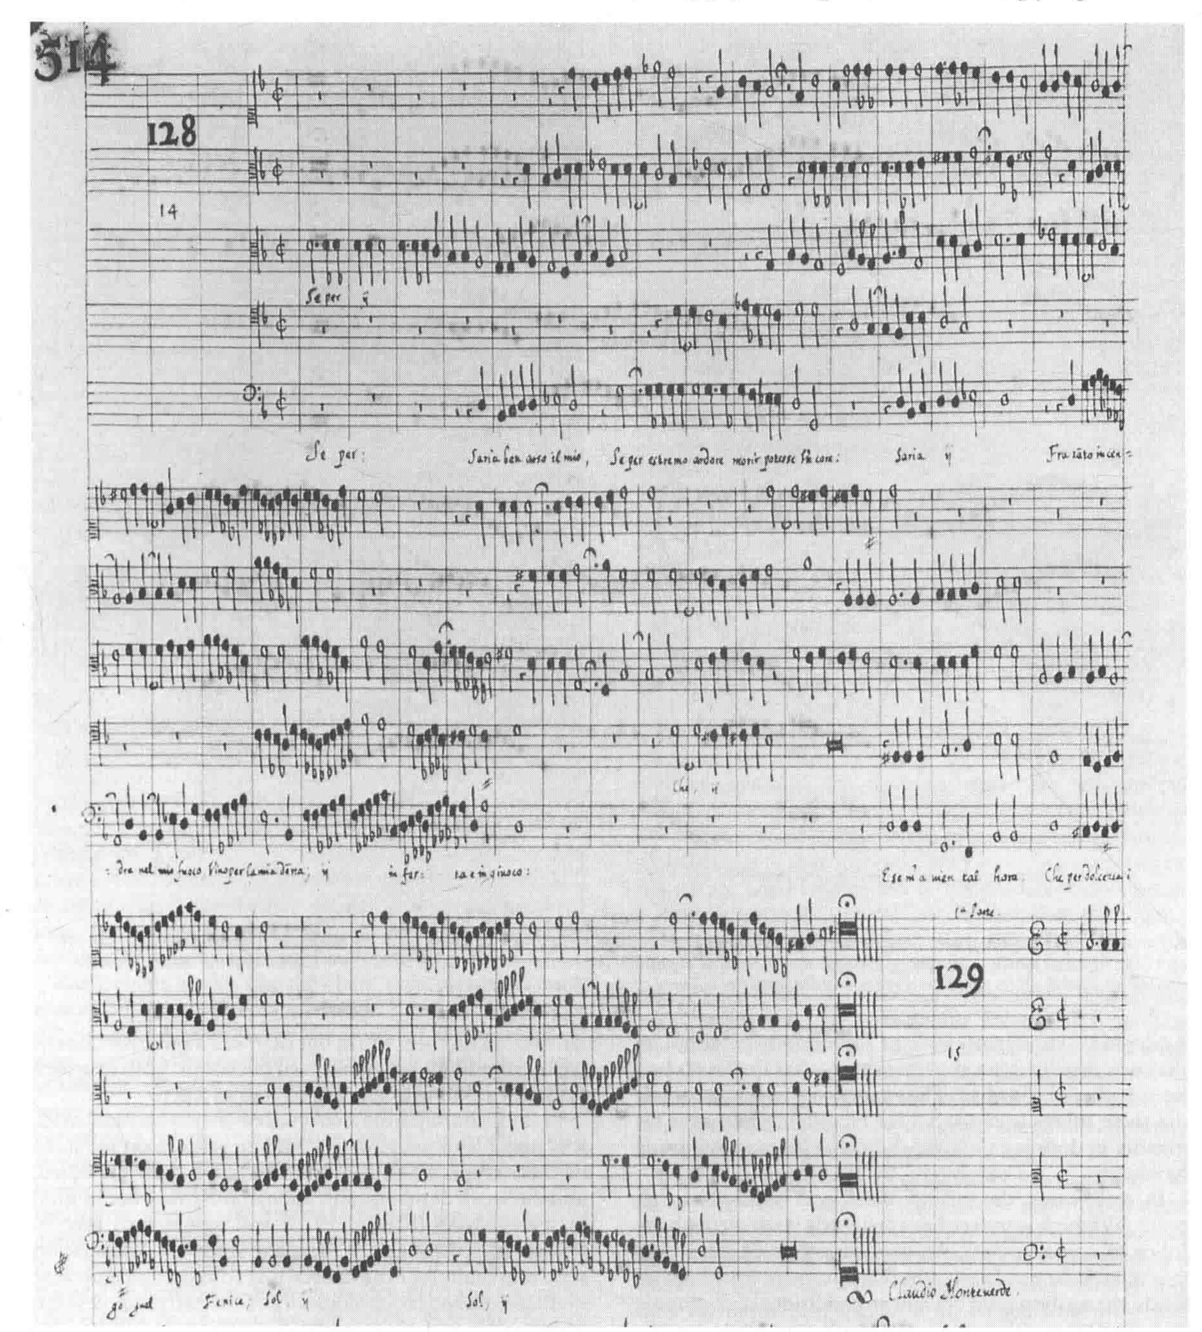


In many cases, the copyist planned the arrangement of his MS in advance. When the cost of materials was relatively high (generally before 1800), the detailed layout of the MS was critical to the cost of the work, and sometimes can be shown to have been adopted to save space. Layout is also important for performing materials: the sequential arrangement of voices in some of the motets in the Florence and Wolfenbüttel MSS (*F*, W_2), involving page turns, precludes performance from the source alone. Similar problems can still arise, for example for performers of string quartets.

In an anthology, the arrangement of pieces or of groups will usually be finalized at this stage, with decisions as to how many pages each is to take and whether spaces are to be left for later additions. Interesting exceptions to this include the copying of some Renaissance masses and some 19th-century opera scores; in each case, every movement was copied on to a separate group of leaves (or fascicle) and these were later arranged in order. The modern student has to distinguish these from the MS made up from separate and distinct small MSS (*GB-Bu* 5001 is an excellent 17th-century example).

The copyist is then able to collect together his paper or parchment. Although some 18th-century professionals, like Smith, and perhaps the larger Renaissance and medieval scriptoria, would have had a large and continuous supply of paper to hand, most scribes collected a uniform batch of paper or parchment which would be sufficient for the MS on order (this applies to at least one of the larger Renaissance musical scriptoria, the Cappella Giulia). Much evidence for this exists in the correspondence of professional (non-musical) scribes. Early printers followed the same pattern. The paper or parchment would then be subjected to two processes, one before the other, the order apparently depending on the relative sizes of paper and MS and on the scribe's habits. The material would be gathered into groups of sheets and folded into gatherings (often of four or six sheets, although frequently of five in Florence), which would provide the spine for later binding; guide-lines would be ruled upon it for the writing. This latter was a complicated process, involving fine judgment on the scribe's part. Complex patterns for the relations between height of music and text and size of page seem to have been established as early as the 14th century, if the surviving advertisement page of an Oxford scribe is any guide. The relationships were of course governed by the function of the MS – solo or ensemble performance, private reading, or gift. The proportions have remained important and still govern what we accept as attractive relationships between the height of the staves, their distance apart and the length of note tails.

The scribe would normally rule first the vertical lines that define the margins to the page, often with dry-point but sometimes in ink (as in *D-Mbs* Mus.ms.3725, the Buxheimer Orgelbuch). Within these, he would also draw the horizontal lines that marked the placing of the text, and sometimes the staves. In the Oxford advertisement (*GB-Ob* e Mus.198*; fig.2) a slightly more sophisticated pattern prevails. This MS is a display of the various scripts, both text and music, that the scribe had on offer. After ruling the vertical guides, he seems to have ruled a series of regularly spaced lines across the page. He could then arrange for each size of script to take up a different number of lines. This technique is designed for liturgical MSS, in which more than one size of script would often be used on a single page, and where the amount of music on the page varied considerably. It appears to be the normal procedure in all MSS where music did not appear consistently throughout the gathering, even down to secular ones of the 14th century. The only refinement regularly adopted was the ruling off of a small area at the top left to take an ornate capital letter, often a calligraphic initial drawn by the scribe.

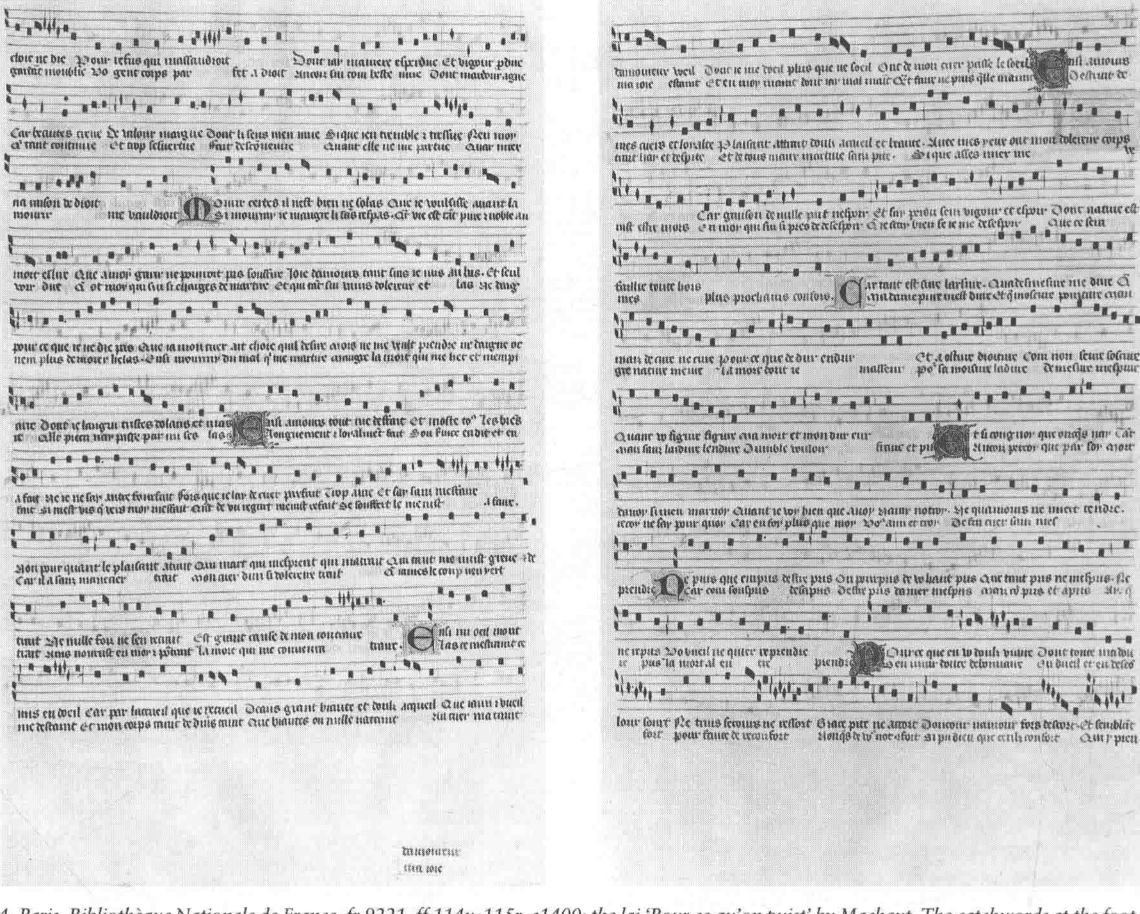


However, it seems to have been the practice to rule the staves after all the guidelines had been ruled, and to align them by eye. The ruling normally involved the use of a rastrum, a multi-nibbed pen drawing one or more staves at a time (*see* RASTROLOGY). Four-, five- and six-nibbed pens were common, to cater for the normal range of lines to a staff; there is also evidence of rastra for drawing several staves at once. Once bar-lines became common, in the 16th century for scores and later for parts, scribes sometimes ruled them at this stage, as in the two scores copied by Tregian (*GB-Lbl* Eg.3665: fig.3; *US-NYp* Drexel 4302), with occasional consequent problems of spacing and crowding. There are detailed ways in which the procedure was slightly different for tablatures. The

2. Oxford, Bodleian Library, e Mus.198, f.8r: part of a scrivener's advertisement sheet (bound with a 14th-century gradual), displaying his range of scripts; two sizes of chant notation are shown.*

average lute tablature could be prepared in exactly the same way, but new German tablature for the organ, for example, required a different approach. So too did some choirbooks, where the arrangement of the parts on the page affected the spacing of the staves. In some cases, most probably, the staves could not be ruled up for more than one opening at a time, so that the layout of the parts could balance according to how active each part was musically.

Once the scribe began to copy, his skill and personal preferences had more scope. An experienced copyist contrived to space the material so that the minimum of paper was wasted: bars reached the ends of lines, and movements the ends of pages, without significant squeezing or spreading of the music to confuse the reader, rather than spreading on to a virgin page for just a few notes or bars. (J.S. Bach was both very economical and surprisingly inaccurate at this: many of his copies have a few extra bars squeezed on to an additional line at the foot of a page: *see* BACH family, fig.8.) Whether text or music was to be copied first was a decision made on the basis of the nature of the piece. A syllabically set text, where the words would take more space than the music, would prompt the scribe to write the text first and space the music accordingly (as scribes seem to have been aware from the earliest extant MSS); although there are many cases where a copyist had to cramp one to accommodate the other, there are more where he seems to have been able to copy one or the other first in different places



3. London, British Library, Eg.3665, f.261v (= p.514), c1615: 'Se per estremo ardore morir' by Monteverdi, from his 'Terzo libro de madrigali' (1592). Part of a large MS attributed to Tregian: the bar-lines were ruled in advance, which affected the spacing of the music and placing of breves; it also necessitated a free use of the tie, sometimes to a repetition of the note, sometimes only to a point

according to the musical style. In most 18th- and 19th-century MSS the music appears to have been written first.

In many MSS of the 14th and 15th centuries there are red and, rarely, blue sections in the musical notation. The use of rubrication (a term derived from the Latin *rubeus*, 'red') for texts is older and more widespread. In such situations the scribe often seems to have left space for the later addition of the red sections, rather than keep two colours of ink available all the time.

While working through the MS the scribe made a number of additional marks on the page, usually as reminders for a later stage. These may include small guide initial letters, to tell the illuminator where to place his decorative work and which letter was required (normally covered by the decoration); indications, in the margin, of errors to be corrected later; a catchword, the initial word of the next sheet or gathering, to ensure that they were arranged in the right order (fig.4), at the foot of a verso; small numbers at the foot of the last verso of a gathering to ensure that the binder collected the gatherings in the correct order (in some MSS these also appear at the starts of gatherings, as for example in the Fayrfax MS, *GB-Lbl*

4. Paris, Bibliothèque Nationale de France, fr.9221, ff.114v–115r, c1400: the lai 'Pour ce qu'on puist' by Machaut. The catchwords at the foot of f.114v (the first words at the top of the next sheet) acted as a guide to the binder in the arrangement of the sheets; in some cases they were needed because the folio numbers were not added until the copying of the MS was completed

Add.5465). He might also add folio numbers, although that was usually done at a later stage, after the leaves had been gathered together. The manner in which a copyist did these things is as crucial for identifying him as is his manner of drawing clefs and directs or his text and music hands.

In most cases, the scribe's work was finished at that point, although some scribes apparently went through the folios to correct errors. An economical or domestic MS might now be ready for binding; in some intermediate kinds, the scribe would draw in any additional calligraphic initials; and in other types the work was ready for the illuminator. The only exception, common to all classes, was where the scribe prepared an index of contents. This, of course, could be done only after the MS was completed (or after a composite one had been compiled) and sometimes even after binding. Often individual gatherings would be sent to the illuminator when completed, rather than held until the whole was completed.

As regards illumination, the tradition of music MSS joins with the main line of MS preparation. The illuminator does not generally seem to have been the same person as the scribe, although evidence in the Vatican Archives suggests that he sometimes was (Sherr, 1975). Many scribes, of course, used colour and occasionally the more complicated gold leaf to draw filigree and simple decoration on their work, but that was a different class of work from illumination or even floriation, both of which demanded skill with a brush as well as a pen.

Because illuminators also worked on non-musical MSS, it is possible to assign many MSS to schools on the basis of their style. While some scribes have been identified, and the work of others, still anonymous, have been found in several MSS (Rifkin, 1973) and assigned to specific towns, it is through the detailed study of illumination style that many MSS have been placed geographically and even sometimes chronologically. Two early sources, the Montpellier and Florence MSS (*F-MOf* H196: *Mo*; *F*), have now both been assigned to schools of painting in Paris and other later MSS associated with known illuminators (Slim, 1972; Avril, 1978). It is of course possible for MSS to travel from the scribe to a different centre for illumination, although the principal case recently advanced for a musical one (the Medici Codex, *I-Fl* Acq. e doni 666) has been fairly convincingly refuted (Rifkin, 1973).

With binding the position is similar: no binder made a living binding merely music. There is however much less evidence here, for many MSS have survived fragmentarily, sometimes even having been used as padding, wrappers or end-papers for later bindings. Further, there was no reason for MSS to be bound when copied and kept at the

same place (particularly as many were kept as separate fascicles, unbound until enough had been collected). A similar situation prevails over later collections of salon music or chamber music parts that were not bound until a convenient number had been collected. Other collections seem only to have been bound once the music had ceased to be used. Some bindings, however, were clearly made at the time of copying, and these can yield as much information about the source and its origins as can the illuminations. The most unfortunate (from the scholar's point of view) part of the binding process is that in which the leaves were gathered together and trimmed to provide a series of pages of uniform size and placing. Even in MSS surviving in their original bindings, this has often resulted in the cutting away of writing. Actual music is comparatively seldom lost, but the names of composers regularly disappear, as do marginal annotations. With the repeated bindings (and hence trimmings) that some MSS have undergone, the page can have shrunk so much that even music may be lost.

4. Historical survey: up to 1600. In all periods and locations, there have been roughly standardized sizes and formats for music MSS of the same type. The early Notre Dame sources are surprisingly small; many Renaissance choirbooks are very large. Early polyphony tends to follow certain arrangements on the page, whereas the very use of the term 'choirbook' and 'partbook' for later sources implies different, specific arrangements. The oblong (landscape) format that emerged around 1500 became almost standard for opera scores, persisting well into the 19th century for both editions and MSS in Italy, while a different, upright (portrait) format prevailed in France and England. Collections of dance tunes and American hymn books had similar shapes, designed for long coat-pockets, while hymn-books from elsewhere followed traditions with quite different proportions.

Early chant books, like the chant repertory itself, have many consistent patterns of design. The arrangement of the books, like the liturgy they carried, shows changes that are relatively minor compared with the more noticeable changes in notation. The earliest surviving sources, described below (in §II), still show signs, in their appearance, of the motivations that led to adding pitch indications for texted music, as well as of the limited needs which that notation was expected to fill. In many, the source was clearly planned and laid out as a textual manuscript, and the musical symbols were added (perhaps later), fitted between the lines of text. It is only as the musical requirements grew more detailed, and the notation equally more complex and subtle, that MSS had to be planned with the notation in mind. This was not achieved by creating special layouts and formats or by providing different rulings for the text and the music: rather the page was ruled up as before, and the music took up a predetermined number of ruled lines. Early chant MSS of this type assign the equivalent of one textual line to the music: with the development of stave lines and precisely pitched notation, music took up proportionately more space, and more text-line equivalents were allocated to it. In addition, space had to be allocated for the rubrics, sometimes written below the staves, but often in short gaps between two sections of staff. In such situations, the precise location of music and staves on the page could not be known in advance. The staves could only be ruled as and when needed (fig.5). These MSS, then, tend to have a uniform appearance, although over the centuries there were marked differences in music notation and in size. The early MSS are small in size, and French ones seem to be larger than German. That pattern does not continue; later there is a wide range of sizes. These were presumably related to the needs of the foundation that was to use the MS.

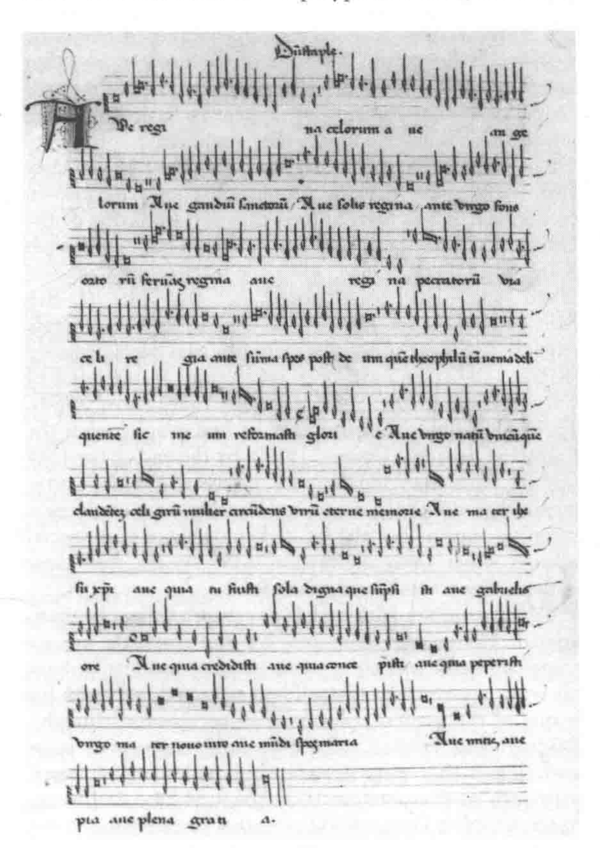
An interesting exception to the normal patterns is provided by a small group of *Exultet* rolls (for illustration *see* Exultet) written in southern Italy during the 11th century. Here the chant, to be sung by a soloist, is interspersed through the roll with miniatures, which are upside down. As can be seen from a miniature in the roll at the Biblioteca Capitolare in Bari, the roll dropped over the front of the lectern, unrolling so that the paintings, scarcely miniature in size, would be the correct way up for the onlookers.

The emergence of polyphony imposed changes on the general pattern, although the separate voice parts were not always copied together if the evidence of the Winchester Troper (*GB-Ccc* 473) is any guide. Here the parts to be sung with the chant are copied in separate sections of the MS. Most MSS, however, keep the parts at least adjacent, and often in score. The scribe then found, of course, that the music took up much more space than the chant had on its own. The music tends to become cramped (as in W_1 and W_2), staff lines are close together (sometimes they are almost continuous in score pieces) and less space is left between works for ornamental calligraphic initials. Indeed, in these, and in the Florence MS (*F*), the music is often fitted around the capital letters, which suggests that the letter may have been written by the scribe. The Florence MS is of considerable interest in a study of scribal attitudes and work: while the organa are copied in score, other works are laid out with consecutive parts, with page turns intervening; the MS also shows evidence of having been copied in sections, with spaces left, presumably for later additions. The layout and notation also suggest that it was copied from several other sources, but that the scribe attempted to make the arrangement of his new MS as systematic as possible. He also took great care over the details, for there are many erasures and corrections.

The changing nature of polyphony led to changes in the way in which it was arranged on the page. While some pieces continued to be written in score (and indeed score notation survived in England until the 15th century), works in which the tenor moved markedly more slowly than the upper parts began to be copied with the voices separated. The two upper voices of a three-part piece, often roughly equal in length, would be copied in two columns, on one page or on facing pages, while the tenor was written beneath the other two, in lines across the foot of the page. (This highlights the manner in which changes in sources are as likely to reflect changes in the musical style as changes in performing practice.) This pattern seems to have been adopted at the very end of the 13th century (it is found in some layers of the Montpellier Codex: *Mo*) and to have been preceded by an intermediate stage in which all the voices were written in adjacent columns, regardless of the number of notes involved. In this situation (also to be found in the Montpellier Codex) the columns with the tenor would often have few notes, consequently saving very little space over the older score

5. London, British Library, Add.30058, f.18v, late 13th century: the end of the first Mass and beginning of the second for Christmas Day from a Sens missal; the guidelines for the two columns were ruled in advance, but the staves could not be ruled before copying had reached the point where they were to appear (the rubrics are red, the capital letters red and blue)

arrangement; that is presumably why the new pattern was adopted.



Such layouts seem to have remained customary only briefly. The Machaut sources of the late 14th century show both of them still in use, alongside the two more orthodox patterns that were being adopted and that form the basis of the compromise arrangement of the next century or so. In the Machaut sources the scribes faced several particular problems, and, because they appear to have written several of the MSS in separate layers or fascicles, they could use different solutions. The bulk of a copy consisted not of music but of the long poems for which Machaut was most highly regarded in his day; these were often written in two, and once in three, columns to the page. When a section was set to music, it was not convenient to have such short lines; so the music staves were regularly ruled across the page. In this situation, a polyphonic piece had the parts arranged consecutively, one beneath another. In monophonic pieces, the distance of the staves from each other had to vary, depending on whether there were one or two lines of text to each musical line. Some of the purely musical sections follow the same pattern, so that the consecutive arrangement of parts becomes one of the accepted layouts. However, the Mass, in four voices, was treated differently: here the scribe used the practice of having one column for each voice, or, in one case, the then new choirbook pattern, in which two voices appear on each face of an opening of the MS, one written beneath the other. It can be seen that this is a compromise between older patterns and the sequential arrangement, and it appears to have been adopted partly because of the length of some movements: all four voices could not be fitted on to a single page, as could the great majority of motet parts.

In the 15th century this choirbook pattern gradually became the norm. For the three-part pieces that form the bulk of the secular repertory, patterns of arranging the voices developed that can almost be described as national in origin; and naturally they were related to musical style. While the English, with a style using at an early date two

equal upper voices, tended to write these parts at the tops of the two pages of an opening with the tenor beneath the right-hand, shorter part (fig.6; although they would still write in score if convenient), the French frequently placed the tenor at the head of the right-hand page (see fig.39 below); the contra would then appear beneath the tenor. The Germans seem to have retained an early layout even with four-part writing during the early 16th century with the bassus under the superius and the tenor beneath the altus on the facing page. In all styles the superius seems to have been kept at the top left. There are a few cases where the music is written across both faces of an opening, from top left to the right, particularly in German keyboard tablatures.

There are also a few MSS of this period that appear to have been parts of rolls (*F-Pn* Coll. de Picardie 67; *GB-Ctc* 0.3.58; *GB-Ob* Bodley 652, if the evidence of the stitch-holes can be taken). Each of these contains a different repertory, suggesting that rolls may have been more common than has been thought. There is some iconographical evidence for the use of rolls in polyphony (Page, 1997), although they are more often shown used by angels or in other situations that are clearly not realistic (perhaps reflecting a traditional view of the transmission of the scriptures).

The internal organization of the MS also came to concern scribes as they developed ways of handling polyphony. Monophonic sequence collections sometimes show evidence of having been arranged alphabetically, but that is less common in polyphonic MSS, no doubt because few concentrate so intensively on one form or genre. Some later English sources of motets may have been arranged approximately alphabetically (that is, within the pattern of alphabetical arrangement that the medieval scribe also used for indexes). From the 13th century onwards, however, many MSS show signs of some sort of arrangement of the material. The Notre Dame sources gather together organa, conductus, clausulas and motets into different sections, planned as such; all but one of the central Machaut sources arrange his music by genre, and within that in an order that is consistent, and claimed to be chronological (Keitel, 1976); in MSS of the late 14th and the 15th centuries the material is arranged by form, mass movements being followed (for example) by other sacred texts, with the secular items in another fascicle. This obviously helped the scribe, for he would be able to work on more than one section at once, or to leave a section until the next batch of music became available (as in fig.4). Many later MSS show space left at the end of a section for the addition of music. This is particularly true of those arranged according to the number of voices; in both the Medici Codex (*I-Fl* Acq. e doni 666) and a set of partbooks in Munich (*D-Mu* 4° Art.401) there are blank pages at the ends of the sections with staves ruled ready for copying. In such a situation the scribe could retain control of the plan of his MS only if he worked in sections, regarding each as self-contained, and ready to receive new music until such time as the MS was deemed to be complete.

6. Modena, Biblioteca Estense e Universitaria, α.X.1.11 (formerly lat.471), ff.85v–86r, mid-15th century: 'Ave regina celorum' by Dunstaple, from a continental choirbook which shows English influence in the arrangement of the parts, with the tenor at the foot of the right-hand page. The original foliation (86) appears at the top of the recto

The existence of such gaps may sometimes relate rather to the well-attested medieval practice of universities and stationers, whereby they held sources of the more popular texts in separate unbound gatherings (or *pecie*) which were then rented out one at a time for copying; this enabled more than one person to work on the MS concurrently. Some music sources show clear evidence of this in the way the text is spaced and in the placing of blank or partly filled leaves. This practice is not to be confused with that involved in the theory advanced by Hamm (1962), according to which small fascicles of music were mobile, carried about Europe by itinerant scribes or musicians, providing the copy from which resident scribes worked. There is evidence of such small fragments from later periods. Some MSS of the 16th century in Basle, Wolfenbüttel and other libraries, as well as the 17th-century source *GB-Lbl* Add.30931, confirm that such small MSS were sent or carried around.

Other factors of arrangement gradually became more important. Some of these are the result of music taking its place alongside many other fields, as a suitable subject for MSS of the highest quality, in both materials and presentation. While early chant MSS already show the ostentatious display bestowed on Books of Hours, for example, one of the first polyphonic sources to display rich illuminations on high-quality parchment is the only musical source for the *Roman de Fauvel* (*F-Pn* fr.146: for illustration, see FAUVEL, ROMAN DE). Similar elegant MSS preserve the works of Machaut, of English composers (the Old Hall MS), or (in the Squarcialupi Codex) those of Italian Trecento composers. Few similar MSS survive from the middle of the 15th century (although they include some for the music of Wolkenstein), but soon afterwards they began to be produced in relatively great numbers. The new affluence of both princely and religious establishments encouraged their production as a manifestation of their owners' importance. Thus such MSS survive from chapels of the Holy Roman Emperor, Frederick the Wise of Saxony, the court of the Medici in Florence and the Vatican in Rome, as well as from a number of cathedrals. Similar MSS were also deemed to be suitable as lavish gifts. The Cordiforme Chansonnier (*F-Pn* Rothschild 2973) or the Lucca MS (*I-La* 238) are early examples, and Margaret of Austria, Regent of the Netherlands, seems to have made a particular habit of using a musical scriptorium to prepare rich MSS for distribution all over Europe (*see* ALAMIRE, PIERRE; see also §IX, 16 below).

This certainly affected details of the arrangement of material in the MS. An important anthology designed for presentation to a potentate would, if possible, open with something appropriate. This procedure, related to the practice of dedicatory odes in collections of poetry, had become customary by the late 15th century; the choice of text or composer was apparently made with care, having a function analogous to the choice of saint to be honoured in motets in other collections. In the same way, a secular chanson source often began with a piece to a religious (if not liturgical) text. The pattern is so pronounced that Slim (1972) could argue, on the basis of the pieces placed first and last in the motet sections of the so-called Newberry partbooks (*US-Cn* Case VM 1578.M31), that their destination may have changed during the time of their preparation; much the same could be argued for *GB-Lbl* Roy.8 G.vii, where the first two motets relate to the French and the English courts, but the second has had the names in it changed, after copying, from those of the French circle to those of Henry VIII and his then wife.

In some cases the process of choice was carried further, even to the selection of the whole. In the Old Hall MS, blank pages were left for specific pieces, apparently predetermined, for the ornamental initial letter was provided. A chansonnier for Margaret of Austria (*B-Br* 228) contains music principally by composers associated with her court, in particular La Rue. The index page of the Medici Codex shows that certain pieces were included so that their initial letters could form part of an acrostic; ones that did not belong in the sequence were relegated to the next page of the index. Such a plan was often distorted, and might thus be concealed from the modern reader, by changes of plan, by lack of time for completion, or by the subsequent loss of a part of the MS.

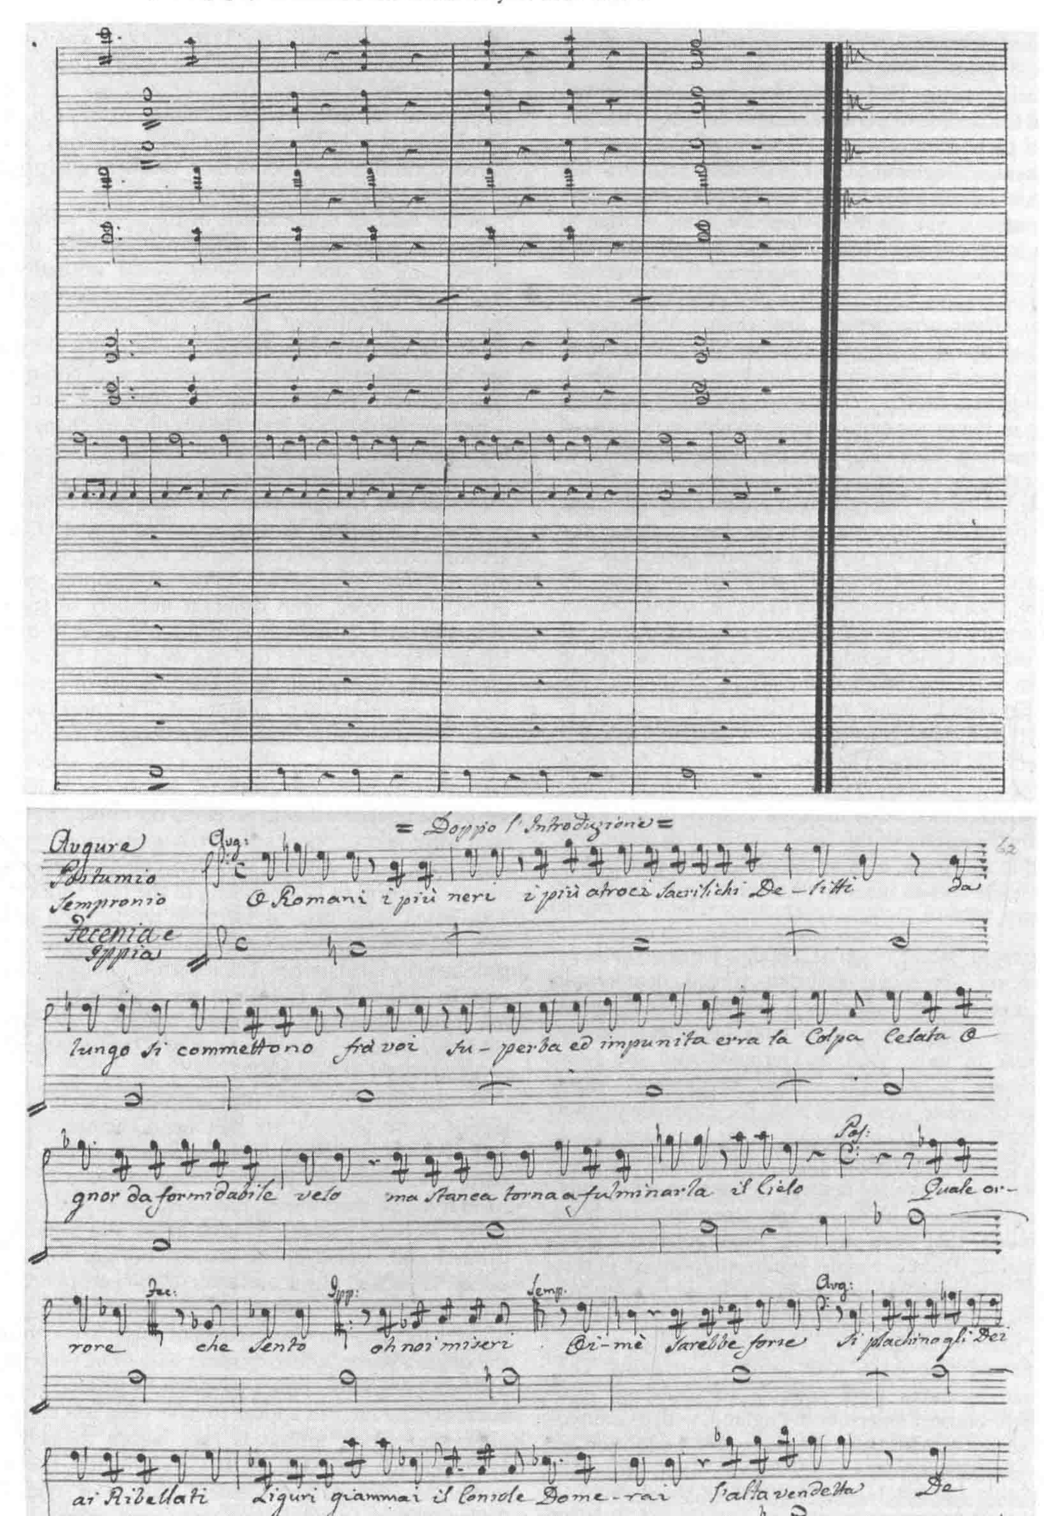
By this time the status of the copyist had to some extent changed. With the emergence from the shadows of composers of polyphony, and the establishment of more and more institutions that could perform the music, composers and chapel members began to be named in the archives as copyists. Du Fay apparently copied music, as did many later composers. Spataro at Bologna, and other *maestri di cappella*, had MSS copied for their cathedral and sometimes took part in the work themselves. Senfl was employed at the imperial court for a while as an assistant to Isaac in the copying of his music. While professional text scribes (such as Coluccio Salutati) had achieved considerable status even late in the 14th century, few music scribes reached a similar standing. Alamire, working in Burgundy, was one of the exceptions; other known scribes, such as those employed at Trent, the papal chapel or similar institutions, appear to have been rated lower than the singers whom they supplied.

It is from the 15th century, too, that the first evidence appears of what may be autograph copies by known composers. It has been argued that certain layers of the Old Hall MS may be holograph, or at least have autograph corrections (Bent, 1966), while the inscription 'Ysaac de manu sua' has been noted in one MS (*D-Bsb* Mus.ms.40021; see Just, 1962; Owens, 1994). A single page probably in the hand of Pietrequin has been identified (Rifkin, 1973), as have been corrections in the hand of Carpentras (*I-Rvat* C.S.42; see Sherr, 1975; Dean, 1984). There is an increasing number of holographs from the following decades (Owens, 1997); by the end of the 16th century, the changing balance between MS and print means that more MSS that might be assigned to composers begin to appear; but the limited evidence of composers' writing other than in musical MSS means that their authenticity is often hard to confirm.

Also during the 15th and 16th centuries there begin to appear MSS made, it seems, for the copyist's private study. Glarean was clearly not the first theorist to base his work on music he himself had collected, although his is one of the earliest collections to survive (in Munich). Baldwin and Tregian were both later copyists of large anthologies that were apparently not designed for performance or presentation (*GB-Lbl* R.M.24.d.2; *Lbl* Eg. 3665, *US-NYp* Drexel 4302); another example in score is the so-called Bourdeney MS (*F-Pn* Rés.Vm 851; see Bridgman and Lesure, 1958–61). The nearest to this in earlier periods may have been the conscious preservation

of specific repertories such as survive in the Squarcialupi Codex.

The earliest copies that can firmly be said to have been prepared for the use of performers also date from the late 15th and early 16th centuries (if such collections as the Robertsbridge fragment, *GB-Lbl* Add.28550, are left aside, together with the few 15th-century German keyboard sources). Among the earliest are some written in German keyboard tablature (e.g. the Amerbach tablatures) or anthologies made by lutenists (of which Capirola's, *US-Cn* Case VM C.25, is a particularly attractive example). Their arrangement and choice of repertory makes clear that they were not prepared for public show. However, even in larger sources (such as Jan z Lublina's organ tablature, *PL-Kp* 1716), some method is normally apparent in the process of copying and the arrangement of the repertory. There is, of course, no parallel to most of these categories in early printed sources.



Coupled with the emergence of copies that may have been prepared for performance is the appearance of the partbook. This is usually one of a series of books, each of which carries only one voice of a set of compositions. By definition, such sets of books are likely to be intended for performers, for they are of little use to scholars or students and are seldom lavish enough to be seen as presentation MSS. (An early exception is the set of partbooks now divided between Cortona and Paris – *I-CT* 95–6 and *F-Pn* n.a.fr.1817 – which were probably prepared as a gift to Giuliano de' Medici.) The earliest partbooks date from the end of the 15th century, characterized by an oblong format, which was quickly adopted by both printers and scribes. By the middle of the 16th century most music was prepared in this form, so that the printing of Gesualdo's music in score was an unusual phenomenon at the end of the century.

5. Historical survey: from 1600. During the later 16th century, as music printing spread throughout Europe, it was accompanied by a change in the range of MSS. Music printing seems to have become relatively cheap, first in Italy, then in Germany and the Low Countries and, in the next century, in England. More collectors of music were thus able to afford their own printed copies: MSS therefore came to be associated more with the process of composition, with performance, or with repertories of limited market, rather than with study or presentation or with those few repertories (such as church music) that were relatively small but had a wide dissemination. There are many significant pointers in this direction. While the papal chapels continued to have MS collections, because the repertory did not go beyond the Vatican, other cathedrals and churches in Italy increasingly replaced their MSS with printed partbooks. The new sonata textures were suitable for printing, too, although the consort repertory in England, with its limited market, stayed in MS. Until the widespread adoption of engraving, little keyboard music was printed, although that was more a matter of the technical problems involved.

However, throughout the Baroque era there were still many scriptoria and establishments employing professional scribes. The collection of MSS made under the aegis of Philidor (now dispersed to Paris, Versailles and Oxford) comprises a wealth of music, both operatic and sacred, from the period of Lully, Campra and Lalande. These MSS were copied in a uniform format and bound in sets, each with a different-coloured cover. A leading English scribe of the later 17th century was Gostling, whose partbooks survive (*GB-Y* M1/1–8). There appears to have been a prolific circle of copyists in England throughout the century, particularly of church music, which seems – with a few notable exceptions, such as Barnard's anthology – not to have ventured into print (see Morehen, 1969; Love, 1993).

In the field of opera much of the music remained in MS, principally because performances with different singers and in different towns would normally have contained different items and recurring ones would have been sung at different pitches. The copying of opera presented particular problems for the scribe during the next three centuries. As long as operas were composed of separate numbers, sometimes with distinct recitatives, the composer or director was always able to change either whole numbers or parts of them. The scribe attempted to arrange his copying so that substitution was as easy and economical as possible. Numbers were often copied on to separate gatherings; the paper for each was chosen to accommodate the scoring (fig.7). Consecutive numbers may therefore be preserved, in the same source, on paper of different types, with different numbers of staves, in different-sized gatherings, and often copied in different hands. The scribes who did this work had a new status, often being on the staff of an opera house or retained by a composer or group of composers. The most famous of them was perhaps J.C. Smith, who copied (or organized the copying of) many of Handel's works. Others were employed by publishers; others, themselves members of the opera house staff with access to the music, 'published' their MS copies of opera arias. Perhaps the most important publishing house dealing with MS copies of operas was the Naples firm of Marescalchi, in the late 18th century. Title-pages were printed for their works by a separate firm, Alessandri & Scattaglia, but the contents were mass-produced by local scribes. The repertory comprised mainly popular arias from operas in the Naples repertory. A much earlier example, apparently unique, of an engraved title-page for a MS is that to Myriell's *Tristitiae remedium* of 1616 (*GB-Lbl* Add.29372–7).

During the 17th and 18th centuries, the format and layout of the average MS had again become somewhat standardized, although on different lines in the different parts of Europe. The French tended to retain an upright format for all their music, including opera and keyboard music. In Italy, parts for church music and sonatas were printed and copied in the normal upright format, but opera, keyboard music and later 18th-century orchestral music was copied in oblong. For the last the parts retained upright format, but vocal scores of single arias preserved the oblong shape, allowing more bars to be presented on a single line. This applies as much to printed as to MS sources. The English appear to have been less consistent, although oblong format is rare before the advent of Handel in the 18th century. In Germany, too, the change in format accompanied a general change in style. While Bach wrote most of his autographs in the vertical format (but the Brandenburg Concertos and much of the keyboard music are oblong, as indeed printed editions of the organ music still are), Mozart consistently used the other shape for his orchestral music. It is significant that, while he normally used oblong paper for his piano music, two of the sonatas he composed in Paris are in upright format.

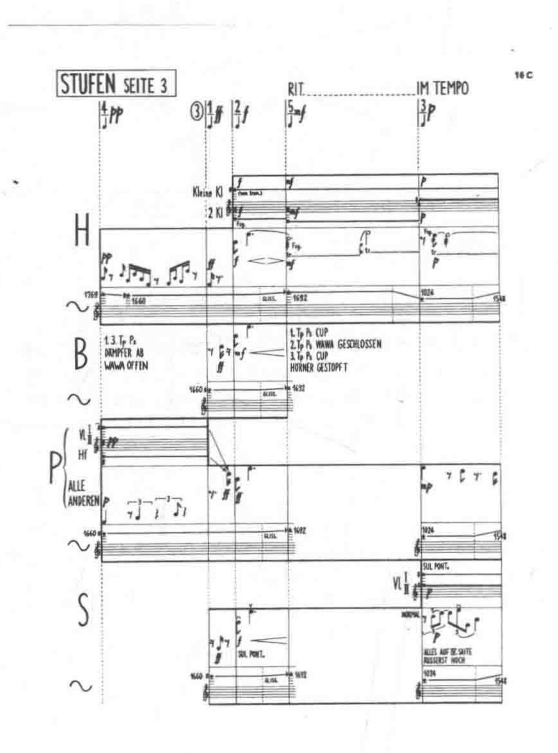
7. London, British Library, Add.31777, ff.61v–62r: 'I baccanali di Roma' by Pietro Generali, copied apparently for a performance at Trieste in 1816. The left-hand page (top) shows the end of the opening tutti (2 violins, viola, flute, oboe, clarinet marked to double oboe, trumpet, bassoon with doubling trombone, timpani and, at the foot of the page, string basses), with staves for the soloists and the four-part chorus. The different paper on the recto (bottom) is for the succeeding recitative, which occupies only two sheets of paper; this is followed by 12-staff paper (two systems per page) for the aria 'Misera che fardeggio'.

The arrangement on the page of the parts for instruments and singers was also largely formalized during the 18th century, although not according to the pattern now prevailing (*see* SCORE). In a full score, the violins headed the page, with the obbligato instruments set out within the basic plan, followed by the lower strings. Solo singers and the keyboard in concertos were, quite logically, written immediately above the bass line (fig.8). This was clearly standard enough to allow the copyists to plan their work easily and rapidly. However, as a study of the Mannheim sources has shown (Wolf and Wolf, 1974), many other elements of the work followed absolutely traditional patterns: the supply of paper, the purely mechanical preparation of the page for the music, and the way of making up gatherings and fascicles are all consistent enough for the identification of the members of a scriptorium, and all show evidence of a long tradition linking them with earlier practices.

In the 19th century, the professional copyist was a full-time member of a musical establishment and the provider of performing copies of operas, orchestral parts or anthems for church use. Other MSS, increasingly, were amateur productions, and they show this both in the undisciplined character of the hand and in the apparent lack of experience in arrangement. Some publishing houses retained copyists on their staff who would also copy music for house composers; most still keep in stock much MS music, particularly parts for modern or less popular works, which it will never be economical to print. To some extent the printing of parts was facilitated once engraving became the cheapest method of preparing copy: engraved plates could be kept on hand ready for reprinting as needed, as type could not. This made the process much more economical for a publisher and expanded the range of repertories that were economically viable. In many ways, the engraver was the logical successor of the copyist; he had the same problems of layout and the same flexibility in adjusting the spacing of the work to produce a pleasing result.

The emergence of photo-copying techniques saw a revival in the role of the copyist in the wider dissemination of music, an effect that photo-lithography did not have. Universal Edition was an important publishing house to begin producing editions of music by modern composers that consist of reproductions of the composers' autograph, and the use of copyists' work for photo-reproduction has grown increasingly prevalent, particularly in fields (like early music editions) where sales are relatively small. As a result there was a slight revival of freelance copying, although most professional music scribes remained attached to large institutions, opera houses, professional orchestras or broadcasting companies.

New approaches to notation have raised a number of new problems for the 20th-century copyist. This, of



8. London, Royal College of Music, 402, f.20v: last movement of Mozart's Piano Concerto in C minor K*1786). The layout of the score is typical of the period, with violins and violas on the top three staves and cellos and double bass sharing the bottom one. The solo piano part occupies the two staves above the cellos (here Mozart wrote in a number of revisions on the staves immediately above), and the wind the central staves. No clefs or key signatures appear on such sheets within a movement*

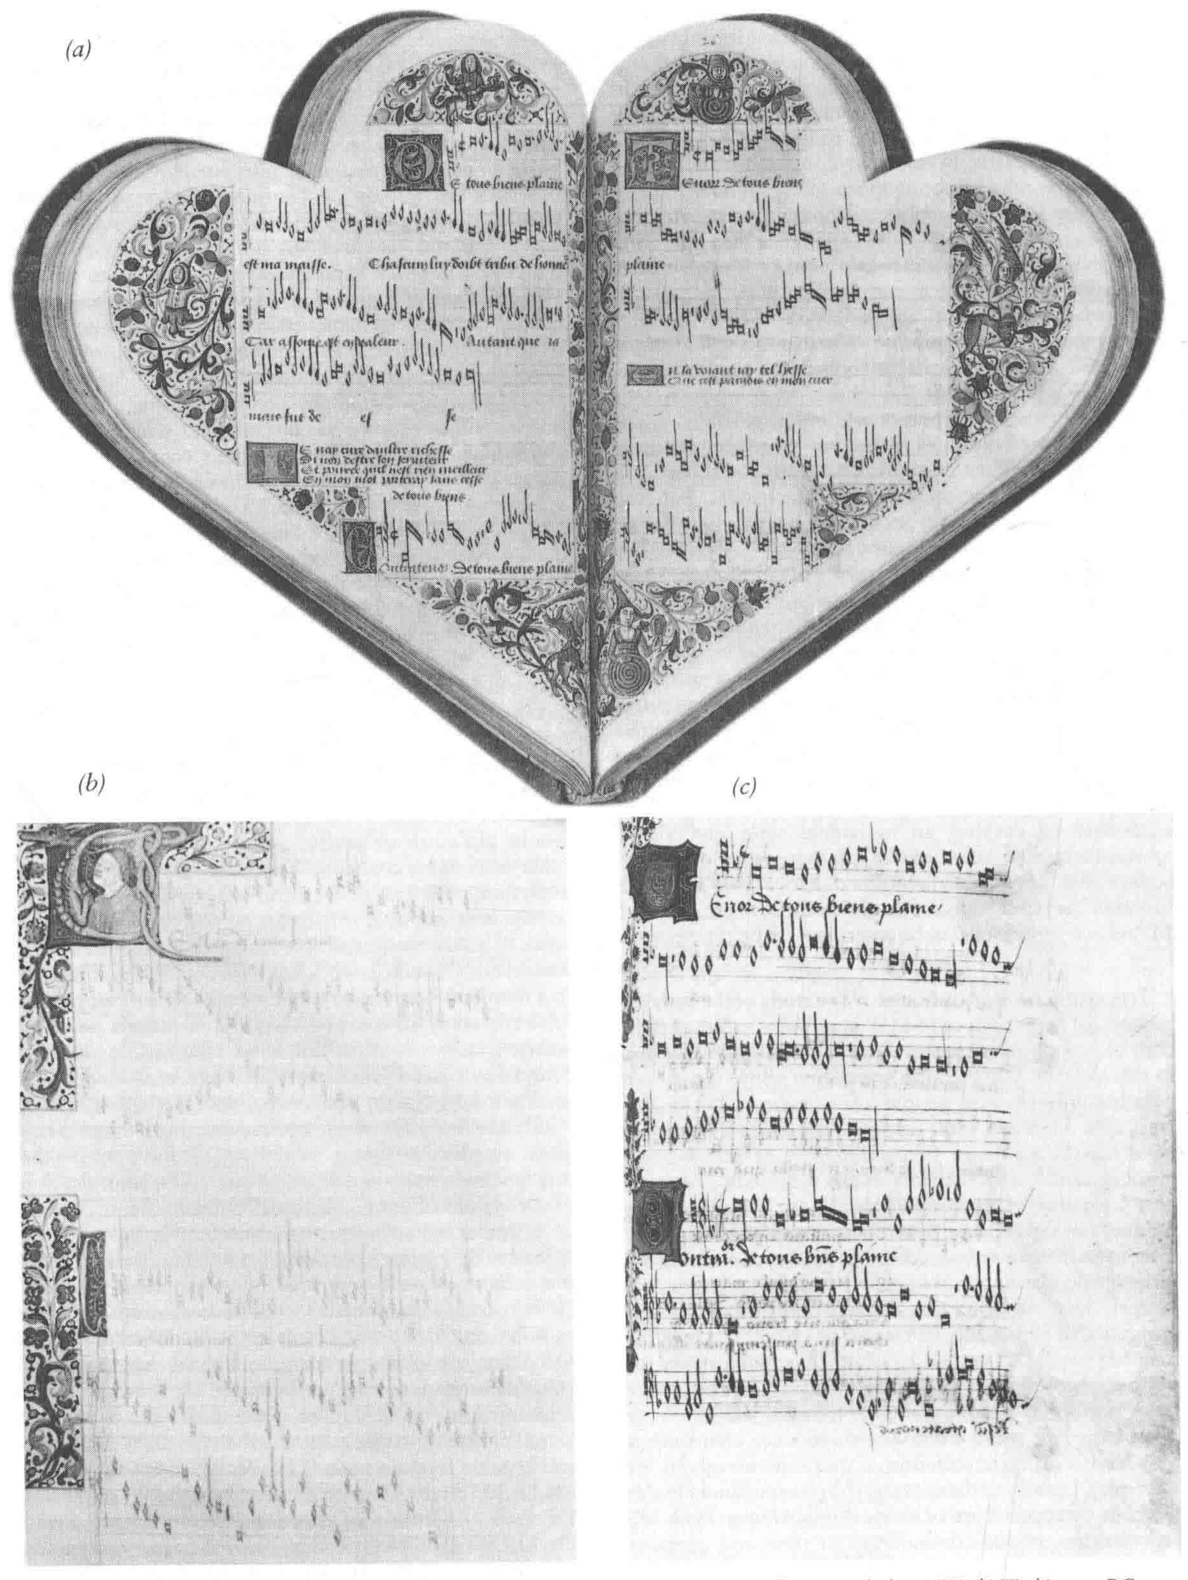
183

9. 'Treatise' by Cornelius Cardew (1967), p.183. On this page traditional symbols and layout are amalgamated with unorthodox shapes and placings. The relationship of the two can be clearly seen, but the composer does not intend it to influence the performer's interpretation of the notation

course, has happened in all periods, although since the time of Monteverdi there have been few changes in the basic pattern of music on the page. Even with the vastly more complex scores of the late 19th century, or the considerably more detailed notation of the early 20th, the copyist did not change the initial premises on which he based his work. The difficulties of reading many such scores are all a consequence of this traditional approach as, indeed, is some of the complexity of the notation itself, for composers strove to overcome, with their notation, the limitations of the score: many more accidentals, indications such as Schoenberg's 'Hauptstimme' sign, and the complexity of Boulez's rhythmic notations are symptoms of this. It is only with the emergence of truly new ways of treating notation that the scribe was compelled to break from tradition. Aleatory scores with special notations for random or improvised passages (Lutosławski), scores where staves appear and disappear or are arranged in a visually pleasing design (Bussotti), scores that no longer use the standard symbols for pitch or duration (Cardew's *Treatise* is a particularly attractive example; fig.9), those that include new information, perhaps for movements or actions (Cage, Ligeti) or require use of colour (Peter Maxwell Davies, String Quartet) all imposed on the scribe the need to look for new approaches to format and layout, in the way that those elements of modern notation that concern only the theorist (ways of writing accidentals, etc.) did not and could not. Among products of this new thinking were scores that modified the traditional pattern in minor though vital ways (Stockhausen's *Momente* and *Mixtur*, for example, where the use of staves is reconsidered; fig.10) as well as those

10. 'Mixtur' no.16 by Stockhausen (1964). The staves are not continued beyond the point at which they cease to be needed; this helps to make the score easier to read

where the whole arrangement of the music on the page needed to be tackled in a new way to assist legibility.



Some of these new approaches have gradually become conventions: an increasing number of scores drop staff-lines for silent bars, and the notations of aleatory and improvised sections have tended to become more consistent. This is partly a result of composers discovering which of the musical innovations of the middle third of the century seem to have a continuing musical validity. But it is also a function of the experience that they (and performers) have gained through looking at each other's notations. In this respect, copyists and their manuscript sources have had a significant impact on the contemporary development of music notation. Whether this will continue to happen seems questionable: indeed, the position of the copyist as a profession is less secure. As composers have increasingly used computers while composing, and as music software continues to become more sophisticated (producing excellent parts directly from the score), the need for the traditional copyist decreases. For the immediate future, some types of manuscript will continue to be produced: foremost among them will be the sketches and some other working documents of composers. Some other types of notation layout are still stretching the abilities of computer software, and making excessive demands on the time involved in input and layout. But, with the development of real-time input from keyboards, as well as the increasing pattern of storing all computer data as graphic files, it is probable that true handwritten sources will become rare, perhaps restricted to composers' sketchbooks. Presumably, within years, music-notation software will be sophisticated enough that it will allow each user to develop an individual style and visual appearance: then some of the characteristics of manuscripts that have been mentioned above will again be found in the latest sources. Until that time, the traditional MS source would seem to be entering a twilight existence.

6. THE STUDY OF MANUSCRIPTS. The study of the copying process, of the structure of MSS and of the habits of their copyists are prerequisites to the study of the actual music in the sources. Many of the comments above have been possible only because people have studied MSS in this way. The MSS are, after all, the only evidence that we have for the existence of a large part of our musical heritage, and many elements of the music are preserved only by virtue of the scribe's decisions. If the source is unique, the significance of annotations is obvious; however, even if there are concordant sources, containing the same music, the significance of structural detail of each is scarcely less. Any one may carry a number of musical variants that can hardly be classed as errors, but must be assessed (see fig.11 and ex.1). It may have indications for performance (written-out ornaments, accidentals, more text); it may have additional parts (Mozart's clarinets, or a *si placet* part to an otherwise three-voice chanson); it may have a different selection of music (in an opera, for example). In each of these cases, the circumstances under which it was copied are of musical importance. Each MS represents a unique combination of time and place of compilation; if this combination can be determined, the readings assume greater significance. Further, a study of the copyist's habits as seen in the MS may establish much about his reliability, his musical literacy, his taste and the type of thing he tended to change, and even the points in the source (such as immediately after changing line or page) where he was most prone to make mistakes. All these things will play their part in assessing the significance of the musical versions preserved in the sources – and this is no less true of a composer's autograph, for the composer was no less prone to error and accident than was his professional but probably disinterested colleague.

A MS has also to be considered in relation to any printed source of the same music. It may well be an autograph and yet carry less weight than a first edition that the composer supervised. That applies to certain Handel texts, and to several Mozart and Brahms works where changes (ornamentation, dynamic indications) were introduced with evident authority. Beethoven certainly saw proofs of some of his editions, and Tyson (1963) has argued that the London editions that he did not see still have some variant readings which should be given high authority. An analogous case in which the degree of authority of early MSS has been hotly disputed is that of Verdi's and Puccini's operas (see Vaughan, 1961). Few MSS that were demonstrably used as printer's copy survive from before the middle of the 19th century. When such exist (and the majority are now preserved in the archives of publishing houses; Ricordi has a large collection of opera scores, apparently with proof copies as well), they are instructive about the relationship between MS and print.

One of the most significant and perhaps most rewarding aspects of MS study concerns study of the copyist as an individual. Sometimes a copyist can be attached to a name, with a career and other MSS; more often he remains a cipher, an anonymous writer who can nevertheless be placed in an institution or a decade, or who has other MSS to his credit. In these cases, the significance of everything that can be learnt about the structure of the source is multiplied, for it can be placed alongside the work of his contemporaries or his own practice elsewhere. Recent and important work has been done in this direction in a number of periods. For the Renaissance a complex of MSS copied at the court of Margaret of Austria has been isolated, as well as a clutch of relationships among Neapolitan and Florentine MSS, that lead to detailed studies of repertory and scribal habits (Rifkin, 1973; Atlas, 1975–6). The study of the Mannheim sources has given an added authority to many MSS that preserve the music of composers active at that court. The identification of the scribes of many English 17th-century sources has, in a similar manner, thrown considerable light on the spread of new styles from the court to other circles around the country as well as on the influx of Italian influence (Willetts, 1961; Morehen, 1969). In the case of Gaffurius at Milan and Spataro at Bologna, the identification of the MSS that they arranged to be copied has provided valuable information about the music likely to have been performed at their churches while they were in charge. Identification of scribes can go further: for the Washington and London frottola source (*US-Wc* M2.1 M6 Case, *GB-Lbl* Eg.3051), the Cortona and Paris partbooks (*I-CT* 95-6, *F-Pn* fr.1817) and the Oxford and Cambridge fragments (fig.12), for example, the identification of an anonymous scribe, as much as the arrangement of the MSS, has enabled modern scholars to link fragments together as parts of single MSS that had become separated.

This identification is specially exciting when it concerns a known composer. The study of composers' autographs

11. (a) Paris, Bibliothèque Nationale de France, Rothschild 2973 (Chansonnier Cordiforme), ff.25v–26r, before 1477; (b) Washington, DC, Library of Congress, M2.1 L25 Case (Laborde Chansonnier), f.63r (tenor and contratenor only), c1465; (c) New Haven (CT), Yale University, Beinecke Rare Book and Manuscript Library 91 (Mellon Chansonnier), f.43r (tenor and contratenor only), c1476. These three versions of the popular chanson 'De tous biens plaine' by Hayne van Ghizeghem (transcribed in ex.1) differ in a number of particulars; such differences need not be regarded as errors, for they would probably have been acceptable to both composer and performer

Ex.1

is in some ways a little different from that of other MSS. It is more often concerned with the ways in which the autographs reflect the compositional process (Marshall, 1972; Bailey, 1979; Owens, 1997) or show the development of a composer's style. It may also throw important light on the order in which different works were composed; such techniques have caused radical changes in, for example, the accepted chronology of Bach's works and of details in Mozart's (Dürr, 1957; Tyson, 1987).

It is often not possible to identify a scribe or to relate him to that of another source. However, he can always be placed, both in a historical period and (more tentatively) in a geographical area, from a study of his style as much as from a study of the papers he used. The manner of laying out a page has changed over the centuries, as have such details as the normal manner of writing clefs, accidentals and directs or the patterns of text spelling and orthography: these can be used alongside an analysis of the handwriting and of the bibliographical format to give a close indication of when and where the copyist was working.

A change of scribe within a MS will more often mean a different layer of work than two scribes working together at the same time. There are times when the change coincides with changes in paper and repertory, and it is evident that two completely different MSS (with different origins and intentions) have been subsequently bound together. Especially in the case of late collections of songs and short piano pieces, some present-day bindings contain numbers of separate short MSS (and often also printed editions), each containing only one item, and all of various origins. But in other cases, where the change of scribe coincides with a change in paper or layout, we are dealing with no more than a break in the process of copying. Anthology MSS, often copied over a relatively lengthy period of time, regularly show changes in handwriting, while many 19th-century anthologies contain individual pieces entered by different scribes. However, analysis of handwriting has its own pitfalls, and changes in hand not supported by other evidence have to be handled carefully. Many scribes working before the mid-19th century (and later in German lands) regularly maintained more than one hand, and some (particularly obviously in non-musical sources) kept the two distinct, using them for different purposes or repertories.

Alongside the handwriting, other codicological evidence will often provide a clear demonstration of the number of layers into which a MS falls, that is the number of separate sequences of copying (regardless of whether or not they represent a continuation of the same original plan). One critical piece of evidence here is the paper. For many years, watermarks have provided an important element in the study of all paper MSS, although the limitations in their interpretation are becoming increasingly clear (*see* WATERMARKS). While the presence of a mark in a dated source says a little about the possible date of other sources with the same or 'very similar' marks, it seldom says with any certainty much more than can be deduced from a study of other elements of the source. However, the pattern of papers within a MS (or edition) may often be revealing. The marks in the last two gatherings of the Codex Reina (*F-Pn* n.a.fr.6771) are distinct from those in the rest of the MS. It is no surprise to learn that these gatherings were an independent fascicle, copied by a different hand; however, the earlier fascicles use four papers, one of which seems to be a later insertion, possibly to replace errors on the original pages. Similarly instructive is the fact that one paper in the Tregian MS (*GB-Lbl* Eg.3665) has a date in the watermark, but that it is one of the papers that was pasted over the original, to correct an error. The different marks in some Mozart scores (Tyson, 1987) have thrown interesting light on the order of composition, and the presence of certain marks has proved as useful as the identification of scribes in the Mannheim complex of MSS.

There are other strands of evidence that can help as guides to the chronology of a MS. Some are written on printed MS paper: changes in the rulings on the paper can be used to distinguish layers of a MS. This is particularly valuable for MSS of works which comprise distinct movements – for example, 18th-century opera, song-cycles, sets of piano pieces. If the copyist used a rastrum, it would sometimes need to be replaced. In the published facsimile of Stravinsky's sketches for the *Rite of Spring* rastra of different sizes can be seen, although it is by no means certain that they represent different stages of work. But a large MS will often show changes of rastrum and of other pens and inks. This sort of analysis has been used on Bach MSS and in the classic study (Köhler, 1967) of

12. *(a) Oxford, University College, 192, f.27ar: part of a Credo by Thomas Damett; (b) Cambridge, University Library, Add.5963(8)r: part of a Credo by John Cooke. These two fragments from an English 15th-century MS were used as padding in the bindings of later volumes after they had outlived their original function. The similarity of layout, staff-ruling, format and calligraphy shows that they belonged to the same source (now largely destroyed)*

the stages of composition of Acts 1 and 2 of *Le nozze di Figaro*.

Once conclusions on the order of work have been reached, the plan of a MS often becomes clearer. Then the scholar turns to the contents to determine how far the accuracy, the musical literacy and the independence of the scribe can be trusted. Few scribes sink to the level of an early 19th-century Englishman, an amateur who wrote a complete piece in 6/8 as if large sections of it were in 5/8; professional copyists preserve at least the appearance of accuracy. Even they, however, are prone to error: often there are sections in MSS that seem to make little sense or where the scribe appears to have attempted to cover up an error. Some scribes appear to have been sufficiently literate musically to realize when a source was defective and to abandon copying (as in the case of Hugo de Lantins' *Tra quante regione*, *GB-Ob* Canon.misc.213).

But errors are by no means the only ways in which MSS of the same piece can differ from each other, or raise problems for the modern editor. In all periods, there have been notational conventions, well understood in their time, that have not survived to the present day. Among well-known examples are the omission of dots of addition in some mensurations (a practice even found as late as the early 19th century), the simplified notation of double-dotted rhythms, or that of *notes inégales*. More obscure, and therefore sometimes less well understood today, are the apparently casual approach to accidentals in the 17th century and the handling of key and time signatures during both the 17th and 18th centuries. Alongside these are some pairs of notational devices which seem to have the same meanings for performers – the presence and absence of ligature patterns are an obvious example, as are some sequences of mensuration signs (a similar problem can be encountered with beaming patterns in 18th- and 19th-century music). For any given composition, these can vary from source to source. It must be assumed (unless the results are musically impossible) that the copyist, or an editor who guided him, was musically literate enough to make competent decisions, and to take into account the reactions of his readers. The modern scholar is thus faced with the dilemma of trying to discern a possibly different meaning for the performer in each of the versions. These variations correspond to those in literary texts, where such 'spellings' can similarly represent now obsolete patterns, or sets of contemporaneous variations, which may or may not have had significance for the reader.

Until such time as the composer's word was considered definitive (as late as the 19th century for some repertories), the scribe felt free to make adjustments, to add ornamentation, to alter anything that displeased him and generally to 'improve' on the copy from which he was working. The range of changes made by the scribe reveal much about his musical acuity or incompetence. But, in addition, they also reveal a great deal about his musical background. While some changes – adjustments to a melodic line to limit the range, for example, or the deliberate simplification of complex rhythms or notations – apparently reflect special circumstances, others are more probably to be seen as unconscious reflections of the scribe's own normal preferences. One scribe will tend, in a majority of cases, to add ornamentation while another will remove it; one will give extra guidance on *musica ficta* while another will indicate a different tradition, or will think such aids to performance unnecessary. In some cases these differences and patterns of change can be associated only with the scribe: in many others, however, they can be found in several sources, related by geographical area or by being associated with a single performing institution.

This sort of analysis goes hand-in-hand with traditional approaches to textual criticism, with filiation or stemmatics (*see* MUSICOLOGY, §II, 3), used to group sources. The grouping will reflect the readings found in the sources, making allowance for the editorial habits discernible for each scribe, as well as any limiting paleographical or codicological evidence. This grouping then tends to produce sets of versions of compositions which plausibly lie close to a composer's (possibly lost) version, as well as other sets that are further removed, perhaps because they reflect the regional or institutional performing tradition. Such work has been done for 15th-century chansons (Atlas, 1975–6) and for 19th-century opera (Gossett, 1970): similar studies have begun to reveal some otherwise unretrievable information about performance practice in various institutions during the 16th and 18th centuries.

Many MSS, now anthologies, were compiled from more than one earlier source, with the scribe selecting from each such pieces as he required. In these cases, the sorts of analyses outlined above have to be carried out separately for each composition, since each may have come from a different exemplar. In many MSS, now arranged sytematically by genre, number of voices, or approximate alphabetical order, adjacent compositions can have had very different provenances; similarly, any group of works that lay together in the exemplar could be far apart in the MS to hand. In others, the arrangement still shows some traces of the earlier sources: Hamm (1962 and elsewhere) has pointed to groups of pieces with consistent origins, which apparently travelled together and have survived together in extant MSS.

Coupled with the codicological evidence, this type of study can sometimes indicate that certain pieces were later additions to the MS: particular arias can be assigned to later performances, or short works inserted into spaces in a MS can be shown to be later in composition or in the versions as copied. In other cases, smaller changes are obviously made later: this is particularly true when corrections or additions are made by a different scribe in a later handwriting, or when a piece of paper has been inserted or pasted over the earlier text. A famous case concerns the revisions made to *Don Carlos*, in Verdi's hand but clearly later than the original (see Günther, 1972; Porter, 1971–2). There are instances, however, where the decision is much harder. Erasures or corrections of individual notes or words may appear to be in a different ink, but often there is not enough to determine whether they were written by a different scribe. In the case of the *Sumer* canon, the notation seems to have been radically altered, and it has been suggested that the notation of a piece in the *Roman de Fauvel* was altered by the addition of tails to some notes. Sometimes it is possible to point to deletions from a MS even where erasure has not left evidence on the page. This can be done by bibliographical analysis, detecting pages taken from the source, as in the Fayrfax MS (*GB-Lbl* Add.5465); by detailed analysis of the contents of the source; or by comparison with a concordant source (especially in the case of partbooks). It is always important to assess whether such changes were made during the process of

copying (perhaps as a result of checking for accuracy), or whether they represent a later decision, for example as a result of performing experience.

There is clearly a symbiotic relationship between codicological and paleographical study of a MS, on the one hand, and study of the textual contents, with all their unique or generic features, on the other. The former will almost certainly place the MS more accurately, geographically and historically; it will always provide details relevant to the merits and failings of both the MS and its contents. Study of the contents yields information about the music, about whether this version is acceptable or the directions in which it is biassed, and about its relationship to the versions in other sources. The two, taken together, may well raise a particular MS to the status of an authoritative source, sometimes a unique representation of a performing tradition, sometimes even a holograph; they may equally well relegate it (autograph or not) to an almost irrelevant position in the history of the music it preserves.

7. THE CONTENT OF MUSICAL MANUSCRIPTS. Because of the unique, 'one-off' nature of almost all music MSS, we have to examine and evaluate their contents in ways that differ from our view of printed sources. We can normally assume that any MS had a particular function, and that it was created in response to a specific need. Especially once printed editions became the principal medium for dissemination and use (sometime during the mid-16th century), any MS represents a particular unusual circumstance. Obvious examples include a composer's sketches and drafts, arrangements for special performing ensembles, or repertories which (like that at the Cappella Sistina) were not to be disseminated: but these are only special instances of a more general case. As a result, the details of the music in such MSS will also carry an additional significance. In other words, the MS is a document of unusual historical importance.

With composers' holographs this importance is self-evident, and even extends to the physical appearance of the MS. We feel that we can detect something of Beethoven's personality in the barely legible scrawl with which he covered the pages of his drafts, even coming to see the power of the inspirational force that drove him. In the same vein, we want to read something into the various handwritings and levels of organization and tidiness in other composers' holographs. However, this is far from being the real value of these documents: instead of inspiration, they show us the hard work of composition. A sketchbook by Beethoven or Berlioz, Webern or Stravinsky, shows thematic ideas being noted down, altered and tinkered with, or kept in reserve until a suitable context emerges. The context is itself often the focus of much hard work (visible on the page), as chordal progressions, instrumentation or details of the extensions to melodies undergo a series of changes. For many composers, the following stages of work, often scattered across a number of sources (containing longer sketches and drafts, experimental series of juxtapositions and developments of material), provide the best evidence we have for their musical priorities (Anderson, 1990). Other, complete copies, written when the music was apparently regarded as in an acceptably performable state, still often show changes of detail (and sometimes more). The piano part in the holograph score of Mozart's Piano Concerto K491 famously includes a number of variant versions for passage-work. Significant musical changes can also be found in what are otherwise fair copies of music by Bach, Handel, Schubert, Chopin and virtually every other major composer.

The details on these sources, and (equally importantly) the manner of their presentation, provide musical evidence on two levels: at the more obvious, each gives an insight into a composer's preferences – the merely acceptable giving way to a series of trial improvements, themselves sometimes later rejected. At the same time, the sources tell us a great deal about general compositional procedures and stylistic features of the time. Compositional sketches from the 16th century, while confirming that composers worked phrase by phrase and were concerned with imitation and text-setting, often show little evidence of large-scale thinking (Owens, 1997). The autographs of Mozart or Liszt, however, show in different ways how important formal structures had become for composers. Sketches and drafts by Webern stress the manipulation of the basic material, so that a satisfactory blend of form and content will be achieved, and also indicate the extent to which he was interested in creating a lyrical style: in the same way, his revisions to his fair copies show that musical concerns were always paramount (Meyer and Shreffler, 1996). The preparatory MSS for John Cage's works, though they often contain no musical notation, clearly reveal exactly how he went about creating/preparing a new piece (Pritchett, 1988).

The structure and format of these working holographs are necessarily a product of the special needs of the moment: a composer's first sketches are both more amorphous and more variable than orchestration drafts, and this shows in the layout on the page, and even in the pattern of staves and white space. MSS copied at a later stage in the compositional process will often be more systematic in organization and layout – at least initially: rulings will be more consistent, for example. This organization is still revealing, for it indicates the composer's expectations at the time, perhaps allowing (in the spacing on the page) for further revision, perhaps having to be modified as work progresses. Here, again, detailed study of the document shows that the content of the manuscript carries more information than a single straightforward version of a composition.

Indeed, almost all musical MSS do this. They give us information on several levels: first is the identification, or at least the characterization of the intended recipient or user; second is an indication of the type of use to which the MS will be put, perhaps a liturgical occasion, a Victorian drawing-room soirée, or a professional choral concert; third is some guide to the competence or specific technical weaknesses of the planned users; and finally there is some indication of the level of prestige accorded by the recipient to music in general and to this repertory in particular.

Most MSS will tell a scholar a certain amount about each of these elements of musical culture. MSS that contain anthologies of music will often tell a great deal more. The process of selection usually produces a collection that is homogeneous in one respect or another – music for Vespers, Renaissance love songs, Baroque duets that are suitable for two sopranos, virtuosic (rather than simpler) violin sonatas, or simple folksongs and semi-opera songs from around 1800 and within the range of an amateur singer. These define the function of the music,

or the skills and abilities of the performer. The selection will also reveal something of the musical milieu in which the anthologist moved: the motets may be all by Flemings, or musicians working in northern Italy; the violin sonatas may be collected principally from the Netherlands or the Austro-Bohemian orbit; the popular song collection may draw exclusively on material that had been published in London or Dublin just before its compilation.

These are simple, clear-cut cases: for many anthologies the situation is more complex, for the music and its sources or style are more varied: at the same time, analysis of the selection can lead to interesting historical conclusions: a manuscript copied in Rome in the 1510s and containing music by composers working at the French court (*I-Fl* Acq. e doni 666) is a testament to the popularity of things French in the circles of the then Pope, the Medicean Leo X; the presence of works by Dunstaple and many other Englishmen in the Trent Codices (and other contemporary sources) documents the enthusiasm with which many continental musicians and patrons responded to their music; copies of London stage-songs in a MS copied in Baltimore soon after 1800, or in American Moravian MSS of the same epoch, reflect the continuing enjoyment of English culture in the newly independent American states.

A MS of a single work – one opera, a symphony, a mass – would seem to offer less scope for this sort of historical enquiry, It is true that we can learn less about the milieu in which the MS was prepared, or about local tastes in music. However, such a MS can reveal as much as the anthology can about the affluence of the owner, about his or her musical competence, about the scribe's abilities and accuracy, or about the MS's destination, in performance or archive. Partly this is a result of the level of elegance of the MS, and of any evidence it shows of being intended for (or having been used in) performance.

But even more it is a result of a study of the contents of the MS, which may reflect a particular performing situation. For example, it has been argued that the absence of multiple vocal parts for Bach's Mass in B minor indicates that it was sung by solo voices; and that the lack of cello parts for Mozart's Haffner Serenade result from it having been composed for outdoor performance. An individual MS, after comparison with other sources of the same work, may reveal a different version, or a new set of ornamentation: this can sometimes be assigned to a performer, a city or a local performing tradition. Finally, especially in early music, the ways in which the contents differ from those found in other MSS or editions are a direct reflection of the transmission history of a composition, aiding us in understanding a possible original form and its evolution as tastes changed (*see* MUSICOLOGY, §III, 2).

It might seem that the content of some MSS is not significant to the same extent: such sources would be manuscript parts prepared from a score, or the MSS prepared in bulk (especially in 19th-century Italy) for sale in the manner of printed copies. Yet, in their own way, each is strongly indicative of its destination. The parts will carry many details not found in the score, and often will contain significant changes – deletions of sections or the addition of arias to meet local requirements. Recent study of Mahler's performing material for Beethoven's symphonies has provided a detailed picture of the taste of Vienna of the time. Similarly, MSS written in bulk will necessarily contain a very carefully judged assessment of the musical taste and abilities of potential purchasers, usually cultured amateurs.

For all MSS, therefore, study of the content, its arrangement, its defects and derivations from other versions, will present a picture of the user, the intended use, and the place of the music in local society. Coupled with a similar study of the paleography and codicology of the source, this will help to accord a MS its rightful place in the history of taste and style, and in the society which produced it.

8. MANUSCRIPTS IN MUSICAL SOCIETY. By virtue of its character, a manuscript presents very precisely the effects of social forces on music and its preservation. By its structure, the quality and level of its presentation, its repertory, its notational complexities or simplifications, its subsequent history, and most importantly its very existence, each manuscript carries evidence of many musical and social issues of its time. The copyist, as much as the originating force (patron, composer or performing institution), is responding to those issues and creating traces that we have recently begun to explore with increasing interest.

An important aspect of the existence of musical MSS, both of their creation and of their survival in collections, involves the interests and concerns of their original (and later) owners. Certainly, for much of the period before 1700, the ownership and use of books (of any sort) conveyed a clear message: at the least, with the possession of a Bible or psalter (in Reformed countries) or a Book of Hours, the implication was that the owner could, and did, read. In many households, there were few other books, although recent research (in, for example, collections of inventories at death) has shown that a surprisingly large proportion of the population did own a few books. At the other end of the spectrum were those who collected, and perhaps needed to use, a library of books. These owners largely fall into three groups – affluent collectors (royalty, nobility and the like) for whom beautiful books were another manifestation of their status; institutions (merchant companies and guilds, legal organizations, cathedrals) which needed manuals, textbooks on accounting, service books, or records of past deliberations, and who regularly produced manuscript accounts of their own decisions and doings; and scholars and professionals (lawyers, theologians, doctors and also members of monastic houses) who needed to have reference collections of scholarship as well as the basic texts and documents.

Most surviving musical manuscripts come from one of these three classes of owners: while this is evidently true for sources from before 1600, it remains so for later sources, if we include composers' manuscripts and professional performers' sets of parts. By contrast, there are few traces of notated music in the possession of the semi-literate or the average working household, at least before the 17th century, when psalters began to be notated and broadsheets with music circulated more widely. But the single major exception to the three categories listed above is that of the performer. While, by the 15th century, professional performers must regularly have owned music (or at least have had access to it, through an institutional collection), amateurs only gradually showed an interest in copying and owning specific compositions. The rapid growth of amateur music-making was primarily supported by the similar expansion in music publishing, and

has left only sporadic evidence of manuscripts in amateur possession. A number survive from German-speaking countries, and are a reflection of the different place that music held there after the Reformation, as a necessary and influential part of a general education. Another interesting example involves the presence of a collection of pieces in a 16th-century mariner's anthology (Leech-Wilkinson, 1981), but some other rough-looking books that include music among other items (such as *GB-Cu* Add.5943) can be shown to have belonged to institutions that would habitually own libraries. This pattern changes with time, of course, so that there are relatively many more MSS from amateur ownership dating from later periods: perhaps lute music is the repertory where this happens first.

For many owners, including institutions, the musical manuscript seems to have carried some special cachet: the idea appears early that the contents are important in some special way. Machaut, writing to Peronne, promises to send her a manuscript of his songs, to be sung exactly as they are copied: the early autograph of Henricus Isaac, with an owner's inscription, must be one of the earliest examples of a musical autograph being valued for itself, as much as for its contents.

But there are other signs that musical manuscripts were highly esteemed, and used for preserving special contents. A number of institutions chose to keep their music in manuscript: the most famous example is that of the Vatican Chapels, made notorious by the story of Mozart copying Allegri's *Miserere* after hearing it once. Since the music had not been published (and was in any case by then being sung in a different version), he could not otherwise have studied it. This attitude on the part of the Vatican authorities seems, in fact, to have developed relatively late: the musical repertory was certainly being printed during the 16th and early 17th centuries, although the Cappella Giulia and Cappella Sistina themselves sang from manuscript copies. Indeed, a number of institutions seem to have preferred to keep their music in manuscript, without feeling exclusive about the contents: manuscript copies survive, for the 16th century, from many of the major cathedral sites of northern Italy (Casale Monferrato, Milan, Modena, Padua, Ravenna and Verona), from a number in Germany and further east (Augsburg, Bártfa, Grimma, Jena, Munich, Wittenberg), and from a few in other parts of Europe (Cambrai, 's-Hertogenbosch and Montserrat are representative examples), and in a number of cases it can be demonstrated that these MSS were copied directly from printed editions of the music. In some cases, this may be because the printed sources were only available in a small format (and therefore not convenient for a larger choral body), but this is far from true in every case. The singers, or the institutions themselves, apparently preferred to have MSS copies, even when the printed books were easily available. While there are some cases of major collections of printed editions – for example, the one used by members of the Accademia Filarmonica in Verona – these seem to be in the minority, and to be tied to specific types of function, for analytical study, or more often for amateur music-making. Thus the personal collections amassed by Georg Knoff in Gdańsk or Paston in England were apparently made available to local musicians.

This apparent interest in collecting music in manuscript persists through the 17th and 18th centuries. It has to be distinguished from the very different situation in which whole repertories were deemed not economically viable for printing: Italian cantatas in the 17th century (as opposed to sacred motets and mass settings), solo instrumental music throughout the period (as opposed to ensemble canzonas and ricercars), and parts for orchestral music (as opposed to chamber music). To some extent, there probably was a smaller market for all these repertories: but the pattern sometimes also reflects the phenomenon mentioned above, that the owners of these compositions did not want them to circulate widely. In the case of solo virtuosos, for example, everything was to be gained by keeping show pieces from too wide a dissemination.

Indeed, the act of keeping a composition in manuscript made the music more personal, less 'public'. The music, or at least the version preserved in the MS, could not circulate among friends and rivals without permission, at least in theory, ignoring the possibility of unscrupulous copyists. Mozart was aware of this last problem, more than once sending MSS to his father with strict injunctions to control the making of other copies. In other cases, the version itself was the important factor, containing personal embellishments and ornaments, providing a different accompaniment, allowing one band or group to develop a distinctive sound. Something of this prestigious nature of the owned MS comes across with the occasional appearance of the name of a purchaser inscribed on the title-page of individual copies of published MSS of Italian arias, with the apparent implication that the MS was individually prepared for the purchaser.

If the possession of musical manuscripts tells something about the status of music, musicians and owners, so do many aspects of the way in which those manuscripts describe and present the music they contain. The pattern of making attributions to composers has changed over the centuries. Several significant instances of change all attest directly to the manner in which the MSS reflect music's status, and are themselves important bearers of social messages. For example, early MSS of polyphonic music rarely cite a composer's name, and many attributions come from elsewhere, from treatises (which do name the authorities they are citing, even when these are composers) or other writings. The first significant exception concerns those collections of songs which are found juxtaposed with poetry, in MSS that are planned primarily as poetic collections. Since poets were named much earlier, and since these sources seem to have served as repositories of the works of major poets, we find names also attached to the musical settings. In most cases, in the trouvère and similar repertories, it is not always clear that the composer was the same person as the poet, and some poems survive with different musical settings in different MSS. Evidently, the poet and his or her poetry still had a status that was not being accorded to the composer and the musical setting, and this holds throughout the greater part of the 14th century. Those works for which we assume the poet was also composer, by Jehannot de L'Escurel or Machaut for example, are regularly collected in, and presented as part of, a poetic anthology. The change to citing composers' names, found towards the end of the 14th century, implies a change in the status of the composer, and of the music vis-à-vis the text. The change can be found in Italian sources, after the mid-century Rossi Codex, and then with increasing frequency.

Since these sources supply attributions to earlier composers, it appears that the transition in a composer's status had occurred around the middle of the century (see §VIII, below). A similar change can be seen in French sources of the end of the century, with the interesting additional point that many polyphonic settings of liturgical texts also carry composers' names (see §VII). The change may have occurred even later in central Europe, to judge by the evidence of attributions to Wolkenstein's contrafacta of other composers' chansons. Some of the MSS for all these repertories may be archival copies, preserving the record of compositions of major artists, and others (such as the Squarcialupi Codex) are still arranged as were early poetical sources – with the collected works of each individual gathered together – but the presence of names must be indicative of a new status for music and musicians. No longer, apparently, was music an ancillary feature, a support for the liturgy or the necessary vehicle for poetry: it now had a status of its own, and (as a result) so did the composer.

As the composer acquired status, the habit of assigning composers' names to compositions itself gained in importance, and the message that the given name carries is increasingly significant. One of the ways we know that English composers and styles had gained enormous prestige on the Continent by the middle of the 15th century is that anonymous compositions are freely ascribed 'de Anglia', and even added to the catalogue of known composers (not always consistently: the same work can be ascribed to Benet, Dunstaple or Power in different sources). This habit of assigning works to well-known or popular composers continues for at least another century, adding considerably to the bibliographical problems facing scholars of the music of Josquin, for example. In these cases, the MS is telling us more about the status of the composer named, and about the desires of the owners of the source, than it is about the music itself. (There are still echoes of this view in the tendency of modern scholars to want to attribute anonymous works to the most famous of possible composers, and to link significant MSS to their milieux.)

Composers have also, at various times, been given their professional qualification: 'Dr Bull' in the early 17th century can be compared with 'Dr John Stevenson' in the 19th, or with the addition of phrases such as 'Master of music at' in the 18th. Each of these is asserting a certain kind of professional standing for the composer, of competence or brilliance for the composition, and a corresponding authority for the manuscript bearing the annotation.

Similar sorts of changes appear in other periods: one concerns the ways in which dance tunes are titled, the titles changed, and the names of patrons, dancers or composers attached. In the decades around 1600, a composition headed as *Almande d'amours* in several sources appears as *Die schöne Sommerzeit* in another; the French *Almande Nonette* is transferred to England as *The Queen's Almaine*; the tune *Hunt's up* also surfaces on the Continent as *Anglicum* or *Ein Anglicum: Kom mein Liebchen*. Other works acquire this specific regional association, indicating something about the provenance and fame of the original. For example, *Fortune my foe* is not the only one of Dowland's works to survive in continental MSS with the epithet 'Angloise' or 'Englesa'. Once again, the adjective implies a criterion of quality, or at least that English dances were admired and collected simply because they were English.

These sorts of changes are not primarily significant, in most cases, for the history of musical style: the compositions are paralleled by others that are similar, and with these others make up a stylistic picture. Rather, the changes and attributions are reflections of the social status of music and musicians, and sometimes of the relative status of music or composers from specific regions.

This evidence can be contrasted with a later phenomenon, found in MSS and printed editions alike, in which the composer's name becomes less important. MSS of the decades around 1800 and later, especially those for amateur use, frequently replace the composer's name with that of the opera or performance from which the music was taken, or of a well-known performer. Certainly, in some cases this practice reflects the printed editions from which the copyist was working, in which the composer's name may be given in smaller letters than the title, the singer's name or the dedicatee's, but this in fact enhances the significance of the pattern. While we could argue that the composer's name was too well-known to need copying, the evidence actually suggests that the performance, and the style of the performer, were more significant to users of the MSS, as indicators of the quality or style of the music.

Conventionally, MSS – and especially composers' autographs – have been studied for what they contain, for the music, for the versions presented, and for any evidence of performance practice. Many details of MSS, however, tell us more about the status of music and musicians, about taste in book-making and collecting, and about types and levels of culture in different strata of society. The appearance of the MS, the ways in which it was constructed and copied, and the ancillary information it carries (rather than the actual notes) are thus central to the history of music within society. MS study, having developed ways of examining musical sources, as outlined above, is increasingly concerned with what a MS represents, as well as what its musical contents represent.

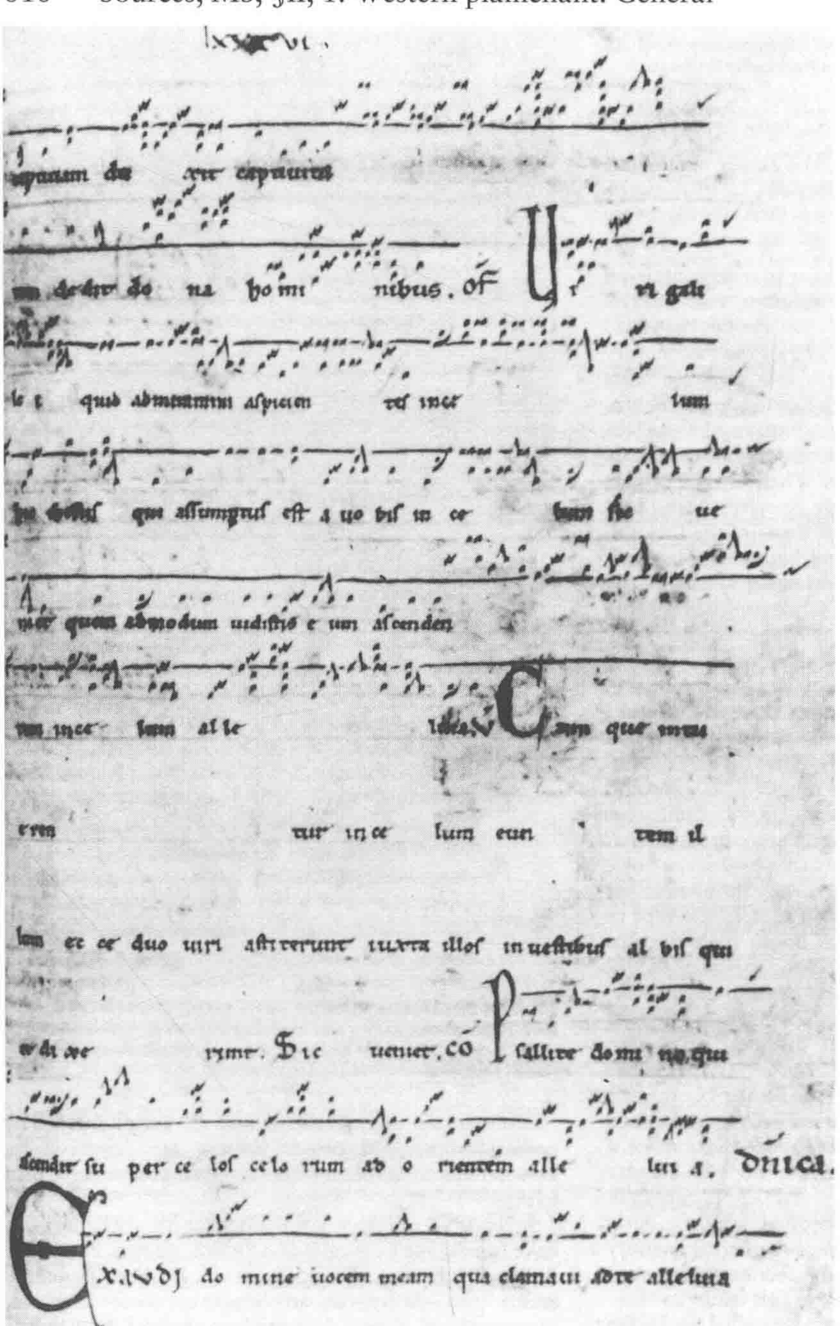
II. Western plainchant

1. General. 2. 9th and 10th centuries. 3. 11th century. 4. 11th–12th centuries. 5. 12th century. 6. 12th–13th centuries. 7. 13th century. 8. 14th, 15th and 16th centuries. 9. Mozarabic chant. 10. Old Roman chant.

1. GENERAL. The earliest plainchant sources containing a substantial number of notated melodies, such as *CH-SGs* 359, *F-LA* 239, *CHRm* 47 and *Pn* lat.1154 and 1240, are usually dated from the end of the 9th century to about 925. Beyond this, only a few scattered texts accompanied with neumes can be dated with relative certainty before the year 890. Distribution of the 10th- and 11th-century plainchant sources throughout medieval Europe follows a general pattern. These fragile books, which became obsolete so quickly, survive most abundantly from those politically stable areas of the Carolingian and Ottonian Empires where humanistic learning and well-established religious communities flourished. By the beginning of the 17th century, when copies of cheaply printed liturgical books conforming to the reforms of the Council of Trent were readily available, the scribal art of laboriously copying them by hand had nearly ceased. Since no modern census of these medieval chant books has ever been undertaken, there is no accurate information on the number of actual physical volumes that are extant. It can be estimated indirectly from the holdings of several large microfilm archives and a survey of library catalogues that probably well over 1800 can be accounted for that date from before the early 1600s.



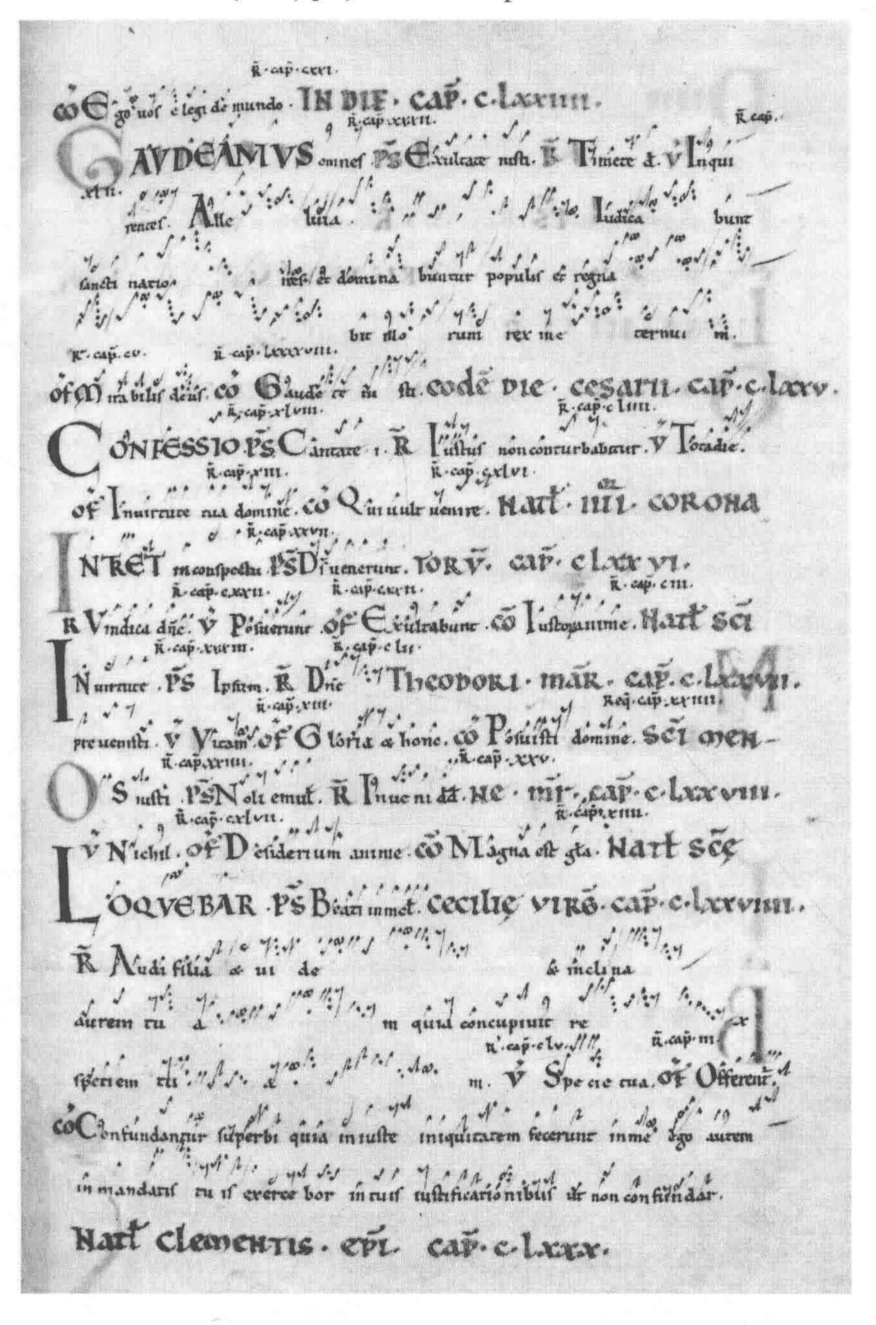
Plainchant sources can be conveniently grouped either by the nature of their liturgical content or by the type of their musical notations. Liturgical books from western Europe, whether notated or not, belong to one of the six major liturgical rites: Ambrosian, Beneventan, Celtic, Gallican, Mozarabic and Roman. The ancient 7th- and 8th-century Celtic and Gallican liturgies have been transmitted in such non-musical sources as the Stowe Missal, the Antiphoner of Bangor, the Book of Cerne, the *Missale gothicum*, the 'Mone Masses' and several dozen lesser fragments (cited by Gamber, 1963). Except for a few antiphons and Preces occurring in 11th-century Roman books, nothing is known directly of this music. In contrast, the notated sources identified with the early Ambrosian and Mozarabic rites exist in sufficient quantity for their musical repertories to be reconstructed with reasonable accuracy. Comprehensive lists of these Milanese and Spanish sources have been compiled by Huglo and Pinell. No complete sources of Beneventan chant have survived, only fragments of lost books. Further items of Beneventan chant were copied alongside Gregorian pieces in books following the Roman rite.

The great majority of medieval chant books belong to the Roman rite – a remarkably uniform and resilient liturgy considering the diversity of religious devotions that prospered within its general framework. About 80 notated sources are available in modern photographic editions; 17 of these appear in the series Paléographie Musicale. Basic information on nearly 750 Mass chant books has been published by the monks of Solesmes in *Le graduel romain*, ii: *Les sources* (1957). In his indispensable *Antiphonale missarum sextuplex* and *Corpus antiphonalium officii*, Hesbert prepared comparative textual editions of six early graduals and 12 antiphoners. The earliest troper and proser sources are described by Husmann, and Stäblein edited selected sources of Office hymns.

13. Paris, Bibliothèque Mazarine, 384 (748), f.185v, 11th century: table of antiphons, psalms and responsories from the monastic Office of St Cucufas (25 July) in an antiphoner without notation from St Denis, Paris

Inventories of important plainchant library collections have been made by Anglès and Subirá, Arnese, Bannister, Bernard, Van Dijk, Frere, Gottwald, Hesbert, Jammers, Stenzl and others. In an important new initiative, inventories of nearly 40 antiphoners have been made available in machine-readable and -sortable form in the project CANTUS directed by Ruth Steiner, and several of them have been published in print. Concise information on many hundred sources is encoded by Hughes (1994–6). As a result of the spate of recent research into tropes, much information on trope sources is to be found in the publications particularly of Planchart (1977) and the volumes of the series Corpus Troporum (*see* TROPE (i)). Useful but rare are lists of sources from particular churches or dioceses, such as those compiled by Hesbert (1955–6) and Villetard (1956). A catalogue of manuscript processionals by Huglo is being published.

The second method commonly used in grouping plainchant sources is their division into categories according to the type of musical notation. Depending on the



14. Brussels, Bibliothèque Royale Albert Ier, II 3823 (Fétis 1172), f.86, early 12th century: 'Viri Galilaei quid admiramini', offertory for the Mass of Ascension Day without verse melody in a Cluniac gradual from the Auvergne

criteria applied, some 12 to 15 notational families have been clearly identified, each corresponding to a local geographical zone in Europe. Certain groups, such as the Aquitanian, Beneventan and Mozarabic families, display such highly characteristic neumes that classification of these sources poses few problems. On the other hand, the wide variety of hybrid graphic forms used by notators in central and northern Italy greatly complicates their grouping.

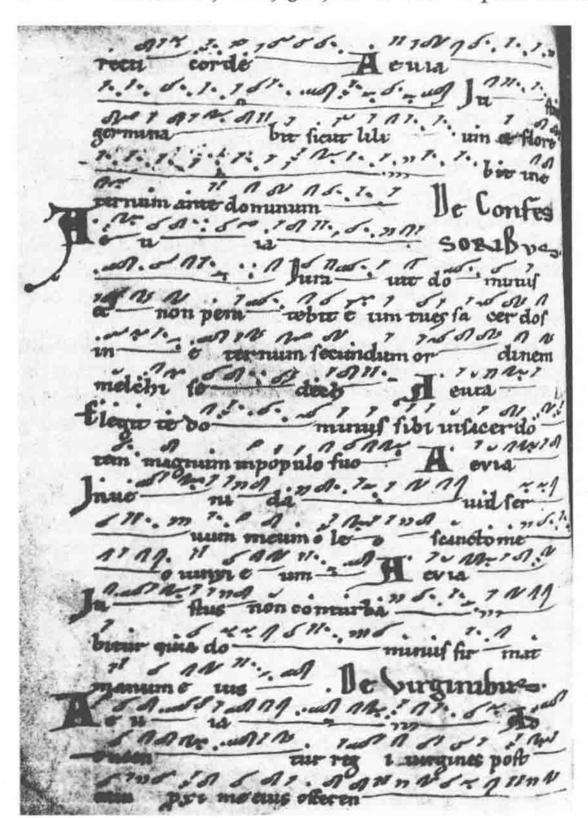
While all the MSS belonging to a given notational family can be established with relative ease, the task of dating a single MS strictly on the basis of its notation is usually very difficult. A great deal of palaeographical research remains to be done in documenting the metamorphosis from the earliest 10th-century neume forms within each notational family to the point where they evolved into the highly stylized semi-quadratic and square forms that were in wide use by the mid-13th century. Until such processes are understood much more fully, many sources will remain poorly dated. (*See also* NOTATION, §III.)

Chant books were functional compilations of religious song designed to embellish the solemnity of a recited liturgy and to meet the needs of specific local customs and observances. Most sources, therefore, faithfully preserve a central core of liturgical and musical practice common to the rite as a whole, but are notable for the variety of their internal structure – a phenomenon totally obscured

15. London, British Library, Eg.857, f.50 (early 12th century): numbered Masses 174–80 for the feasts of All Saints (1 November) to St Clement (23 November) in a gradual from Noyon

in modern printed books. Based on content, there are several general categories of plainchant sources. The standard Mass books are the gradual and notated missal (fig.17). The Office books include the antiphoner and its counterpart, the notated breviary with psalter and hymnal. Some important early sources consist of no more than lists of the chants to be sung (fig.13). A few early books include only those portions of mass chants sung by a soloist (the verses of graduals and alleluias, tracts and sometimes also the verses of offertories), and such a book is often referred to as a cantatorium (see fig.19 below). Medieval festal liturgies were often made more solemn by the addition of supplementary chants such as sequences and tropes (including prosulas). (The older term 'paraliturgical' for such chants is best avoided, since they were no less liturgical than any others.) Since these were also primarily for solo performance, the term cantatorium is sometimes applied to collections of them. But the term troper is more usual. A collection of sequences is referred to as a sequentiary. (A distinction is sometimes made between the sequentiary, with sequence melodies alone, and proser, with sequence texts or proses.) From the 12th century onwards Mass Ordinary chants (some troped) were often gathered together with sequences, and these collections too are sometimes called tropers, although tropes occupy only a minor part of them. A late term for a collection of Mass Ordinary chants was the kyriale. Processional chants are often integrated into the gradual,

16. Oxford, Bodleian Library, Canon. liturg.297 (19395), f.189, 12th century: Office of St Nicholas (6 December) with full antiphon, invitatory lesson, oration and responsory texts and melodies in a notated monastic breviary from St Felicitas, Schwarzach, Austria



17. Rome, Biblioteca Apostolica Vaticana, vat.lat.7231, f.49v, 12th–13th centuries: 'Qui cum unigenite Filio tuo', preface for the Mass of Trinity Sunday in a notated votive missal from the region of Benevento and Monte Cassino

or sometimes gathered together in their own book, the processional. To these types of chant book may be added the tonary, a reference work typically establishing the mode of antiphons and the recitation tone and cadence of the psalms they framed. (*See* LITURGY AND LITURGICAL BOOKS, §II; see also Hughes, 1982, Huglo, 1988, Hiley, 1993, pp.287–339.)

In practice, elements from these various classes of chant book were brought together into single volumes in nearly every combination by their scribes and notators. Examples of regular antiphoners are *F-Pn* lat.12044 and *D-BAs* Liturg.23 (both 12th century). The former adheres to the monastic cursus of 12-respond Offices and the latter displays the characteristic secular Office of nine responds. The Oxford MS *GB-Ob* Canon.liturg.297 (12th century; fig.16) is a typical notated breviary with a Calendar and computus. In this type of book the notated chants of the antiphoner are fused with the recited texts of the Office breviary. Among the notated Mass books *GB-Lbl* Eg.857 (12th century; fig.15) is a gradual in the conservative tradition of the sacramentary with numbered Masses. Considerably more elaborate is *F-Pn* lat.903 (11th century), a gradual from St Yrieix near Limoges containing a series of prosulas, processional antiphons, Proper tropes, Ordinary tropes and a substantial number of *prosae*. *I-Rc* 1907 (11th–12th centuries) presents an interesting case where the Offices of the antiphoner and the Masses of the gradual are combined into one integrated liturgical cycle. *F-Pn* n.a.lat.495 (12th century) is a neatly organized collection of tropes and *prosae*. In contrast the highly complex troper, tonary, sequentiary and proser *Pn* lat.1084 (10th century) is further complicated by many additions in different hands. *GB-Lbl* Add.19768 (10th century) is representative of a certain class of plainchant source in that two entirely distinct prosers have been artificially bound together by a bookbinder.

Despite the heterogeneous nature of most plainchant books, a rather uniform bibliographical description of the individual MSS can be made once certain distinctive liturgical features are recognized. The winter and spring *Temporale* (temp.), which is often combined with the feasts for the *Sanctorale* (sanc.) from December to May, usually terminates with either Whit Saturday, Trinity Sunday or the Sunday within the Octave of Pentecost. Easter Sunday marks the liturgical apex of this first part of the liturgical year. It is then usual for the summer sanctoral to follow; this commences with the feast of St Marcellinus and St Peter (2 June), or in the case of the Office books with the feast of St John the Baptist (24 June), and terminates with one of several feasts – St Andrew (30 November), St Lucy (13 December) or St Thomas the Apostle (21 December). The 23 to 26 Sundays after Pentecost and the summer histories in the Office books form easily identifiable sections, except in some sources, particularly from Italy, where they are positioned individually among the summer sanctoral feasts. The Masses and Offices for Trinity, Dedication of a Church, and the Dead often served as clear division points between major sections of the liturgical year and are most helpful in clarifying the overall structure of the book. Like the summer *Sanctorale* and the Sundays after Pentecost, the Common of the Saints was an independent and movable division. Among the German sources, the Common was frequently reduced to a series of alleluias only (see fig.18 below). Many sources often concluded with votive feasts and prayers. These liturgical formulae, which generally lack melodies, are closely related to the special services found in the bishop's ordinal, the pontifical. There are few liturgical MSS that do not have missing or added leaves, erasures, changes of textual and notational hands, marginal additions or excisions and supplementary sections. The so-called 'supplement' is an unpredictable and often unusually interesting mélange of chants, prayers or rubrics, frequently added by several late hands, and it can appear almost anywhere in a book. Sometimes it is possible to detect a structured order to the 'supplement', but it is not uncommon to find a group of more or less optional chants, as, for example, in *F-Pn* lat.1240, ff.78*v*–90*v* (10th century).

In the descriptions of representative plainchant sources given below (based for the most part on data gathered from microfilms), each citation includes a general title for the MS and the basic physical information on number of folios, size, date and type of musical notation. Among the Mass books, a note is made of whether the offertories have verses or not (fig.14); recognition of this fact can often serve as a useful clue for dating the MS, since during the period 1075–1150 there was a strong trend towards abandoning these verses. Finally, the general contents of each source are given and the descriptions conclude with a selective bibliography of secondary sources. (Items that

18. *Vienna, Österreichische Nationalbibliothek, Vind.1909, f.64v, 12th–13th centuries: a Common of the Saints typical of German usage (alleluia series only) in a gradual from Admont*

appear in the main bibliography are cited in abbreviated form.)

2. 9TH AND 10TH CENTURIES.

Bamberg, Staatsbibliothek, Liturg.6 (Ed.III.7). Gradual and proser from St Emmeram, Regensburg; late 10th century. 98 ff.; 29·2 × 24·4 cm. German neumes with significative letters. Offertories with verses.

Ff.1–51*v*: winter and spring temp. and sanc. from Advent I to Whit Saturday (Easter, 40*v*); 52–62: summer sanc. from St Marcellinus and St Peter (2 June) to St Andrew (30 Nov); 62–62*v*: Trinity; 62*v*–69: Sundays after Pentecost; 69–70*v*: alleluias for Sundays after Pentecost; 70*v*–72: Common (alleluias only); 73–89: *prosae* (texts only) with sequences in the margins; 89*v*–98*v*: processional antiphons, *Laudes regiae*, selected Proper and Ordinary tropes, versus etc.

3. 11th century.

Apt, Basilique Ste Anne, 17. Troper and Lives of St Basilius and St Babylas from Apt; 11th century. 380 pp.; 22·7 × 16 cm. Diastematic Aquitanian notation without lines. Offertories with verses. The liturgical year is made up of major feasts only, and the typical Mass contains *prosae*, prosulas and troped introits, Kyries, Glorias, Sanctus and Agnus.

Pp.1–13, 121–4 and 359–67: Life of St Basilius (1 Jan); 367–79: Life of St Babylas (24 Jan); 13–120: major Masses from the first Mass of Christmas to the Purification (2 Feb); 126–58: Easter; 158–224: Easter ferials up to Pentecost Sunday; 225–347: 11 Masses for the summer sanc. from St John the Baptist (24 June) to St Andrew (30 Nov) including St Castoris, Bishop of Apt (21 Sept, 285–302); 349–56: Trinity; 356–8: troped *Benedicamus* and Ite settings.

G. Björkvall: *Les deux tropaires d'Apt, mss. 17 et 18* (Stockholm, 1986); G. Björkvall: 'La relation entre les deux tropaires d'Apt', *La tradizione dei tropi liturgici: Paris 1985 and Perugia 1987*, 207–25

Apt, Basilique Ste Anne, 18. Troper, perhaps from northern Italy; 11th century. 106 ff.; 22·5 × 15·3 cm. Perhaps northern Italian neumatic notation (additions in Aquitanian notation ff.33*v*, 79, 79*v*, 87*v*, 88, 88*v*). Offertories with verses. The liturgical year is made up of major feasts only, and a typical mass contains *prosae*, prosulas and troped introits, Kyries, Glorias, Sanctus and Agnus.

Ff.1–1*v*: troped Gloria *Laus tibi, Domine, celsa potestas* (see *I-VEcap* CVII, f.44) and Sanctus *Dulcis est cantica melliflua*; 1*v*–2*v*: 9 Office responsories and a troped introit for the Dedication of a Church; 3–58: major Masses for the winter–spring temp. and sanc. from the first Mass of Christmas to Pentecost (*Quem queritis*, 33*v*; Easter, 34); 58–84*v*: 8 Masses for the summer sanc. from St John the Baptist (24 June) to St Andrew (30 Nov); 84*v*–92: Common, Trinity, Holy Cross and Sundays I–III of Advent; 92–95: 6 *prosae*, partly notated; 95*v*–106: prosulas; 106*r*–*v*: *prosa Stetit Michael patrono* etc.

G. Björkvall: *Les deux tropaires d'Apt, mss. 17 et 18* (Stockholm, 1986); G. Björkvall: 'La relation entre les deux tropaires d'Apt', *La tradizione dei tropi liturgici: Paris 1985 and Perugia 1987*, 207–25

Bamberg, Staatsbibliothek, Liturg.5 (*Ed.V.9*). Troper, proser, offertoriale and tonary from Reichenau; dated 1001. 198 ff.; 19·3 × 14·6 cm. German neumes with significative letters.

Ff.4*v*–27: tonary with a lengthy list of Office and Mass incipits; 27*v*: Notker's letter defining significative letters; 29–63: Proper and Ordinary tropes; 66–161: notated *prosae* with sequences in the margins; 163–186*v*: offertory verses; 187–188: tonary with a brief list of offertory and communion verses; 188–196: introit psalm verses and *ad repetendum* verses (texts only).

Le graduel romain, ii (1957), 30; Froger (1962), 23–72; RISM, B/V/1 (1964), 58; Jammers (1965), 82; Rönnau (1967), 44; Huglo (1971), 37; Hoffmann (1986), 311

Bamberg, Staatsbibliothek, Liturg.7 (*A.II.54*) ('Cantatorium des heiligen Heinrich'). From Seeon (Upper Bavaria); early 11th century (before 1024). 79 ff.; 26·6 × 11·1 cm. German neumes. Cantatorium contains introits, alleluias and tracts.

Ff.1–47: winter–spring temp. and sanc. from Advent I to Whit Saturday (Easter, 39); 47–57: summer sanc. from St Marcellinus and St Peter (2 June) to St Andrew (30 Nov); 57–57*v*: Trinity; 58–61: graduals for Sundays after Pentecost; 61–69*v*: alleluias primarily for Sundays after Pentecost and the Common; 72–76: Easter antiphons; 76*v*–78: *Laudes regiae*.

Le graduel romain, ii (1957), 30

Bamberg, Staatsbibliothek, Liturg.8 (*A.II.55*) ('Cantatorium der heiligen Kunigunde'). Probably from Seeon (Upper Bavaria); early 11th century. 63 ff.; 27·7 × 10·9 cm. German neumes. Cantatorium contains graduals, alleluias and tracts.

Ff.1*v*–41: winter–spring temp. and sanc. from Advent I to Whit Saturday (Easter, 37); 41–49: summer sanc. from St Marcellinus and St Peter (2 June) to St Andrew (30 Nov); 49*r*–*v*: Trinity; 49*v*–52: graduals for Sundays after Pentecost; 52–61*v*: alleluias for Sundays after Pentecost and the Common.

Le graduel romain, ii (1957), 30

Benevento, Biblioteca Capitolare, 38. Gradual with tropes, *prosae*, prosulas and kyriale from Benevento; 11th century. 171 ff. Beneventan diastematic notation with added lines and clefs. Offertories with verses. Beginning of MS lacking.

Ff.1–101*v*: winter–spring temp. and sanc. beginning within the tract *De profundis* for Septuagesima Sunday to Whit Saturday (*Quem queritis*, 47*v*; Easter, 48); 101*v*–140*v*: summer sanc. from St Marcellinus and St Peter (2 June) to St Andrew (30 Nov); 140*v*–152: Sundays after Pentecost; 152–154*v*: several votive and Requiem Masses; 154*v*–165*v*: alleluias for the Sundays after Pentecost and the Common with *prosae* and prosulas; 165*v*–170: supplement consisting of a brief kyriale and a notated litany.

Le graduel romain, ii (1957), 32; Planchart (1994), xvii

Benevento, Biblioteca Capitolare, 39. Gradual with tropes, *prosae* and prosulas from Benevento; end of 11th century. 195 ff. Beneventan notation with red F and yellow C lines. Offertories with verses. Beginning and end of MS lacking.

Ff.1–13*v*: Rogation antiphons beginning within *Libera, Domine, populum tuum de manu*; 14–104: spring temp. and sanc. from Monday of the fifth week of Lent to Whit Saturday (*Quem queritis*, 28; Easter, 29*v*); 104–179: summer sanc. from St Marcellinus and St Peter (2 June) to St Andrew (30 Nov); 179*v*–190: Sundays after Pentecost; 190–195: several votive Masses and Masses of the Dead; 195*r–v*: alleluias for the Sundays after Pentecost (inc.).

Le graduel romain, ii (1957), 33; Planchart (1994), xvii

Benevento, Biblioteca Capitolare, 40. Gradual with tropes, *prosae* and prosulas from Benevento; 11th century. 165 ff. Beneventan notation without lines or clefs. Offertories with verses. Beginning and end of MS lacking.

Ff.1–82v: spring temp. and sanc. beginning within the verse of the introit *Judica, Domine, nocentes me* for the Monday after Palm Sunday to Whit Saturday (*Quem queritis*, 20; Easter, 21); 82*v*–83: lacuna; 83–143: summer sanc. beginning within the Mass for St Vitus and Companions (15 June) to St Andrew (30 Nov); 143–153: Sundays after Pentecost; 153–157*v*: several votive Masses and Masses for the Dead; 157*v*–165*v*: alleluias for the Sundays after Pentecost with prosulas and *prosae* (inc.).

Le graduel romain, ii (1957), 33; N. Albarosa and A. Turco, eds.: *Benevento, Biblioteca Capitolare 40, Graduale* (Padua, 1991) [colour facs.]

Berkeley, University of California Music Library, 746 ('Wolffheim Antiphoner'). Fragment of a secular antiphoner from the region of Nevers; second half of 11th century. 59 ff.; 28 × 17·5 cm. French neumes on 4 black lines overlaid later with red semi-quadratic neumes. Beginning and end of MS missing.

Ff.1–46: winter–spring temp. and sanc. from Epiphany (6 Jan) to Trinity; 46–55*v*: histories; 55*v*–56: lacuna; 56–57*v*: Sundays after Pentecost (nos.15–25 only); 57*v*–59*v*: summer sanc. feasts of St John the Baptist (24 June) and St Peter and St Paul (29 June) only.

P. Wagner: 'Aus der Frühzeit des Liniensystems', *AMw*, viii (1926), 259–76; J. Emerson: 'The Recovery of the Wolffheim Antiphonal', *AnnM*, vi (1958–63), 69–97

Berlin, Staatsbibliothek zu Berlin Preussischer Kulturbesitz, Mus.ms.40047. Secular antiphoner of the canonesses of the collegiate church of St Servatius, Quedlinburg; 11th century. 144 ff.; 25 ×19 cm. German neumes with significative letters.

Metz, Bibliothèque Municipale (*now Médiathèque*), *452*. Troper, proser and tonary from the Cathedral of St Etienne, Metz; early 12th century. 92 ff. Lorraine (Messine) neumatic notation. MS destroyed during World War II; microfilm copy at the abbey of Solesmes, France.

Ff.1*v*–41*v*: major masses of the liturgical year containing introit, Kyrie, Gloria, offertory, Sanctus and Agnus tropes; 41*v*–47*v*: procession antiphons; 48–91*v*: *prosae* (mostly texts) with sequentias in the outer margins; 91*v*–92: mnemonic formulae of the 8 tones 'Primus ut exsurge' (see Huglo, 1971, p.320); 92*r*–*v*: noted Gloria without tropes (added).

RISM, B/V/1 (1964), 108

Munich, Bayerische Staatsbibliothek, Clm 7905. Cistercian gradual from Kaisheim; dated before 1185. 184 ff. German *Hufnagel* notation on 4 lines. Offertories lack verses.

Ff.1–87*v*: winter–spring temp. from Advent I to Whit Saturday (Easter, 66*v*); 87*v*–88*v*: Trinity; 88*v*–110*v*: Sundays after Pentecost; 110*v*–162*v*: sanc. from St Stephen (26 Dec) to St Thomas (21 Dec); 162*v*–163: brief Common; 163–164: Dedication; 164–165*v*: Requiem; 165*v*–169*v*: votives; 169*v*–173*v*: kyriale; 173*v*–175*bis*: *Pater de caelis* litany; 175*bis v*: Ites; 176–178*v*: processional antiphons; 178*v*–181*v*: hymns; 181*v*–183*v*: added material.

Le graduel romain, ii (1957), 79

Naples, Biblioteca Nazionale Vittorio Emanuele III, VI-G-34. Processional, kyriale and proser from Troia, nr Foggia; late 12th century. 139 ff.; 21 × 15 cm. Late Beneventan notation with red F and yellow C lines.

Ff.1–12*v*: processional antiphons and responds (inc.) from *Letania majore* to the Finding of the Holy Cross (3 May); 12*v*–31*v*: Kyrie tropes; 31*v*–39: Gloria tropes; 39–72*v*: troped epistles; 72*v*–88*v*: *Liber generationis*, *Exultet*, Preface and alleluias; 88*v*–139*v*: proser (beginning lacking).

RISM, B/V/1 (1964), 175; Arnese (1967), 146

Oxford, Bodleian Library, Canon. liturg.202 (*19314*). Secular antiphoner with rubrics from Austria, later at S Pietro, Carnia, nr Udine; 12th century. 150 ff.; 25·3 × 17·8 cm. German neumes.

F.1*v*: date of 1361 (added); 1*v*–90: winter–spring temp. and sanc. from Advent I to Trinity (Easter, 72); 90*v*–121*v*: St John the Baptist (24 June) to St Andrew (30 Nov); 121*v*–129: Common; 129–131: Dedication; 131–139*v*: histories; 139*v*–142: Sundays after Pentecost; 142–148*v*: inc. hymnal (texts only).

Frere, i (1901), 30; Flotzinger (1991), 67

Oxford, Bodleian Library, Canon. liturg.297 (*19395*). Notated monastic breviary from St Felicitas, Schwarzach, Austria; after 1154. 352 ff.; 21·5 × 15 cm. German neumes (fig.16).

Ff.3–9: Calendar and computus; 11–142: winter–spring temp. from Advent I to Trinity (Easter, 110*v*); 142–171: histories; 171–188: Sundays after Pentecost, sanc. from St Nicholas (6 Dec) to St Andrew (30 Nov) and St Damasus (11 Dec); 262*v*–297: Common; 297–301: Dedication; 302–315: hymnal with few melodies; 315–327: *ad cantica* canticles, litanies, collects, hymns and Offices for the dead; 329–352*v*: ferial psalter.

Frere, i (1901), 34

Oxford, Bodleian Library, Canon. liturg.321 (*19410*). Notated votive missal and monastic breviary (Common of the Saints only) from Ravenna; 12th century. 129 ff.; 23·1 × 16·1 cm. Beneventan notation with red line and letter clefs.

Missal, ff.3–94*v*. Ff.3–13*v*: baptism services (inc. at beginning); 13*v*–37: ordo for the sick and the dead including litanies, Office and Masses etc.; 37–41*v*: ordo missae including vesting prayers, Ordinary, Preface and Canon; 41*v*–43: Trinity Mass; 43–47*v*: votive weekday ferial Masses; 47*v*–59: votives (texts only); 59–66*v*: Blessing of Candle service for Holy Saturday; 66*v*–94*v*: notated Masses *Puer natus est* for Christmas, Epiphany, Easter, Ascension, Pentecost, Common and Dedication. Breviary, ff.94*v*–129*v*. Ff.94*v*–110: Common and Dedication hymns, collects, lessons and gospels (texts only); 110–129: Common and Dedication, notated antiphons and responds.

Frere, i (1901), 112

Oxford, Bodleian Library, Canon. liturg.341 (*19427*). Gradual with kyriale, *prosae* and tropes from Innichen (now San Candido), South

Tyrol; 12th century. 62 ff.; 25·8 × 18·3 cm. German neumes. Offertories lack verses.

Ff.1–30*v*: winter–spring temp. and sanc. from Advent I to Whit Saturday (Easter, 23); 30*v*–32*v*: summer sanc. (inc.) from St Marcellinus and St Peter (2 June) to St Peter (29 June); 33–38: Sundays after Pentecost (complete); 38–39*v*: Common (alleluias only); 40*r*–*v*: kyriale (group I); 41–58*v*: proser with little notation; 59–60: introit tropes for major feasts; 60–61: kyriale (group II); 61*v*–62*v*: additions.

Frere, i (1901), 74; Flotzinger (1991), 73

Oxford, Bodleian Library, Canon. liturg.350 (19436). Notated missal from north Italy, probably S Martino, Beligna, nr Aquileia; 12th century. 243 ff.; 28·5 × 20·4 cm. German neumes. Offertories lack verses.

Ff.1–135: winter–spring temp. and sanc. from the Christmas Mass *Dominus dixit* to the Sunday within the Octave of Pentecost (Easter, 106); 135–172*v*: summer sanc. from St Nicomedes (1 June) to St Andrew (30 Nov); 172*v*–174: Dedication; 174*v*–210*v*: Sundays after Pentecost; 211–220: Common; 220: Holy Cross; 220*v*–221*v*: Trinity; 221*v*–230: votives; 230–233*v*: Requiem Masses; 234–237*v*: Blessing of the Candle on Holy Saturday; 238–242*v*: elements from the Offices of the BVM, the Trinity and St Michael.

Frere, i (1901), 73; Flotzinger (1991), 87

Oxford, Bodleian Library, Rawl.C.892 (12726). Gradual, possibly for use in the Benedictine monastery of Downpatrick, Northern Ireland (see Turner); second half of 12th century. 149 ff.; 22·8 × 15·6 cm. Anglo-Norman notation on brown, red, green, blue etc. lines. Offertories lack verses.

Ff.1–86*v*: winter–spring temp. Advent I to Trinity (Easter, 68*v*); 87–97: Sundays after Pentecost; 97*v*–101*v*: Sundays after Pentecost, alleluias; 101*v*–125: sanc. from St Sylvester (31 Dec) to St Thomas (21 Dec); 125–126: Dedication; 126–47: Common; 147*v*–149: Requiem; 149*r*–*v*: troped Christmas Epistle, inc. (see AH, xlix, 1906, p.169).

Palermo, Archivio Storico Diocesano, 2. Notated missal (inc.) from Palermo, Sicily; dated after 1130. 112 ff.; 32·5 × 20 cm. Quadratic Norman-Sicilian notation. Beginning and end of MS missing.

Ff.1–71: winter–spring temp. from the Saturday after the second Sunday of Lent to the Sunday within the Octave of Pentecost (Easter, 57*v*); 71–96: Sundays after Pentecost; 96–112*v*: sanc. (inc.) from St Sylvester (31 Dec) to St Marcellinus and St Peter (2 June).

F. Terrizzi, ed.: *Missale Antiquum S. Panormitanae Ecclesiae* (Rome, 1970) [edn of text only]; Hiley (1981)

Paris, Bibliothèque Nationale de France, lat.742. Notated monastic breviary (temp. vol.) from Ripoll; beginning of 12th century. 281 ff.; 24·5 × 15·3 cm. Aquitanian diastematic notation.

Ff.143, 144, 142: Advent I–III (folios bound out of order); f.1: Advent IV; 2–225*v*: Ember ferials in Advent to Pentecost (Easter, 165); 225*v*–226: lacuna; 226–279*v*: Sundays after Pentecost nos.2 to 22 only, with summer histories interspersed throughout; 280–281: Trinity Office (inc.).

Leroquais (1934), ii, 417; J. Lemarié: *Le bréviaire de Ripoll*, Scripta et documenta, xiv (Montserrat, 1965); J. Lemarié: 'Influence lyonnaise sur l'antiphonaire de l'office de St-Victor de Marseille', *Revue bénédictine*, lxxviii (1968), 138–45

Paris, Bibliothèque Nationale de France, lat.778. Troper and proser from Narbonne; 12th century. 220 ff.; 27·5 × 18 cm. Late Aquitanian notation on red and yellow lines.

Ff.1–8*v*: troped epistles; 9–23: troped Kyries arranged according to the 8 tones; 24–40*v*: Glorias and *Regnum* settings, troped; 41–199*v*: proser with about 135 *prosae*; 200–217: Sanctus and Agnus, troped; 217*v*–218*v*: *Laudes regiae*, names of Pope Gregory X (1271–6), Archbishop Petrus de Montbrun of Narbonne (1272–86) and King Philip of France (1270–85) added.

RISM, B/V/1 (1964), 113; H. Husmann: 'Notre Dame und Saint-Victor', *AcM*, xxxvi (1964), 191–221; Rönnau (1967), 31

Paris, Bibliothèque Nationale de France, lat.1139. *Prosae* (4 series), historical documents, *versus* and *Benedicamus* tropes (some polyphonic), medieval dramas, troped kyries and Marian Offices from the region of Limoges; early 12th and 13th centuries. 236 ff.; 18·5 × 14 cm. Late Aquitanian notation by several notators.

Ff.2–8*v* and 10–20*v* (early 12th century): *prosae* (series I); 21–31*v* and 229–236*v* (early 13th century): historical chronicles of Limoges (ed. in Duplès-Agier); 32–79 (early 12th century; ff.40–47 in another hand): primarily *versus* and *Benedicamus* tropes (some polyphonic) with a *Sponsus* drama (53–55*v*), Procession of the Prophets drama (55*v*–58) and troped epistles (63–73*v*); 80–108*v* (dated *c*1100): 16 *prosae* (series II); 108*v*–116 (same period): troped Kyries; 119–148*v* (13th century): Marian Office and ferials (partly ed. in AH, xlv, 1904, p.23); 149–201 (12th–13th centuries): 37 *prosae* (series III); 202*v*–209: Marian Office; 209*v*–228*v* (13th century): 14 *prosae* (series IV). The number of polyphonic items (all for 2vv) is disputed, since several pieces are recorded in successive notation, and because of the absence of clefs it is not always clear when parts are intended to be combined in polyphony. Fuller's (1971) estimate of 11 pieces is reasonable.

H. Duplès-Agier: *Chroniques de Saint-Martial de Limoges* (Paris, 1874); Young (1933), ii, 109, 138, 361, 456; *Catalogue général*, i (1939), 415; S. Bamberg, Staatsbibliothek, Liturg.25 (Ed.IV.11). Secular antiphoner from Bamberg; 13th century. 151 ff.; 24·5 × 17 cm. German notation with F and C lines.

Ff.1–71*v*: winter–spring temp. and sanc. from Advent I to Trinity (Easter, 55*v*); 71*v*–110*v*: summer sanc. from St John the Baptist (24 June) to St Nicholas (6 Dec); 110*v*–122: Common; 122–125: Dedication; 125–139: histories; 139–144*v*: Sundays after Pentecost; 144*v*–146*v*: Office of the Dead; 146*v*–151*v*: *Venite* settings.

CANTUS database

Bamberg, Staatsbibliothek, Liturg.26 (Ed.IV.2). Secular antiphoner from Bamberg; 13th century. 128 ff.; 26·7 × 21·4 cm. German neumes.

Ff.1–61: winter–spring temp. and sanc. from Advent I to the Sunday within the Octave of Pentecost; 61–92*v*: summer sanc. from St John the Baptist (24 June) to St Andrew (30 Nov); 92*v*–98*v*: Common; 98*v*–100: Dedication; 100–102: Trinity; 102–110: histories; 110–113: Sundays after Pentecost; 113–116*v*: *Venite* settings; 116*v*–117*v*: Office of the Dead; 118*v*–119*v*: Tonary of Henricus of Augsburg; 120–125: hymns (texts only); 126*v*–128: Office of St Kunigunde, notated.

Huglo (1971), 281

Berkeley, University of California Music Library, 752. Rubricated and notated Camaldolese breviary (temp. vol.) from Camaldoli; end of 13th century (before 1292). 340 ff.; 37·5 × 25 cm. Quadratic notation on 2 to 6 red lines. Original library shelf numbers: 'Sacri Eremi Camalduli W-126 and Q.V-3'. MS copied by Simon of Genoa (*d* 18 Sept 1292). Inserted between Ember Saturday in Advent and Christmas (ff.41*v*–45*v*) are a sermon of St Augustine, a litany, a tract by St Bernard and an extended series of ordines.

Ff.1–2*v*: ferial psalter (beginning lacking); 3–4*v*: Camaldolese Calendar; 5–257: winter–spring temp. from Advent I to Whit Saturday (Easter, 215*v*); 257*v*–328*v*: Sundays after Pentecost; 329–335*v*: Trinity; 336–340*v*: supplement of Marian prayers: 'Ave' psalters, litany, orations, *prosae*, Office (texts only).

Brussels, Bibliothèque Royale Albert Ier, II 3824 (Fétis 1173). Gradual with *prosae* and kyriale from St Bénigne, Dijon; mid-13th century. 296 ff. Quadratic notation on 4 red lines. Offertories without verses. A typical festal Mass includes Kyrie and Gloria incipits and a complete *prosa*.

Ff.1–139: winter temp. from Advent I to Trinity (Easter, 91*v*); (duplicate nos. for ff.130–39); 139–161*v*: Sundays after Pentecost; 164–223: sanc. from St Stephen (26 Dec) to St Lucy (13 Dec); 223–225*v*: Dedication; 226–265: Common; 265–278*v*: kyriale; 278*v*–284*v*: processional antiphons; 284*v*–296*v*: prosae.

Le graduel romain, ii (1957), 38

Brussels, Bibliothèque Royale Royale Albert Ier, 19389 (Cat.429). Notated missal with *prosae* from St Martin, Quesnast, nr Brussels; 13th century. 193 ff.; 30 × 20 cm. Messine notation on 4 black lines. Offertories lack verses.

Ff.4–14*v*: Calendar with obituaries; 18–82*v*: winter temp. from Advent I to Holy Saturday; 83–87: Prefaces and Canon (added 14th century); 87–108: Easter to Trinity; 108–129*v*: Sundays after Pentecost; 130–147: Common; 147–170*v*: sanc. from St Lucy (13 Dec) to St Thomas (21 Dec); 170*v*–171*v*: Dedication; 172–173: Marian Mass *Salve sancta parens*; 174*v*–175: Requiem; 175–177*v*: votives; 178–193*v*: proser (texts only, added 14th century).

Cambridge, University Library, Mm.2.9 ('Barnwell Antiphoner'). Rubricated Sarum antiphoner (inc.) probably from the house of Augustinian canons at Barnwell, England; 13th century. 302 ff.; 34 × 24 cm. Early English quadratic notation on 4 lines. Perhaps the first 4 gatherings of the MS are lacking.

Ff.1–98: winter temp. from the Monday after the Octave of Epiphany to Trinity (Easter, 68); 98–116*v*: histories; 116*v*–121*v*: Sundays after Pentecost; 123–267: sanc. from St Andrew (30 Nov) to St Cecilia (22 Nov); 267–284*v*: Common; 285–291*v*: hymnal (inc.).

Central MS used in the preparation of the facs. *Antiphonale sarisburiense*, Plainsong and Mediaeval Music Society (London, 1901–25/*R*).

Frere, ii (1932), 79

Cologne, Erzbischöfliches Diözesan- und Dombibliothek, Bu 2. Notated Cistercian missal probably from the abbey of Altenberg; first half of 13th century. 293 ff.; 37 × 27 cm. German *Hufnagel* notation on 4 lines with red F and yellow C lines. Beginning of MS lacking.

Ff.4–116: winter temp. from Advent III: Feria VI to Vigil of Pentecost (Easter, 98*v*); 116*v*–123*v*: Prefaces, communicantes, kyriale, ordo missae; 124–127*v*: additions; 128–134*v*: Pentecost week ferials; 134*v*–162: Sundays after Pentecost; 162–163*v*: Dedication; 164–220: sanc. from St Stephen (26 Dec) to St Andrew (30 Nov); 220*v*–238*v*: Common; 239–41: Trinity; 241–263*v*: votives; 264–293*v*: tropes, *prosae* and hymns.

Hammer (1968), 71

Darmstadt, Hessische Landes- und Hochschulbibliothek, 871. Cantatorium from the colegiate church of St Kunibert, Cologne; dated *c*1250 (fig.19). 105 ff.; 26·5 × 10·3 cm. *Hufnagel* notation on 2 black, 1 red and 1 yellow lines. Most of the masses are composed only of notated gradual and alleluia verses intended to be sung by a soloist.

Ff.1*v*–3: bifolium from a contemporary processional MS containing a single antiphon for Advent I *Ecce karissimi dies illa iudicii*; 4–37: winter–spring temp. from Advent I to Thursday after Pentecost (Easter, 28*v*); 37*r–v*: Trinity; 37*v*–45: Sundays after Pentecost; 45–58: sanc. from St Lucy (13 Dec) to St Andrew (30 Nov) inclusive; 58–63: Common (alleluia verses only); 63*r–v*: Dedication; 63*v*–76*v*: Good Friday and Holy Saturday chants; 77–84: notated epistles and gospels; 84*v*–87: elements from an Easter play (copied twice); 87*v*: antiphon for St Cunibert *Pontifex Deo plenus Cunibertus*; 88–95*v*: full responds for Sunday processions from the Sunday after Epiphany to Passion Sunday; 96–103: notated epistles and gospels; 103*v*–104*v*: troped Sanctus *Genitor summi filii* and Agnus *Rex eterne glorie*.

Eizenhöfer and Knaus (1968), 59

Leipzig, Universitätsbibliothek, St Thomas 391 (formerly St Thomaskirche, 371). Tonary, gradual, kyriale and proser from St Thomaskirche, Leipzig. 8 parchment leaves, *a*[1]–*h*[8] (13th–14th centuries); 10 paper leaves, *i–s* (dated 1533), and 196 parchment

leaves (end of 13th century); 32 × 23 cm. Gothic notation (Messine-derived neumes) on 4 lines with red F and yellow C lines. Offertories for several major feasts still retain their verses. (Ff.1–137*v* published in facs. by Wagner and numbered pp.1–249.)

Tonary (ff.*a*[1]–*h*[8]); pp.2–153 (in Wagner edn) winter–spring temp. from Advent I to Whit Saturday (Easter, p.116); pp.153–4: Trinity; pp.154–5: Corpus Christi; pp.155–75: Sunday after Pentecost; pp.175–7: Dedication; pp.177–222: sanc. from St Lucy (13 Dec) to St Andrew (30 Nov); pp.222–4 (ff.124–5): Mass for the Dead *Si enim credimus*; pp.224–6 (ff.125–6): Marian Mass *Salve sancta parens*; pp.226–32 (ff.126–9): Common (alleluias only); pp.232–49 (ff.129–137*v*): kyriale; ff.138–186: notated proser containing 84 *prosae* (inc. at the beginning, starting within *Eia recolamus*); ff.186–190*v*: alleluias for the temp. and sanc.; ff.190*v*–191*v*: *Liber generationis*; ff.192–194: Mass ordines with some musical incipits; ff.194–196*v*: supplement including Fabrice prosulas and an abbreviated Credo in cantus fractus notation.

Paris, Bibliothèque Nationale de France, lat.1112. Notated missal with Calendar, kyriale and proser from Paris; early 13th century (*c*1225). 315 ff.; 20·9 × 14·6 cm. Quadratic notation on 4 red lines. Offertories without verses.

Ff.1–6*v*: Calendar; 9–102*v*: winter–spring temp. from Advent I to Holy Saturday; 103–105*v*: Preface and Canon; 105*v*–131*v*: Easter to Trinity; 131*v*–152: Sundays after Pentecost; 152–154: Dedication; 155–205*v*: sanc. from St Stephen (26 Dec) to St Thomas (21 Dec); 206–229: Common; 229–248: votives; 248*v*–256: notated processional antiphons and rogation litanies; 257–259*v*: Kyries and Glorias, with and without tropes; 259*v*–307*v*: 148 notated *prosae*; 307*v*–308*v*: troped Sanctus, Agnus and Ite settings; 309–310: *Laudes regiae*; 311–314*v*: Corpus Christi Mass with *prosa* (14th-century addition).

Leroquais (1924), ii, 47; *Le graduel romain*, ii (1957), 98

Paris, Bibliothèque Nationale de France, lat.14452. Gradual, kyriale and proser of Adam of St Victor, Paris; 13th century (suppl. dated 1567). 252 ff. Quadratic notation on 4 red lines. Offertories lack verses. Frequent rubrics in the margins. Sections of melismas are frequently encircled with ink in the gradual. The same sequence of alleluias for the Sundays after Pentecost is also found in *GB-Lbl* Add.38723, *F-Pa* 197, *Pn* lat.1112, *Psg* 93 and 1259, etc.

Ff.1–63: winter–spring temp. from Advent I to Whit Saturday (Easter, 48); 63–64: Trinity; 64–83*v*: Sundays after Pentecost; 83*v*–116*v*: sanc. from St Stephen (26 Dec) to St Thomas (21 Dec); 116*v*–133*v*: Common; 133*v*–134: Dedication; 134–139: 11 Kyries and 6 Glorias; 139–223*v*: proser of Adam of St Victor (ed. Misset and Aubry); 223*v*–248: supplement of *prosae* and Masses dated 1567.

E. Misset and P. Aubry: *Les proses d'Adam de Saint-Victor* (Paris, 1900/*R*); *Le graduel romain*, ii (1957), 107

Paris, Bibliothèque Ste Geneviève, 99 (*BB.1.fol.10*). Calendar, missal and gradual from Senlis; 13th century (Leroquais and *Le graduel romain*), 14th century (Bernard). 220 ff.; 27·1 × 20 cm. Small quadratic notation on 4 red lines. Offertories lack verses.

Ff.3–8*v*: Calendar; 9–144: missal (texts only). Gradual, ff.145–219*v*. Ff.145–190: winter–spring temp. from Advent I to Trinity (Easter, 180); 190–193*v*: Sundays 1–4, 20–23 after Pentecost (nos.5–19 are missing); 194–207*v*: sanc. from Vigil of St Andrew (29 Nov) to St Catherine (25 Nov); 207*v*–208: Dedication; 208*v*–219: Common; 219*r–v*: Requiem (different hand).

Leroquais (1924), ii, 60; *Le graduel romain*, ii (1957), 113; Bernard, i (1965), 59

Paris, Bibliothèque Ste Geneviève, 1259 (*BB.4°.11*). Calendar and notated missal with *prosae* from Ste Geneviève, Paris; first half of 13th century. 296 ff.; 24·8 × 15·1 cm. Small quadratic notation on 4 red lines. Offertories lack verses. *Prosae* for principal feasts are incorporated within the Mass Propers.

Ff.2–8*v*: Calendar; 9–14*v*: prayers and a *prosa* to Ste Geneviève (texts only); 15–136: winter–spring temp. (beginning missing) from Advent II to Trinity (Easter, 104*v*); 136–160*v*: Sundays after Pentecost; 161–178: Prefaces and Canon; 179*v*–228*v*: sanc. from St Stephen (26 Dec) to St Thomas (21 Dec); 228*v*–229*v*: Dedication; 229*v*–250*v*: Common; 250*v*–264*v*: votives and blessings; 265–268*v*: notated processional antiphons and Kyrie and Gloria incipits; 268*v*–296: episcopal blessings (texts only; 14th century).

Leroquais (1924), ii, 85; *Le graduel romain*, ii (1957), 113; Bernard, i (1965), 69

Rome, Biblioteca Apostolica Vaticana, Rossiani 76. Gradual and proser from Aquila; 13th century. 256 ff.; 16·5 × 10·8 cm. Quadratic notation on 4 lines. Offertories lack verses. Foliation nos. on verso side of leaf.

Ff.1–127: winter–spring temp. from Advent I to Trinity (Easter, 100); 127–144: Sundays after Pentecost; 144*v*–147: Masses for the Dead; 147*v*–190: sanc. from St Lucy (13 Dec) to St Nicholas (6 Dec); 190–192*v*: Marian Mass *Salve sancta parens* with *Spiritus et alme* troped Gloria; 192*v*–197*v*: Common (alleluias only); 198–207: 5 introit tropes and kyriale; 209–256*v*: notated proser.

Le graduel romain, ii (1957), 127; Salmon, ccliii (1969), 81

Rome, Biblioteca Casanatense, 410 (*A.II.25*). Franciscan psalter and hymnal probably from Italy; 13th–14th centuries. 30·2 × 21 cm. Large quadratic notation on 4 red lines.

Ff.1–4*v*: Calendar (May to Aug lacking); 6*v*–104: psalms with notated antiphons; 104*v*–114: cantica, Te Deum, Credo, Gloria, etc.; 114–117*v*: Rogation litanies and prayers; 118–157*v*: notated hymnal with special hymns to St Martin (156*v*–157*v*).

C.-A. Moberg: *Die liturgischen Hymnen in Schweden* (Copenhagen, 1947), 192; Stäblein (1956), 461, 553

Rome, Biblioteca Casanatense, 1695 (*C.V.2*). Notated missal from Paris; early 13th century. 279 ff.; 17·1 × 12·5 cm. Quadratic notation on 4 red lines. Offertories lack verses.

Ff.1–117*v*: winter–spring temp. from Advent I to Holy Saturday; 117*v*–121*v*: offertory prayers, Prefaces, Canon; 121*v*–153: Easter to Trinity; 153–174: Sundays after Pentecost; 175–178: *Liber generationis* (different hand); 179–224: sanc. from St Stephen (26 Dec) to St Thomas (21 Dec); 224–225: Dedication; 225–254: Common; 254–261: votives; 261–267*v*: services for the dead; 277–279*v*: Calendar.

Ebner (1896), 159; *Le graduel romain*, ii (1957), 121

Rome, S Sabina, Biblioteca della Curia Generalizia dei Domenicani, XIV, lit.1. A service book dated 1259–62 containing the entire Dominican liturgy in one volume based on the corrections ordered by Humbert of Romans, master-general of the Dominican order from 1254 to 1277. The codex consists of 14 sections and is considered the prototype of Dominican use. 997 ff.; 48 × 32 cm. Notated sections in quadratic notation on 4 red lines. (Cf *GB-Lbl* Add.23935.)

W.R. Bonniwell: *A History of the Dominican Liturgy* (New York, 1944), 85; *Le graduel romain*, ii (1957), 122; K. Levy: 'A Dominican Organum Duplum', *JAMS*, xxvii (1974), 183–211, esp. 185

Rouen, Bibliothèque Municipale, 248 (*A.339*). Monastic antiphoner (sanc. part) from Jumièges; 13th century. 178 ff.; 26 × 17·5 cm. Norman notation on 4 lines.

Ff.1–139*v*: sanc. (beginning of MS missing) from the Purification (2 Feb) to St Lucy (13 Dec); 140–171: Common; 173*v*–176: *Venite* settings; 176*v*–178*v*: hymnal (inc. at end).

Hesbert (1954), 29

Rouen, Bibliothèque Municipale, 251 (*A.393*). Notated breviary (summer part) from Fécamp; second half of 13th century. 206 ff.; 24 × 16·5 cm. Quadratic notation on 4 red lines.

Ff.3–44*v*: spring temp. from Easter to Trinity; 45–47*v*: Dedication; 47*v*–92*v*: Sundays after Pentecost; 94–206*v*: spring–summer sanc. (inc. at end) from the Annunciation (25 March) to St Martin (11 Nov).

Leroquais (1934), iv, 117

Stuttgart, Württembergische Landesbibliothek, HB.I.95. Cantionarium (anthology of *prosae*, tropes, conductus, etc.) and St Gregory's *Moralia*, from Weingarten; 13th century. 103 ff.; 12·5 × 10 cm. German neumes.

Part I, ff.4–65*v*. Ff.4–18*v*: the last portion of a proser; 18*v*–36*v*: conductus and metrical songs (*versus*, planctus, etc.); 36*v*–48*v*: kyriale (introit, Kyrie, epistle, Sanctus, Agnus and *Benedicamus* tropes); 48*v*–65*v*: miscellaneous section of alleluias, tropes, *prosae*, *versus*, votive masses, etc.. Part II, ff.65*v*–83*v*: miscellaneous section of a mixed character in different hands containing alleluias, *Benedicamus* and Agnus tropes, metrical poems, etc. Part III, ff.84–100*v*: St Gregory, *Moralia*, bk 5, chap.4.

RISM, B/V/1 (1964), 81; RISM, B/IV/1 (1966), 97; J. Autenrieth and others: *Die Handschriften der Württembergischen Landesbibliothek Stuttgart*, 2nd ser., i/1 (Wiesbaden, 1968), 171 [inventory]

Trier, Stadtbibliothek, 2254 (*2197*) ('Codex Peter Bohn'). Gradual, proser and kyriale, probably from Trier; 13th century. 384 pp. German *Hufnagel* notation on 4 lines, with red F line. Offertories with verses. The beginning of the MS is lacking and scattered pages are mutilated throughout.

Pp.1–149: winter–spring temp. from the Friday of the Fourth Week in Lent to Whit Saturday (Easter, 108); 149–80: Sundays after Pentecost; 181–2: Trinity; 183–5: Dedication; 185–255: sanc. from St Lucy (13 Dec) to St Andrew (30 Nov); 255–7: Marian Mass *Salve sancta parens*; 257–70: Common (alleluias only); 270–357: *prosae* (notated); 357–70: kyriale; 370–75: 2 Credos (notated); 375–84: supplement of mixed character.

Le graduel romain, ii (1957), 144

Utrecht, Universiteitsbibliotheck, 417 (*Eccl.325*). Proser, tropes and alleluias from the chapter church of St Mary, Utrecht; 13th century. 57 ff.; 27·5 × 21 cm. Dutch notation on 4 lines with letter C clef and a dot indicating an F clef.

Ff.1–40*v*: 76 *prosae*; 41–44: Common of the Saints (alleluias only); 44*v*–45*v*: introit tropes; 46–57: Ordinary chants, with and without tropes.

RISM, B/V/1 (1964), 189; N. de Goede, ed.: *The Utrecht Prosarium*, MMN, vi (1965) [study and transcr.]

Vercelli, Biblioteca Capitolare, 56. Notated missal, probably from Ivrea; 13th century. 248 ff.; 36·5 × 27·2 cm. North Italian notation with F and C lines. Offertories lack verses.

Ff.1–22*v*: elements of a cantatorium containing alleluias, tracts, processional antiphons, *prosae*, etc. (14th century); 23–109*v*: winter–spring temp. from Advent I to the Sunday within the Octave of Pentecost (Easter, 86*v*); 109*v*–130: Sundays after Pentecost; 130–131*v*: Trinity; 131*v*–132*v*: Dedication; 132*v*–137: vesting prayers, Ordinary of the Mass, Prefaces and Canon; 137–192*v*: sanc. from Vigil of St Andrew (29 Nov) to St Clement (23 Nov); 193–201*v*: Common; 201*v*–236*v*: votive Masses and blessings; 237–239*v*: Calendar; 241–248*v*: sacramentary fragment from Advent to Epiphany (bound incorrectly).

Le graduel romain, ii (1957), 149

Vienna, Österreichische Nationalbibliothek, Vind.1925. Gradual and proser from south Germany or Austria. 13th–14th centuries. 150 ff.; 18·8 × 14·3 cm. Messine notation on 4 lines.

Ff.5–14*v*: kyriale (addition); 15–78: winter–spring temp. from Advent I to Trinity (Easter, 66); 78–89: Sundays after Pentecost; 89–90: Dedication; 90–115: sanc. from St Nicholas (6 Dec) to St Andrew (30 Nov); 115*v*–117*v*: Common (alleluias only); 117*v*–118: patron alleluia and *prosa* of St Achatio (see AH, lv, 1922, p.47); 118*v*: Marian Gloria *Spiritus et alme*; 119*r*–*v*: Mass ordines; 120–148*v*: notated proser; 149–150*v*: *Liber generationis* (addition).

Le graduel romain, ii (1957), 152

Vienna, Österreichische Nationalbibliothek, Vind.13682. Abbreviated missal with notation probably from Vienna or St Pölten. 13th century. 176 ff. German neumes. Offertories lack verses. Some masses have *prosae*. MS lacks Advent, Epiphany, Lenten and Eastertide masses, the summer sanc. feasts and masses for the Sundays after Pentecost.

Ff.1–11*v*: epistle, gospel, votive mass, psalms, prayers, etc.; 12–45*v*: vesting prayers, Ordinary of the Mass, communicantes and notated Prefaces; 46–53*v*: kyriale chants; 54–64*v*: Canon; 65–72: votives; 73–129: major Masses from the Vigil of Christmas to Pentecost (Easter, 115*v*); 129–133*v*: St John the Baptist (24 June); 133*v*–147: Common; 147–149*v*: Marian Saturday Mass *Salve sancta parens*; 149*v*–160: All Saints (1 Nov), St Caesarius (1 Nov) and Dedication of St Michael (29 Sept); 161–163: decree dated 1215; 163*v*–167*v*: episcopal blessings (texts only); 168–170: Holy Cross; 170–175*v*: Requiem.

Le graduel romain, ii (1957), 152

Vienna, Österreichische Nationalbibliothek, Vind.14208. Calendar, gradual, proser and sacramentary, perhaps from the region of Salzburg; 13th–14th centuries. 109 ff. German neumes. Offertories lack verses.

Ff.3–8*v*: Calendar; 9–48: winter–spring temp. and sanc. from Advent I to Trinity (Easter, 40*v*); 48–53*v*: summer sanc. from St Marcellinus and St Peter (2 June) to St Andrew (30 Nov); 53*v*–54: Dedication; 54–59*v*: Sundays after Pentecost; 59*v*–61*v*: Common (alleluias only); 62*r*–*v*: Kyries and Glorias; 63–64: Marian Mass *Salve sancta parens*; 64–77*v*: proser (texts only); 77*v*–82: Prefaces, communicantes and Canon; 82*v*–109*v*: sacramentary, no notation.

Le graduel romain, ii (1957), 152

Wolfenbüttel, Herzog August Bibliothek, Guelf.45 Helmst. (*Heinemann catalogue 40*). Gradual with *prosae* and sacramentary probably from the region of Westphalia, Germany; 13th century. 236 ff.; 34·5 × 24·5 cm. German notation on 4 lines. Offertories lack verses. *Prosae* are included among the gradual feasts.

Ff.1–6: Calendar; 6*v*–40*v*: winter–spring temp. from Advent I to Trinity (Easter, 32*v*); 40*v*–45: Sundays after Pentecost; 45–46*v*: kyriale; 47–214: sacramentary; 214*v*–229*v*: the sanc. of the gradual from St Lucy (13 Dec) to St Andrew (30 Nov); 229*v*–230*v*: Common (alleluias only); 230*v*–233*v*: 8 notated *prosae*; 233*v*: Marian alleluias and antiphons (added).

Le graduel romain, ii (1957), 154

Worcester, Cathedral Library, F.160. Monastic antiphoner, processional, Calendar, psalter, hymnal, collectarium, tonary, kyriale, gradual and proser (fragment) from Worcester; dated *c*1230 with 14th-century additions. 354 ff.; 26 × 18 cm. Small quadratic notation on 4 red lines. Offertories in the gradual lack verses. Portions of the antiphoner section of the MS are bound out of order (reconstructed correctly in PalMus, xii). The following sections of the MS are reproduced in facs. in PalMus: ff.1–1*v* (pp.308–9), ff.2–115*v*

(pp.4–231), ff.147–8 (pp.1–3), ff.164*v*–169*v* (pls.1–11), ff.182–286 (pp.232–442).

Antiphoner and processional: PalMus, xii, pp.4–439. Pp.4–157: winter–spring temp. from Advent I (inc., beginning within the first respond of the second nocturn) to Whit Saturday (Easter, 127); pp.157–67: Trinity; pp.167–86: histories; pp.186–91: Sundays after Pentecost; pp.192–9: *Venite* settings; pp.200–31: processional; pp.232–410: sanc. from St Andrew (30 Nov) to St Clement (23 Nov); pp.410–35: Common; pp.435–9: Office of the Dead; p.440 (f.285): St Oswald *prosa Ad honorem summi*; pp.441–2 (ff.285*v*–286): *Magnificat* and *Benedictus* tones. Ff.121–133*v*: Office and Mass of the Visitation (14th century); ff.135–145*v*: Office and Mass of Corpus Christi (14th century); ff.147–148: Calendar (PalMus, xii, pp.1–3); ff.149–164*v*: psalter, canticles, litany, collects (not in PalMus, xii); ff.164*v*–169*v*: hymnal (PalMus, xii, pl.1–11); ff.170–181: collectarium (not in PalMus, xii). Ff.287–292: troped Kyries; ff.292–293*v*: troped Glorias. Gradual; ff.294–346*v* (not in PalMus, xii). Ff.294–327*v*: winter–spring temp. from Advent I to the Sunday within the Octave of Pentecost (Easter, 320); f.327*v*: Trinity; ff.327*v*–334*v*: Sundays after Pentecost; ff.334*v*–335: Dedication; ff.335–344*v*: sanc. from the Conversion of St Paul (25 Jan) to St Nicholas (6 Dec); ff.334*v*–346*v*: Common (inc. at end); ff.347–348*v*: fragment of a notated proser (final 5 *prosae*); ff.348*v*–350: troped Sanctus; ff.350–351: troped Agnus Dei; ff.351–352: notated *Laudes regiae*; ff.352–354*v*: Mass ordines (texts only).

L. Brou and J. Vives, eds.: *Antifonário visigótico mozárabe de la Catedral de León*, Monumenta Hispaniae sacra, *Litúrgica*, v/1–2 (Madrid, 1953–9) [facs. and edn of text]; Pinell (1965), 129

London, British Library, Add.30845. Notated *Liber misticus* (Offices and masses) of the Mozarabic rite from Santo Domingo de Silos, nr Burgos; 10th century. 164 ff.; 36·3 × 25·4 cm. Visigothic (northern Mozarabic) neumes.

The MS contains only part of the summer sanc. from St Quiricus (13 June) to St Bartholomew (24 Aug).

Férotin (1912), 820 [edn of text only]

London, British Library, Add.30846. Notated *Liber misticus* (Offices and masses) of the Mozarabic rite from Santo Domingo de Silos, nr Burgos; 10th century. 173 ff.; 28·5 × 22·1 cm. Visigothic (northern Mozarabic) neumes.

The MS commences within the end of the Easter Mass and continues through Pentecost, including the feast of St Torquatus (1 May), ff.80–87.

Férotin (1912), 842–70 [edn of text only]

London, British Library, Add.30847. Monastic notated breviary fragment (winter part) of the Mozarabic rite from Silos; 12th century. 188 ff.; 32 × 21 cm. Visigothic (northern Mozarabic) neumes. Notation confined to ff.1–82*v*; beginning and end of MS lacking.

Combined winter temp. and sanc. from St Lucy (13 Dec) to the Thursday following Lent IV. Feasts include: St Fructuosus (21 Jan), 118*v*; St Babylas (24 Jan), 120; St Tyrsus (28 Jan), 120*v*; St Dorothea (7 Feb), 123; St Eulalia (12 Feb), 124; St Pantaleon (19 Feb), 124*v*; St Emitherius and St Celedonius (3 March), 126.

London, British Library, Add.30851. Notated Mozarabic psalter, hymnal, Offices and masses of the Common from Silos; 11th century. 202 ff.; 39 × 31 cm. Visigothic (northern Mozarabic) neumes.

Ff.1–110*v*: psalms and canticles; 110*v*–63*v*: hymnal; 164–202: Offices and Masses of the Common.

J.P. Gilson, ed.: *The Mozarabic Psalter*, Henry Bradshaw Society, xxx (London, 1905) [edn of text only]; Férotin (1912), 870

Madrid, Archivo Histórico Nacional, Aemil.30. Notated *Liber misticus* (Offices and masses) of the Mozarabic rite from S Millán de la Cogolla, nr Nájera; 10th century. 230 ff.; 36·2 × 28·5 cm. Visigothic (northern Mozarabic) notation. MS heavily mutilated.

Ff.1–230*v*: winter temp. and sanc. MS begins within the first feast of the Mozarabic liturgical year, St Acisclus (17 Nov), and breaks off within the feast of St Emitherius and St Celedonius (3 March).

Férotin (1912), 893

Madrid, Biblioteca Nacional, 10110 (formerly Toledo, Biblioteca Capitular, 35, 2). Secular breviary (ferial offices for Lent) of the Mozarabic rite from SS Justa and Rufina, Toledo; 11th century. 121 ff.; 27 × 19·1 cm. Visigothic (Toledan) neumes.

Ff.1–121: weekday Offices from the beginning of Lent to Palm Sunday.

Janini and Serrano (1969), 133 [inventory]

10. Old Roman chant.

London, British Library, Add.29988. Old Roman antiphoner from the region of Rome, perhaps from S Pietro; mid-12th century. 154 ff.; 28 × 18 cm. Central Italian Beneventan notation with red line.

Ff.2–95: winter–spring temp. and sanc. from Advent I to Pentecost (Easter, 72); 56*v*–57: extensive lacuna from the end of St Agatha to Passion Sunday; 95–143*v*: histories are distributed throughout the summer sanc. from St Petronilla (31 May) to St Andrew (30 Nov); 143*v*–150*v*: Common; 151–152*v*: Dedication; 152*v*–153: Trinity; 153*r*–*v*: *Venite* settings; 153*v*–154*v*: services for the dead (inc.).

Huglo (1954), 112; Stäblein (1970), 29

Rome, Biblioteca Apostolica Vaticana, Archivio del Capitolo di S Pietro, B.79. Old Roman antiphoner from S Pietro; second half or end of 12th century. 197 ff.; 35.3 × 24·5 cm. Central Italian Beneventan notation with red F line.

Ff.1–3*v*: Calendar; 4–124*v*: winter–spring temp. from Advent I to Pentecost (Easter, 103); 124*v*–175: histories are distributed throughout the summer sanc. from St John the Baptist (24 June) to St Andrew (30 Nov); 175–184: Common; 184–185: Dedication; 185–191: Offices of St Nicholas, St Blaise, St Benedict, St Valentine, St George and St Caesarius; 191–193*v*: Office of the Dead; 193*v*–195*v*: *Venite* settings.

Huglo (1954), 113; Salmon, ccli (1968), 61; *Studi medievali*, xi (1970), 1110; Stäblein (1970), 30; B.G. Baroffio and Soo Jung Kim, eds.: *Biblioteca Apostolica Vaticana Archivio S. Pietro B 79: antifonario della Basilica di S. Pietro (Sec. XII)* (Rome, 1995) [facs.]

Rome, Biblioteca Apostolica Vaticana, Archivio del Capitolo di S Pietro, F.22. Old Roman gradual from S Pietro; 13th century. 104 ff.; 30·8 × 21 cm. Central Italian Beneventan notation with red F and yellow C lines. Offertories lack verses.

Ff.1–65: winter–spring temp. from Advent I to Whit Saturday (Easter, 53*v*); 65–74*v*: Sundays after Pentecost; 74*v*–86: sanc. from St Sylvester (31 Dec) to St Andrew (30 Nov); 86–100*v*: Common; 100*v*–101*v*: Dedication; 102*v*–103: Marian Mass *Salve sancta parens*.

Huglo (1954), 99; Salmon, ccliii (1969), 75; *Studi medievali*, xi (1970), 1127

Rome, Biblioteca Apostolica Vaticana, vat.lat.5319. Old Roman gradual with kyriale and *prosae* from S Pietro; dated variously from the mid-11th century to the mid-12th. 158 ff.; 30·3 × 20 cm. Central Italian Beneventan notation with red F line. Offertories with verses.

Ff.1–109*v*: winter–spring temp. and sanc. from Advent I to the Sunday within the Octave of Pentecost (Easter, 83); 109*v*–135: Sundays after Pentecost distributed among the summer sanc. feasts from St Marcellinus and St Peter (2 June) to St Andrew (30 Nov); 135–137: Dedication; 137–140*v*: Ordination of a Pope, Ordination of a Bishop, nuptial and Requiem Masses; 140*v*–145*v*: processional antiphons; 145*v*–151: kyriale with troped Kyries and Glorias; 151–158: inc. proser.

Jammers (1965), 98; Salmon, ccliii (1969), 88; Stäblein (1970) [edn]

Private Collection. Martin Bodmer (Cologny, nr Geneva) ('Bodmer-Phillipps Codex'). Formerly Phillipps 16069. Old Roman gradual, troper and proser from S Cecilia in Trastevere; dated 1071. 128 ff. 31·2 × 19·6 cm. Central Italian Beneventan notation with 1 red and 2 dry lines.

J. Hourlier and M. Huglo: 'Un important témoin du chant "vieux-romain"', *Revue grégorienne*, xxxi (1952), 26–37; Stäblein (1970), 25; M. Lütolf, ed.: *Das Graduale von Santa Cecilia in Trastevere: Cod. Bodmer 74* (Cologny-Geneva, 1987) [facs.]

III. Secular monophony

1. General. 2. Latin. 3. Occitan. 4. French. 5. German. 6. Galego-Portuguese. 7. Italian. 8. Other languages and later repertories.

1. General. The transmission of early monophonic song developed according to the growing consciousness among musicians and patrons of a repertory as such. So the earlier sources of Latin and English song in particular find secular works mixed in with sacred and liturgical music, with polyphony and with entirely non-musical matter. But when a group of poets became aware of common aims, admired one another and emulated one another, as the troubadours and trouvères evidently did, that awareness made itself felt in unified sources prepared for private patrons or institutions that could afford to pay for the prolonged copying labour, notational skill and refined illumination techniques found in the great manuscripts which are the basis of the survival of monophonic song today.

It is more difficult to see any pattern in the distinction between purely poetic sources and those with music. For the trouvère repertory nearly all surviving sources either contain music or leave spaces for it; of troubadour manuscripts very few contain music at all and the rest are simple poetry collections; and the Minnesang poetry survives in a few magnificent text manuscripts whereas music survives only in fragments apart from two large music collections compiled some centuries later and explicitly assembled according to the needs of their time. But perhaps here too there is a consciousness of tradition and repertory. Early Latin songs occasionally survive in enormous poetry collections of which a single piece has unheighted neumes – untranscribable for any practical purposes but sure evidence of both a song repertory and a sung repertory at the time.

Modern scholarship is increasingly inclined to treat the monophonic song repertories as a single tradition with, to be sure, divergent branches whose characteristics may be to some extent unique to each, but which share so much in terms of repertory and historical precedents that mere linguistic barriers can, if taken too literally, confuse the essential and fundamental common features. So it is curious how different the manner of the manuscript transmission sometimes is: the unplanned nature of some of the Latin manuscripts, the carefully consistent calligraphy and illuminations of the trouvère sources, or the textbook format of the cantiga and *lauda* sources.

Yet throughout these sources musical inconsistency is the rule and it marks a substantial rift in manner between the secular and the sacred. The liturgical music of these

centuries is consciously preserved in manuscripts whose textual agreement shows a reverential concern for the authority of the parent sources. If a trouvère song survives in ten sources, however, there is very little likelihood of their all transmitting the same melody: some may vary only in detail, but others can contain a melody whose relationship to the others is scarcely recognizable if at all. Interpreting this as a symptom of a notationless culture (van der Werf), of a repertory in which song melodies were not composed but were devised or evolved as a *res non confecta* long before they were written down (Petzsch), seems the only sensible approach. As has often been said, most of the major sources give every impression of having been prepared primarily for the sake of possession, rarely as a reminder or as a source for a singer.

So modern scholarship has reluctantly discarded the idea of an Urtext when considering these sources. Moreover the continuing discussion as to the correct rhythm for practically all songs of the monophonic repertory makes even the most responsible editing to some extent subjective and requires in particular that any comments about the music should keep a clear reference as to what is in the source and what in the transcriber's imagination: it is an area in which hypothesis easily becomes fact and in which musical identity between two melodies is often overlooked because the two may be transcribed according to different principles in modern editions.

A further barrier to understanding is the nature of 14th-century historical awareness. In spite of the 14th-century scribes' habit of adding ascriptions and devising elaborate life stories for the troubadour poets, there is still a shortage of any substantial documentary basis from the 12th century to confirm most of the material found here. It is probably too late in history to establish how consciously medieval writers inflated Roland and KLINGSOR into superhuman figures; but those two examples should advise caution respecting practically everything in these early sources.

P.S. Allen (*Medieval Latin Lyrics*, 1931, pp.196ff) seems to have been the first to make an issue of a literary distinction that is particularly important for any consideration of the manuscript transmission: the learned song and the folksong. His distinction has been challenged in literary terms (see especially §2, Szövérffy, 1970, p.36) as being simplistic, but it remains a useful conceptual tool so long as one is aware that no medieval folksong is likely to survive and that much surviving medieval poetry is a mixture or fusion of these two traditions. As concerns the musical transmission, this holds even more: the fully learned music of the years after 1100 was polyphony; the most folksong-like melodies in the early repertory are written in advanced notation in one of the polyphonic manuscripts (*I-Fl* Plut.29.1) with Latin text; and the great majority of secular monophony gives every evidence of coming from a culture considerably less 'learned' in music than in poetry and philosophy. But one can try to focus the problem further: the enormous quantity of folksong that clearly existed in the Middle Ages has disappeared, more or less without trace; and the highly professional traditions of the instrumentalists (minstrels, jongleurs, and so on) survive in only a few brief extracts of which those in *F-Pn* fr.844 and *GB-Lbl* Harl.978 are the earliest but those in the trecento manuscript *Lbl* Add.29987 by far the most suggestive. The very stylistic differences between these pieces and what otherwise remains of early music are suggestions that here are hints of the great unwritten tradition in the context of which the written traditions should perhaps be viewed.

2. LATIN. While the question of chronology and priority among the various song repertories of medieval Europe remains subject to debate and, in some ways, possibly insoluble, a survey such as this must begin with the Latin repertory because there is less room for questioning the dates of the sources, and MSS containing Latin secular poetry with neumes appear in the 9th century, 200 years before the two earliest surviving Provençal poems with neumes – themselves contrafacta of Latin hymns.

It is generally agreed that late 9th-century dates are likely for *D-Bsb* theol.lat.2° 58, f.1*v* (a setting of Boethius), *HEu* pal.lat.52, f.17*v* (Otfried), *F-Pn* lat.2832, ff.123*v*–124, *I-Nn* IV.G.68 and for the Aquitanian source *F-Pn* lat.1154, ff.98*v*–142 (see Jammers, 1975, and Stäblein, 1975, p.146). With the exception of the last – whose date is questioned in any case – these all concern a very small number of neumes applied to a mere two or three lines within a larger poetry collection. The poetry is in most cases substantially earlier than the source; it is not easy to tell whether the music was newly composed or traditional for the song, particularly since the unheighted neumes are rudimentary and effectively untranscribable. All these considerations are applicable also to the sources associated with the 10th century, among them *A-Wn* 116, f.157*v* (*Iam dulcis amica*), *D-WO* 3610 (formerly Aug.56, 16/18), f.62 ('Modus Ottinc'), *E-Mn* 10052, f.364*v*, *I-Fn* Ashb.23 (Virgil) and *GB-Cu* Gg.5.35 (the Cambridge Songbook). This last and the *Carmina burana* MS require further description since they are the most famous Latin songbooks of the 11th and 13th centuries respectively, and are characteristic if not entirely typical.

Cambridge, University Library, Gg.5.35 (*formerly 1567*) ('Cambridge Songbook') [*c*]. 2 + 446 parchment leaves, 22 × 15 cm (fig.20). *Foliation*: ink, perhaps from *c*1500, 1–454 (ff.446–51 missing, unnumbered leaf after 294). *Structure*: bound in quinternions with most gatherings numbered at end in an early hand (leaves missing after f.432 and f.440, although one leaf has recently resurfaced, see Page and others, 1983). *Scribes*: consistent continental minuscule hand throughout with regular coloured initials alternating red and mauve; song section (ff.432–441*v*) in a smaller hand and written in double columns. *Date*: an 11th-century English copy of an original prepared in north Thuringia between 996 and 1002 (see Stäblein, 1975, n.501). *Provenance*: at St Augustine's Abbey, Canterbury, in 12th–14th centuries.

Contents: poetic, devotional and philosophical matter; ff.266*v*–277: treatise *De harmonica institutione* by Hucbald (ed. in *GerbertS*, i, pp.104–21) with musical notation on f.266*v*; ff.432–441*v*: collection of 49 secular poems, two with neumes (f.439, f.441*v*).

Metra from Canterbury: a Newly-Recovered Leaf of Cambridge, Gg.5.35', *Anglo-Saxon England*, xii (1983), 141–52; J.M. Ziolkowski, ed.: *The Cambridge Songs (Carmina Cantabrigiensia)* (New York, 1994) [with Eng. trans.]

Munich, Bayerische Staatsbibliothek, Clm 4660 ('Carmina burana'; fig.21) *and Clm 4660a* ('Fragmenta burana'). 112 + 7 parchment leaves, 25 × 17 cm. *Foliation*: 1–112 added by Schmeller; the pieces are numbered in pencil. *Structure*: bound in quaternions with irregular gatherings at ff.1–2, 43–56, 73–82 and 106–12; the original sequence was: [lacuna], ff.43–8, 1–42, [lacuna], 49, 73–82, 50–72, 83–98, [lacuna], 99–106; ff.107–12 and the 7 leaves of the *Fragmenta burana* were added later. *Scribes*: one main hand and one main correcting hand; fuller details in Hilka and Schumann, ii/1 (1930). *Date*: although Schumann considered it to belong to the end of the 13th century, modern scholarship tends to follow Dronke's date of *c*1220–30; Bischoff (1967) implied a slightly later date by suggesting that some of the songs could have been copied from the Notre Dame MS *I-Fl* Plut.29.1, but supported Dronke's dating in his preface to Hilka and Schumann, i/3 (1970). *Provenance*: in 1803 it came to the Bayerische Staatsbibliothek from the Benedictine house at Benediktbeuren, where it had been since at least the 18th century; Bischoff (1970; see Hilka and Schumann) suggested the original provenance as Carinthia or the Tyrol (see also Steer).

Contents: over 250 poems, mostly in Latin, over half of them unique to this source, covering all genres of Latin secular poetry; the original organization is followed in the edition of Hilka and Schumann: moral and satirical poems; love-songs (from f.18, 'incipiunt iubili'); drinking-, gambling- and goliardic songs (from f.83); and religious plays (from f.99). *Poets*: only Walter of Châtillon named, but including Hugh Primas of Orléans, Archipoeta, Peter of Blois and Philip the Chancellor. *Music*: non-diastematic neumes added by the main hand for nine songs and the gambler's Mass; Schumann showed that neumes had been intended for many other songs.

Walsh, ed.: *Love Lyrics from the Carmina Burana* (Chapel Hill, NC, 1993) [with Eng. trans.]. For further bibliography *see* CARMINA BURANA.

That unheighted neumes appear in the *Carmina burana* MS a century after the introduction of staff notation and two centuries after the earliest source with heighted neumes suggests that detailed notation was required much later in secular sources than in sacred. And indeed staff transcriptions can be made only with recourse to sacred or theoretical MSS that happen to contain the song in some more developed form of notation. *O admirabile* from the Cambridge Songs appears in a combination of letter and staff notation in an Italian theory MS, *I-MC* 318, p.291 (fig.22); some of the *Carmina burana* songs appear in diastematic neumes in the predominantly sacred ST MARTIAL MSS while others are in black staff notation in sources of the NOTRE DAME SCHOOL. Further melodies may be deduced from contrafacta or by extracting a single melody from a polyphonic conductus.

Latin song did not come to an end with the 13th century; but its poetic traditions became weaker when the vernacular became more acceptable as the language for expressing secular emotions, however elevated and courtly. Though it does not contain love-songs, the following source is perhaps characteristic of the Latin tradition after the mid-13th century (see also *I-Fl* Plut.29.1 and *F-Pn* fr.146 (the ROMAN DE FAUVEL)):

Lille, Bibliothèque Municipale Jean Levy, 316 (formerly 397). 48 parchment leaves, 27 × 18 cm. *Foliation*: modern pencil. *Structure*: originally 6 quaternions, but the last folio of the second gathering (f.17) was cut out along with the first 2 folios of the next gathering. One binion gathering was substituted for the former 3 leaves. This almost certainly happened in the course of the original compilation. *Scribes*: the main corpus in a single hand. A second hand (according to Bayart perhaps that of Adam de la Bassée) entered marginal annotations, additions and the final poem. *Date*: early 14th century (*Catalogue général*) or before the death of the author in February 1286 (Bayart). *Provenance*: the chapter library of St Pierre, Lille, where Adam had been a canon.

Contents: ff.2–41: the *Ludus super Anticlaudianum* of ADAM DE LA BASSÉE including 38 Latin songs; ff.42–47*v*: 3 Latin poems also presumably by Adam. *Forms*: over half the pieces identify the origin of their music, including 10 trouvère songs and 11 Latin chants, among them 6 hymns and 2 *prosae*; 1 conductus, 2vv; 1 motet with the tenor named but not included; some of the music may be original. *Notation*: apparently Franconian. *Date of compilation*: 1280–86.

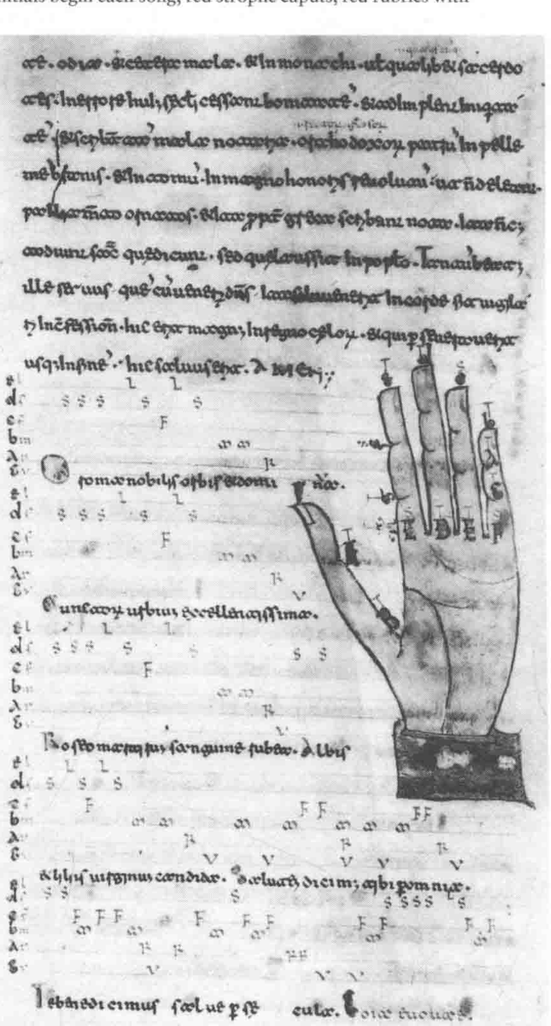
3. OCCITAN. The repertory of the TROUBADOURS survives today in about 30 major MSS and several fragmentary sources from about the middle of the 13th century to the first three decades of the 14th, as well as about 60 other sources from as late as the 19th century. The MSS contain over 2500 lyric poems, almost all in a high courtly style, and several also transmit didactic, epistolary and narrative literature, including the *vidas* and *razos*, short prose texts that relate stories about the lives and many of the poems of the troubadours. Most of these sources were never intended to include music as the scribes did not allow space for it. Only three extant manuscripts were ruled for musical staves, two of which were partially notated. With so few music sources, the number of concordant versions of a particular melody is quite small. Of the 246 Occitan courtly poems that are provided with melodies, 196 have only one melody extant.

What is striking about these MSS, besides the fact that few contain melodies, is that only about a third of them were copied in Languedoc or Provence, where the troubadours originated and for the most part worked. Almost half of them were produced in Italy and others were copied in Catalonia or France. Of the two MSS that transmit music, one (*F-Pn* fr.22543) is from Languedoc and the other (*I-Ma* S.P.4) was copied in Lombardy; both are from the very late 13th or early 14th century. Two trouvère sources, *F-Pn* fr.844 and fr.20050, also contain substantial sections of troubadour songs, and a few other French MSS contain one or two Occitan songs. *I-Rvat* Chigi C.V.151, a mid-14th-century MS containing an Occitan liturgical drama with musical interpolations, has eight melodies that appear to be contrafacta of courtly songs, although the notation is somewhat difficult to read. The earliest source of Occitan music appears to be the late 11th-century Aquitanian MS *F-Pn* lat.1139 which contains three Occitan religious lyrics with music, including the poem *O Maria Deu maire* set to a variation of the melody of *Ave maris stella*. On the whole, relatively few clearcut examples of contrafacta of Occitan melodies are extant.

20. Cambridge, University Library, Gg.5.35 (the Cambridge Songbook), f.441v, containing six Latin poems. The last, the love-song 'O admirabile Veneris idolum', has simple unheighted neumes over the first two stanzas; a transcription can be made on the basis of 'O Roma nobilis' shown in fig.22 (the melodic identity of the songs is confirmed by I-Rvat lat.3327)



21. Munich, Bayerische Staatsbibliothek, Clm 4660 (the Carmina burana MS), f.70v, c1220–30, containing the Latin refrain song 'Tempus est iocundum' with unheighted neumes to the first stanza; at the bottom of the page is a single-stanza German song 'Einen brief ich sande einer vrowen gût' in the same form and presumably to the same music

The troubadour MSS are generally large anthologies of between 100 to 200 parchment leaves, mainly laid out in two columns. The MSS are usually organized by genre, beginning with *cansos* and sirventes, usually grouped by author and given red attributive rubrics; in the two music MSS, these serious courtly types are the only songs for which staves were provided, always above the first stanza of the poem. In some of the sources, the courtly songs are followed by works without music, including lyric *tensos* and short *coblas*, the prose *vidas* and *razos*, treatises, and other non-lyric works. Many of the MSS have an index of authors and incipits that was prepared at the time of copying, keyed to folio numbers in the codex. Almost all of the MSS have some sort of decoration, including painted or calligraphic initials in red, blue, white and black and occasionally gold leaf. Several have historiated initials, some of which depict 'portraits' of troubadours, often with musical instruments.

Each of the two music MSS is unusual in certain respects. *F-Pn* fr.22543 has monumental dimensions and particularly rich and varied contents. *I-Ma* S.P.4 was laid out in verse format, which resulted in waste of space at the ends of systems, a situation that the scribe attempted to remedy by erasing and filling in lines, with only slight success. Both MSS have a significant number of empty staves. The music notation is square in both sources, although the scribe of *F-Pn* fr.22543 seems to have attempted to use mensural shapes in a few melodies.

The sigla used today to designate the sources of troubadour songs were established by Karl Bartsch in 1872. The two French sources are known in troubadour studies as *W* (*F-Pn* fr.844, trouvère MS *M*) and *X* (*F-Pn* fr.20050, trouvère MS *U*); these MSS are described below (§III, 4).

Milan, Biblioteca Ambrosiana, S.P.4 (formerly R 71 superiore) [G]. 2 + 142 parchment leaves, 27 × 18 cm. *Foliation*: modern pencil 1–141; the first 2 leaves, with the medieval index, are unnumbered. *Structure*: originally 130 leaves in 15 quaternions and a quinternion, to which 2 gatherings (a quaternion and a binion, plus a single leaf tipped in) of slightly smaller dimensions were added at the end; the final leaf is heavily damaged; medieval index on a damaged binion at the beginning; 2 paper flyleaves at the beginning give an index of authors in a modern hand. *Layout*: 2 columns with 37 lines per column; generally in verse format (one verse per line), although the scribe sometimes attempted to consolidate verses into the same line, often erasing text already written to do so. *Decoration*: large red initials begin each song; red strophe caputs; red rubrics with

22. Monte Cassino, Monumento Nazionale, Biblioteca, 318, p.291, late 11th century: 'O Roma nobilis orbis et domina'. The melody is written in solmization syllables on a six-line staff: up the left side of each staff are written the letter names g–e, then the solmization letters v–l (for ut–la); this curious system, with only one pitch for each line, suggests pre-Guidonian origin. In addition, the solmization letters that represent the notes of the song duplicate the information at the beginning of the line as well as that given by the staff lines. In the fourth line, pitches aligned vertically are read upwards

composers' names. No space was ruled off for any of these items, so they are written in the margins and on the music staves. *Text scribes*: ff.1–130, 1 text scribe; different hand on ff.131–140*v*. *Notation*: red staves of 4–8 lines above first stanzas and first verse of second stanzas; 1 music scribe, square notation without mensural values; music added before rubrics and decoration, not aligned carefully with text syllables. *Date and provenance*: early 14th century (date 1318 in a colophon on f.142 is later than main text hand), Lombardy; evidently resided in France before being acquired by the Biblioteca Ambrosiana.

Contents: ff.1–90*v*: 170 lyric songs, 81 with melodies; ff.90*v*–101: 31 *tensos* and partimens without staves; ff.101–116: 32 lyric songs with empty staves; ff.116–128*v*: *ensenhamens* and other long non-strophic works by Arnaut de Mareuil, Garin le Brun and others, without staves; ff.129–130*v*: 30 anonymous *coblas* without staves; ff.131–140*v*: *Ensenhamen d'onor* of Sordello. *Melodies*: Peirol (14), Folquet de Marseille (13), Gaucelm Faidit (11), Bernart de Ventadorn (10), Aimeric de Peguilhan (6), Peire Vidal (5), etc.

Beck, 14–18 [with list of melodies]; G. Bertoni, ed.: *Il canzoniere provenzale della Biblioteca Ambrosiana R.71 sup.* (Dresden, 1912) [edn of texts]; U. Sesini, ed.: *Le melodie trobadoriche nel canzoniere provenzale della Biblioteca Ambrosiana R.71 sup.* (Turin, 1942) [edn of melodies, facs. of ff.1–41]; Aubrey (1996), 38–9, 43–6

Paris, Bibliothèque Nationale de France, fr.22543 (formerly 2701, La Vallière 14) ('Chansonnier d'Urfé') [*R*]. 4 + 147 parchment leaves, 43 × 30 cm. *Foliations*: medieval foliation i–cxlviii beginning after the index; modern pencil foliation A–C on the last three leaves of the index and 1–148 (most modern studies use this foliation, even though it ignores the lacuna of ff.73–4); another modern foliation 1–143 begins on f.5, where the lyric songs begin. *Structure*: original ff.73–4 missing (inner bifolio of gathering 9); medieval index on binion at beginning, then 13 quinternions, 1 quaternion (ff.61–8), and an irregular gathering of 7 leaves followed by a binion. *Layout*: for songs, 2 columns, 80 lines per column in prose format; for non-lyric works, 2–7 columns. *Decoration*: idiosyncratic initial decoration of uniform conception and varying levels of elaboration, including red and blue calligraphic initials and larger historiated initials at the beginnings of several composer collections; alternating red and blue strophe caputs; red rubrics with composers' names; rubrics in section of songs by Guiraut Riquier (ff.104*v*–111*v*) also give genre and date. *Text scribe*: one hand throughout except for a few additions from the 14th century and later. *Notation*: generally 4-line red staves above first stanzas, entered in the first gathering only when melodies available, thereafter for every song; large number of empty staves and somewhat random diffusion of melodies throughout the codex, except in the Guiraut Riquier section; square notation, possibly several notation hands, including a few with primitive mensural values (longs and breves) which are not in consistent modal patterns; music added after text, rubrics and decorative elements. *Date and provenance*: *c*1300, Languedoc; rubric on f.141*v* beginning *Ensenhamen del Guarso* by Cavalier Lunel de Monteg dated 1326, in later hand; owned by Jeanne Camus, Marquise de la Rochefoucauld d'Urfé, by about 1737; sold to Louis César de La Beaume le Blanc, Duc de La Vallière, sometime after 1766, and then by his heirs to the Bibliothèque du Roi in 1784.

Contents: ff.1–4: *vidas* and *razos*; ff.5–111*v*: 925 lyric songs, 160 with melodies, includes *libellus* of Guiraut Riquier on ff.104*v*–110; ff.112*v*–121: *coblas* and non-lyric letters without staves; ff.121*v*–142*v*: *Tezaur* of Peire de Corbian, *ensenhamens* and other didactic works, letters of Guiraut Riquier, and 4 lyric works without staves; ff.143–145*v*: 14 lyric songs with empty staves; ff.146*v*–148*v*: *ensenhamens*, letters, didactic works. *Melodies*: Guiraut Riquier (48), Raimon de Miraval (22), Bernart de Ventadorn (13), Folquet de Marseille (10), Gaucelm Faidit (9), Peire Vidal (9), Berenguier de Palazol (8), Raimbaut de Vaqueiras (8), Jaufre Rudel (4), etc.

4. French. The repertory of Old French song includes not only the courtly chansons and jeux-partis of the trouvères but also a wide variety of other genres, including non-lyric lais and descorts, Marian, crusade and other religious songs, popular genres like *chansons à refrain*, *chansons avec des refrains*, pastourelles, *chansons de toile*, rondeaux and virelais, and lyric insertions in long narrative works. About 22 major and dozens of minor MS sources transmit these varied repertories, and all but four of the major sources contain music; two of them include important collections of troubadour songs (*F-Pn* fr.844 and fr.20050). Seven of the MSS (*F-Pa* 5198, *F-Pn* fr.845, fr.846, fr.1591, fr.20050 and *I-Sc* H.X.36) can be considered chansonniers in the strict sense of being devoted entirely to courtly lyric chansons. Other MSS, though, including *GB-Lbl* Eg.274, *F-Pn* fr.844, fr.12615, n.a.fr.1050 and *I-Rvat* Reg.lat.1490, include music for other genres besides courtly songs, notably motets, liturgical music and Marian songs. The overlap of the motet repertory with Old French monophony is reflected in the transmission of vernacular texts and melodies both in polyphonic settings and as monophonic songs. Still other collections of Old French songs are found as part of large miscellanies ('bibliothèques portatives' in the apt phrase of Brayer, describing *F-Pn* fr.1109), which include didactic, historical, philosophical and religious works, *dits*, romances and other non-lyric texts. Song collections found in such sources include *F-AS* 657, *F-Pn* fr.847, fr.1109, fr.24406 and fr.25566. A few of the important sources of trouvère song are fragments or self-contained small fascicles bound in with other types of material later in their history (*F-Pn* fr.765, fr.847, fr.25566 ff.2–9 and fr.844 ff.13, 59–78). One single gathering that remains a fragment (*CH-BEsu* 231) is included here because of its possible kinship with a section of a larger extant MS (*F-Pn* fr.765).

Several of the MSS have clear relationships with others in their similar contents and order (the much-discussed *KNPX* group, *F-Pa* 5198, *Pn* fr.845, fr.847 and n.a.fr.1050, the group of fr.844, fr.12615, *I-Rvat* Reg.lat.1490 and *F-AS* 657, the Adam de la Halle group of *AS* 657, *Pn* fr.847, fr.1109, fr.12615, fr.25566 and *I-Rvat* Reg.lat.1490), or by similarity of format, layout and decoration style. A number of the MSS have some empty staves, but melodies survive for about three-quarters of the repertory. The survival of so many sources and the high incidence of concordant readings with insignificant variants point to close cooperation among composers and musicians and the scribes who recorded their music. The regions of Artois and Picardy seem to have been in the forefront of MS production for the trouvères, as some 15 of the major MSS can be placed there on the basis of decoration style and scribal orthography; Lorraine and Burgundy also produced MSS of vernacular song, but not one of the extant sources appears to have come from Paris. Most of the MSS date from the second half of the 13th century, the earliest (*F-Pn* fr.20050) from around 1240 to 1250 and a few from the first or second decade of the 14th century.

Most of the trouvère MSS described below are of moderate size (with the exception of *GB-Lbl* Eg.274 and *F-Pn* fr.20050 which are exceptionally small); two-thirds of them are laid out in two columns, the rest in a single long line across the page. The collections usually begin with chansons grouped by author, with red attributive

rubrics and music on red staves above the first stanza. These are often followed by a group of jeux-partis (with or without music) and a large section of unattributed songs. An index of authors and incipits, keyed to folio numbers in the codex, was often produced in the copying process or shortly thereafter. Many of the MSS were lavishly decorated, often with beautiful historiated initials that depict musicians and instruments, and 'portraits' of trouvères or other figures, arranged in a careful hierarchy according to the contents (see Huot). The first song in a group by a major composer such as Thibaut IV, Gace Brulé and the Chastelain de Couci is given the most richly ornamented initial, while less elaborate initials mark the beginnings of the remaining songs. Several of the extant MSS have been severely damaged by the excision of miniatures, with either entire leaves or the portions of leaves that contained the illustrations being removed.

The music notation is for the most part square, although *F-Pn* fr.846 uses mensural notation and *Pn* fr.20050 uses Messine neumes. Blank staves are scattered through some of the MSS. Some sources use modal or mensural notation for polyphony, usually laid out in parts. Attributions are often conflicting among these sources and a few lack them altogether. In the descriptions below no attempt has been made to verify a particular source's attributions, and the number following a composer's name indicates the number of songs with melodies ascribed to the composer in that MS or in other MSS.

At least eight sets of sigla have been assigned to Old French sources, sometimes depending on the repertory in question (Ludwig's system is used in a discussion of motets, for instance). The designations established by Schwan (1886) are standard when dealing with trouvère song (see Gennrich, 1921, for a table of concordance between the different sigla systems).

Arras, Médiathèque [Bibliothèque] Municipale, 657 (*formerly 139*) [*A*]. Now 212 parchment leaves, 31 × 23 cm, many original leaves had been excised by the early 18th century. *Foliation*: modern ink 1–212, does not take account of the lacunae; another modern foliation 129–60 reflects Jeanroy's proposed order of the music fascicle. *Structure*: 40 gatherings of varying sizes due to the lacunae; ff.129–160*v* comprise a music fascicle of 5 gatherings originally of quaternions; Jeanroy (1925) argued the original gathering order of this fascicle was ff.152–6 (missing its first 3 leaves), ff.157–60 (missing its middle 2 bifolios), ff.129–35 (missing its first leaf), ff.136–51 (2 complete quaternions, the second of which ends in the middle of a piece), which is how it appears in his facsimile and in its current binding. *Layout of music fascicle*: 2 columns, 40 lines per column, in prose format. *Decoration*: painted initials and vignettes in uniform style begin important sections, including 5 in the music fascicle at the start of composer groups and of the jeux-partis; music fascicle has red and blue lettrines at beginnings of all songs, red and blue calligraphic initials beginning each interior strophe, and painted line endings; red rubrics introduce and end each major section; decoration similar to that of *a* (*I-Rvat* Reg.lat.1490). *Text scribes*: at least 2 text hands for the non-musical works, 1 of which probably also entered the poems in the music fascicle. *Notation*: red staves of 4 or 5 lines above first stanzas; 1 music scribe, square notation of a slightly casual but careful appearance; staves added before decoration in second and fifth gatherings (ff.157–60 and 144–51), but after in the other 3; music added last in all gatherings. *Date and provenance*: dated (f.212*v*) August 1278 by a scribe named 'Jehans d'Amiens li petis', copied and decorated in Artois, possibly Amiens; note on end flyleaf indicates MS was owned *c*1625 by Abbey of St Vaast in Arras, which was seized by the state in 1790; rebound by Bibliothèque Nationale in 1955.

Contents: ff.1–128*v*: moral, didactic, religious works, including Alart de Cambrai's *Moralités aux philosophes*, various Marian texts and Richart de Fournival's *Bestiaire d'Amour*; ff.129–160*v*, 42 chansons (of which 2 are incomplete) and 31 anonymous jeux-partis, all with music, contents and order of songs similar to those of *a*; ff.161–212*v*: *Roman des sept sages* and *Roman de Marques de Rome*. *Melodies*: Thibaut IV (6), Richart de Fournival (6), Adam de la Halle (6), Gautier de Dargies (5), Guillaume Le Vinier (5), Chastelain de Couci (4), etc.

Raynaud, i, 1–4; A. Jeanroy: *Le chansonnier d'Arras* (Paris, 1925) [facs. of music fasc.]; F. Gennrich: 'Der Chansonnier d'Arras', *Zeitschrift für romanische Philologie*, xlvi (1926), 325–35; Huot, 55–64

Berne, Stadt- und Universitätsbibliothek, 231 [*B*]. 8 parchment leaves, 30 × 22 cm. *Foliation*: modern black ink 1–8. *Structure*: a single quaternion, part of a larger MS; Spanke suggested this gathering belongs with *L* (*F-Pn* fr.765). *Layout*: single column, 43–7 lines per column, prose format. *Decoration*: red and blue calligraphic initials begin each song; red and blue lettrines begin interior stanzas. *Text scribes*: 1. *Notation*: 1 scribe, 5-line red staves, square notation with many short vertical bars. *Date and provenance*: end of 13th or early 14th century, Picardy or Burgundy.

Contents: 20 complete songs, of which 14 have melodies. *Melodies*: no attributions, but 11 can be authenticated from other sources as by Thibaut IV.

A. Rochat: 'Die Liederhandschrift 231 der Berner Bibliothek', *Jb für romanische und englische Literatur*, x (1869), 73–113; Raynaud, i, 4–5

London, British Library, Eg.274 [*F*]. 160 parchment leaves, 15 × 11 cm. *Foliations*: modern 1–160; ii, iiii–vii on ff.2–6 in late medieval hand. *Structure*: possibly 2 or more discrete collections, ff.1–130 and ff.131–60, bound together in 15 quaternions, 1 ternion, 5 binions and 1 bifolio, with 2 single leaves tipped in, in random order; many erasures with replacements of text and music. *Layout*: 19–22 lines per leaf; single column throughout, prose format. *Decoration*: painted initials, blue and gold lettrines (not uniform style in all fascicles); decoration in song fascicle is simpler, with no illuminations; blue and red initials with filigree beginning interior strophes; style generally belongs to Arras-Lille MS group of third quarter of 13th century. *Text scribes*: 1 main scribe throughout; later additions and changes especially in first strophes of song fascicle, where later scribes erased French texts and melodies and replaced them with Latin responds, usually employing the original initial letter of the vernacular text; 6 rubrics with composer attributions were added before these changes were made. *Notation*: several music hands, including 3 (original square, later square and Messine) in the song fascicle; in the Latin fascicles, 4- or 5-line staves, square notation, sometimes evidently altered to make mensural; polyphony is laid out in parts; in the song fascicle, 5- or 6-line red staves. *Date and provenance*: 1260s, Artois; 1832, in private library of Van de Velde of Ghent; also owned by Jacobus Dogimon (f.1) and Jehan Perthuis de Hacquemere (f.160); acquired by British Museum in 1834.

Contents: ff.3–57: 20 monophonic sequences and conductus and 2 two-voice; 4 two-voice motets; ff.58–93: 3 troped Kyries, 6 monophonic sequences, and 2 Glorias; ff.94–97: miscellaneous liturgical monophony; ff.98–117*v*: 18 lyric songs (7 with original melodies intact, 11 never entered or replaced by Latin respond); ff.119–130: 2 long Latin verse works without music; ff.131–132: 1 lyric song (with fragment of original melody); ff.132*v*–159*v*: late 14th-century sacred monophony, entered over erased 14th-century mensural polyphony (e.g. Benedicamus Domino settings). *Melodies*: of original 19 French songs entered, 7 melodies remain unchanged: Gace Brulé (1), Chastelain de Couci (1), Jehan de Neuville (1), Colart le Boutellier (1), anonymous (3); 5 other melodies reconstructed from palimpsests by Gennrich (1925).

Raynaud, i, 35–6; Ludwig, i/1, 251–63 and i/2, 606; F. Gennrich: 'Die altfranzösische Liederhandschrift London, British Museum, Egerton 274', *Zeitschrift für romanische Philologie*, xlv (1925), 402–44 [edn of Fr. songs, incl. 5 reconstructed from palimpsests]; RISM B/IV/1, 496–8; A. Stones: 'Sacred and Profane Art: Secular and Liturgical Book-Illumination in the Thirteenth Century', *The Epic in Medieval Society: Aesthetic and Moral Values*, ed. H. Scholler (Tübingen, 1976), 100–12; T.B. Payne: *Poetry, Politics, and Polyphony: Philip the Chancellor's Contribution to the Music of the Notre Dame School* (diss., U. of Chicago, 1991), ii, 337–42

Paris, Bibliothèque de l'Arsenal, 5198 (*formerly B.L.F.63*) ('Chansonnier de l'Arsenal') [*K*]. 211 parchment leaves, 32 × 22 cm. *Foliation and pagination*: original pencil foliation i–xxxvii, corresponds to index on p.420; modern ink pagination 1–420 (with 70 followed by 70*bis* and 70*ter*), disregards lacuna between

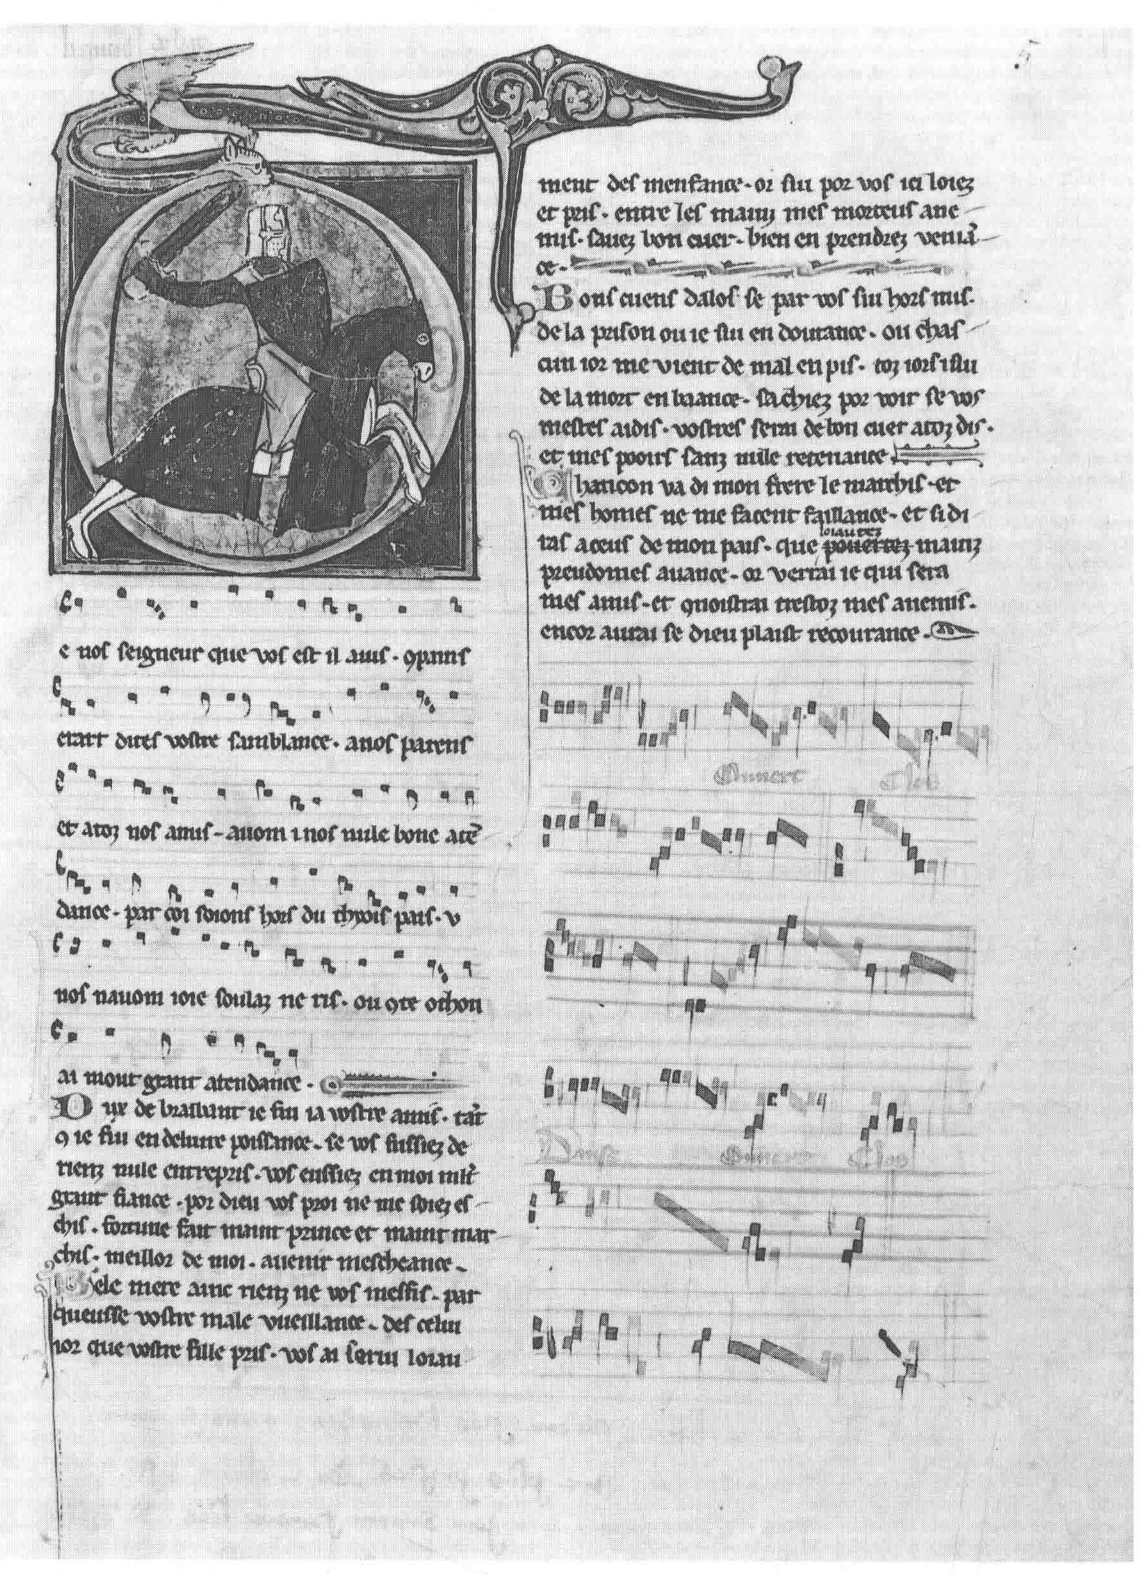
gatherings 21 and 22; scholars use the pagination. *Structure*: 25 quaternions, 1 binion and 1 gathering of 7 leaves; gathering signatures indicate 1 gathering missing between pp.332 and 333; p.420 has a medieval index of 64 incipits of songs on the first 2 gatherings. *Layout*: 2 columns, 34 lines per column, prose format. *Decoration*: 2 large polychrome initials begin each main fascicle (Thibaut IV holding a fiddle on p.1 and p.303); gold leaf initials with blue, pink and white paint, in a style similar (but not identical) to that of *N*, probably from Picardy or Artois; red or blue lettrines mark interior stanzas; circled attributive red rubrics in margins on pp.1–302 are similar to those in *N*. *Text scribes*: one scribe throughout, possibly same as that for *N*. *Notation*: one hand throughout, square notation, 4-line red staves; music entered before decoration and rubrics. *Date and provenance*: 1270s, Picardy or Artois; belonged to Marie d'Albret (p.1); later belonged to Marquis René Antoine de Paulmy, who made it part of his library at l'Arsenal, opened to scholars in 1756.

Contents: pp.1–302: 342 attributed songs, at first arranged by author, then more randomly entered; pp.302–420: 140 unattributed songs; contents related to *N*, *P*, *X* and *L*. *Melodies*: altogether 481 complete melodies and 1 incomplete: Thibaut IV (59), Gace Brulé (46), Perrin d'Angicourt (21), Chastelain de Couci (16), Blondel de Nesle (16), Gillebert de Berneville (14), Richart de Semilli (10), Moniot de Paris (9), Gautier de Dargies (8), Moniot d'Arras (7), Thibaut de Blason (6), etc.

Spanke, ed.: *Eine altfranzösische Liedersammlung: der anonyme Teil der Liederhandschriften KNPX* (Halle, 1925) [edn of anon. poems, 42 melodies]; H. Orenstein: *Die Refrainformen im Chansonnier de l'Arsenal* (Brooklyn, NY, 1970); Huot, 48–54; Everist, 187–97

Paris, Bibliothèque Nationale de France, fr.765 (formerly 7182[5]; Colbert 3075), ff.48–63 [*L*]. 16 parchment leaves, 30 × 22 cm. *Foliation*: modern ink 48–63. *Decoration*: red and black calligraphic initials begin each song, with red and black lettrines for internal strophes; decoration entered after notation. *Structure*: 2 gatherings of quaternions, bound at the end of a paper MS of perhaps the 15th century (ff.1–45, 39 × 29 cm), containing the *Roman de la Comtesse d'Anjou* dated 1316; *réclame* at the bottom of f.63*v* indicates that the parchment gatherings were originally part of a larger MS; Spanke suggested these gatherings belong with the fragmentary MS *B*. *Layout*: 1 column; 49 lines per column; prose format. *Text scribes*: 1 for the *roman* fascicle, another for the song gatherings. *Notation*: 1 scribe; 5-line red staves, square notation; evidence of careful copying in erasures and corrections. *Date and provenance*: late 13th or early 14th century, France; belonged to Claude Fauchet (*d* 1601) who added attributive rubrics and other notes, then to Jean-Baptiste Colbert (*d* 1683), eventually to Charles-Eléonor, Count of Seignelay, and from him to the Bibliothèque du Roi in 1732.

Contents: 52 songs arranged more or less by author, all with music; final song missing last 2 stanzas and the *envoi*. *Melodies*: attributions as found in *K*, where they are in the same order, to Gace Brulé (46) and Chastelain de Couci (6).



P. Paris: *Les manuscrits françois de la Bibliothèque du Roi*, vi (Paris, 1845), 40–45; Raynaud, i, 73–5; J.G. Espiner-Scott: *Claude Fauchet: sa vie, son oeuvre* (Paris, 1938), 186–7

Paris, Bibliothèque Nationale de France, fr.844 (formerly 7222; Mazarine 96) ('MS du Roi'; fig.23) [*M* and *Mt*; troubadour MS *W*]. 2 collections bound together with gatherings somewhat out of order, 32 × 22 cm. *Foliations*: modern red ink foliation B–E, 1–215, added presumably when the MS was bound with gatherings out of order and leaves missing, and after the miniatures were cut out; the Becks' facsimile assigns a new foliation to the restored codex; scholars use the foliation as the actual leaves rather than the Becks'. *Structure*: (i) the larger fascicle, *M*, now 4 + 213 parchment leaves (ff.B–E, 1 to the left column of 13, 14–58 and 79–215), which originally comprised 15 quaternions and 9 irregular gatherings; ff.B–E have incipits of this collection without folio numbers, written by the same scribe who entered the texts and decorated with the same lettrines as in the main MS; (ii) a smaller fascicle of songs by Thibaut IV, labelled *Mt* in the Becks' facsimile, begins in the right column of f.13 immediately following the conclusion in the left column of a small group of songs also by Thibaut; this fascicle comprises 18 parchment leaves (right column of f.13, ff.13*v* and 59–78, comprising 2 quaternions and 1 binion); the index does not include incipits of *Mt*. Present state of the large codex is poor, missing 18 of its original leaves and with many remaining leaves mutilated by excision of miniatures; mutilation occurred before the MS was described by P. Paris in 1845; many marginalia in a modern hand giving text (incipits, rubrics, etc.) lost to lacunae; *Mt* is undamaged. The larger codex seems to be a MS in progress, with many spaces left empty presumably for addition of more stanzas; during the late 13th century and the 14th other scribes, most using mensural notation, filled some of these spaces with 33 other works, including untexted *estampies* (ff.103*v*–104*v*) and songs in Old French and Occitan; the Becks' facsimile restores the original order of the gatherings and reconstructs the contents of the lacunae; added leaves at the beginning (ff.A and 216–21) have lists of authors and incipits. *Layout*: textblock of *M* is ruled in pencil and stanzas begin at left margin; textblock of *Mt* is ruled in dry point and stanzas are laid out in prose format; both collections have 2 columns with 41 lines per column. *Decoration*: *M* has historiated initials on first song of groups of authors' works (15 of which survived the excisions), initials painted with blue, pink, gold leaf, white tracery and black outlines at beginnings of the remaining songs, alternating blue/red and gold/blue calligraphic lettrines marking interior stanzas, line endings of gold, red and blue fill lines at ends of stanzas, and red rubrics with authors' names, almost all entered before the music was added except in the motet fascicle, where the decoration was entered last; *Mt* has no historiated initials, but painted initials beginning each song are in same style as in *M*, probably done in the same atelier; lettrines use the same colours and style as in *M* but are much less elaborate; decoration in *Mt* was added after the music notation. *Text scribes*: 1 text scribe for *M* and another for *Mt*. *Notation*: 1 scribe for *Mt*, square notation; 2 scribes for the songs and motets in *M*, 1 main hand and another less careful hand for at least 33 melodies; 4-line red staves, square notation throughout except for three melodies in mensural notation entered by the second scribe of *M* and by the scribes of many of the later entries; tenors of the motets are more or less modal. *Date and provenance*: after 1253, probably 1260s or 1270s, Artois (possibly Arras); came to Bibliothèque du Roi in 1668 from Bibliothèque Mazarine; the Becks suggested the MS was copied for Charles d'Anjou, count of Provence from 1245, but this is unsubstantiated.

Contents: *M* originally contained 428 Old French songs; in its current state it preserves in complete or fragmentary condition ff.1–185: 404 songs by trouvères, 365 with melodies, grouped by author beginning with 'li princes' and proceeding roughly in descending order of nobility; ff.188–204: 61 songs by troubadours, 51 with melodies; ff.205–210: originally 45 French two-voice motets and 3 three-voice motets (13 tenors without music); ff.212–214, 1 Old French and 2 French-Occitan lais; *Mt* has 60 songs by Thibaut IV, 56 with complete melodies and 2 with unfinished melodies; contents are closely related to *T*, including the motets; among the later additions are 9 monophonic '*estampies royals*' (the first a fragment) in mensural notation on ff.103*v*–104*v*. *Melodies*: Gace Brulé (42), Guillaume Le Vinier (27), Gautier de Dargies (19), Blondel de Nesle (21), Audefroi le Bastart (16), Guiot de Dijon (14), Jehan Erart (10), Gillebert de Berneville (14), Chastelain de Couci (11), Colart le Boutellier (12), Moniot d'Arras (13), Conon de Béthune (8), Raoul de Ferrières (9), Bernart de Ventadorn (8), Folquet de Marseille (4), Rigaut de Berbezilh (3), Gaucelm Faidit (3), Comtessa de Dia (1), etc.

Paris, Bibliothèque Nationale de France, fr.845 (formerly 7222[2]; Cangé 67) [*N*]. 191 fine parchment leaves, 30 × 21 cm. *Foliation and pagination*: modern 1–191 in red ink, which does not account for the lacunae; earlier pagination 1–381 in black ink, in same hand as Varennes-Godes index in *X* (see below). *Structure*: 24 quaternions, of which the second lacks its first leaf; at least 1 gathering missing between ff.159 and 160; last gathering was bound out of order before the foliation was added; 2 paper leaves bound in at front of MS list number of songs in the codex by each author, in a modern hand. *Layout*: 2 columns, 32 lines per column; prose format. *Decoration*: f.1, historiated initial of Thibaut IV and courtiers at the head of collection of his songs; large ornamental initials begin groups

23. Paris, Bibliothèque National de France, fr.844 (formerly 7222; the MS du Roi), f.5, ?1260s–70s: portrait of the Count of Bar, with his chanson 'De nos seigneur' in the main hand of the MS (in non-mensural notation); the two 'Danses' in mensural notation were copied by a later hand

of important authors' songs, the unattributed fascicle and the *motet enté* group; elsewhere gold leaf initials with blue and pink paint and white tracery, in a style similar to that of *K*; red or blue lettrines for interior stanzas; circled attributive red rubrics in margins, also similar to those in *K*; 2 blue rubrics, on ff.54 and 80; the former song is set off as 'couronée' in *X* and *CH-BEsu* 389. *Text scribes*: 1 scribe throughout, possibly same as that for *K*. *Notation*: 1 scribe throughout; 4-line red staves, square notation; entered after initials were painted but before rubrics or lettrines were added. *Date and provenance*: 1270–80, Picardy or Artois; owned by Guyon de Sardière (whose signature appears on f.1) and evidently also by Mme Varennes-Godes, according to 2 paper leaves tipped in at the end of *X*, ff.ii.[c]lxxii–ii.[c]lxxiii, which following the rubric 'A mad[e]. de Varennes gode' contain an index of authors and incipits of *N*; eventually reached the library of Châtre de Cangé sometime after 1724; given to the Bibliothèque du Roi in 1733.

Contents: 393 songs, all with music, including one in Occitan; closely related to contents and order of *K*, *L*, *P* and *X*; ff.1–143: 299 attributed songs grouped by authors; ff.144–183*v*: 93 unattributed songs; ff.186–187*v*, 2 lais and 1 texted *estampie*; ff.184, 189 and 190: 16 monophonic *motets entés*. *Melodies*: Thibaut IV (28), Gace Brulé (50), Blondel de Nesle (15), Perrin d'Angicourt (27), Thierri de Soissons (11), Gillebert de Berneville (12), Thibaut de Blason (6), Gautier de Dargies (8), Moniot d'Arras (7), Richart de Semilli (8), Moniot de Paris (9), Gautier d'Espinal (6), Eustache le Peintre de Reims (7).

Paris, Bibliothèque Nationale de France, fr.846 (*formerly 7222[3], Cangé 66*) ('Chansonnier Cangé') [*O*]. 141 parchment leaves, 24 × 17 cm. *Foliation*: 1–151 in Cangé's hand; Cangé also provided indices of authors and incipits on a parchment sesternion bound at the beginning of the codex, with folio numbers that match his foliation. *Structure*: 18 quaternions of which the last is missing its final leaf; the last song ends on f.139*v*, and Cangé added texts to ff.140–41, continuing on an additional parchment quaternion (ff.144–51, whose first song he gave a melody). *Layout*: 2 columns, 35 lines per column, prose format. *Decoration*: historiated initials begin the first song of each letter of the alphabet; red and blue calligraphic initials begin all other songs; red and blue lettrines mark interior stanzas; occasional line endings. *Text scribes*: one, Burgundian script and orthography. *Notation*: one hand; 4-line red staves; mensural notation including ligatures *cum opposita proprietate* and numerous chromatic inflections; music entered before decoration. *Date and provenance*: *c*1280–1290, Burgundy; acquired by Châtre de Cangé in 1724, evidently from the estate of Baudelot de Dairval (*d* 1722); Cangé gave the chansonnier as well as *N* and *P* to the Bibliothèque du Roi in 1733; Cangé added copious marginal and interlinear material to this MS, including author rubrics, extra text, translations, and 2 melodies on empty staves (ff.2 and 25*v*), indicating the sources from which he drew the annotations (*M*, *N*, *P*, *Q*, *R*, *T* and *X*).

Contents: 351 songs (including one in Occitan), of which 336 have melodies (2 more were copied by Cangé from *X*); no medieval attributions, songs arranged alphabetically and then by author within each letter, suggesting the collector was collating from several sources; many songs found also in *K*, *N*, *P* and *X*. *Melodies* (authenticated from other sources): Thibaut IV (63), Gace Brulé (27), Chastelain de Couci (10); Gautier d'Espinal (8), Adam de la Halle (8), Gillebert de Berneville (7), Blondel de Nesle (6), Moniot d'Arras (6), Conon de Béthune (5), Pistoleta (1), etc.

Aubrey, 'Medieval Melodies in the Hands of Bibliophiles of the Ancien Régime', *Essays on Music and Culture in Honor of Herbert Kellman*, ed. B. Haggh (Paris, forthcoming)

Paris, Bibliothèque Nationale de France, fr.847 (*formerly 7222[4], Cangé 65*) [*P*]. Now comprises 227 parchment leaves, which make up 3 distinct collections, each with a different mise-en-page and different scribes and thus probably originally separate MSS; 20 × 13 cm. *Foliation*: 1–228 (there is no f.92 but no text is missing), added by Cangé continuously through all 3 fascicles, which must thus have been bound together by the early 18th century. *Structure*: ff.1–210: 23 quaternions, 2 ternarions with 1 leaf (f.74) tipped in the first, and a sesternion at the end; the latter was probably created to accommodate the insertion of a lengthy *dit* at the conclusion of the collection of songs; ff.211–218: 1 quaternion; ff.219–28: 1 quaternion and a bifolio; this gathering probably belongs with ff.2–9 of *W*, a gathering which also does not match the rest of the codex with which it is bound; likely identity of format and scribal hands and coincidence of text support this assumption (Keyser); Cangé added an index of authors on 3 paper leaves at the beginning. *Layout*: 2 columns throughout; ff.1–210 have 26 lines per column; ff.211–18 have 28 lines per column; ff.219–26 have 27 lines per column; prose format. *Decoration*: historiated initials on f.1 (beginning of Gace Brulé songs) and 135 (where an unattributed group of songs begins); red and blue calligraphic initials begin all other songs; red or blue lettrines mark stanzas; decoration is in a similar style throughout all fascicles; ff.1–128, red rubrics with authors' names. *Text scribes*: several hands: one on first 2 gatherings, new hand begins on f.17; several hands from f.198*v* to the end of this fascicle; ff.211–18 are in a different hand and ff.219–28 in another. *Notation*: several hands: ff.1–198; ff.198*v*–201; ff.211–218*v*; ff.219–228; all use square notation; except on ff.219–228, all music was entered after the decoration. *Date and provenance*: 1270–80, Picardy-Artois region; acquired after 1724 by Châtre de Cangé, who gave it along with *N* and *O* to the Bibliothèque du Roi in 1733; he made occasional annotations from comparisons with *N* and *T* (after the latter had entered the Bibliothèque du Roi, since Cangé refers to it by its royal number, supp.fr.184).

Contents: 338 songs overall, 314 with music; ff.1–134*v*: 190 attributed songs grouped by author; ff.135–203*v*: 148 unattributed songs (some of which duplicate those in the attributed section); the contents of this first fascicle are closely related to those of *K*, *N* and *X*; ff.204–10: *Roman de vergier et de l'arbre d'amour* in a new hand; ff.211–28: 34 songs by Adam de la Halle, all with music. *Melodies*: Gace Brulé (25), Chastelain de Couci (14), Blondel de Nesle (11), Thibaut IV (7), Gautier de Dargies (9), Thibaut de Blason (4), Richart de Semilli (7), Adam de la Halle (34), etc.

Raynaud, i, 123–36; Ludwig, i/1, 336–7; H. Spanke, ed.: *Eine altfranzösische Liedersammlung, der anonyme Teil der Liederhandschriften KNPX* (Halle, 1925); Huot, 48–67; D.K. Keyser: *Oracy, Literacy, and the Music of Adam de la Halle: The Evidence of the Manuscript Paris, Bibliothèque Nationale f.fr.25566* (diss., U. of North Texas, 1996), 147–58

Paris, Bibliothèque Nationale de France, fr.1109 (*formerly 7363*), ff.311–325*v* [*Q*]. 329 parchment leaves, 30 × 21 cm. *Foliations*: original ink i–cxxxvi, coinciding with Brunetto Latini's *Livres dou tresor* (beginning at the second gathering and continuing to f.179); modern pencil 1–324, including 185*bis*, 185*ter*, 2 leaves without numbers and 2 leaves numbered 322; modern pen 1–329, the foliation used by scholars today. *Structure*: 38 quaternions, 2 binions, 1 bifolio, and 3 irregular gatherings of 7, 5 and 3 leaves respectively; the fascicle of lyric songs occupies the last 2 complete quaternions (ff.311–325*v*); major works coincide with the beginnings of gatherings and new hands; gathering signatures suggest that the fascicles may now be bound out of order; uniform textblock size, decoration style and scribal orthographies (Picard) indicate that the MS was prepared as a whole. *Layout*: song fascicle has 2 columns of 42 lines each; prose format. *Decoration*: 5 miniatures with gold leaf, 4 in the *Tresor* and 1 beginning the *Régime du corps* on f.242; red and blue calligraphic initials for songs and similar divisions elsewhere in the codex are of uniform style; red and blue lettrines in song fascicle; all decoration was entered after the music was written; red rubric 'Chi coumencent les canchons d'Adanz' on f.311, a little later than text. *Text scribes*: several scribes in the codex, each beginning a new work (ff.1, 144, 242, 282, 311 [song fascicle], 327, 328*v*) and coinciding with a new gathering; scribes appear to be contemporary with each other. *Notation*: one music scribe; 4- or 5-line red staves, some compression in spacing after f.313*v*; square notation, but with some ligatures *cum opposita proprietate*. *Date and provenance*: after 1310 (date given on f.143 at the end of the *Tresor*), Picardy; explicit 'Marie de Luxembourg' on the last leaf (f.329*v*) suggests that the book was owned by the wife of François de Bourbon, count of

Vendôme (she married in 1487; *d* 1546/7); the MS had entered the Bibliothèque du Roi by 1622.

Contents: a miscellany mainly of long prose and poetic works: ff.1–143: Brunetto Latini's *Li livres dou tresor*; ff.144–179: *Li dis de carité* and *Miserere* of the Reclus de Molliens; ff.179–185*v*: *Le chevalier au Barizel*; ff.188–234*v*: *Li mireoir dou monde*; ff.236–241: *Les vii Saumes Penitentians que David fist*; ff.242–281*v*: *Le régime du corps* of Aldebrandin of Siena; ff.282–290*v*: *Les enseignements des philosophes*; f.291–310: proverbs of Solomon; ff.311–325*v*: 26 chansons (the first 3 without staves) and 16 jeux-partis (none with staves) by Adam de la Halle, 1 jeu-parti (without staves) by Gillebert de Berneville; ff.327–328, *Li dit des iii vis et des iii mors* by Nicole de Margival; ff.328*v*–329*v*, *Explication d'un jeu de société*. *Melodies*: 23 chansons by Adam (1 incomplete).

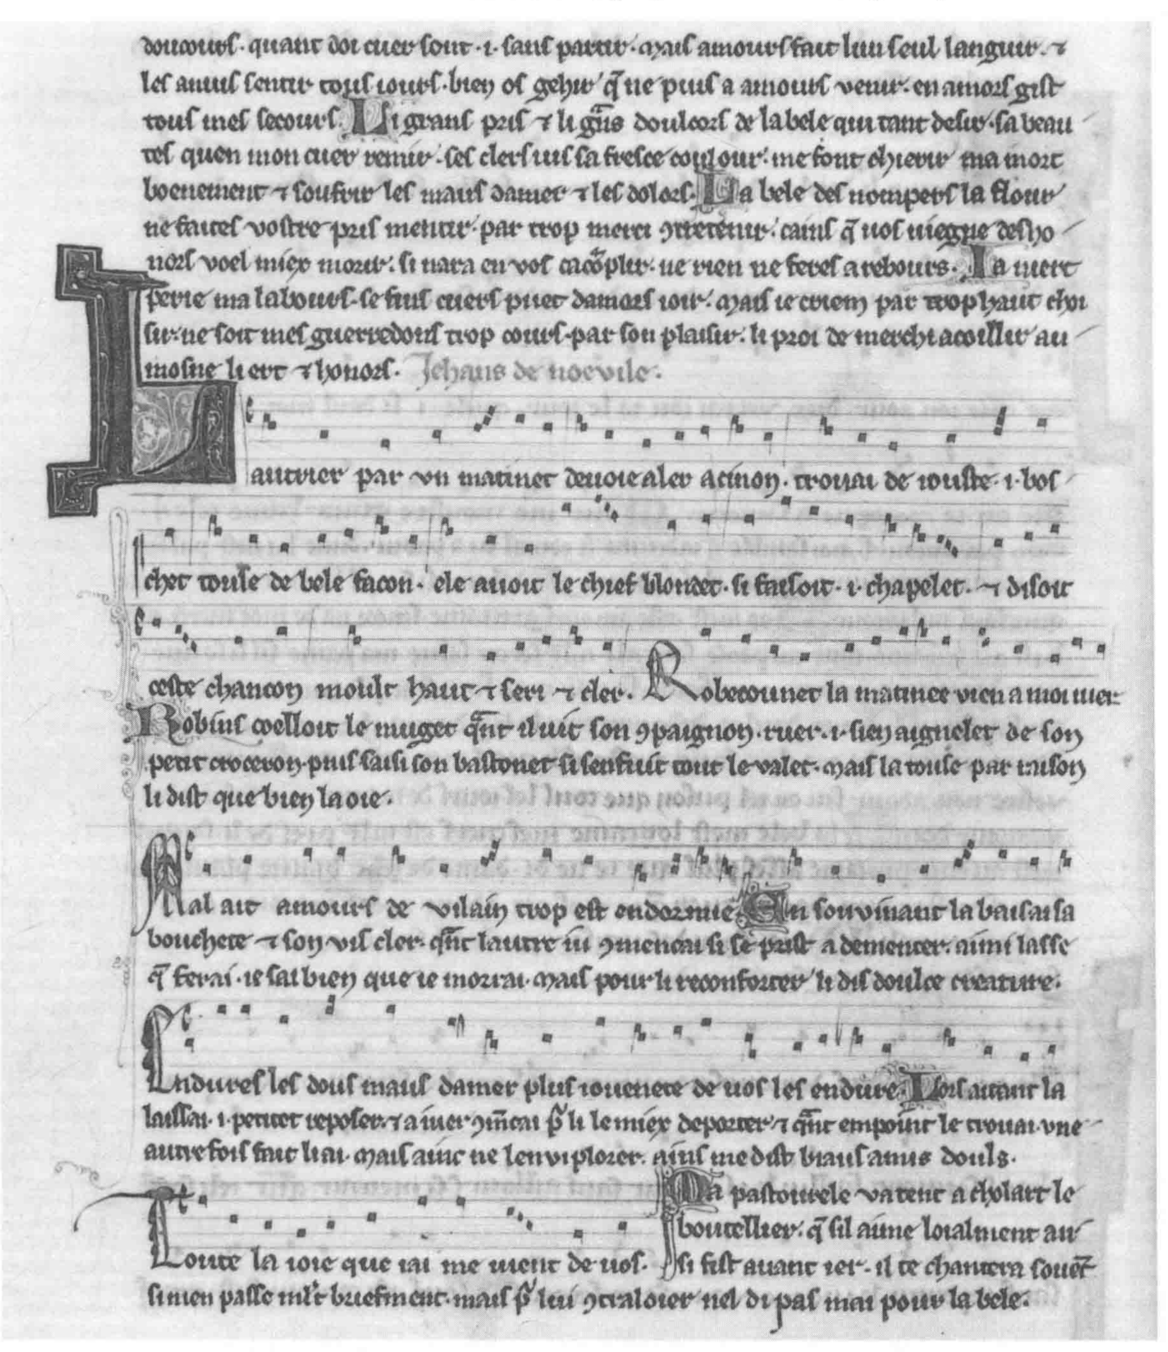
Raynaud, i, 137–8; E. Brayer: 'Notice du manuscrit Paris, BN fr.1109', *Mélanges dédiés à la mémoire de Félix Grat*, ii (Paris, 1949), 222–50

Paris, Bibliothèque Nationale de France, fr.1591 (*formerly 7613*) [*R*]. 185 parchment leaves, 25 × 18 cm. *Foliation*: modern ink 1–184 + 64*bis*, entered with the title page and index of authors on paper flyleaves at the beginning, dated 1895. *Structure*: 21 quaternions, 2 bifolios, 1 ternion, and at the end a bifolio, a single leaf tipped in and a binion. *Layout:* single column of 26 lines; prose format. *Decoration*: red and blue calligraphic initials (entered after music) begin each song; red and blue lettrines marking interior stanzas and attributive rubrics were entered before the music; uniform decoration throughout. *Text scribes*: 1 hand throughout. *Notation*: possibly 2 or 3 hands; evidence of attempts at mensural notation (differentiation of longs and breves, ligatures *cum opposita proprietate*, grouping notes by vertical strokes); 4-line red staves drawn with a rastrum. *Date and provenance*: beginning 14th century, Artois; owned by brothers Pierre (*d* 1651) and Jacques (*d* 1656) Dupuy, who bequeathed it to the Bibliothèque du Roi in 1645; it entered there in 1657.

Contents: ff.1–15*v* and 27–62: 63 attributed chansons; ff.16–26*v*, 17 jeux-partis; ff.62*v*–184: 172 unattributed chansons; all but the jeux-partis have music. *Melodies*: 235, of which 3 are incomplete: Thibaut IV (10), Chastelain de Couci (9), Moniot d'Arras (7), Blondel de Nesle (5), etc.

Raynaud, i, 139–49; A. Jeanroy and A. Långfors: 'Chansons inédites tirées du ms. fr.1591', *Romania*, xliv (1915–17), 454–510; J. Schubert: *Der Handschrift Paris, Bibl. Nat. fr.1591: kritische Untersuchung der Trouvèrehandschrift R* (Frankfurt, 1963)

Paris, Bibliothèque Nationale de France, fr.12615 (*formerly suppl.fr.184*) ('MS de Noailles'; fig.24) [*T*]. 234 parchment leaves, 31 × 20 cm. *Foliation*: modern ink 1–233, with 2 leaves numbered 226. *Structure*: sectionalization of contents coincides with changing gathering signatures, *réclames*, ruling and scribal hands to suggest 4 separate collections: (i) ff.1–22, 2 quaternions and an irregular gathering of 6 leaves; (ii) ff.23–178, 19 quaternions and 1 bifolio; (iii) ff.179–223, 5 quaternions, 1 ternion and single leaf, and 1 ternion; (iv) ff.224–33, a quaternion, a bifolio, and 1 leaf tipped in at the end. Consistent textblock size and similar decoration style indicate these fascicles were all produced in one workshop; staves, music, rubrics, and decoration were entered in different order throughout the codex as the various fascicles were circulated among different artisans during production. *Layout*: mostly single column; ff.1–20 and 224–33: 39 lines per column; ff.23–176 and 197–9: 36 lines per column; the *dits* and narrative poem on ff.199–222 are in 2 columns, the *dits* with 36 and the poem with 39 lines per column; the lyric songs are in prose format, the *dits* in verse format. *Text scribes*: at least 2, scattered throughout the codex; a few 14th- and 15th-century additions (ff.20*v*–21, 177, 178*v*, 222–223*v*). *Decoration*: historiated initial on f.1, and a large ornamental initial beginning the Adam de la Halle collection on f.224; elsewhere boxed ornamented gold leaf initials begin each song; blue/red and gold/blue lettrines mark interior stanzas; ff.224–33 have calligraphic initials without gold leaf, but otherwise decoration is similar; red attributive rubrics. *Notation*: for the monophony, at least 5 scribes, most using square notation, except for the 4 melodies by Thibaut IV in the first fascicle, which have rudimentary mensural notation; generally 5-line red staves, on ff.224–30 drawn with a rastrum; from f.30, notes occasionally extend over syllables of the second stanza which happen to be on the same line as the end of the first stanza; some melodies are left incomplete at the end; for the motets, a different scribe, square notation on 4-line red staves in parts (tenors are more or less modal; some are left unnotated but can be supplied from other sources). *Date and provenance*: 1270s–80s, Artois; early 14th-century *libellus* of Adam de la Halle bound in at the end (ff.224–233*v*); belonged to Duke Adrien-Maurice de Noailles (*d* 1766) by the early 18th century, but it had entered the Bibliothèque du Roi by 1733, because Cangé referred to it by its early royal number (suppl fr.184) in the leaves of *P* before he gave the latter to the Bibliothèque du Roi.



Contents: ff.1–20: 55 songs of Thibaut IV, only 4 with music; ff.23–61*v*, 76*v*–176*v* and 204: 472 chansons, jeux-partis, *chansons avec des refrains*, and descorts, all but 18 with attributions, 350 with melodies; ff.62–75*v*: 9 Old French lais, 7 with melodies, and 2 Occitan lais, both with music (1 incomplete); ff.179–197: 79 two-voice motets (4 without tenors; 2 with tenor text incipit but no music), 6 three-voice motets (1 without tenor or motetus), 1 four-voice motet; ff.197–199: 4 lyric songs of Artois, none with music; ff.199–216: *dits* from Artois, the latest from *c*1265; ff.218–222: Robert le Clerc's *Vers de la mort*; ff.224–233: 33 songs by Adam de la Halle, the first 12 with music. *Melodies*: Thibaut IV (4), Guillaume Le Vinier (24), Gillebert de Berneville (9), Audefroi le Bastart (13), Blondel de Nesle (9), Richart de Fournival (6), Thibaut de Blason (6), Moniot d'Arras (10), Pierre de Corbie (6), Jehan Erart (10), Thomas Herier (8), Andrieu Contredit (13), Gautier de Dargies (16), Chastelain de Couci (12), Gace Brulé (14), Adam de la Halle (12), etc.

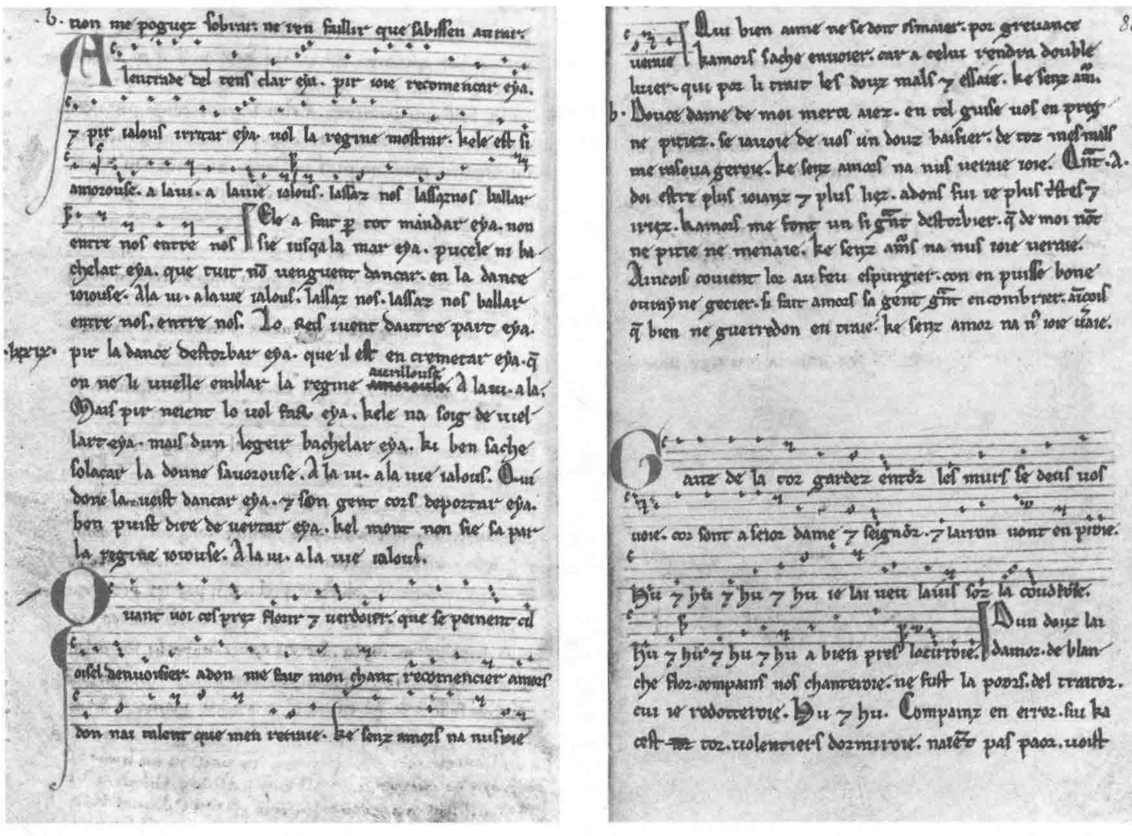
Paris, Bibliothèque Nationale de France, fr.20050 (*formerly St Germain fr.1989*) ('MS St-Germain-des-Prés'; fig.25) [*U*; troubadour MS *X*]. 3 + 168 parchment leaves, 18 × 12 cm, plus 2 partial leaves tipped in later (ff.120 and 151). *Foliations*: original i–clxviii (lxxxxi is missing), beginning on the leaf after the index, in the side margin on the *verso*, keyed to the index; later black pen 1–173 begins with the index and ignores the lacuna; the tipped in partial leaves (ff.120 and 151) are not included in the original foliation; scholars use the modern Arabic foliation. *Structure*: 19 quaternions, 2 bifolios, 1 ternion with a leaf tipped in, and 1 irregular gathering of 4 leaves at the end; medieval index at the beginning is on 3 leaves, a bifolio plus 1 leaf glued in; 1 leaf is missing between ff.93 and 94 (according to the original foliation), but no text seems to be missing. *Layout*: single column; varying number of lines per column: 26 (ff.4–91*v*), 25 (ff.94–109) and 20–23 (ff.110 to the end); prose format. *Decoration:* 1 painted initial begins f.4; elsewhere red initials begin each song, all added after the music except on ff.22*v*–23; ff.4–92, interior stanzas are highlighted by red marks on the black ink letters; ff.94–152, interior stanzas begin with red ink lettrines; modern attributive rubrics in black ink. *Text scribes*: ff.4–91*v*, 1 scribe; several other hands in the rest of the codex, including that of the main scribe. *Notation*: 4-line red staves on ff.4–91*v*; space allowed for staves but none drawn in on ff.92*r*–*v*, 110–152 and 154*v*–161; elsewhere no space allowed for music; 1 main music hand, with a few melodies added here and there by at least 2 other scribes, all using Messine neumes; 1 melody added on f.170*v* in square notation, possibly by a modern hand; gatherings 5 and 10 have empty staves, and gatherings 4, 5 and 11 have mostly empty staves. *Date and provenance*: after 1240, probably by 1250, Lorraine; Everist (1989) argues on paleographical grounds that it was produced as early as *c*1225, but it contains songs by several composers who could not have worked earlier than the 1240s; has been conjectured that the MS was accumulated over several decades, possibly by a *jongleur*, but the comprehensive index gives original foliation numbers and uses the same decorative initial highlights as in the texts, and gathering cues throughout the codex seem to be contemporary with the main text hand (Tyssens; Aubrey, p.35); the MS belonged to Henri-Charles du Cambout, duke of Coislin and bishop of Metz, who may have inherited it with the collection of his grandfather, chancellor Pierre Séguier (*d* 1672); Coislin placed his MS collection in the care of the abbey of St-Germain-des-Prés in 1720; the abbey retained possession after Coislin's death in 1732, and the collection entered the Bibliothèque Nationale in 1795.

Contents: 304 French chansons, pastourelles and *chansons de toile*, 91 with music (not counting the late addition on f.170*v*); 28 Occitan *cansos* (ff.81–91 and 148*v*–151) copied without being segregated, 22 with melodies. *Melodies:* no attributions, but authenticated by concordances: Jaufre Rudel (1), Rigaut de Berbezilh (2), Bernart de Ventadorn (2), Gaucelm Faidit (7), Peire Vidal (2), Gace Brulé (16), Blondel de Nesle (3), Chastelain de Couci (10), etc.



Raynaud, i, 172–83; P. Meyer and G. Raynaud: *Le chansonnier français de Saint-Germain-des-Prés* (Paris, 1892/*R*)

24. Paris, Bibliothèque Nationale de France, fr.12615 (formerly suppl.fr.184; the 'MS de Noailles'), f.46v, 1270s–80s: a pastourelle avec des refrains 'L'autrier par un matinet' by 'Jehans de Noevile'. The music for the first stanza is given; subsequent stanzas have music written in only for the final couplet or 'refrain', which is metrically and musically independent, and for the opening words of the next stanza

[facs.]; Ludwig, i/1, 337; I. Parker: 'Notes on the Chansonnier Saint-Germain-des-Prés', *ML*, lx (1979), 261–80; Huot, 52–3; Everist, 199–200; M. Jahrhunderts und einer Transkriptionsgeschichte des europäischen Minnesangs* (Frankfurt, 1995); Aubrey, 34–8

Paris, Bibliothèque Nationale de France, fr.24406 (formerly La Vallière 59) [V]. 1 + 155 parchment leaves, 29 × 20 cm. *Foliations*: modern red ink A + 1–155; older black pagination 1–236 (on ff.1–118*v*). *Structure*: the codex comprises 2 self-contained collections: (i) ff.1–119: 15 quaternions (last leaf cut out of final gathering); (ii) ff.120–55: a sesternion, 3 binions, 1 bifolio and 1 quinternion; gathering signatures and the remains of an early foliation (viii, xiiii, vi, ix–xii, xv–xxiiii, xxvi–lx, on ff.133–9 and 146–55, and 2–36) suggest that the original order of these 2 fascicles was reversed; index of authors in modern hand on f.A. *Layout*: (i) 2 columns of 34 or 35 lines; stanzas begin at left margin; (ii) 2 columns of 41 or 42 lines. *Decoration*: (i) 1 historiated initial on f.1, a vielle player; large ornamented gold leaf initials begin each song; smaller gold lettrines mark interior stanzas; no rubrics; (ii) no decoration,

25. Paris, Bibliothèque Nationale de France, fr.20050 (formerly St Germain fr.1989; the Chansonnier of St-Germain-des-Prés), ff.82v–83, mid-13th century: the opening is numbered in the left-hand margin by the original scribe; the foliation in the top right-hand corner dates from the 18th or 19th century

although space was allowed. *Text scribes*: at least 2 in song fascicle, change coinciding with new gathering (f.65); different hand on ff.120–55. *Notation*: at least 3 hands: (a) ff.1–48: 5-line red staves drawn with a rastrum on ff.1–16, 4- or 5-line red staves drawn without a rastrum on ff.17–48; square notation with some erasures and corrections; (b) ff.49–119: (at the beginning of a new gathering, but in the middle of a song), 4-line red staves drawn without a rastrum, square notation; and (c) ff.148–152: 4-line black staves, square notation, smaller than first 2 hands with many chromatic inflections and clef changes, possibly a much later (?modern) hand; the first 2 scribes entered music before the decoration was added. *Date and provenance*: after 1266 (date given in a rubric on f.120), Artois; added note on f.119*v* refers to marriage of 'Raoulet Bertholet' and 'Perrine de Fougerays' in 1427, suggesting early ownership of the codex; arms of Claude d'Urfé (*d* 1558) on f.1*v*; sold to Louis César de La Beaume le Blanc, duc de La Vallière, sometime after 1766, and then sold by his heirs to the Bibliothèque du Roi in 1784.

Contents: (i) 301 unattributed chansons, all but 1 with melodies (1 of which is incomplete), arranged by author as in other MSS, but many poetic variants and unique musical readings; (ii) ff.120–140: *Traité des quatres nécessaires*; ff.141–147*v*: Richart de Fournival's *Bestiaire d'amours*; ff.148–155: 30 anonymous Marian songs including 1 in Occitan, 18 with melodies; most of these are contrafacta of melodies found elsewhere in the codex. *Melodies*: no attributions, but concordances with other sources authenticate songs by Thibaut IV, Gace Brulé, Gillebert de Berneville, Richart de Semilli, Thibaut de Blason, Thierri de Soissons, Gautier d'Espinal, Chastelain de Couci, Moniot d'Arras, etc.

Raynaud, i, 186–98; A. Jeanroy, 'Les chansons de Philippe de Beaumanoir', *Romania*, xxvi (1897), 517–36; F. McAlpine: *Un chansonnier médiéval: édition et étude du manuscrit 24406 de la Bibliothèque Nationale* (diss., U. of Paris, Sorbonne, 1974).

Paris, Bibliothèque Nationale de France, fr.25566 (*formerly La Vallière 31*) ('Adam de la Halle MS'; 'MS La Vallière') [W]. 283 parchment leaves; 2 different collections bound together: (i) ff.2–9 (here called *Wa*, after Keyser), 21 × 14 cm, probably belongs with ff.219–28 of *P*, with which it seems identical in format and scribal hands; the text on f.9*v* of *W* breaks off at precisely the point that continues on f.219 of *P* (Keyser); (ii) the main part of the codex, *W*, 275 parchment leaves, ff.1 and 10–283, 25 × 17 cm. *Foliations*: *W* has an early foliation i–lxxiii (coinciding with ff.10–89); *Wa* and *W* have separate modern foliations in black ink, 1–8 and 1–275 respectively, evidently done before the 2 collections was bound together; after their binding, a red ink foliation was added coinciding with the current order of leaves, 1–283, which is the foliation used by scholars. *Structure*: (i) 8 parchment leaves in 1 quaternion; (ii) a single leaf (f.1), 31 quaternions, 1 quinternion, 1 ternion, and a final ternion with a tipped-in single leaf (f.280) in the middle; gathering 21 has an added bifolio containing full-page illuminations (ff.175 and 178*v*), and gathering 26 has a single tipped-in leaf with a full-page illumination (f.220*v*). F.1 contains an index of the contents of *W*, contemporary with the MS but without folio numbers. *Layout*: both collections are in two columns; *Wa* has 27 lines per column in prose format; *W* has 34–5 lines per column, and stanzas begin at left margin for the monophonic songs; the polyphonic rondeaux are laid out in score, the motets in parts. *Decoration*: both collections have blue and red calligraphic initials to start each song and blue and red lettrines marking interior stanzas; *W* has a historiated initial at the beginning of each major section, most illustrating the content or generic identity of the works to follow; ff.175, 178*v* and 220*v* are full-page illuminations; long non-lyric works from f.83 to the end have numerous illuminations; red rubrics introduce the different genres and works. *Text scribes*: *Wa*, 1 hand, possibly same as that of *P*, ff.219–28; *W* has 1 hand for all of Adam's works; a new hand begins partway through *Renart le nouvel*. *Notation*: *Wa*, 1 hand, possibly same as that of ff.219–28 of *P*, square notation; *W* has 1 scribe for all music, square with occasional mensural shapes for the monophonic chansons and jeux-partis, on 5-line red staves; mensural for the polyphony on 4- and 5-line staves (the rondeaux in score, the motets in parts) and for the lyric insertions on 4-line red staves. *Date*

and provenance: end of the 13th century, Artois; sold by the heirs of Louis César de La Beaume le Blanc, duc de La Vallière to the Bibliothèque du Roi in 1784.

Contents: *W* is a well-planned comprehensive MS, beginning with the monophonic and polyphonic songs and motets of Adam de la Halle (ff.10–68) and continuing with many prose and narrative poetic works by other major 13th-century authors; ff.10–23*v*: 34 chansons, all but 1 with music; ff.23*v*–32*v*, 16 jeux-partis, all with music; ff.32*v*–34*v*: 16 three-voice rondeaux; ff.34*v*–37, 4 three-voice motets and 1 two-voice; ff.37*v*–39, *Le jeu du pelerin*; ff.39–48*v*: *Jeu de Robin et Marion*, with musical lyric insertions; ff.49–59*v*: *Jeu de la feuillée*; ff.59*v*–65: *Roy de Sezile* with musical lyric insertions; ff.65–66*v*: *Vers d'amour*; ff.66*v*–67*v*: *Congé d'Adam*; ff.68–83: Jehan Bodel's *Jeu de S. Nicolai*; ff.83–106*v*: Richart de Fournival's *Bestiaire d'amour* and *Response du bestiaire*; ff.106*v*–109: *Comment Dieus forma Adam* and 2 *dits*; ff.109–177: Jacquemart de Gielée's *Renart le nouvel*, with musical lyric insertions; ff.179–232: *Des iiii. evangelistres*; *Li tornoiement Antecrist* and other religious and moralizing works; ff.232–283: *dits* and other narrative works, concluding with Jehan Bodel's *Congé*. *Wa* contains 14 chansons by Adam, the last of which is incomplete. *Melodies*: *Wa*: Adam (14 chansons); *W*: Adam (33 chansons, 16 jeux-partis).

Raynaud, i, 198–201; Ludwig, i/2, 464–71; RISM, B/IV/1, 395–401; Huot, 64–74; Everist, 204; D.K. Keyser: *Oracy, Literacy, and the Music of Adam de la Halle: the Evidence of the Manuscript Paris, Bibliothèque Nationale f.fr.25566* (diss., U. of North Texas, 1996)

Paris, Bibliothèque Nationale de France, n.a.fr.1050 ('MS de Clairambault') [*X*]. Originally 279 parchment leaves, 25 × 18 cm. *Foliations*: original i–cclxix in brown ink, reflecting the lacunae; modern red ink 1–272, disregarding the lacunae, begins on the paper gathering preceding the medieval codex, added with the paper title page dated 1876; scholars use the arabic foliation. *Structure*: originally 34 quaternions and a final gathering of 5 leaves; the second bifolio of gathering 15 (ff.cxiv and cxix) and gatherings 17, 18 and 19 (ff.cxix–clii) are missing, replaced by Clairambault with paper leaves containing songs copied from *N*; Clairambault also added a paper gathering at the beginning (ff.1–7) with an index of authors; several paper leaves were added at the end in several hands: ff.ii.[c]lxx–ii.[c]lxxi, possibly in Clairambault's hand, give remarks on some songs, a partial index, and a few additions; ff.ii.[c]lxxii–ii.[c]xxiii begin with the rubric 'A mad[e]. de Varennes gode' followed by an index of authors and incipits of *N* in the same hand as and keyed to the pagination of that MS; and ff.ii.[c]lxxiv–ii.[c]lxxvii, in the hand of Baudelot (*d* 1722), give 4 poems by Thibaut IV found in *O* (which Baudelot owned) and *T*. *Layout*: 2 columns, 30 lines per column; all stanzas begin at left margin. *Decoration*: Thibaut IV *libellus* (f.i) and Marian song collection (f.ccliiii*v*) begin with historiated initials; most other author groups begin with an ornamented initial with gold leaf; remaining songs begin with a large calligraphic red or blue initial; interior stanzas have blue and red lettrines; red attributive rubrics, entered when text copied and before staves were drawn; red crowns in margins mark 5 songs as 'coronnée'. *Text scribes*: 1 scribe throughout. *Notation*: 1 scribe throughout, in darker ink than text; 4-line red staves, square notation, entered after rubrics and before decorated initials. *Date and provenance*: 1270–80, probably Arras; belonged to François-Roger de Gaignière (*d* 1715), from whose library it was evidently stolen by Pierre de Clairambault (*d* 1740), thence to his nephew Nicolas-Pascal (*d* 1762), who before his death ceded this and his other MSS to the Order of Saint-Esprit; it was moved to the convent of the Grands-Augustins in 1772, and finally to the Bibliothèque du Roi in 1792; in the turmoil of the Revolution many papers of Clairambault and others associated with the nobility were burnt, and this MS was thought to be lost until it was catalogued in 1876.

Contents: ff.8–192: 294 attributed songs grouped by author, all but 1 with music, 2 left incomplete by lacunae; ff.192–257: 130 unattributed songs, all with music; ff.257–272: 31 Marian songs, all with music; order and contents of courtly song collection related to *K* and *N*; Marian fascicle shares a few concordances with *P*. *Melodies*: Thibaut IV (59), Gace Brulé (46), Chastelain de Couci (16), Blondel de Nesle (14), Thibaut de Blason (6), Gautier de Dargies (8), Moniot d'Arras (7), Gillebert de Berneville (13), Perrin d'Angicourt (21), Richart de Semilli (7), Moniot de Paris (9), Raoul de Soissons (4), Eustache le Peintre de Reims (6), etc.

G. Raynaud: 'Le Chansonnier Clairambault de la Bibliothèque nationale', *Bibliothèque de l'Ecole des Chartes*, xl (1879), 48–67; Raynaud, i, 201–19; Ludwig, i/1, 336–7; H. Spanke, ed.: *Eine altfranzösische Liedersammlung, der anonyme Teil der Liederhandschriften KNPX* (Halle, 1925); F. Gennrich, ed.: *Cantilenae piae: 31 altfranzösische geistliche Lieder der Hs. Paris, Bibl. Nat. nouv. acq. fr. 1050* (Frankfurt, 1966); Huot, 48–57.

Rome, Biblioteca Apostolica Vaticana, Reg.lat.1490 [*a*]. Earlier 4 + 204 leaves of which 23, presumably with historiated initials, were cut out, truncating many poems and melodies on adjacent leaves; surviving codex has 181 leaves, 31 × 21 cm. *Foliations*: original red ink [i]–xx/ix.xiij [=193], not including the index on the first 4 leaves to which it is keyed, accounts for the lacunae; modern black ink 1–181 beginning with the index, ignores lacunae; the latter foliation is the one used by most scholars. *Structure*: originally 22 quaternions, 1 binion, 2 ternions and 1 quinternion; medieval index with attributions, incipits, and rubrics introducing sections of the MS on a binion at the beginning; this index sometimes disagrees with attributions in the MS, omits many pieces, and lists several motets and rondeaux as chansons; index does not include the *dits* on ff.128–33, a gathering that seems to have been inserted later. *Layout*: 2 columns of 31 lines each; stanzas begin at the left margin. *Decoration*: historiated initials begin major composer groups; 7 of these survive; red/blue/gold initials begin remaining songs; blue and red calligraphic lettrines mark interior stanzas; painted line endings; red attributive rubrics and genre headings; decoration very smilar to that of *A*. *Text scribes*: 1 main hand throughout, with a few slightly later additions. *Notation*: at least 2 music hands; 4- to 5-line red staves, square notation for monophony; motets sometimes have quasi-mensural notation, in parts; music added after decoration. *Date and provenance*: late 13th or early 14th century, Artois; came to Vatican from estate of Queen Christina of Sweden (*d* 1689); once thought to have belonged to Claude Fauchet, but this is unverified; marginalia and interlinear notes throughout the MS do not appear to be in Fauchet's hand.

Contents: arranged by genre, and works by a single composer often coincide with the start of a gathering, so excised leaves with historiated initials are usually the first leaf of a gathering; ff.1–108*v*: 215 chansons (203 with music); ff.109–113*v*, 9 pastourelles (7 with music); ff.114–117: 5 three-voice motets (2 with music, 3 missing tenors, 1 also missing its motetus), 2 two-voice motets (both with music, but both missing tenors); ff.117–119*v*: 9 monophonic rondeaux (8 with music) and 1 virelai (with music) by Guillaume d'Amiens; ff.120–127: 15 Marian songs (14 with music); ff.128–133*v*: 4 *dits sur l'amour*; ff.134–181: 78 jeux-partis (76 with music); in addition, there are 3 rondeaux (with music), 1 *ballette* (with music) and the upper voices of 10 motets (2 with music) scattered throughout the codex, often at the ends of gatherings where space was left initially; some of these are in the main text hand, some in different hands; the motet voices were entered into the index as chansons. *Melodies*: Thibaut IV (14), Chastelain de Couci (8), Gautier de Dargies (5), Gace Brulé (6), Guillaume Le Vinier (14), Richart de Fournival (15), Moniot d'Arras (5), Adam de la Halle (15), Colart le Boutellier (12), Jehan Bretel (6), Jehan de Grieviler (7), Blondel de Nesle (5), Gillebert de Berneville (9), Perrin d'Angicourt (7), Jehan le Cuvelier d'Arras (5), Guillaume d'Amiens (9), etc.

A. Keller: *Romvart* (Mannheim, 1844), 24–327 [description and excerpts]; Raynaud, i, 219–32; Ludwig, i/2, 569–90; RISM, B/IV/1, 798–9; Huot, 53–64.

Siena, Biblioteca Comunale degli Intronati, H.X.36 [*Z*]. 54 parchment leaves, 29 × 20 cm. *Foliation*: modern 1–53 + 10*bis*. *Structure*: 6 quaternions and 1 ternion. *Layout*: single column, 31 lines per column. *Decoration*: a gold/blue/red initial begins the first piece (f.1); red and blue calligraphic initials begin other pieces; red and blue lettrines begin interior stanzas. *Text scribe*: 1. *Notation*: 1 scribe, 4-line red staves, square notation added before the decoration. *Date and provenance*: late 13th or early 14th century, Artois or Picardy; came to Siena library from estate of Uberto Benvoglienti (*d* 1733).

Contents: 77 chansons and 24 jeux-partis, all but the last of the jeux-partis with music. *Melodies*: a total of 101 melodies, no attributions, but authenticated from other sources are songs by Thibaut IV (13), Perrin d'Angicourt (11), Blondel de Nesle (4), Jehan de Grieviler (5), Colart le Boutellier (9), Robert du Chastel (5), etc.

5. GERMAN. The active tradition of German monophonic song, which lasted uninterrupted for some seven centuries (Meistergesang was still being cultivated in the early 19th century), is reflected in a series of MSS whose very continuity is perhaps misleading but whose perpetual variety of musical readings has warned scholars not to take any of the information in them too literally. So melodies ascribed to WALTHER VON DER VOGELWEIDE, for instance, are fairly numerous but only four of them, those in the Münster fragment, are generally accepted as being likely to resemble anything Walther knew. It is, moreover, rather more apparent from German sources than from others that the copyists were concerned primarily with presenting a relatively homogeneous repertory, not an *Urtext*: the melodies that were copied for later generations were actually used by them, so there would be no question of resurrecting earlier performing practice, rather the melodies had to be adapted to the current styles.

Study of these sources is made extremely difficult by the severe lack of early MSS and by the daunting profusion of enormous MSS from the 17th century, many of them not yet fully described. Even more frustrating is the clear evidence that there were once several MSS of early Minnesang with music: quite apart from the evidence of numerous fragments mentioned below, there is a record of five old songbooks with music (and including Walther von der Vogelweide's *Leich*) that were catalogued at Wittenberg in 1434 (see Stäblein, 1975, p.91). On the interpretation of the surviving musical evidence *see* MINNESANG, §7, and MEISTERGESANG, §2.

Consideration of Minnesang sources must begin with the text sources that provide the picture of the tradition accepted by scholars and literary students. The sources are all relatively late, but scarcely more so than the troubadour MSS. Their evidence is crucial for a study of the music because the musical sources are later still and mostly belong more to the era of Meistergesang.

IMPORTANT TEXT MANUSCRIPTS
in chronological order

Heidelberg, Universitätsbibliothek, Pal.germ.357 ('Kleine Heidlberger Liederhandschrift', 'Alte Heidelberger Liederhandschrift') [*H, A*]. 13th century. Ed. F. Pfeiffer (Stuttgart, 1844/*R*); facs., ed. C. von Kraus (Stuttgart, 1932)

Stuttgart, Württembergische Landesbibliothek, HB XIII, 1 ('Weingartner Liederhandschrift') [*W, B*]. Early 14th century. Ed. F. Pfeiffer and F. Fellner (Stuttgart, 1843); facs., ed. K. Löffler (Stuttgart, 1927)

Heidelberg, Universitätsbibliothek, Pal.germ.848 ('Manessische Liederhandschrift', 'Grosse Heidelberger Liederhandschrift') [*M, C*]. Early 14th century and magnificently illuminated. Ed. F. Pfaff (Heidelberg, 1909); facs., ed. R. Sillib, F. Panzer and A. Haseloff (Leipzig, 1925–9); facs., ed. U. Müller and W. Werner (Göppingen, 1971)

Munich, Universitätsbibliothek, 2° 731 ('Wurzburger Handschrift') [*E*]. Mid-14th century.

Weimar, Herzogin Anna Amalia Bibliothek, 4° 564 ('Weimarer, Liederhandschrift') [*F*]. Early 15th century.

The study of the music for Minnesang rests primarily on four sources: *Jena, Thüringer Universitäts- und Landesbibliothek, El.f.101* ('Jenaer Liederhandschrift'; fig.26) [*J*]. Originally 154, now 133 leaves of high-quality parchment, 56 × 41 cm. *Foliations*: old 1–49 entered before any leaves were lost from this section; more recent 50–133 ignoring missing leaves.

Structure: 19 gatherings, mostly of 8 leaves. *Scribes*: ff.1–72*c*; ff.81*a*–end; [later] ff.73–80. *Date*: mid-14th century; Holz suggested it was prepared for Friedrich der Ernsthafte, Landgrave of Thuringia and Margrave of Meissen (1324–49), partly on the basis of the magnificent format and partly because of the Eastern orthography. *Provenance*: came to Jena with the Elector of Saxony's library in 1548.

Contents: 91 melodies and many other poems without music; final section contains the *Wartburgkrieg*. *Authors*: Wizlâv III von Rügen (17), Der Mysnere (16), Meister Rumelant (9), Herman Damen (6), Brůder Wirner (6), Meister Alexander (5), Friedrich von Sunnenburg (4), Meister Kelyn (3), Der Unverzagte (3), Frauenlob (3), Meister Zilies von Seyne (2), Meyster Gervelyn (2), Der junge Spervogel, Robyn, Spervogel, Der Helleviur, Der Hynnenberger, Der Gůtere, Der Leitscouwere, Der Tannhäuser, Meister Singof, Reynolt von der Lippe, Rumelant von Swaben, Konrad von Würzburg, Meister Poppe, Heinrich von Ofterdingen, Her Wolueram. The volume also includes poems without music by Meyster Růdinger, Der Urenheymer, Der Ghůter and Der Goldener. *Notation*: square non-mensural neumes on a 5-line staff.

Kornrumpf: 'Jenaer Liederhandschrift', *Literaturlexikon*, ed. W. Killy (Gütersloh,1988–93); K. Klein and H. Lomnitzer: 'Ein wiederaufgefundenes Blatt aus dem "Wartburgkrieg"-Teil der Jenaer Liederhandschrift', *Beiträge zur Geschichte der deutschen Sprache und Literatur*, cxvii (1995), 381–403; L. Welker: 'Jenaer Liederhandschrift', *MGG2*

Vienna, Österreichische Nationalbibliothek, Vind.2701 ('Frauenlob-Codex', 'Wiener Leichhandschrift') [*W*]. 50 parchment leaves, 24 × 16 cm. *Foliation*: modern pencil 1–50. *Structure*: 6 gatherings of 8 leaves with 2 extra sheets around the first. *Scribes*: ff.1–10; ff.11–18; ff.19–50 all containing several hands. *Illumination*: many initials, titles and ascriptions in red ink. *Date*: 14th century. *Provenance*: taken over from *A-Wu* in 1756 (catalogue no.509). *Notation*: non-mensural Messine neumes on a 5-line staff.

Contents: 5 *Leichs* and 5 Minnelieder. *Composers*: Frauenlob (4), Reinmar von Zweter (2), Meister Alexander (2), Winsbeke (1) and anon.

DTÖ, xli, Jg.xx (1913/*R*) [complete facs. and edn]; C. März: 'Wiener Leichhandschrift', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2, 1977–)

Munich, Bayerische Staatsbibliothek, Cgm 4997 ('Kolmarer Liederhandschrift', 'Colmar MS'; fig.27) [*K, t*]. 856 paper leaves, 30 × 20 cm. *Foliations*: (*a*) original Arabic; (*b*) slightly later Roman; (*c*) modern foliation, *c*1860. *Structure*: original index and 12-leaf gatherings; 36 lines per page. *Scribes*: main scribe 'A', who identifies himself on f.478; scribe 'B', perhaps from Alsace, added some contrafactum texts, etc. *Illumination*: 'kunstlos' (Aarburg). *Date*: mid-15th century, probably copied at Speyer, *c*1460. *Provenance*: purchased in Schlettstatt by Jerg Wickram in 1546; he took it to Colmar and founded the Colmar Meistersinger fraternity on this basis.

Contents: over 900 poems, arranged according to Ton; 105 melodies (including 5 *Leichs*). *Composers*: Frauenlob (24), Monk of Salzburg (10), Regenbogen (9), Konrad von Würzburg (8), Lesch (7), Der Kanzler (5), Heinrich von Mügeln (4), Marner (4), Harder (3), Peter von Reichenbach (3), Reinmar von Zweter (3), Walther von der Vogelweide (3), Liebe (2), Tannhäuser (2), Mülich von Prag (2), Muskatblůt (2), Peter von Aarburg (2), Wolfram von Eschenbach (2), Anker, Boppe, Heinrich von Ofterdingen, Tugendhafter Schreiber, Klingsor, Der alte Stolle, Der junge Stolle, Suchensinn, Meffrid, Meissner, Neidhart, [Nestler von Speyer], Peter von Sachsen, Reinmar von Brennenberg, Rumsland von Sachsen, Der Ungelehrte, Der Zwinger. *Date of music*: goes back apparently to the 12th century in some cases, though it is likely that all earlier material is heavily adapted.

26. *Jena, Thüringer Universitäts- und Landesbibliothek, MS El.f.101 ('Jenaer Liederhandschrift'), ff.127v–128, mid-14th century: the 'Schwarzer Ton', with the text 'Do man dem edelen Syn getzelt' and an ascription to 'Her Wolveram'; for transcription see* Ton *(i), ex.1*

27. *Munich, Bayerische Staatsbibliothek, Cgm 4997 ('Kolmarer Liederhandschrift'), f.680, mid-15th century: the 'Schwarzer Ton' with the text 'Ein edel Baum gewachsen ist' and heading 'In Clingesores Swarzen Ton'; for transcription see* TON (i), *ex.1*

28. Nuremberg, Stadtbibliothek, Will III 792, f.35, c1670 and after: two versions of the 'Schwarzer Ton', the first (following Puschman) with the text 'Vor Jaren sass'; for transcription see TON (i), *ex.1*

Schnell: 'Zur medizinischen Sammelhandschrift Salzburg M II 3 und zur Kolmarer Liederhandschrift', *Archiv für das Studium der neueren Sprachen und Literaturen*, ccxxx (1993), 261–78; L. Welker: 'Kolmarer Liederhandschrift', *MGG2*

Karlsruhe, Badische Landesbibliothek, Donaueschingen 120 (formerly Donaueschingen, Fürstlich Fürstenbergische Hofbibliothek) [*D, u*]. 321 paper pp., 28 × 21 cm. *Structure*: pp.1–204 theological treatises; pp.205–321 songbook, of which first layer pp.205–24, second layer pp.225–311 (3 gatherings), third layer pp.312–21. *Illuminations*: elaborate. *Date*: very late 15th century (uses void minims); perhaps copied in Alsace. *Provenance*: 1589 belonged to Nik. Mucheim of Uri at Mulhouse.

Contents: 40 poems, 21 melodies, all except Reinmar von Zweter's *Sangweise* found also in the Colmar MS, which is normally considered to have been copied from the same exemplar. *Composers*: Frauenlob (14), Reinmar von Zweter (2), Kanzler, Peter von Sachsen, Lesch, Monk of Salzburg, anon.

P. Runge: *Die Sangesweisen der Colmarer Handschrift und die Liederhandschrift Donaueschingen*(Leipzig, 1896/*R*); H. Husmann: 'Donaueschinger Liederhandschrift', *MGG1*; G. Steer: 'Donaueschinger Liederhandschrift', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2/1977–); L. Welker: 'Donaueschinger Liederhandschrift', *MGG2*

Beyond these four larger MSS, the earlier German repertory is known from the sources dedicated exclusively to the poetry and music of NEIDHART VON REUENTAL (*D-Bsb* Mgf 779 and *D-F* germ.oct.18), and from a whole series of single leaves and fragmentary sources as well as from larger late medieval collections such as the 'Sterzinger Miszellaneenhandschrift' (Vipiteno, Stadtarchiv) and the 'Mondsee-Wiener Liederhandschrift' (*A-Wn* 2856). The following list is a relatively full census of song collections, and it gives a representative selection of single leaves and fragments.

SONG COLLECTIONS, ISOLATED MELODIES AND FRAGMENTS
in chronological order

13TH CENTURY

Munich, Bayerische Staatsbibliothek, Clm 4660, 4660a ('Codex Buranus' and 'Fragmenta Burana'). *c*1230, South Tyrol, single German strophes with staffless neumes. Facs. and commentary in B. Bischoff: *Carmina Burana: Faksimileausgabe* (Munich and Brooklyn, NY, 1967); see also §III, 2

[Lost Schreiber fragment] [*S*]. See Taylor (1968), i, 92–3; ii, 136–7

14TH CENTURY

Vienna, Österreichische Nationalbibliothek, Vind.2675 [*A'*]. *c*1300. 1 melody. Facs. in von den Hagen, 774; see also Brunner and Wachinger, 290–91

Berlin, Staatsbibliothek zu Berlin Preussischer Kulturbesitz, Mgq 981 [*Mb*]. 14th century. One melody. Facs. in E. Jammers: *Tafeln zur Neumenschrift* (Tutzing, 1965), 139

Kremsmünster, Benediktinerstift, Musikarchiv, 127 (formerly VII 18) [*N*], f.130. Early 14th century. Neumatic notation for 2 lines of 1 song by Walther von der Vogelweide. Facs. and description in H. Brunner and others, eds.: *Walther von der Vogelweide: die gesamte Überlieferung der Texte und Melodien* (Göppingen, 1977), 37*–38*, 50*, 162–3

Münster, Staatsarchiv, VII 51 [*Z*]. 14th century. Parchment bifolio with 5 melodies, 4 ascribed to Walther von der Vogelweide. Facs. and description in H. Brunner and others, eds.: *Walther von der Vogelweide* (Göppingen, 1977), 51*–58*, 80*–86*, 293–6

Basle, Öffentliche Bibliothek der Universität, N I 3, Nr.145. Facs. in H. Tervooren and U. Müller, eds.: *Die Jenaer Liederhandschrift* (Göppingen, 1972), appx; extensive study, facs. and edn in W. von Wangenheim: *Das Basler Fragment einer mitteldeutsch-niederdeutschen Liederhandschrift und sein Spruchdichter-Repertoire* (Berne and Frankfurt, 1972)

Berlin, Geheimes Staatsarchiv, Stiftung Preussischer Kulturbesitz, XX. Hauptabteilung (StA Königsberg), 33.1 (formerly Königsberg, Provinzialarchiv). Early 14th century. See K. Stackmann and K. Bertau, eds.: *Frauenlob (Heinrich von Meissen): Leichs, Sangsprüche, Lieder* (Göttingen, 1981), i, 139

Engelberg, Kloster, Musikbibliothek, 314. Late 14th century or early 15th. German religious songs in the first gathering. Facs. and commentary in W. Arlt and M. Stauffacher: *Engelberg Stiftsbibliothek Codex 314* (Winterthur, 1986)

Graz, Universitätsbibliothek, 756 ('Seckauer Cantionale'). Mid-14th century. Several German religious songs with neumes. See J. Janota: 'Seckauer Cantionale', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2/1977–)

Marburg, Staatsarchiv, Bestand 147, Hr.1.2. Early 14th century. 2 parchment leaves. See K. Stackmann and K. Bertau, eds.: *Frauenlob (Heinrich von Meissen): Leichs, Sangsprüche, Lieder* (Göttingen, 1981), i, 150–51

Melk an der Donau, Bibliothek des Benediktinerstifts, s.s. 14th century. Parchment bifolio containing part of Frauenlob's *Marienleich*. See Stackmann and Bertau, 146–8

Munich, Universitätsbibliothek, 4° 921. 2 leaves containing part of Frauenlob's *Marienleich*. Facs. in K.H. Bertau: 'Wenig beachtete Frauenlobfragmente, II', *Zeitschrift für deutsches Altertum und deutsche Literatur*, xciii (1964), 215–26; see also Stackmann and Bertau, 139

Wrocław, Biblioteka Uniwersytecka, I Q 368a (formerly frag.no.12). Early 14th century. Parchment bifolio containing part of Frauenlob's *Marienleich*. Facs. in J. Klapper: 'Frauenlobfragmente', *Festschrift Theodor Siebs zum 70. Geburtstag*, ed. W. Steller (Breslau, 1933/R), 69–88; see also Stackmann and Bertau, 149

15TH CENTURY

Kraków, Biblioteka Jagiellońska, Mus.ms.40580 (formerly Berlin, Preussische Staatsbibliothek) [*b*]. 14th–15th centuries. See J. Wolf: 'Zwei Tagelieder des XIV. Jahrhunderts', *Mittelalterliche Handschriften:... Festgabe zum 60. Geburtstage von Hermann Degering*, ed. A. Bömer (Leipzig, 1926/R), 325–7 (also pubd separately)

Leipzig, Universitätsbibliothek, 1305. Early 15th century (ff.107–10 dated 1382). See H.J. Moser: *Geschichte der deutschen Musik*, i (Stuttgart, 1920, 5/1930/R); W. Jungandreas: 'Das Ms. 1305 der Universitätsbibliothek Leipzig, eine Handschrift aus Schlesien', *JbLH*, xix (1972), 205–12; Brunner and Wachinger, 193

Erlangen, Universitätsbibliothek, B5 (formerly 1655). 15th century. 14 paper leaves containing 1 melody in staffless neumes. See Brunner and Wachinger, 155

Basle, Öffentliche Bibliothek der Universität, B XI 8. *c*1400. See P. Kesting: 'Die deutschen lyrischen Texte in der Basler Handschrift B XI 8', *Überlieferungsgeschichtliche Editionen und Studien zur deutschen Literatur des Mittelalters: Kurt Ruh zum 75. Geburtstag*, ed. K. Kunze, J.G. Mayer and B. Schnell (Tübingen, 1989), 32–58

Darmstadt, Hessische Landesbibliothek, 2225. Dated 1410. 10 songs with melodies. See J. Wolf: 'Deutsche Lieder des 15. Jahrhunderts', *Festschrift zum 90. Geburtstage... Rochus Freiherrn von Liliencron* (Leipzig, 1910/R), 404–20

Vipiteno (Sterzing), Archivio di Stato (Stadtarchiv), s.s. ('Sterzinger Miszellaneen-Handschrift'). *c*1410–20. Facs. in E. Thurnher and M. Zimmermann: *Die Sterzinger Miszellaneen-Handschrift* (Göppingen, 1979). See also M. Zimmermann, ed.: *Die Sterzinger Miszellaneen-Handschrift: kommentierte Edition der deutschen Dichtungen* (Innsbruck, 1980); M. Welker: 'Ein anonymer Mensuraltraktat in der Sterzinger Miszellaneen-Handschrift', *AMw*, xlviii (1991), 255–81

Berlin, Staatsbibliothek zu Berlin Preussischer Kulturbesitz, Mgf 922 ('Berliner Liederhandschrift'). *c*1420. See M. Lang and J.M. Müller-Blattau: *Zwischen Minnesang und Volkslied* (Berlin, 1941); B. Schludermann: *A Quantitative Analysis of German/Dutch Language Mixture in the Berlin Songs mgf 922, the Gruuthuse-Songs, and the Hague MS 128 E 2* (Göppingen, 1996)

Karlsruhe, Badische Landesbibliothek, St Blasien 77 ('Heinrich Otters Liederbuch'). Dated 1439/42. See Brunner and Wachinger, 188

Munich, Bayerische Staatsbibliothek, Cgm 811 ('Liederbuch des Jakob Käbitz'). *c*1430–50. See H. Fischer: 'Jakob Käbitz und sein verkanntes Liederbuch', *Euphorion*, lvi (1962), 191–9; M. Curschmann: 'Kebicz, Jakob', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2/1977–)

České Budějovice, Krajská Knihovna, 1 VB 8b ('Hohenfurter Liederbuch'). *c*1450. See B. Wachinger: 'Hohenfurter Liederbuch', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2/1977–)

Vienna, Österreichische Nationalbibliothek, Series nova 3344 ('Liebhardt Eghenfelders Liederbuch'; 'Schratsche Handschrift'). Before 1455. See H. Lomnitzer: 'Liebhard Eghenvelders Liederbuch', *Zeitschrift für deutsche Philologie*, xc (1971), suppl., 190–216

Vienna, Österreichische Nationalbibliothek, Vind.2856 ('Mondsee-Wiener Liederhandschrift'). *c*1455–70. Gatherings 1–7 contain almost exclusively works by the MONK OF SALZBURG; gatherings 8–10 also have songs by other authors such as Heinrich von Mügeln and Albrecht Lesch. Facs. in H. Heger: *Mondsee-Wiener Liederhandschrift* (Graz, 1968); see also L. Welker: 'Mondsee-Wiener Liederhandschrift', *MGG2*; C. März, ed.: *Die weltlichen Lieder des Mönchs von Salzburg: Texte und Melodien* (Tübingen, 1999), 64–72

Wienhausen, Klostermuseum, 9 ('Wienhäuser Liederbuch'). *c*1470. See J. Janota: 'Wienhäuser Liederbuch', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2/1977–)

Rostock, Universitätsbibliothek, phil.100/2 ('Rostocker Liederbuch'). *c*1480. See A. Holtorf: 'Rostocker Liederbuch', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2/1977–)

Berlin, Staatsbibliothek zu Berlin Preussischer Kulturbesitz, Mgo 280 ('Liederbuch der Anna von Köln'). *c*1500. See W. Salmen and J. Koep, eds.: *Liederbuch der Anna von Köln (um 1500)* (Düsseldorf, 1954)

In addition to the larger 15th-century song collections listed above, mention should be made of the sometimes very carefully prepared autograph or author-supervised collections for the 15th-century poets HUGO VON MONTFORT (*D-HEu* Cpg 329), OSWALD VON WOLKENSTEIN (*A-Wn* 2777; *Iu*) and MICHEL BEHEIM (*D-HEu* Cpg 312; *Mbs* Cgm 291). *A-Wn* 2856, though not an authorial MS, is almost exclusively dedicated to only one author, the Monk of Salzburg. This MS and the two Wolkenstein MSS are also interesting in containing monophonic song as well as simple polyphony. Furthermore, the Wolkenstein MSS present a link to an international polyphonic song repertory by the inclusion of polyphonic contrafacta. The songbook of Anna von Köln (*D-Bsb* Mgo 280) and the Berliner Liederbuch (*D-Bsb* Mgf 922) also contain works in a range of styles. These last two repertories, in particular, show some striking similarities to the Dutch song tradition of the time (see below). But in view of the proliferation of styles among this disparate collection of MSS it seems especially significant that the future of secular monophony lay not with these comparatively compact song styles but with the almost prodigally expansive Meistergesang, following the style of the material in the Colmar MS. Between Colmar (*c*1460) and the songbook of Adam Puschman there are very few major Meistergesang sources, but the connections between the two and the nature of their repertories clearly establish the continuity and startling growth of Meistergesang. Robert Staiger estimated that in 1600 the repertory of Meistergesang comprised about 700 melodies; but since versions of a melody often differed widely a precise number is difficult to obtain. On the other hand, the exhaustive and compendious nature of the surviving sources suggests that they were intended as collections of all surviving melodies.

Breslau, Stadtbibliothek, 356 (1009) [lost] ('Puschman's Singebuch'). 460 paper leaves, folio size. *Scribe*: ADAM PUSCHMAN. Dated 1584, Jan 1588.

Contents: ff.2–22 *Grunttlicher Bericht des deutschen Meister Gesanges*, 1571, rev. 1584; ff.23–94 *Comedia von dem frumen Patriarchen Jacob und seinem sone Joseph und seinen Brudern* (with 7 songs); ff.95–7, except from Colmar MS; ff.99–460, 327 Meisterlieder. *Composers*: Frauenlob (25), Regenbogen (12), Hans Folz (14), Hans Sachs (13), Hans Vogl (20) and others.

E. Bohn: *Die musikalischen Handschriften des XVI. und XVII. Jahrhunderts in der Stadtbibliothek zu Breslau* (Breslau, 1890), 375–420 [detailed index of contents]; G. Münzer, ed.: *Das Singebuch des Adam Puschman nebst den Originalmelodien des Michel Behaim und Hans Sachs* (Leipzig, 1906/R) [see also review by R. Staiger, *SIMG*, viii (1906–7), 223]

Some further idea of the nature of Meistergesang MSS may be gained from what can be reconstructed from the collection of Georg Hager, who numbered his volumes. Those that have been located include: ii: *D-Dl* M 195 (lost, formerly M 100), bound in 1580 but not finished until 1623, 386 leaves, many hands, songs mostly unascribed but including Frauenlob (12), Müglin (3), Regenbogen (4), Konrat Nachtigal (4), Hans Folz (5), Hans Sachs (13) and Hans Vogl (7); iv: *Bsb* germ.583, dated 11 July 1588, 337 leaves, many hands, Frauenlob (9), Vogl (11), Nachtigal (7), Sachs (13); xi: *WRz* Q 571, dated 1527–1629, bound 1596, *c*430 leaves, Frauenlob (11), Folz (9), Sachs (10, incl. autograph entries), Vogl (10), Hager (5); xii: *A-Wn* Vind.13512, 713 + 62 leaves, Frauenlob (22), Regenbogen (10), Nachtigal (10), Fritz Zan (5), Folz (12), Vogl (18), Sachs (13), Michl Vogl (8), Adam Puschman (9), Hager (18); xiii: *D-Dl* M 6 (lost), bound 8 March 1601, 499 + 116 leaves, with musical section on ff.335–457*v* written by Puschman, ascriptions to Frauenlob (19), Regenbogen (9), Wolfram von Eschenbach (5), Nachtigal (8), Folz (10), Sachs (10), Vogl (15), Onoferus Schwarzenbach (14), Sepherinus Kriegsauer (11), Puschman (27), Hager (17).

Other important Meistergesang sources include *D-HEu* 392 (*c*1481, 122 leaves, 50 *Töne*) and *HEu* 680 (15th century, 88 leaves, 55 *Töne*): both described by Holzmann in F. Pfeiffer's *Germania*, iii (Stuttgart, 1858), 308; *Bsb* germ.fol.22, 23, 24 (*c*1603), 25 (*c*1615); *Ju* El.fol.100 (prepared in 1558 in Magdeburg by Valentin Voigt); *Nst* Will III 784 (*c*1616), 792–6 (*c*1670 and after; fig.28). Some of these MSS contain over 600 leaves, and there are many others like them: it may be some years before it becomes possible to compile a reasonably full catalogue of the repertory.

H. Brunner: *Die alten Meister* (Munich, 1975); F. Schanze: *Meisterliche Liedkunst zwischen Heinrich von Mügeln und Hans Sachs* (Munich, 1983–4); F. Schanze: 'Meisterliederhandschriften', *Die deutsche Literatur des Mittelalters: Verfasserlexikon*, ed. K. Ruh and others (Berlin, 2/1977–)

6. Galego-Portuguese. In the Iberian peninsula, during the 12th and 13th centuries, Galego-Portuguese was the language chosen for poetic literature not only in the western kingdoms of Portugal and Galícia but also in the central kingdoms of Castile and León (Occitan was used in Catalonia and Arabic in the Andalus). A corpus of more than 1680 secular poetic texts in Galego-Portuguese survives in three major sources without music: the Cancioneiro da Ajuda (*P-La*), written about 1300; and the Cancioneiro da Vaticana (*I-Rvat* vat.lat.4803) and Cancioneiro Colocci-Brancuti (*P-Ln* 10991), the latter both copied about 1525 in Rome from a lost 14th-century Portuguese exemplar. Of these songs the only extant music is for six *cantigas de amigo* by Martin Codax written on a loose bifolio (the so-called Vindel MS) and seven *cantigas de amor* by Dom Dinis entered on a fragmentary folio, discovered in 1990 by Sharrer; this was originally part of a Portuguese songbook (see below). Over 400 *Cantigas de Santa Maria* – songs dedicated to the Virgin by Alfonso el Sabio, King of Castile and León – survive, however, with music in three closely related codices written between 1270 and 1290 in connection with the royal court (*see* Cantiga).

Madrid, Biblioteca Nacional, 10069 [*To*]. 161 parchment leaves, 32 × 22 cm. Modern arabic foliation in pencil; red and blue illuminated capitals; each song headed in red. *Layout*: mostly 2 columns containing between 27 and 29 lines of text or 9 staves of music. No miniatures. *Structure*: quires of 8 and 10 leaves (see Ferreira, 1994: f.9 belongs to the first quire). *Scribes*: 5 for the text (French gothic script), 1 for the music (see Ferreira, 1994). *Notation*: semi-mensural, based on the shapes of 13th-century Iberian (Aquitanian-type) chant notation (Ferreira, 1987, 1993). Date: ?*c*1275 (Ferreira, 1994)

Contents: 128 songs: 102 cantigas corresponding to the earliest redaction of the *Cantigas de Santa Maria* (f.9*v* ff), and 3 appendices with 26 more cantigas (f.136 ff)

Ribera [edn and pseudo-facs.]

San Lorenzo de El Escorial, Biblioteca del Real Monasterio, T.I.1 (also known as T.j.1) [*e*; *E*[2]; *T*]. 256 parchment leaves, 49 × 33 cm. Modern arabic foliation in pencil; songs numbered with illuminated Roman numerals on both leaves, top centre. *Layout*: normally 2 columns, 44 lines or 11 staves a page; red and blue illuminated capitals; each song headed in red. *Illuminations*: 1264 magnificent miniatures, normally grouped by 6 (1 full page corresponding to a song) or 12 (2 full pages, singling out the fifth song in each group of 10). *Scribes*: no detailed study; seemingly uniform French gothic hand. *Notation*: proto-mensural, based on, but not identical to French pre-Franconian practice (Ferreira, 1987, 1993). *Date*: ?1280–84 (Ferreira, 1994)

Contents: on f.4, after the surviving folios of the index, a fragmentary cantiga without music forms an 'appendix'; on f.4*v* the main collection begins, with 194 cantigas (including 3 fragmentary, of which 2 without music, and 1 more with empty staves). This is the first volume of a set of 2; the second, incomplete volume, containing 104 songs with empty staves, is now in Florence, Biblioteca Nazionale Centrale, B.R.20 [*F*].

Facs.: *El 'Códice Rico' de las Cantigas de Alfonso el Sabio: Ms. T.I.1 de la Biblioteca de El Escorial* (Madrid, 1979)

San Lorenzo de El Escorial, Biblioteca del Real Monasterio, b.I.2 (also known as j.b.2) [*E*[1]; *E*]. 361 parchment leaves, 40 × 28 cm. Modern arabic foliation; songs (except for the 2 Prologues and the last cantigas) numbered with illuminated Roman numerals on both leaves, top centre. *Layout*: normally 2 columns containing 40 text lines or 10 staves; red and blue illuminated capitals; each song headed in red. *Illuminations*: 40 detailed miniatures of musicians playing instruments before every tenth song (for illustration *see* Cantiga, fig.1). *Structure*: largely composed of quaternions (see Anglès, i). *Scribes*: no published study; text: French gothic script; at least 2 scribes (compare, for instance, ff.29–76 with preceding); music: 2 scribes (compare ff.203–4, 326, 328, etc., with other leaves). 2 marginal notes 'aras nunez' on f.204 and f.267 may refer to the contemporary cleric and troubadour Airas Nunez, who possibly entered the music on ff.203–4. On f.361, a scribe identified himself as Johannes Gundisalvi [González]. *Notation*: proto-mensural, based on, but not identical to French pre-Franconian practice (Ferreira, 1987, 1993) *Date*: ?*c*1284 (Ferreira, 1994)

Contents: 416 songs (including 9 repeated cantigas, a repeated melody and 4 cantigas without music) thus distributed: appendix, ff.1*v*–12: 13 songs; after the index on ff.13–26, the main collection of 403 songs starts on f.28*v* and occupies the remaining folios.

Anglès, ii, iii/2 [edn]; i [facs., with notational details drawn in by J.M. Llorens]

New York, Pierpont Morgan Library, M 979 [*N*; *R*; *PV*]. Loose bifolio written on one side only, 34 × 45 cm. *Layout*: 2 columns of 36 lines per page; red and blue illuminated capitals; no miniatures. *Scribes*: 1 main text scribe, last cantiga in different hand; 2 copyists for the music. *Notation*: proto-mensural (Ferreira, 1986). *Date*: ? last quarter of 13th century.

Contents: 7 *cantigas de amigo* by Martin Codax, one of them without music.

Ferreira (1986) [edn and facs.]

Lisbon, Arquivo Nacional da Torre do Tombo, Capa do C.N.L. n° 7A, cx 1, m. 1, l. 3 (*Casa Forte*) [*T*; *PS*]. Fragmentary folio written on both sides in French gothic script. Unduly restored in 1993 (the musical content suffered). *Layout*: 3 columns; red and blue illuminated capitals; no miniatures. *Scribes*: 2 calligraphic styles, possibly by same copyist, with corrections by a different hand. 3 music copyists. *Notation*: proto-mensural (see Ferreira, forthcoming). *Date*: *c*1300.

Contents: 7 *cantigas de amor* by Dom Dinis, King of Portugal (ruled 1279–1325), with lacunae.

Ferreira (forthcoming) [edn and facs.]

7. ITALIAN. The two surviving LAUDA SPIRITUALE sources with music were probably prepared for confraternities. The few surviving fragments suggest similar scope and provenance for the MSS from which they originally came. On the other hand the primarily devotional or evangelical character of the MSS explains their casual approach to texts: the 18 songs that the two larger sources have in common show widely varying readings in all cases, often with the Florence source representing a far more florid version.

The fragmentary sources – *GB-Cfm* 194, *Lbl* Add.35254B, *US-NYpm* 742 and *NYlehman* (formerly Worcester, MA, private collection of Frank C. Smith) – are all reproduced in Liuzzi, i, 223. These are not the only evidence that the repertory was relatively widespread: several of Jacopone da Todi's poems are set, and there is no reason to think that the others were not set and sung; and Francis of Assisi's *Canticum creatorum* appears in *I-Ac* 338, f.33, below empty staves (facs. in Nolthenius, p.198).

Cortona, Biblioteca Comunale e dell'Accademia Etrusca, 91. 171 parchment leaves, 23 × 17 cm. *Foliations*: ? original roman at top; later arabic at top; cursive arabic at bottom. *Structure*: i–xv in 8s (with leaves missing in v and vi); xvi of 10 leaves. *Scribes*: consistent hand, but far more modest in scope than the Florence MS. *Date*: *c*1260–91. *Contents*: 46 *laude* with music.

Liuzzi, i [facs. of music and complete edn]; L. Lucchi, ed.: *Il laudario di Cortona* (Vicenza, 1987); T. Karp: 'Editing the Cortona Laudario', *JM*, xi (1993), 73–105

Florence, Biblioteca Nazionale Centrale, Banco Rari 18 (II.1.122). 153 parchment leaves, 40 × 29 cm. *Foliations*: modern 1–153, 1 early Roman i–cxxxiv at bottom of leaf, 1 top right as modern but adding 5 folios at beginning. *Scribes*: consistent Italian Gothic hand with large brown square notation on a 4-line staff throughout. *Date*: Early 14th century. *Provenance*: Confraternità di S Maria presso li Agostiniani di Santo Spirito, Florence, identified from miniatures.

Contents: original index; 88 *laude*, ff.1–135*v*; 2 disjunct quaternions containing sequences and other sacred music, including 1 *lauda*, ff.152–153*v*, with music in an apparently much later hand. Versions are often far more elaborate than those in the Cortona MS.

Liuzzi, ii [facs. of music and complete edn]; B. Wilson and N. Barbieri, eds.: *The Florence Laudario: an Edition of Florence, Biblioteca Nazionale Centrale, Banco Rari 18*, RRMMA, xxix (1995); B.McD. Wilson: 'Indagine sul laudario fiorentino (Firenze, Biblioteca Nazionale, MS Banco Rari 18)', *RIM*, xxxi (1996), 243–80

8. OTHER LANGUAGES AND LATER REPERTORIES. Elsewhere in Europe there are isolated fragments of lyric poetry, occasional traces of a repertory, but rarely enough music to give any clear impression of a musical tradition. In England, for example, the nearest thing to a monophonic song collection is that containing the four songs of St GODRIC (*GB-Lbl* Roy.5 F.vii), though if a much looser definition of 'collection' is admissible a survey would include *Lbl* Harl.978 and *Lbl* Arundel 248, both including isolated English songs among Latin song and polyphony; apart from that the surviving monophonic song with English text is confined to isolated fragments to whose MS nature and musical style a coherent pattern could be given only by dint of considerable imagination.

An example of an apparent song repertory from the Netherlands may be seen, however, in the late 14th-century Gruuthuse MS, described below. It belongs less to the medieval repertories than to a new tradition represented also in the French sources *F-Pn* fr.9346 ('Bayeux') and *Pn* fr.12744, the German Mondsee-Wiener Liederhandschrift (*A-Wn* Vind.2856) and perhaps also various late 15th-century volumes of devotional songs such as the songbook of Anna von Köln (*D-Bsb* Mgo 280), and the two Dutch volumes *A-Wn* Vind.12875 and *D-Bsb* Mgo 190 (ed. E. Bruning, M. Veldhuyzen and H. Wagenaar-Nolthenius: *Het geestelijk lied*, MMN, vii, 1963).

Koolkerke, nr Bruges, Casteel Ten Berghe, private library of Baron Ernest van Calcoen ('Gruuthuse-Handschrift'). 1 + 84 parchment leaves, *c*25 × 18 cm. *Structure*: 12 ff. (6 bifolia) of which 3 are now missing; 32 ff. (4 quaternions), incl. 147 songs; 52 ff. (4 + 6 quaternions), containing 14 long poems. *Scribe*: Jan Moritoen. *Date*: finally assembled 1462. *Provenance*: Bruges, Loys van den Gruythuyse. *Contents*: *c*150 songs of late 14th century, nearly all with melody, untexted, copied at head of poem; melodies mostly in stroke notation.

IV. Organum and discant

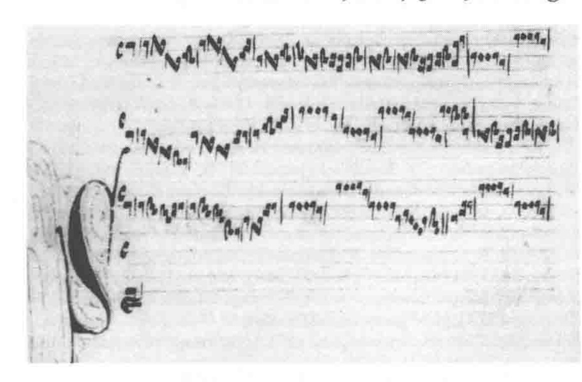
1. General. 2. The Winchester Troper. 3. Aquitanian and related sources. 4. Parisian and related sources.

1. GENERAL. Most surviving early polyphonic music is liturgical, an embellishment of the services for high feasts of the church year and for ecclesiastical cults such as that of the Blessed Virgin Mary in the 13th century. Yet its special nature caused it to be gathered in collections that, though highly individual artistically, are surprisingly anonymous in another sense. Liturgical polyphony is not usually found in regular service books such as those described in §II, whose provenance can be deduced from the liturgical use to which they conform; more often it was noted separately, in miscellanies which included secular music as well. Of the MSS described here, only *GB-Ccc* 473, *E-SC* and *GB-Lbl* Eg.2615 contain exclusively liturgical music. The others all include secular pieces, which, it is usually assumed, served as clerical or courtly entertainment. Determination of provenance and date often therefore requires a combination of liturgical comparisons (to find which use the source 'fits'), paleography, and repertorial and stylistic evaluation.

Much of the sacred music of these MSS is often referred to as 'para-liturgical', including for instance many *versus* and conductus whose texts refer clearly to one of the great feasts of the church year, but which have no liturgical history in chant book or ordinal (*see* VERSUS (i) and CONDUCTUS). The function of the clausulas (*see* CLAUSULA) of MSS in §4 is also disputed. The survival of such a source as *GB-Lbl* Eg.2615 is particularly fortunate in that it shows sacred conductus in a specific place in the liturgy; and its rich repertory of prosulas (for example, the responsory *Styrps Iesse*, ff.62*r*–63*r*, has prosulas on 'almus', 'eius' and 'sancto'; compare the setting in *I-Fl* Plut.29.1, ff.75*r*–76*r*, with clausulas on 'Iesse', 'eius' and 'sancto') is perhaps indicative of one role of clausula and motet in Parisian sources.

Fragmentary 11th-century sources of liturgical polyphony, such as the Chartres group (*F-CHRm* 4, 109, 130) and the Fleury group (*I-Rvat* Ottob.lat.3025, Reg.lat.586, 592), are not described here; although interesting evidence of the early cultivation of polyphony, they are individually very modest in scope (see Gushee, 1965 and Arlt, 1993).

Sources in §3 (and *F-Pn* lat.1139, in §II, 5) may be considered as a group because of a significant number of concordances. But the geographical dissemination of their repertory is wide, and its centre, if such there were, unknown. With the exception of the Codex Calixtinus, and those MSS catalogued by BERNARDUS ITIER at St Martial (*Pn* lat.1139, 3549, 3719, which passed through his hands, and *GB-Lbl* Add.36881, which did not, were long cited as sources of 'St Martial polyphony'), they survive more or less by chance; the polyphony cannot be considered as the product of a 'school'.



Sources in §4 contain music by LEONINUS and PEROTINUS of Paris, and their colleagues and successors (*see also* PHILIP THE CHANCELLOR). Several of them contain exceptionally large repertories, and collect music written over the previous half-century or more. *I-Fl* Plut.29.1, *D-W* 628 and 1099 bring together collections of pieces of very different functions, both liturgical and secular. Other MSS cover fewer genres, or only one. Only *GB-Lbl* Eg.2615, from Beauvais Cathedral, can be assigned to a specific establishment. Of the music of, for instance, St Louis's royal household chapel we are almost entirely ignorant, let alone that of his cousins Henry III of England (see I. Bent, *PRMA*, xc, 1963–4, p.93) and Ferdinand III and Alfonso el Sabio of Castile. Nor is it

(a)

(b)

(c)

29. *Cambridge, Corpus Christi College, 473 (Winchester Troper), ff.96r, 81v, 154v (from Frere, 1894, pls.22, 4, 21). Music performed simultaneously but notated in different parts of the MS: (a) prosa, (b) sequence, (c) organal voice for sequence*

30. Wolfenbüttel, Herzog August Bibliothek, Guelf.628 Helmst. (Heinemann catalogue 677), ff.3v–4r (alternative 1v–2r), mid-13th century; Perotinus's 'Sederunt principes', organum quadruplum notated in score

definitely known whether the absence of settings of the Ordinary of the Mass in all but *GB-Lbl* Eg.2615 and *D-W* 628 is fortuitous or whether it reflects differences of liturgical practice (and, if so, whose?). It is understandable, therefore, that the most energetic research has concerned musical style (e.g. Flotzinger, 1969, on the clausula collections). The layering of the repertory is continually being clarified while the dating and provenance of the MSS themselves are still sometimes uncertain. Furthermore, the sources are often considerably later in date than the music they contain.

Fragments of 13th-century polyphony are relatively plentiful and continue to be discovered (see, for example, Chew, 1978, Everist, 1984); they are too numerous to be included here. Other sources related to those in §4 include *GB-Cjc* QB1, from Bury St Edmunds, containing conductus particularly close to those in *I-Fl* Plut.29.1 and *D-W* 628, and *D-HEu* 2588, from Germany. The late influence in provincial areas of what was still, for them, a fashionable monophonic and polyphonic liturgical repertory is seen in *CH-SGs* 383 and *D-Mbs* lat.5539, in Germany; and in *E-TO* 97 and 135, in Spain. On the other hand, *GB-Lbl* 27630 and *CH-EN* 314 contain more independent repertories, comparable in this respect, though not of course in musical sophistication or by concordances, to English sources (§VI). While later sources of organum in Parisian style are rare (see *F-MOf* H196 and *E-BUlh* below; and *D-MGs*, formerly Staatsbibliothek Preussischer Kulturbesitz lat.4° 523, described by K. von Fischer, *AcM*, xxxvi, 1964, p.80), the surviving motet repertory is large, giving the impression that the 'central' French tradition continued as a cultivation of the motet (see §V) rather than the other forms found in the sources described here.

The problem of utilizing valuable MS space for the polyphony in these books was solved in varying ways. For music in note-against-note style (i.e. conductus throughout this period), score was generally used. The exceptions are to be found in the earliest sources: a handful of pieces in the Aquitanian MSS are written in successive polyphony (see S. Fuller: 'Hidden Polyphony – a Reappraisal', *JAMS*, xxiv (1971), 169–92); the organal parts of *GB-Ccc* 473 are in a fascicle separate from the cantus firmi they accompany (fig.29).

The performer of the sustained notes of Parisian organum needed to see the upper part(s) in order to know when to change note, so score was also used in these pieces, although it meant that some staves might have only one note on them, or none at all (fig.30). But the rhythm of motet tenors was regular, and so the concisely notated tenor could be written after the more extended texted voices.

Only editions devoted to specific sources are cited with the respective MS below. The most recent (and fundamentally different) editions of the 12th-century polyphony are by Karp (1992) and Van der Werf (1993). The Parisian *organa dupla* have been edited by Tischler (1988), the *organa quadrupla* and *tripla* by Husman (1940) and Roesner (1993), the conductus by Anderson (1979–) and the motets by Tischler (1982).

See also ORGANUM; DISCANT; ST MARTIAL; MAGNUS LIBER; NOTATION, §III, 2.

2. THE WINCHESTER TROPER.

Cambridge, Corpus Christi College, 473 (fig.29). 198 parchment ff. (14·6 × 9·2 cm). *Structure*: 22 gatherings, alternating quaternions and quinions (but 9 and 10 are both quaternions, 17 and 18, 20 and 21 are quinions). *Notation*: 16 lines of text per side, with English non-diastematic neumes; significative letters; 'instrumental' letter notation; the partial sequence texts embedded in 2 *prosae* are written in red capitals (see Frere, pp.69, 84). *Scribes*: 3 main scribes (Holschneider): the first wrote the troper and prosers, the second the sequentiary and collection of organa, the third the alleluia fascicle. *Date and provenance*: Winchester, Old Minster (Benedictine); the work of scribe 1 falls in the last years of the 10th century (after death of Ethelwold in 984, and probably after the official institution of his feast day in 996); scribe 2 worked in the 1st half of the next century; scribe 3 *c*1050; Holschneider suggested that the cantor Wulfstan (*fl* 992–6) composed the organa.

Contents: alleluia fascicle in what is now the first gathering (but see H. Husmann, RISM, B/V/1, p.151); gatherings 2–6 contain tropes for the Proper of Mass; gatherings 7–9, tropes for the Ordinary, with a tonary on ff.70*v*–73*v* (between Glorias and Sanctus); gathering 10, sequentiary; 11–15, prosers; 16–21, collection of organa. *Organa*: 174 organal voices, without cantus firmus; 158 in main collection, 16 additions; the main collection has organa for 12 troped and untroped Kyries, tropes for 7 Glorias, 19 tracts, 7 sequences (the collection peters out here, and would presumably have continued with more sequences, Sanctus and Agnus tropes), 53 alleluias, 1 Greek Gloria, and 59 pieces for monastic Office.

Alleluias series, tonary and notation style all link the tradition of this MS to continental St Denis-Corbie practice; unfortunately, no troper or collection of organa from those centres survives. The organa would supply polyphony for the Gradual, Troper and Antiphoner of Old Minster; hence this MS itself contains 68 appropriate cantus firmi, the troped Gradual *GB-Ob* Bodley 775 has 91. The New Minster Missal *F-LH* 330 has no tropes. No Winchester Antiphoner with music survives.

3. Aquitanian and related sources.

Paris, Bibliothèque National de France, lat.1139 [*St-M A*]. *See* §II, 5.

Paris, Bibliothèque Nationale de France, lat.3549 [*St-M B*]. 169 ff. (19·5 × 14 cm); self-contained music section ff.149–69. *Notation*: Aquitanian neumes on 5 pairs of staves of 4 dry-point lines each: for polyphony the staves are separated by a red line; the 2 polyphonic *Benedicamus* settings in the monophonic section of the MS both have cantus firmus and *vox organalis* on the same staff, in the first piece there are only 3 cantus firmus notes in red ink, in the second piece each cantus firmus note has a circle round it. *Date and provenance*: 12th century, Aquitanian; the MS was in St Martial, Limoges, by 1205, when librarian Bernardus Itier had it rebound.

Contents: 35 pieces, 19 of which are polyphonic for 2 voices. The polyphonic section comes first; it includes a trope for a Marian responsory, 9 *prosae* and a *Benedicamus* substitute. Monophonic pieces follow, beginning with 2 troped Kyries and tropes for 4 Sanctus; the 2 polyphonic *Benedicamus* interrupt this section. Most other pieces in the MS are *versus*. Pieces from f.167*v* are additions, 2 without music.

MGG1 ('Motette', L. Finscher [incl. facs. of f.166*v*]; 'Notre-Dame-Epoche', H. Husmann [incl. facs. of f.159*v*]; 'Saint-Martial', B. Stäblein [incl. facs. of ff.150*v*–151*r*]); B. Stäblein: 'Modal Rhythmen im Saint-Martial-Repertoire?', *Festschrift Friedrich Blume*, ed. A.A. Abert and W. Pfannkuch (Kassel, 1963), 340–62; RISM, B/IV/1 (1966), 404ff; Fuller (1969), 357, 395; H. Hofmann-Brandt: *Die Tropen zu den Responsorien des Officiums* (diss., U. of Erlangen, 1971), i, 142f [facs. of f.157*r*–*v*]; B. Stäblein: *Schriftbild der einstimmigen Musik*, Musikgeschichte in Bildern, iii/4 (Leipzig, 1975), pl.38 [facs. of f.165*r*]; B. Gillingham, ed.: *Paris, B. N., fonds latin 3549 and London, B.L., Add.36,881* (Ottawa, 1987) [facs.]

Paris, Bibliothèque Nationale de France, lat.3719 [*St-M C*]. 115 ff. (15·3 × 10·4 cm); music from f.15. *Notation*: 4 main hands (Fuller, Grier), ff.15–22, 23–32, 33–44 and 45–92 respectively; from f.33 there are usually staves of 4 dry-point lines (7 or 8 staves per page ff.33–44, thereafter 6), with clefs and *custodes*; elsewhere the notation is heterogeneous, for example with less exactly heighted neumes, which do not use whatever ruling there may be, and an example of square notation on ink lines (transcribing a *vox organalis* from the opposite page); polyphony is usually in score, but 2 pieces are in successive notation (ff.29–31); on f.27 the *vox organalis* appears without text in the top half of the page, the *vox principalis* with text in the lower half; sometimes the *vox organalis* is in a different hand from the *vox principalis*, sometimes space is left over a monophonic line for a second voice, sometimes there is no music at all but space for 2 voices in score; the fact that 2 pieces begin at the second line of text, and that 2 others lack music for alternate lines, may mean that successive polyphony was originally given or planned here too. *Date and provenance*: 12th century, Aquitanian; *Virginis filium* (f.26) is for St Benignus of Angoulême; St Martial librarian Bernardus Itier wrote on f.115*v* 'Hec scripsi anno 1210'.

Contents: Spanke (and RISM) suggested 5 fascicles (ff.15–22, 23–32, 33–44, 45–89, 89*v*–100), but ff.93–100*v* contain Matins of the BVM with 9 lessons, ff.101–107*v* lessons and chant text incipits for her votive Office with music for 4 more items. The first 2 fascicles are miscellaneous, containing both sacred and secular *versus*, *Benedicamus* substitutes, introductions to lessons, 2 respond prosulas, and 2 Sanctus; several pieces are found in a more or less complete state elsewhere in the MS. 2 monophonic troped Kyries (ff.33–34*v*) are followed by *versus*; the polyphony from f.45 includes 7 *prosae* (usually the setting goes only to the third double verse, unless the *prosa* is short; for the repeating music usually only the *vox principalis* is given, but occasionally both); for the polyphonic *Benedicamus* monophonic tropes are provided; the end of this section includes tropes for 2 Agnus Dei and 4 Sanctus (monophonic). Polyphony is distributed as follows: fasc.1, 5 pieces (1 repeated later), fasc.2, 4 pieces (1 repeated later), fasc.3, 1, fasc.4, 23 (2 earlier), fasc.5, 2.

MGG1 ('Notre-Dame-Epoche', H. Husmann [incl. facs. of f.46*v*]; 'Saint-Martial', B. Stäblein [exx.2, 3, 5]); Spanke, 308, 397; W. Lipphardt: 'Unbekannte Weisen zu den Carmina Burana', *AMw*, xii (1955), 122–42 [facs. of ff.27*r*, 28*v*, 88*r*]; B. Stäblein: 'Modale Rhythmen im Saint-Martial-Repertoire?', *Festschrift Friedrich Blume*, ed. A.A. Abert and W. Pfannkuch (Kassel, 1963), 340–62; RISM, B/IV/1 (1966), 406ff; Fuller (1969), 354, 383; B. Stäblein: *Schriftbild der einstimmigen Musik*, Musikgeschichte in Bildern, iii/4 (Leipzig, 1975), pl.37 [facs. of ff.38*v*–39*r*]; B. Gillingham, ed.: *Paris, Bibliothèque Nationale, fonds latin 3719* (Ottawa, 1987) [facs.]

Santiago de Compostela, Biblioteca de la Catedral Metropolitana, s.s. ('Codex Calixtinus', 'Liber Sancti Jacobi', 'Jacobus'). 195 ff. (now 29·5 × 21 cm); modern foliation 1–196 (f.191 is missing); a further 29 ff. (now 30 × 21·5 cm), containing the story of Charlemagne's peers by the pseudo-Archbishop Turpin of Reims, was removed from between ff.162 and 163 in 1619 and is now kept separately. *Scribes*: Hämel asserted that the original text was written by 1 scribe, but that the present codex contains some replacement copies (ff.156–60) and additions (f.128 Mass of St James's Miracles; ff.185–96 polyphonic supplement, letter attrib. fictitiously to Pope Innocent II, a pilgrim's song, miracles [the last dated 1190], etc.). *Notation*: all in 1 hand except for the pilgrim's song on f.193*r* (in diastematic Aquitanian neumes), east-central French neumes (i.e. with Lorraine-Messine influence) on staves of 4 ink lines (some brief incipits without lines); the characteristic forms of *climacus*, *clivis* and *cephalicus* used in this MS are also found together in a 12th-century gradual-antiphoner from Nevers (*F-Pn* n.a.lat.1235, 1236); vertical lines in the polyphonic pieces to help align voices and text; for 2 pieces (ff.131*r*–*v*) a second voice has been added on the same staff (for the first it was taken from the polyphonic version of the piece in the supplement; for the second it was written in red ink); for *Congaudeant catholici* (f.185) the lower staff has 2 voices, one in red ink.

Contents: book 1 (ff.1–139*v*): letter fictitiously attrib. Pope Calixtus II (1119–24), legendary editor of the codex; list of contents; lectionary and homiliary for feasts of St James (Vigil 24 July, Passion of St James 25 July, ferias and Octave 26 July–1 Aug, Translation 30 Dec, Octave 6 Jan). Music for the same feasts: f.101*v* Office and Mass for 24 July; Office, including Matins with a 'Hymnus', i.e. *versus*, after the *Venite*, and Mass for 25 July; f.122*v* masses within and on the Octave, music incipits only; f.128 the added leaf with directions for a new Mass of the Miracles of St James 11 Oct, without music; f.129 Office and Mass for 30 Dec and Octave. F.130 troper for the liturgies of 25 July: a *prosa*, a *Benedicamus* and 4 conductus (3, or possibly all 4, to introduce lessons) for the Office; and a prelude *versus*, introit trope, troped Kyrie, troped Gloria, farsed epistle, troped Sanctus, troped Agnus and *Benedicamus* substitute for the Mass.

Book 2 (ff.140–155*v*): 22 Miracles of St James.

Book 3 (ff.155*v*–162): Legend of St James and of his Translation to Galicia.

Book 4 (now separated, except for illuminated title-page on f.162*v*): Book of the pseudo-Turpin.

Book 5 (now called book 4; ff.163–184*v*): description of the roads to Santiago (in the account of the Tours-Poitiers-Bordeaux route, at Saintes, a *Passio Sancti Eutropii* is included).

Ff.185–190*v*: supplement of 20 polyphonic pieces.
Ff.190*v*–196*v*: continuation of the supplement; polyphonic *versus* by Aimeric Picaud (in successive notation); letter fictitiously attrib. Pope Innocent II (1130–43); Greek Alleluia; more miracles of St James, poems (f.193*v* pilgrim's song in Latin with ?Galician refrain).

Date and provenance: in 1173 Arnaldus de Monte, monk of Ripoll, made a copy (now *E-Bac* Ripoll 99) of this MS in Santiago; although of the music Arnaldus copied only a less full version of the Mass of 25 July (in Ripoll neumes), he did include material from the supplement (*Ad honorem regis summi* by Aimeric Picaud, defective in *SC* s.s. because of the missing f.191, Pope Innocent's letter, the miracles dated 1139 and 1164 but not that dated 1190). It would seem that practically all of *SC* s.s., with polyphony, was in Santiago by 1173. Its notator, however, was trained in central France, and the painter of the miniatures was French, despite his portrayal of Charlemagne with a Visigothic crown. The style of notation supports

Hohler's view that *SC* s.s. was copied at or near Vézelay, Aimeric Picaud probably being responsible for the polyphony.

Diaz y Diaz: *El Códice Calixtino de la Catedral de Santiago: estudio codicológico y de contenido* (Santiago de Compostela, 1988); D. Hiley: 'Two Unnoticed Pieces of Medieval Polyphony', *PMM*, i (1992), 167–73; *Jacobus: Codex Calixtinus de la Catedral de Santiago de Compostela* (Madrid, 1993) [complete facs.]

London, British Library, Add.36881 [*St-M D*]. 27 ff., consisting of 3 quaternions (16 × 10·5 cm) and 3 single leaves of parchment (13 × 10 cm); between the second and third gatherings at least one gathering is missing; red ink pagination 1–54, British Museum pencil foliation 1–27. *Notation*: ff.1–24 small south French-Catalan square notes on 7 to 9 staves of 4 or 5 dry-point lines (in polyphonic pieces *vox organalis* usually on 5 lines, *vox principalis* on 4, separated by a broken or continuous red line) with clefs (G, C or F, sometimes only ♭); Stäblein (1963) found forms of *pes* and *clivis* similar to this MS used together in only four other 12th–13th-century sources from Catalonia and southern France; ff.25–7 untidy north French square notes on 4 red lines. *Date and provenance*: unknown.

Contents: ff.1–16: 19 polyphonic pieces (at least 10 *Benedicamus* substitutes), followed by 9 monophonic pieces (the first three are Sanctus tropes, then come 2 *prosae*, for the BVM and John the Baptist, finally 2 Latin rondeaux, the first of which is also found in *I-Fl* Plut.29.1, the second incomplete). Ff.17–24 begin in the middle of a polyphonic *prosa*; there follow 8 other polyphonic pieces, then 6 monophonic pieces (2 without music), the last 4 being *Benedicamus* substitutes. Ff.25–7: *Planctus ante nescia*, the lament of the BVM.

MGG1 ('Saint-Martial'; B. Stäblein [exx.4, 9; incl. facs. of ff.3*v*–4]); H. Spanke: 'Die Londoner St. Martial Conductushandschrift', *Butlletí de la Biblioteca de Catalunya*, viii (1928–32), 280–300 [facs. of ff.11*v*–12*r*; edn of 29 texts]; H. Anglès: 'La musica del MS de Londres British Museum Add.36881', *Butlletí de la Biblioteca de Catalunya*, viii (1928–32), 301–14 [edn of 11 pieces]; C. Cambridge, University Library, Ff.I.17. 8 ff. (19·8 × 13·5 cm), once flyleaves of a 14th-century English MS, since separated; they are 4 bifolios at present kept in 2 sets of 2 and foliated 1–8; a previous pencil foliation 1–4, 298, 297, 300, 299 reveals their order when used as fly-leaves; they are correctly a self-contained quaternion and should be read in the order 2, 1, 5–8, 4, 3. *Notation*: a cursive notation where no distinction is made between *virga* and *punctum*, all single notes being drawn with a horizontal stroke turning down at the right in a thin tail; staves of 4 or 5 lines, first red, later black and brown; vertical strokes to help align voice(s) and text; the potpourri of *prosa* and other chant incipits and their contrafacta *Amborum sacrum spiramen* is combined with a *Benedicamus Domino* whose sustained cantus firmus notes are each notated as a succession of notes of the same pitch; Schumann distinguished 11 text hands; number of music hands not determined. *Date and provenance*: early 13th century; as fly-leaves, received 'ex dono' mark of Roger of Shepshed (near Leicester).

Contents: 21 monophonic pieces (9 lack music), 13 polyphonic pieces (all for 2 voices except *Verbum Patris humanatur o o* for 3). There are several *versus*, 1 troped Agnus Dei, 5 *Benedicamus* substitutes (one for St Thomas of Canterbury), 4 introductions to lessons (one for St Nicholas with a French refrain, ed. B. Stäblein, *MGG1*, 'Saint-Martial', ex.6); 5 didactic poems. Concordances include 3 with Aquitanian MSS described above, 3 with *I-Fl* Plut.29.1, 1 song found in the Rouen shepherds' play (*F-Pn* lat.904), and 1 with Norman-Sicilian MSS (*E-Mn* 289 and Vitrina 20, 4).

Gillingham, ed.: *Cambridge, University Library, Ff.i.17(1)* (Ottawa, 1987) [facs.]

4. Parisian and related sources.

London, British Library, Eg.2615 [*LoA*]. 111 ff. (21·8 × 13·3 cm); British Museum foliation (1894) 1–78, then an unnumbered folio called since Ludwig (1910) 78*bis*, then 79–110. *Structure*: mainly quaternions; ff.73–78*bis* is a 7-leaf gathering (f.75 is the single); a gap in the series of original gathering signatures reveals that a gathering is missing after f.40; last gathering signature f.72*v*; the gathering ending f.94 ends in the middle of a piece. Everist has shown that the parchment of ff.79–94 was ruled identically to part of *D-W* 1099 and is therefore from Paris. *Scribes*: first scribe and notator wrote ff.1–68, 95–110; another scribe and notator ff.79–94; a different notator wrote polyphony for the first scribe (upper voices of *Orientis partibus*, ff.43–44*v*, and ff.69–72*v* of the polyphonic supplement); further additions in other hands ff.73–8; same coloured initials for both the first section and ff.79–94. *Notation*: the pen of the first notator is tilted in typical Picardian style (cf *F-Psg* 117, 13th-century antiphoner from St Michel, Beauvais) so that all *puncta* are rhombs; *virga* has tail to left; thus *climacus* is 3 rhombs with descending tail to the left of the first ('Rautenternaria'); rhomboid forms are also used by other hands, but not by the notator of ff.79–94, who, however, does use rhomb-ternaria; staves of 4 or 5 red lines (3 for the lections at end of MS, green for middle voice of *Orientis partibus*); 10 staves per page to f.69*r*, 12 thereafter. *Date and provenance*: the *Laudes regiae* of the Mass name Pope Gregory IX (1227–41); the Daniel play is announced as having been written in Beauvais (for other evidence of the tradition of an elaborate Circumcision Office at Beauvais, see Hughes, 1966); MS in Beauvais until at least 1775; in 1848 it was in Padua; purchased by British Museum in 1883.

Contents: ff.1–68*v*: Office and Mass for New Year's Day (Feast of Circumcision, 'Feast of Fools'), including plainsong for first Vespers, Procession to the Rood, Compline, Matins, Lauds (probably a Procession is missing after this), Mass, Sext, None, second Vespers; there is rich provision of tropes (especially for the responsories) and conductus (e.g. each of the last eight lessons of Matins is preceded by a conductus); polyphony ('cum organo') is rubricated 11 times, and a set of antiphons at first Vespers is directed to be begun 'cum falseto'.

Ff.69–78*v*: settings for 3 voices of 3 pieces mentioned in the foregoing first Vespers and 2 mentioned in the Procession; these are an alleluia verse, with a text for the 2 upper voices; a *versus*; a troped responsory (prelude and median tropes set for 2 voices, prosula set for 3 voices); another troped responsory (without text); *Serena virginum* (melismatic tenor and 2 upper voices all in score, words not entered). F.76*v* also contains a hymn setting for 3 voices, and on ff.77*v*–78 is another setting of the median trope above, this time for 3 voices; the rest of these added leaves are blank.

Ff.79–94: Perotinus's *organum quadruplum Viderunt*, followed by 11 pieces for 3 voices; these are a responsory, the alleluia verse and *versus* on ff.69–72*v* above, 5 conductus, 2 motets where all 3 parts are written in score with text for the upper voices under the tenor (one is *Serena virginum*), and the troped responsory on ff.74*r*–*v* above.

Ff.95–108*r*: the Play of Daniel. Ff.108*v*–110*r*: 2 lections.

Ludwig (1910), 229; D.G. Hughes: 'Liturgical Polyphony at Beauvais in the Thirteenth Century', *Speculum*, xxxiv (1959), 184–200 [facs. of f.73]; RISM, B/IV/1 (1966), 501ff; D.G. Hughes: 'The Sources of *Christus manens*', *Aspects of Medieval and Renaissance Music: a Birthday Offering to Gustave Reese*, ed. J. LaRue and others (New York, 1966/*R*), 423–34; W. Arlt: *Ein Festoffizium des Mittelalters aus Beauvais in seiner liturgischen und musikalischen Bedeutung* (Cologne, 1970) [complete edn of Circumcision Office, and 5 polyphonic pieces]; J. Stenzl: *Die vierzig Clausulae der Handschrift Paris Bibliothèque Nationale Latin 15139* (Berne, 1970), pls.6 and 7 [facs. of ff.9*v* and 74*v*]; Anderson, pl.2

[facs. of f.73*v*]; M. Everist, ed.: *French 13th-Century Polyphony in the British Library: a Facsimile Edition of the Manuscripts Additional 30091 and Egerton 2615 (folios 79–94v)* (London, 1988)

Wolfenbüttel, Herzog August Bibliothek, Guelf.628 Helmst. (*Heinemann catalogue* 677; fig.30) [W_1]. 197 ff. (21 × 15 cm); orig. 215 ff. as an older foliation (i–xxix, 30–68, 68*bis*, 69–214) makes clear (i–ii, vii–viii, 36–7, 51–2, 83–4, 177–84 now missing); modern foliation 1–197. *Scribes*: different phases of same hand throughout (Brown, 1981), or 3 different scribes (the first writing fascs.1–5, 8–10, 7 as supplement to 2; the second writing fasc.6; the third fasc.11). *Notation*: square (modal) notation with many English characteristics, especially in fasc.11: *brevis* pairs as 2 rhombs (see fig.30), *brevis* between 2 longs as a rhomb, ♭ alone as clef (fasc.6 and f.67*v* [59*v*]), rhomb-ternaria, notes written as a long wavy line or string of rhombs (ff.146*v*–147 [137*v*–138], etc.; see Handschin, pp.116–17 and footnote).

Contents: since Ludwig (1910) 11 fascicles are usually counted. Fasc.1 (ff.iii–vi [1–4]): 2 *organa quadrupla*; 1 clausula for 4 voices. Fasc.2 (ff.ix–xvi [5–12]): 4 *organa tripla*; 4 conductus for 3 voices (*Benedicamus* substitutes). Fasc.3 (ff.xvii–xxiv [13–20]): 11 *organa dupla* for the Office, followed by 2 *organa dupla* for Office of St Andrew and 1 *organum duplum* gradual for Assumption of BVM; tropes for 1 Sanctus for 2 voices. Fasc.4 (ff.xxv–xxix, 30–35, 38–48 [21–42]): 32 *organa dupla* for the Mass. Fasc.5 (ff.49–50, 53–4 [43–6]): 33 clausulas for 2 voices. Fasc.6 (ff.55–62 [47–54]): 70 clausulas for 2 voices, 1 conductus for 2 voices. Fasc.7 (ff.63–8, 68*bis*, 69 [55–62]): 5 *organa tripla*. Fasc.8 (ff.70–82, 85–94 [63–85]): 18 conductus for 3 voices (for the first the third voice was never entered, the start of the last is missing because of 2 lost folios); 2 *organa tripla*; 1 conductus for 3 voices, 1 *organum triplum*; 1 clausula for 3 voices, 3 Sanctus tropes for 3 voices; 2 Agnus tropes for 3 voices. Fasc.9 (ff.95–176 [86–167]): 4 conductus whose first part is for 3 voices, second part for 2; 3 *organa dupla* (*Benedicamus* settings); 1 conductus for 2 voices; 1 *organum duplum* (*Benedicamus* setting); 28 conductus for 2 voices; tropes for 1 Agnus for 2 voices; 49 conductus for 2 voices; tropes for 1 Agnus for 2 voices. Fasc.10 (ff.185–92 [168–75]): 3 monophonic conductus (first lacks beginning because of missing quaternion); tropes for 6 monophonic Sanctus for week's cycle of Lady Masses; tropes for 6 monophonic Agnus for the same; 1 *explicit* (by a certain Walterus) set to music (15th-century addition). Fasc.11 (ff.193–214 [176–97]; all music for Lady Mass for two voices): tropes for 7 Kyries; 1 troped Gloria; 9 alleluias; 1 tract; 14 sequences; 8 offertories and tropes; tropes for 4 Sanctus; tropes for 3 Agnus.

Date and provenance: compiled *c*1240 (different sections at different times) for, and possibly in, St Andrews, Scotland (chapter of cathedral formed by canons of Augustinian priory since 1144), where its presence is attested by a 14th-century *explicit* (f.64 [56]). Taken from St Andrews in 1553 by Marcus Wagner (with other Scottish MSS including *D-W* Guelf.499 Helmst. (Heinemann catalogue 538) from Arbroath, whose fly-leaves also contain polyphony) for Flacius Illyricus. Bought from Flacius's widow by Count Heinrich Julius of Brunswick-Wolfenbüttel and presented to his newly founded University of Helmstedt (suppressed 1810).

MGG2 ('Notre Dame und Notre-Dame-Handschriften' [incl. facs. of f.13 (17)]); Ludwig (1910), 7; J.H. Baxter: *An Old St. Andrews Music Book* (London, 1931/*R*) [facs.1]; J. Guelf. 628 Helmst.* (Wiesbaden, 1995) [facs.]

Wolfenbüttel, Herzog August Bibliothek, Guelf.1099 Helmst. (*Heinemann catalogue* 1206; fig.31) [W_2]. 255 ff. (18 × 13 cm); modern foliation 1–218, 218*a*, 219, 219*a*, 220–53; f.211 should follow f.215; the 33 gatherings are mainly quaternions, leaves are missing at the beginning and after ff.5, 46 and 133. *Scribes*: 10 fascicles usually distinguished since Ludwig (1910); according to Everist (1989, p.101), the MS in its present state is the work of 6 or 7 scribes: scribe 1 wrote fasc.1; scribe 2 (perhaps the same as 1) wrote fascs.2, 4 and 5; scribe 3 wrote the first gathering of fasc.3 (ff.31–38*v*) and fasc.6; scribe 4 wrote the second gathering of fasc.3 (ff.39–46*v*); scribe 5 wrote fasc.7; scribe 6 wrote fasc.8; scribe 7 wrote fascs.9 and 10. *Notation*: square (modal); steep angle of the pen for *currentes*; there are a few mensural ligature forms: to the 10 instances of *ligatures cum opposita proprietate* cited by L. Dittmer, *MD*, ix (1955), p.42, n.8, may be added 6 on f.8*v*; both ascending and descending long-breve binaria may be seen on f.51*v*, line 7. *Date and provenance*: probably Parisian, middle of 13th century (Everist, 1989); like *D-W* 628, this MS passed through the hands of Flacius Illyricus.

Contents: fasc.1 (ff.1–5): end of an *organum quadruplum*; a clausula for 4 voices. Fasc.2 (ff.6–30): 12 *organa tripla*. Fasc.3 (ff.31–46): 10 conductus for 3 voices. Fasc.4 (ff.47–62): 15 *organa dupla* for the Office. Fasc.5 (ff.63–91): 35 *organa dupla*, of which 30 are for Mass, 1 is the Easter processional antiphon *Crucifixum in carne*, and 4 are *Benedicamus* settings. Fasc.6 (ff.92–122): 12 conductus for 2 voices. Fasc.7 (ff.123–44): ff.123–133*v* contain 12 motets for 3 voices (the end of the last is missing) with one Latin text for the upper voices, which are notated in score with the tenor at the end; ff.134–138*v* contain 5 motets for 3 voices (the start of the first is missing) with one French text, notated like the previous group; ff.138*v*–144*v* contain 9 conductus for 2 voices (the last without music, space for 2 staves per line of text). Fasc.8 (ff.145–92): ff.145–155*v* contain 19 Latin motets (one in 2 sections) for 2 voices, ordered alphabetically by first letter of motetus text; ff.155*v*–178 contain another alphabetical series of 29 Latin motets for 2 voices, within which are found Perotinus's monophonic *Beata viscera*, 2 motets for 3 voices (2 texts, successive notation), and after the second of these, which is based on the *Mors* melisma, texted versions of the duplum parts of 2 extracts from each of Perotinus's *organa quadrupla Viderunt* and *Sederunt*; ff.178–190 contain another alphabetical series of 28 Latin motets for 2 voices, within which is a Latin motet

31. Wolfenbüttel, Herzog August Bibliothek, Guelf.1099 Helmst. (Heinemann catalogue 1206), f.222, mid-13th century: motets at the end and beginning of the alphabetic series 'Tout adés mi troueroiz/In seculum', 'A une eniornée/[In seculum]' (tenor notated after motetus)

for 3 voices (2 texts, notated successively); ff.190–192*v* contain 7 Latin motets for 2 voices; between ff.145 and 157 7 French motetus incipits are written in red ink in the margin, referring to Latin counterparts on those pages. Fasc.9 (ff.193–210, 212–15, 211): 22 French motets for 3 voices with 2 texts, notated successively, but including one with a Latin triplum and one with a French texted tenor; for one the triplum was never entered; also 1 French motet for 4 voices with 3 different texts. Fasc.10 (ff.216–18, 218*a*, 219, 219*a*, 220–253*v*): ff.216–222 contain 19 French motets for 2 voices, arranged alphabetically; ff.222–248 contain another alphabetical series of 60 French motets for 2 voices; ff.248*v*–252 contain 8 French motets for 2 voices, the start of another alphabetical series; ff.252–253*v* contain 3 French motets for 2 voices, possibly the end of an alphabetical series.

MGG2 ('Notre Dame und Notre-Dame-Handschriften' [incl. facs. of f.16*r*]); Ludwig (1910), 157; F. Gennrich: *Bibliographie der ältesten französischen und lateinischen Motetten*, SMM, ii (Darmstadt, 1957); L. Dittmer: *Faksimile-Ausgabe der Handschrift Wolfenbüttel 1099 Helmstadiensis (1206)* (Brooklyn, NY, 1960) [facs.]; RISM, B/IV/1 (1966), 171–202; G.A. Anderson: *The Latin Compositions in Fascicules VII and VIII of the Notre Dame Manuscript Wolfenbüttel Helmstedt 1099 (1206)* (Brooklyn, NY, 1968–76) [edn, trans. and commentary]; Everist (1989)

Florence, Biblioteca Medicea Laurenziana, Plut.29.1 [*F*]. 441 ff. (23·2 × 15·7 cm); old foliation i–cclv, beginning after a front leaf bearing a full-page illustration on the verso, which reveals that former ff.49–64, 94, 185–200 and 255–6 are missing; modern system (used in all studies of the MS) continues the original foliation from 356 to 476, ignoring further lacunae after f.398 and f.414; most recent foliation 1–441; unusually large gatherings, mainly of 7–11 bifolios. *Scribes*: 1 hand throughout, except for added mensural music ff.252*v*–254*v* and an added monophonic conductus ff.451*r*–*v*. *Illumination*: Johannes Grusch atelier, Paris (Branner), whose work is also found in *F-R* 277 (Rouen missal, 1231–45), *Pn* lat.15613 (Paris breviary, *c*1250), *Pn* lat.9441 (Paris missal, *c*1250). *Notation*: square (modal, except for the mensural additions ff.252*v*–254*v*; the added conductus ff.451*r*–*v* distinguishes unusually clearly between normal and duplex longs).

Contents: since Ludwig (1910) 11 fascicles are usually distinguished. Fasc.1 (ff.1–13): 3 *organa quadrupla*, 3 conductus for 4 voices (actually pairs of conductus for 2 voices set one above the other), 9 clausulas for 3 voices (for the first the top part was never entered). Fasc.2 (ff.14–47): 26 *organa tripla*, 5 clausulas for 3 voices, 3 *organa tripla* (the third incomplete because of missing quaternion). Fasc.3 (ff.65–98): 55 *organa dupla* for the Office, of which 19 are settings of *Benedicamus Domino* or *Domino*. Fasc.4 (ff.99–146): 61 *organa dupla* for the Mass. Fasc.5 (ff.147–84): 462 clausulas for 2 voices. Fasc.6 (ff.201–62): 59 conductus for 3 voices, of which 2 are based on the upper voices of clausulas and have the clausula tenors appended, and an *organum triplum Benedicamus* with one text for the upper parts; 2 textless mensural pieces, the second incomplete, both found incomplete elsewhere (see G.A. Anderson, *JAMS*, xxvi, 1973, p.293). Fasc.7 (ff.263–380): 130 conductus for 2 voices. Fasc.8 (ff.381–98): 26 Latin motets for 3 voices in which the top voices share the same text and are written in score, the tenor following at the end. Fasc. 9 (ff.399–414): 43 Latin motets, all for 2 voices except 3 for 3 voices, where the top voices have different texts and are written successively. Fasc.10 (ff.415–62): 83 monophonic Latin conductus. Fasc.11 (ff.463–76): 60 monophonic Latin rondeaux.

Date and provenance: most probably written in Paris in the 1240s. The latest datable piece in the main hand is *Aurelianis civitas* (f.439*v*) which relates to incidents in Orléans in 1236. The added *Sol eclypsim patitur* (f.451) is a lament for Ferdinand III 'El Santo' of León and Castile (*d* 1252), nephew of Blanche of Castile. The MS later belonged to Piero di Cosimo de' Medici (*d* 1469); first book (*Antiphonarium*) now in one of the cases of books on mathematics in his son's library.

Munich, Bayerische Staatsbibliothek, Mus.ms.4775 (gallo-rom.42), and fragments once in the private library of Johannes Wolf, Berlin [*MüA*]. Leaves or photographs of leaves from four gatherings, plus two small strips and two small pieces of parchment, which survive from a codex or codices of about 15 × 11 cm; some of them form *D-Mbs* Mus.ms.4775 (facs. in Dittmer, 1959), and the rest were in Johannes Wolf's library, destroyed in World War II; photographs of these leaves exist in Paris (*F-Pn* Vma 1446; facs. in Dittmer, 1966). Dittmer called the remains of any one gathering a 'complex'. Complex A: all or parts of each leaf of a quaternion; complex B: all of 2 outer bifolios of a ternion; complex C: remains of 1 bifolio, probably the outer member of a binion; complex D: almost all the outer bifolio of a ternion. Everist (1989, p.138) believes C did not originally belong with the rest.

Contents: remains of Latin and French motets, *organa dupla*, Latin and French songs. Complex A: 21 Latin and 7 French motets for 2 voices. Complex B (all music for 2 voices): 3 versions (1 French, 2 Latin) of the same motet; 2 French textings each of 2 other motets; 4 French motets. Complex C: 3 *organa dupla*. Complex D: a French lai, a conductus for 3 voices, a monophonic conductus and French song. On the 2 strips: another monophonic conductus and a French song.

Date and provenance: probably mid-13th century, Paris.

F. Ludwig: 'Die Quellen der Motetten ältesten Stils', *AMw*, *v* (1923), 184–222, 273–315, esp. 189; L. Dittmer: *Eine zentrale Quelle der Notre-Dame Musik/A Central Source of Notre-Dame Polyphony* (Brooklyn, NY, 1959) [facs. of extant MS]; RISM, B/IV/1 (1966), 87ff; L.A. Dittmer: 'The Lost Fragments of a Notre Dame Manuscript in Johannes Wolf's Library', *Aspects of Medieval and Renaissance Music: a Birthday Offering to Gustave Reese*, ed. J. LaRue and others (New York, 1966/*R*), 122–33 [with facs. of lost MS]

Madrid, Biblioteca Nacional, 20486 (formerly Hh 167, and before that Toledo Cathedral 930/33.23) [*Ma*]. 142 ff. (16·5 × 11·5 cm); leaves are missing after ff.4 and 106; foliation by W. Meyer (1907). *Scribes*: except for the first 4 folios and the added piece on f.122*v*, the codex was written by 1 scribe and 1 notator. *Notation*: square (modal). *Date and provenance*: middle or 3rd quarter of 13th century, from Spain.

Contents: ff.1–4: additions in various hands, some lines of text lacking music; among them are a rhymed offertory for 3 voices and a conductus for 2 voices. Ff.5–24 (all music for 4 voices): begins in the middle of a version of Perotinus's *organum quadruplum Sederunt* where a text is provided under the duplum; followed by 3 textings of the section on 'misericor*dia*'; there follow *Viderunt* and *Sederunt* without added texts, and the *Mors* clausula. Ff.25–65: 22 conductus for 2 voices. Ff.66–106: 20 conductus for 2 voices, 8 Latin motets (5 for 3 voices, 3 for 2 voices, some without tenors). Ff.107–22: 11 conductus for 2 voices; the hocket *In seculum* for 2 voices is added on f.122*v*. Ff.123–42: a mixture of conductus and motets, the latter often without tenors, the tenors without names when they are present; the mixed group includes 5 conductus for 2 voices and 2 monophonic conductus, 5 motet duplum parts, and both upper voices of a double-text motet and a single-text motet originally for 3 voices; there follow 13 motets and 2 conductus for 2 voices.

Ludwig (1910), 125; H. Husmann: 'Die Motetten der Madrider Handschrift und deren geschichtliche Stellung', *AMf*, ii (1937), 173–84 [edn of 6 motets from last fasc.]; L. Dittmer: *Faksimile-Ausgabe der Handschrift Madrid 20486* (Brooklyn, NY, 1957); RISM, B/IV/1 (1966), 245ff.; J. Pumpe: *Die Motetten der Madrider Notre-Dame-Handschrift* (Tutzing, 1991)

Paris, Bibliothèque Nationale de France, lat.15139 [*StV*]. Originally over 300 ff. of which ff.3–46 are now missing and ff.47–175 elsewhere; ff.255–93 (18 × 10 cm) contain music; 16th-century foliation by Claude de Grandrue of St Victor. *Structure* (music section): a binion, 2 single leaves, 2 quaternions and a single leaf for music for 2 voices, a binion for music for 3 voices, a ternion for

organa dupla, a final ternion for clausulas. *Scribes*: the music on ff.259–60, 267–8 and 293 is in later hands; so are the motet text incipits entered beside the clausulas, and the composition treatises in the margins (see Ludwig, 1910, for a detailed discussion). *Notation*: the main notator frequently used rhomb-ternaria; lower element of *podatus* slightly tilted; rhomb-ternaria also appear in the added *prosa* on ff.267*v*–268 in conjunction with ♭ as the only clef; the added responsory and prosula on ff.268*r*–*v* have *clivis* and *podatus* without tails, usually found thus in north-east French MSS; Stenzl (p.113) and Flotzinger (p.287) argued against the widely held view first advanced by Y. Rokseth (*Polyphonies du XIIIe siècle*, Paris, iv, 1939, p.70) that unorthodoxies in the modal notation of the clausulas resulted from their being motets stripped of their texts (see also Frobenius and Smith). *Date and provenance*: middle or third quarter of 13th century, provenance unknown; it has so far proved impossible to link the unusual liturgical and secular repertory of the MS decisively with any one date or institution; in the late 14th century it was at St Quentin, in the early 16th at St Victor, Paris.

Contents: ff.255–258*v*: 2 monophonic conductus, 1 Latin motet for 2 voices. Ff.259–260*v*: 1 conductus for 3 voices, 1 motet for 2 voices (music incomplete), both additions. Ff.261–277: 10 conductus for 2 voices and, added at the end of the first gathering, a monophonic *prosa* for St Andrew and responsory for the BVM with prosula; across the foot of the leaves of the first gathering were written composition treatises in French ('Quiconques veut deschanter', already begun on f.263, but abandoned) and Latin ('Quando due note' and 'Gaudent brevitate moderni'). Ff.278–281*v*: 3 conductus and 1 *Benedicamus* for 3 voices, and 1 *organum triplum*. Ff.282–287*v*: 10 *organa dupla*. Ff.288–293*v*: 40 clausulas, the first 2 for 3 voices, the rest for 2 voices.

V. Early motet

1. General. 2. Principal individual sources.

1. GENERAL. The most important genre of polyphonic music of the 13th century in France was the MOTET, which increasingly overshadowed the older and declining genres of organum, troped organum, conductus and clausula. Most of the major late 13th-century sources of French polyphony, therefore, contain mainly motets.

The chief sources in the early layer of MSS preserving motets (those whose notation has no discrete form for a single semibreve) are: *F-CSM* 3.J.250; *GB-Lbl* Eg.2615 (2); *D-W* 628; *I-Fl* Plut.29.1; *D-Mbs* Clm 16444; *E-Mn* 20486; *D-Mbs* Mus.ms.4775; *W* 1099; *F-Pn* fr.12615; *Pn* fr.844. (For the last two sources in this group, see §III; for others see §IV.) *F-CSM* 3.J.250 is a fragment containing six motets, *GB-Lbl* Eg.2615 (2) preserves two and *D-W* 628 contains six in their alternative versions as conductus (i.e. without tenor). *I-Fl* Plut.29.1 preserves 25 conductus motets (where the two top parts have the same text) and one troped organum in its eighth fascicle as well

as 40 motets for two voices (tenor and motetus) and three double motets (two upper voices with different texts, and tenor) in the ninth fascicle, while the fragmentary *D-Mbs* Clm 16444 transmits 16 motets and *E-Mn* 20486 contains 32. *D-Mbs* Mus.ms.4775 and the fragments from Johannes Wolf's private collection, remains of the same large codex, preserve a total of 36 motets. They and *D-W* 1099 (which has more than 200 motets in fascicles 7–10) are the first sources to contain both Latin and French motets. The Artesian chansonniers *F-Pn* fr.12615 and fr.844 contain respectively 87 and 41 French motets.

The scribes of the earliest sources preserving conductus motets (e.g. *F-CSM* 3.J.250 and *GB-Lbl* Eg.2615 (2)) not only wrote the upper voices 'in score', like those of a conductus, but placed the motet text under the tenor, which forms the bottom voice of these three-part scores but whose ligature notation generally does not convey the exact rhythm of the upper voices. This atavistically wasteful and unfunctional notation was soon given up in favour of writing the melismatic tenor (usually in ligatures) at the end of the texted upper voice (or voices, in the case of conductus motets), as in *I-Fl* Plut.29.1, *E-Mn* 20486, *D-Mbs* Mus.ms.4775 and *W* 1099. The voices of double motets were notated successively (triplum, motetus, tenor). As the progenitor of the early motet was the CLAUSULA, a genre which, in turn, had its origin in the chant settings of the Parisian MAGNUS LIBER, early motet sources still arranged pieces in the liturgically appropriate order of their tenors (e.g. the eighth fascicle of *I-Fl* Plut.29.1, and *D-Mbs* Mus.ms.4775). But when the motet gave up its connection with church and liturgy, alphabetical arrangement, by motetus incipit, became usual (*D-W* 1099).

Six major continental MSS of the later 13th and early 14th centuries are described in detail below: *F-Pn* n.a.fr.13521; *MOf* H196; *D-BAs* Lit.115; *E-BUlh*; *I-Tr* Vari 42; *F-Pn* fr.146. The more prominent minor sources of polyphony belonging to this group are the Parisian *GB-Lbl* 30091, containing 14 motets of which three are unica (see RISM, B/IV/1, 1966, pp.516–18 and M. Everist, *French 13th-Century Polyphony in the British Library: a Facsimile Edition of the Manuscripts Additional 30091 and Egerton 2615 (Folios 79–94v)*, London, 1988), *D-DS* 3471 ('Wimpfener Fragmente', *c*1300), containing 15 motets and six or seven other pieces, mostly fragmentary (see RISM, B/IV/1, 1966, pp.75–9 and Everist, 1989, 282–7) and *F-Pn* fr.25566 of the 1290s, which contains the works of ADAM DE LA HALLE, including his 16 polyphonic rondeaux and five motets (see RISM, B/IV/1, 1966, pp.395–401 and M. Everist, 'The Polyphonic *Rondeau c*1300: Repertory and Context', *EMH*, xv (1996), 59–96).

Numerous concordances show motet sources to be considerably interdependent and yet reveal a remarkable geographical dissemination of the motet repertory of the 13th century.

2. PRINCIPAL INDIVIDUAL SOURCES.

Paris, Bibliothèque Nationale de France, n.a.fr.13521 ('La Clayette') [*Cl*]. 419 parchment ff. (26·5 × 18·4 cm; written space: 21·2 × 13·6 cm), 22 of which contain music. *Foliation*: pencil pagination, no later than 18th century (only odd-numbered pages are marked on recto of every folio), and a recent foliation in copying ink pencil; music on pp.729–72 (ff.369–390*v*). *Structure*: music fascicle, which apparently survives in its entirety, consists of 3 gatherings of 8, 8 and 6 ff. *Scribes*: no change of hand in the music section. *Notation and layout*: 14 red 5-line staves per page, except the first which has 13; notation uses 'Franconian' symbols for single longs, breves and semibreves, but still nearly always uses ligatures of the 'Notre Dame' type, i.e. *cum proprietate et perfectione*, no matter what rhythmic patterns they are intended to convey; like the rest of the MS, the music pages are divided into 2 columns; the motet voices are written continuously, beginning with the highest, i.e. in the traditional layout of earlier 13th-century sources (*I-Fl* Plut.29.1, *D-W* 1099, etc.). *Date* (music section): either 1260s or a scribal copy of *c*1300 preserving the notation of its earlier exemplar. *Provenance*: Ile de France or vicinity; known to have been owned by the Marquis Claude-Alexis de Noblet of La Clayette (Saône-et-Loire, nr Mâcon), to whose ancestors it may have belonged since the 14th century (Rosenthal, 1953, pp.108, 105). Lost after 1773, until rediscovered by H. Omont (Solente, p.226) or A. Rosenthal (Rosenthal, 1953, p.108) and acquired by the Bibliothèque Nationale in Oct 1952.

Contents: the MS, 'an entire library of l3th-century writings' (Meyer, 1890, p.2), contains 55 motets in the music section: 1 Latin triple motet, 6 Latin double motets, 7 French triple motets, 26 French double motets, 2 French motets for 2 voices (existing in another source as double motets), 5 macaronic triple motets and 8 macaronic double motets (Latin motetus, French triplum), i.e. 13 four-voice motets, 40 three-voice motets and 2 two-voice motets. One of the Latin 3-voice motets (f.370*r*) is exceptional, since its tenor (*Anima iugi*) is not a plainchant cantus firmus, but the lowest voice of the final cauda of a pre-existing conductus (*Relegentur ab area*), which was detached from the conductus and given a text of its own; the three voices of the motet appear in *I-Fl* Plut.29.1 as the three stanzas of a non-strophic monophonic conductus. *Date of music*: first half – mostly second quarter – of the 13th century; a few compositions show Perotinus's influence; some may date from as late as the 1260s. Contents are comparable in age to the 'old corpus' of *F-MOf*, with which it shares many concordances, though the notation here appears less advanced.

Anderson: 'Motets of the Thirteenth-century Manuscript La Clayette', *MD*, xxvii (1973), 11–40, and xxviii (1974), 5–37; G.A. Anderson, ed.: *Motets of the Manuscript La Clayette*, CMM, lxviii (1975); Everist (1989), 149–53, 265–7; *MGG2* ('La Clayette', K. Kügle)

Montpellier, Bibliothèque Inter-Universitaire, Section Médecine, H196 [*Mo*]. Originally 402 parchment ff. (19·2 × 13·6 cm, written block 12·8 × 7·7 cm), of which 400 survive, a bifolio with ff.303 and 308 having been lost before gatherings were made. *Foliation*: 4 series, all of which omit the first 5 folios containing the original table of contents up to f.333, including ff.303 and 308: (1) original ink Roman numerals ff.1–333, including 303 and 308; ff.18 and 19 erroneously numbered 19, 18; (2) ink Arabic numerals 1–48 on ff.350–97, many of which have been cut away; (3) ink Arabic numerals 334–97 continuing and completing original foliation; (4) pencil Arabic numerals 1–333 not allowing for missing ff.303 and 308, hence ending on f.335. *Structure*: all gatherings are quaternions except the first, a bifolio, the second, a ternion, and ff.239–45 (one leaf cut away before foliation). 8 fascs.: ff.1–22, 23–62, 63–86, 87–110, 111–230, 231–69, 270–349, 350–97, representing an original 'old corpus' of fascs.2–6 and 2 major layers of additions, (*a*) fascs.1 and 7, along with additions to fascs.3 and 5, and (*b*) fasc.8 along with additions to fasc.7. The additions carefully reproduce critical features of the original format. *Scribes*: several; precise number of text and music hands not determined (Rokseth); Jacobsthal distinguished 14 text hands, while Wolinski finds 11. Most significantly, all of fascs.2–6, with the exception of later appx to 3 and 5, are the work of one text scribe and notator; fasc.1 has a single notator; the main section of fasc.7 is the work of a single scribe

and notator; and fasc.8 is the work of a single scribe and notator. *Notation and layout*: 6–8 red 5-line staves per page; the notation of the 'old corpus' is 'pre-Franconian' (generally modal ligatures, rhythmically differentiated single notes, undifferentiated rests), while that of fasc.8 is Franconian and that of fasc.7 nearly so. The layout of the motet voices differs from that in the older sources. The 4 voices of the triple motets (fasc.2): 2 sets of double columns on facing pages. Double motets of the old corpus: triplum on verso, motetus on recto, tenor across bottom of both pages. The upper voices of the double motets of fascs.7 and 8 are written in 2 not necessarily equal columns per page, a system presumably invented because of the uneven text distribution in Petronian and similar motets, though often the greater amount of triplum text also caused the end of that voice to be written across the entire page. Only in fasc.8, however, are the voices (of all but 4 motets) laid out so that all reach the bottom of a page simultaneously. Performance by reading, rather than from memory, here becomes a possibility, as a result of the innovations of Franconian notation. *Date*: fascs.2–6, 1270s (Rosketh and RISM, *c*1280); fascs.1 and 7, plus the additions to 3 and 5, very end of 13th century (Branner: late 13th century, Everist: 1280s); fasc.8, very early years of the 14th century (Branner and Everist: *c*1300). As a controversial alternative to the picture of a manuscript compiled in discrete stages of activity a decade or more apart, Wolinski posits a single campaign of copying fascs.1–7 as an entity in the 1260s or 1270s, with fasc.8 perhaps also as early as the 1270s; not widely accepted, her theory has radical implications for the development of the motet, musical notation and music theory in the second half of the 13th century (Wolinski, 1992, pp.299–301). *Provenance*: Paris. Nothing is known of its ownership before the 1570s or 1580s (Everist, 1989, pp.115–18; Wolinski, 1992, pp.287–8), when it was in the possession of Estienne Tabourot of Dijon.

Contents: There are 336 polyphonic compositions, of which 8 lack music (therefore not included in RISM inventory), 5 are duplications and 3 are contrafacta; several survive incomplete. *Mo* (*F-MOf* H196) is the largest medieval motet MS extant; all compositions but those in the first fascicle (nos.1–10) and the first compositions of the fifth and eighth fascicles (nos.64 and 286) are motets. Nos.1 and 286 are conductus settings of a versicle trope, nos.2, 3 and 64 are 2 modal versions of a hocket for 3 voices with a texted quadruplum added to nos.2 and 3, no.4 is a *Benedicamus* in conductus style, no.5 is a hocket and nos.6–10 are organa, at least 2 of them by Perotinus. Each motet fascicle is dedicated principally to one genre: in the 'old corpus' fasc.2: 16 French and 1 Latin triple motets; fasc.3: 11 macaronic motets (Latin motetus, French triplum); fasc.4: 22 Latin double motets; fasc.5: 100 French double motets (plus 1 Provençal, 1 French-Provençal and 1 French-Latin); fasc.6: 75 French motets for 2 voices. The appx to fasc.3: 4 motets for 2 voices (2 Latin, 2 French); the appx to fasc.5: 1 macaronic motet (French-Latin). Fasc.7: 39 double motets (26 French, 7 Latin, 3 Latin-French, 3 French-Latin), at least 2 of them by Petrus de Cruce; appx to fasc.7: (*a*) 8 French double motets; (*b*) 1 Latin double motet, 1 Latin motet for 2 voices, 1 French-Latin double motet; fasc.8: 42 double motets (21 French, 16 Latin, 4 Latin-French, 1 French-Latin). *Date of music*: the whole of the 13th century.

Bamberg, Staatsbibliothek, Lit.115 (*formerly Ed.IV.6*) [*Ba*]. 80 parchment ff. (26·3 × 18·6 cm; written block 18·7 × 13·6 cm). *Foliation*: modern pencil. *Structure*: 10 uniform quaternions. *Scribes*: same music hand for ff.1–64*v*, same text hand for ff.1–62*v*; different later hands for second section. *Notation and layout*: mostly 10 five-line staves per page; the notation is 'Aristotelian' (*see* MAGISTER LAMBERTUS); the pages are generally divided into 2 columns for triplum and motetus, with the tenor running across the bottom of the page (*see* MOTET, fig.5). *Date*: Fourth quarter of the century for copying of first section, early 14th century for the second (Norwood, 1979, 1986, 1990). *Provenance*: Paris or Ile de France, at least for copying of first section (Norwood, 1979, 1986, 1990).

Contents: ff.1–64*v*, contains 100 double motets, of which 44 are Latin, 47 French and 9 macaronic (Latin motetus, French triplum), on ff.1–62, notated in parts, plus an appx on ff.62*v*–64*v* with 1 conductus setting of a versicle trope and 7 hocket clausulas in score. All but 1 of the compositions are for 3 voices; the other (ff.57*v*–58) has triplum, motetus and 2 tenors. The motets are arranged alphabetically by first letter (only) of the motetus; within each letter division the order is: Latin, macaronic, French. The second section of 2 quaternions, ff.65–80, contains the *Practica artis musice* by AMERUS, ff.65–79; an anonymous treatise on *cantus mensurabilis*, f.79*r*–*v*; and 2 further motets, f.80*r*–*v*. These are all later additions. *Date of music*: repertory characteristic of period, *c*1260–90.

Burgos, Monasterio de Las Huelgas [*Hu*]. 170 parchment ff. (26 × 18 cm; written space varies: 23·5 × 13 cm to 15·3 × 13·2 cm). *Foliation*: modern ink (1906); 2 successive folios numbered 124. *Structure*: 19 gatherings; 1–16 (ff.1–148*v*) all originally quinions, but the fourth (only outer bifolio remaining) and the eighth (innermost bifolio missing) are defective. 17–19 (ff.149–168*v*) were originally written as 2 more quinions, but at present are bound as a quaternion, a ternion and a half, and a bifolio with 2 single folios, to be read in the order 149–52, 161, 166–7, 160, 162, 165, 153–6, 163, 164, 168; 169 is a fly-leaf. *Scribes*: 1 hand for the main part of the MS (ff.1–7*v*, 8*v*–152*v*, 157–159 first staff, 161*r*–*v*, 166–167*v*); a later hand entered the isolated part on f.8, and according to Anglès 11 further and later hands wrote the remaining pages from 153 on. *Notation and layout*: the red 5-line staves are distributed 6 per page for 'score' notation and 7–11 (ff.100*v*–101) for part notation; the notation is Franconian with certain idiosyncratic modifications; each of the shorter double motets is accommodated on 1 page, while the longer ones are notated as in *Mo*, i.e. triplum on the verso, motetus on the recto, tenor at foot of page. *Date*: main part *c*1300 (Dittmer, *MGG1*, who disproved the date *c*1325 given by Anglès and by Reaney, RISM); later additions *c*1325. *Provenance*: MS was written for, and has remained in, the Cistercian convent of Las Huelgas.

Contents: 45 monophonic pieces (20 sequences, 5 conductus, 10 *Benedicamus* tropes) and 141 polyphonic compositions, 1 of which (no.10 in Anglès edn) lacks music (therefore excluded from inventory in *RISM*). The comprehensive polyphonic repertory consists of conductus (including 1 Credo), Latin motets (for 2 voices, conductus motets and double motets), 1 solmization exercise, Sanctus settings, Kyrie, Gloria, Sanctus and Agnus tropes, solo

portions of 3 graduals and 3 alleluias, 1 offertory trope, several *Benedicamus Domino* and *Benedicamus* tropes, and sequences. *Date of music*: mainly later 13th century, but including works composed in the first half of the century (Notre Dame repertory); additions: first quarter of 14th century.

Turin, Biblioteca Reale, Vari 421 [*Tu*]. 125 parchment ff. (23 × 16.2 cm), the last 45 of which contain music. *Foliation*: apparently once an independent motet collection, then bound into a large codex E.73, the music is now found in a MS that is the last of 4 that came into being in the 18th century when E.73 was split up into MSS 46, 43, 42(2) and 42(1), in that order. The first section of MS 42(1), containing St Jerome's commentaries on the Bible, is foliated 169–248 as a continuation of M2 42(2). The second section, containing the *liber motetorum*, has 5 unnumbered folios (usually referred to as A–E), 40 folios with old red ink Roman numerals, 1 unnumbered paper fly-leaf at the front and another at the back. *Scribes*: no change of hands apparent in music section. *Notation and layout*: Franconian notation, on 8 red 5-line staves to each page, except for the first 3 pieces (ff.A–E), which are notated on 6 staves. Distribution of parts as in *Ba* (*D-BAs* Lit.115) and *Mo*. *Date*: *c*1300. *Provenance*: abbey of St Jacques, Liège (title on f.1); still there in 1667 as part of MS E.73.

Contents: ff.A–E: 3 conductus for 3 voices; f.E*v*: original table of contents; ff.1–40: 31 double motets (24 French, 6 macaronic, 1 Latin). *Date of music*: mostly late 13th century.

Auda: *Les 'motets wallons' du manuscrit de Turin: Vari 42* (Brussels, 1953) [facs., edn. and commentary]; Gennrich, pp.xxxiv–xxxv; RISM, B/IV/1 (1966), 801–07; P. Norwood: 'Performance Manuscripts from the Thirteenth Century?', *College Music Symposium*, xxvi (1986), 92–6

Paris, Bibliothèque Nationale de France, fr.146 [*Fauv*]. 102 parchment ff. (46·2 × 33 cm; written block average 33·5 × 23·8 cm). *Foliation*: 4 unnumbered leaves at the beginning and 6 at the end, 2 folios lettered A and B, first section of MS numbered I–XLVIII (fig.32); 2 leaves inserted at a slightly later date between ff.28 and 29 numbered in 19th-century hand (28*bis* and 28*ter*), the remainder, ff.49–88, in more recent Arabic numerals. *Scribes*: 1 hand for first section of MS (except ff.28*bis* and 28*ter*); another hand for musical portion of second section (ff.57–62*v*). *Date*: 1316, perhaps 1316–18 (Roesner, Avril and Regalado, 1990, p.49). *Provenance*: Paris.

Contents: 4 main sections. The first, ff.I–XLV, contains an edition by CHAILLOU DE PESSTAIN of the ROMAN DE FAUVEL, for whose music (except that on ff.28*bis* and 28*ter*) fly-leaf B is the original index (fly-leaf A contains an unrelated French poem). The second section, ff.XLVI–XLVIII and 49–55*v*, has 'Plusiers Diz de mestre Geoffroi de Paris'. The third section, ff.57*r*–62*v*, contains monophonic compositions by JEHANNOT DE L'ESCUREL, including 15 ballades, 11 rondeaux (1 also in a 3-part arrangement), 5 virelais and *dits entés*. The fourth section, ff.63–88, has a rhymed chronicle covering the period from 1300 to 1316. *Date of music*: of the *Roman de Fauvel* early 13th century to 1315–16; of L'Escurel, *c*1300. Composer: PHILIPPE DE VITRY; 2 motets and 1 detached motet triplum are attributable to him. Leech-Wilkinson posits authorship of several motets in the *Roman* to an as yet anonymous 'Master of the Royal Motets'.

VI. English polyphony, 1270–1400

1. General. 2. The Worcester Fragments. 3. Other individual sources.

1. GENERAL. It is an indication of the lamentable state of preservation of medieval English polyphony that, strictly speaking, a report on its MS sources has to be negative; no integral codex written in the British Isles between the Winchester Troper (*GB-Ccc* 473) and the Old Hall MS (*Lbl* Add.57950) is extant, aside from the Scottish *D-W* 677. (Some commonplace books with music entries are intact as such.) Yet how significant a role polyphonic music played in medieval England, at least from the 13th century on, is indicated by the quantity of surviving scraps, fly-leaves, paste-downs, stray leaves, and isolated jottings. Several of the MSS of which only fragmentary leaves remain were sizable codices, some of them numbering over 200 pages (Lefferts, 1986, pp.159–61). While all of them are in more or less tattered and scattered condition, 'England has in fact more sources of medieval polyphony than any other country' (G. Reaney, xv, 1961, p.15). Only in settings of vernacular poetry does medieval England seem to have been eclipsed by other countries. There are very few, their occurrence is isolated, and the MSS are therefore not specifically cited below (see Dobson and Harrison, 1979, particularly for

GB-Cu 5943, and see Wathey, 1993, for *GB-Lbl* 41340(H)).

The sources that preserve Latin polyphony may be divided into two groups, containing (1) compositions, most or all of which date from the 13th century, and (2) 14th-century compositions. There are five main categories into which the repertory of the first group can be divided: (*a*) sequences, tropes, conductus, and rondelli (*see* RONDELLUS); (*b*) motets on a *pes* (*see* PES (i)); (*c*) chant settings; (*d*) troped chant settings; and (*e*) motets on a cantus firmus. In many of the sources specimens of several of these categories are found without strict separation from one another. This applies primarily to the so-called Worcester Fragments (see §2) as well as to lesser sources, such as *GB-Ob* CCC497 (two scribes), *F-Pn* fr.25408, *GB-Ob* Mus.c.60, and *US-Cu* 654 App. Some of the sources that preserve only one category are *GB-Ob* Bodley 257, *Owc*, *Ob* CCC489, *Ob* Wood 591 (category *a*); *Ctc* 0.2.1 (category *e*). Of course, in view of the fragmentary condition of the sources there are relatively few concordances (about a dozen); yet they attest the dissemination of much of the repertory, the more so as two compositions (Worcester Fragments nos.53 and 67, ed. in PMFC, xiv, nos.56 and 57) exist in three versions. While little or nothing is known about the points of origin of a number of sources other than the Worcester Fragments, enough information is available to prove that the geographic spread of English polyphony embraced many widely separated centres and areas, including both France (*F-MOf* H196 nos.59–61, ed. in PMFC, xiv, nos.79, 77, 78) and a Cistercian abbey in Yorkshire (*US-Cu* 654 App.). No comprehensive discussion of the MSS exists; lists of compositions and sources in Losseff (1994) and Summers and Lefferts (forthcoming).

The repertory of the 14th century falls into three main groups: motets (increasingly based on a cantus firmus, rather than a *pes*); cantilenas (*see* CANTILENA (i)); and discant settings for three voices of cantus firmi (many of them choral chants). As in the 13th century, many sources mix two or all of the genres. The main fragmentary sources are *GB-Lwa* 33327; *Lbl* 24198; *Onc* 362; *Cpc* 228; *Lbl* Sloane 1210; *Lbl* 62132A; *Cgc* 727/334; *Cgc* 543/512; *B-Br* II266; *GB-Ob* Hatton 81; *DRc* C.I.20; *Ob* e Mus.7; *Lpro* 23; *Lbl* Arundel 14; and *Ob* Barlow 55. *Onc* 362, *Ob* e Mus.7 and *DRc* C.I.20 transmit motets almost exclusively (the latter two also including some continental motets of the 14th century), *Lwa* 33327, *Ob* Hatton 81 and *Lbl* 24198 entirely so. Despite the fact that the contents of these MSS range from a total of five items (*Ob* Hatton 81) to a total of only 21 (*Onc* 362), there is a surprising number of concordances, which relate *Ob* Hatton 81, *Ob* e Mus.7 and *DRc* C.I.20 to one another; another such group consists of *Cpc* 228., *Lbl* Sloane 1210, *B-Br* II266, *Lbl* 62132A, *GB-Cgc* 727/334, *Cgc* 543/512 and several lesser sources. Some of these, as well as *Onc* 362 and *Lwa* 33327, are also related to the Worcester Fragments. The sources cited all date from the first half or the middle of the 14th century (*Lwa* 33327 probably goes back to the last decade of the 13th). Later MSS are even more fragmentary, they continue to transmit mostly motets, discant settings and cantilenas. Among them, the most significant include *Occ* 144, *Ir* 50/22/13/15, *Lpro* E 163/22/1/24, *US-NYpm 978* and *Lbl* 40011B; the last, written on paper using white void notation, is now dated about or just before 1400 (Bent, 1987). The most comprehensive listing of sources is Summers, 1990, which is supplemented by Wathey, 1993. Some items of possibly late 14th or early 15th century origin are given in RISM, B/IV/4, *Census-Catalogue* and Curtis and Wathey, 1994.

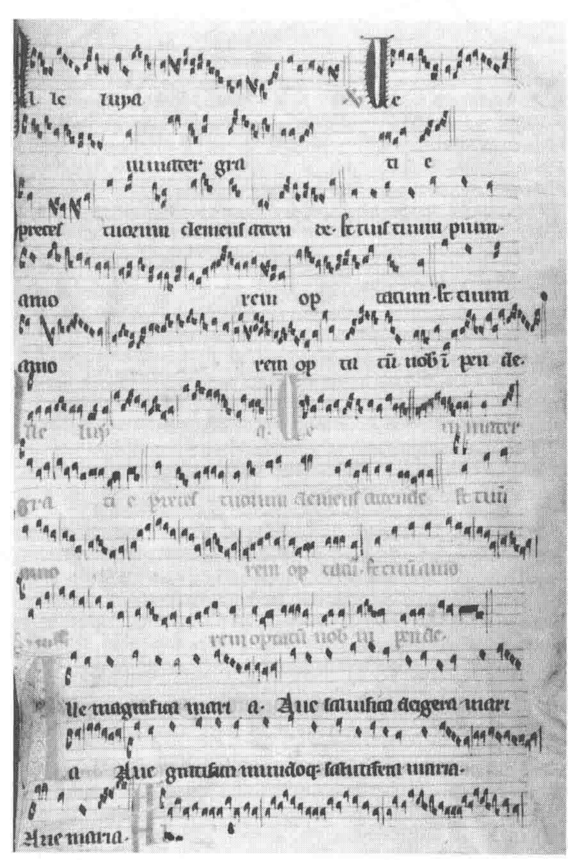
While it is awkward to present formal descriptions of such fragmentary remains, a description of the Worcester Fragments as well as accounts of the musical contents of 12 MSS are nevertheless given below, in the hope that a general picture will be discernible. All listed sources contain ten or more polyphonic pieces (*Lbl* Harl.978 has fewer but its list indicates 164 other compositions), an arbitrary criterion of selection from many points of view, but one which does in fact allow inclusion of MSS which are representative in content.

2. THE WORCESTER FRAGMENTS. The Worcester Fragments consist of over fifty folios from nine or more separate volumes, only three of which are represented by a substantial number of pages. This material survives today in three separate collections of parchment leaves (fly-leaves etc.) not corresponding directly to any one of the medieval volumes: *GB-WO* Add.68 (*olim Worc*), *Ob* Lat.lit.d.20 and *Lbl* Add.25031. RISM incorporates the third of these into the second, which is likewise given the sigillum *Worc*, although it is listed and inventoried separately from the first. The reason for this unusual procedure is complex. Recognizing the relatedness of some leaves, between 1925 and 1952 attempts were made at the Bodleian Library to reconstruct one or more MSS of English medieval polyphony by combining certain Bodleian fragments (from three different MSS) with photographic copies of the four folios of *Lbl* Add.25031 and of most of the fragments collected in *WO* Add.68. This curious aggregate, designated as *Ob* Lat.lit.d.20 and containing nearly twice as many photographs as it does originals, forms the basis of Dittmer's edition (MSD, ii, 1957) and of RISM's listing; the last 32 of the 109 items of the edition are transcriptions of those polyphonic contents of *WO* Add.68 (20 leaves) that were not incorporated as photographs into *Ob* Lat.lit.d.20, and only the fragments containing them are listed under *WO* Add.68 in RISM.

WO Add.68 contains both monophony and polyphony. The leaves or groups of leaves containing polyphonic compositions are as follows (asterisks indicate photographic copies in *Ob* Lat.lit.d.20): nos.ix*, x*, xi*, xii, xiii*, xviii, xix, xx, xxviii*, xxix, xxx, xxxi*, xxxii and xxxv* (fig.32; no.xxxv is composed of six leaves that in the 1920s were removed from *Omc* 100, and transferred to *WO* Add.68). Their relationship with the Oxford and London sources is shown by similarities in musical style and genre, palaeographic factors (including certain notational devices), size of leaves, medieval foliation (where present), and the evident original adjacency of certain leaves now preserved in different sources.

At least the first 21 leaves of the 'factitious' (RISM) MS *Ob* 20, as at present constituted, evidently came originally from one volume, though only eight of them are Bodleian originals, while of the remainder (photographs) nine are contained in four different items of *WO* Add.68 and four are in *Lbl* Add.25031. Dittmer (MSD, ii, pp.13–14) suggested that the music of *Ob* Lat.lit.d.20 might have come from as few as two or as many as five different volumes; it is probable that the first volume (ff.1–21 or 22 – about half of them discontinuous and most of them

preserving the original foliation) was separate, while ff.25–32 (or 33) plus ff.34–5 and ff.23–4 plus ff.36–9 may originally have been parts of two further volumes. Well over a dozen different hands (including palimpsests) can be distinguished in the Worcester Fragments (see Wibberley, 1976 and Losseff, 1994). For a description of the compositions as well as probable dates of the sources and the music, *see* WORCESTER POLYPHONY. Nothing definite is known about provenance, though the preservation in Worcester of so relatively large a number of leaves makes it reasonable for scholars to have assumed that most of the polyphony was written or at least used there. New fragments from the same complex of medieval sources have been found by Summers (now identified as *WO* Add.68, frag.xxxix/1 and 2).



Worcester, Cathedral Library, Add.68 [*Worc*]. Fly-leaves and bindings from various MSS in Worcester Cathedral Library, plus 6 leaves formerly *Omc* 100 (transferred to Worcester in the 1920s). The folio numbers of those fragments included as photocopies in *Ob* Lat.lit.d.20 (as used by Dittmer and RISM) are given in parentheses: frag. IX: 1 leaf (f.27); X: 2 leaves (ff.1–2); XI: 2 leaves (ff.20–21); XII: 1 leaf; XIII: 4 leaves (ff.36–9); XVIII: 2 leaves; XIX: 6 leaves; XX: 2 leaves; XXVIII: 4 leaves (ff.8–11); XXIX: 4 leaves; XXX: 4 leaves; XXXI: 1 leaf (f.7); XXXII: 1 leaf; XXXIV: 1 strip; XXXIV*a–c*: 3 strips; XXXV: 6 leaves (formerly *Omc* 100; ff.26, 29–33) (fig.32). The strips XXXIV and XXXIV*a–c* were disregarded by Dittmer. Strips xxxix/1 and 2 were recently identified by Summers; for these, see Wathey, 1993

Oxford, Bodleian Library, Lat.lit.d.20 [*Worc*]. Fragments gathered together from various MSS in the Bodleian. Their original shelf-mark and the number of their leaves, followed by their foliation as now interspersed with photocopies (used by Dittmer and RISM), are Auct.F inf.1, 3: 8 leaves (ff.12–19); Hatton 30: 1 leaf (f.22); Bodley 862: 3 leaves (ff.23–5); Bodley 862 (covers): l leaf (f.27*a*); Bodley 862: 1 leaf (f.28); Bodley 862: 2 leaves (ff.34–5).

London, British Library, Add.25031 [*Worc*]. 3 ff. (17 x 17·5 cm, 23·5 x 18 cm, 23·5 x 18 cm) and 2 strips (now mounted one above the other) in the front of miscellaneous tracts, letters etc., preceded by four modern paper leaves. The first two parchment leaves bear an old ink foliation XIII, XIIII. Modern pencil foliation 1–4. The correct order is as follows (foliation in *Ob* Lat.lit.d.20 indicated in brackets): f.1*r–v* with the second strip of f.4*r–v* underneath it [ff.3*r–v* and 6 *r–v*, second strip], f.2*r–v* [f.4*r–v*], f.3*v–r* [f.5*r–v*], f.4*v–r*, first strip [f.6*r–v*, first strip]. The original foliation of ff.3 and 4 (xv and xvi) has been cut off. The first of the two strips is erroneously indicated as reverse in RISM, while in Dittmer (MSD, ii, p.18) it is listed as staff 7 of the folio to which it originally belonged.

3. Other individual sources.

London, British Library, Harl.978 [*LoHa*]. 170 ff (19 × 13 cm), of which the first four and last four are fly-leaves, the outside ones paper, the other six parchment; after the first four fly-leaves an 18th-century paper fly-leaf has been inserted. *Foliation*: 3 systems, none including the eight outer fly-leaves. First series begins with parchment leaves, running 1–3, 5–9, unnumbered folio, 10–35, 58–182. The 18th-century fly-leaf was then added and numbered 1*. Ff.58–182 of the first system then refoliated in modern pencil (British Museum) as 36–160. A final British Museum pencil system refoliated the 18th-century fly-leaf and the parchment leaves as 1–162. *Notation*: music (ff.2–15) in more than one hand (not yet precisely differentiated: Handschin, p.67) but all roughly contemporaneous; most breves in monphony and polyphony are rhomboid. *Date*: music *c*1250 or soon after. *Provenance*: Reading Abbey (Benedictine); whether it remained

32. *Worcester, Cathedral Library, Add.68, no.xxxv, g–h (= GB-Ob Lat.lit.d.20, f.29r–v). g: staves 1–8, end of duplum of 54; staves 8–9, end of tenor of 54; staves 10–12, beginning of duplum of 55 [= App.19]. h: staves 1–5, end of triplum of 55 [= App.19]; staves 6–9, end of tenor of 55 [= App.19]; staves 10–12, beginning of triplum of 56 [= App.18b]; staff 12, beginning of tenor of 56 [= App.18b]*

there until the dissolution of the abbey, and how the 1st Earl of Oxford acquired it, are unknown.

Contents: a gathering of music on ff.2–13*v*; a second gathering containing solmization exercises on ff.14–15 and a calendar of Reading Abbey (entries for Jan–Feb only); on ff.15*v*–21*v*; list of contents of a lost MS containing 164 sacred polyphonic compositions, belonging to W. de Wintonia (*see* WINTONIA, W. DE), in a hand nearer the end of the 13th century, on ff.160*v*–161. The rest of the MS does not relate to the date or contents of the music or list. *Music on ff.2–13v*: 4 monophonic cantilenas; 3 *estampies* (untexted) for 2 voices; l conductus for 3 voices, with both Latin and a unique French text, followed by the *neuma* (in modal rhythm) of which the conductus tenor is an arrangement; 1 monophonic cantilena; the famous 'Summer Canon'.

List on ff.160*v*–161: the list is headed 'Ordo l*ibri* W. de Winto*nia*' and begins with a setting of the Marian Gloria trope *Spiritus et alme* entitled 'R*esponsorium* R. de Burg*ate*' (Ludwig read 'R*esponsorium* de virg*ine*') (*see* BURGATE, R. DE). There follow settings of 7 other Marian tropes, including 2 *Regnum*, 1 responsory, 3 alleluia tropes and 1 alleluia. Next comes a cycle of 37 alleluia settings for important feasts and Lady masses; this list is headed 'Postea R*esponsoria* W. de Wic̄', which attribution has been expanded to 'W. de Wic*umbe*' (*see* WYCOMBE, W. DE). There follow 38 'Cund*uctus*', 13 'Mot*eti cum una* litt*era et* dupl*ici* no*ta*' (presumably conductus motets), 18 'Mot*eti* cu*m* dupl*ici* litt*era*' (double motets), 2 'It*em* mot*eti cum* dupl*ici* no*ta*' (presumably additional conductus motets), 48 'It*em cum duplici* litt*era*' (additional double motets).

Oxford, Bodleian Library, Corpus Christi College, 497 [*OCC497*]. 7 ff. (various sizes, some only narrow strips), once fly-leaves of *Ob* CCC86, now separated; gap of at least one leaf between f.4 and f.5. *Notation*: 4 sets of 3 red 5-line staves per page, with 4 brown 4- or 5-line staves added in the wide lower margin of ff.3*v*–4, 5*v*–6. Non-mensural notation except for the motet additions, which are in 13th-century English mensural with rhomboid breve. *Date*: third quarter of 13th century, additions last quarter; *Provenance*: unknown.

Contents: 2 Latin-texted Kyries (no cantus firmus), 9 conductus in score, 2 motets in parts; all for 3 voices. 1 item omitted in RISM between no.7 and no.8; RISM no.13 is monophonic. Two pieces have concordances with 13th-century Parisian MSS.

L.A. Dittmer: 'Beiträge zum Studium der Worcester-Fragmente', *Mf*, x (1957), 29–39; RISM, B/IV/1 (1966), 582–6; M. Lütolf: *Die mehrstimmigen Ordinarium Missae-Sätze vom ausgehenden 11. bis zur Wende des 13. zum 14. Jahrhundert* (Berne, 1970) [edns of 2 pieces]; PMFC, xiv (1979), nos.18, 23–4, 42, 82, appxs. 2–4; Anderson (1979–88), ii, no.F33 and ix, nos.O25–O32; Losseff (1994), 42–9; Summers and Lefferts (forthcoming) [facs.]

Cambridge, Trinity College, O.2.1 (catalogue: 1105) [CbT]. 262 ff. (22·9 × 16·4 cm), of which the first two and last two are unnumbered paper fly-leaves. Two more front fly-leaves are foliated I–II. Music on ff.I–II, 229–30. *Notation*: English mensural with rhomboid breve on 12 red 5-line staves per page. The two upper parts have the same text and are written in score; the unlabelled tenor or tenors follow separately. *Date of music*: third quarter of 13th century. *Provenance*: main MS from Ely Cathedral priory (Benedictine) *c*1200.

Contents: 9 conductus motets, all but 1 fragmentary, 1 (possibly 2) for 4 voices (2 tenors, of which 1 has a cantus firmus). The last 3 pieces are well known from continental sources. The first composition is erroneously listed as two separate pieces in RISM.

J. Handschin: 'The Summer Canon and its Background, II', *MD*, iii (1949), 55–94; v (1951), 65–113; RISM, B/IV/1 (1966), 482–5 [lists edns of continental pieces made from other MSS]; PMFC, xiv (1979), no.75, appxs. 24–5; Summers and Lefferts (forthcoming) [facs]

Oxford, Bodleian Library, Mus.c.60 [*OM 60*]. Miscellany of which only ff.79–85 (various sizes) and f.86 (26·7 × 19·7 cm, cut in half) and f.104*r*–*v* are medieval and contain music; f.86 comes from a mid-15th century continental MS and will not be further described here. *Notation*: ff.79–80, 81–85*v* square notation without semibreves or minims, on the whole reflecting the precepts of Johannes de Garlandia f.104*r*–*v* uses 13th-century English mensural with rhomboid breve espressing sevond mode. F.80*v* uses semibreves. Generally 9 red 5-line staves per page. *Date*: late 13th century, f.81 slightly earlier, f.80*v* first half of the 14th century. *Provenance*: unknown (two concordances with the Worcester Fragments).

Contents: 13 pieces. Ff.79–85 (RISM nos.3 and 4 are a single item). 2 troped introits, 2 Kyrie tropes (one a fragmentary motet setting, the other in cantilena style without cantus firmus), 1 Gloria (no cantus firmus), 2 Gloria tropes (one a fragmentary motet setting, thother in 4-voice score and attributed by Dittmer and Sanders to R. DE BURGATE), 1 troped responsory, 1 conductus, 1 *pes* motet with 2 texted parts and 2 tenors, Fragments of 3 motets. Most of these pieces are incomplete, with voices missing. On f.104*r*–*v*, 1 fragmentary motet.

Chicago, University Library, 654 App [*US-Cu*]. 4 ff. (*c*26 × 20 cm), cut across the middle and trimmed (from a probable original size of *c*30 × 20cm) to make 16 fly-leaves around another MS, now kept separately. *Notation*: late English mensural with rhomboid breve, on 11 or 12 red 5-line staves, one nearly always cut away. *Date*: *c*1290. *Provenance*: Meaux Abbey (Cistercian), near Beverley, east Yorkshire.

Contents: 10 compositions for 3 voices. One of the upper voices is missing in each of the three compositions on f.1. The remaining pieces are a Gloria trope with another texted part and a tenor, a motet whose upper voices share the same text, 3 rondelli, and 2 pieces containing rondellus or voice-exchange sections.

Oxford, New College, 362 [*ONC*]. Medieval liturgical fragments collected from various bindings, of which one group of 10 ff. (32·1 × 21·5 cm, some reduced by excisions) contains music. It bears an old red ink foliation (lxx–lxxi, lxxvi–lxxvii, lxxxi–lxxxiii, lxxxviii–xc) and a modern pencil foliation (82–91, incorrect, to be read in the order 84–9, 82–3, 90–91). *Notation*: 11 red 5-line staves per page; Petronian notation except for three added pieces (nos.18–20) on ff.90*v*, 91 which employ down-tailed semibreves (no.18) and minims (no.19). Score notation for nos.13, 19–20, otherwise parts written separately. *Date*: *c*1320 (Harrison). *Provenance*: unknown.

Contents: 21 compositions: 1 motet for 4 voices with 3 texted upper voices and a French tenor; 2 motets for 4 voices with 2 texted upper voices and 2 tenors (one with one French text for the tenors); 1 motet for 3 voices with a French tenor; 8 motets (several fragmentary, some for 4 voices); 2 voice-exchange motets for 3 voices; 1 rondellus for 3 voices; 1 *Regnum* trope for 4 voices (motet); 1 Gloria trope for 3 voices; 1 antiphon for 3 voices (motet); 1 respond for 4 voices (motet with 2 texted upper voices); 2 discant settings for use before a lection.

Göllner: *Die mehrstimmigen liturgishen Lesungen* (Tutzing, 1969), 132–3, 325–6 [facs. and commentary]; PMFC, xiv (19790, no.42; PMFC, xv (1980), nos.1–10, 17; Harrison and Wibberley (1981), pls.80–99 [facs.]; PMFC, xvi (1983), nos.32, 41–2, 99, 101–2; Summers (1983), pls. 197–9 [facs.]; Lefferts (1986); Wathey (1993), 6–8 [concordance in *GB-AB* 22875E]

Cambridge, Gonville and Caius College, 543/512 [*CGC*]. 270 ff (25·5 × 18·3 cm) of which the first four and last four are unnumbered modern paper fly-leaves. *Foliation*: 1–262, partly old ink, partly modern pencil (the old foliation is three numbers higher). Music on ff.246*v*–249*r* and 252*v*–262. *Notation*: Petronian, 8–10 four- or five-line staves per page. Monophonic additions in three further hands on f.248, including white mensural notes. The motets are written in parts, the remainder in score. *Date*: *c*1330. *Provenance*: texts on f.249*v* refer to East Anglia and bishops of Norwich, the last entry in the main hand naming William de Hermyn (1325–36).

Contents: 14 items: 6 motets (one for 4 voices, with 2 tenors, the remainder for 3 voices); 2 rondelli for 4 voices; 5 cantilenas (in the usual double-versicle form of the sequence), 3 for 3 voices, 2 for 2 voices; and 1 isolated motet part.

London, British Library, Sloane 1210 [*Sl*]. 144 ff. (21 × 14 cm), numbered 1, 1*bis*, 2–143. Ff.1, 1*bis*, 138–43 are fly-leaves with music.

Notation: various hands; 9–11 brown or red 4- or 5-line staves per page. Notation styles include those with dots of division, *signum rotundum*, minims, semibreves with left-hand oblique descending tail. *Date*: *c*1330. *Provenance*: early owners include John Gigur, *magister* at Tattershall collegiate chapel.

Contents: 14 pieces: Kyrie trope for 3 voices, Gloria for 3 voices, Credo for 3 voices, alleluia for 2 voices, hymn for 3 voices (only the Credo and the hymn have been shown to be cantus firmus settings), 3 motets for 3 voices; 6 cantilenas, 3 for 3 voices and 3 for 2.

London, British Library, Add. MS 62132A (formerly Leeds Central Library, Archives Department, MS Vyner 6120; formerly Studley Royal, Fountains Abbey MS 23. 232 ff. (21·5 × 14·5 cm), the first of which is blank and unnumbered; the rest has modern pencil foliation 1–231. A miscellaneous collection with music at the end on two parchment bifolia from different gatherings, ff.228–31, to be read in the order 230, 229 (or 229, 230, see Bent, 1987), 228, 231. Pages were lost between the bifolia after cantilenas were copied but before responsories were entered. *Notation*: Ars Nova notation on 12 red 5-line staves per page; in the three added cantus firmus settings the middle voice is notated in red ink on a 4-line staff even though in two of the compositions it is the lowest voice that sings the chant. Semibreves occasionally made *major* with downward tail or swallow tail. *Date*: first third of the 14th century (Bent, 1987, suggests 3rd quarter). *Provenance*: Fountains Abbey (Cistercian), north Yorkshire, at least by the mid-15th century.

Contents: 6 cantilenas, 1 sequence (in discant), 3 responsories (verses only, in discant) all for 3 voices and in score notation.

H.K. Andrews and R.T. Dart: 'Fourteenth-century Polyphony in a Fountains Abbey MS Book', *ML*, xxxix (1958), l–12 [facs. of 3 ff., edn of 1 piece, edns of all texts]; D. Apfel (1959) [edns of 2 pieces]; RISM, B/IV/2 (1969), 275–9; PMFC, xvi (1983), nos.80, 84, 86; Summers (1983), pls.46–53 [facs.]; PMFC, xvii (1986), nos.22, 34, 41–4; Bent (1987) [facs. and commentary]

Oxford, Bodleian Library, e Mus.7 [*EMus*]. 277 ff. (36·5 × 23·2 cm), numbered i–xii, 1–540 (old pagination, probably 17th century), and I–VI, 1–271 (modern foliation). Ff.I–VI and 266–71 are fly-leaves, of which ff.I–II and 270–71 are paper and blank, and ff.III–VI and 266–9 are parchment and contain music. *Notation*: front fly-leaves Franconian and Petronian, the rest Ars Nova notation; 12 or 13 red 5-line staves per page. *Date*: mid-14th century. *Provenance*: Bury St Edmunds (Benedictine).

Contents: 18 pieces. Front leaves hold 11 (item no.1 in RISM is actually two fragmentary compositions): 1 motet with 2 texted upper voices and 2 tenors, 1 antiphon for 4 voices (a voice-exchange motet for 2 tenors and 2 texted upper voices, probably intended as a *Benedicamus* substitute), 6 motets for 3 voices, 1 untexted composition (?Kyrie) for 3 voices, *Regnum* trope for 3 voices (motet), 8 motets or fragments (for 3 or 4 voices). Rear leaves hold 7: a fragmentary voice-exchange motet for 4 voices, an untexted discant composition in score (Kyrie) for 3 voices, and 5 motets or framents (3-voice works). Or the latter, 2 have a French text (1 in the the tenor), and 1 other (isorythmic) has a concordance in *I-IV* 115.

Durham, Cathedral Library, C.I. 20. [*DRc20*] 340 ff. (34 × 22·2 cm). Music on the 4 fly-leaves at the beginning and the four at the end (ff.1–4, 366*–369). *Notation*: ff.1–4, late Petronian notation; f.4*v*, 2 pieces in score in French Ars Nova notation; ff.366*–369 French Ars Nova notation. Ff.1–4*v*, 12 brown 5-line staves per page, ff.366*–369, 13. *Date*: mid-14th century. *Provenance*: main MS bought mid-15th century for Durham by prior John Wessyngton (*explicit* on f.5).

Contents: Front leaves: 4 motets for 3 voices including one with a French tenor, 1 motet for 4 voices, 2 isolated motet part; f.4*v*, 2 chant settings in discant style, for 3 voices (cantus firmus, if any, of the second is unknown so far). Rear leaves: 10 3-voice motets, 6 of French provenance, including two by Philippe de Vitry.

Oxford, Bodleian Library, Barlow 55 [*Ob 55*]. Miscellany of 13 ff. of various sizes, modern pencil foliation. Music on ff.4–5 (21 × 13·8 cm). *Notation*: Ars Nova notation, except for last line of f.5, a later addition which is in 15th-century white notation (*Si quis amat*; concordance in *Cu* 5943, f.163*r*). Top two staves cut off, leaving 1 red 5-line staff and 3 sets of 3 red 5-line staves; text in red ink except on f.5*v*. *Date*: 14th century. *Provenance*: unknown.

Contents: 8 settings for the Mass Ordinary, in varying states of incompleteness, 1 alleluia, 1 cantilena. All compositions for 3 voices, some in discant style, some in cantilena style.

E. Apfel (1959) [3 facs., edns of 2 pieces]; RISM, B/IV/2 (1969), 248–51; Harrison and Wibberley (1981), pls.40–43 [facs.];

VII. French polyphony, 1300–1420

1. General. 2. The Machaut manuscripts. 3. Principal individual sources.

1. General. The French repertory of the Ars Nova and Ars Subtilior survives in about 85 sources containing more than 600 polyphonic compositions (this figure includes 35 French works by Italian composers but excludes the 228 unique compositions in the Cyprus MS *I-Tn* J.II.9). Some 150 mass movements, 11 hymns, 74 motets, 1 hocket, 171 ballades, 102 rondeaux, 89 virelais, 4 chaces, 3 canons, 4 polyphonic lais and 2 chansons have survived complete and are available in modern edition; to these may be added 43 monophonic works by Machaut, and a large number of fragments. Few of the central sources are now complete. However, there is a large number of MSS and fragments from outlying countries – principally Italy, but also from Catalonia and England, and from the north and east border regions of France – and these provide evidence of the wide spread of French culture and music. Most of the sources are now located in France (25), Italy (21) and Spain (18), with some in Belgium, England and Germany; there are a few others in the Netherlands, Switzerland, the USA, Poland and the Czech Republic. Inventories and descriptions of nearly all these sources are in RISM, B/IV/1–2 (with supplement) and B/IV/3–4, and additional information concerning the early 15th century can be found in the *Census-Catalogue of Manuscript Sources of Polyphonic Music, 1400–1550*, ed. C. Hamm and H. Kellman, RMS, i (1979–88). The principal sources were known to Ludwig and Besseler.

Whereas the Italian sources of the period have their contents arranged in order of composers, the French sources are predominantly categorized by forms, although this order often tends to become obscured by miscellaneous additions. The repertory has in part survived anonymously, but 50 French composers and 12 Italian are named in ascriptions. Most of these, however, are represented by only one or two works. The music of the 14th century was notated in separate parts: in the early stages motets and mass movements were often laid out in

33. *Paris, Bibliothèque Nationale de France, fr.146, f.VII (1316): the motet 'Orbis orbatus/Vos pastores adulteri/Fur non venit' by Philippe de Vitry in the 'Roman de Fauvel' MS; the large format accommodates three columns and up to 14 5-line staves*

two columns on a single page, the tenor at the foot spanning the two columns; later they were set out on facing pages. In song compositions the voices were laid out sometimes in columns in older MSS (see fig.34 below) but usually one under the other: cantus, tenor and contratenor; the position of the triplum varied.

The MSS of French origin have between seven and fifteen 5-line staves to a page, depending on size. MSS intended for practical use tended to retain the quarto format of 13th-century sources. Most MSS have nine or ten staves per page with an average size of 30 × 20 cm. For costly illuminated MSS folio format was preferred: the largest are the fragment *F-Pn* n.a.fr.23190 (*Trém*; formerly *F-SERc*), notated in 1376 by a royal scribe, which measures 49 × 32·5 cm, and the *Roman de Fauvel* of 1316 (in which red notes appear for the first time), measuring 46·2 × 33 cm (fig.33). With regard to the contents, pieces in *F-Pn* fr.571 (where the minim is distinguished clearly from the semibreve for the first time) and *GB-Lbl* Add.41667 (*McV*), and two fragments in rotulus form in *F-Pn* Pic.67 and *B-Br* 19606, are all related to the latest works in *F-Pn* fr.146, as are also the earliest instrumental compositions from *GB-Lbl* Add.28550. After *B-Tc* 476 – the MS containing the Mass of Tournai – there is a break in the surviving MS tradition, which is in part bridged by the five large Machaut MSS (see §2) and the southern French *I-IV* (see §3) as well as a number of smaller contemporary sources: *F-Pn* fr.2444, *Pim*, *AS* 983, *CA* 1328 (*CaB*), *Pn* n.a.fr.23190, *TLm* 94, *E-Bbc* 971 (*BarcC*), *GB-DRc* 20, *Ob* e Mus.7, *Cmc* Pepys 1594 (*Pep*), *CH-BEsu* 218 (*Mach K*), *BEsu* 421 (*Bern A*), *Fcu* 260, *D-Nst* 25, *NL-Lu* 342A, *Lu* 2515, *US-NYpm* 396 (*Morg*) and *R* 44 (*BF*). Alongside works of the early Ars Nova these MSS contain a repertory – not yet very complex in rhythm – from the second third of the century.

Much more numerous are sources containing late 14th- and early 15th-century works, more in the style of the Ars Subtilior, together with earlier pieces. Apart from *F-APT* 16*bis* (see §3), these sources are rarely wholly French in content or origin. Even the two principal sources, *F-CH* 564 and *I-MOe* α.M.5.24 (see §3), contain a handful of works composed in Spain and Italy respectively. Of Italian sources with French sections or added pieces the most important is *F-Pn* n.a.fr.6771 (*PR*, 'Codex Reina') with 80 such works (43 ballades, 29 virelais, 8 rondeaux – see §VIII, 2). Another, *Pn* it.568 (*Pit*), has 29 French additional pieces; and *I-Fn* Panciatichiano 26 (*FP*) has 26, of which 8 are concordances with *F-CH* 564 evidently copied from the same intermediary source (see §VIII, 2). Here, as in the instrumental versions in *I-FZc* 117 (*Fa*), the French pieces are generally copied only with text incipits.

A number of French pieces appear in Italian fragments from Bologna (*I-Bu* 596), Cividale del Friuli (*I-CF* 98), Grottaferrata (*I-GR* 16 and 197), Lucca and Perugia (*I-La* 184; *PEc* 3065; facs. of both MSS ed. J. Nádas and A. Ziino, 1990), Padua (*I-Pu* 658, 1115, 1475 and *GB-Ob* Canon.pat.lat.229), Parma (*I-PAas* 75), Pistoia (*I-PS* 5) and Udine (*I-UDc* 290). The harp notation – so far unique – of *US-Cn* 54 appears to be of Italian origin. By contrast *US-BEm* 744 and *Wc* M2.1.C6a14 are French. The Spanish sources *E-Bbc* 853, *Boc* 2 and *G* are related in content to *F-APT*. The extensive fragments from Leiden (*NL-Lu* 2720) and Utrecht (*Uu* 37) comprise a predominantly French repertory with an admixture of Netherlands works. The part-copy of *F-Sm* 222 (see §3) together with the related *CZ-Pu* XI E 9 and the fragments *D-Nst* 9 contain a mixed repertory of French and German works.

2. The Machaut manuscripts.

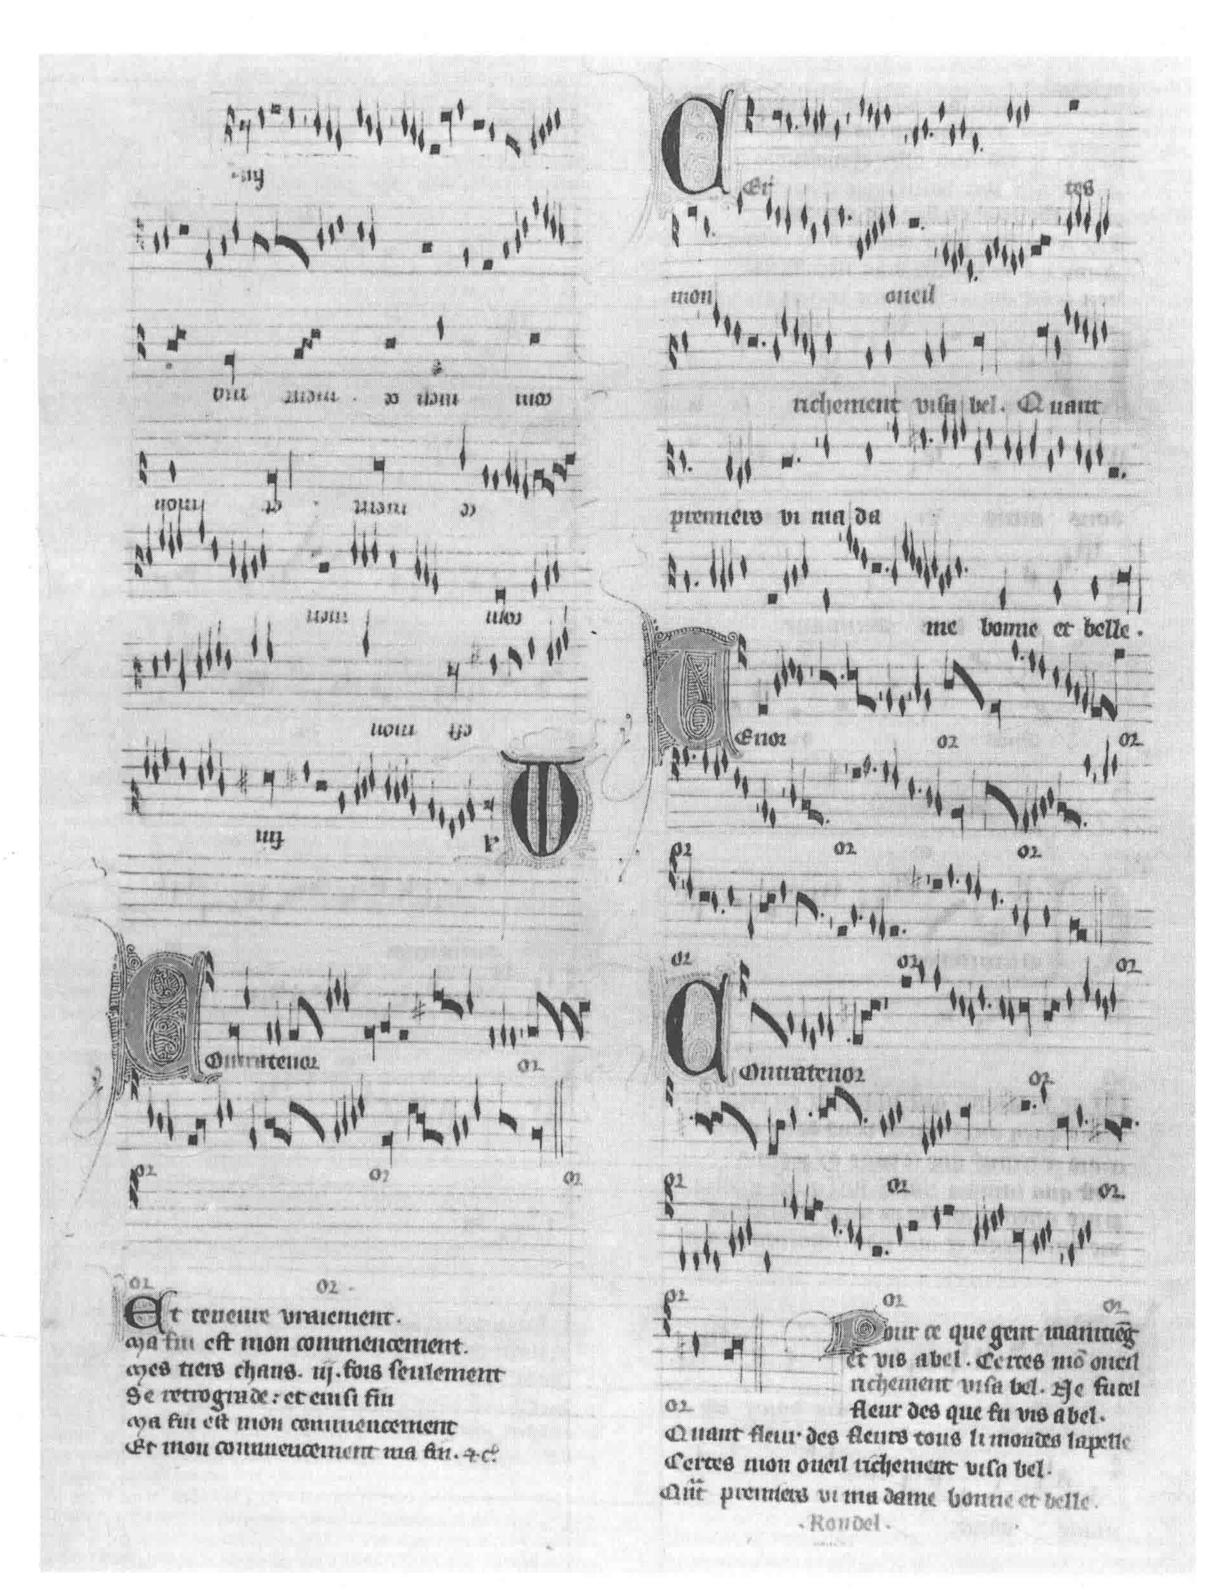
Paris, Bibliothèque nationale, fr.1584 [*A*], *1585* [*B*], *1586* [*C*], *9221* [*E*], *22545–6* [*F–G*] *and US-NYw, without shelf-mark* (formerly in the possession of the Marquis of Vogüé) [*Vg*].

F-Pn fr.1586, with illuminations dating from 1350–56 (Avril, 118–24), is less complete than the other sources, but contains the oldest repertory. (For theories, now generally accepted, regarding the chronology of Machaut's works based on the differing number of pieces in the various MSS see G. Reaney: 'Towards a Chronology of Machaut's Musical Works', *MD*, xxi, 1967, p.87.) It comprises 226 parchment folios (30 × 2 cm), with an 18th-century ink foliation; the musical section occurs on ff.148*v*–225, contains 94 pieces, of which 56 are polyphonic, and falls into 2 sections: the first (ff.148*v*–186*v*) has 23 monodic virelais (3 without music), 16 polyphonic ballades and 9 monophonic lais (1 without music); the second section (ff.186*v*–225), less organized, has another 8 polyphonic ballades and 9 rondeaux, 5 virelais (none polyphonic) and 6 monophonic lais, and 19 motets.

New York, Wildenstein Collection, without shelf-mark, possibly dating from about 1370–72 (Avril, 124–6), may well present the next-oldest repertory. It comprises 390 parchment folios (32 × 9 cm; originally 392 folios, copied complete in *F-Pn* fr.1585), with medieval foliation. It was in the possession of the Count of Foix by the 15th century at the latest ('J'ay belle dame assouvie', probably the Foix motto, is on a preliminary leaf in a 15th-century hand). It originally contained the mass and 125 other musical items: 15 lais, 23 motets, 38 ballades, 17 (now only 15) rondeaux, 31 virelais and the hocket.

F-Pn fr.1584, 1370–77 (Avril, 126–7), comprises 501 parchment folios (30.6 × 22 cm), 494 with medieval foliation plus seven at the beginning containing the original index and Machaut's prologue to his works. It contains two more ballades, five more rondeaux and two more virelais than the preceding manuscript, *Vg*.

F-Pn fr.1585 is a paper copy of *US-NYw*: 395 folios (29 × 21 cm), also dating from 1370–72. (Two folios are missing – the first of lais and penultimate of virelais – and f.321 is misbound as f.309.)



F-Pn fr.22545–6, in 2 volumes, is the largest of the Machaut sources and is apparently to be dated in the 1390s; it was at one time at the convent of Discalced Carmelites in Paris. It comprises 200 and 164 parchment folios respectively (35.5 × 26 cm), with a possibly 18th-century foliation (fig.34). It presents Machaut's entire musical output with the exception of 1 ballade and 2 lais.

F-Pn fr.9221, dating from about 1400, belonged originally to John, Duke of Berry, and was in the possession of the dukes of Burgundy from 1420 to 1467 (fig.4 above). It comprises 238 parchment folios (40·6 x 30 cm), with medieval red ink foliation. It contains all Machaut's works except for 1 motet, 3 lais and 8 virelais, but with many musical and textual variants and in no apparent orderly arrangement; about half of the music was copied from *F-Pn* fr.1585. Unusually, the music for parts of the *Voir dit* is copied within the poem.

F. Ludwig, ed.: Guillaume de Machaut: *Musikalische Werke* (Leipzig, 1926–54/*R*); PMFC, ii–iii (1956/*R*) [both edns have descriptions]; F. Avril: 'Les manuscrits enluminés de Guillaume de Machaut: essai de chronologie', *Guillaume de Machaut: Reims 1978*, 117–33; L. Earp: *Guillaume de Machaut: a Guide to Research* (New York, 1995) [incl. detailed descriptions of MSS]. For further bibliography *see* Machaut, guillaume de.

3. Principal individual sources.

Chantilly, Musée Condé, 564 (*formerly 1047*) [*Ch*]. 64 parchment ff. (38·7 × 28·6 cm), preceded by 8 19th-century paper folios containing an essay on the MS (by J.G. Flammermont). *Foliation*: ff.9–12 (modern), 13–72 (medieval: scribe B). *Structure*: basic corpus ff.13–72 (5 senions, with original first gathering missing or misplaced as gathering 3), with added leaves ff.9–12 including an index of the basic corpus (9*v*–10) and 2 pieces by Baude Cordier dedicated to owners of MS (11*v*–12). *Scribes*: ff.13–72 scribe A (elegant but incorrect hand, 6-line staff, possibly Italian but with French or Spanish features, obviously unfamiliar with material copied and unable to understand the French texts), ff.9–12 scribe B (French hand, who also added some names of composers in the basic corpus,

34. Paris, Bibliothèque Nationale, fr.22546, f.153: two three-part rondeaux, 'Ma fin est mon commencement' and 'Certes mon oueil' by Machaut, from volume ii of the largest source of his music; in the first piece the cantus read backwards forms the triplum, and the first section of the tenor read backwards forms the second section

5-line staff). *Date and provenance*: basic corpus late 14th century from southern France (Reaney, Apel, Green), or early 15th-century Italian copy of late 14th-century material or exemplar on 5-line staff (Ludwig, Besseler, Günther), the latest possible date for which is 1393–5 (date of no.38 on Mathieu de Foix, successor of Gaston Fébus, married to the daughter of John I of Aragon. Gacian Reyneau, who served in the royal chapel at Barcelona from 1398 to 1429, is represented by 1 work, a rondeau in the simpler early 15th-century style). The old corpus might have been written for the young prince represented twice on f.37 (*MGG1*, ii, pl.34, facs. facing 1057), a drawing possibly made on what was originally the first page of the MS: he has an eagle on his helmet and a round shield which excludes the French nobility; but the French dedication pieces by Cordier and the 2 *fleurs de lis* on f.11*v* suggest French-speaking owners. Added leaves early 15th century (Reaney, Günther) or not later than 1398, based upon the identification of Baude Cordier with Baude Fresnel, chamber valet to Philip the Bold of Burgundy, who was at Avignon in 1395 but died in 1397 or 1398 (Wright, Greene, Strohm). MS was owned by the Florentine family of Francesco d'Altobianco degli Alberti in 1461 (inscription f.9). It might have been written for his father or his uncle Niccolò, who was banished from Florence in 1401 and died in France. MS remained in private Florentine collections until 1861 and was then brought to Chantilly, where the purple velvet binding was added for the Duke of Aumale, who obtained the MS through the sculptor Bigazzi in Florence.

Contents: 112 polyphonic compositions (1 twice): 13 motets (last gathering), 70 ballades, 17 rondeaux, 12 virelais. *Date of music*: basic corpus *c*1350–95: Ars Subtilior repertory 1375–95 by papal singers from Avignon and musicians employed by the Duc de Berry and at the Foix and Aragon courts (highly complex pieces with notational intricacies), but the older French repertory post-1350 is also represented; on the added leaves 2 dedicatory pieces by Baude Cordier. *Composers*: basic corpus 34, including Solage (10 pieces), Philippus de Caserta (7), Trebor (6), Vaillant, Matheus de Sancto Johanne (5), Cuvelier, Jaquemin de Senleches (4), Grimace, Guido, Machaut, Susay (3), Galiot, Magister Franciscus, Hasprois (2), all others (1).

Modena, Biblioteca Estense e Universitaria, α.M.5.24 (olim lat.568) [*Mod*; *Mod A*]. 52 parchment ff. (28 ×19·8 cm). *Foliation*: 11–40 (original; used by Pirrotta, Apel and Günther), ff.*a*, 1–10, 41–50 and *z* later added accordingly (though gatherings 1 and 5, originally together, may have had a different order: ff.1–5 as 6–10 and 41–5 as 1–5); 1–52 (modern; used by Wolf and von Fischer). *Structure*: 5 quinions preceded and followed by half a bifolium which has been used only on the inner pages; gatherings 2–4 form the older corpus. *Scribes*: gatherings 2–4 written by A, gatherings 1, 5 and a palimpsest f.16 written by B. *Date and provenance*: gatherings 2–4 contain a French repertory from the papal court at Avignon and near Genoa and pieces from Milan, assembled during the council of 1409–10 in Pisa; the style of miniatures suggests that the old corpus was written in Bologna about 1410; gatherings 1 and 5 contain mainly works by Matteo da Perugia and may have been written in Milan before his death (?1418).

Contents: 100 pieces: 12 mass movements, 1 hymn, 3 motets, 1 motet-like caccia, 36 ballades, 17 rondeaux, 19 virelais, 2 canons, 1 caccia, 2 madrigals and 6 ballatas. *Date of music*: mainly 1380–1418 plus well-known earlier pieces. *Composers*: Matteo da Perugia (30 + 2 single parts, 7 doubtful works + 3 doubtful parts), Antonello da Caserta (8), Antonio Zachara da Teramo (5), Philippus de Caserta (4), Jaquemin de Senleches (4), Machaut (4), Bartolino da Padova (3), Bartolomeo da Bologna (2), Ciconia (2), Conradus de Pistoria (2), Egardus (2), Magister Egidius (2), Johannes de Janua (2), Matheus de Sancto Johanne (2), Andreas Servorum (? Andreas de Florentia), Blasius, Galiot, Grenon, Hasprois and Landini (each with 1 work).

Ivrea, Biblioteca Capitolare, 115 [*Iv*], 64 parchment ff. (32 × 22·5 cm) without binding (outer leaves almost illegible). *Foliation*: modern. *Structure*: 6 gatherings (5, 5, 6, 4, 6, 6 bifolia); main corpus gatherings 1–5, with some folios possibly missing between gatherings 5 and 6. *Scribes*: main corpus by 2 scribes, ff.1–37 and 37*v*–51 respectively; a third scribe plus other hands fill in blank spaces and add gathering 6 (Besseler); the Ars Nova notation used on red 5-line staff still contains plicas and uses occasional red notes; semiminims, dragmas and black void notes occur only in 4 late additions. *Date and provenance*: main corpus started after 1365 (date of no.4: see PMFC, v), with late additions possibly from the 1370s; MS generally considered to have originated in Avignon (because of many concordances with *F-APT* 16*bis*), but an origin at the court of Gaston Fébus more likely (nos.2 and 4 are unique dedicatory motets that mention the nickname Fébus (hypothesis of Günther and Asper); different from *APT*: motets precede mass movements, most pieces anon.); MS may have been brought from southern France to Ivrea in

the late 14th century, where it was discovered by Borghesio in 1921. According to Kügle, the MS originated at Ivrea itself in the 1390s and might have been written by Jacomet de Ecclesia and Jehan Pellicier.

Contents: 81 compositions: 36 motets (mainly ff.1*v*–27, 53–64), 1 motet-like quodlibet, 25 mass movements (mainly 27*v*–51), 2 2-voice discants with different texts in each voice, 4 chaces, 6 rondeaux, 5 virelais, 2 2-pt textless pieces. *Date of music*: 1320–75. *Composers*: unascribed (with one exception): Philippe de Vitry (probably 9 motets), Machaut (4 motets, 1 rondeau), Magister Heinricus, Bararipton, Depansis, Matheus de Sancto Johanne, Chipre, Orles, Sortes, Loys (all 1).

Editions: CMM, xxix (1962) [all mass music except no.35]; PMFC, v (1968) [22 motets]; CMM, xxxix (1965) [3 motets]; CMM, liii/1–3 (1970–72) [10 chansons, 4 chaces]; PMFC, xxiii/a–b (1989–91) [all mass music except Credo of the mass of Barcelona]; see also individual composers

Apt, Basilique Sainte-Anne, Trésor 16bis. 45 ff. (between 27 × 19·3 cm and 29 × 21 cm), the first 37 parchment, the last 8 paper; *Foliation*: I–X, XI (= ff.25–34, 37) (medieval), 1–45 (19th-century) and remnants of other early systems. *Structure*: 6 gatherings (of 8, 8, 5, 16, 2 and 6 leaves respectively) dividing into 2 main parts in the original order of gatherings 1–2–4, 3–5–6. *Scribes*: 8 different hands (Stäblein-Harder). *Date*: 1400–17 (Stäblein-Harder), gatherings 3 and 6 the earliest, gathering 4 the latest.

Contents: 48 pieces (plus one later addition), constituting together with *I-IV* the principal part of the surviving repertory of the Avignon papal court (1377–1403): 35 Mass Ordinary movements for 2, 3 or 4 voices (10 Kyries, 10 Glorias, 10 Credos, 4 Sanctus, 1 Agnus), 9 of them troped, 4 3-voice motets, and 10 3-voice hymns grouped together at the end of gathering 2. *Date of music*: early 14th century to early 15th. *Composers*: ranging in time from Philippe de Vitry (3 motets *c*1320–30) to Cordier and Tapissier (after 1400), both unascribed, others being Bararipton, Chassa, Chipre, Defronciaco, Depansis, Fleurie, Graneti, Guymont, Loys, Murrin, Orles, Peliso, Perrinet, Sortes, Susay and Tailhandier.

Editions: PSFM, i/10 (1936) [complete, with 4 facs., but unreliable]; CMM, xi/1 (1955) [1 Gloria by Cordier, 1 Credo by Tapissier]; PMFC, i (1956) [Vitry motets nos.9, 11, 13, Gloria splendor patris and Credo of the mass of Barcelona]; CMM, xxix (1962), and MSD, vii (1962) [all mass movts except the 'Tournai' Credo]; PMFC, xxiii/a–b (1989–91) [all mass movts except those of the mass of Barcelona, all hymns]

A. Elling: *Die Messen, Hymnen und Motetten der Handschrift von Apt* (diss., U. of Göttingen, 1924); H. Besseler, *AMw* (1925), 167–252, esp. 201–5 [with inventory]; F. Ludwig, *AMw*, vii (1925), 417–35, esp. 425–8; L. Schrade, *AcM*, xxvii (1955), 13–39, esp. 37–9; RISM, B/IV/2 (1969), 104–15; A. Tomasello (1983); K. Moll: *Structural Determinants in Polyphony for the Mass Ordinary from French and Related Sources (ca.1320–1410)* (diss., Stanford U., 1995)

Strasbourg, Bibliothèque Municipale, 222 (C.22) [*Str*]: MS destroyed by fire in 1870 (only a facs. of f.78*v* survives), but part-copied by Coussemaker in 1866. *Original MS*: 155 paper ff. (29 × 21 cm). *Foliation and structure*: ff.1–11 (containing alphabetical index and five music treatises), one unnumbered folio, ff.1–143 (containing music and a treatise on plainchant) – all original foliation. *Date and provenance*: early 15th century, probably finished by HEINRICH LAUFENBERG; the date 1411 mentioned on f.142 (*explicit* of treatise) does not relate to the MS, which contained, among its 47 later additions in void notation, works by Du Fay and Binchois.

Contents: 207 compositions, 192 polyphonic, 15 monophonic, of which Coussemaker copied all the incipits, and 51 polyphonic pieces entire; 25 have German texts, 88 French, 5 Italian and the remainder Latin; there are 20 contrafacta. *Forms*: 37 mass movements (26 in full black notation, 11 in black void), 11 early motets, 24 single-texted Latin pieces, 88 chansons (61 full black, 27 void). *Date of music*: 1310–1450. *Composers*: ascriptions to Alanus, Anthonius Clericus Apostolicus, Binchois, Bosquet, Cameraco, Carlay, Climen, J. Cornelius, Du Fay, Egidius de Thenis, Grimace (no.105), Henricus de Libero Castro (i.e. Freiburg), Heinrich Laufenberg (who may be identifiable with the preceding), Henricus (Egidius de Pusiex), Henricus Hessman de Argentorato, Lampens, Lantins, Libert, Merques, Nucella, Perrinet, Phylomena, Richart (?Loqueville), Roylart, Zeltenpferd (those to Machaut, Cesaris and Vitry are false); also by concordance Antonius de Civitate Austrie, Borlet, Fontaine, Grenon, Hymbert de Salinis, Jaquemin de Senleches, Landini, Machaut, Passet, Peliso, Pierre de Molins, Tailhandier, Vaillant, Vide, Vitry and Zacara de Teramo.

Coussemaker's study and part-copy of the MS is now *Brussels, Bibliothèque du Conservatoire Royal de Musique, 56.286*. 152 paper ff. (29 × 23 cm). *Foliation and structure*: ff.1–80 (only rectos used) include a description of the MS (ff.1–4), list of pieces in order as they appeared in original MS (5–15), alphabetical index (16–25), copy of treatises (26–77), list of pieces copied (78–80); 14 unnumbered folios plus pp.1–116 (MS paper, recto and verso) contain a thematic index on 5-line staves, copies of 52 items (51 pieces) (pp.2–111, of which pp.2–38 and 109–11 are on 5-line staves and 39–108 on 6-line: on p.39 Coussemaker noted 'La ligne supérieure doit être négligée' – whether this applies to p.39 only or to all pages with 6-line staff is unclear, though the incipits were copied consistently on 5-line staff).

Editions: *CoussemakerS*, iii, 35–46, 411–13, 413–15 [edns of treatises *Liber musicalium*, *De musica mensurabili* and *De minimis notulis*]; PMFC, i (1956) [1 motet]; CMM, xi, 2 (1959) [Gloria by Bosquet, 'Patrem' by Cameraco]; CMM, xxxix (1965), 4–7, 17–22, 57–65 [3 motets]; PMFC, v (1968), 24, 54, 141 [3 motets]; CMM, liii (1970–72) [15 chansons]; A. vander Linden, ed.: *Thesaurus musicus* (Brussels, 1973); TM, ii (1977); PMFC, xx–xxii (1982–9) [chansons]; see also individual composers

C. van den Borren: *Le manuscrit musical M.222 C.22 de la Bibliothèque de Strasbourg (XVe siècle) brûlé en 1870, et reconstitué d'après une copie d'Edmond de Coussemaker* (Antwerp, 1924) [inventory]; RISM, B/IV/3 (1972), 550–92 [incl. bibliography to 1968]; L. Welker: *Musik am Oberrhein im späten Mittelalter: die Handschrift Strasbourg, olim Bibliothèque de la Ville, C.22* (Habilitationsschrift, U. of Basle, 1993)

Turin, Biblioteca Nazionale Universitaria, J.II.9 [*TuB*]. Originally 159 parchment ff. (39 × 28·3 cm, but outer edges and inner margins damaged by fire and water in 1904). Repertory survived intact. *Foliation*: two foliations; both begin f.2, first in top right corner of recto, ending f.158, second in centre of lower margin, to f.159; illuminated f.1 numbered in pencil. The original front flyleaf, for a long time lost but refound, contains an abstract from the Bull granting Pope John XXIII's authorization for the Office of St Hylarion, on the request of King Janus II of Cyprus. *Structure*: 17 gatherings, mostly quinternions, can be reconstructed using catchwords. Music organized in 5 sections: (i) ff.1–28 (newly composed plainchant for the Offices of St Hylarion and St Ann, 6 Mass Ordinaries); (ii) ff.29–57, 58 blank staves (7 Gloria-Credo pairs and 3 other Glorias, all 3-voice); (iii) ff.59–97 (33 Latin and 8 French motets, mostly 3-voice); (iv) ff.98–139*v* (102 ballades, mostly 3-voice); (v) ff.143–158 (21 virelais, 43 rondeaux, blank staves on ff.158*v*–159); 3 extra leaves inserted between (iv) and (v) contain a 3-voice cyclic mass. *Scribes*: 1 or 2 (Hoppin) musical scribes using 2 different custodes and Italian-French script in full black mensural notation with red coloration, 3 text scribes, experts for French or Italian, possibly different scribe for the chant section i and 1 illuminator. *Date and Provenance*: 1413–20 at the court of the Lusignans in Nicosia, Cyprus; MS possibly travelled with Anne de Lusignan, daughter of King Janus II of Cyprus, in 1433 to Nice and then to Chambéry, where she was married to Ludovic of Savoy.

VIII. Italian polyphony, c1325–c1420

1. General. 2. Principal individual sources. 3. Other fragments.

1. GENERAL. The sources of Italian Trecento music, written between approximately the mid-14th century and 1420, fall into two main groups: those from Florence or Tuscany and those from northern Italy (namely Padua and Milan/Pavia). A third group of fragmentary sources has more recently been shown to be linked to the papal curia (a centre that was not geographically fixed, moving after the beginning of the schism in 1378 from Rome to central Italy and later through northern Italy). Altogether they contain over 600 madrigals, cacce and ballatas, a few pieces of dance music, and about 50 liturgical pieces and motets (of which many are only fragments). Of these, the pieces which belong stylistically to the true Trecento repertory span a period of composition from about 1325

35. Vatican City, Biblioteca Apostolica Vaticana, Rossi 215 (Codex Rossi; mid- to late 14th century), ff.18v–19r: the two-voice madrigal 'Nascoso el viso' by Giovanni da Cascia, and the anonymous monophonic 'Per tropo fede' and 'Amor mi fa cantar'

to 1420. They are exclusively in Italian sources, apart from a small number of southern German and east-central European ones.

In spite of innumerable concordances, there are almost no immediate relationships among the principal Italian sources in the sense of direct copying. This is made clear by the differing versions in which particularly the older pieces of the repertory survive. The many fragmentary sources are the sole remains of larger MSS. Only in a few cases do the fragments belong to a common original MS: the Paduan sources (*GB-Ob* Canon.lat.pat.229, *I-Pu* 684 and 1475; *Pu* 1115; *Pu* 658; *Pu* 675, 1106, 1225 and 1283), sources from Lucca and Perugia (*La* 184 and *PEc* 3065) and the Rossi and Ostiglia fragments (*Rvat* Rossi 215 and *OS*). Identical scribal hands responsible for the copying of different sources are to be found in *La* 184, *US-CLwr* and part of *F-Pn* it.568; as well as in *I-Fn* F.5.5, another section of *F-Pn* it.568 and the Ciliberti fragment; and among the Paduan fragments. The intabulations in *I-FZc* 117 and *F-Pn* n.a.fr.6771 (nos.184–5) form a source group of their own.

2. Principal individual sources.

Vatican City, Biblioteca Apostolica Vaticana, Rossi 215 ('Codex Rossi'; fig.35) [*Rs*; *R*; *VR*] *and Ostiglia, Opera Pia G. Greggiati, Biblioteca Musicale, s.s.* ('Ostiglia fragment'): two fragments belonging to one source. Originally at least 32 ff. (4 quaternions; *c*23 × 16·8 cm), of which 14 parchment folios survive in *Rvat* (from between ff.8 and 18, and after f.23) together with 10 inserted modern paper folios and modern flyleaves, and 4 parchment folios in *I-OS*. *Foliation*: *Rvat*: i–viii, xviii–xxiii; *OS*: xxv–xxvi, xxxi–xxxii (all original). *Structure*: at least 4 distinct fascicles, of which the second is entirely lost; the surviving folios are in a single hand. *Date and provenance*: mid- to late 14th century (Fischer *c*1350, Pirrotta *c*1370), from Padua-Verona region; *Rvat* possibly came from the library of Cardinal Domenico Capranica (1400–58), belonged in the 19th century to the Italian collector G.F. de Rossi, passed at his death in 1854 to Jesuit libraries in Linz and thence Vienna, and in 1922 to the Vatican.

Contents: the fragments together contain 37 pieces (*Rvat* 29, *OS* 8): *Rvat* has 22 madrigals (1 of which is canonic), 1 caccia, 1 rondello, 5 monophonic ballatas; *OS* 8 madrigals. *Date of music*: *c*1325–55. *Composers*: all pieces are anonymous, but concordances ascribe 2 to Piero and 2 to Giovanni da Cascia (with 1 further ascription to him possible for no.1).

Florence, Biblioteca Nazionale Centrale, Panciatichiano 26 [*FP* (*Fp*); *FN*; *Fl*; *Panc*]. 115 paper ff. (29·5 × 22 cm), with 2 modern flyleaves at front and 3 at back (fig.36). *Foliation*: 1–5 (modern: index), i–cx (15th or 16th century). *Structure*: index (5 folios) followed by 11 gatherings, each of 5 bifolios (a quinion). *Scribes*: the main corpus is in 4 (Nádas) or 5 (Campagnolo) hands, with additions made both by the main scribes and by later scribes; the Italian notation (especially when in duodenaria or octonaria) has in many cases been Frenchified and changed according to the tastes of the copyists. *Date and provenance*: main corpus: 1380–90 (Fischer, Campagnolo) or *c*1400 (Pirrotta, Nádas). The additions fall into 3 (Nádas) or 5 (Fischer) groups: (1) directly after completion of main corpus; (2) shortly after the main corpus; (3) 1400–20; (4) after 1420; (5) 1430–50 (in void notation); the earliest of the Florentine Trecento MSS, it belonged to the Florentine Panciatichi collection founded in the 16th century by V. Borghini and extended by Panciatichi.

Contents: 185 pieces: 59 madrigals, 15 cacce, 85 ballatas, 15 French ballades, 9 rondeaux, 2 virelais; the main corpus derives directly from a circle of composers associated with Landini; the contents are as follows: 2-voice ballatas by Landini (gatherings 1–2), 3-voice ballatas by Landini (gatherings 3–4), madrigals and cacce by Landini and earlier composers (gatherings 5–9), mostly 3-voice madrigals by earlier composers (gathering 10), French works (later additions and the whole of gathering 11) of which 5 have concordances with *F-CH* 564. *Date of music*: from 1340 to 1440–50. *Composers*: Landini (86), Jacopo da Bologna (22), Giovanni da Cascia (18), Piero (8 or 9), Donato da Cascia (5), Gherardello da Firenze (5), Lorenzo da Firenze (5), Machaut (5) and others.

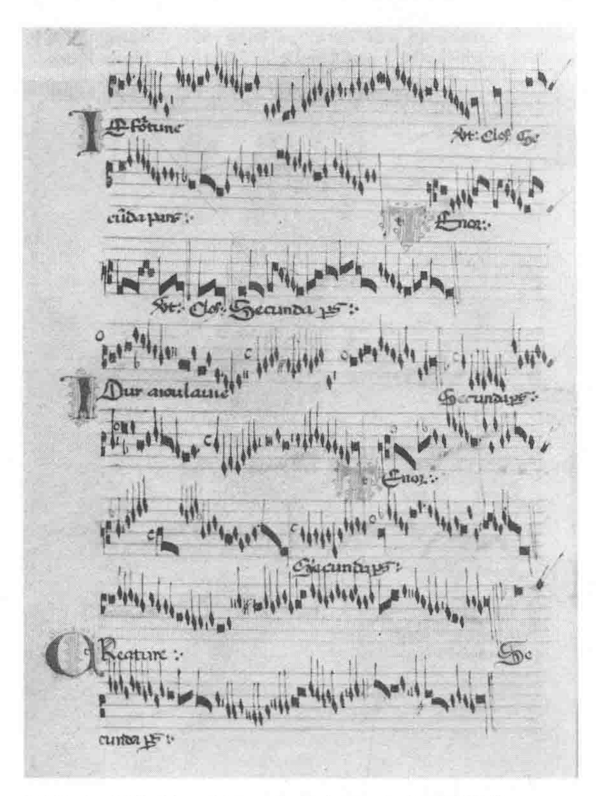
London, British Library, Add.29987 [*Lo*; *L*; *B*]. 88 parchment ff. (26 × 19·5 cm) survive of an original MS of no fewer than 185ff.; 6 flyleaves at front and 2 at back. *Foliation*: 98–185 (original, palimpsest), renumbered 1–85 (17th or 18th century); 2–88 (dating from 1876). *Structure*: 11 gatherings, each of 8 folios. *Scribes*: carelessly written MS, with 1 principal hand and several additional hands (2 of which also copied *I-Fc* D.1175 and *Fsl* 2211; see Long,

36. *Florence, Biblioteca Nazionale Centrale, Panciatichiano 26, f.12v: Landini's two-voice ballata 'Se pronto non sarà'; the mixture of black notation and void coloration is one indication of French influence*



Nádas); at some stage a separate hand corrupted many musical readings by adding nonsensical rests and modifying the rhythms (see Gozzi). *Date and provenance*: main corpus variously dated as late 14th to early 15th century (Reaney), very early 15th century (Fischer) and *c*1425 (Pirrotta); southern Tuscany or Umbria (Fischer) or possibly Florence (Reaney, Di Bacco); the MS may have been mutilated at the beginning of the 16th century; the surviving section bears a coat of arms of the Medici family; it was in the hands of Carlo Tomasini Strozzi in the 17th century, then in a private library in Florence, and reached the British Museum in 1876.

Contents: 119 pieces: 35 or 36 madrigals, 45 ballatas, 8 cacce, 15 *estampies*, 7 liturgical works (some monophonic), 3 virelais, and other forms. *Date of music*: 1340–1400 (except no.118, which is much later). *Composers*: Landini (29), Niccolò da Perugia (12 or 13), Jacopo da Bologna (7), Bartolino da Padova (5), Giovanni da Cascia (5) and others.

Paris, Bibliothèque Nationale de France, it.568 [*Pit*; *PN*]. 150 parchment ff. (25·7 × 17·5 cm) with modern flyleaf at front and back (fig.37). *Foliation*: A–I (modern: original index) + i–cxl (original) + 141 (modern). *Structure*: 14 gatherings (all quinions), of which gatherings 6 and 8 (principally works of Paolo da Firenze) are of later date and are late insertions. *Scribes*: at least 3 (Fischer; 8 according to Nádas): A (Fischer; or A, B and E in Nádas: gatherings 1–5, 7, 9–14); B (D in Nádas: gatherings 6 and 8, plus additions and refoliation of the MS; same scribe as *I-La* 184, ff.70–72, and *US-CLwr* ff.A*r*–B*r*, C*v*–D*v*); C (several hands, according to Nádas: additions to gatherings 1–5, 7, 9–14). *Date and provenance*: gatherings 1–5, 7, 9–14 date from after 1400 (Fischer, Reaney) or *c*1405 (Günther), and gatherings 6 and 8 *c*1410 (Fischer) or 1406–8 (Günther, Nádas); from Florence (perhaps the monastery of S Maria degli Angeli; Nádas, 1989), or Lucca or Pisa (Fischer). The MS belonged originally to the Capponi family, and was perhaps written for them, was in the library of King Charles X of France in the 19th century and passed from there to the Bibliothèque Nationale.

37. *Paris, Bibliothèque Nationale de France, it.568, f.CXXIv: two parts with text incipits of the anonymous ballade 'Je Fortune' and the rondeau 'Iour a iour la vie', from a page of French 14th-century music in an Italian early 15th-century MS with eight Italian six-line staves; the tenor of the rondeau 'Creature' is on the next page*

Contents: 199 pieces: 45 madrigals, 113 ballatas, 5 cacce, 10 French ballades, 13 rondeaux (includes 1 rondeau refrain), 8 virelais, polyphonic settings of 5 movements from the Ordinary of the Mass (no Kyrie but including *Benedicamus*). *Date of music*: from 1340 to *c*1410. *Composers*: Landini (61), Paolo da Firenze (32), Jacopo da Bologna (11), Niccolò da Perugia (6), Bartolino da Padova (5), Gherardello da Firenze (5), Donato da Cascia (5) and others (these numbers do not include the 31 ascriptions erased from the MS which concern in particular the work of Paolo: see Günther, and Nádas, 1989). Of the 29 pieces that are probably of French origin, 27 are anonymous and 19 have no text; there are 4 double concordances with *F-CH* 564; composers include Machaut (3 pieces) and Pierre de Molins (2).

Paris, Bibliothèque Nationale de France, n.a.fr.6771 ('Codex Reina') [*PR*; *Rei*; *R*]. 122 paper ff. (27·1 × 21·3 cm), with 4 modern flyleaves at back. *Foliation*: 2 systems: i–xxviiii [sic], 30–84 (on verso) (original); 1–131 (modern), of which ff.120–24 are lacking, and ff.128–31 are flyleaves. *Structure*: 9 fascicles (different sizes), with inserted folios (ff.85–8), and leaves representing the beginning of a tenth: fascs.8 and 9 are of a much later date. *Scribes*: 6 (Fischer) or 8 (Nádas) hands, which divide into four groups as follows: section I, scribes S (Nádas; A in Fischer) and T (fascs.1–3), with 4 new hands U, V, W (D in Fischer) and X (B in Fischer), who worked alongside S (fasc.4 and first half of fasc.5); section II, scribe W (second half of fasc.5); section III, scribes Y (fascs.6–7); section IV, scribe Z (F in Fischer; fascs.8–9, also index). *Date and provenance*: sections I–III (with distinct layers of copying and additions throughout), *c*1400–1410, section IV, 1430–40; from north-east Italy (Padua-Venice region); the MS appeared for the first time in the library catalogue of a Sig. Reina in Milan in 1834, was bought by A. Bottée de Toulmon and passed at the latter's death to the Bibliothèque Nationale.

Contents: 220 pieces (I: 105; II: 24; III: 56; IV: 35): 41 madrigals, 63 ballatas (including sicilianas in ballata form), 43 French ballades, 40 rondeaux (includes 8 rondeau refrains), 30 virelais, 2 chansons and 1 caccia; section I (including additions) contains Italian pieces from the 14th century and the early 15th, sections II–III contain 80 French works of the same period (43 ballades, 29 virelais, only 8 rondeaux or rondeau refrains) together with 1 Flemish piece, and 3 Italian pieces of which 2 are in tablature, section IV contains French pieces (almost all rondeaux), together with 1 Italian, of the Du Fay period. *Date of music*: 1340–1430. *Composers*: Bartolino da Padova (26 or 27), Jacopo da Bologna (20 or 22), Landini (20), Machaut (7), Du Fay (9) and others.

Editions: CMM, xxxvi (1966) [52 French works from sections II and III]; CMM, xxxvii (1966) [35 works in section IV]; CMM, liii/1 (1970) [71 French works from sections I–III]; for editions of Italian works see individual composers

Lucca, Archivio di Stato, 184 ('Codex Mancini') [*Mn*; *Man*; *Manc*; *Luc*], *and Perugia, Biblioteca Comunale Augusta, 3065*: these two fragments belong to one source (whereas, contrary to Ghisi, the Pistoia fragment, *I-PS* 5, does not). Originally at least 102 ff. (*c*22 × 15 cm), of which 42 parchment folios survive in *La* (incl. 4 new leaves discovered in 1988 by Nádas and Ziino, and other folios more recently found), and 6 parchment folios in *PEc*. *Foliation*: *La*: (first 20 ff. lost), XX–LXXXV–[C] (original), 1–72 (modern)); *PEc*: 2 systems, LVIII–LIX, LXXXI–LXXXIV (original), and 1–6 (modern, incorrect). *Structure*: 7 surviving fascicles (out of an estimated 11). *Scribes*: the main corpus is in a single hand, the last 4 surviving folios contain 2 further hands, the second of whom (ff.70–72), also worked on *F-Pn* it.568 (fascs.6 and 8) and on *US-CLwr* (ff.A*r*–B*r*, C*v*–D*v*). *Date and provenance*: Main corpus copied in northern Italy (?Padua) *c*1400, then probably at Bologna or Pisa, and Florence (or Lucca), *c*1410, additions to *c*1430; *I-PEc* was discovered in Perugia in 1935, *La* in Lucca by A. Mancini in 1938; the leaves had served as covers to 15th- and 16th-century notarial acts.

Contents: the fragments together contain 85 pieces: 57 or 58 ballatas, 11 madrigals, 10 rondeaux, 3 virelais, 1 French ballade, 1 canon. *Date of music*: 1365–1430. *Composers*: Bartolino da Padova (12), Zacara da Teramo (12), Ciconia (9), Landini (8), Antonello da Caserta (7), Antonius de Civitate (3) and others; the individual fascicles evidently relate to specific composers: 2 fascicles to Bartolino, one and a half to Zacara da Teramo, one each to Ciconia and Landini, half each to Antonius de Civitate and Antonello da Caserta.

Nádas and A. Ziino: 'Two Newly Discovered Leaves from the Lucca Codex', *Studi musicali*, xxix (2000)

Turin, Biblioteca Nazionale Universitaria, T.III.2 ('Codex Boverio'). 15 paper folios (*c*30 ×30 cm), most of them damaged. *Pagination*: 1–26 (modern). *Structure*: 9 gatherings of varying sizes. *Scribes*: 2 main hands for the texts, possibly 2 for the music. *Date and provenance*: 1409–18, perhaps from a Franciscan monastery of Pisan-Bolognese obedience (loyal to antipopes Alexander V and John XXIII) in northern Italy; it was subsequently used as cover-strengthening material; it was purchased by the Italian government from a private owner in 1991.

Contents: 39 pieces (mostly incomplete), and 5 more added later in the 15th century: 8 ballatas, 1 madrigal, 6 ballades, 3 rondeaux, 2 virelais, 11 Credos, 3 Glorias (2 troped), 1 Kyrie, 1 Sanctus, 2 motets (of which 9 or 10 songs and 13 mass movements are *unica*). Date of music: *c*1400. Composers: Antonio Zacara da Teramo (7 or 8), Antonius de Civitate (2), Frater Petrus de Sancto Severio (otherwise unknown), Antonello da Caserta, Philippus de Caserta, Susay (1 each).

Editions: A. Ziino, ed.: *Il codice T.III.2, Torino, Biblioteca Nazionale Universitaria* (Lucca, 1993) [facs. with introduction]; (editions forthcoming in *AcM*)

Florence, Biblioteca Medicea Laurenziana, Med.Pal.87 ('Codex Squarcialupi') [*Sq*; *Fl*]. 216 parchment ff. (40·5 × 28·5 cm), 2 original parchment flyleaves at the front (independent of the rest of the MS), and 5 modern paper flyleaves (3 at the front, 2 at the back). *Foliation*: i–cxvi (original). *Structure*: 20 gatherings of 3 to 10 bifolia each. *Scribes*: 1 hand for the texts, 3 (Fischer) or 4 (Nádas) very similar hands for the music. *Date and provenance*: *c*1410–15 (Bellosi, Nádas), almost certainly from the Florentine monastery of S Maria degli Angeli; it is not certain whether Paolo da Firenze was involved in the preparation of the MS; it was in the possession of Antonio Squarcialupi in the 15th century, passed thereafter via his nephew R. Bonamici to Giuliano de' Medici (1512–13), from there to the Biblioteca Palatina, and then to the Biblioteca Medicea Laurenziana.

Contents: 353 (or 354) pieces (150 *unica*), of which 2 appear twice: 115 madrigals, 12 cacce, 227 ballatas. *Date of music*: 1340–1415. *Composers*: the pieces are arranged in chronological order by composer: Giovanni da Cascia (12), Jacopo da Bologna (28), Gherardello da Firenze (16), Vincenzo da Rimini (6), Lorenzo da Firenze (17), Donato da Cascia (15), Niccolò da Perugia (36), Bartolino da Padova (37), Landini (146), Egidius and Guilielmo de Francia (5 in all), Zacara da Teramo (7), Andreas de Florentia (29); 16 folios have been left blank to accommodate the music of Paolo da Firenze between Lorenzo and Donato, and 22 folios for that of Jovannes Horganista de Florentia (Giovanni Mazzuoli) at the end. A portrait of each composer appears with the ascription of his works.

Editions: J. Wolf, ed.: *Der Squarcialupi-Codex Pal.87 der Biblioteca Medicea Laurenziana zu Florenz* (Lippstadt, 1955) [see corrections by K. von Fischer, *Mf*, ix (1956), 77–89, and L. Schrade, *Notes*, xiii (1955–6), 683 only]; F.A. Gallo, ed.: *Il codice Squarcialupi* (Florence, 1992) [facs. with essays]; see also individual composers

Florence, Archivio Capitolare di San Lorenzo, 211 [*SL*]. 111 parchment folios (21·5 × 28·5), palimpsest; 6 16th-century leaves at the end, 4 flyleaves (2 at the front, 2 at the back). *Foliation*: 1–88 (16th-century), 89–109 (modern); iii–clxxxviii (original); therefore at least 80 ff. lost. *Structure*: no fewer than 19 gatherings (? all quinions), of which at least 4 lacking (2, 6, 7, 13), and many incomplete and barely legible owing to erasures. *Scribes*: only 1 hand (who also copied ff.82*v*–85 of *GB-Lbl* Add.29987). *Date and provenance*: *c*1420, Florence. It is uncertain whether the MS belonged originally to the church of S Lorenzo or came there from elsewhere; in the early 16th century the MS was unbound and erased, then reassembled without regard for its original structure and used as a register of the church properties. Its discovery was first announced by Frank D'Accone in 1982.

Contents: about 110 pieces detected, of which those by Giovanni Mazzuoli, his son Piero, and Ugolino of Orvieto are *unica*. *Date of music*: *c*1340–1420. *Composers*: Jacopo da Bologna (fascs.1–3), Giovanni da Cascia, Bartolino da Padova, Donato da Cascia (fascs.3–9), Johannes Organista (Giovanni Mazzuoli; fascs.9–10), Landini (fasc.11 and fascs.12–13, the latter mutilated), Paolo da Firenze (fasc.14); French-texted repertory: Machaut, Grimace, Magister Franciscus, Senleches (fasc.15, almost illegible); caccia section with other works (fasc.16), Petrus Johannis (Piero Mazzuoli, organist at S Lorenzo, 1403–15; fasc.17, barely legible), Ugolino of Orvieto (fasc.18, illegible), motets by Hymbertus de Salinis, Jacopo, Vitry and others (fasc.19)

IX. Renaissance polyphony

1. Introduction.

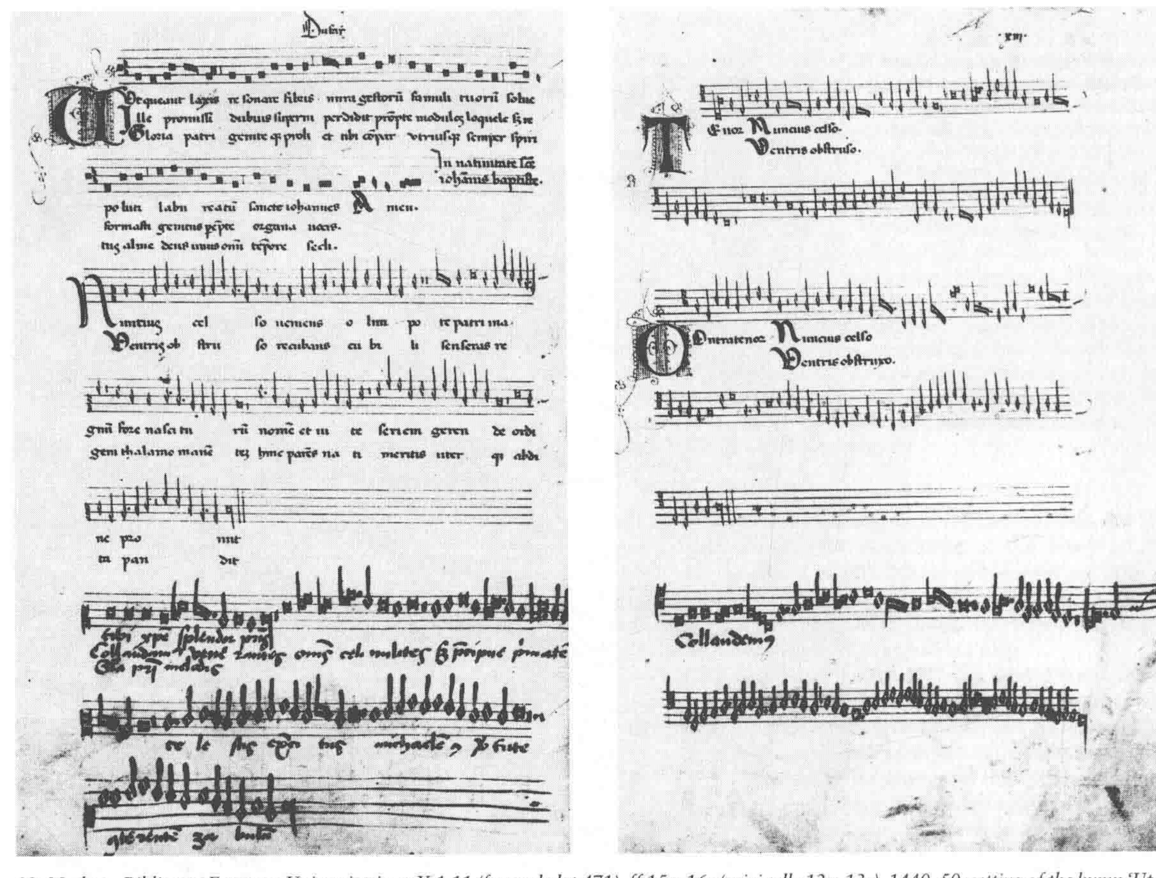
(i) General. The printing of polyphonic music did not begin until 1501. Our knowledge of the music of the entire 15th century is dependent on MS sources, and, as prints preserve only a portion of the music in circulation in the 16th century, MSS must be relied on for a substantial amount of that repertory also.

MSS can give more than just the music itself. Since about the middle of the 20th century, musicologists have been devising and refining techniques of MS study that are yielding valuable information on other aspects of musical life during the Renaissance: the identification of various repertories; the ways in which music was disseminated; the liturgical use of polyphony; performing practice; and the social and economic milieu within which various kinds of music were composed and performed. MSS can also provide useful data for biographical studies of composers.

The singing of polyphonic music was practised in a rather limited number of places in the early Renaissance: certain cathedrals and major churches in Italy, England, France and possibly several other countries; courts and court chapels of royalty and the nobility in these same countries; and some monasteries and other religious establishments. Only a few musicians possessed the skills necessary to perform from mensural notation; these musicians were highly regarded and relatively well paid, and competition for their services was keen. They were internationally famous and often worked in several countries during the course of their careers.

By the end of the 15th century, the number of churches and courts boasting musicians who could sing polyphony had increased significantly. This growth was partly geographical, with polyphony now practised in Spain, Poland, Bohemia, Hungary, the Alpine regions and various parts of Germany. It was also partly the result of an increase in the number of establishments which supported choirs. It became even more pronounced in the first decades of the 16th century, reaching a third level of proliferation: a much larger amount of polyphonic music sung at a given church or court.

This is reflected in the number of MSS surviving from various times during the Renaissance. The number of extant sources from the beginning of the 15th century is quite small; it grows gradually during the course of the century and then increases rapidly during the 16th. Several hundred MSS survive from the 15th century; several



38. London, British Library, Add.57950 (Old Hall MS), f.9v, first half of the 15th century: Gloria by Damett, written in black notation on parchment; the music appears to be in score with the text set out beneath the lowest of the three voices but the alignment is not exact: instead, the notes are placed directly above the syllables to which they are to be sung

thousand from the 16th. It is possible, of course, that more of the earlier sources were lost or destroyed. However, everything known about the music of this period suggests that the greater number of 16th-century sources reflects a real and dramatic increase in the amount of polyphony being performed and is not simply due to accidents of preservation favouring later sources.

Most MSS of Renaissance polyphony contain some pieces by the most famous composers of the day, along with works by composers who were known only regionally or locally. Although new MSS continue to be discovered every year, it is rare for them to contain previously unknown pieces by such composers as Du Fay or Josquin. For instance, the Aosta MS (see §2), discovered in the mid-20th century, contains many pieces by Du Fay, but all were previously known from other sources. This suggests that most of the significant repertory by the most famous composers of the Renaissance has been recovered. But most new MS discoveries add pieces by lesser-known composers, some found in no other sources.

(ii) Early 15th-century manuscripts. For the first decades of the 15th century, most polyphony was copied in black (solid or full) mensural notation (fig.38). This represents a continuation of the style of notation used in French sources of the previous century; there are also elements of Italian Trecento notation in some sources, particularly those copied in northern Italy. Parchment was the standard material on which copying was done. As the popularity of polyphony spread and more MSS were needed, paper began to be used. Just at this time – the third and fourth decades of the century – white (hollow or void) notation (fig.39) began to replace black notation. There are no important differences between the two types, and the same piece is often found in one MS in black notation and in another in white. The change must have

39. Modena, Biblioteca Estense e Universitaria, α.X.1.11 (formerly lat.471), ff.15v–16r (originally 12v–13r), 1440–50: setting of the hymn 'Ut queant laxis' by Du Fay; verses in chant (at the top of the left-hand page) alternate with the three-part setting laid out in choirbook format; below is an addition in a different hand

come about partly because solid black note heads tended to bleed through to the other side of the paper, and eventually the corrosive action of the ink caused note heads to drop out.

Three-part writing was the norm during this period. The most common method of laying out these voices in a MS was in choirbook format, with all voices of a composition copied on the two facing pages of an opening (fig.39). The discantus (superius) voice was copied on the verso (left) side of the opening, with the tenor and contratenor on the recto (right) side. Sometimes one of the lower parts was copied under the discantus on the verso side, and the other occupied the recto side alone. In a four-voice piece, the tenor was usually copied on the verso side under the discantus, with the two remaining voices on the recto.

A full text was almost always copied for the upper voice. Text may or may not be found under the other voices. At times, only incipits of text appear with the lower voices. In some carefully copied MSS, text appears in certain sections of the lower voices and not in others.

Many English sources are copied in pseudo-score: the voices are copied one under the other, in what resembles score notation, although the notes are not aligned exactly (fig.38). This layout is especially common for English pieces which are homorhythmic harmonizations of a chant melody.

The composer attribution, if given, was most often placed at the beginning of the composition, at the top of the verso of the opening above the superius voice. Many MSS were trimmed around the outer margins, after the music had been copied, as part of the process of binding. In many cases, composers' names have been lost in the process, and pieces originally labelled with the name of the composer have unfortunately come down to us as anonymous works.

Space was often left on an opening after a piece had been copied there, and this space was frequently used for another piece. Such additions were sometimes made by the principal scribe, but more often were put in by later scribes after the first copying had been done (fig.39): they can obscure the original scribe's plan of organization.

Some MSS of this time contain only sacred music, some both sacred and secular. Secular pieces were sometimes planned to be an integral part of the MS, as in *I-Bu* 2216 and *GB-Ob* Canon.misc.213, but more often they were added on blank pages after the original layers of sacred works had been copied.

Most sources of this period are composite MSS made up of several sections copied independently of one another, perhaps at different places, then brought together and bound at a later time. Within each section, the copying often seems to have been done in a series of layers of similar or related pieces – pieces by the same composer, pieces by composers of the same nationality or pieces of

the same type. Single pieces and groups of related pieces were copied into fascicle-MSS (fascicles of one or more unbound gatherings), and music seems to have been sung from, copied from and circulated in this form. In certain circumstances, large MSS were copied from numbers of such fascicle-MSS. This situation explains how several MSS may have many common pieces, in readings that may be quite close, yet these pieces will appear in a completely different order in the large MSS, and be mixed with other pieces not shared among them.

MSS were copied for several quite different reasons. Some, of course, were copied to be performed from. These are the largest, with both music and text copied carefully and accurately, and texts placed with some precision under certain musical phrases and even specific notes. There is usually some clear organization of the contents, often by liturgical genre, and mistakes made by the scribe are sometimes corrected. *I-Bu* 2216, measuring 40 × 29 cm, with notes and words large enough to be seen by each of a number of singers gathered around a lectern, is an example of this type. Others are *MOe* α.X.1.11 and the Old Hall MS (*GB-Lbl* Add.57950).

Others appear to be anthologies, collections of pieces gathered by some individual for his own use, or gathered at a church or chapel as a repository of pieces to be drawn on as needed. These are smaller in dimensions, often too small to be used for performance. They are often copied in a hasty or careless fashion, with many uncorrected mistakes. Text underlay is casual, and often there is no text at all; the contents are not arranged in systematic fashion. *D-Mbs* Clm 14274 (formerly Mus.ms.3232*a*) and the later Trent MSS are examples of this type.

Most of the large MS sources of the first half of the 15th century are well known to scholars and students, as they were studied by scholars in the late 19th and early 20th centuries. But several of them have been thoroughly studied since the introduction of more refined methods of MS study in recent decades. Much remains to be done: the date and provenance of the various sections and layers within most sources need to be determined with more accuracy, and MSS need to be linked with more certainty to specific musical establishments where the singing of polyphonic music is known to have been practised.

(iii) Late 15th-century manuscripts. The last three or four decades of the 15th century brought some important changes. There are more MSS, and fewer of them are composite ones. MSS appear to be planned for more specific purposes, and the contents of any given source tend to be more homogeneous.

It is from this time that we find more MSS devoted entirely or largely to secular polyphony. There are physical differences between these and sources from earlier in the century. The secular MSS are smaller, reflecting the fact that this music was usually performed with a single singer or player to a part. There is usually no text for the lower two or three voices, and sometimes the upper voice as well is textless or has only a text incipit. Some of these MSS are oblong rather than upright. And, for the first time, the several voices are sometimes separated, with each one in its own small MS – the first partbooks.

Sacred music continued to be copied into large choirbooks. A gradual increase in the size of many of these reflects an increase in the size of singing groups. An increase in the amount of polyphony sung at various cathedrals and court chapels soon made it impossible for the entire polyphonic repertory to be copied into a single MS. Thus we find from this time the first groups of MSS planned and copied as sets. The earliest Sistine Chapel MSS and a group of MSS copied for the Este court at Ferrara are early examples of this practice.

The use of white mensural notation was virtually universal, although it is not uncommon to find a chant-related voice part copied in square or Gothic chant notation. Paper is the usual material on which these MSS were copied. However, high-quality parchment or vellum was sometimes used, especially for court or presentation MSS. Some of those were produced for courts (such as the Este court at Ferrara) that prided themselves on the beauty of their books and maintained workshops for their copying and illumination. Others were copied for such important occasions as weddings or coronations or were prepared as gifts from one court or individual to another. These books, with their fastidious musical calligraphy and magnificently illuminated miniatures, initials and ornamental borders, are among the most beautiful MSS – musical or non-musical – of the entire Renaissance.

(iv) 16th-century manuscripts. Many different types of MS survive from this period. There are large, beautifully illuminated parchment choirbooks of masses and motets copied for use at court chapels, such as *B-Br* 15075 (see fig.40), *D-Ju* 3 and many other MSS copied at the Netherlands court at Brussels and Mechelen. There are large paper choirbooks, modestly but clearly copied for the use of choirs at cathedrals and churches, such as the large sets now at the Biblioteca Capitolare in Treviso (fig.41) and the Archivio Musicale of S Petronio in Bologna. There are sets of smaller partbooks containing Italian and French secular pieces, such as *I-Bc* Q21 (fig.42), *Fn* Magl.XIX 99–102, Magl.XIX 122–5 and *Fc* Basevi 2442. Polyphonic pieces were also copied into theoretical treatises, as illustrations and examples. Students copied pieces of mensural music into their notebooks, some of which survive. Polyphonic pieces in a simple style were sometimes copied into chant MSS at monasteries and other religious establishments, to be sung at major feasts. Finally, some MS collections of polyphonic music (such as *DK-Kk* 1848 and *CH-SGs* 463) seem to have been copied by or for private individuals, for their own use.

1501 saw the first printed collection of polyphonic music, the famous *Odhecaton A* published by Ottaviano Petrucci in Venice. Within a few decades, there were dozens of printed collections of polyphonic music in circulation, containing both sacred and secular works. The advent of music printing, however, did not mark the end of the copying of music into MSS. On the contrary, MS production reached a peak during the first half of the 16th century.

Many modern editions of music from this period are based on printed sources only, often with no attempt made to examine MS sources and collate them with the printed versions. Some editors have assumed that printed sources are superior to MS sources. But recent comparative studies suggest that MS sources from the first half of the 16th century are often superior to printed ones in many details – the actual reading of notes, placement of text, ligatures etc.

This raises the question of the relationship between MS and printed sources of the 16th century, a question which

40. Brussels, Bibliothèque Royale Albert Ier, 15075, ff.42v–43r: the beginning of Pierre de La Rue's five-voice 'Missa de septem doloribus', in a typically lavish Renaissance MS with detailed illumination. The normal choirbook format is modified so that the fifth voice, starting at the foot of the verso page, continues on the last two lines of the following recto

41. Treviso, Biblioteca Capitolare del Duomo, 23, ff.83v–84r: the Missa 'Chiare dolc'e fresch'acque' by Jacquet of Mantua, based on the madrigal by Arcadelt, in a mid-16th-century choirbook, probably copied for performance, from Treviso Cathedral. The relatively slight decoration was probably the work of the scribe

42. Bologna, Civico Museo Bibliografico Musicale, Q21, ff.13v–14r: a single mid-16th-century partbook, an early source of madrigals

can best be discussed if one accepts that there were various MS types at this time.

It seems unlikely that printed editions of sacred music brought out by Petrucci and his contemporaries were used as performance material. Wrong notes and other errors are not uncommon, and such errors remain uncorrected. Text underlay is not nearly so careful as in the best MS sources. Ligatures are often broken into separate notes, probably for technical reasons. Furthermore, if prints had been used for performance, at least several copies would have been required, since the smallness of most early prints would have made it impractical for a choir to read from a single copy. Yet multiple copies of the same print are never found in archives of cathedrals and courts. Finally, while many paintings from the Renaissance show church singers gathered around a lectern singing from a MS choirbook, there are no pictures showing printed music on the lectern.

It appears that printed music was one of the sources drawn upon for the repertory copied into sets of MSS. When a church or court decided to copy MSS for its own choir, various source materials were assembled. Liturgical practice, and the role of polyphonic music in that practice, differed from place to place. The copying was done in the order required for the new set of MSS, not in the order in which pieces were found in the MS and printed sources from which the copying was done. The polyphonic repertory might include Mass Ordinary cycles; hymns, in temporal and sanctoral cycles; motets, often grouped by feast; *Magnificat* introits and *Magnificat* settings; sets of psalms, usually those sung at Vespers; Mass Proper cycles and sections; music for Holy Week, the selection dictated by local practice; and music for Offices other than Vespers. Thus prints functioned as collections from which pieces could be copied into MSS, which were in turn used for the actual performance.

The situation is quite different with prints of secular pieces and instrumental works. Most secular music was performed by one musician to a part, and there is no practical reason why prints, even those in small format, could not have been used for performance. The same is true of lute tablatures. In fact, most MSS of secular and instrumental music are quite similar in format, size and shape to printed books of this music. Paintings of lute players and of small ensembles performing secular music show musicians reading from books similar in shape and size to prints. A rather large part of the frottola, chanson and madrigal literature from the first half of the 16th century has been preserved in prints, suggesting that once this music was available in printed collections there was little reason to copy it into MSS before it was performed.

Prints became increasingly numerous and important in the second half of the century. Many are large enough to be used for performance. Almost the total output of such internationally famous composers as Palestrina, Lassus and Victoria was printed. Such details as text placement become clearer and less problematic in the printed sources. Thus modern editions of the works of the major composers of the late 16th century based only on printed sources are often quite satisfactory. This does not mean, however, that MSS from this time are of no value to the scholar. They serve many purposes: sometimes they complement the published music of even the most famous composers, by preserving works not found in prints; they are often the only source of music by less famous but nevertheless excellent composers; and they often contain pieces by local composers whose music is found nowhere but in MSS copied for the church or court where they served. Furthermore, MSS tell us much about the history of polyphonic music of the late 16th century – where polyphony was sung, how widely the music of certain composers was disseminated, how much polyphony was sung in various places.

The bibliography that follows includes items referred to repeatedly in the material below as well as MS studies selected as samples of outstanding scholarship on topics treated in Renaissance MS studies – questions of dating and provenance, analysis of fascicle structure, problems of palaeography and notation and relationships between groups of sources, for example. Note that all manuscripts mentioned below are more fully described in the *Census-Catalogue* (1979–88) and that vol.iv contains updated material on most sources described in the earlier volumes.

2. 15TH-CENTURY SOURCES FROM NORTHERN ITALY (AND SOUTHERN GERMANY). A large majority of musical sources surviving from the first half of the 15th century comes from northern Italy and from southern Germany. To some extent this reflects the vagaries of MS preservation; Rome and Cambrai, for example, are known to have been centres of polyphonic music at this time, yet only two MSS have survived from Cambrai and none at all from Rome. But certainly the area around Cambrai experienced the composition of more polyphonic music than any other part of Europe, with the possible exception of England, and the presence there of the most renowned composer of the day, Guillaume Du Fay, was no mere accident.

The earliest sources, which show a continuation of Trecento tradition in style, repertory and notation, are unfortunately fragmentary.

Grottaferrata, Badia Greca, Biblioteca, collocazione provvisoria 197. 13 paper ff., *c*31·4 × 21·8 cm. 5 Glorias, 5 Credos and several other works (mostly fragmentary or incomplete) by Ciconia, Zacara and other composers. Originated at S Giustina in Padua, *c*1415.

U. Günther: 'Quelques remarques sur des feuillets récemment découverts à Grottaferrata', *L'Ars Nova italiana del Trecento: Convegno II: Certaldo and Florence 1969* [*L'Ars Nova italiana del Trecento*, iii (Certaldo, 1970)], 315–97; RISM, B/IV/4 (1972), 923–6

Cividale del Friuli, Museo Archeologico Nazionale, 63, 79 and 98. Some 10 mass Ordinary sections by Antonius de Civitate Austrie, Rentius de Ponte Curvo, Philippus de Caserta, Sortes and Zacara da Teramo on parchment flyleaves, dating from the early 15th century (see RISM, B/IV/4, 1972, pp.749–52).

Siena, Archivio di Stato, fragments 326–7. Portions of 4 mass Ordinary sections by Zacara and several anonymous secular pieces, in black and red mensural notation (see K. von Fischer: 'Una ballata trecentesca sconosciuta: aggiunte per i frammenti di Siena', *L'Ars Nova italiana del Trecento: convegni di studio 1961–1967*, ed. F.A. Gallo (Certaldo, 1968), 39–47).

The first surviving large collections are copied in black mensural notation and contain many pieces by Du Fay. They date from after his arrival in Italy; probably copied in the third to fifth decades of the century, they contain pieces written over a period of some 50 years, some dating back to the end of the 14th century. They are in choirbook format, with most of the pieces written in three voices and copied to occupy a whole opening in the MS. This often left considerable space at the bottom of the opening, space used for later additions to the MS, sometimes obscuring the original plan of the collection. Of the four sources described below, only the second (*I-Bu* 2216) appears to have been designed for and used as a performance MS; it has the largest dimensions, the staves and notes are large enough to have been read by a number of singers grouped at a lectern, and many of the folios show unmistakable signs of use and frequent turning. The others apparently came into existence as anthologies or collections.

Du Fay is represented by far more pieces than any other composer. The others are Frenchmen and Italians; a few compositions by English composers begin to appear in the later MSS.

Venice, Biblioteca Nazionale Marciana, 7554 (formerly IX.it.145). 202 parchment ff., 10 × 6·5 cm. 2 distinct sections: ff.1–85 (7 gatherings of 6 bifolios each, plus an additional folio; black and red mensural notation); ff.86–202 (16 gatherings, some of 4 and some of

2 bifolios; mixture of monophony and polyphony, copied in square black and red notation with some mensural elements). Original foliation goes as far as f.36, taken up by a more modern hand. The MS originated in a Franciscan establishment in Venice, probably *c*1430–40. Formerly in the library of the Somaschi della Salute, it was acquired by the Marciana in the early 19th century. The unusually small format suggests that it was an anthology, not a performance MS.

First part contains 9 mass Ordinary sections, 37 motets, liturgical pieces, *laude* and 2 textless pieces, by Du Fay (8), Binchois (2), Benoit and Hymbert de Salinis. 5 2-part *laude* on ff.31–4 are by a 'poor friar' (*frate pauperculus*). Second part has 23 motets, liturgical pieces and *laude*, all anonymous. Chief source for Italian *laude* of the period: those in first part written in style of early Du Fay period, those in second part in the style of 'primitive' polyphony, with many parallel perfect intervals and other 'crudities'.

Zenck, H. Schulz and W. Gerstenberg (Regensburg, 1933), 69–76; G. Cattin: 'Il manoscritto Venet. Marc. Ital.IX, 145', *Quadrivium*, iv (1960), 1–60

Bologna, Biblioteca Universitaria, 2216 [*BU*]. ii + 57 + ii paper ff., 40 × 29 cm. Early ink pagination and later pencil foliation, modern covers of white leather over boards. Restored and rebound apparently several times, most recently in 1969. First 40 folios were copied, in black mensural notation, some time before 1440, probably in the vicinity of Venice or Padua; remaining folios copied shortly after 1440, perhaps in Brescia. MS remained in Brescia until mid-18th century, when it was transferred to the Biblioteca dei Canonici Regolari di S Salvatore in Bologna, and then to *Bu* (after 1798).

31 mass Ordinary sections, 19 motets, 21 French and Italian secular pieces, 11 *laude* and several miscellaneous liturgical pieces, by Du Fay (11), Arnold de Lantins (7), Reson (7), Vala (5), Binchois (3), Feragut (3), Dunstaple (2), Grossin (2), Ciconia, Grenon and others. MS planned and copied in 4 sections, beginning of each marked by a large red calligraphic initial: Kyries and Glorias (ff.1–16); Credo, Sanctus and Agnus settings (ff.17–32); motets (ff.33–48); and secular pieces (ff.49–57).

Gallo, ed.: *Il codice musicale 2216 della Biblioteca universitaria di Bologna*, MLMI, 3rd ser., Mensurabilia, iii (1968–70) [facs.]; RISM, B/IV/2 (1991), 89–94; J. Palumbo-Lavery: 'Bologna, Codex Bu', *MGG2*

Bologna, Civico Museo Bibliografico Musicale, Q15 (*formerly 37*) [*BL*]. 342 ff., mostly of paper but with some outer or middle bifolios of gatherings of parchment, 28 × 20 cm (fig.1 above). An old foliation system in Roman numerals skips gatherings 11–12 and 20; another numbering system attempts to number the pieces, but is inaccurate and incomplete; a modern foliation, 1–342, omits one folio but uses the same number for two others. Rebound and restored, with new covers; f.1 has an incomplete original index. One scribe copied ff.1–250 and 341–2; possibly two other scribes, contemporaneous with the main scribe, completed the copying. MS copied in black mensural notation. Copied probably at Padua: an original layer of *c*1420–25 was partly reconstructed and expanded, *c*1430–35, with much new material. Padre Martini acquired it in 1757 from Piacenza.

4 masses, 122 mass Ordinary sections, 118 motets, 24 hymns, 9 *Magnificat* settings, 19 French secular pieces, 11 *laude*, by Du Fay (69), Johannes de Lymburgia (42), Ciconia (13), Arnold de Lantins (17), Salinis (8), Antonius Romanus (6), Brassart (8), Feragut (6), Franchois (7), Loqueville (6), Zacara da Teramo (11), Antonius de Civitate Austrie (5), Binchois (5), Dunstaple (4) and others. 33 pieces remain anonymous. Gatherings 1–3 and 13–18 contain complete and composite mass Ordinary cycles, 3–10 contain Gloria-Credo pairs, 11–12 are added gatherings with mass Ordinary sections, 18–27 contain motets, 27–8 have hymns and 29 has sequences and *Magnificat* settings. The secular pieces and other brief compositions are later additions, on space left blank at bottoms of folios.

Gaspari: *Catalogo della biblioteca del Liceo musicale di Bologna*, iv (Bologna, 1905/*R*), 239–45; G. de Van: 'An Inventory of the Manuscript Bologna Liceo Musicale, Q 15 (*olim* 37)', *MD*, ii (1948), 231–57; M. Bent: 'A Contemporary Perception of Early Fifteenth-Century Style: Bologna Q15 as a Document of Scribal Editorial Initiative', *MD*, xli (1987), 183–201; RISM, B/IV/5 (1991), 15–33; M. Bent: 'Bologna, Q15', *MGG2*

Munich, Bayerische Staatsbibliothek, Clm 14274 (*formerly Mus.ms.3232a*) [*Em*]. 158 paper ff., 28·5 × 21 cm. Original covers of leather over board. MS composed of 13 gatherings; 2–7 copied in black mensural notation, 1 and 8–13 in white mensural notation. Hands of at least 14 different scribes can be detected, and 9 different watermarks have been identified. Has the nature of an anthology, containing pieces written over a period of almost 75 years (from the last decades of the 14th century to almost the middle of the 15th). Begun in Vienna, *c*1435, as the private anthology of Hermann Pötzlinger, who in 1443 took it to the Benedictine cloister of St Emmeram, Regensburg, where it was further expanded. Relative smallness and lack of musical or liturgical organization suggest that it was not a performance MS but a continuing collection.

72 mass Ordinary sections, 125 motets and liturgical pieces, *c*33 hymns, 8 *Magnificat* settings, 13 secular pieces and 21 textless pieces, by Du Fay (42), Binchois (11), Roullet (8), Dunstaple, Liebert, Grossin, Brassart, Leonel Power, Loqueville, Landini, Antonius de Civitate Austrie and others. At least 15 contrafacta have been identified.

K. Dèzes: 'Der Mensuralcodex des Benediktinerklosters *Sancti Emmerami* zu Regensburg', *ZMw*, x (1927–8), 65–105; D. Braunschweig-Pauli: 'Studien zum sogenannten Codex St. Emmeram', *KJb*, lxvi (1982), 1–48; I. Rumbold: 'The Compilation and Ownership of the "St Emmeram" Codex', *EMH*, ii (1982), 161–235

Several other MSS in black notation from this period have survived only as fragments. *D-Mbs* Mus.ms.3224 is a collection of fragments from a single MS, originally measuring *c*28 × 19 cm. 4 mass Ordinary sections, 4 motets, 3 secular pieces, 2 hymns and 1 textless piece remain (most incomplete); composers identified include Du Fay, Brollo, Christoforus de Monte and Ray. de Lantins (see *Census-Catalogue*, iv, 444–5). *I-Bc* Q1 (no.23) is a single parchment folio containing 2 incomplete Glorias, one by Salinis and the other anonymous. It is the only remnant of a north Italian MS roughly contemporary with and perhaps comparable to *Bc* Q15 (see O. Mischiati: 'Uno sconosciuto frammento di codice polifonico quattrocentesco', *CHM*, iv (1966), 179–83).

Black notation gave way to white about 1430 in Italy, a little later in France and later still in England. The change may have come about as a result of the increasing use of paper, rather than parchment, for the copying of MSS; the concentration of ink in filled-in note heads tended to eat through paper, which was fast becoming cheaper than parchment (if less durable). But it may also have resulted from the growing need to copy large quantities of polyphony at speed. The practice of polyphonic music was becoming more common as the 15th century unfolded, more MSS were being copied at more places, and parchment was simply too difficult to obtain and too expensive, although it continued to be used for chant MSS. Polyphonic music was considered to be ephemeral, chant eternal.

Among the most important MSS in white notation before and around the mid-century are the following:

Oxford, Bodleian Library, Canon. misc.213. 140 paper ff., 29·8 × 21·5 cm. 10 gatherings, preceded by an original index. Gatherings 5–8 the oldest, and include a few pieces copied in black notation; gatherings 9–10 slightly later; 1–4 copied last. 9 works have dates, ranging from 1422 to 1436; it is not clear whether these indicate the date of copying. Probably copied in Venice, in third and fourth decades of the century.

325 pieces made up of 187 rondeaux, 10 virelais, 38 ballades, 3 chansons, 25 ballatas, 21 mass Ordinary sections, 37 motets, 1 *Magnificat* and 3 *laude*, by Du Fay (52), Binchois (29), Hugo de Lantins (20), Arnold de Lantins (20), Vide (7), Cordier (7), Fontaine (7), Brollo (6), Cesaris (6), Loqueville (6), Grenon (5), Guillaume Legrant (5), Ciconia (4) and others. Some 60 pieces remain anonymous; some 220 are unica. The oldest gatherings (5–8) contain mostly French secular pieces, some dating back to the late 14th century; gatherings 9–10 have many pieces by Du Fay and the

Lantins; the latest gatherings (1–4) contain most of the motets and mass Ordinary sections, with many chansons.

J., J.F.R. and C. Stainer: *Dufay and his Contemporaries* (London, 1898/*R*); C. van den Borren, ed.: *Polyphonia Sacra: a Continental Miscellany of the Fifteenth Century* (Burnham, Bucks., 1932, 2/1963); G. Reaney: 'The Manuscript Oxford, Bodleian Library, Canonici Misc.213', *MD*, ix (1955), 73–104 [inventory]; Schoop (1971); D. Fallows: *Oxford, Bodleian Library MS. Canon.misc.213* (Chicago, 1995) [facs. and description]

Aosta, Seminario Maggiore, 15 (*formerly A¹ D 19*) [*Ao*]. 280 paper ff., 27·2 × 20·2 cm. Upper parts of many folios damaged, and trimming to present size has resulted in loss of many composer attributions and even some music. An original numbering system in ink is inconsistent and incomplete; 2 modern foliations: 1 in pencil (skipping f.130) and 1 in ballpoint pen. Original covers of brown leather over boards removed and discarded when MS restored in 1958, replaced by new covers of brown leather, tooled in gold, over boards. An original index of pieces up to f.258 is arranged by genre. First section (ff.13–48) perhaps copied in Bologna, *c*1428–32; second (ff.49–158), *c*1430–35, and third sections (ff.159–258 + 1–12), 1435–42, share common scribes and watermarks, and were probably copied in the Basle-Strasbourg area; fourth section (ff.259–80) may have been copied at the imperial court at Innsbruck, *c*1435–42. One of the scribes of second and third sections brought these together with first section and added the index and first numbering system; fourth section added later, and the composite MS transferred to the library of the priory of St Jacquême at Aosta, then to the present library.

129 mass Ordinary sections, 45 motets, 3 hymns and 3 *Magnificat* settings, by Du Fay (26), Binchois (24), Brassart (13), Dunstaple (14), Leonel Power (9), Franchois (4), Benet (3), Grossin (11), Loqueville (3), Sarto (3), Guillaume Legrant (2), Brabant (2), Blome, Zacara and others. 35 pieces remain anonymous. Entire gatherings and fascicles devoted to layers of music by English composers, which may have been taken to the Continent during the Council of Konstanz (1414–18) and/or the Council of Basle (1431–49).

G. de Van: 'A Recently Discovered Source of Early Fifteenth Century Polyphonic Music', *MD*, ii (1948), 5–74; Hamm, *AcM*, xxxiv (1962), 166–84; Cobin (1978); S. Jahrhunderts: die Ordinariumsvertonungen der Handschriften Aosta 15 und Trient 87/92* (Munich, 1989); Wright (1989); RISM, B/IV/5 (1991), 3–14; T. Sasaki: 'The Dating of the Aosta Manuscript from Watermarks', *AcM*, lxiv (1992), 1–16

Modena, Biblioteca Estense e Universitaria, α.X.1.11 [*ModB*]. i + 139 (of an original 150) + i paper ff., 41·2 × 28·5 cm (fig.39). Original foliation of inked Roman numerals, and a modern pencil foliation. Covers of brown leather over boards, dating from 19th century; portions of an original index remain, with musical incipit for each piece. Originally 15 gatherings of 5 bifolios each; only 3 of the original 10 folios of the first gathering (which included only the index) remain. Bulk of the MS copied by a single scribe, *c*1440–50, probably for the Este court in Ferrara; various pieces added from time to time on blank folios and at bottoms of pages.

71 motets, 29 hymns, 22 brief liturgical works and 9 *Magnificat* settings, by Du Fay (48), Dunstaple (31), Binchois (13), Leonel Power (8), Forest, Plummer, Benoit, Fedé, Benet and others. Only 9 of the 131 pieces are anonymous. Apparently all for Vespers, and organized in 5 sections: hymns (beginning on f.1); miscellaneous liturgical pieces (f.21*v*); *Magnificat* settings (f.31); antiphons and motets by continental composers (f.51); and motets by English composers (f.81). The most important surviving source of English motets (contains 51).

A.B. Scott: *Coherence and Calculated Chaos: the English Composers of Modena, Biblioteca Estense, X.1.11 (lat.471)* (diss., U. of Chicago, 1969); C. Hamm and A.B. Scott: 'A Study and Inventory of the Manuscript Modena, Biblioteca Estense, α.X.1.11 (ModB)', *MD*, xxvi (1972), 101–43; Lockwood (1984)

Several sources in white notation have survived in incomplete or fragmentary form. The largest and most interesting of these is *I-La* 238: 56 parchment folios (46 × 33 cm) recovered from covers of various books prove to be parts of a single MS, containing in its present form 14 masses, nine motets and three *Magnificat* settings, many incomplete. There are works by Du Fay (2), Petrus de Domarto, Frye, Heyns, Martini, Stone and Plummer; the first mass, elaborately decorated with ornate initials, is by Henricus Tik. The MS also contains 17 anonymous pieces, some apparently by English composers. (See R. Strohm: 'Ein unbekanntes Chorbuch des 15. Jahrhunderts', *Mf*, xxi (1968), 40–42; *StrohmM*; RISM, B/IV/5 (1991), 228–30) A somewhat earlier incomplete MS, dating from 1440–50, is *A-Z* s.s., consisting of five paper folios, 39 × 29 cm, with six Glorias (all but one incomplete) by Loqueville, Roullet, Grossin and Verben (see K. von Fischer: 'Neue Quellen zur Musik des 13., 14. und 15. Jahrhunderts', *AcM*, xxxvi (1964), 79–97; Wright, 1989). *I-Mb* AD.XIV.49, comprising 12 paper folios (21·4 × 14·5 cm) bound into a non-musical MS, has a Sanctus-Agnus pair and a motet by Leonel Power, and an anonymous hymn (see N. Bridgman: 'Un manuscrit milanais', *RIM*, i (1966), 237–41).

Trent, Castello del Buonconsiglio, Monumenti e Collezioni Provinciale, 1374–1379 (formerly *87–92*) and *Trent, Biblioteca Capitolare* ('Trent Codices'), referred to by the sigla *I-TRmp* 87 (=1374) to *I-TRmp* 92 (=1379) and *I-TRcap* ('Trent 93'). These manuscripts contain an immense repertory spanning the first 75 years of the 15th century and form the largest and most important collection from the entire century. *TRmp* 87–92 were discovered by F.X. Haberl in the chapter library of the Cathedral of Trent and first discussed in his monumental monograph on Du Fay, *Bausteine für Musikgeschichte*, i (Leipzig, 1885). They were removed in 1891 to the Hofbibliothek in Vienna, where they were studied by Guido Adler and others. DTÖ, xiv–xv, Jg.vii (1900/*R*), contains a discussion and thematic incipit catalogue of the 1585 compositions in these six MSS and a transcription of several pieces in them. Additional transcriptions are in DTÖ, xxii, Jg.xi/1, DTÖ, xxxviii, Jg.xix/1, and DTÖ, liii, Jg.xxvii/1. The MSS were returned to Trent in 1918, and in 1920 a seventh MS belonging to the same set (Trent 93) was discovered. DTÖ, lxi, Jg.xxxi, gives an incipit catalogue of this source and some transcriptions; DTÖ, lxxvi, Jg.xl, and cxx have still more transcriptions. The manuscripts underwent a complete restoration in 1975.

The seven MSS, copied on paper, are *c*30 × 20 cm. *TRmp* 87 (23 gatherings, 265 folios) and *TRmp* 92 (22 gatherings, 264 folios) are the oldest of the set, having been copied *c*1435–50 at several places in northern Italy and Piedmont. They were apparently brought to Trent as a collection of fascicles and bound into large MSS when the other five were bound. The fascicles were at that time divided up equally to make the two MSS, and some originally belonging together were split between the two. Four distinct layers can be identified.

Gatherings 15–17 and 19 of *TRmp* 87, and 22–3 of *TRmp* 92. The first layer contains the earliest repertory in all of the Trent MSS: early mass Ordinary sections and motets by Du Fay; pieces by Grossin, Zacara da Teramo, Brassart, Vide, Verben, Ludvicus de Arimino and Tyling; and a scattering of pieces by such English composers as Dunstaple.

Gatherings 1–9 and 11–12 of *TRmp* 87 and 13–20 of *TRmp* 92. The large second section, with common scribes, paper and watermarks, has mass Ordinary sections, motets, hymns and *Magnificat* settings, by Du Fay, Binchois, Brassart, Liebert, Velut, Merques, Grossin and others, and a number of English pieces by Dunstaple,

Leonel Power, Forest and Benet. A series of clearly differentiated layers can be detected.

Gatherings 22–3 of *TRmp* 87. The paper, scribe and watermarks in the third section are of a sort found nowhere else in the Trent MSS. *Magnificat* settings, mass sections, hymns and motets are scattered in no apparent order. Nine pieces are attributed to H. Battre, otherwise unknown, and there is one attribution each to Du Fay and Binchois; the remaining pieces are anonymous. Watermarks and repertory suggest an origin somewhere in north-east France.

Gatherings 1–12 of *TRmp* 92. The fourth section is unrelated, in paper, scribe and watermarks, to the other Trent MSS. Its contents form essentially a series of mass introits, each followed by a mass Ordinary cycle, though this original organization is obscured in places by pieces added later. Wright (1989) has shown that this section is related to the second and third sections of *AO* 15 and that it probably originated in the circle of Felix V, in the Savoy-Basle region.

The remaining five MSS were mostly copied in Trent 1445–75; the principal scribe was Johannes Wiser, from Tione, 32 km west of Trent. *TRmp* 90, the earliest of the group, is made up of 39 gatherings comprising 465 folios. Gatherings 1–6 contain introits, 6–9 Kyries, 9–10 Glorias, 15–19 Credos, 20–24 Sanctus and Agnus settings, 26 French secular pieces, 27–8 and 33–9 masses, 32–3 music for Vespers, and the rest miscellaneous works. Du Fay is the most widely represented composer, followed by Pullois, Binchois, Brassart, W. de Rouge and Johannes Legrant. There are a number of English pieces, by Leonel Power, Dunstaple, Benet, Bedyngham and Plummer; most are anonymous, but many are clearly by English composers.

Trent 93 has 33 gatherings, 382 folios. The first 30 gatherings almost exactly duplicate *TRmp* 90 – the same pieces are in the same order and Trent 93 was plainly used as its exemplar. Gathering 31 has mostly textless pieces, 32 German and French secular works, and 33 mostly hymns. Almost all of the pieces in the last three gatherings are anonymous; the few attributions are to such obscure composers as Opilionis and Villete.

TRmp 88, the next copied, has 35 gatherings with a total of 422 folios. The first ten gatherings contain mass Ordinary sections, mostly arranged in cycles, as do gatherings 22–8 and 31–5. Mass Propers, also arranged in sets, are found in gatherings 10–19 and 30, vesper hymns in gathering 20, *Magnificat* settings in gathering 29, and miscellaneous pieces in the rest. There are very few composer attributions; the identified pieces are by Du Fay, Ockeghem, Touront, Domarto, Cornago and a few others (the repertory is thus somewhat later than that of the preceding MSS). Feininger (1947) attributed a large number of mass Proper cycles to Du Fay on stylistic grounds.

TRmp 89 (36 gatherings, 425 folios) is organized differently. Gatherings 1–7, 10, 14, 18 and 22–35 are taken up with mass Ordinary cycles, usually one to each gathering; *Magnificat* antiphons occupy gatherings 8–13; and 16 has seven vespers hymns. This MS apparently existed originally as a series of fascicle-MSS: independent groups of folios containing a single composition, or a set of related pieces, with the outer two pages blank. These were later brought together, bound as a single MS, and additional pieces were copied on some of the blank folios. Most pieces are anonymous. Among identified composers are Touront, Busnoys, Du Fay (late works only), Barbingant, Hermannus de Atrio and Martini; the repertory comes from mid-century and slightly after.

TRmp 91 (22 gatherings, 259 folios) was the last of the set to be copied. Mass Ordinary cycles and sections take up gatherings 1–3, 5–7, 9–16 and 19–22, *Magnificat* settings and hymns 16–18; the other sections contain miscellaneous pieces copied in no apparent order. Again there are few composer attributions, but the presence of pieces by Vincenet, Faugues, Busnoys, Touront and Martini suggests that the repertory is even later than that of *TRmp* 89.

Though these MSS have been known to scholars for almost a century, much work has been done only in more recent years: identifying more of the many hundreds of anonymous pieces; more precise dating; determination of why they were copied, and to what use they were put; investigation of liturgical practice of the time as revealed in these sources. It seems unlikely that they were performance MSS, particularly *TRmp* 88–91, because of their size, the careless nature of much of the copying and the many errors that would seem to make it impossible to sing from them. They appear to be a vast anthology, possibly reflecting the polyphonic repertory of churches and court chapels in northern Italy and southern Germany, probably including the imperial court.

Leverett: *A Paleographical and Repertorial Study of the Manuscript Trento, Castello del Buonconsiglio, 91 (1378)* (diss., Princeton U., 1990); RISM, B/IV/5 (1991), 461–547; M. Gozzi: *Il Manoscritto Trento, Museo Provenciale d'Arte, cod. 1377 (Tr 90)* (Cremona, 1992); P. Wright, ed.: *I codici musicali trentini [II]: Trent 1994*; *MGG2* ('Trenter Codices'; R. Strohm); complete facs. edn pubd by Vivarelli & Gullà (Rome, 1969–70)

Florence, Biblioteca Nazionale Centrale, Magl.XIX 112bis. i + 80 + paper ff., 29 × 20.5cm. Contains 22 motets, 18 hymns, 9 *Magnificat* settings, 1 psalm and 1 textless piece, by Janue (16), Du Fay (6), Binchois (3), Dunstaple (3), Leonel Power (2), Frye and Quadris; 17 pieces remain anonymous. As Antonius Janue, an otherwise unknown composer, is represented in this MS by more pieces than any other composer, it has been suggested that he may have copied it or supervised the copying. Giazotto (1951) reported a document with a record of payment to him at the Genoese ducal palace in 1456 and concluded that the MS itself was of Genoese provenance.

Besseler, *AMw*, vii (1925), 167–252; R. Giazotto: *La musica a Genova nella vita pubblica e privata dal XIII al XVIII secólo* (Genoa, 1951); R. 3. 15TH-CENTURY ENGLISH SOURCES. The destruction and loss of English sources of polyphony of the 15th century has been so grievous that much of the musical history of that time must be pieced together from incomplete and often fragmentary remains of MSS and from inferences drawn from other groups of sources.

One important source from the early part of the century (*GB-Lbl* Add.57950, described below; *see also* OLD HALL MANUSCRIPT) survives nearly complete (for *Ob* Selden B.26 see §4). Otherwise, only fragments remain (most described and transcribed by A. Hughes in *English Sacred Music (excluding Carols) in Insular Sources, 1400–c1450*, diss., U. of Oxford, 1963); among them are *Lbl*

Add.40011 B (the 'Fountains Fragment'), which originated at Fountains Abbey in Yorkshire and contains 16 mass Ordinary sections and motets (see Bukofzer, 1950, pp.86–112, and RISM, B/IV/4, 1972, pp.653–9). The University Library at Cambridge has a number of fragments, including Add.5943 (*c*1400), with 18 pieces; Add.5963; Ff.6.16; and Kk.1.6. Such fragments attest to the widespread singing of polyphonic music in England in the early 15th century.

London, British Library, Add.57950 (formerly Old Hall, St Edmund's College, Ware, Herts.) ('Old Hall MS'; see fig.38 above). 112 parchment ff., 41·6 × 27·6 cm. Some folios lost, with an unknown number of complete pieces, and parts of others. Covers and foliation modern. Repertory *c*1370–1420; copied for the chapel of the Duke of Clarence, later taken to the Chapel Royal. 2 pieces by 'Roy Henry', who was possibly Henry V (1413–22). Black mensural notation, with many pieces written in pseudo-score. By far the largest surviving source from the first half of the century; it must have been copied for use by a large group of singers.

40 Glorias, 35 Credos, 27 Sanctus, 19 Agnus, 18 antiphons, 8 motets, by Leonel Power (21), Damett (9), Cooke (8), Sturgeon (7), Pycard (7), Typp (7), Chirbury (4), Oliver (3), Dunstaple, Forest and others. 51 pieces remain anonymous.

Andrew Hughes and M. Bent: 'The Old Hall Manuscript', *MD*, xxi (1967), 97–147; Andrew Hughes and M. Bent, eds.: *The Old Hall Manuscript*, CMM, xlvi (1969–73); RISM, B/IV/4 (1972), 675–725

Only two sacred polyphonic MSS of substantial size survive from the remainder of the century: *GB-Lbl* Eg.3307 (see §4 below) and *Cmc* Pepys 1236.

Cambridge, Magdalene College, Pepys 1236. 128 paper and parchment ff., 18 × 12·5 cm. Originated in Kent *c*1459–65. Copied in black mensural notation. 117 pieces (80 motets, 25 mass Proper sections, 11 hymns, 1 Lamentation) by Tuder (6), Banaster (2), Haute (2), Corbrand (2), Nesbet, Frye, Fowler and Garnesey; 101 are unidentified. Apparently a local or regional repertory, following the Sarum rite.

F.Ll. Harrison: 'Music for the Sarum Rite', *AnnM*, vi (1958–63), 99–144; S. Charles: 'The Provenance and Date of the Pepys MS 1236', *MD*, xvi (1962), 57–71; S. Charles, ed.: *The Music of the Pepys MS 1236*, CMM, xl (1967); see also description by R. Bowers, *Cambridge Music Manuscripts, 900–1700*, ed. I. Fenlon (Cambridge, 1982), 111–14

In view of the unparalleled extent to which English music was admired and imitated during the middle of the 15th century, it is unfortunate that no complete MSS, or even substantial fragments, survive in England from this time. Typical fragmentary sources are:

Cambridge, Emmanuel College Library, 300. Remnants of 4 paper ff., now 14 × 21 cm, cut in half for use as flyleaves for a printed book; they contain 3 incomplete Kyries by Dunstaple. See RISM, B/IV/2 (1966), 209–10

London, British Library, Add.54324. 6 paper ff. originally *c*35 × 29 cm, cut to form part of the binding of an illuminated psalter *c*1440–50; 3 Kyries, 1 Gloria and 4 motets, by Dunstaple, Plummer and Du Fay.

M. and I. Bent: 'Dufay, Dunstable, Plummer – a New Source', *JAMS*, xxii (1969), 394–424

Cambridge, University Library, Pembroke 314. 4 parchment ff., originally *c*41 × 29 cm, containing parts of 5 mass Ordinary sections, 3 motets and 3 English sacred pieces, by Dunstaple (3) and Wyvell; 7 pieces remain unidentified.

RISM, B/IV/2 (1966), 597ff

Coventry, The Coventry Corporation, A.3. 2 parchment ff., now 38·7 × 26·7 cm, serving as flyleaves for a book of legal records written in Coventry in the 15th and 16th centuries, containing parts of the Gloria and Credo of an unidentified mass and the Agnus of the Missa 'Caput'.

M. Bukofzer: '*Caput Redivivum*: a New Source for Dufay's *Missa Caput*', *JAMS*, iv (1951), 97–110

Cambridge (MA), Harvard University, Houghton Library, Incun.8948. 2 parchment ff., now 28·3 × 20·5 cm, bound as flyleaves for a collection of religious fables and historical incidents printed at Deventer, containing fragments of several Kyries and 3 Glorias, two of which are by Dunstaple.

E. Kovarik: 'A Newly-Discovered Dunstable Fragment', *JAMS*, xxi (1968), 21–33

However, such fragments are not the only sources of English music of this period. Hundreds of pieces by Dunstaple and his contemporaries are found in such continental sources as *I-AO* 15, *TRmp* 87, 90, 92 and *Fn* Magl.XIX 112*bis*. A particularly rich source is *MOe* α.X.1.11, with no fewer than 51 motets by English composers (see §2 above).

In addition there are many anonymous pieces in continental sources that are most certainly by English composers; they may be identified from groupings of pieces in MSS, by stylistic features or by characteristic melodic figures (see C. Hamm: 'A Catalogue of Anonymous English Music in Fifteenth-Century Continental Manuscripts', *MD*, xxii (1968), 47–76; G. Curtis and A. Wathey: 'Fifteenth-Century English Liturgical Music: a List of the Surviving Repertory', *RMARC*, no.27 (1994), 1–69).

4. CAROL MANUSCRIPTS. The 15th-century CAROL was a distinctively English genre. With its English, Latin and macaronic texts, its unique mixture of sacred and popular elements and its distinctive musical style, the carol represents a high point in the history of late medieval English polyphony. Although about 500 carol texts survive, only about 130 have music. Most of these are preserved in four MSS of English provenance; the entire musical repertory is edited by J. Stevens, MB, iv (1952, 2/1958, where there is also a description of the MSS), and in MB, xxxvi (1975).

Cambridge, Trinity College Library, 0.3.58. A parchment roll, 200·7 × 7·8 cm, consisting of 3 sections sewn together. A single scribe copied 13 anonymous carols on one side, in white mensural notation with red coloration; a later hand added Latin Offices on the reverse side. Copied during the first half of the 15th century, perhaps in East Anglia, the roll contains the earliest surviving carol repertory.

J. Fuller Maitland, ed.: *English Carols of the Fifteenth Century: from a Ms. Roll in the Library of Trinity College, Cambridge* (London, 1891)

Oxford, Bodleian Library, Arch.Selden B.26. 5 unrelated items bound together, of which only first part relevant. 31 parchment ff., 25·6 × 18 cm, numbered 3–33, containing 32 anonymous carols. Black mensural notation with red coloration; occasional black void and red void notes. Both score and choirbook formats used. Not precisely dated, but probably rather later than *GB-Ctc* roll. Greene argued for an origin in Worcester.

J., J.F.R. and C. Stainer, eds.: *Early Bodleian Music: Sacred & Secular Songs together with other MS. Compositions in the Bodleian Library, Oxford*, ii (London, 1901/*R*) [incl. full facs. and edn]; R.L. Greene: *A Selection of English Carols* (Oxford, 1962), 176ff

London, British Library, Eg.3307. ii modern paper + 83 original parchment + iii modern paper ff., 29·8 × 21·5cm. First 5 folios have been cut out. Modern foliation, 6–88; modern maroon leather binding. Black notation with red coloration; some void notes in both red and black. Mostly in score format, but ff.6–7 and ff.72*v*–77 in choirbook format. Decorated initials and illuminations. One scribe copied most of the MS, but a few pieces are in different hands. Bukofzer (1950) and Greene (1954) suggested Meaux Abbey in Yorkshire as the probable place of origin, but Schofield (1946) and McPeek (1963) argued that the MS was probably copied at St George's Chapel, Windsor. McPeek dated the MS between 1430 and 1444.

Contents in 2 sections. First part contains 1 mass, 6 processional hymns, 2 Passions and 9 motets. Second part contains

32 carols, 1 textless piece in carol form, 1 motet and 1 Latin drinking-song. All anonymous.

B. Schofield: 'A Newly Discovered 15th-Century Manuscript of the English Chapel Royal', *MQ*, xxxii (1946), 509–36; Bukofzer (1950), 113–75; R. Greene: 'Two Medieval Musical Manuscripts: Egerton 3307 and some University of Chicago Fragments', *JAMS*, vii (1954), 1–34; G. McPeek: *The British Museum Manuscript Egerton 3307* (London, 1963)

London, British Library, Add.5665 ('Ritson MS'). vi + 148 + v mixed parchment and paper ff., *c*25·8 × 18 cm. 2 sets of foliation. Black and white mensural notation with red coloration. Both choirbook and score formats used, but most of the carols in score. 5 sections, distinguished by repertory, notation and scribal hands. Miller dated the MS *c*1460–1510; the carols form the earliest layer and were probably copied by 1475. Probably originated at a Franciscan monastery in Devon, but designed to be used at services at which the laity were present. Thomas Pack may have played a role in the compilation and copying. MS later owned by the antiquarian Joseph Ritson, who donated it to the British Museum in 1795.

In addition to 44 carols, MS contains 3 masses, 1 Kyrie-Gloria pair, 1 Latin-English *Te Deum*, 1 canticle, 1 Office hymn, 2 processional hymns, 23 motets (1 monophonic), 3 English sacred pieces, 16 English secular pieces and 1 French secular piece. Only composers named in carol section are Smert and Trouluffe. Other composers represented are Pack, John Cornysh, Mowere, Haute, Norman, Petyr, Turges, Henry VIII, T.B. and W.P. [?William Pasche].

C. Miller: *A Fifteenth-Century Record of English Choir Repertory: B.M. Add.Ms.5665: a Transcription and Commentary* (diss., Yale U., 1948); J. Stevens, ed.: *Early Tudor Songs and Carols*, MB, xxxvi (1975)

5. 15TH-CENTURY FRENCH MANUSCRIPTS OF SACRED MUSIC. The earliest source of polyphony in France in the 15th century, *F-APT* 16*bis*, almost certainly originated in the circle of the papal residence at Avignon during the period of the Great Schism (1377–1417; see §VII, 3, above). *APT* 9 contains a single hymn in black mensural notation added to a book made up of a calendar of Apt Cathedral, a hymnal and a psalter. Two more hymns in black notation (one by Du Fay) are preserved in a fragment of a parchment folio discovered in *CH-BSPh* 8; this is described in J. Stenzl: 'Un fragment de Dufay au Grand-Saint-Bernard', *Revue musicale de Suisse romande*, xxiv/1 (1971), 5–7. Another fragmentary source in black notation is *F-Dm* 2837, discovered in 1971 in the binding of the incunabulum *Vocabularis breviloquus* (Basle, 1480). These four parchment folios measuring 31 × 21 cm, dating from *c*1420 and preserving six anonymous sacred and secular works, are described in C. Wright: 'A Fragmentary Manuscript of Early 15th-Century Music in Dijon', *JAMS*, xxvii (1974), 306–15.

Cambrai Cathedral had an active musical life for much of the 15th century. There Du Fay sang and studied as a boy, under Loqueville, before he went to Italy. Only two MSS have survived:

Cambrai, Médiathèque Municipale, 6. i + 36 + i parchment ff., 50 × 33·5 cm. Copied in black material notation, with original foliation, at Cambrai Cathedral *c*1440.

3 Kyries, 5 Glorias, 5 Credos and 3 hymns, by Du Fay (7), Binchois (2) and Franchois (1); 6 pieces remain anonymous.

Besseler, *AMw*, vii (1925), 167–252; L. Curtis: 'The Origins of Cambrai, Bibliothèque Municipale Manuscript 6 and its Relationship to Cambrai 11', *TVNM*, xliv (1994), 6–35

Cambrai, Médiathèque Municipale, 11. i + 49 + i parchment ff., 48·6 × 36 cm. Copied in black mensural notation, at the same time and place as *CA* 6.

5 Kyries, 7 Glorias, 7 Credos, by Du Fay (7), Binchois (5), Franchois (1) and Dunstaple (1); 5 pieces are anonymous. L. Curtis, ed.: *Cambrai Cathedral Choirbook* (Peer, 1992) [facs.]; see also bibliography for *CA* 6

These two choirbooks are unusually large for the time, in fact the largest preserved from the first half of the century. This indicates something about the size of the choir at Cambrai. Most pieces in these sources are concordant between the two MSS. Each contains a monophonic mass Ordinary cycle and several other monophonic liturgical pieces, written in black mensural notation.

Though the singing of polyphony continued at Cambrai for the rest of the century, and documents attest to the payment of money to scribes to copy music (in many cases the actual pieces copied are named), the only other source from Cambrai with polyphony is *CA* 29 (formerly 32) made up of assorted calendars, psalters, litanies and the like, to which have been added 13 hymns (two by Du Fay) at various points.

Sources from the second half of the century are few and fragmentary. The most important is:

Copenhagen, Kongelige Bibliotek, Frag.17, I. 12 paper ff., originally *c*27 × 21 cm, mutilated and in poor condition. Copied 1450–70, possibly in the Auvergne.

1 Gloria, 2 Credos, 5 motets, 3 French secular pieces, by Du Fay (3) and Zacara da Teramo (1); 8 pieces unidentified.

H. Glahn: 'Ein Kopenhagener Fragment aus dem 15. Jahrhundert', *Natalicia musicologica Knud Jeppesen septuagenario collegis oblata*, ed. B. Hjelmborg and S. Sørensen (Copenhagen, 1962), 59–100; J. van Benthem: 'Ein verstecktes Quodlibet ...', *TVNM*, xxiii/1 (1973), 1–11

Another fragment that may have originated in France is *D-MERa* 13*b*. This single parchment folio, *c*40 × 30 cm, contains two motets, two incomplete ones and a hymn, by Du Fay and anonymous composers. K. von Fischer ('Neue Quellen zur Musik des 13., 14. und 15. Jahrhunderts', *AcM*, xxxvi (1964), 79–97) described this fragment and suggested that it might be of Burgundian origin, or from Cambrai. *F-AM* 162 is a composite MS of presumably French origin; among its contents are 16 motets and several other polyphonic pieces, some copied *c*1500. Obrecht and Prioris are the only composers identified. See H. Hofmann-Brandt: 'Eine neue Quelle zur mittelalterlichen Mehrstimmigkeit', *Festschrift Bruno Stäblein*, ed. M. Ruhnke (Kassel, 1967), 109–15; RISM, B/IV/3 (1972), 429–34

6. LATE 15TH- AND EARLY 16TH-CENTURY GERMAN SOURCES OF CATHOLIC MUSIC. The principal MSS in this category number only about 15, but their contents form an impressively extensive repertory. Most of these large paper choirbooks contain at least 200 folios, and one has 472. About half of the MSS contain between 100 and 200 pieces each – mass Ordinary and Proper and *Magnificat* settings, hymns and motets. Although many internationally famous composers of the period are represented, there is a significant number of anonymous works and works by local composers – Raber, Notens, Aulen, Flordigal, Rupsch, Gerstenhaus, Egidius Rossely, Bartholomeus Frank and others – who remain largely obscure.

All but two of the 15 MSS originated in what is now central or eastern Germany. (*D-Mbs* 3154 is from Innsbruck, and *PL-Wu* Mf.2016 is of Silesian or Bohemian provenance. The last-named MS is included in this section because of its close relationship to *D-Bsb* 40021 and *Lu* 1494.) Most of the MSS were copied for the use of cathedrals, collegiate churches or monastic institutions;

two sources, *Mbs* 3154 and *Lu* 1494, were compiled by or for private individuals.

An examination of the gathering structure, scribal hands, watermarks and repertorial organization of the MSS makes it clear that many were originally copied in separate fascicles which were only later bound together. The MSS were obviously intended for practical use rather than ostentatious display; although some of them have modest decoration, their outward appearance is plain and unimpressive when compared with the sumptuously illuminated presentation MSS made for the nobility and high ecclesiastical officials. Nevertheless, the German sources are for the most part clearly and accurately copied and are in fairly good condition.

Munich, Bayerische Staatsbibliothek, Mus.ms.3154 ('Chorbuch des Nikolaus Leopold'). 472 paper ff., 32 × 22 cm; 19 folios missing from the beginning. Original and new foliation; 19th-century numbering of pieces. Copied by many different scribes over a long period, *c*1466–*c*1511; over 30 different watermarks. Compiled for Nicolaus Leopold, an Innsbruck schoolmaster.

65 masses, mass pairs or mass sections (Proper and Ordinary), 11 *Magnificat* settings, 1 psalm, 10 hymns, 2 motet cycles and 72 motets, with a few secular works and textless pieces. Composers represented are Martini (7), Obrecht (6), Isaac (5), Josquin, Alexander Agricola, Aulen, Busnoys, Compère, Antoine de Févin, Finck, Ninot le Petit, Paulus de Broda, Raber, Veye, Jung and a few others whose identity has not been established, or whose authorship is in doubt.

T. Noblitt: 'Das Chorbuch des Nikolaus Leopold (München, Staatsbibliothek, Mus.ms.3154): Repertorium', *AMw*, xxvi (1969), 169–208; T. Noblitt: 'Die Datierung der Handschrift Mus.ms.3154 der Staatsbibliothek München', *Mf*, xxvii (1974), 36–56; T. Noblitt, ed.: *Der Kodex des Magister Nicolaus Leopold*, EDM, 1st ser., lxxx–lxxxiii (1987–96) [complete edn]

Berlin, Staatsbibliothek zu Berlin Preussischer Kulturbesitz, Mus.ms.40021 (*formerly Z21*). 296 paper ff., 31·5 × 21·3 cm. Mostly original foliation; original covers of white tooled leather on boards, with leather spine and ornamental brass clasps. Copied by several scribes, *c*1490–1500. Exact circumstances of origin not established. Fétis discovered the MS in 1848 at Halberstadt Cathedral, and it has been assumed that it originated there. However, the repertory suggests close connections with the court of Frederick the Wise, Elector of Saxony; it is also possible that some of the paper used in the MS was produced at Torgau. Furthermore, Just (*'Ysaac de manu sua', GfMKB: Kassel 1962*, 112–14) showed that the MS was bound in Leipzig. Possibly source originally copied, assembled and bound in Saxony (Torgau and Leipzig) and sent to Halberstadt after its completion.

30 masses or mass sections (Ordinary and Proper), 10 *Magnificat* settings, 2 *Te Deum* settings, 28 hymns, 53 motets, 7 German sacred pieces and a few secular or textless pieces. Composers named are Adam von Fulda, Alexander Agricola, Aulen, B.H., Beham, Busnoys, E.O., Finck, Flordigal, Gerstenhaus, Hofhaimer, Isaac, Jacobit, Josquin, Reneri and Volckmar. Pieces by Barbireau, Compère, Ghiselin, Obrecht and Weerbeke have been identified from concordances. MS closely related to *D-Lu* 1494 and *PL-Wu* Mf.2016.

M. Just: *Der Mensuralkodex Mus.ms.40021 der Staatsbibliothek Preussischer Kulturbesitz Berlin* (Tutzing, 1975); M. Just, ed.: *Der Kodex Berlin 40021*, EDM, 1st ser., lxxvi–lxxviii (1990–91) [complete edn]

Warsaw, Biblioteka Uniwersytecka, Mf.2016 (*formerly Breslau, Musikalisches Institut bei der Universität Breslau*). ii + 156 paper ff., 33 × 23 cm. New pencil foliation; covers of new pasteboard over original wood. Feldmann (1932) dated MS *c*1500 and suggested a monastery in Silesia or possibly Bohemia as the place of origin.

95 pieces (three are duplicates), including 9 masses or mass sections, 6 *Magnificat* settings, 15 hymns, 3 Lamentations, 45 motets, 2 Latin secular pieces, 1 German secular piece and 11 textless pieces. A few of the Latin pieces have additional German texts. Only composers named in MS are Aulen, Flordigal, Bartholomeus, Isaac, M.S. and Egidius Rossely. Works by Adam von Fulda, Alexander Agricola, Josquin, B.H., Compère, Ockeghem, Rupsch and Weerbeke have been identified from concordances.

F. Feldmann: *Der Codex Mf. 2016 des Musikalischen Instituts bei der Universität Breslau: eine palaeographische und stilistische Beschreibung* (Breslau, 1932)

Leipzig, Universitätsbibliothek, 1494 ('Apel Codex'). 260 paper ff., 31 × 21 cm. Compiled by Magister Nikolaus Apel some time between *c*1492 and 1504, during the time he was a student and, later, a junior faculty member at Leipzig University.

172 pieces, almost all liturgical; repertory closely related to that in *D-Bsb* 40021 and *PL-Wu* Mf.2016.

R. Gerber, ed.: *Der Mensuralkodex des Nikolaus Apel*, EDM, 1st ser., xxxii–xxxiv (1956–75)

Jena, Universitätsbibliothek, 30, 31, 32, 33, 34, 35, 36, and Weimar, Bibliothek der Evangelisch-Lutherischen Kirchengemeinde, A. This group of pre-Reformation MSS, interrelated by common scribes and repertory, was copied for All Saints Church in Wittenberg, *c*1500–20. Except for a few scattered folios, MSS all copied on paper, and average *c*43 × 30 cm; original covers of brown or grey-brown tooled leather.

Contents exclusively settings of the Ordinary and Proper of the Mass, except for *D-Ju* 34, which contains 8 *Magnificat* settings, 117 psalms (some set to the same music), 35 hymns and 31 motets in addition to a mass Proper cycle. Only two of the sources have composer attributions: *Ju* 33 names Rener (8 pieces), and *Ju* 36 names Rener (4), Isaac (3), Josquin and Mouton. Of the pieces in the Weimar MS, about a third have been identified as Isaac's works. Other composers in this group who have been identified from concordances include Alexander Agricola, Compère, Brumel, Obrecht, Weerbeke, Ghiselin, Orto, Pipelare and Martini, but each is represented by only a few works. Gerken (1969) suggested that many of the pieces in *Ju* 30 and *Ju* 35 may be by Rener.

The *Ju* paper MSS discussed here are not to be confused with another set of MSS at the same library (*Ju* 2–5, 7–9, 12, 20–22; all but *Ju* 21 on parchment), which contain different repertory and originated at the Netherlands court at Brussels and Mechelen.

Roediger (1935); R.E. Gerken: *The Polyphonic Cycles of the Proper of the Mass in the Trent Codex 88 and Jena Choirbooks 30 and 35* (diss., Indiana U., 1969); J. Heidrich: *Die deutschen Chorbücher aus der Hofkapelle Friedrichs des Weisen: ein Beitrag zur mitteldeutschen geistlichen Musikpraxis um 1500* (Baden-Baden, 1993)

Wrocław, Biblioteka Uniwersytecka, I F 428 ('Viadrina Codex'). 251 paper ff., 40 × 28 cm. Green covers. MS formerly in the 'Viadrina' Library of the University of Frankfurt an der Oder, founded in 1506; the university and its library were moved to Breslau (now Wrocław) in 1811. Staehelin dated the MS *c*1510–30 and suggested that it originated somewhere in mid- or eastern Germany, perhaps at Frankfurt an der Oder itself.

72 pieces, including 13 masses, 2 mass Ordinary sections, 5 mass Proper sections, 6 *Magnificat* settings, 13 hymns, 22 motets, 3 German sacred pieces, 1 German secular piece and 7 textless pieces. All anonymous, but a few composers have been identified from concordances: Compère (3), Isaac (3), Adam von Fulda, Brumel, Josquin, Obrecht and Senfl.

M. Staehelin: *Der Grüne Codex der Viadrina: eine wenig beachtete Quelle zur Musik des späten 15. und frühen 16. Jahrhunderts in Deutschland* (Mainz, 1971)

Dresden, Sächsische Landesbibliothek, Mus.1/D/505 (*formerly Annaberg 1248*) *and Mus.1/D/506* (*formerly Annaberg 1126*). These 2 choirbooks were copied *c*1510–30 for the use of the Annen-Kirche, Annaberg, a town in the Erzgebirge, which divides what is now Germany from the Czech Republic. MSS taken to *D-Dl* in 1968, at which time they received new numbers (owing to a mislabelling of a widely circulated microfilm of these sources, the correct call numbers given above are frequently confused).

Dl 1/D/505 (315 paper ff., 39·4 × 28 cm) contains 166 pieces, including 15 mass Ordinary cycles or sections, 93 mass Proper sections, 5 *Magnificat* settings, 2 *Te Deum* settings, 2 psalms, 10 hymns, 1 Passion, 34 motets, 1 German sacred piece and 3 textless pieces. Composers named are Alexander Agricola, Brumel, Compère, Ghiselin, Isaac, Josquin, Martini, Obrecht, Raber and Pierre de La Rue, to whom is ascribed the ubiquitous Passion elsewhere attributed variously to Longueval, Obrecht and A la Venture. Works by Adam von Fulda, Finck, Rener and Stoltzer have been identified from concordances; Ninot le Petit and Isaac have conflicting attributions.

Dl 1/D/506 (261 paper ff., 40·8 × 28·9 cm) contains 162 pieces, including 38 masses or mass Ordinary sections, 73 mass Proper sections, 8 *Magnificat* settings, 38 hymns, 4 motets and 1

textless piece. All anonymous; only a few composers identified, each represented by only one or two works: Alexander Agricola, Brumel, Compère, Josquin, Isaac, Notens and Raber (some with conflicting attributions).

T. Noblitt: 'Manuscript Mus.1/D/505 of the Sächsische Landesbibliothek Dresden (olim Annaberg, Bibliothek der St. Annenkirche, Ms.1248)', *AMw*, xxx (1973), 275–310; T. Noblitt: 'Manuscript Mus.1/D/506 of the Sächsische Landesbibliothek, Dresden (*olim* Annaberg, Bibliothek der St. Annenkirche, Ms.1126)', *MD*, xxviii (1974), 81–127; W. Steude: *Untersuchungen zur mitteldeutschen Musiküberlieferung und Musikpflege im 16. Jahrhundert* (Leipzig, 1978)

7. German lied manuscripts. MS sources of German secular polyphony during the 15th and 16th centuries usually have heterogeneous contents in which the German pieces are intermingled with Latin sacred and French secular works. Only from the appearance of the earliest printed partbooks of German song in the second decade of the 16th century does there appear to have been any homogeneous repertory of German secular polyphony represented as such in the sources. During the 15th century the sources tended either to include a large number of contrafacta from French and Italian music (as in the Wolkenstein MSS) or extremely mixed compilations of music from all parts of Europe but including a fairly small and distinct German song repertory. Most of the songs in the 16th-century MSS are also to be found in printed books: the sources listed here are important either because of their scribe, because of the repertory they represent, or because they contain an unusually large proportion of unpublished music.

In German MSS it is usually true to say that size is directly related to the degree of formality. The large Wolkenstein sources (like their contemporary sources of monophonic song, the Jena and Colmar MSS, see §III) are presentation volumes, whereas the medium-sized MSS of Senfl (*D-Mbs* 3155) or pseudo-Wagenrieder (*Mu* 328–31 and *A-Wn* 18810) are evidently attempts to record and define a repertory, and the smallest MSS (*D-Mbs* Cgm 810 and *CH-Bu* F.X.1–4) are designed as private collections.

Innsbruck, Universitätsbibliothek, s.s. ('Wolkenstein-Rodeneck Codex'). ii + 48 parchment ff., 49 × 34 cm. Modern and original foliation; original covers of white leather over boards; original index. Copied 1432–45 under direction of Oswald von Wolkenstein, a bust of whom appears on f.1*v*. A closely related source is *A-Wn* Vind.2777, containing 19 polyphonic lieder (all by Oswald) along with monophonic pieces.

81 monophonic and 37 polyphonic German songs mostly by Oswald von Wolkenstein.

J. Schatz and O. Koller, eds.: *Oswald von Wolkenstein: Geistliche und weltliche Lieder*, DTÖ, xviii, Jg.ix/1 (1902/*R*); H. Moser and U. Müller, eds.: *Oswald von Wolkenstein: Abbildungen zur Überlieferung, I: Die Innsbrucker Wolkenstein-Handschrift B* (Göppingen, 1972) [complete facs.]; L. Welker: 'New Light on Oswald von Wolkenstein: Central European Traditions and Burgundian Polyphony', *EMH*, vii (1987), 187–226

Berlin, Staatsbibliothek zu Berlin Preussischer Kulturbesitz, Mus.40613 ('Lochamer Liederbuch' and *Fundamentum organisandi* of Paumann). 46 paper ff., *c*21·5 × 15·5 cm, enclosed in 2 parchment leaves (originally the covers). Brown tooled leather covers added some time after 1582; these have ornamental borders, several coats-of-arms associated with Nuremberg families and the inscriptions 'Discantus' and '15 BA 82'. Both the leather and the original parchment covers were retained when MS was rebound and restored in modern times. Copied *c*1452–60 at Nuremberg, probably by associates of the blind organist Conrad Paumann. Main scribe may have been Frater Jodocus von Windsheim.

41 German secular pieces (only 9 polyphonic), 3 monophonic Latin contrafacta of secular works, 1 monophonic textless piece and 3 texts with no music. All anonymous: attributions can be made to Binchois (1 tenor), the Monk of Salzburg (1) and Oswald von Wolkenstein (1). The *Fundamentum organisandi* of Paumann, bound together with the songbook, contains 32 keyboard pieces in tablature, most probably by Paumann.

W. Salmen: *Das Lochamer Liederbuch: eine musikgeschichtliche Studie* (Leipzig, 1951); C. Petzsch: *Das Lochamer Liederbuch: Studien* (Munich, 1967); W. Salmen, ed.: *Das Lochamer Liederbuch*, DTB, Sonderreihe, ii (1972)

Munich, Bayerische Staatsbibliothek, Cgm 810 (formerly Mus.ms.3232; Cim.351a) ('Schedel Liederbuch'). ii + 170 paper ff., 15 × 10·5 cm. Original foliation, original covers of leather over boards. Compiled and copied mostly by Hartmann Schedel (1440–1514), a prominent physician and humanist. Schedel began copying *c*1460, as a student in Leipzig; he made later additions at intervals during the next decade while living at Augsburg and Nuremberg.

1 *Magnificat*, 17 motets, 74 German secular pieces, 19 French secular pieces, 1 Italian secular piece and 17 textless pieces, by Barbingant, Bedyngham, Binchois, Brollo, Du Fay, Frye, Ockeghem, Pullois, Touront and others.

B. Wackernagel, ed.: *Das Liederbuch des Dr. Hartmann Schedel: Faksimile*, EDM, 1st ser., lxxxiv (Kassel, 1978); N. Böker-Hell, H. Heckmann and I. Kindermann, eds.: *Das Tenorlied: mehrstimmige Lieder in deutschen Quellen 1450–1580*, ii (Kassel, 1982) [thematic index]; M. Kirnbauer: 'Schedelsches Liederbuch', *MGG2*; M. Kirnbauer: *Hartmann Schedel und sein Liederbuch* (diss., U. of Basle, 1998)

Kraków, Biblioteka Jagiellońska, Mus.40098 (formerly Berlin, Preussische Staatsbibliothek) ('Glogauer Liederbuch'). 3 paper partbooks, in oblong octavo, *c*15·5 × 21 cm (among the earliest partbooks known). One main scribe copied the MS *c*1480, perhaps at Glogau Cathedral in Silesia (now Głogów, Poland).

294 pieces: 2 mass Ordinary sections, 18 mass Proper sections, 18 Office hymns, 1 processional hymn, 120 motets (some are contrafacta of French secular works), 4 German sacred pieces, 4 Latin secular pieces, 63 German secular pieces, 1 Italian piece, 1 Slavonic piece, 3 quodlibets, 59 textless pieces (including dances and other pieces with German titles; some have been identified as French chansons). Composers represented include Attamasch, Barbingant, Bebrleyn, Brollo, Busnoys, Caron, Du Fay, Martini, Obrecht, Rubinus, Tinctoris and Touront (most of the pieces, however, remain anonymous).

H. Ringmann and others, eds.: *Das Glogauer Liederbuch*, EDM, 1st ser., iv (1936); viii (1937); lxxxv–lxxxvi (1981) [complete edn]; J.A. Owens, ed.: *Kraków, Biblioteka Jagiellónska, Glogauer Liederbuch*, RMF, vi (1986) [facs.]

Munich, Bayerische Staatsbibliothek, Mus.ms.3155. iv + 133 paper ff., 13·5 × 20·5 cm (oblong). Ff.104*v*–133*v* are blank. Original covers of dark brown tooled leather. Two distinct sections, distinguished by different paper and scribal hands. First part (to f.86) dates from *c*1520 and includes Senfl works composed at the court of Maximilian I; this part was probably copied by Senfl himself before his departure from the court, or shortly after. Second part (ff.86*v*–104) dates from *c*1525–35 and includes Senfl repertory composed at the Munich Hofkapelle. 1 scribe copied most of this section, probably at Munich; last 3 pieces are later additions in another hand.

97 German secular pieces (3 without text), most by Senfl. Among other composers represented are Hofhaimer, Isaac and Rener.

Bente (1968); N. Böker-Heil, H. Heckmann and I. Kindermann, eds.: *Das Tenorlied: mehrstimmige Lieder in deutschen Quellen 1450–1580*, ii (Kassel, 1982) [thematic index]; R. Birkendorf: *Der Codex Pernner* (Augsburg, 1994)

Basle, Öffentliche Bibliothek der Universität, F.X.10. 1 paper partbook, *c*11 × 16 cm. A date in the MS is difficult to read, but may be MDXX. One of several MSS in the Basle University Library which originated within the circle of Bonifacius Amerbach (1495–1562), the Basle humanist and scholar.

27 German secular pieces and 1 Italian secular piece. Barbireau (1), Busnoys (1) and anonymous.

Kmetz (1988); Kmetz (1995)

Vienna, Österreichische Nationalbibliothek, Mus.18810 (formerly A.N. 35.E.126). 5 paper partbooks, 15·2 × 21 cm (oblong). Original covers of tooled leather, with date 1524. Scribe was probably not Lukas Wagenrieder, Senfl's copyist (Schneider). Closely related by

repertory, scribe and watermarks to *D-Mu* 8° 328–31 (formerly Cim.44*c*). Both sources probably originated in Augsburg.

6 motets, 3 German sacred pieces, 49 German secular pieces, 8 French secular pieces, 3 Flemish secular pieces, 1 Italian secular piece, 16 textless pieces (all of the preceding with text incipits or titles only), by Blanckenmüller, Hofhaimer, Isaac, Josquin, Pierre de La Rue, Rener, Senfl (25) and others.

Bente (1968), 264ff, esp. 269–70; C. Gottwald: *Die Musikhandschriften der Universitätsbibliothek München* (Wiesbaden, 1968), 83–92 [*Mu* source only]; N. Böker-Heil, H. Heckmann and I. Kindermann, eds.: *Das Tenorlied: mehrstimmige Lieder in deutschen Quellen 1450–1580*, ii (Kassel, 1982) [thematic index]; J.O. Robison: 'Vienna, Austrian National Library, Manuscript 18810: a Repertory Study and Manuscript Inventory with Concordances', *RMARC*, no.19 (1983–5), 68–84; M. Schneider, ed.: *Collection of German, French and Instrumental Pieces: Wien, Österreichische Nationalbibliothek MS 18810* (Peer, 1987) [complete facs. with introduction and inventory]

Basle, Öffentliche Bibliothek der Universität, F.X.1–4. 4 paper partbooks, 9·7 × 15·3 cm. New pencil foliation; original and new numbering of pieces. Original covers of brown tooled leather, with gold imprinting. Dates from 1522 to 1524 appear; the latter, however, may refer to dates of composition rather than copying. Hoffmann-Erbrecht (*Thomas Stoltzer: Leben und Schaffen*, Kassel, 1964, p.165) dated the MS *c*1540.

4 motets, 102 German sacred and secular pieces and 13 French secular pieces, by Cesar, Dietrich, Greitter, Isaac (10), Josquin, Pierre de La Rue, Senfl (at least 10), Wüst (10) and others.

Kmetz (1988); Kmetz (1995); J. Kmetz: 'The Compilation and Ownership of Basel University Library Manuscript F X 1–4', *Gestalt und Entstehung musikalischer Quellen im 15. und 16. Jahrhundert*, ed. M. Staehelin (Wiesbaden, 1998), 133–47

Iserlohn, Evangelische Kirchengemeinde, Varnhagen-Bibliothek. Fragments recovered from binding of incunabulum IV 36 F124. 5 paper partbooks, 8 × 12 cm. About a third of original contents now missing, judging from the original index, found in a binding of a *Herbarius* (Mainz, 1485); most of the missing folios, like the index folios, were probably used for book bindings. Dated 1544, probably copied at Augsburg or Nuremberg. The first 33 songs were copied directly from Egenolff's *Reutterliedlin* (RISM 1535[11]).

9 motets, 102 German sacred and secular pieces and 90 textless pieces, by Alexander Agricola, Arthopius, Bosch, Lemlin, Senfl, Susato and others.

G. Sowa: 'Die Liederhandschrift 1544: Manuskript Iserlohn (Westfalen)', *AMw*, xxiv (1967), 266–82

Basle, Öffentliche Bibliothek der Universität, F.X.21. 1 paper partbook, 7·4 × 10·4 cm. Original foliation; new pencil numbering of items, 1–118 (some are texts only). New covers of white parchment on cardboard. MS consists of several layers, dating from *c*1529 to 1575. Latest layer copied by Ludwig Iselin (1559–1612), a nephew of Basilius Amerbach, son of the humanist Bonifacius Amerbach.

1 mass section, 3 motets, 93 German sacred and secular pieces and 2 Italian secular pieces, by Dietrich, Finck, Isaac, Senfl, Sicher and others.

Kmetz (1988); Kmetz (1995)

8. Chansonniers. The Franco-Flemish chanson was intensively cultivated in Italy as well as in France and the Low Countries during the second half of the 15th century and the first years of the 16th. The prominent role of Italian patronage in the dissemination of this large repertory is underscored by a collation of the surviving MS sources, which brings to light the surprising fact that most are of Italian rather than French provenance.

These MSS have more or less similar physical characteristics. They are in small choirbook format (average *c*19 × 14 cm), usually upright rather than oblong, with one chanson copied on each opening. The discantus part and one or more underlaid stanzas of text appear on the verso side of the opening, with the tenor and contratenor parts opposite on the recto. The tenor and contratenor usually have text incipits only, and in some Italian sources all the parts have only incipits of text. Although French texts naturally predominate, most chansonniers contain some pieces with Italian, Flemish or Spanish texts, along with one or more Latin motets. Many of these MSS provide visual as well as musical delights: they are neatly and elegantly (though not always accurately) copied, with illuminated initials and miniatures cleverly and beautifully decorated with whimsical or grotesque faces and other motifs.

Among the best known of these sources are the 'Central French' chansonniers, a group of related MSS containing a repertory that belongs primarily to France. Once thought to come from Flanders or the Burgundian court, they are now shown to be from Paris and the areas along the Loire Valley occupied by the French royal court (see P.M. Higgins: *Antoine Busnois and Musical Culture in Late Fifteenth-Century France and Burgundy* (diss., Princeton U., 1987), and L. Perkins: 'Modern Methods, Received Opinion and the Chansonnier', *ML*, lxix (1988), 356–64).

Dijon, Bibliothèque Municipale, 517 (formerly 295). 204 parchment ff., 17·5 × 12·8 cm; original covers of tan leather over boards. The main scribe also copied *DK-Kk* Thott 291 and portions of *US-Wc* M2.1 L25 Case; a second scribe, who copied the last 3 pieces, also worked on *I-Fr* 2794. Plamenac dated the MS *c*1470–75.

160 French secular pieces and 1 textless piece; attributions to Busnoys (30), Ockeghem (10), Barbingant, Caron, Compère, Hayne van Ghizeghem and Tinctoris. Composers identified from concordances include Bedyngham, Dunstaple, Binchois, Boubert, Convert, Delahaye, Du Fay, Michelet, Molinet, Morton and Simon le Breton.

D. Plamenac, ed.: *Dijon: Bibliothèque publique, manuscrit 517*, Publications of Mediaeval Musical Manuscripts, xii (Brooklyn, NY, 1970) [see also review by M. Picker, *JAMS*, xxvi (1973), 336–40]; Barret (1981)

Copenhagen, Kongelige Bibliotek, Thott 291, 8°. 49 parchment ff., 17 × 12 cm. The scribe also copied most of *F-Dm* 517 and portions of *US-Wc* M2.1 L25 Case. Jeppesen (1927) dated the MS 1470–80.

34 French secular pieces, all anonymous; identified composers include Busnoys (5), Convert (3), Basiron, Delahaye, Hayne van Ghizeghem, Michelet, Molinet, Morton, Ockeghem, Prioris and Simon le Breton. 1 of the pieces is a Sermisy chanson, added later by another hand.

Jeppesen (1927)

Washington, DC, Library of Congress, M2.1 L25 Case ('Laborde Chansonnier'; fig.11*b* above). 151 parchment ff., 12·6 × 9·2 cm. MS in several layers, probably copied *c*1465–80. First layer has scribal and repertorial connections with *D-W* 287; second layer in same hand that copied *DK-Kk* Thott 291 and most of *F-Dm* 517; 1 of the scribes in third layer also appears in *I-Fr* 2794.

103 pieces, by Frye, Caron, Basiron, Joye, Convert, Du Fay, Busnoys, Ockeghem, Tinctoris, Hayne van Ghizeghem, Compère, Prioris and Delahaye.

H. Bush: 'The Laborde Chansonnier', *PAMS 1940*, 56–79; M. Gutiérrez-Denhoff: 'Untersuchungen zu Gestalt, Entstehung und Repertoire des Chansonniers Laborde', *AMw*, xii (1984), 113–46; C. Goldberg: *Das Chansonnier Laborde* (Frankfurt, 1992); D. Fallows: *A Catalogue of Polyphonic Songs, 1415–1480* (Oxford, 1999)

Wolfenbüttel, Herzog August Bibliothek, Guelf.287 Extravagantium. 70 parchment ff., 14·8 × 10·4 cm. The main body of the manuscript has a heavy overlap, in both repertory and readings, with the first section of *US-Wc* M2.1 L25 Case. Prepared for the royal courtier Estiene Petit, whose name emerges from the first letters of nos.2–13, probably *c*1467.

56 pieces, mostly French chansons, all anonymous. Identified composers include Du Fay (6), Ockeghem (6), Busnoys (4), Frye, Convert, Binchois, Basiron, Morton, Prioris and Hayne van Ghizeghem.

M. Gutiérrez-Denhoff: *Der Wolfenbütteler Chansonnier …: Untersuchungen* (Wiesbaden, 1985); M. Gutiérrez-Denhoff, ed.: *Der Wolfenbütteler Chansonnier*, Musikalische Denkmäler, x (Mainz, 1988) [complete edn]; D. Fallows: '"Trained and Imersed in All Musical Delights": Towards a New Picture of Busnoys', *Antoine Busnoys: Notre Dame, IN, 1992*, 21–50

Other chansonniers of French provenance from the second half of the 15th century are: *F-Pn* Rés.Vmc 57, Chansonnier Nivelle de la Chaussée (67 pieces), and *I-Fr* 2794 (60 chansons and 8 Latin pieces).

Of somewhat later date (*c*1490–1510) are the following chansonniers: *F-Pn* fr.2245 (23 chansons by Alexander Agricola, Fresneau, Hayne van Ghizeghem, Josquin, Mureau, Ockeghem, Prioris and others); *Pn* fr.1597 (67 pieces by Alexander Agricola, Brumel, Compère, Du Fay, Hayne van Ghizeghem, Josquin, Prioris and others); *GB-Lbl* Roy.20 A.xvi (28 chansons); and Harl.5242 (31 chansons).

A beautifully illuminated chansonnier with a unique format is *F-Pn* Rothschild 2973 ('Chansonnier Cordiforme'; see fig.11*a* above). It consists of 72 parchment folios bound in red velvet, shaped in the form of a heart. Copied probably in Geneva before 1477, the MS is the work of a single scribe, and was compiled for Jean de Montchenu. It contains 14 Italian and 30 French secular pieces, all anonymous. Identified composers include Du Fay, Bedyngham, Busnoys, Ockeghem, Morton and Binchois.

E. Kottick: 'The Chansonnier Cordiforme', *JAMS*, xx (1967), 10–27; E.L. Kottick, ed.: *The Unica in the Chansonnier Cordiforme*, CMM, xliii (1967); G. Thibault and D. Fallows, eds. *Chansonnier de Jean de Montchenu* (Paris, 1991) [complete edn]

The Aragonese court in Naples was most probably a focal point for the cultivation of the French chanson in that region. Although only a few of the Neapolitan MSS described below can be linked conclusively with the Aragonese court itself, Atlas (1975–6) was able to establish their Neapolitan provenance quite convincingly, using evidence derived from a collation of concordances and a comparison of variant readings of the same pieces in different sources.

San Lorenzo de El Escorial, Real Biblioteca del Monasterio, IV.a.24. iii + 137 + iii paper ff., 21·1 × 14·2 cm. Hanen (1983) dated the MS *c*1460–74, and identified 4 principal scribes.

122 pieces, including 89 French and 24 Italian secular works. Composers named are Pullois (7), Braxatoris, Domarto, Dunstaple, Horlay, Johannes Legrant, Morton and Ockeghem. Other identified composers include Binchois (8), Du Fay (6), Basin, Bedyngham, Cornago and Frye.

E. Southern: 'El Escorial, Monastery Library, Ms. IV.a.24', *MD*, xxiii (1969), 41–79; E. Southern, ed.: *Anonymous Pieces in the MS El Escorial IV.a.24*, CMM, lxxxviii (1981); M.K. Hanen: *The Chansonnier El Escorial IV. a.24* (Henryville, PA, 1983)

New Haven, Yale University, Beinecke Rare Book and Manuscript Library, 91 ('Mellon Chansonnier'; fig.11*c* above). 81 parchment ff., 19·2 × 13·5 cm. Copied by a single scribe, *c*1476.

57 pieces, mostly with French texts, but also including a few works with Spanish, Latin, Italian and English texts. Among composers represented are Busnoys (15), Vincenet (4), Du Fay (4), Ockeghem (3), Joye, Tinctoris, Frye, Caron, Regis, Morton, Barbingant and Hayne van Ghizeghem.

M. Bukofzer: 'An Unknown Chansonnier of the 15th Century', *MQ*, xxviii (1942), 14–49; edn by L. Perkins and H. Garey (New Haven and London, 1979)

Other Neapolitan sources, copied mostly during the 1480s, include *I-Bc* Q16, *MC* 871, pp.247–435, and *E-Sc* 5-1-43 (some leaves of which are now *F-Pn* n.a.fr.4379).

The surviving chansonniers of Florentine provenance are generally inferior in their treatment of the French texts. Much of the time only incipits are given, and even these are often quite corrupt. However, the musical readings in these sources are of very high quality.

Berlin, Staatliche Museen Preussischer Kulturbesitz, Kupferstichkabinett, 78.C.28 (formerly Hamilton 451). i + 70 + i parchment ff., 24·6 × 16 cm. Original blue velvet covers. Reidemeister (1973) showed that the illumination and decoration were done at a Florentine workshop, and that the MS was presented as a wedding gift to a Florentine couple, Margherita Castellani and Bernardino Niccolini, *c*1465. Atlas argued, on the basis of repertory and date, that the MS was nevertheless copied in Naples; but Fallows and Warmington offer overwhelming arguments for Florentine origin.

43 pieces, all but two textless, and all anonymous. Concordances show that the textless pieces are mostly French chansons; identified composers include Basin, Bedyngham, Du Fay, Binchois, Frye, Morton and Pullois.

P. Reidemeister: *Die Handschrift 78 C 28 des Berliner Kupferstichkabinetts* (Munich, 1973); A.W. Atlas: 'La provenienza del manoscritto Berlin 78.C.28: Firenze o Napoli?', *RIM*, xiii (1978), 10–29; D. Fallows: 'Polyphonic Song in the Florence of Lorenzo's Youth, *ossia* the Provenance of the Manuscript Berlin 78.C.28: Naples or Florence?', *La musica a Firenze al tempo di Lorenzo il Magnifico: Florence 1992*, 47–61; F. Warmington: 'The Missing Link: the Scribe of the Berlin Chansonnier in Florence', ibid., 63–8

Vatican City, Biblioteca Apostolica Vaticana, C.G.XIII 27 ('Codex Medici'). vi + 119 + vi paper ff., 23·2 × 17 cm. Original covers of brown morocco leather with portrait of Julius Caesar and the inscription 'DIVI IVLI'. Copied for Giuliano de' Medici, youngest son of Lorenzo de' Medici; the Medici coat-of-arms appears within an initial on the first opening with music.

108 pieces, including 83 French and 10 Italian pieces. Composers named are Alexander Agricola (15), Isaac (12), Baccio [Bartolomeo degli Organi], Basiron, Caron, Compère, Felice, Fresneau, Arnulfo G[iliardi], Hayne van Ghizeghem, Japart, Josquin, Lannoy, Martini, Molinet, Mureau, Obrecht, Virgilius, Ockeghem, Pietrequin, Stokem and Enrique [Urrede].

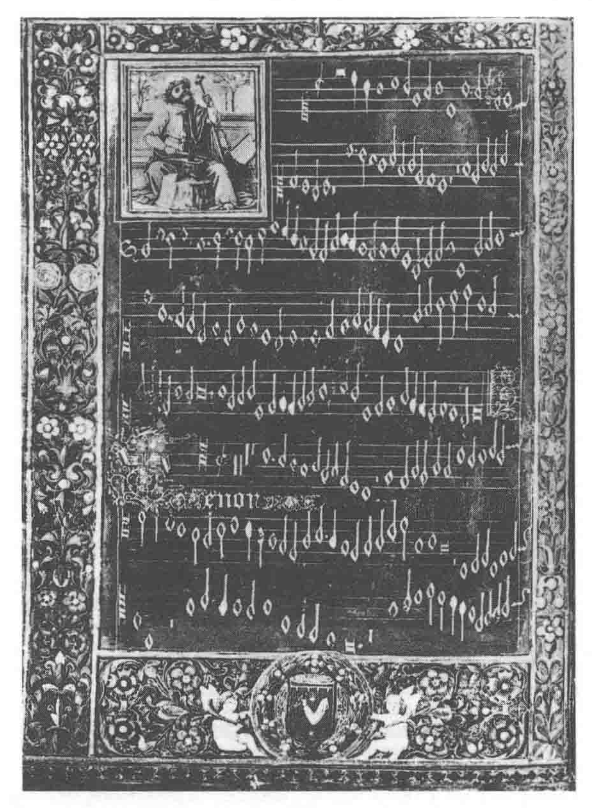
Atlas (1975–6)

Florence, Biblioteca Nazionale Centrale, Banco Rari 229 (formerly Magl.XIX 59). v parchment + 325 paper + i parchment ff., 24 × 17 cm. Brown tooled leather covers. Elaborately illuminated, especially the parchment folios at the beginning, which include a portrait formerly believed to be that of the composer Johannes Martini; H.M. Brown suggested that the portrait is actually that of Alessandro Braccesi, the owner of the MS (fig.43).

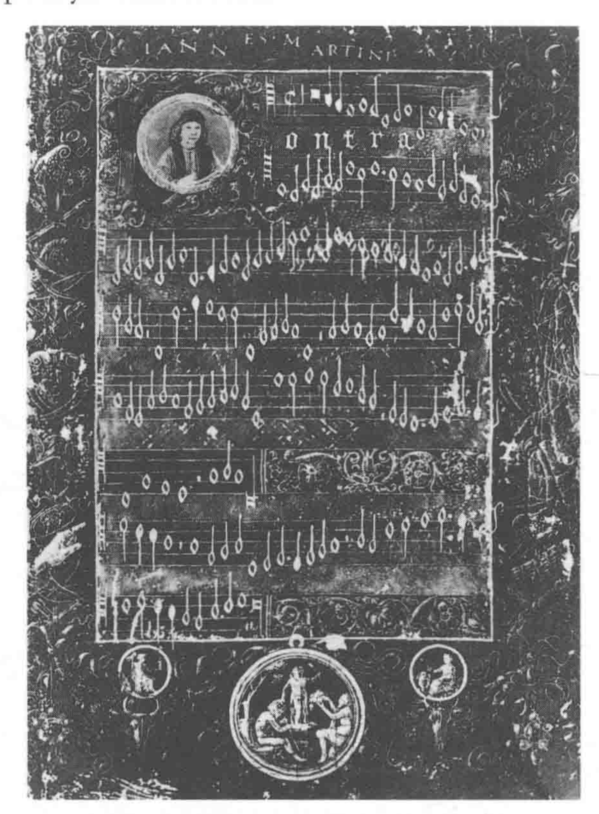
268 pieces, including 163 pieces with French incipits or titles and 20 textless pieces which have French texts in other sources; also included are Italian and Flemish secular pieces and a few Latin motets. Among composers represented are Alexander Agricola (26), Isaac (23), Martini (21), Busnoys (20), Caron (10), Compère, Congiet, Josquin, Lannoy, Mureau, Obrecht, Regis, Robinet, Stokem and Tinctoris.

Brown (1983) [complete edn]

Paris, Bibliothèque Nationale de France, fr.15123 ('Pixérécourt Chansonnier'). 197 parchment ff., 18 × 12 cm. Atlas (1975–6) noted the absence of works by Isaac, and concluded that the MS must have been copied in the early 1480s, antedating Isaac's arrival in Florence in 1484. H.M. Brown believed the MS was produced in the same scribal workshop as *I-Fn* B.R.229.



170 French, Italian, Spanish and Latin pieces, by Busnoys (21), Caron, Ockeghem, Compère, Cornago, Du Fay, Morton and Ycart.



Atlas (1975–6)

Florence, Biblioteca Nazionale Centrale, Magl.XIX 178. vii + 78 +i paper ff., 11·4 × 16·5 cm (one of the earliest oblong chansonniers).

73 pieces, including 62 French chansons (several are textless in this source), along with Italian, Flemish, Spanish and Latin pieces. Attributions to Alexander Agricola (22), Josquin (11), Isaac (9), Compère, Du Fay, Hayne van Ghizeghem, Japart, Martini, Obrecht, Pietrequin, Stokem and Gaspar [van Weerbeke]. Identified composers include Busnoys, Caron, Lannoy, Molinet, Ockeghem and Urrede.

RISM, B/IV/5 (1991), 181–95 [inventory]; W.J. Powers: *The Music Manuscript Fondo Magliabechi XIX.178 of the Biblioteca nazionale centrale, Florence: a Study in the Changing Role of the Chanson in Late Fifteenth-Century Florence* (diss., Columbia U., 1994)

43. Florence, Biblioteca Nazionale Centrale, Banco Rari 229 (formerly Magl.XIX 59), ff.2v–3r: the first opening of a late 15th-century chansonnier copied in Florence, with a portrait probably of the original owner, Alessandro Braccesi, on the recto and his coat-of-arms on the verso below a miniature of Tubalcain, one of the biblical inventors of music; miniatures attributed to Monte di Giovanni del Fora

Other chanson sources which are definitely or probably of Florentine provenance include *I-Bc* Q17 (formerly 148), *Fn* Magl.XIX 176 and *Fr* 2356.

Two sources which originated in northern Italy should also be mentioned. The first, *I-Rc* 2856 (formerly O.V.208), contains the combined arms of the d'Este and Gonzaga families, suggesting a connection with the marriage of Isabella d'Este and Francesco Gonzaga (February 1490) though Wolff (1970) and Lockwood (1984) argue for a date closer to 1480. Copied mostly by one scribe, the MS contains 124 pieces, including 105 French chansons, in addition to Flemish, Italian and Latin pieces.

Composers represented in the manuscript are Martini (23), Alexander Agricola (16), Busnoys (11), Hayne van Ghizeghem (9), Caron (7), Compère (6), Ockeghem (5), Josquin (5) and others. *Bc* Q18 (formerly 143) was probably copied in Bologna; one of the scribes has been identified as Giovanni Spataro, who is known to have worked there. The MS contains 90 pieces, including 28 Italian and 23 French secular pieces, all anonymous except for one problematic attribution to 'Rubinet' which appears in the space normally devoted to the text incipit. Composers identified from concordances include Alexander Agricola, Brumel, Busnoys, Cara, Caron, Compère, Isaac, Josquin, Lurano, Obrecht, Pesenti, Tromboncino, Urrede and Vincenet.

A.S. Wolff: *The Chansonnier Biblioteca Casanatense 2856: History, Purpose, and Music* (diss., North Texas State U., 1970); Lockwood (1984); S.F. Weiss: 'Bologna Q 18: Some Reflections on Content and Context', *JAMS*, xli (1988), 63–101

The continued popularity of the chanson in Italy well into the second and third decades of the 16th century is reflected in sources such as *I-CT* 95–6 (whose tenor partbook is in *F-Pn* n.a.fr.1817), probably copied for Giuliano de' Medici, and *I-Fc* Basevi 2442, thought to have been written out for Filippo Strozzi. In France itself few MSS containing chansons seem to have been copied after the 1540s, presumably because printing had by then become sufficiently viable economically to compete effectively. Chansons also circulated in MS in England from the early years of the century; the first source to transmit the repertory would appear to be *GB-Cmc* Pepys 1760, copied in France during the second decade for the English royal house. This and other early 16th-century MS sources of continental music sent to England at this time were prepared as diplomatic gifts, but by the second half of the century chansons also begin to occur in non-royal sources, suggesting a widening of patronage and the growth of musical literacy (see also §19 below). The libraries of Henry Fitzalan, Earl of Arundel, and the Norfolk gentleman Edward Paston both included MSS containing chansons, and a source such as the Winchester Partbooks (*WCc* 153), dated 1564–6, is quite typical of English taste in its transmission of the works of Sermisy and his followers long after they had ceased to be popular in France (see the summary in J.A. Bernstein: 'An Index of Polyphonic Chansons in English Manuscript Sources, c.1530–1640', *RMARC*, no.21 (1988), 21–36). The Italian influence on English musical life of the period has often been emphasized, but the chanson also continued to play an important role until the mid-17th century.

9. Manuscripts of Italian secular music. Du Fay and some of his contemporaries occasionally set Italian texts, but it was not until well into the second half of the 15th century that substantial numbers of Italian secular pieces began to appear. At first these are found in MSS containing mostly French secular compositions, or in sources with mixed contents. Some 40 Italian pieces are in *I-MC* 871, a source dating from about 1480. *E-E* IV.a.24, a chansonnier, has 25 Italian works; 24 are in *Sc* 7-1-28; 21 in *F-Pn* fr.15-123; and 15 in *I-Fn* Magl.XIX 176. These pieces are by such non-Italians as Caron, Bedyngham, Du Fay and Cornago, and are not yet in any distinctive Italian style.

The first MSS devoted largely or completely to Italian secular music appeared in the final years of the 15th century and the first decades of the 16th. Their repertory is similar to that of the printed collections of frottolas of the early 16th century, with which these MSS share many common pieces and composers; but several hundred pieces are found only in MSS. This is music for solo singers and players, and the books are quite small. Most of them are oblong; they are among the first MSS in this shape. Some of them predate the first Petrucci prints, and it seems likely that the characteristic oblong shape of the latter was modelled after these MSS, which were certainly known to Petrucci. Some of the important MSS of this sort are:

Modena, Biblioteca Estense e Universitaria, α.F.9.9. 8 parchment + 72 (of an original 100) paper ff., 11·1 × 16·6 cm. Text underlaid only for top voice. Beautifully copied and illuminated, with miniatures of birds and various plants on many pages; original covers of brown leather tooled with gold. Original index gives names of pieces on folios now missing. Dated 1496; copied probably in Padua.

82 Italian songs (of an original 100) for 2–4 voices, by Franciscus Venetus [Francesco d'Ana], Giovanni Brocco and Crispinus. Composers of only 10 are known, from attributions and concordances. 18 of the 82 are incomplete because of loss of folios.

F. D'Accone, ed.: *Modena, Biblioteca Estense e Universitaria, MS alpha F.9.9*, RMF, xiii (1987); G. La Face Bianconi: *Gli strambotti del codice estense α.F.9.9* (Florence, 1990)

Florence, Biblioteca Nazionale Centrale, Banco Rari 230. 151 paper ff. (of an original 200), 14·8 × 22·1 cm. Original ink foliation, bound in modern white parchment covers. Copied by a single scribe, this MS contains almost all known secular works by the Florentine composers Coppinus, Bartolomeo degli Organi and Serragli. Copied in Florence *c*1500.

156 Italian secular pieces for 2–4 voices (40 incomplete because of missing folios), by Coppinus, Giacomo Fogliano, Isaac, Lurano, Serragli, Bartolomeo degli Organi, Cara, Tromboncino and others; 99 anonymous.

F. D'Accone, ed.: *Florence, Biblioteca Nazionale Centrale MS Banco Rari 230*, RMF, iv (1986); RISM, B/IV/5 (1991), 195–203

Paris, Bibliothèque Nationale de France, Fonds du Conservatoire, Rés.Vm⁷676. 116 paper ff., 24 × 17 cm. Original first gathering missing, original foliation 9–125. Simple red and blue initials are the only attempt at ornamentation in this unpretentious book, probably for performance. Copied by Lodovico Milanese, for use at Ferrara or Mantua, in 1502.

N. Bridgman: 'Un manuscrit italien du début du XVIe siècle à la Bibliothèque nationale', *AnnM*, i (1953), 177–267; Jeppesen (1968–70), ii, 84ff, 176–81; F. Lesure, ed.: *Manuscrit italien de frottole (1502)* (Geneva, 1979) [facs]

Jeppesen's *La frottola*, ii (Copenhagen, 1969), is a detailed bibliography of frottola MSS to which one further source can now be added, *I-Rvat* vat.mus.571, mostly devoted to motets. Among the more important of these sources are *Mt* 55, *Vnm* IV.1795–8, *Fn* B.R. 337, and *GB-Lbl* Eg.3051 which, as Staehelin has shown, has the first 12 gatherings of a once complete MS, some of the remainder of which survives as *US-Wc* M2.1 M6 Case (see M. Staehelin: *Schweizer Beiträge zur Musikwissenschaft*, i, 1972, pp.55–81). These MSS are usually paper, though occasionally parchment is used. Several, such as *I-Vnm* IV.1795–8, are partbooks and are among the earliest MSS in this format. By the time that the early madrigal began to be copied, partbooks had become the norm, and some parts of the repertory were copied in Florence by known scribes and circulated in MS before being printed (see I. Fenlon and J. Haar, *RIM*, xiii, 1978, pp.212–42).

The more central sources of Italian secular music of this period include *I-Fc* Basevi 2495, *MOe* γ.L.11.8, *Bc* Q21 (see C. Gallico, ed.: *Un canzoniere musicale italiano del Cinquecento*, Florence, 1961, a study and partial edition), and *US-Cn* Case VM 1578 M91. The latter, four of an original set of five, have been completed by the discovery of the altus book at Oscott College, Sutton Coldfield, England (the 'Newberry-Oscott Partbooks'; see C. Slim: 'A Royal Treasure at Sutton Coldfield', *EMc*, vi, 1978, pp.57–74). Copied on parchment and delicately illuminated, they are the most elaborate of the early madrigal sources, and on the basis of a palaeographical and textual analysis, Slim (*A Gift of Madrigals and Motets*, Chicago, 1972) has convincingly shown that they were copied, illuminated and bound in Florence, and were probably presented to Henry VIII of England around 1527–9. See also H.C. Slim: *Ten Altus Parts at Oscott College, Sutton Coldfield* (n.p., 1978).

The number of MSS containing secular Italian pieces decreases dramatically after the mid-century, but it would be a mistake to assume that later sources are without textual significance: the decrease itself partly reflects the increasing power of printing. The surviving compilations fall into two groups. Sources such as *I-VEaf* 220 and *MOe* mus.F.1358 contain specialized repertories that were never printed. The former was prepared, as were the printed anthologies *Il lauro secco* and *Il lauro verde*, for presentation to the Mantuan soprano Laura Peverara some time in the early 1580s (see E. Kenton: 'A Faded Laurel Wreath', *Aspects of Medieval and Renaissance Music: a Birthday Offering to Gustave Reese*, ed. J. LaRue and others New York, 1966/*R*, pp.500–18; A. Newcomb: 'The Three Anthologies for Laura Peverara 1580–1583', *RIM*, x, 1975, pp.329–45); the latter is Ferrarese and contains some of the repertory of the *Concerto delle donne*. Other collections, such as *F-Pn* Rés.Vma 851 (the 'Bourdeney MS'; see O. Mischiati: 'Un'antologia manoscritta in partitura del secolo XVI: il MS. Bourdeney della Bibliothèque Nationale di Parigi', *RIM*, x, 1975, pp.265–328; A. Newcomb: 'The Anonymous Ricercars of the Bourdeney Codex', *Frescobaldi Studies: Madison, WI, 1983*, 97–123; A. Newcomb: *The Ricercars of the Bourdeney Codex*, RRMR, lxxxix, 1991) or *I-CNM* 1 and 2, served as commonplace-books copied from printed sources. Scores such as the Bourdeney MS sometimes served for instructional rather than practical use, and this is certainly true of *Fn* Ant. di Galileo 9, copied by Vincenzo Galilei, which reflects his own preoccupation with theories of dissonance (on scores in general see E. Lowinsky: 'Early Scores in Manuscript', *JAMS*, xiii, 1960, pp.126–73). Quite exceptional is *B-Bc* 27.731, begun in the 1530s and added to subsequently. One of the later sections includes five madrigals by Alessandro Striggio (i)

for the second and third *intermedii* performed with G.B. Cini's comedy *La vedova* in Florence in 1569, which do not seem to have survived in printed sources (see J. Haar: 'Madrigals from Three Generations: the MS Brussels, Bibl. du Conservatoire Royal, 27.731', *RIM*, x, 1975, pp.242–64).

The *laude* repertory, which from the earlier 15th century was sometimes represented in larger choirbooks (such as *I-Bc* Q15, *GB-Ob* Canon.misc.213 and *I-Fn* Magl.XIX 112*bis*), occasionally took up substantial sections of MSS (as in *Vnm* 7554) in the years before the publication of Petrucci's two large collections (1507, 1508). However several MSS in the years around 1500 contained representative samples of the repertory, among them *Fn* Panciatichiano 27 and *UDc* 165. Material of this kind appears in the Benedictine MSS of around 1500, particularly Cape Town, South African Library, Grey 3.b.12 (see G. Cattin: 'Nuova fonte italiana della polifonia intorno al 1500', *AcM*, xlv (1973), 165–221, and G. Cattin, ed.: *Italian Laude & Latin Unica in MS Capetown, Grey 3.b.12*, CMM, lxxvi, 1977). *Laudi* continued to be disseminated in MSS throughout the 16th century. Among the most important later sources are *I-Fn* Palat.173, four volumes of *laudi* assembled and written out by the Florentine theologian and composer Serafino Razzi.

10. Manuscripts of Spanish secular music. The earliest secular Spanish pieces of the 15th century are found in MSS of mixed contents dating from the second half of the century; among these are: *F-Pn* fr.15123, *I-MC* 871 and *E-SE* s.s. But most of the repertory is preserved in three large collections from the late 15th and early 16th centuries. In format and general appearance, these resemble certain chansonniers of the time. They are in small choirbook format, usually with the three or four voices of a piece written on a single opening. Their smallness reinforces the notion that this music was to be performed with a single musician to each part, as it would have been impossible for more than three or four performers to group themselves around a book of this size.

Seville, Institución Colombina, 7-1-28 ('Cancionero de la Colombina'; CMC). 98 paper ff. (of an original ?107), 21·8 × 15cm. Copied by several different scribes, the MS shows signs of use. In the library of Fernando Colón by 1534. Copied late 15th century, probably for use at the court of some prince or duke, possibly in Seville. 95 pieces (16 incomplete) for 2–4 voices, by Triana (20), Cornago (6), Urrede (3), Madrid, Torre, Belmonte and others. Mostly settings of Spanish texts, though some in Latin. *F-Pn* n.a.fr.4379, ff.69–92, were almost certainly once part of the same manuscript.

G. Haberkamp: *Die weltliche Vokalmusik in Spanien um 1500* (Tutzing, 1968); M. Querol Gavaldá, ed.: MME, xxxiii (1971); D. Fallows: 'I fogli parigini del *Cancionero musical* e del manoscritto teorico della Biblioteca Colombina', *RIM*, xxvii (1992), 25–40

Madrid, Palacio Real, Biblioteca, II-1335 (formerly 2-I-5) ('Cancionero Musical de Palacio'; *CMP*). 227 (of an original 304) paper ff., 19 × 14 cm. This large MS, which originally contained as many as 550 pieces, may have been copied for the court of King Ferdinand of Spain, or for the Duke of Alba, in the late 15th and early 16th centuries. 463 pieces (mostly Spanish secular works) for 3–4 voices, by Torre, Encina, Escobar, Millán, Gabriel, Badajoz, Peñalosa, Anchieta, Urrede, Mondéjar, Alonso and others. More than half remain anonymous.

Music ed. H. Anglès, MME, v (1947), x (1951); text ed. J. Romeu Figueras, MME, xiv (1965)

Elvas, Biblioteca Municipal, 11793. 101 paper ff., 14.5 × 10 cm. In 2 sections: the first, originally 104 ff. (but ff.1–39 have been lost), contains the musical settings; the second, of 36 ff., contains texts with no music. Copied *c*1530–45, in Portugal. Once in the possession of João Joaquim de Andrade (1790–1859). 65 Spanish and Portuguese secular pieces for 3–4 voices, some by Encina and Escobar. 59 remain anonymous.

M. Joaquim, ed.: *O cancioneiro musical e poético da Biblioteca Públia Hortênsia* (Coimbra, 1940); G. Miranda, ed.: *The Elvas Songbook*, CMM, xcviii (1987); M.P. Ferreira, ed.: *Cancionero da Biblioteca Publia Hortensia de Elvas* (Lisbon, 1989) [facs.]

Some other song sources from Portugal more recently discovered include: *P-Ln* C.I.C. 60 (*Census-Catalogue*, iv, 422), with one song in Portuguese, alongside 18 in Castilian; and *F-Peb* Jean Masson 56 (*Census-Catalogue*, iv, 464), with 97 Castilian pieces and 30 in Portuguese. These two are transcribed in *Vilancetes, cantigas e romances do seculo XVI*, ed. M. Morais, PM, xlvii (1986). MS 3391 in the Museu Nacional de Arqueologia e Etnologia (formerly the Museum Etnológico Doutor Leite de Vasconcelos) in Belém, Lisbon, is transcribed in *Cancioneiro musical de Belém*, ed. M. Morais (Lisbon, 1988); it is dated 1603, though its repertory apparently dates from the 1580s; it contains 18 songs, of which 17 are in Castilian, one in Portuguese.

Little music of this sort is found in MSS from the middle decades of the 16th century. *E-V* 17, with 19 secular pieces by such composers as Robledo scattered among motets and French and Italian secular compositions, is an exception. MSS from the end of the century are more common. Typical is:

Barcelona, Biblioteca de Catalunya, 588/2. 3 paper partbooks (of an original 4), 15·8 × 21·8 cm. The original parchment covers were cut from a 14th-century gradual. Copied 1580–1600, in Spain, possibly Barcelona. 20 Spanish secular pieces for 3–4 voices by Albrech i Ferrament (Vila) (12) and Flecha (6); 2 remain anonymous.

H. Anglès, ed.: *Mateo Flecha: Las ensaladas* (Barcelona, 1955)

Other Spanish secular pieces from this period are found in Madrid, private library of Bartolomé March Servera, R.6829 (861) and R.6832 (862) (formerly *E-Mmc* 13230 and 607) and *Bbc* 588/1.

11. Mixed collections of sacred and secular music. A general homogeneity of contents characterizes MSS from the late 15th century and the first half of the 16th. Admittedly, most sources of secular music from this period also contain a few pieces with sacred Latin texts. It is also common to find several secular pieces in predominantly sacred sources: for example, *I-Tn* Riserva musicale I.27 contains 12 French chansons in addition to its principal contents of masses, *Magnificat* settings, hymns and motets. But MSS in which substantial numbers of sacred and secular pieces are more or less intermingled are relatively rare. For the most part, these miscellaneous collections are anthologies compiled for the private use of individual musicians or well-to-do members of the merchant or professional classes.

In many earlier sources with mixed sacred and secular contents, the individual gatherings were obviously copied at different times and places by many different scribes, and only later brought together. But most of the sources under discussion here seem to have been copied by only one or two main scribes over a relatively short period of time. Thus the heterogeneity of their contents clearly reflects the intentions of the original compilers.

As one would expect, these MSS show little uniformity in format or size; typically, they are larger than the late

15th-century chansonniers, but smaller than contemporary choirbooks used in cathedrals and court chapels. In contrast to the sumptuously illuminated parchment books prepared for the high nobility, these mixed collections are all copied on paper, and decoration (where it exists) is relatively modest. (The principal exception to this is *F-CA* 125–8, discussed below.) Visual attractiveness was obviously not the prime consideration for the scribes who copied the music in these sources. The calligraphy, with a few exceptions, is inelegant and undistinguished, though legible.

Among the most important of these collections are the following:

Perugia, Biblioteca Comunale Augusta, 431 (formerly G.20). 163 paper ff., 21.3 × 14·3 cm. Original and modern foliation; original covers of brown stamped leather. Most of MS probably copied in the Neapolitan area, near the end of the 15th century. By the 1550s apparently in the possession of Raffaele Sozi [Socius] (1529–89), a Perugian merchant and chronicler, who added several pieces, along with several pages of theoretical material.

133 pieces (2 are duplicates), including mass Ordinary sections, *Magnificat* settings, hymns, motets, French chansons, Italian frottolas and *laudi*, Spanish secular pieces and textless pieces. French pieces mostly by well-known composers such as Caron, Morton, Hayne van Ghizeghem, Busnoys, Du Fay, Obrecht and Isaac. Most other pieces probably the work of local composers, judging from the cryptic attributions such as F.M., M., M. Ie., M.P. and P.

Jeppesen (1968–70), ii, pp.xxxvi, 89, 190–93; M.A. Hernon: *Perugia MS 431 (G20): a Study of the Secular Italian Pieces* (diss., George Peabody College for Teachers, 1972); A. Atlas: 'On the Neapolitan Provenance of the Manuscript Perugia Biblioteca Comunale Augusta, 431 (G20)', *MD*, xxxi (1977), 45–105

Copenhagen, Kongelige Bibliotek, Ny kongelige samling 1848, 2°. i + 226 + i paper ff., *c*28·5 × 20 cm. Modern pagination; rebound in modern covers. Probably copied at Lyons, *c*1525, by a certain 'Charneyron', whose name appears at several places in the MS.

278 pieces (23 are duplicates), including French chansons, mass Ordinary sections, *Magnificat* settings, hymns, motets and other pieces. Composers named are Alexander [Agricola], Maistre Jaques Danvers [Barbireau], Dulot, Ghiselin, Haquinet, Isaac, Janequin, Johannes de Sancto Martino, Maioris and Richafort. Other identified composers include Adam von Fulda, Compère, Antoine de Févin, Fresneau, Hayne van Ghizeghem, Josquin, Ockeghem, Obrecht, Sermisy and Willaert.

H. Glahn: 'Et fransk musikhåndskrift fra begyndelsen af det 16. århundrede', *Fund og forskning*, v–vi (1958–9), 90–109; P.W. Christoffersen: *French Music in the Early Sixteenth Century: Studies in the Music Collection of a Copyist of Lyons, the Manuscript Ny kgl. Samling 1848 2° in the Royal Library, Copenhagen* (Copenhagen, 1994)

St Gallen, Stiftsbibliothek, 463 ('Tschudi Liederbuch'). 2 paper partbooks bound together in one volume of 142 ff., 15·2 × 21·6 cm. New foliation; original numbering of pieces. Compiled and copied by the Swiss chronicler Aegidius Tschudi (1505–72); Loach (1969) proposed a date of *c*1540.

187 pieces, including mass Ordinary sections, hymns, motets and secular pieces with German, French, Italian and Spanish texts. Among composers named in the MS are Adam von Fulda, Brumel, Compère, Ghiselin, Isaac, Josquin, Mouton, Obrecht, Richafort, Senfl and Wannenmacher. Tschudi arranged the pieces systematically, by mode, genre and number of voices. The modal classification of the pieces reflects Tschudi's preoccupation with the theoretical concepts of Glarean, with whom he studied briefly in Basle.

D.G. Loach: *Aegidius Tschudi's Songbook (St. Gall MS 463): a Humanistic Document from the Circle of Heinrich Glarean* (diss., U. of California, Berkeley, 1969)

Cambrai, Médiathèque Municipale, 125–8 (formerly 124). 4 paper partbooks, each of iv + 146 + iii ff., 20 × 28·5 cm. Original foliation; original brown leather covers. MS differs from other sources described in this section in that its margins and initials are elaborately decorated. Copied in 1542, for Zeghere van Male (1504–1601), a Bruges merchant.

229 pieces, including masses, motets, French, Flemish and Italian secular pieces, and textless works. Composers named in the MS or identified from concordances include Claudin [de Sermisy] (17), Gheerkin de Hondt (16), Benedictus [Appenzeller] (15), Richafort (8), Gombert (8), Lupi (8), Mouton (6), Willaert (6), Josquin (5), Jean de Hollande (5), Courtois (3), Crecquillon (2), Janequin (2), Lapperdey (2), Lupus (2), Verdelot (2), Alaire (2), Clemens non Papa, Gascongne, Hellinck and Pipelare.

G. Diehl: *The Partbooks of a Renaissance Merchant: Cambrai, Bibliothèque municipale, MSS 125–128* (diss., U. of Pennsylvania, 1974)

12. Mensural music in theoretical and didactic books. Throughout the Renaissance, theoretical treatises and other writings with a didactic purpose often include music as illustrative or interpolated material. This music is frequently taken from existing pieces, and is often useful in giving information about pieces that have not otherwise survived, or in helping solve problems of authenticity or chronology. For example, Tinctoris's quotation of several sections of a polyphonic mass for St Anthony, in his *Proportionale*, helps establish that Du Fay was the composer.

Other pieces seem to have been written specifically for the treatises in which they are found, as examples of contrapuntal technique, proportions or mensural practice. They are often of a quite complex nature, and, since their function was didactic, they should not be taken as samples of the sort of music customarily performed. The size of the books reinforces this: they are so small that the music could not have been read by even a small number of musicians grouped around one. The following are typical:

Faenza, Biblioteca Comunale Manfrediana, 117. 96 parchment ff., 24·8 × 17·5 cm. An original layer of keyboard intabulations copied in northern Italy *c*1410–20; see D. Plamenac, ed.: *Keyboard Music of the Late Middle Ages in Codex Faenza 117*, CMM, lvii (1972) for a discussion and transcription. 22 pieces in white mensural notation copied into the MS, with several treatises by Johannes Bonadies, at the Carmelite monastery of S Paolo, Ferrara, in 1473–4. These pieces appear only here; some use complex series of proportional signs.

6 settings of sections of the mass Ordinary, 5 *Magnificat* settings, 5 motets, 1 setting of a Greek text, 4 Italian secular pieces, 1 textless fuga, by Hothby (9), Johannes de Erfordia (5), Ycart (5) and Bonadies (1).

A. Seay, ed.: *The Musical Works of John Hothby*, CMM, xxxiii (1964); RISM, B/IV/4 (1972), 898–920

Bologna, Biblioteca Universitaria, 2573. 190 parchment ff., 23·8 × 16·8 cm. Elegantly copied with florally ornamented initials and borders. Contains 9 treatises by Tinctoris. Motet *Virgo Dei* copied on the first two folios; the other 22 pieces are musical illustrations for the treatise *De arte contrapuncti* and were most probably written by Tinctoris. Though complete compositions, they are unknown outside this treatise.

L. Frati: 'Codici musicali della Reale Biblioteca Universitaria di Bologna', *RMI*, xxiii (1916), 219–42, esp. 230; RISM, B/IV.5 (1991), 94–6

Bologna, Civico Museo Bibliografico Musicale, A71 (formerly 159). vii + 152 + vi paper ff., 21·5 × 14·5 cm. Contains 6 treatises on music (three by Guillermo de Podio, two by Gaffurius, one anonymous); polyphonic pieces found between treatises, or as musical examples within the treatises. Several motets use complex series of proportions. Copied 1510–15, possibly for use at the Spanish College in Bologna.

7 motets, 2 French secular pieces and some 25 brief pieces illustrating mensural proportions and contrapuntal techniques, by Tinctoris, Marlet, Josquin, Silva and Willaert. Only 6 pieces can be attributed.

B.J. Blackburn: 'A Lost Guide to Tinctoris's Teachings Recovered', *EMH*, i (1981), 29–116

Other MSS of this sort are *I-PEc* 1013, containing five textless works for two and three voices in a source (copied

Venice, 1509) otherwise taken up with treatises on music; *Fn* Pal.472, with 13 anonymous musical examples for treatises by Hothby and Ramis de Pareia (see F.A. Gallo: '"Cantus planus binatim": polifonica primitiva in fonti tardive ...', *Quadrivium*, vii (1966), 79–89); *D-Bsb* Mus.theor.1175, containing several treatises, with some 40 musical examples by such composers as Josquin and Isaac; and *GB-Lbl* Add.4911, with 56 short didactic pieces and more than 150 excerpts from pieces by such composers as Tallis and Josquin, as examples in *The Art of Music collectit out of all Ancient Doctouris of Music*, written *c*1580 by an anonymous Scotsman: see J.D. Maynard, *An Anonymous Scottish Treatise on Music from the Sixteenth Century* (diss., Indiana U., 1961). See also J. Maynard: 'Heir Beginnis Countering', *JAMS*, xx (1967), 182–96, and K. Ruhland: *Der mehrstimmige Psalmvortrag im 15. und 16. Jahrhundert* (diss., U. of Munich, 1975).

13. Simple polyphony in monophonic liturgical books. Not only did the amount of polyphony sung in cathedrals, chapels and courts increase at a dramatic rate during the 15th and 16th centuries, but also the practice of singing polyphony spread to places where it had not been in use before. This happened, for example, in various small monasteries, convents and other modest religious establishments where there was no tradition of polyphonic music and no training in the complexities of mensural notation, but where there was nevertheless the desire to embellish certain religious ceremonies with music in parts.

Sources giving evidence of this practice are liturgical books for the Mass or Office containing monophonic liturgical music or liturgical texts, with certain pieces notated to be sung in two or three voices. Since this was music to be sung by people with no knowledge of mensural notation, it was written down in a system with which they were familiar – the same as was used for chant. In some places this was square black notation, in some *Hufnagelschrift* or stroke notation, in others even more ancient forms of chant notation. The music is quite simple in style, usually homorhythmic, often with extensive use of parallel motion. Chants selected for embellishment by part-singing are often those for one of the most important feasts of the church year, such as Christmas or Holy Week.

Such music is found in MSS dating from throughout the 15th and 16th centuries. All of it is anonymous; some may date from as early as the 14th century, though it is impossible to determine this from the musical style, which remains the same throughout the Renaissance. The geographical spread is wide; Benedictine and Franciscan establishments were particularly fond of this music.

It is simple, modest music, in no way comparable to the complex polyphonic works written and sung in chapels and cathedrals in Italy, France, the Low Countries and Spain, where there were professional choirs, chapelmasters, scribes, and even schools for the training of boys in the intricate art of Renaissance polyphony. The following MSS are typical:

Munich, Bayerische Staatsbibliothek, Clm 5511. 83 parchment ff., 32·5 × 23·5 cm. Modern foliation; original covers of brown tooled leather over boards. Originated in Diessen, Bavaria, *c*1400.

4 polyphonic items for Christmas, in Gothic chant notation, on ff.60–64*v*; preceded by lection texts and followed by a monophonic Lamentation.

Geering (1952), 13 only; RISM, B/IV/3 (1972), 373–4

Munich, Bayerische Staatsbibliothek, Cgm 716. 205 paper ff., 21·3 × 15·5 cm; original covers of white leather over boards; partial original foliation (cancelled), modern foliation 1–205. This collection of monophonic and polyphonic Marian songs, in black Gothic notation, was copied at the Benedictine Abbey of Tegernsee in 1430.

19 2-voice Marian pieces; all but 1 have different texts in the 2 voices. Not clear in all cases that the 2 voices go together. Also monophonic antiphons, sequences and songs, mostly to the Virgin, most in Latin but some in German. Entire MS, polyphony and monophony alike, copied by a single scribe.

Geering (1952), 18 only; J.A. Emerson: 'Über Entstehung und Inhalt von MüD', *KJb*, xlviii (1964), 33–60; RISM, B/IV/3 (1972), 354–9

Cividale del Friuli, Museo Archeologico Nazionale, LVII. 362 parchment ff., 39 × 26·5 cm. 16th-century covers of brown leather over boards, with metal clasps. Antiphoner from Cividale Cathedral, 15th century.

4 polyphonic items at various places in the antiphoner, copied in square black and red notation, with some mensural elements.

RISM, B/IV/4 (1972), 746–8

Kraków, Archiwum i Biblioteka Krakowskiej Kapituły Katedralnej, 58 ('Gosławski Cantionale'). 188 parchment ff., 37·5 × 28 cm. Original covers of white leather over boards. Copied in 15th century, once in possession of Johanne Gosławski, a canon of Kraków.

A setting, 1–4 voices, of the *Liber generationis* on ff.261–91; otherwise monophonic contents include Passions, Lamentations, antiphons for Passion Week, responses etc. Copied in black rhomboid notation, with some mensural elements.

Göllner (1969); RISM, B/IV/4 (1972), 1144

Vienna, Österreichische Nationalbibliothek, Mus.15501 (formerly A.N.38.A.7) ('Kuttenberger Codex'). 252 parchment ff., 68 × 46 cm. Original covers of brown tooled leather. Gradual from St Jacob's Cathedral in Kutná Hora (Kuttenberg), copied late 15th or early 16th century.

2 polyphonic Credos, written in same Bohemian chant notation as rest of book. Monophonic contents include mass Ordinary items (up to f.62*v*), antiphons, mass Propers (ff.62*v*–149*v*), sequences (ff.150*v*–250).

RISM, B/IV/3 (1972), 1131

Bologna, Biblioteca Universitaria, 2866. ii + 319 + iii paper ff., 15·3 × 10·8 cm. Modern foliation; original covers of brown leather over boards. Copied by 'Presbiter Simon' at the Dominican abbey of S Salvatore, Bologna; dated 1515.

2 2-voice settings of *Benedicamus Domino*. Black and red chant notation, with mensural elements. The book is a *Diurnum dominicanum*.

R. Strohm: 'Neue Quellen zur liturgischen Mehrstimmigkeit des Mittelalters in Italien', *RIM*, i (1966), 77–87; RISM, B/IV/4 (1972), 741

St Gallen, Stiftsbibliothek, 546. 409 paper ff., 41 × 27 cm. Copied at the Benedictine abbey at St Gall 1507–14, by P. Joachim Cuontz.

2-voice settings of the Sanctus and Agnus on ff.76*v*–77; otherwise monophonic sequences, mass Propers, etc. Copied in *Hufnagelschrift*.

Geering (1952), 21 only; RISM, B/IV/3 (1972), 125–6

Zwickau, Ratsschulbibliothek, XCIV, 5. 104 paper ff., 30·8 × 21·cm; original covers of leather over boards; modern foliation. This 'Lektionar' was copied in the early 16th century in Zwickau.

2 settings of the *Liber generationis* and 2 other polyphonic settings of liturgical texts, in Gothic chant notation. Otherwise monophonic passions, antiphons etc.

Göllner (1969); RISM, B/IV/3 (1972), 405–7

Haarlem, Bisschoppelijk Museum, 21. 232 parchment ff., 38·3 × 28·1 cm. Modern pencil foliation; modern covers of leather. 15th-century gradual from northern Netherlands, diocese of Utrecht; once in the possession of the parish church in Enkhuizen.

4 polyphonic mass Ordinary sections (1 Kyrie, 1 Credo, 2 Sanctus), in square black and primitive white notation, added to last folios early 16th century.

Geering (1952), 24 only; RISM, B/IV/4 (1972), 1112–13

14. Polish manuscripts. No country has suffered such severe losses of MS sources as has Poland. Much of its musical history has to be pieced together from widely

scattered and often fragmentary sources. There are a few remnants of polyphony in Poland before 1400; facsimiles and discussions of these may be found in Perz (1973).

The two major sources from the 15th century, written in black mensural notation, are linked by common watermarks and repertory. Repertory, concordances, notation and watermarks suggest strong ties with northern Italy, possibly Padua:

Warsaw, Biblioteka Narodowa, III 8054 (formerly Krasiński 52). 205 paper ff., 30·4 × 22 cm. Ff.1–172 contain sermons, histories and various treatises, all in Latin. Ff.173–205, containing music, were apparently an independent collection originally. Latter section copied in Poland, *c*1420–30; several texts refer to Kraków, and Mikołaj Radomski (composer of 7 compositions) was Polish, the first known composer of polyphonic music in the country.

36 mass sections, motets and brief liturgical pieces by Mikołaj Radomski, Grossin, Ciconia, Nicholas of Ostrorog, Zacara da Teramo and Egardus. 16 pieces remain anonymous.

M. Perz: 'Die Einflüsse der ausgehenden italienischen Ars Nova in Polen', *L'Ars Nova italiana del Trecento: Convegno II: Certaldo and Florence 1969* [*L'Ars Nova italiana del Trecento*, iii (Certaldo, 1970)], 465–83; Perz (1973), p.xxii, 37–102

Warsaw, Biblioteka Narodowa, Lat.F.I.378. 34 paper ff., 29 × 21·5 cm, probably a fragment of a much larger MS. Copied in Poland *c*1440; numerous contemporary annotations in Polish. In the Zaluski Library in the 18th century, transferred to St Petersburg in the 19th, brought back to *PL-Wn* in the 20th. Missing since 1944; photographic copy (incomplete) made by Maria Szczepańska remains.

16 Glorias and Credos and 2 motets by Ciconia, Mikołaj Radomski and Zacara da Teramo. 6 remain anonymous.

M. Perz: 'Die Einflüsse der ausgehenden italienischen Ars Nova in Polen', *L'Ars Nova italiana del Trecento: Convegno II: Certaldo and Florence 1969* [*L'Ars Nova italiana del Trecento*, iii (Certaldo, 1970)], 465–83; Perz (1973), p.xxvi, 103–60

No important or complete sources remain from a period of more than a century after these two MSS. The work of such Polish composers of the first half of the 16th century as Mikołaj z Krakowa is known only from two organ tablatures. A single paper folio dating from the 16th century (*Kp* 1689) has a three-part setting of the strophic song *Zdrowa bucz Maria.* This is the first known polyphonic setting of a Polish text. Several MSS copied in Kraków in the late 16th and early 17th centuries preserve the repertory of the royal chapel (mixed voices) and the Rorantist Chapel at Wawel Cathedral (male voices). Polish and foreign composers are represented; much of the foreign music is by earlier composers, such as Jacotin, Lhéritier, Cadéac, Hesdin etc. Copies of French prints from the time of Attaingnant, known to have been in Kraków in the 16th century, were probably the source of some of this repertory. The earliest known MS in this group is:

Kraków, Archiwum Państwowe, D25–7. 3 paper partbooks (DcAB) of an original 5, *c*16 × 20 cm. Copied in Kraków; dates range from 1573 to 1597. At least 12 scribes, some of whom worked in the 17th century. The original covers of brown tooled leather have the Polish eagle on the front. The T partbook from this set (Q is lost) is *Pu* 192.

47 motets, 12 masses and several miscellaneous pieces, by Sebastian z Felsztyna, Krzysztof Borek, Tomasz Szadek, Moulu, Morales, Certon, Paligoni etc. More than half of the pieces remain unidentified.

Z. Szweykowski, ed.: *Katalog tematyczny rękopiśmiennych zabytków dawnej muzyki w Polsce*, i/1 (Kraków, 1969)

15. Central European manuscripts.

(i) Czech Republic and Slovakia. The 15th and 16th centuries witnessed the development in Bohemia of a rich and varied tradition of polyphonic music, in some ways quite different from the international polyphonic style of other countries in western Europe. Fragments, flyleaves and pieces of simple polyphony copied into monophonic books survive to chronicle the early stages of this polyphony (the following MSS are described more fully in RISM, B/IV/3, 1972).

CZ-Pu XIV G 46, a 14th-century MS of chants for Mass and various Office Hours, has a simple two-voice Amen written in German-Bohemian neumes of the Metz school. *Pnm* XVI C 7, a missal of the late 14th century, has a back flyleaf containing a portion of a three-voice setting of the *Liber generationis*, written in early Bohemian Gothic chant notation.

Pak E LXVI, a book of sermons and lives of the saints, has as flyleaves – front and back – two parchment bifolios, apparently remnants of a sizable collection of polyphonic music from the 14th or early 15th century (four sections of a two-voice *Jube Domine* and a monophonic Lamentation remain, in German-Bohemian neumatic chant notation of the Metz school). *Bm* G 12, a Roman missal of the 15th century, contains a single piece of polyphony, a three-voice setting of the *Liber generationis* written in Bohemian chant notation. *Pnm* XII A 1 is a gradual in two sections, the first dated 1390 and the second 1473; a three-voice setting of the *Liber generationis* in Bohemian chant notation is found in the first part, two two-voice Credos in the second; the MS originated in Prague or Plzeň; *VB* 42, a processional and gradual copied in 1410 at the cloister in Vyšší Brod, has 13 pieces of two-voice polyphony in simple black mensural notation, clustered at the end of the book.

The final section (ff.145–83) of the last-named MS is a cantional – a collection of monophonic sacred songs, mixed with some simple polyphonic pieces – which became the most characteristic type of Bohemian source during the Renaissance. The earliest known large MS of this sort is the Jistebnice Cantional:

Prague, Národní Muzeum, Hudební Oddělení, II C 7. i + 123 ff., 33 × 22 cm. Modern leather covers, no index. Contents are a mixture of monophonic songs, written in Bohemian Gothic chant notation, and 2-voice polyphonic pieces in simple black mensural notation. Copied perhaps in Prague, *c*1420, it comes from the circle of the radical Hussite group of Jan Zelinský, who attempted to suppress the old Latin liturgy.

6 two-voice pieces with vernacular texts, 7 in Latin; some texts by Jan Hus, others by Jan Čapek. Also 64 monophonic songs; many became popular, and some were made into polyphonic pieces later in the century. All pieces, polyphonic as well as monophonic, anonymous.

D. Orel: *Der Mensuralkodex Speciálník* (diss., U. of Vienna, 1914), 23ff; RISM, B/IV/3 (1972), 210–12

A slightly later source is *Pnm* XII F 14, a gradual copied in the middle of the 15th century, possibly in Jistebnice, containing 3 2-voice settings of Latin texts (see RISM, B/IV/3, 219–20). *Pnm* K Vš.376 is a cantional copied in the second half of the 15th century for Prague Cathedral; it has 13 polyphonic pieces, several for 3 voices (see RISM, B/IV/3, 1972, 235–8).

Cantionals are usually graduals, with monophonic and polyphonic music for the Mass (*see* Cantional). Many of them were copied for use by lay fraternity choirs, which played an important role in the musical life of Bohemia from the 14th century to the 17th. The polyphony sung by these groups was simple in style and notation, at least until the later 16th century, and much of it was of Utraquist origin.

The repertory was a limited and soon a retrospective one, with the same pieces found time and again in various MSS. The Franus Cantional is a central and representative source:

Hradec Králové, Muzeum Východních Čech, II A 6. 367 parchment ff., 66 × 43 cm. Original foliation, 16th-century covers of white tooled leather over boards. Copied 1505 for the use of a lay fraternity associated with the church of the Holy Spirit in Hradec Králové. Presented to the church by Johannes Franus.

72 motets and liturgical pieces, 9 mass Ordinary sections, 2 Bohemian sacred pieces – all anonymous. Book laid out in 6 sections: Kyrie, Gloria, Sanctus settings (ff.2–44); a gradual (48–118); Credos (118–27); sequences (130–240); monophonic and polyphonic sacred songs (241–310); cantilenas or motets (311–67). Polyphonic pieces include 7 mass Ordinary settings in first part, in chant or black mensural notation, 2 Credos in second part, 23 2- and 3-voice pieces in black mensural notation in fifth part, and 51 pieces for 2–4 voices in sixth part. Many in the last section are polytextual motets. Most written in black mensural notation, but some in white, including motets by Josquin and Ghiselin. Most later cantionals drew on the same repertory as the compiler of this MS.

D. Orel: *Der Mensuralkodex Speciálník* (diss., U. of Vienna, 1914), 43ff; J. Černý: 'Soupis hudebních rukipisů muzea v Hradci Králové, *MMC*, no.19 (1966), 9–240; RISM, B/IV/3 (1972), 141–63

The following are typical of similar sources of the 16th century:

Prague, Národní Muzeum, Hudební Oddělení, XIII A 2. i + 384 paper ff., 48·5 × 32 cm. Original covers of white tooled leather over boards, with metal clasps. Like most gradual-cantionals, a large choirbook, large enough for both monophony and polyphony to be sung by a medium-sized choir grouped around a lectern. Inscription inside front cover states that book was copied in 1512 in the central Bohemian town of Výskytná by Martin Bakalář of Kolín.

17 mass Ordinary sections (Sanctus and Agnus), 36 motets and liturgical pieces, one Bohemian sacred song – all anonymous. 33 motets, many polytextual, grouped in last section of book, ff.356–84. 27 pieces concordant with the Franus Cantional.

D. Orel: *Der Mensuralkodex Speciálník* (diss., U. of Vienna, 1914), 52ff; RISM, B/IV/3 (1972), 220–30

Klatovy, Okresní Muzeum a galerie, C3/403. Gradual-cantional copied by Johannes Táborský in 1537 for the church of St Mary in Klatovy. 549 paper ff., 41 × 28 cm, laid out in the same 6 sections as the Franus Cantional (see above). Polyphonic pieces are mostly Sanctus settings and motets; all 45 anonymous, and only two are unica. 31 are concordant with the Franus Cantional alone.

Prague, Národní Muzeum, Hudební Oddělení, I A 17 ('Solnice Gradual'). 320 paper ff., 43 × 28 cm. Copied for the lay fraternity choir of Solnice in the second quarter of the 16th century, it contains 22 pieces of 2- and 3-voice polyphony in black mensural notation scattered among monophonic songs and chants. All texts in Czech. MS particularly handsome, with an elaborately illuminated initial and floral borderwork on the first folio and notes written in gold, red and blue; beginnings of other sections of the MS have similar initials, miniatures and borderwork. The original covers of white tooled leather over boards have metal clasps. Inscription on f.182 by Samuel Soukeník, town clerk of Solnice, confirms its presence and use in that town.

Teplice, Oblastni Vlastivědné Muzeum, B, is another cantional copied by Táborský *c*1560 for the choir of a lay fraternity in Teplice.

There are many similar cantionals, some dating from as late the early 17th century. They are described and inventoried in RISM, B/IV/3 (1972).

In addition, MSS of polyphonic music more similar to those of western Europe survive in the Czech Republic. These are written largely or completely in white mensural notation, the repertory is more international, and these sources contain only polyphony, rather than a mixture of homophony and polyphony. The earliest date from the late 15th century:

Prague, Strahov Monastery (Památník Národního Písemnictví), D.G.IV.47. ii + 307 + ii paper ff., 21·2 × 15·5 cm. Original covers of light brown tooled leather over boards, with metal hinges and clasps, partly restored when it was rebound and restored after World War II. Copied neatly and clearly, but simply; most initials missing, ones present are modest block letters with occasional floral decoration. 1 scribe planned the MS and copied most of it, leaving blank folios at the ends of several sections; a second scribe assembled the various gatherings in the order known today, added pieces in places left blank, and copied and inserted several additional gatherings. Arranged in 5 sections: introits (ff.1–46); mass Ordinary sections (47–175); liturgical pieces for use in various Office Hours, at Marian devotions, in processions, and at other points during Mass (176–257); Office hymns (258–86); *Magnificat* settings (287–306). Judging by its relative smallness and systematic ordering, the MS appears to have been copied as a repository of polyphonic pieces, or for the private use of some individual, rather than as a book to be sung from by a choir. Copied *c*1480, most probably in eastern Silesia or Bohemia.

87 mass Ordinary sections, 6l hymns, 51 introits, 14 *Magnificat* settings, 94 motets and liturgical pieces, 19 textless works, 5 pieces with vernacular texts, by Touront (14), Philipus Francis (7), Pullois (6), Standley (6), Frye, Flemmik, Barbingant, Vincenet, Batty, Cornago and Brollo. 283 pieces remain unidentified; the presence of so many pieces unknown elsewhere suggests that there was an active school of composition wherever the MS was copied.

D. Plamenac: 'Browsing through a Little-Known Manuscript', *JAMS*, xiii (1960), 102–11; R. Snow: *The Manuscript Strahov D.G.IV.47* (diss., U. of Illinois, 1968)

Hradec Králové, Muzeum Východních Čech, II A 7 ('Codex Speciálník'). i + 305 + i paper ff., 38 × 28 cm. Modern pencil pagination, 1–609; original numbering system by fascicle signature and folio number within fascicle. Original covers of light brown tooled leather over boards, with decorative metal studs and metal clasps. Original index, pp.606–8. Copied in both white and black mensural notation, with a few pieces written in Bohemian Gothic chant notation. At least 10 scribes wrote down the music over a considerable period of time in the late 15th and early 16th centuries, probably in Prague. MS shows signs of considerable wear; probably a practical MS, used for performance by a church choir. An inscription states that it was sent as a gift to the church of St Peter in 1611.

15 mass Ordinary cycles and part cycles, 35 mass Ordinary sections, 2 mass Proper cycles, 139 motets and liturgical pieces, 5 Czech sacred pieces, 5 textless works, by Touront (5), Josquin (3), Ghiselin, Alexander Agricola, Barbingant, Klička, Gontrášek, Pullois and others. Some of the mass Ordinary sections have text partly in Czech. More than 150 pieces unidentified and found in no other surviving MSS; many of these may be by local composers.

D. Orel: *Der Mensuralkodex Speciálník* (diss., U. of Vienna, 1914); J. Pohanka: *Dějiny české hudby v příkladech* (Prague, 1958), 35ff; J. Černý: 'Soupis hudebních rukopisů muzea v Hradci Králové', *MMC*, no.19 (1966), 9–240, esp. 40

The copying and singing of masses and motets by foreign composers and the writing of new pieces in international style by native composers became quite popular in parts of Czechoslovakia in the second half of the 16th century. But most of this repertory was copied into partbooks rather than choirbooks, and with the loss and destruction of so much music during the 17th and 18th centuries, most sets of partbooks survive in incomplete form.

Hradec Králové, Muzeum Východních Čech, Literární Archiv, II A 29. Bassus partbook, 351 paper ff., 21 × 15·5 cm. Only surviving book of this set. Modern pencil foliation, also an original numbering system, A–R9; covers of brown tooled leather. Copied by a number of scribes, with dates ranging from 1556 to 1562. From collection of lay fraternity choir of the church of the Holy Spirit in Hradec Králové.

284 motets and liturgical pieces, 8 Czech sacred pieces, 2 textless pieces, by Clemens non Papa (20), Paminger (7), W. Ottho (4), Hellinck (4), Josquin (3), Caspar Copus (3), Crecquillon, Gombert, Hesdin, Christian Hollander, Phinot, Polonus, Senfl,

Werrecore and many others. Some 215 pieces not identified; many may be by local composers.

J. Černý: 'Soupis hudebních rukopisů muzea v Hradci Králové', *MMC* (1966), esp. 56

Hradec Králové, Muzeum Východních Čech, Literární Archiv, II A 20. B partbook containing 4 masses with settings of both Ordinary and Proper and other complete and partial mass Ordinary cycles; Isaac, Obrecht and Compère are the only identified composers. MS II A 23 of the same collection is an A partbook of a set copied 1574–1602 for the choir of the lay fraternity of the church of the Holy Spirit. Contains 25 mass Ordinary or mass Proper cycles and some additional part cycles and separate items, by Rychnovský (9), Spongopeus Gistebnicenus, Knöfel, Scandello, Trojan Turnovský and Junecius a Roclina. MSS II A 24 (a cantus partbook), II A 16*a–b* (Dc, B partbooks), II A 25 (a B partbook), II A 27 (a T partbook) and II A 18*a–b* (A, B partbooks) all contain mass Ordinary and Proper music, by such composers as Spongopeus Gistebnicenus, Albinus, Chrysoponus Gevicenus, Knöfel and Costanzo Porta – all in incomplete form.

A rare choirbook survives in Prague:

Prague, Národní Muzeum, Hudební Oddělení, 151–2. 262 paper ff., 56·2 × 42 cm. Original covers of leather over cardboard. Simply but clearly copied, with no illumination or ornamentation. 2 clearly differentiated sections, the first of 154 folios, the second of 108. Copied in the late 16th or early 17th century.

11 mass Ordinary cycles for 5–8 voices, by Philippe de Monte, Philipp Schoendorff, Luython, Regnart and others. 2 masses anonymous and unidentified.

J. Snížková: 'Kutnohorský sborník msí ze sklonku 16. století' [the Kutná Horá collection of masses from the end of the 16th century], *Časopis Národní ho muzea*, cxli (1972), 49–55

(ii) Hungary. Scattered remnants attest to some activity in polyphonic music in Hungary during the 15th century. 20 motets in Gothic and black mensural notation survive in *H-Bn* (MS Division) Lat.534; this source (described in B. Rajeczky, 'Ein neuer Fund zur mehrstimmigen Praxis Ungarns im 15. Jahrhundert', *SMH*, xiv, 1972, pp.147–68) comes from the Szepes area of medieval Hungary, now in Slovakia. Seven other motets are found in Lat.243 of the same collection, a gradual-cantional of the first half of the 15th century from Nagyszombat [now Trnava], described in RISM, B/IV/4 (1972). A setting of the *Liber generationis* and a motet to be sung at the end of a *St Matthew Passion* are in the 15th-century MS *H-Efko* 1.178 (formerly L.II.7; described by B. Rajeczky, 'Spätmittelalterliche Organalkunst in Ungarn', *SMH*, i, 1961, pp.15–28). Six folios recovered from the bindings of two printed books in the Dominican Library in Košice [Hung. Karsa] contain 14 pieces by Walter Frye and other composers of the second half of the century; these leaves (described by B. Rajeczky, 'Mittelalterliche Mehrstimmigkeit in Ungarn', *Musica antiqua Europae orientalis: Bydgoszcz and Toruń 1966*, 223–36) are now in *SK-BRu* and *BRmp* (?lost).

Though the Hungarian court undoubtedly heard polyphonic music in the 16th century, no evidence remains of any spread of this practice to churches and regional secular circles. A large and important collection of MSS and printed volumes of the second half of the century was moved from Bártfa (now Bardejov, Czech Republic) to the National Library in Budapest in 1915, when this region was still part of Hungary, but this 'Bártfa Collection' comes from a German-speaking community that had embraced the Reformation, and is discussed in §20 below. This set of sources is discussed in B.M. Fox: *A Liturgical-Repertorial Study of Renaissance Polyphony in Bártfa Mus.Pr. 6 (a-d), National Széchényi Library, Budapest* (diss., U. of Illinois, 1977).

16. PRESENTATION MANUSCRIPTS. The lavishly produced MS was, of course, not a new phenomenon in the Renaissance; there were even luxurious polyphonic music MSS from earlier periods – the *Roman de Fauvel* and certain of the Machaut MSS are obvious examples, while many chant MSS from religious foundations and court chapels were lavishly illuminated. But it was during the Renaissance that the idea of a beautiful MS as a worthy gift for a prince or to celebrate a noble wedding became more common; and it was also at this time that the idea spread to polyphonic music MSS. Such MSS have often survived, for they were destined to become part of the library of the recipient and were often treasured by later owners and scholars as rare examples of the art of their preparers, scribes, illuminators and binders. Some are mentioned elsewhere in this article, for example the MSS containing the music of Oswald von Wolkenstein (§7 above). Other MSS, containing the arms or emblems of noble families or individuals, may well have been prepared as gifts for them (e.g. *I-Rvat* C.G.XIII 27 and *Rc* 2856: see §8 above). In such cases, however, it is difficult to distinguish between volumes that may have been prepared to commissions from the future owner and others intended as gifts to him. However, a source like the Chansonnier Cordiforme (*F-Pn* Rothschild 2973: see §8 above) was probably intended as a gift (see fig.11*a* above).

Reference has been made elsewhere to some MSS prepared within one scriptorium which seems to have been responsible for a large number of political presentation MSS – that of the court circle of the Netherlands. Some of the scribes have been identified and associated with a large number of surviving MSS, apparently prepared for courts and individuals all over Europe (for details of the copyists and their work *see* ALAMIRE, PIERRE). Work on special music MSS apparently began around 1500 and continued for about 30 years. Not all the MSS copied were especially luxurious or necessarily for presentation. Some must have been direct commissions, perhaps including those for Raimund Fugger (eight MSS all on paper and lightly decorated, *A-Wn*) or for the Marian Brotherhood at 's-Hertogenbosch (*NL-SH*). While these tend to be less heavily decorated than others, it is clear that they are written in the same hands and they show similar patterns of layout and organization. All are the product of an expensive workshop and are in themselves valuable documents.

Other sources from this scriptorium seem to have been prepared specifically as presentation documents: they carry the coats-of-arms of the recipient and sets of initials, they are decorated with fine illuminations, and occasionally the selection of music shows some plan. This last does not apply only to MSS written in this circle: one, copied in Rome, lists the pieces in the opening table of contents in such an order as to form an acrostic (*I-Fl* Acq. e doni 666: see E.E. Lowinsky, *The Medici Codex of 1518*, MRM, iii–v, 1968). In some MSS from the Alamire group of scribes, the first work in the volume is chosen to represent the dedicatee, or to interest him. The MS *GB-Lbl* Roy.8.G vii opens with a motet by Mouton, where the names of the saints have been changed to George, Henry and Katharine. This clearly indicates an English destination; moreover, these names are written over erasures of the names of Louis and Anne, the originals in

the motet, perhaps indicating some change of plan for the MS.

London, British Library, Roy.8 G.vii. 64 parchment ff., 37 × 26 cm, with leather boards. Copied by 2 scribes of the Alamire workshop, and presented to Henry VIII of England.

34 Latin works of which 28 are motets, by Josquin (5), Mouton (4), Févin (3), La Rue (3), Ghiselin, Isaac, Le Brung, Strus and Thérache, with 14 anonymous.

H. Kellman, ed.: *London, British Library, MS Royal 8 G.vii*, RMF, ix (1987); Kellman (1999)

Among the other recipients of MSS from this scriptorium were Pope Leo X (*I-Rvat* C.S.34, 36 and 160), the Emperor Maximilian I (*A-Wn* Mus.15495), Wilhelm IV of Bavaria (*D-Mbs* 6, 7 and 34), Frederick the Wise (several MSS at *D-Ju*, listed in §6 above), João III of Portugal (*B-Br* 15075), Anne of Bohemia (*I-Rvat* Pal.lat.1976–9) and perhaps Emperor Charles V (*E-MO* 766, 733, and the Mechelen choirbook). Most of these are lavishly produced on fine parchment, and bear the marks of being special commissions. One or two other similar MSS cannot be certainly placed as gifts or political presentations; among these is perhaps the most lavish of them all:

Vatican City, Biblioteca Apostolica Vaticana, Chigi C.VIII.234. 289 parchment ff., 36·3 × 27·8 cm. Red velvet binding. Probably prepared for Philippe Bouton, and copied by the Netherlands scribe B, perhaps Martin Bourgeois. It was probably in Spain early in its history, for it carries a table of contents in Spanish. Later owned by Pope Alexander VI.

40 pieces, including 20 masses, 1 Credo and 19 motets, by Ockeghem (15), Regis (5), Compère (4), Josquin (2), La Rue (2), Agricola, Barbireau, Brumel, Busnoys, Févin, Weerbeke, Isaac, Madrid and Mouton, with 3 anonymous.

17. ITALIAN CATHEDRAL AND COURT MANUSCRIPTS. By the last decades of the 15th century the repertory of polyphonic music sung by choirs at cathedrals, churches and court chapels had reached such a size that single MSS would no longer suffice. Sets of choirbooks, of large enough dimensions to be read from by a choir of as many as two dozen singers, were planned and executed; the copying of such sets took place over a period of years, decades, or even longer. The contents would be thought of as a single repertory, to be added to as new sources were gathered and new music was written. This process sometimes stretched out for a century or more, but the early MSS of the set were usually kept as part of the repertory, even after the music in them went out of fashion.

One of the largest such sets was copied for the use of the papal choir at the Vatican, from the last two decades of the 15th century until well into the 17th; see §18 below.

An early set of large choirbooks forming a single repertory was copied in Ferrara for the choir of the Este court chapel. As befitted such an important and art-loving court, these books were copied on parchment and were handsomely illuminated:

Modena, Biblioteca Estense e Universitaria, α.M.1.13. 224 parchment ff., 55·8 × 38·5 cm, with elaborate initials and borderwork in the style of the Este school of MS illumination. Original index; restored and rebound, probably in the 19th century. Copied at Ferrara when Johannes Martini was *maestro di cappella*, probably *c*1480.

18 mass Ordinary cycles, the last incomplete, by Martini (9), Faugues (2), Du Fay, Caron, Vincenet, Domarto and Weerbeke; 2 remain unidentified.

Lockwood (1984)

I-MOe α.M.1.2 (173 parchment ff., 54·5 × 39·5 cm) belongs to the same set and was copied slightly later. 6 of its 10 masses are by Obrecht, so it may date from the years of his service at Ferrara. Fragments of a third mass MS survive in *MOs*; its 3 parchment folios preserve portions of masses XII and XIV of what must have been a companion-book to the above 2. *MOe* α.M.1.11–12 also belong to this set. These 2 books are of unusual interest in that they contain music for 2 choirs, to be sung antiphonally, the earliest surviving source giving unambiguous evidence of this practice. Composed respectively of 116 and 110 parchment ff. measuring 56·4 × 40 cm, they contain music for Holy Week: 34 psalms, 8 hymns, 4 *Magnificat* settings and 2 Passions. Most anonymous, but some attributed to Martini and Brebis, both of whom were in the service of the Este court. Archival evidence places the copying of these 2 books in 1479. Probably originally part of a larger set of MSS. Music for Vespers is missing, and 1 or more volumes of motets.

The set of choirbooks copied at Milan Cathedral under the direction of Gaffurius between about 1490 and 1510 provides perhaps the most coherent and extensive repertory for any church in those years. There is room for dispute about how far that repertory is retrospective and reflects the music of Galeazzo Maria Sforza's court in the 1470s.

Milan, Archivio della Veneranda Fabbrica del Duomo, Sezione Musicale, Librone 1 (formerly 2269), Librone 2 (*formerly 2268*), Librone 3 (*formerly 2267*), Librone 4 (*formerly 2266*). All paper: ii + 189 + ii ff., 63·5 × 45 cm; i + 211 + i ff., 64·5 × 45 cm; iii + 217 + ii ff., 48·2 × 34 cm; 144 burnt fragments, originally *c*40 × 30 cm. All include the hand of Gaffurius; other scribes include one who copied *I-Fc* Basevi 2441. Librone 1 includes the date 1490, which could be a starting-date; Librone 3 contains music copied from a print of 1505; the severely damaged Librone 4 seems to be the latest.

335 works by Gaffurius (87), Compère (40), Weerbeke (29), Josquin (11), Martini (5), Coppini (5), Brumel (3), Isaac (3), Agricola, Arnulfus, Binchois, Du Fay, Notens, Obrecht, Prioris, Pullois, Spataro and Tinctoris.

K. Jeppesen: 'Die 3 Gafurius-Kodices der Fabbrica del Duomo, Milano', *AcM*, iii (1931), 14–28; C. Sartori: 'Il quarto codice di Gaffurio non è del tutto scomparso', *CHM*, i (1953), 25–44; A. Ciceri and L. Migliavacca, eds.: *Liber capelle ecclesie maioris: quarto codice di Gaffurio*, AMMM, xvi (1968) [facs. of Librone 4]; L.H. Ward: 'The *Motetti Missales* Repertory Reconsidered', *JAMS*, xxxix (1986), 491–523; H.M. Brown, ed., *Milan, Archivio della Veneranda Fabbrica del Duomo, Sezione musicale, librone 1–3*, RMF, xii (1987). Most of the music in the Gaffurius codices is edited in AMMM.

The church of S Petronio in Bologna is of great historical importance in Italy for several reasons. It was often used for ceremonies involving visiting dignitaries, and it also became a musical centre. The archives record activity in polyphonic music in the 15th century; during the 16th, a succession of excellent musicians, including Giovanni Spataro, held the post of 'maestro de canto'. It continued to be in the forefront of musical activity in the 17th century with its concerted masses and other types of early Baroque music.

The treatment accorded the various kinds of musical MSS copied there during the Renaissance reflected general attitudes in the 15th and 16th centuries. Many chant MSS were copied at S Petronio during this time; they were beautifully illuminated, on parchment, and were carefully

preserved in the church archives. Some polyphonic music was copied there in the 15th century, but it came to be considered obsolete with changes in musical style during the era of Josquin and was destroyed.

The only remnants are parts of 30 folios cut up and used in the binding of MSS of the following century: these paper folios contain four masses and a *Magnificat* (see C. Hamm: 'Musiche del Quattrocento in S. Petronio', *RIM*, iii (1968), 215–32). The copying of a new set of paper MSS began in the first decades of the 16th century, under the direction of Spataro, continuing through the remainder of the century; even the earliest MSS of this set were preserved in the archives when musical style changed again.

Most of the earliest MSS in this set are incomplete:

Bologna, Basilica di S Petronio, Archivio Musicale, A.XXIX. 28 paper ff. of an original 73, 58 × 43·5 cm. An original ink foliation, 1–73, from which it can be seen that ff.13–38, 44–8, 50–61 and 69 are missing, with resultant loss of some complete pieces (listed in the original index) and parts of others. The original covers are of dark green parchment over pasteboard. Copied 1512–27, partly by Spataro; a testament written by him in 1527 lists this MS.

5 mass Ordinary cycles, 2 Credos and 4 motets, by Josquin, Richafort, Mouton and Ghiselin. 4 masses and 2 motets listed in the index are missing because of the loss of folios.

L. Frati: 'Per la storia della musica in Bologna dal secolo XV al XVI', *RMI*, xxiv (1917), 449–78, esp. 459; F. Tirro: *Renaissance Musical Sources in the Archive of San Petronio in Bologna*, i: *Giovanni Spataro's Choirbooks* (Neuhausen, 1986)

3 other MSS copied at least in part by Spataro date from before 1527. The 71 (of an original 150) ff. of *I-Bsp* A.XXXI contain 7 mass Ordinary cycles and a number of Ordinary sections by Josquin (5), Brumel, Moulu, Verdelot, Alberti, Lafage and Roselli. *Bsp* A.XXXVIII has music for the mass Ordinary and 10 motets, by many of the same composers. *Bsp* A.XXXXVI contains music for Vespers: 24 *Magnificat* settings and 19 psalms. 10 pieces are by Jacquet of Mantua, others by De Silva, Mouton, Morales, Antoine de Févin, Carpentras, Roselli and Eustachio Romano.

The repertory to this point consisted almost entirely of mass Ordinaries and music for Vespers. More than half of the pieces have not yet been identified. It has been suggested that Spataro himself wrote some of these, but this hypothesis is difficult to prove.

Spataro also copied most of *I-Bsp* A.XXXXV, a collection dating from after 1527 containing 42 hymns, 13 motets and liturgical pieces, 3 *Magnificat* settings, 5 canticles and 1 psalm – again music for Vespers. Willaert (12), Spataro (5), Jacquet of Mantua (2), Lhéritier, Morales and Mouton are among the composers identified, but 42 pieces are anonymous. *Bsp* A.XXI, the largest of the choirbooks, with dimensions of 61·5 × 42 cm, has 62 folios, each consisting of 2 sheets of heavy paper glued together for extra strength. It preserves 3 sets of 9 responsories each for Holy Week, all anonymous, and a hymn by Willaert added in another hand. It probably dates from the mid-16th century; the title-page bears the date 1585, but this may be the date of restoration of the MS.

Bsp I.XXV, also from the mid-16th century, has 6 masses and 3 hymns, 3 by Berchem and another 3 by Jacquet of Mantua. It was copied in a somewhat different style from that of the other S Petronio MSS, with elaborate, illuminated initials and floral borders. *Bsp* A.XXX adds 3 masses and 9 *Magnificat* settings to the repertory. *Bsp* A.IL has 4 cycles of 4 psalms each (all may be by Phinot) and 9 *Magnificat* settings – again a vesper collection. *Bsp* A.XXXVI and A.XXXVII contain still more music for Vespers, 2 *Magnificat* settings and 8 psalms for double choir. *Bsp* A.XXVII has 7 anonymous psalms.

Another group, copied shortly after mid-century, consists of *Bsp* A.XLVIII, dated 1552, with 7 mass Ordinary cycles; *Bsp* A.XXXIX, with 34 motets (arranged according to the liturgical calendar) by such composers as Mouton, Jacquet of Mantua, Penet, Gombert and Conseil; and *Bsp* A.XXIV, with 8 anonymous *Magnificat* settings.

The copying of MSS continued in the second half of the century. *Bsp* A.XXXV has a collection of hymns, *Bsp* A.XXIII contains another set of mass Ordinary cycles, *Bsp* A.XXX has more *Magnificat* settings, *Bsp* A.XXXXIII is a large collection of hymns and *Bsp* A.XXXXIIII preserves psalms for two choirs. Almost all of this music is anonymous, and perhaps much of it is by local composers. It was copied to supply the choir with new repertory, more recent pieces set to the same texts as pieces already in the collection. But the older MSS were kept in the church and probably still used. By the end of the 16th century S Petronio had at least 40 choirbooks of polyphonic music spanning the entire century.

Another typical repertory is preserved at the cathedral in Casale Monferrato. These MSS are described, inventoried and discussed in Crawford (1975). The earliest books in this collection date from the second decade of the century:

Casale Monferrato, Duomo, Archivio Capitolare, M (D). i + 107 paper ff., 46 × 33 cm. Original covers of leather over pasteboard, no index, no original numbering system. The coat-of-arms of the Marquisate of Monferrato is found on f.1; the large black-ink calligraphic initials often contain grotesque human heads. The masses making up the largest and earliest layer were copied 1515–18, the motets were added later, probably 1538–*c*1545.

11 masses, 1 Credo, 4 motets, by De Silva (3), Bruhier (2), Josquin, Mouton, Prioris, La Rue and Jacquet of Mantua; 5 pieces remain unidentified. 6 of the masses, including the 1 by Mouton opening the collection, are unica.

I-CMac L(B) was copied at about the same time as the first layer of *CMac* M(D). It contains 5 masses, 3 Credos and 5 motets (added later), by Barra, Moulu, Mouton, Ninot le Petit and others. The 2 MSS share a common scribe. *CMac* P(E), with several scribal concordances with L(B), dates from 1521–*c*1526; many of its physical aspects resemble those of the above 2 sources. Like them, it is chiefly a collection of mass Ordinary cycles, 8 on ff.1–63. Remainder is a mixed collection of 9 motets, 2 hymns and several additional mass Ordinary sections. Among the composers represented are Moulu, Willaert, Antoine de Févin, Janequin, Madis and De Silva.

Having assembled a sufficiently large collection of Mass music, the scribes next turned to motets:

Casale Monferrato, Duomo, Archivio Capitolare, D (F). + 128 paper ff., 46·5 × 32·5 cm. Original covers of leather over boards, original ink foliation. Copied at Casale Monferrato by at least 17 scribes, several the same as those in the earlier MSS. A first layer, up to f.66, dates from 1521–*c*1526, remainder copied 1538–*c*1545.

61 motets, 2 *Magnificat* settings and 3 hymns, by Cellavenia (7), Lhéritier (7), De Silva (4), Mouton, Richafort, Jacquet of Mantua, Morales, Sermisy, Costanzo Festa, Cadéac and others.

Two other MSS were devoted largely to motets. *I-CMac* N(H), copied 1538–*c*1545 by some 9 scribes, has 38 motets, 6 psalms, 4 *Magnificat* settings, 4 masses, 2 requiem masses and several miscellaneous pieces. Among the composers are Jacquet of Mantua (12), Maistre Jhan (10), Willaert (7), Lhéritier, De Silva and Cellavenia (4). *CMac* C, also dating from 1538–*c*1545, has 22 motets, 21 hymns, 9 Lamentations and various other pieces. There are scribal concordances with the above MSS. Jacquet of Mantua and Costanzo Festa are both represented with 9 pieces, others are by Morales, Berchem, Richafort, Willaert, Sermisy and Arcadelt. Some of the 30 anonymous pieces may well be by local composers.

A seventh MS in the set, *CMac* G, contains 11 *Magnificat settings* (8 by Costanzo Festa, 3 by Morales) and several other pieces. Several MSS survive from the latter part of the century.

The creation of these MSS was a cooperative venture, with as many as 60 people sharing in the copying. As in the set at S Petronio, mass Ordinary cycles were copied first, then motets, and finally music for Vespers – hymns, psalms and *Magnificat* settings.

Similar sets of choirbooks are found elsewhere in Italy, mostly in the north. 13 MSS containing music spanning the entire 16th century are in the Biblioteca e Archivio Capitolare of Modena Cathedral. These are described and inventoried in D.E. Crawford: *Vespers Polyphony at Modena's Cathedral in the First Half of the Sixteenth Century* (diss., U. of Illinois, 1967). Another large and

important set, in the Archivio Musicale dell'Opera di S Maria del Fiore in Florence, was largely unavailable to scholars until late in the 20th century. No catalogue is yet available, but their contents are summarized in the *Census-Catalogue*, iv, 377–83.

The Biblioteca Estense in Modena preserved several MSS copied for the Este family in Ferrara in the 16th century:

I-MOe α.N.1.2, copied in 1534 by Jean Michel de Francia, is a collection of 9 masses and 12 motets by such composers as Mouton, Berchem, Josquin, Willaert and Hesdin. The first piece, a mass by Maistre Jhan, celebrates the occasion of Ercole II becoming Duke of Ferrara. *MOe* C.313, a set of partbooks, has 78 motets for 4 and 5 voices, by Willaert (36), Jacquet of Mantua (16), Cipriano de Rore (12), Contini (5) and others. *MOe* C.314 is a companion-set of partbooks with 43 motets for 6 and 7 voices, by the same composers. *MOe* α.N.1.1 is a large choirbook, 73·6 × 51·5 cm, with 5 mass Ordinary cycles by Dalla Viola (3), Luzzaschi and Willaert.

These, and a handful of smaller MSS at the Biblioteca Estense and elsewhere, are the only remnants of what we know from contemporary inventories to have been an extensive set of books copied at the Este court in the 16th century.

Numerous single MSS, or small groups of them, which in physical structure and contents are similar to individual MSS in sets of the kind just described, are found in various libraries and archives. They are large paper or parchment choirbooks with homogeneous contents that could have been part of a larger repertory, and they may be surviving members of sets of cathedral or court MSS. Typical are:

Florence, Biblioteca Nazionale Centrale, II.I.232 (formerly Magl.XIX 58). 200 paper ff., 42·5 × 30·2 cm, probably copied in Florence *c*1515. Contains 65 motets and several miscellaneous pieces, by Josquin (17), Mouton (12), Isaac (11), Obrecht, Compère, Brumel, Carpentras and others.

A.M. Cummings: 'A Florentine Sacred Repertory from the Medici Restoration', *AcM*, lv (1983), 267–332; RISM, B/IV/5 (1991), 203–8

Florence, Biblioteca Nazionale Centrale, II.I.350 (formerly Magl.XXXVI 113). 90 paper ff., 39·5 × 28·7 cm, copied in Florence *c*1520 for the church of S Egidio. 31 Lamentations, 21 motets, 5 canticles and 2 psalms, by Carpentras (14), Pisano (18–20), Brumel and several other composers.

F. D'Accone: 'Bernardo Pisano: an Introduction to his Life and Works', *MD*, xvii (1963), 115–35; RISM, B/IV/5 (1991), 213–16

Berlin, Staatsbibliothek zu Berlin Preussischer Kulturbesitz, Mus.ms.40091. 157 paper ff., 52 × 39 cm, probably copied for the church of S Luigi dei Francesi in Rome in 1515–20. 8 masses, by Josquin, Pipelare, De Silva, Divitis and Misonne.

M. Staehelin: 'Zum Schicksal des alten Musikalien-Fonds von San Luigi dei Francesi in Rom', *FAM*, xvii (1970), 120–27

Cividale del Friuli, Museo Archeologico Nazionale, 53 and 59. MS 53 has 14 masses, by Mouton, Sermisy, Willaert, Richafort, Manchicourt and others; MS 59 contains 29 motets, 8 *Magnificat* settings, 3 masses, and a scattering of other pieces, by Jacquet of Mantua, Lurano, Mouton, Compère, Isaac, Josquin etc. These two choirbooks were copied *c*1540 for the collegiate church of S Maria Assunta in Cividale.

Milan, Biblioteca Ambrosiana, E 46. 88 parchment ff., 45·8 × 43·8 cm. 9 masses, by Josquin, Divitis, Morales and Pierre de La Rue. Watermarks on paper flyleaves similar to several from Lucca in second quarter of 16th century; an inscription on a flyleaf records that MS was sold to an unnamed library in 1596, by Paulo da Lucca. Could be the surviving member of a set of court MSS.

Bergamo, Biblioteca Civica Angelo Mai, 1207 D, 1208 D and 1209 D. Copied between 1524 and 1545 for S Maria Maggiore in Bergamo. Contain mostly motets, psalms and other liturgical pieces. Other MSS with masses and more music for Vespers probably once belonged with this set but are now lost. Gasparo Alberti, a local *maestro di cappella*, is the most widely represented composer and other Italians, including Maffoni, Laurus and Fogliano, who worked in the area, are included.

D. Crawford and S. Messing: *Gaspar de Albertis' Sixteenth-Century Choirbooks at Bergamo*, RMS, vi (1994)

Florence, Biblioteca Nazionale Centrale, II.I.285 (formerly Magl.XIX 56). 210 paper ff., 42·6 × 28 cm, containing sets of Lamentations by Arcadelt, Costanzo Festa, Morales, Carpentras, Verdelot and others. Copied in Florence; dated 1559.

B. Becherini: *Catalogo dei manoscritti musicali della Biblioteca nazionale di Firenze* (Kassel, 1959), 18–19; G. Bunshaft: *Biblioteca nazionale centrale, Manuscript II.I.285 (Magliabecchi XIX.56)* (diss., U. of Illinois, 1969)

Rome, Basilica di S Giovanni in Laterano, Archivio Musicale, 61. Dated 1575 on the first folio, this 156-folio choirbook contains the cycle *Hymni per totum annum* by Costanzo Festa and 27 other hymns by Carpentras, Palestrina, Matelart and others including Annibale Stabile, who may have copied – or directed the copying of – this MS.

G. Haydon: 'The Lateran Codex 61', *IMSCR VII: Cologne 1958*, 126–31

Pistoia, Basilica di S Zeno, Archivio Capitolare, Biblioteca Musicale, 215 and 216. MS 215, a choirbook of 131 paper ff., 48 × 37 cm, has antiphons for Holy Week, 27 responsories for Triduum sacra, Lamentations and psalms, by Simone, Rampollini, Corteccia, Ruffo, Carpentras and Morales. MS 216 has psalms, hymns and *Magnificat* settings – a vespers repertory – by Simone, Ruffo and Lassus. The two were copied *c*1600.

M. Fabbri: 'Una preziosa raccolta di musica sacra Cinquecentesca', *CHM*, iv (1966), 103–23

Repertories continued to be planned and copied in the second half of the 16th century. One of the largest is at the cathedral in Treviso, north of Venice. A great deal is known about this set: it was catalogued, and each MS briefly described and given a letter (A–Y), shortly after 1595; the archivist, Giovanni d'Alessi, made an incipit catalogue of the remaining MSS some time before World War II, giving each book a number – only seven of the original books had been lost; local scribes used to record not only the year, but also the day and sometimes even the hour when they completed the copying of an individual piece or group of pieces. With so much information, it is possible to reconstruct the various steps in the copying of this repertory.

Though there is archival evidence of polyphony at the cathedral in the late 15th century and the first half of the 16th, the earliest surviving sources date from just after mid-century. Four MSS were copied in 1552–4. Two, B and D, were lost; the other two, *I-TVd* 1(A) and *TVd* 2(C), were inventoried by d'Alessi. Along with about half the cathedral's MSS, they were destroyed during a bombing of the town in 1944, but from d'Alessi's cataloguing we know that 1(A) contained 13 mass Ordinary cycles (4 by Jacquet, 3 by Morales, 1 each by Hesdin, Jan Nasco, Gombert, Maistre Jhan, Cipriano de Rore and Willaert) and 2(C) had ten additional masses (3 by Gombert, 2 by Lupus, 1 each by Bruhier, Maistre Jhan, Ciera and Nasco).

Thus mass Ordinaries are again the first items copied, and it is no surprise that the next source, *TVd* 3(E), has music for Vespers comprising some 50 hymns. This one was also destroyed in the bombing, but d'Alessi's catalogue enables us to identify Nasco, Willaert, Olivetus and Ciera as composers of some of the hymns. *TVd* G contained more vespers music – *Magnificat* settings and psalms – but it was lost before the 20th century.

Next comes a group of MSS containing motets, copied 1557–61, with some additions *c*1567. The first three, *TVd* 4(F), 5(H) and 6(I), were lost in 1944, but from d'Alessi's work it can be determined that the motets were ordered according to the liturgical calendar. *TVd* 4(F) had 75 motets for feasts falling between August and December, the 50 in *TVd* 5(H) are for the months of May to July, and the 44 of *TVd* 6(I) for January to April. The number of motets for each feast varies with their importance. In *TVd* 5(H), for instance, there are 14 motets for the feast of the Holy Cross (3 May), 12 for Corpus Christi, 13 for John the Baptist (24 June), 2 for Mary Magdalene (22 July) and 3 for St Luke (18 October).

The next in the set is the earliest extant MS:

Treviso, Biblioteca Capitolare del Duomo, 7(*K*). 106 paper ff., 71·2 × 35·5 cm. Rather poor condition. An opening fly leaf has an original table of contents, grouping motet titles by feasts and identifying these. Copied in Treviso, mostly 1558–61, with some additions in 1569.

46 motets and 5 psalms, by Willaert, Jacquet, Lassus, Phinot, Niccolò Patavino, Lupus, De Silva, Richafort, Gombert, Maistre Jhan and others. The motets are for various feasts, both fixed and movable, for April, May and June: Easter; the feast of St Liberalis (patron saint of Treviso); Philip and James; Corpus Christi; St Honofrius; St Vitus, St Modestus and St Crescentia; Peter and Paul; St Theonisti, St Thabre and St Thabrathe; John the Baptist.

G. d'Alessi: *La cappella musicale del duomo di Treviso (1300–1633)* (Vedelago, 1954), 184–6, 209ff

I-TVd 8(L), with some 55 motets for Advent, Christmas, and other feasts of December and early January, completes this 5-choirbook set of motets.

These eight MSS gave the cathedral choir a basic polyphonic repertory – a number of settings of the mass Ordinary, music for Vespers, and a collection of motets for the most important feasts. MSS continued to be copied, with more music of the same sort, and also polyphony for occasions for which none had yet been copied.

I-TVd 9(M) is a collection of 9 masses, none duplicating ones already in the repertory. *TVd* 11[a-b] (P), copied in 1557, contain the first music for double choir to be found in this set: 38 psalms by Willaert, Jacquet, Niccolò Patavino and Olivetus. *TVd* 12[a-b] (Q) have 21 psalms for double chorus, all anonymous save for 1 attributed to Francesco Portinaro. The repertory already contained psalms; these new ones for 2 choirs were probably reserved for feasts of the highest importance.

TVd 13(R) contains 43 hymns, including many by Willaert. Some of the latter are not found in his printed collection. *TVd* 14(T) has antiphons. It is likely that a polyphonic antiphon was sung when the *Magnificat* or psalm that followed was also to be sung polyphonically, and a study of the contents of this MS should identify the feasts for which this was done.

A cycle of 8 *Magnificat* settings, anonymous but possibly by Ruffo, makes *TVd* 15(V). *TVd* 16(X) has 8 masses, the first 6 by Jacquet and the last 2 by Chamaterò, and *TVd* 19(N) also contains 8 masses by Pierre Colin, and several miscellaneous pieces.

The copying of this repertory was completed by 1568. Another scribe added more pieces, mostly by local composers, between 1568 and 1570, taking care to copy these in the proper places. The repertory was contained in unbound fascicles to this point. Between 1570 and 1574 these fascicles were bound into the larger MSS that exist today, and foliation was added. Margins were trimmed in the process, with the loss of many composer attributions at the tops of folios.

This process did not signal the end of copying of polyphonic music at Treviso. *I-TVd* 20, containing sets of Lamentations by Maistre Jhan and Nasco, and *TVd* 21, with a requiem mass and other funeral music, were copied in 1572. *TVd* 22 has psalms for double choir, to be sung at Terce and Compline. *TVd* 23, containing eight masses by Jacquet of Mantua, was not copied at Treviso. It duplicates some pieces already in the Treviso repertory, and must have been brought to the cathedral from elsewhere. *TVd* 24 has more vesper psalms for double choir, *TVd* 25 (hymns) was not copied at Treviso, and *TVd* 26 contains *Magnificat* settings for two choirs.

The assembling and copying of this enormous repertory occupied the various copyists at Treviso for almost half a century. It affords a lively view of the extremely rich and varied polyphonic practice in Italian cathedrals in the later 16th century.

Description or even mention of the many more sets and single MSS of this sort is beyond the scope of the present article. But one more large repertory, which has not yet been studied thoroughly, should be mentioned. Some 200 MSS and prints were assembled at the ducal chapel of S Barbara in Mantua during the reign of Guglielmo Gonzaga (1550–85). Sold in 1850, at least part of the collection is now in the library of the Milan Conservatory.

The MS music in this set was copied from the founding of S Barbara in 1565 to *c*1630. A 19th-century inventory lists 53 choirbooks of masses (MSS and prints are counted together), 33 choirbooks of motets, 31 books of psalms and hymns and an additional 20 collections of partbooks. Among the hundreds of polyphonic pieces from the late 16th century found in the MSS now in Milan are masses by Palestrina, Isnardi, Wert, Rovigo, Striggio, Gastoldi, Guglielmo himself and many other composers. Many of these are unica. See K. Jeppesen: 'Pierluigi da Palestrina, Herzog Guglielmo Gonzaga und die neugefundenen Mantovaner-Messen Palestrinas', *AcM*, xxv (1953), 132–79.

18. Vatican manuscripts. The papal choir was the most important musical establishment of the 15th century, numbering among its members many of the leading composers of the time. Even though we have lists of the singers in the choir, and we know of certain pieces performed by it, no MSS known to have originated there or even used there before the last two decades of the century have been identified.

The choir increased in size from fewer than a dozen singers early in the century to 24 by the 1480s. There were no boys in the choir after 1441; the upper parts were taken by specially trained men. The Cappella Sistina or Sistine Chapel, built by Pope Sixtus IV (1471–84), became the home of the papal choir, and a group of some hundreds of MSS preserved there apparently reflects the repertory of the papal choir from the last decades of the 15th century up to the beginning of the 19th. These were first inventoried and described in Haberl (1888), more thoroughly (though still with inaccuracies) in Llorens (1960). Since the 1970s the production of the first 100 years or so of Vatican MSS has been carefully examined: the two earliest choirbooks in Roth (1991); the MSS from the papacies of Alexander VI and Julius II in R.J. Sheer: *The Papal Chapel ca.1492–1531 and its Polyphonic Sources* (diss., Princeton U., 1975) and Sherr (1996); the first generation of the permanent music scriptorium in J.J. Dean: *The Scribes of the Sistine Chapel, 1501–1527* (diss., U. of Chicago, 1984); and the output of the prolific Vatican scribe Johannes Parvus in M.P. Brauner: *The*

Parvus Manuscripts: a Study of Vatican Polyphony, ca.1535 to 1580 (diss., Brandeis U., 1982).

Even the earliest of these MSS are in large choirbook format, larger than any other known sources of the time, large enough for two dozen or so papal singers grouped around a lectern to read from a single MS. The oldest of these sources contain cyclic masses and some separate sections of the mass Ordinary:

Vatican City, Biblioteca Apostolica Vaticana, C.S.14. 171 paper ff., 57·5 × 42·2 cm.

17 masses and 2 Kyries, by Du Fay (3), Regis (2), Weerbeke, Busnoys, Caron, Ockeghem and others.

Vatican City, Biblioteca Apostolica Vaticana, C.S.51. 215 paper ff., 55·5 × 40·5 cm. Arms of Pope Innocent VIII (1484–92) on f.196*v*. First part of MS is older, and may have been copied under Sixtus IV.

17 masses and 7 mass Ordinary sections, by Caron (3), Basiron (3), Vaqueras (2), Busnoys (2), Martini (2), Vincenet, Weerbeke and others.

These two choirbooks were copied together, but not at the papal chapel itself, though they were probably made to order for the choir. Their place of origin is disputed (Naples, Florence and Venice have been proposed), but the date is fairly well agreed as being between the mid-1470s and about 1480. More masses and a few motets were copied, this time within the chapel, in *I-Rvat* C.S.35 during the late 1480s and early 1490s.

The repertory of the papal choir, as represented in the preserved sources, was expanded during the reign of Alexander VI (1492–1503) to include music for Vespers (hymns, *Magnificat* settings and motets):

Vatican City, Biblioteca apostolica vaticana, C.S.15. 269 paper ff., 55 × 41·7 cm.

28 hymns, 14 *Magnificat* settings and 41 motets and antiphons by Du Fay (21), Compère (5), Josquin (4), Martini (3), Weerbeke (3), Orto (2), Brumel (2), Busnoys, Regis and anonymous. Hymns grouped in temporal and sanctoral cycles, *Magnificat* settings ordered by tone, antiphons mostly Marian. Inclusion of so many pieces by Du Fay (who had died about 2 decades earlier) is remarkable, and is an early instance of the retrospective orientation of much of the Vatican repertory.

Similar MSS continued to be copied under the pontificate of Julius II (1503–13) by the scribe Johannes Orceau (*fl* 1497–1512). *I-Rvat* C.S.23 adds 14 masses, 3 Credos and a Gloria to the Sistine repertory; C.S.42 has 45 motets, arranged according to the church year; C.S.44 contains 11 *Magnificat* settings (arranged by tone) and 5 motets; and C.S.49 has 12 masses and a *Salve regina*. The most frequently copied composer was Josquin. In these and later MSS pieces or groups of pieces were first copied as separate folios or fascicles, perhaps even sung from in this form, and only later bound together into large MSS. However, the fact that there is almost no duplication of pieces in the Vatican sources suggests that they were conceived of as a collection at a fairly early date, and copyists of later MSS were quite aware of what music was already in the collection. New pieces were copied as they came to hand, or as musical tastes changed.

During the reign of the Medici pope Leo X (1513–21) the scribe Claudius Gellandi and some associates added some 33 masses, 7 mass sections and 47 motets. Mouton is now the best-represented composer, and the music of Willaert, Festa and Richafort enters the repertory. Gellandi was the sole or chief copyist of the mass MSS *Rvat* C.S.16, 26 and 45 (all of which contain Leo's insignia in their decoration), and fascicles of his work appear in other chorbooks. Extreme in its complication, and extending from the time of Leo's predecessor Julius II into that of his successor Clement VII (1523–34), is:

Vatican City, Biblioteca Apostolica Vaticana, C.S.46. 159 paper ff., 55·5 × 42 cm. 18th-century leather covers over boards. 5 scribes: Orceau (6 pieces), Gellandi (23), the chief scribe of *I-Fl* Acq. e doni 666 (3), an assistant also active with Gellandi in *Fl* Acq. e doni 666 (1), and Claudius Bouchet (*fl c*1523–7) (9); the earliest pieces were copied *c* 1508–9, and the MS was assembled by Bouchet (who numbered the folios) just before the Sack of Rome in May 1527. No decoration, though there is space for painted initials on the first opening.

41 motets and 1 *Nunc dimittis* setting with antiphon *Lumen ad revelationem*, by Mouton (7), Carpentras (4), De Silva (3), Festa (3), Josquin (3), Richafort (2), Basiron, Compère, Ockeghem, Willaert and others (6 anon.).

J.J. Dean, ed: *Vatican City, Biblioteca Apostolica Vaticana, Cappella Sistina MS 46*, RMF, xxi (1986) [facs.]; J. Dean: 'The Evolution of a Canon at the Papal Chapel', *Papal Music and Musicians in Late Medieval and Renaissance Rome: Washington DC 1993*, 138–66

Quite different are *Rvat* C.S.34, 36 and 160, also from the time of Leo X, but stemming from the Alamire workshops of the Habsburg-Burgundian court of Margaret of Austria (above, §16). They contain pieces by such previously unrepresented composers as Pierre de La Rue.

The pontificate of Clement VII (1523–34) was a troubled one, marked by the Sack of Rome in 1527; *Rvat* C.S.55 was the only MS chiefly copied during his reign. But the accession of Paul III (1534–49) marked an era of renewed vigour. Dating from this period are such MSS as:

Vatican City, Biblioteca Apostolica Vaticana, C.S.18. 197 paper ff., 65 × 46 cm. Copied by Johannes Parvus, *c*1539; large initials and miniatures by Vincent Raymond. *Stemma* of Paul III at beginning.

30 hymns, 8 *Magnificat* settings, 4 *Benedicamus Domino* and 2 *Magnificat* antiphons, all by Costanzo Festa.

Rvat C.S.13 (8 masses, 7 motets), C.S.17 (6 masses, 5 Marian antiphons), C.S.19 (6 masses, 9 motets), C.S.24 (26 motets, antiphons and sequences) and C.S.154 (4 masses), all copied by Parvus with illumination by Vincent Raymond and Apollonio Bonfratelli, date from the reign of Paul III.

Parvus continued as the chief scribe at the Vatican throughout the pontificates of Julius III and Pius IV, until about 1580. Typical of MSS from this period is:

Vatican City, Biblioteca Apostolica Vaticana, C.S.38. 163 paper ff., 63·5 × 46 cm. Copied by Parvus, with initials and miniatures by Apollonio Bonfratelli, in 1563. *Stemma* of Pius IV.

39 motets, by Josquin (7), Mouton (4), Verdelot (3), Palestrina, Jacquet of Mantua, De Silva, Morales, Clemens non Papa and others.

I-Rvat C.S.38 shows again the retrospective nature of the Vatican repertory: Josquin, represented by more pieces than any other composer, had been dead almost half a century when the MS was copied. It may have been intended to replace music that had worn out through frequent performance.

More than a dozen MSS copied by Parvus towards the middle of the century form the majority of sources preserved from this time. With his retirement and death, Luca Orfei became the principal scribe for a repertory

now dominated by the music of Palestrina and his contemporaries. An example is:

Vatican City, Biblioteca Apostolica Vaticana, C.S.30. 161 paper ff., 74 × 49·5 cm. This is the maximum size for Vatican MSS. Copied 1594 by Orfei, during the pontificate of Clement VIII.

6 masses, by Palestrina (3), Animuccia (1), Nanino (1) and Ameyden (1)

With the onset of the 17th century and its revolutionary changes in musical style, the Vatican became one of the bastions of musical conservatism. The papal choir continued to sing Renaissance music into the 17th century, and scribes continued to copy MSS in mensural notation. *I-Rvat* C.S.43, for example, copied in 1619, contains 38 offertories by Palestrina, a selection from the 68 published in 1593. C.S.96, copied in 1630, contains 5 motets by Palestrina and 2 hymns by Allegri. C.S.92, copied in 1669, contains the *Missa 'Vidi speciosam'* by Victoria. An extreme case – though not the only one – is C.S.313, including Morales's *Lamentabatur Jacob*, copied in 1794

Pope Julius established a choir in the Cappella Giulia, in S Pietro, in 1512. The formation of this group ensured that there would be polyphonic music sung in the Vatican even when the choir of the Cappella Sistina was absent from Rome; it also served as a proving and training ground for singers who might some day become members of the papal choir in the Cappella Sistina. The choir of the Cappella Giulia numbered about a dozen singers, all of them male. The early repertory survives in a set of five MSS, which are described and inventoried in J.M. Llorens: *Le opere musicali della Cappella Giulia* (Vatican City, 1971).

Vatican City, Biblioteca Apostolica Vaticana, C.G.XII.2. 345 paper ff., 55 × 41 cm. Copied by several different scribes, most of whom copied MSS for the Cappella Sistina, towards the end of the reign of Leo X, with additions from the 1570s or 1580s. Original foliation begins with xv; an original first fascicle containing 1 mass has been lost along with 4 masses later in the MS.

14 masses and 2 motets, by Josquin (3), Mouton (3), Costanzo Festa (2), Antoine de Févin (2), Pierre de La Rue and others.

J.J. Dean: *The Scribes of the Sistine Chapel, 1501–1527* (diss., U. of Chicago, 1984)

This MS with settings of the Ordinary of the Mass was copied first, followed almost two decades afterwards by four additional MSS supplying music for Vespers and Holy Week:

Vatican City, Biblioteca Apostolica Vaticana, C.G.XII.4. 161 paper ff., 67·8 × 50·5 cm. Copied in Rome for the Cappella Giulia in 1536. Carries the arms and emblems of the Della Rovere family, the family of Pope Julius II, the founder of the chapel.

Motets for 4–6 voices, by Sermisy (8), Lhéritier (7), Berchem (4), Maistre Jhan (4), Josquin (4), Verdelot (3), Costanzo Festa (3), Gombert (2), Willaert (2) and others.

I-Rvat C.G.XII.5, copied probably in 1539, contains *Magnificat* cycles by Costanzo Festa and Carpentras; C.G.XII.6, from the same year, has 45 hymns by Festa, Carpentras and others; C.G.XII.3, from 1543, has Lamentations and other music for Holy Week by Costanzo Festa, Carpentras, Morales, Escribano and Charles d'Argentille.

One final, much earlier, MS surviving at the Vatican should be mentioned:

Vatican City, Biblioteca Apostolica Vaticana, Archivio del Capitolo di S Pietro, B 80. 249 parchment ff., 35·6 × 25·6 cm. Copied 1474–5 at S Pietro, with additions to 1500. There are 13 gatherings, alternating 6 and 4 bifolios; the main body of the MS, and the oldest, begins with gathering 5 (f.38); the first four gatherings (ff.1–37) are a somewhat later addition. Contents may represent repertory of papal choir from a time several decades before any of the other MSS described and mentioned above were copied. Contains music for Mass and Vespers, as do later Vatican MSS. Since it is a much smaller MS than the later Vatican sources, it was either copied for use by a smaller choir or was a repository of pieces not intended to be sung from.

15 masses, 20 hymns, 14 *Magnificat* settings, 20 antiphons, by Du Fay, Binchois, Caron, Dunstaple, Barbingant, Pullois and others. This is the oldest and largest layer of compositions; two additional masses and several motets by Du Fay, Compère and Josquin are in the first four fascicles, and additional hymns and other brief pieces were added by a number of hands at various places.

C.A. Reynolds, ed.: *Vatican City, Biblioteca Apostolica Vaticana, San Pietro B80*, RMF, xxiii (1986) [facs.]; C.A. Reynolds: *Papal Patronage and the Music of St Peter's, 1380–1513* (Berkeley, 1995)

19. 16th-century sources of sacred music from the British Isles. The violent upheavals attending the Reformation resulted in the destruction of many MS sources of sacred polyphony. MSS with Latin texts were destroyed by anti-Catholic forces, while those with English texts met the same fate during periods of Catholic resurgence. Calvinist hostility towards elaborate polyphonic music was also responsible for reducing the number of sources which have come down to us. Some important sources, however – both Latin and English – survived the vicissitudes of religious conflict; an inventory of the repertory appears in M. Hofman and J. Morehen: *Latin Music in British Sources, c1485–c1610* (London, 1987).

The principal sources of Latin sacred music in England from *c*1490 to 1530 are three large parchment choirbooks:

Windsor, Eton College Library, 178 ('Eton Choirbook'). iv + 126 + iv parchment ff. of an original 224, 59·5 × 42·5 cm. Modern and original foliation. Leather covers, probably from the second half of the 16th century, stamped with the Tudor rose, portcullis, fleur-de-lis, and H.R. (the initials of the binder). Black mensural notation with red coloration (void semiminims and *fusae*). The MS was copied (1490–1502) for use at Eton College. The coat-of-arms of the college, and of its provost Henry Bost, are found in decorated initials in the MS.

Of the 93 pieces listed in the original index, 29 are now missing and some others are incomplete. They include 9 *Magnificat* settings, 1 Passion and 54 motets, by Browne (10), Davy (9), Walter Lambe (8), Robert Wilkinson (7), Cornysh (5), Horwood (4), Fayrfax (2), Fawkyner (2), Huchyn (2), Kellyk (2), Turges (2), Banaster, Brygeman, Hacomplaynt, Hampton, Holynborne, Hygons, Nesbet, Sturton, Sutton, Sygar and William Stratford. Baldwyn, Dunstaple and Mychelson are also listed in the index, but their works are now missing.

F.Ll. Harrison: 'The Eton Choirbook: its Background and Contents', *AnnM*, i (1953), 151–75; MB, x–xii (1956–61) [edn]; M. Williamson: *The Eton Choirbook: its Historical and Institutional Background* (diss., U. of Oxford, 1995)

London, Lambeth Palace Library, 1 ('Lambeth Choirbook'). i + 94 parchment ff., 67 × 46·8 cm. Modern foliation; covers of brown leather on boards. Probably copied during 1520s by Edward Higgins, the MS was intended for use at St Stephen's, Westminster.

7 masses, 4 *Magnificat* settings and 8 motets. Fayrfax (8 pieces) and Sturton (1) are named in the MS; Ludford (2) and Walter Lambe (1) have been identified from concordant sources.

M.R. James and C. Jenkins: *A Descriptive Catalogue of the Manuscripts in the Library of Lambeth Palace* (Cambridge, 1930–32), 1; Chew (1970); D. Skinner: 'Discovering the Provenance of the Caius and Lambeth Choirbooks', *EMc*, xxv (1997), 245–66

Cambridge, University Library, Gonville and Caius Coll.667/760 ('Caius Choirbook'). 95 parchment ff., 71·5 × 48 cm (some slightly

smaller). Original pagination, 1–189, but usually only odd-numbered pages bear numbers. Rebound in new cardboard corners with dark green leather spine. Black notation, with white coloration. Initials and miniatures in blue, red, gold, green, white, brown and yellow. Probably copied by Edward Higgins at St Stephen's, Westminster, during late 1520s; the MS was later presented to Salisbury Cathedral.

10 masses and 5 *Magnificat* settings, by Fayrfax (6), Ludford (5), Cornysh, Pasche, Prentyce and Turges.

M.R. James: *A Descriptive Catalogue of the Manuscripts in the Library of Gonville and Caius College* (Cambridge, 1907–8), 663–4; M.E. Lyon: *Early Tudor Church Music: the Lambeth and Caius Manuscripts* (diss., U. of California, Berkeley, 1957); Chew (1970); D. Skinner: 'Discovering the Provenance of the Caius and Lambeth Choirbooks', *EMc*, xxv (1997), 245–66

By the middle third of the 16th century large choirbooks were replaced by octavo-size partbooks, both upright and oblong. Three important sets of partbooks with Latin repertory from this period are:

Oxford, Bodleian Library, Mus.Sch.e.376–81 ('Forrest-Heyther Partbooks'). 6 paper partbooks; 376–80 are 19·2 × 23·4 cm; 381 measures 14·5 × 19·5 cm. Bound in leather covers stamped with royal arms supported by greyhound and dragon or griffin, also a large Tudor rose. Date: early 1530s.

18 masses by Alwood, Ashwell, Aston, Fayrfax, Merbecke, Norman, Sheppard, Taverner, Tye and others. Sexta book contains 3 anthems added by a later hand; the other parts for these pieces are in *GB-Ob* Mus.Sch.D.212–16.

J.D. Bergsagel: 'The Date and Provenance of the Forrest-Heyther Collection of Tudor Masses', *ML*, xliv (1963), 240–48; J. Milsom, ed.: *Oxford, Bodleian Library, MSS. Mus.Sch.e.376–381*, RMF, xv (1986)

Cambridge, University Library, Peterhouse 471–4 (formerly 31–2, 40–41) ('Henrician Partbooks'). 4 paper partbooks, 28 × 19·8 cm. Original foliation; new covers of brown leather on boards. Date: 1539–41.

19 masses, 7 *Magnificat* settings and 45 motets, by Fayrfax (11), Taverner (12), Ludford (7), Aston (5), John Mason (4), Tallis (4), Alen, Appleby, Bramston, Merbecke, Norman, Pasche, Tye, Whytbroke and others.

A. Hughes: *Catalogue of the Musical Manuscripts at Peterhouse, Cambridge* (Cambridge, 1953), pp.viii–ix, 2–6; N. Sandon: 'The Henrician Partbooks at Peterhouse, Cambridge', *PRMA*, ciii (1976–7), 106–40

London, British Library, Add.17802–5 ('Gyffard Partbooks'). 4 paper partbooks, 21 × 13·8 cm. Modern foliation skips some blank folios; some original foliation, but erratic. Modern maroon leather binding. Most of the copying probably done between 1553–8, during reign of Queen Mary; some possibly as early as *c*1540 and as late as *c*1580. Pieces grouped in liturgical categories, within which they are arranged in order of the seniority of their composers. Inscriptions in the MS indicate that the books were once owned by a certain Philip Gyffard, whose identity is uncertain.

12 masses, 7 Kyries, 1 mass Proper cycle, 13 mass Proper sections, 5 *Magnificat* settings, 1 *Te Deum*, 2 psalms, 2 Office hymns, 4 processional hymns, 1 Passion and 46 motets, by Sheppard (19), Taverner (10), William Mundy (7), Tallis (7), Tye (6), Blitheman (3), Thomas Knight (3), Robert Johnson, i (2), Van Wilder (2), Alcock, Appleby, Bramston, John Mundy, Okeland, Robert White, Whytbroke and others.

R. Bray: 'British Museum Add.Mss.17802–5 (the Gyffard Partbooks): an Index and Commentary', *RMARC*, no.7 (1969), 31–50; D. Mateer: 'The Compilation of the Gyffard Partbooks', *RMARC*, no.26 (1993), 19–43; D. Mateer: 'The "Gyffard" Partbooks: Composers, Owners, Date and Provenance', *RMARC*, no.28 (1995), 21–50

Two MSS containing music of the Anglican liturgy are of particular interest because of their early dates. They were copied *c*1546–8, and therefore antedate the Act of Uniformity and the first prayer book (1549). *GB-Lbl* Roy.App.74–6 consists of three paper partbooks, *c*19 × 28 cm, containing three hymns and a *Magnificat* (all in English), 22 anthems, and a number of shorter settings of Anglican service music, with some other secular vocal and instrumental music. Tallis is the only composer named in the vocal part of the MS. See A. Hughes-Hughes: *Catalogue of Manuscript Music in the British Museum*, i (London, 1906), 1, 179, 396–7; J.H. Blezzard: *The Sacred Music of the Lumley Books* (diss., U. of Leeds, 1972). *Ob* Mus.Sch.e.420–22 ('Wanley Partbooks') consists of three paper partbooks of an original four (tenor book missing), 18 × 27 cm, containing about 90 sacred pieces with English texts. These include ten settings of the complete Office of Holy Communion, five morning and evening canticles, three settings of the Lord's Prayer and other anthems. No composers are named in the MS, but the following have been identified from concordant sources: Tallis (3), Sheppard (2), Taverner (2), Okeland (2), Caustun (1), Robert Johnson, i (1) and Whytbroke (1). See J. Wrightson: *The 'Wanley' Manuscripts: a Critical Commentary* (New York, 1989).

Anglican music from the second half of the 16th century is preserved in *Lbl* Add.30480–84, a set of five paper partbooks, 14·1 × 19·7 cm, containing 2 services, 11 service sections, 24 anthems, 10 Latin motets and 27 instrumental pieces. Composers named are Tye (9), Tallis (6), Adams, Bulman, Caustun, Feryng, Fractynge, Sebastian Hollander, Robert Johnson, i, Mundy, Parsley, Partyne, Sheppard, Taverner, Robert White, Whytbroke and Van Wilder. See A. Hughes-Hughes: *Catalogue of Manuscript Music in the British Museum*, i (1906), 3–4, 265, 397–8; iii (1909), 202, 219, 232.

Latin sacred music did not die out during the reign of Elizabeth I; it continued to be cultivated in some university circles (where Latin texts presented no barriers to comprehension), and in private Catholic establishments. Elizabeth's warm relations with Byrd and others of her Catholic subjects demonstrated her willingness to tolerate recusancy, provided it was practised with due discretion and not intermingled with disloyalty to the crown. The three MSS listed below document the continuing survival of Catholic music in England during the late 16th century:

Chelmsford, Essex County Record Office, D/DP Z6/1. 1 paper partbook (bassus) of i + 71 ff., 20·8 × 28 cm. Original foliation; original covers of brown tooled leather on boards, with remnants of two string ties. The name 'Iohn Petre' is stamped on the cover. Collection probably copied *c*1590 by a scribe in the employ of Edward Paston (1550–1630), a collector of music prints and MSS, whose estate was near Norwich. The MS may have been a gift from Paston to Sir John Petre (1549–1613) of Ingatestone, Essex, a neighbour and a patron of Byrd.

1 mass, 1 *Magnificat*, 2 Lamentations, 66 motets and 2 fantasias. As in other 16th-century sacred music sources of English provenance, English composers predominate: Byrd (20 pieces), Tallis (8), Taverner (6), Sheppard (2), Fayrfax (2) and others are represented. Some continental composers also included: Crecquillon (4 pieces), Vaet (3), Philippe de Monte (2), Palestrina (2), Rivulo (2), Gombert (1), Lassus (1) and a few others of lesser renown.

GB-CF D/DP Z6/2 is a paper partbook, physically similar to Z6/1, but containing 2 parts instead of 1 (bassus appears on verso of each opening, tenor on recto). Repertory similar to that of Z6/1, but also includes 19 French chansons.

E. Fellowes: *Tudor Church Music: Appendix with Supplemental Notes* (London, 1948/*R*), 5ff; P. Brett: 'Edward Paston (1550–1630): a Norfolk Gentleman and his Musical Collection', *Transactions of the Cambridge Bibliographical Society*, iv (1964–8), 51–69 [further information about Paston, with list of other MSS from his collection]

The presence of the French secular works in *GB-CF* Z6/2 underlines the fact that the MS originated in private

circles rather than official ecclesiastical establishments. By contrast, another important collection of Latin sacred music dating from *c*1580–1600 was copied at St George's Chapel, Windsor. The MS consists of five paper partbooks of an original six, in oblong octavo, bound together with the print RISM 1575[3]; the books are now catalogued as *Och* 979–83. Copied by John Baldwin, the books were later owned by Henry Aldrich, whose collection of prints and MSS was bequeathed to Christ Church, Oxford, in 1710. Their contents are a mass, a *Magnificat*, two *Te Deum* settings, a canticle, 36 psalms, 28 hymns, 7 Lamentations, 88 motets and several miscellaneous pieces, by Sheppard (41), Byrd (32), Tallis (16), Robert White (16), William Mundy (15), Taverner (10), Robert Parsons (8), Baldwin (4), Tye (4) and others. See R. Bray: 'The Part-Books Oxford, Christ Church, Mss 979–83: an Index and Commentary', *MD*, xxv (1971), 179–97.

Although a considerable number of MSS of sacred music must have been copied in Scotland during the 16th century, few have survived:

Edinburgh, National Library of Scotland, 5.1.15 ('Scone Antiphoner'; 'Carvor Choirbook'). 180 paper ff., 38 × 27·7 cm. New foliation added after 1950. Rebound in morocco covers in 1957. Red and blue illuminated initials. Most of the MS is in one hand, and was formerly thought to have been copied *c*1503–20 at Scone Abbey (Augustinian) in Perthshire, but is now believed to have been compiled at the Scottish Chapel Royal at Stirling. First mass and last motet added *c*1550 by another hand.

9 masses, 6 *Magnificat* settings and 9 motets, by Carvor (7), Fayrfax (2), Cornysh (1), Du Fay (1), Lambe (1), Nesbet (1) and anonymous (only Carvor's name appears in the MS).

D. Stevens: 'The Manuscript Edinburgh, National Library of Scotland, Adv.Ms.5.1.15', *MD*, xiii (1959), 155–67; I.P. Woods: *The Carvor Choirbook* (diss., Princeton U., 1984)

Edinburgh, University Library, 64 (*formerly Db.I.7*) ('Dunkeld Antiphoner'; 'Dowglas-Fischear Partbooks'). 5 partbooks bound together in a single volume of 137 paper ff. (except for a few parchment ff. at the beginning, end and between each partbook), 27 × 19 cm, with modern covers of yellow calfskin. Designation of MS as 'Dunkeld Antiphoner' based on erroneous belief that it originated at Dunkeld Cathedral, in Perthshire. However, Elliott showed that the books probably originated at Lincluden, a college housed in a former Benedictine monastery, near Dumfries. The original owner was Robert Douglas, provost of the college, whose name appears in an inscription on f.111. Date: *c*1557.

2 masses, 1 mass fragment and 16 motets. No composers named, but following identified from concordances: Certon (4), Lupi (4), Jacquet of Mantua (3), Ashwell, Sermisy, Josquin, Willaert (with conflicting attribution to Rore) and Philip Van Wilder (with conflicting attribution to Gombert).

K. Elliott: '"Church Musick at Dunkell"', *ML*, xlv (1964), 228–32

20. 16TH-CENTURY GERMAN SOURCES OF LUTHERAN MUSIC. The sharp antagonism and mutual anathematizing that characterized Lutheran-Catholic theological disputes did not carry over to any great extent to music. The most obvious denominational difference was the emphasis on congregational singing in the Lutheran church, but Luther never intended that hymn singing should completely replace the singing of more elaborate polyphonic music by trained choirs. His admiration for Netherlands-style polyphony in general, and the music of Josquin and Senfl in particular, fostered a climate favourable to performance of a considerable amount of music by Catholic composers. The masses, *Magnificat* settings and motets of Josquin, Senfl, Isaac and Lassus are just as well represented in 16th-century Lutheran sources as are the compositions of such Protestant composers as Walter, Ducis, Resinarius and Hähnel. Moreover, although music by the latter group of composers was generally less elaborate, it does not differ greatly from the style of the Netherlanders: textual matters – the revision or excision of doctrinally offensive texts and the translation of some Latin texts into German – rather than musical considerations differentiated the early Lutheran liturgical repertory from the Catholic. Even here the distinctions are sometimes vague, so that it becomes impossible to determine with certainty whether a source is Lutheran or Catholic.

An important set of definitely Lutheran MSS is a group of choirbooks and partbooks dating from *c*1540–50, copied by and under the direction of Johann Walter (i) for the chapel at Torgau in Saxony. These MSS are related by common scribes and repertorial similarities. They are described and inventoried in Gerhardt (1949). For a study of these and other Lutheran sources, see J. Windh: *Early Lutheran Masses* (diss., U. of Illinois, 1971).

Nuremberg, Germanisches National-Museum, 83795 (*formerly M369m*) *tenor*. 1 paper partbook, 275 ff., 20·5 × 15 cm. Covers of tooled leather over boards, with picture of Luther on the front and Melanchthon on the back. The main scribe was Johann Walter (i). The first folio contains the inscription 'Hat myr verehret meyn guter freund/herr Johann Walter/Componist Musice/zu Torgaw/1530/dem Gott gnade/Martinus Luther'. Gerhardt argued that the inscription was spurious.

5 mass Ordinary cycles, 8 mass Ordinary pairs or sections, 20 mass Proper sections (mostly introits and sequences), 9 *Magnificat* settings, *Te Deum*, 11 psalms, 9 hymns, 3 Passions, 39 motets and 24 German sacred pieces, by Walter (58), Roselli, Isaac, Josquin, Senfl, Richafort, Compère, Dietrich, Finck, Gombert, Hellinck, Rener and others, arranged more or less in order of the principal feasts of the liturgical year.

The other MSS in this group are: *D-Ngm* 83795 (formerly M369m) bassus, a partbook of 254 paper ff., 22 × 16·5 cm, which does not belong to the same set as the tenor partbook catalogued under the same number, but contains related repertory; *Weimar, Bibliothek der Evangelisch-Lutherischen Kirchengemeinde, B*, a choirbook of 178 paper ff., 48 × 32·6 cm; *Gotha, Forschungsbibliothek, Chart.A98*, a choirbook of 341 paper ff., 41 × 27 cm, with a dedicatory title-page from Walter to Johann Friedrich I, Elector of Saxony, dated July 1545; *Kraków, Biblioteka Jagiellońska, Mus.40013* (*formerly Berlin, Preussische Staatsbibliothek*), a choirbook of 382 paper ff., 47·3 × 35·5 cm; and *Mus.40043*, 4 paper partbooks, *c*25 × 15 cm.

Another group of 6 related sets of paper partbooks from Wittenberg is identified in W. Steude: *Untersuchungen zur mitteldeutschen Musiküberlieferung und Musikpflege im 16. Jahrhundert* (Leipzig, 1978). All *c*20 × 15 cm and all copied by the same scribe (*c*1545–70).

Budapest, Országos Széchényi Könyvtár (*National Széchényi Library*), *Bártfa 22–3*. MS 22 consists of 1 paper partbook (T 104 ff. and Q 15 ff.); MS 23 is a bassus partbook (128 ff.). Two books not from the same set, but preserve similar repertory. Brought to National Library in 1915 from St Aegidi, Bártfa (now Bardejov, Czech Republic), and restored.

Mass Ordinary cycles, pairs and sections, *Magnificat* settings, motets and German sacred pieces by Ducis, Eckel, Finck, Josquin, Senfl, Stoltzer, Walter and others.

H. Albrecht: 'Zwei Quellen zur deutschen Musikgeschichte der Reformationszeit', *Mf*, i (1948), 242–85

Other MSS in this group are *Dresden, Sächsische Landesbibliothek, Mus.1/D/3 (formerly B.1270) and Mus.1/D/4* (formerly B.1276); *Zwickau, Ratsschulbibliothek, LXXXI, 1*, and *CVI, 5*. These sources contain Latin motets and German sacred pieces by Bergholz, Crecquillon, Reusch, Scandello, Senfl, Baston, Stoltzer and others. The Dresden MSS are described and inventoried in W. Steude: *Die Musiksammelhandschriften des 16. und 17.*

Jahrhunderts in der Sächsischen Landesbibliothek zu Dresden (Leipzig and Wilhelmshaven, 1974).

The Sächsische Landesbibliothek in Dresden is now the repository for a large number of Lutheran MSS brought into Dresden from city or church libraries in nearby towns such as Glashütte, Grimma, Meissen, Löbau, Pirna and Marktschellenberg. Copied during the second half of the 16th century and the first decades of the 17th, these MSS are mostly partbooks averaging *c*15 × 20 cm; there is also a set of eight large choirbooks (*c*50 × 35 cm) from Pirna. Many of these MSS are in poor condition as a result of ink corrosion and water damage, and can no longer be used. However, descriptions and lists of their contents can be found in the Steude catalogue (1974) mentioned above. See also L. Hoffmann-Erbrecht: 'Die Chorbücher der Stadtkirche zu Pirna', *AcM*, xxvii (1955), 121–37.

Music for the use of the Württemberg royal court chapel at Stuttgart (Lutheran from the early 1530s) is contained in a set of large choirbooks now at the Württembergische Landesbibliothek. The books are approximately 40–50 × 38–40 cm, with covers of leather over cardboard. Most date from 1538 to *c*1570; the three principal scribes are Nikolaus Peuschel, Johann Chamerhueber and Heinrich Leitgeb. Mass Ordinaries and Propers are contained in MSS I 27–8, I 32, I 37–8, I 40 and I 44–6. Psalms, Passions and *Magnificat* settings are found in MSS I 26, I 29 and I 39. Motets are found in MSS I 25, I 34–6 and I 41–3. MS I 24 contains hymns. Composers represented are Finck, Isaac, Josquin, Jacquet, Rener, Resinarius, Senfl, Stoltzer, Walter and others. The MSS are described and inventoried in C. Gottwald: *Codices musici Cod.mus.fol.I 1–71*, Die Handschriften der Württembergischen Landesbibliothek Stuttgart, 1st ser., i (Wiesbaden, 1964).

A set of large choirbooks now in the Universitätsbibliothek at Erlangen (MSS 473/1–4) preserves a Lutheran repertory, much of which was apparently copied from prints of Rhau, Petreius, Formschneider and others. The original set apparently included at least seven volumes, as MS 473/3 bears the inscription 'Septimus Tomus' on its cover. The books average *c*46 × 31 cm; MSS 473/1–3 have original covers of white leather over boards, tooled with allegorical figures, busts and ornaments; MS 473/4 has modern cardboard covers. All were copied between 1538 and 1548, by Johannes Hartung (father-in-law of the composer Caspar Othmayr), at the Cistercian monastery at Heilsbronn (between Nuremberg and Ansbach). The apparent anomaly of a Protestant repertory originating from a Cistercian monastery is explained by the fact that the cloister had gradually been infiltrated by Lutheran ideas during the first decades of the Reformation. Sympathetic to Lutheran ideas, but desiring to retain the monastic principle at the convent, the abbot Johannes Schopper founded a Lateinschule as a means of recruiting and training novices. Included in the curriculum was the performance of liturgical polyphony. The repertory preserved in these MSS is almost certainly the one performed by the Lateinschule of the monastery. The books contain 248, 325, 305 and 237 paper folios respectively; the pieces are arranged approximately in order of the feasts of the liturgical year. Mass Propers and Ordinaries, *Magnificat* settings, hymns, motets and a few German sacred pieces are included, a total of 128 pieces. Composers represented are Dietrich, Resinarius, Senfl, Isaac, Josquin, Paminger, Hähnel, Walter and others. See F. Krautwurst: 'Die Heilsbronner Chorbücher der Universitätsbibliothek Erlangen (Ms. 473, 1–4)', *Jb für Fränkische Landesforschung*, xxv (1965), 273–324; xxvii (1967), 253–82.

Rostock, Universitätsbibliothek, Mus.Saec.XVI-49 (1–6). 6 paper partbooks (D 226 ff., A 244, T 235, B 224, Q 84, S 50), with the unusually large dimensions of 33·3 × 21·7 cm. Very good condition, no signs of use. Original covers of dark brown leather. Copied by Jacob Praetorius (i) in Hamburg (largely from Rhau prints); title-page dated 1566.

25 masses, 34 mass Proper sections, 24 *Magnificat* settings, 8 *Te Deum* settings (1 in German), 23 psalms, 43 hymns and 47 motets, by Crecquillon, Dietrich, Finck, Hähnel, Isaac, Josquin, Rener (17), Senfl, Resinarius (33), Stoltzer, Walter (17) and others. MS carefully and systematically arranged; pieces grouped according to liturgical categories (masses, introits, hymns etc.).

L. Hoffmann-Erbrecht: 'Das Opus musicum des Jacob Praetorius von 1566', *AcM*, xxviii (1956), 96–121

Leipzig, Universitätsbibliothek, Thomaskirche 49 (formerly III, A.17–20). 4 paper partbooks (D 313 ff., A 343, T i + 299, B 324), 29·3 × 19·6 cm; the covers of white tooled leather bear the initials 'I.R.M.' and the date 1558. The books, copied by many different scribes, were probably made in Leipzig, for use of the Thomaskirche.

271 pieces, almost exclusively liturgical, including mass Proper and Ordinary settings, *Magnificat* settings (one with interspersed German and Latin sacred pieces) and motets, along with other liturgical pieces and a few secular works. Composers represented are Martin Agricola, Breitengraser, Clemens non Papa, Isaac, Josquin, Obrecht, Senfl, Stoltzer, Walter, Willaert and many others.

W. Orf: *Die Musikhandschriften Thomaskirche Mss. 49/50 und 51 in der Universitätsbibliothek Leipzig* (Wilhelmshaven, 1977); [see also review by L. Youens, *TVNM*, xxix (1979), 59–62]; L. Youens: *Music for the Lutheran Mass in Leipzig, Universitätsbibliothek, MS. Thomaskirche 49/50* (diss., Indiana U., 1978)

One final MS which deserves mention is the so-called Eisenacher Cantorenbuch in the Eisenach Stadtarchiv (without call number). Formerly in the Carl-Alexander-Bibliothek, this choirbook of 345 paper folios, 49·6 × 36 cm, was copied by Wolfgang Zeuner at Eisenach during the 1540s. Although the repertory is entirely Latin, the Lutheran orientation of the MS is evident in the absence of graduals, offertories and communions, and in the numerous concordances with the Torgau Walter MSS. The first part of the collection consists of mass Proper sections arranged according to the liturgical calendar, along with separate Kyries, Glorias and seasonal hymns. After a gap of 30 blank folios, the MS resumes with *Magnificat* settings, hymns, psalms and motets by Senfl, Rein, Hähnel, Musa and Walter. The collection as a whole contains a considerable amount of music for Vespers, a characteristic which it shares with many other Lutheran sources.

O. Schröder: 'Das Eisenacher Cantorenbuch', *ZMw*, xiv (1931–2), 173–8

21. 16th-century German sources of Catholic music. In striking contrast to the small number of 15th-century MSS of Catholic music from German-speaking areas, 16th-century sources from these areas are extremely numerous. Almost all of the MSS discussed in this section were intended for practical use by the musical establishments of cathedrals, monasteries or court chapels. Although a few of them have impressive illuminated decorations, most are plain and unostentatious in appearance. With few exceptions, they are now in libraries at or

near their places of origin; relatively few have an extensive history of transfers from one owner to another. The following survey is arranged geographically.

(i) Aachen. From the Rhineland area of western Germany come three choirbooks, copied between *c*1567 and *c*1579. The main scribe was probably Johannes Mangon, succentor of the *Krönungsstift* choir at Aachen Cathedral, where German kings were crowned until 1531. The books (in *D-AAm*) measure *c*39 × 26 cm; the original covers of tooled leather on boards are still present, though much of the leather has deteriorated.

The first choirbook contains 19 masses, all by Mangon himself. The second contains 98 motets by Mangon (45), Clemens non Papa (20), Lassus (6), Crecquillon (5), Michael Guilelmus (3), Lambertus de Monte (2), Simon Moreau (2), Franziscus de Rivulo (2), Chastelain, Cleve, Maillard, Adamus de Ponta and anonymous. The third choirbook contains Marian antiphons, hymns, *Magnificat* settings and other liturgical pieces. The principal composer is again Mangon (42 pieces); 1 piece is by Ludovicus Episcopius, another by Lambertus de Monte; the remaining 22 pieces are anonymous.

R. Pohl: *Die Messen des Johannes Mangon* (Cologne, 1961), 81ff

(ii) Augsburg. The liturgical books of the monastery of St Ulrich and St Afra in Augsburg are important sources of late 16th-century Catholic music. This group includes about 20 choirbooks of polyphony, in addition to other books containing only chant. The MSS are now part of the 'Tonkunst Schletterer' collection at the Staats- und Stadtbibliothek in Augsburg. All are very large choirbooks (*c*58 × 43 cm) containing 200–300 or more paper folios; the covers are of pigskin on boards. Most of the books have title-pages (beautifully illuminated in silver, gold and other colours) with pictures of SS Wolfgang, Afra, Ulrich and other saints, as well as the emblems of the monastery and its abbot. Most of the primary and secondary initials were printed from woodblocks. The books bear dates ranging from 1572 to 1614, and were copied by several scribes, among whom were Johannes Dreher and Gregor Gastel or Hastel.

The books containing polyphony are *D-As* 9, 17, 18, 19 (mass Ordinary cycles); *D-As* 6, 7, 22, 23 (mass Proper settings); *As* 4 (mostly motets); *As* 1, 8, 14, 20, 24, 25 (*Magnificat* settings, psalms or other music for Vespers); and *As* 21 (Offices for the dead). Among composers represented are Lassus, Vaet, Utendal, Scandello, Philippe de Monte, Handl, Andrea Gabrieli, Aichinger, Jacob Regnart, Gosswin, Ivo de Vento, Kerle, Crecquillon, Daser, Clemens non Papa, Christian Erbach, Sebastian Hollander, Palestrina, Blasius Ammon, Morales, Gastoldi, Lechner, Eccard, Viadana, Gastel or Hastel and Ippolito Chamaterò.

C. Gottwald: *Die Musikhandschriften der Staats- und Stadtbibliothek Augsburg* (Wiesbaden, 1974)

(iii) Munich. A large and extremely valuable group of 16th-century choirbooks preserves polyphonic music used at the Bavarian ducal court at Munich during the time its musical chapel was being directed by such composers as Senfl, Daser and Lassus. The MSS, numbering about 60, are now in the Bayerische Staatsbibliothek in Munich. The present call numbers, which group the books in descending order of size, are not to be confused with a different and unrelated set of serial numbers assigned to the same MSS by Maier (1879), who first described and inventoried these sources. More recently, the collection has been discussed by Bente (1968), who provided information on scribal hands, watermarks, bindings, gathering structure and dating, as well as a collation of the present call numbers with Maier's.

The relevant MSS are all of paper. (The few on parchment are splendidly illuminated 'presentation' MSS, most of which did not originate at the Munich court: see §16.) Although some of the paper has been damaged by ink corrosion, most folios are still legible and usable. The original covers are of leather over boards, tooled or stamped with various ornamental patterns and figures. The copying was done by several scribes, including Lukas Wagenrieder (Senfl's principal copyist), Johann Pollet, Hans Mayr, Peter Steydl and, quite possibly, Senfl himself.

Earliest sources in this group (*c*1510–30) include *D-Mbs* Mus.ms.1 (1 mass for 12 voices by Brumel, with the names of the singers in Lassus's hand), Mus.ms.3 (8 masses by Isaac), Mus.ms.10 and 12 (motets by Senfl and Josquin), Mus.ms.31 (mass Ordinary and Proper settings by Isaac), Mus.ms.53 (Credos by Isaac, Brumel, La Rue and Compère) and several others. Senfl himself may have copied some of the fascicles of these MSS while at the imperial court of Maximilian I, and then brought them to Munich in 1523.

Mus.ms.35–8 contain Senfl's *Opus musicum* of 1531, which consists of 144 mass Proper settings for the liturgical year, arranged in cycles by feasts. About a third of the pieces are actually by Isaac; some of these also appear in his better-known collection of mass Proper settings, the *Choralis Constantinus*. Also dating from *c*1531 are Mus.ms.5 (masses by La Rue, Senfl and Bauldeweyn), and Mus.ms.25 (mass Propers and motets by Sermisy, Senfl and Lebrun).

MSS dating from 1540s to 1560s include: Mus.ms.2 (masses by Jacquet of Mantua), Mus.ms.9 (masses by Daser, Lassus and Rore), Mus.ms.11 (*Magnificat* settings, masses and motets by Flori and Lassus), Mus.ms.16 (motets by Daser, Jacquet of Mantua, Lupi, Mouton, Rore, Senfl, Sermisy, Verdelot, Willaert and Zarlino), Mus.ms.29 (mass Proper cycles by Daser, Isaac and Jacotin [?Godebrye]), Mus.ms.43 (*Magnificat* settings and motets by Le Maistre, Mahu, Walter and anonymous) and Mus.ms.47 (masses by Bruck, Daser, Isaac, La Rue and Senfl).

Among the numerous MSS copied during the 1570s and 1580s are the following: Mus.ms.51 (masses by Courtois, Gosswin, Lassus and Ivo de Vento), Mus.ms.54 (masses by Andrea Gabrieli, Lassus and others), Mus.ms.2746 (masses by Daser, Andrea Gabrieli, Gosswin, Lassus and Lockenburg), Mus.ms.21, 23, 48, 56 and 2748 (*Magnificat* settings by Lassus and others), Mus.ms.55 (hymns by Lassus and anonymous), Mus.ms.2745 (Lamentations by Lassus) and Mus.ms.15, 49, 50 and 2744 (motets by Lassus).

J.J. Maier: *Die musikalischen Handschriften der K. Hof- und Staatsbibliothek in Muenchen* (Munich, 1879); Bente (1968); M. Bente and others, eds.: *Katalog der Musikhandschriften*, i: *Chorbücher und Handscriften in Chorbuchartiger Notierung* (Munich, 1989)

(iv) Nuremberg. Another group of late 16th-century German sources preserves music for use at the church of St Aegidi in Nuremberg during the time Friedrich Lindner was Kantor (1574–97). Originally about 25 large (average *c*53 × 37 cm) paper MSS, at least 18 have survived major fires and wartime bombing attacks. Copied by or under the direction of Lindner himself, they are known as the 'Lindner choirbooks'. The coat-of-arms of the Paumgärtner family of Nuremberg is tooled on the original leather covers of almost all of the books; apparently the Paumgärtners provided financial support for the preparation of the MSS.

Although the Lindner choirbooks were copied for use in a Lutheran church, they are discussed here because the liturgical repertory represented in them is virtually indistinguishable from that in use at contemporary Catholic churches. Nuremberg had been firmly aligned theologically with Lutheranism since 1524, but a half-century of Protestantism produced relatively few radical changes in the liturgical practices of Nuremberg's

churches, and the city continued to be a major centre for the publication of liturgical music by internationally famous Catholic composers. The Lindner choirbooks strongly reflect this cosmopolitan flavour. With one minor exception, all of the pieces are in Latin. Furthermore, most of the feasts of the Catholic rite (including Marian feasts) are represented, and Catholic composers predominate overwhelmingly. The Lindner choirbooks thus form a counterpart to the Erlangen MSS (see §20), which originated in a nominally Catholic monastery but contain distinctively Lutheran repertory.

11 of the Lindner choirbooks are now in *D-Nla*: Fenitzer IV.2° 227, St Egidien 19, 27 and 33 (masses); Fenitzer IV.2° 222 and 226, St Egidien 20, 28 and 29 (motets); Fenitzer IV.2° 224 and St Egidien 30 (vespers music). Six MSS are in *Ngm*: 8820 Q (masses); 8820 B, 8820 N and 8820 X (motets); 8820 Z (masses and motets); 8820 T (*Magnificat* settings). One of the mass MSS is now in *B*, where it bears the call number Mus.40023 (formerly Z 23). All of the MSS in Nuremberg libraries are described and inventoried by Rubsamen (1957).

Much of the repertory was apparently copied from contemporary prints. As copies of some of these prints are no longer extant, the Lindner choirbooks are unique sources for a substantial number of pieces. Among the composers represented are Lassus (especially prominent), Rore, Ruffo, Palestrina, Ingegneri, Philippe de Monte, Jacquet of Mantua, Andrea and Giovanni Gabrieli, Riccio, Vecchi, Porta, Vaet, Annibale Padovano, Clemens non Papa, Crecquillon, Phinot, Willaert, Utendal, Regnart, Formellis, Ivo de Vento and Kerle. Only in *D-Nla* Fenitzer IV.2° 224 do a few Protestant composers – Walter, Resinarius and Hähnel – appear.

W. Rubsamen: 'The International "Catholic" Repertoire of a Lutheran Church in Nürnberg (1574–1597)', *AnnM*, v (1957), 229–327

(v) Regensburg. Three sets of mid-16th-century partbooks containing Latin sacred music are now in the Butsch collection of the Bischöfliche Zentralbibliothek at Regensburg, where they bear the call numbers 211–15, 216–19 and 220–22. Carl Proske, the founder of the library, purchased them from Butsch Antiquariat in Augsburg in 1858. These three Butsch MSS contain 138 motets and 12 masses or mass fragments, in addition to 11 German sacred pieces. Although the presence of the German pieces might seem to suggest a Lutheran milieu, Windh (1971) concluded that the denominational orientation and liturgical status of these sources remains unclear. For one thing, the pieces in *D-Rp* B.211–15 are arranged more or less alphabetically by text, with pieces by the same composer grouped together – i.e. the ordering is non-liturgical. Furthermore, Catholic composers – Josquin, Isaac, Arcadelt, Lupi, Sermisy, Hellinck, Mouton, Ockeghem, Stoltzer, Bruck and Willaert – overwhelmingly dominate the collection. A knowledge of the exact provenance of these MSS would obviously help clarify their liturgical role, but definitive information is still lacking. Some earlier scholars assigned the books to Protestant Saxony; Hoffmann-Erbrecht (1974), reversing his earlier opinion, suggested probable connections with the Catholic court of the Habsburg Emperor Ferdinand at Salzburg and Vienna. (Several composers who served at that court are well represented in these sources.)

P. Mohr: *Die Handschrift B 211–215 der Proske-Bibliothek zu Regensburg* (Kassel, 1955); J. Windh: *Early Lutheran Masses* (diss., U. of Illinois, 1971), 110ff; L. Hoffmann-Erbrecht: 'Stoltzeriana', *Mf*, xxvii (1974), 18–36

The Bischöfliche Zentralbibliothek also contains many other choirbooks and partbooks with sacred polyphony from the mid- to late 16th century. Proske included them in the series Antiquitates Ratisbonenses (usually abbreviated A.R.); the catalogue numbers assigned to them correspond to repertorial and liturgical layers rather than to the number and format of the books themselves. Thus A.R.849–52 is not a set of four partbooks, but a single choirbook with four repertorial layers. It appears that most of these MSS, unlike the Butsch group, originated in Regensburg itself or in the vicinity. Copied mostly during the 1570s, they share common scribes and watermarks, and preserve a large repertory of masses, *Magnificat* settings, psalms, hymns and motets. Rubrics are usually supplied and the pieces are grouped by feasts.

Among the choirbooks are A.R.838–43 (pieces for Advent, Nativity and Epiphany), 844–8 (Quadragesima and Holy Week) and 849–52 (Easter). Sets of partbooks include A.R.853–4 and 855–6 (Nativity), 857–60 (Purification and Annunciation), 861–2 (St John the Baptist and St Michael), 863–70 (Quadragesima and Holy Week), 871–4 (Easter), 875–7 (Ascension), 878–82 (Pentecost), 883–6 (Trinity), 893 (motets for weddings) and 930–39 (Advent and Nativity). Composers include Clemens non Papa, Cleve, Phinot, Crecquillon, Gombert, Ivo de Vento, Kerle, Lassus, Regnart, Senfl, Stoltzer, Utendal, Wert, Willaert, Paminger, Isaac, Sixt Dietrich, Berchem, Lechner, Manchicourt, Mouton and many others.

Antiquitates musicae ratisbonenses [handwritten catalogue of prints and MSS in *Rp*]; G. Haberkamp and J. Reutter: *Bischöfliche Zentralbibliothek Regensburg: Thematischer Katalog der Musikhandschriften* (Munich, 1989–90)

(vi) Vienna. Numerous MSS in the Österreichische Nationalbibliothek in Vienna contain Catholic liturgical music from the mid- to late 16th century. The following are representative:

Vienna, Österreichische Nationalbibliothek, Suppl.Mus.15500. 338 paper folios, 47 × 32·5 cm; the original tooled leather covers have metal corners, buckles and clasps. Copied by several scribes, the MS bears the date 1544 on the first folio. Kirsch (1961) concluded that the source was of German provenance, but was unable to fix an exact place of origin. Except for 2 introits, the 45 pieces are all settings for the Office: *Magnificat* and *Te Deum* settings, psalms and motets or other liturgical pieces. Trimming of folios at the top has probably obliterated some composers' names, but attributions to Berchem, Sixt Dietrich, Finck, Lhéritier, Lupus, Richafort, Senfl, Sermisy, Stoltzer, Menon (Tugdual) and Willaert are still legible. Composers identified from concordances are Caen, Josquin, Couillart, Du Hamel, Ducis, Jonckers and Morales.

W. Kirsch: 'Ein unbeachtetes Chorbuch von 1544 in der Österreichischen Nationalbibliothek Wien', *Mf*, xiv (1961), 290–303

The remaining Vienna MSS listed below are a few of the many sources which preserve repertory from one of the most important musical establishments in 16th-century Europe – the imperial court chapel, located variously at Vienna and Prague (under Maximilian I, it was also in Augsburg and Innsbruck).

A-Wn Mus.15506, 15946, 15950, 15951 and 16194, copied during the late 16th century, contain mostly settings of the Ordinary of the Mass. 198, 235, 275, 217 and 142 folios respectively, *c*56 × 41 cm. Composers represented are Cleve, Gatto, Lassus, Lambert de Sayve, Annibale Padovano, Regnart, Philippe de Monte, Clemens non Papa, Crecquillon, Janequin, Manchicourt, Vaet and others.

Wn Mus.16703, 16704 and 16705 are motet sources. Each contains *c*300 folios, 46 × 36·5 cm. Composers represented include Andrea Gabrieli, Gatto, Lassus, Annibale Padovano, Costanzo Porta, Orfeo and Orazio Vecchi, Viadana, Cleve, Christian Hollander, Palestrina, Regnart, Wert, Blasius Ammon, Jacobus de Bruck, Giovannelli, Handl, Rinaldo del Mel, Merulo and Lambert de Sayve.

C. Ballman, M. Cornaz and H. Vanhulst, *RBM*, l (1996), 73–92

22. Spanish and Portuguese cathedral manuscripts.

(i) Spain. The earliest Spanish sources of sacred music, dating from the very late 15th century and the beginning of the 16th, are choirbooks of medium size with music for Mass and Vespers often mixed with secular pieces. Music by foreign composers dominates the repertory, though an increasingly large number of pieces by Spanish composers is found. These books may have been copied for private use, or they may have been used in cathedrals and other churches where polyphony was sung, at a time when the polyphonic repertory of a Spanish choir was still of a size to be contained in a single MS. If some of them do represent the type of choirbook used in Spanish churches at this time, their modest dimensions suggest that Spanish choirs were not yet as large as those in Italy, England or Germany.

The following MSS are typical:

Barcelona, Biblioteca de Catalunya, 454. 190 paper ff., 30·7 × 22·4 cm. Original foliation, original covers of black leather over boards, an incomplete original index. Copied by some 15 scribes, over a period of many years. Copying started in late 15th century and continued well into the 16th; dates between 1525 and 1535 are found at various places in later sections of the MS. Of Spanish origin, though its exact provenance has not been determined.

6 masses, 11 *Magnificat* settings, 3 psalms, 9 hymns, 1 Lamentation, 1 Passion, 53 motets, 26 Spanish pieces and 10 textless pieces, by Francisco de Peñalosa (7), Compère (5), Matheo Flecha, i (5), Mondéjar (4), Josquin (4), Anchieta (3), Brumel, Baena, Morales, Weerbeke, Pastrana, Aldomar and others. Some 60 pieces remain anonymous. Music for Mass, Vespers (*Magnificat* settings, hymns, psalms) and a selection of motets, probably to be sung at Mass or Vespers, for the most important feasts of the church.

F. Pedrell: *Catàlech de la Biblioteca musical de la Diputació de Barcelona*, ii (Barcelona, 1909), 155ff; H. Anglès: *La música en la corte de los Reyes Católicos*, MME, i (1941), 112–15; E. Ros-Fábregas: *The Manuscript Barcelona, Biblioteca da Catalunya, M.454* (diss., CUNY, 1992)

Barcelona, Biblioteca Orfeó Catalá, 5. ii + 69 + ii paper ff., 33·8 × 23·8 cm. Modern pencil foliation, added after some folios had been lost from beginning of MS; no index, black pasteboard covers probably from 19th century. MS in 2 distinct parts: the first, ff.1–52, dates from the late 15th century and contains 6 Flemish masses; the second part, ff.53–69, is of Spanish origin, dating from the early 16th century, and contains much Spanish music.

6 masses, 6 mass Ordinary sections, 8 motets, 4 textless pieces, by Josquin, Isaac, Plaja, Cotes, Francisco de Peñalosa and others.

H. Anglès: *La música en la corte de los Reyes Católicos*, MME, i (1941, 2/1960), 115 only

Barcelona, Biblioteca de Catalunya, 681. ii + 101 + ii paper ff., 37·4 × 26·5 cm. Modern pencil foliation, modern cardboard covers, no index; rebound in late 18th or early 19th century, when it was trimmed, with loss of almost all composer attributions. Originated in Vich, near Barcelona, in first half of 16th century.

4 masses, 2 mass Ordinary sections, 3 *Magnificat* settings, 4 psalms, 2 hymns, 1 Lamentation, 25 motets, by Josquin, Lhéritier, Anchieta, Morales and others. 35 of the 42 pieces are unidentified.

F. Pedrell: *Catàlech de la Biblioteca musical de la Diputació de Barcelona*, i (Barcelona, 1908), 246; H. Anglès: *La música en la corte de los Reyes Católicos*, MME, i (1941, 2/1960), 134–5

Segovia, Catedral, Archivo Capitular, s.s. (formerly 18). 228 paper ff., 29·1 × 21·5 cm. Possibly originated at the Real Alcázar de Segovia. Copied in a series of layers, late 15th–early 16th centuries.

9 masses, 4 mass Ordinary sections, *c*30 motets, 5 *Magnificat* settings, several Lamentations, and some 150 Flemish, French, Italian and Spanish secular pieces, by Obrecht (*c*20), Alexander Agricola, Compère, Josquin, Johannes Martini, Tinctoris, Encina, Anchieta, Mondéjar and others. The Spanish secular pieces are grouped in the back, beginning at f.207, introduced by the inscription 'Aqui comiensan las obras castellanas'.

H. Anglès: 'Un manuscrit inconnu avec polyphonie du XVe siècle' conservé à la cathédrale de Ségovie, *AcM*, viii (1936), 6–17; H. Anglès.: *La música en la corte de los Reyes Católicos*, MME, i (1941), 106–12; R. Perales de la Cal, ed.: *Cancionero de la Catedral de Segovia* (Segovia, 1977) [facs.]; N.K. Baker: *An Unnumbered Manuscript of Polyphony in the Archives of the Cathedral of Segovia: its Provenance and History* (diss., U. of Maryland, 1978); V. de Lama de la Cruz: *Cancionero musical de la Catedral de Segovia* (Valladolid, 1994)

The amount of polyphony sung in churches increased during the 16th century in Spain, as elsewhere. A single MS no longer sufficed to contain this larger repertory, and sets of MSS began to be copied. The largest and most handsome set was copied in Toledo for the use of the cathedral choir. These MSS are large, beautifully decorated parchment choirbooks, many bearing the coat-of-arms of Cardinal Siliceo (1489–1557), Archbishop of Toledo. The set was begun in the early 1540s, when Torrentes was *maestro de capilla*, continued through Morales's tenure at Toledo (1545–7), and was completed in the early 1560s. Morales, Josquin and Torrentes are the most widely represented composers in this set of some 20 MSS. The earliest contained masses:

Toledo, Archivo y Biblioteca Capitulares de la Catedral Metropolitana, 16. 107 parchment ff., 72·8 × 52 cm. Original covers of brown leather over thick boards, original foliation, original index on a parchment folio from a chant MS pasted inside front cover. Elaborate, beautifully illuminated initials begin each piece, more modest secondary initials resemble tinted woodblock prints. Dated 1542, the MS is numbered '2' inside front cover in an old hand – apparently the second of this set copied. A note on f.106*v* in the hand of Andrés de Torrentes, 'maestro de Capilla di esta Santa Iglesia de Toledo', attests that 'este cuaderno' is correct.

6 masses, 1 of them fragmentary, by Josquin (2), Mouton, Torrentes, Bauldeweyn and Morales.

F. Rubio Piqueras: *Códices polifónicos toledanos* (Toledo, 1925) [description and inventory of surviving MSS]; R. Stevenson: 'The Toledo Manuscript Polyphonic Choirbooks and some other Lost or Little Known Flemish Sources', *FAM*, xx (1973), 87–107 [contents listed in alphabetical order]; M. Noone: 'A Manuscript Case-Study: the Compilation of a Polyphonic Choirbook', *Companion to Medieval and Renaissance Music*, ed. T. Knighton and D. Fallows (London, 1992), 239–46

E-Tc 19, 32 and 33, containing among them 14 masses by Josquin, Mouton, Carpentras and Morales, complete this first set of masses copied 1542–4. Next came *Tc* 18, with music for Vespers. A first section of 62 folios contains hymns, psalms, a few motets and a *Te Deum*; only 41 folios of an original 115 remain of the second section, labelled 'Libro de Magnificat'. Dated 1545, this book was probably also copied before Morales came to Toledo. Composers include Josquin, Torrentes, Costanzo Festa, Morales, García de Basurto and Francisco de Peñalosa. Though undated, *Tc* 10 – with 19 motets by Josquin, Gombert, Verdelot, Richafort, Jacquet and others – probably also dates from this period.

Tc 25, a collection of 36 pieces for Vespers in slightly smaller format (68 × 48 cm), is the only book to bear a date (1546, on f.38*v*) from the period of Morales's tenure. Some were copied later; f.76*v* is

dated 1549. Badly damaged by water, with most of the folios stuck together, it cannot be used today. Two other MSS in this smaller format were also copied in 1549. *Tc* 21 has rather mixed contents of motets and music for Holy Week, almost all by Spanish composers – Francisco de Peñalosa (11), Morales (7), Torrentes (5), Boluda, Escobar, Pastrana and Francisco de la Torre. *Tc* 34 is a collection of 15 *Magnificat* settings by Morales and Torrentes.

A number of MSS are dated between 1550 and 1558. The first is a motet collection:

Toledo, Archivo y Biblioteca Capitulares de la Catedral Metropolitana, 17. 99 parchment ff., 72 × 50 cm. Handsomely illuminated and decorated; a coat-of-arms, probably of Cardinal Siliceo, has been cut out of the first folio. Original index. The date 1550 is found in the initial of the tenor voice on f.1*v*.

17 motets, by Morales (11), Josquin, Jacquet, Conseil, Escobedo, Lupus and Verdelot.

Tc 27 (1550) has 5 masses by Morales and Josquin. *Tc* 28 (1552) has 5 more masses, by Morales, Berchem and Antoine de Févin. *Tc* 13 (1554) contains 15 motets, by such composers as Morales, Josquin, Escobedo, Clemens non Papa and Jacquet. *Tc* 9 (1558), a collection of 5 masses by Josquin, has an inscription on f.127*v* attesting that it was 'firmado y rubricado' by the *maestro de capilla*, Bartolomé de Quevedo.

Tc 29 (1558) has 3 masses by Morales. *Tc* 31, with 5 more masses by Morales, is undated but probably from this period, as is also *Tc* 12, with its collection of psalms, hymns and *Magnificat* settings by Torrentes, Bernal and Quevedo.

There are MSS from later in the 16th century. *Tc* 6 has masses, motets and *Magnificat* settings by Bernardino de Ribera, who became *maestro de capilla* in 1563 and may have brought this book with him. Pieces by the most famous Spanish composers of the later 16th century – Guerrero, Victoria, Ceballos – are found in *Tc* 36, 11, 8 and 20, among others. These later MSS were added to the collection at Toledo not as replacements for the pieces found in the earlier set, which continued to be popular throughout the 16th century, but as supplements to this repertory.

Though the art of polyphony was known and practised in Spain from the 15th century (the chapels of Charles V and Philip II were famous for their choirs and composers, and Spanish singers were sought for the papal choir), the practice of singing polyphonic music did not spread from a handful of internationally orientated courts and cathedrals until the second half of the 16th century. Polyphonic, mensurally notated music continued to be composed, copied and sung throughout the 17th century and into the 18th. The nature of the repertory was conservative and retrospective.

A number of MSS are preserved at the Escorial, the royal monastery and residence north of Madrid:

San Lorenzo de El Escorial, Real Biblioteca del Monasterio, 2. 97 ff. of heavy paper, 82·8 × 56·8 cm. Original foliation, original index, original covers of thick black leather over boards, with ornamental brass studs. Rubrics identify feast for which each piece was sung. Copied in 1604, for the choir at the Escorial, this enormous choirbook is perhaps the largest known from the entire Renaissance.

4 masses and 38 motets, by Palestrina (24), Rogier (10), Castillo, Ceballos, Lobo and Alfonso Ferrabosco.

C. Benito: *Catalogo del Archivo de música del Escorial* (1875) [unpublished handwritten catalogue, in *Mn*]

Other choirbooks in this set are almost as large. *E-E* 3, with 33 motets and 3 Credos by Palestrina, Guerrero, Morales, Aguilera de Heredia and others, measures 81 × 56·8 cm. *E* 1, copied in 1607, has 8 Passions and 8 motets for Holy Week, by Castro, Guerau, Villanueva, Morales, Castellon, Valladolid and Soler.

Other MSS in this set were copied during the same period (*E* 4 and 5); others much later. *E* 6, a choirbook of 119 paper ff., 52 × 35·2 cm, contains 5 masses by Palestrina – copied in 1747. *E* 8 was copied in 1786 by Pablo Ramoneda and his pupil Gaspar Castillo; its 88 folios contain a mass, a Passion and 20 motets, by Palestrina, Soler, Ayden and Torres. These later books were probably copied as replacements for earlier MSS that were worn out from several centuries of use, and their smaller format reflects a considerable decrease in the number of singers at the Escorial.

A set of 17 MSS copied between the late 16th century and the 18th is found in the Archivo Capitular of Tarazona Cathedral. The music is largely by Spanish composers, with many pieces by Francisco de Peñalosa, Escobar, Alonso de Alba and Juan de Anchieta. Palestrina is the most widely represented foreign composer; *E-TZ* 4, for example, has a cycle of 25 of his hymns, and *TZ* 10 contains 16 *Magnificat* settings. The later MSS in this set demonstrate again how the copying of Renaissance polyphony continued in Spain throughout the 17th century and into the 18th. These archives also hold several chantbooks from same period, and 34 prints of the 16th and 17th centuries.

J. Sevillano: 'Catálogo musical del Archivo capitular de Tarazona', *AnM*, xvi (1961), 149–76

Among the 18 MSS of polyphony in the Archivo de Música of Valladolid Cathedral are 3 paper choirbooks of sacred music by Guerrero, Vivanco, Navarro, Morales, Josquin and many of their contemporaries (*V* 1, 2 and 5), and 3 single partbooks (from 3 different sets) with motets by such composers as Navarro, Robledo, Ceballos, Lassus, Willaert, Crecquillon, Guerrero, Josquin, Verdelot, Jacquet of Mantua and Gombert (*V* 15, 16 and 17). The other MSS are from the 17th and 18th centuries.

H. Anglès: 'El Archivo musical de la catedral de Valladolid', *AnM*, iii (1948), 59–108

A single MS without call number, now in the Parroquia de Santiago in Valladolid, is of considerable interest. Its 155 paper ff., measuring 40 × 27 cm, contain some 50 motets, 2 masses, a requiem mass, a Passion and a Lamentation, by Ceballos, Juan Navarro, Anchieta, Pedro Guerrero, Morales, Francisco Guerrero, Montanos, Villalar and Alejo Martin. The MS originated in Seville and is a valuable source of pieces from that region of Spain. It is dated 1616, with the name 'Diego Sanchez' found at beginning.

J.B. Elústiza and G. Castrillo Hernández: *Antología musical: siglo de oro de la música litúrgica de España* (Barcelona, 1933), pp.xix–xxiv

The earliest MSS in the set in the Archivo de Música of the Capilla Real in Granada come from the very end of the 16th century. *E-GRcr* 3, a paper choirbook of 149 ff., measuring 49·5 × 36·5 cm, contains 39 motets and 2 psalms by Ceballos, Morales and unidentified composers. *GRcr* 5, dated 1598 and sharing a common scribe with *GRcr* 3, is a set of partbooks – rare in cathedral repertories – with some 60 motets by Cotes (25), Morales, Aranda, Jerónimo de Aliseda, Guerrero, Morales, Quevedo and others. Of the MSS copied in the 18th century, *GRcr* 8 again illustrates the conservative nature of Spanish church music. Copied in 1785, it contains 35 motets and a dozen other pieces, by Guerrero, Duarte Lobo, Victoria, Cotes, Jerónimo de Aliseda and other composers of the late 16th and early 17th centuries – copied not as curiosities from a past age, but in Renaissance mensural notation to be sung by the choir.

J. López-Calo: 'El archivo de música de la Capilla real de Granada', *AnM*, xiii (1958), 103–28; J. López-Calo: *La música en la Catedral de Granada en el siglo XVI* (Granada, 1963)

Single MSS surviving from late 16th and the 17th centuries may be remnants of similar cathedral sets. Several are in a collection of the Hispanic Society in New York. *US-NYhsa* **HC 380/861, 117 paper ff. measuring 57 × 44 cm, has 7 masses, by Palestrina, Morales, Martín de Villanueva and Alonso Lobo. The Duke of Lerma's coat-of-arms is impressed on the leather covers, and the MS may have originated at the collegiate church of S Pedro de Lerma. *NYhsa* **HC 380/870 is a collection of 17 *Magnificat* settings and 6 motets, by Morales, Ceballos and Philippe Rogier. It is a handsome book of 123 paper ff., 58·5 × 43 cm, with original covers of dark brown leather tooled in gold, over boards. Dated 1608 at bottom of index, it may be from Burgos. These MSS, and two others from same period, are described in R. Stevenson: *Spanish Cathedral Music in the Golden Age* (Berkeley and Los Angeles, 1961/R)

Madrid, private library of Bartolomé March Servera, R.6832 (862) (formerly Biblioteca de la Casa Ducal de Medinaceli, 607). i + 408 + i paper ff. measuring 29·4 × 20·8 cm. Much smaller than the usual Spanish choirbook of the time and an interesting if atypical late 16th-century Spanish MS. The single scribe wrote in a clear though undistinguished hand; no illumination, no decorated initials. Too small to have been sung from in a cathedral and too plain to have been a presentation MS, it appears to have been copied for the use of someone with an interest in music. The layout is unusual for the time. First a set of 25 motets, on ff.1*v*–41*v*, by Morales, Mouton, Verdelot, Richafort, Penet, Andreas Lopez, Gombert, Layolle and García de Basurto. Then 16 *Magnificat* settings by Morales, ff.43–93*v*, with 2

anonymous *Magnificat* settings added. A set of 23 masses follows, on ff.101–379*v*. All of Morales's printed masses are here, and an additional 2 found in no printed collections. A group of 11 Spanish secular pieces was copied at the end, some time later. It contains virtually all of Morales's masses and *Magnificat* settings; many of the motets in the first section are those used as models for his parody masses.

H. Anglès, ed.: *Cristóbal de Morales: Opera omnia*, MME, xi (1952), 57ff

Many more sets of MSS of this period survive in Spain – in Seville, Alquézar, Zaragoza, Avila, Barcelona, Pastrana etc. – and many more undoubtedly await discovery. Much work remains to be done, in locating sources, identifying anonymous pieces, and working with archival records of musical activity, before the curious history of Spanish Renaissance music is fully known.

(ii) Portugal. The main surviving set of choirbooks in Portugal originates from the monastery of S Cruz in Coimbra. The oldest of the set dates from the early 16th century:

Coimbra, Biblioteca Geral da Universidade, M.12. i + 209 + i paper ff., 52·3 × 39 cm. Original covers of tan tooled leather decorated by metal studs, original foliation, incomplete original index on front fly leaf. In poor condition, with many loose folios and much damage from ink corrosion. Copied in the early 16th century.

8 masses, 12 *Magnificat* settings, 1 canticle, 2 psalms, 6 hymns, 35 motets, by Morangam, Francisco de Peñalosa, Escobar, Vasco Pires, Paiva, Mouton, Pregador, Bento, Anchieta and others. More than half the pieces remain unidentified.

S. Kastner, ed.: *Inventário dos inéditos e impressos musicais* (Coimbra, 1937); M. de Sampayo Ribeiro: *Os manuscritos musicais nos. 6 e 12 da Biblioteca Geral de Universidade de Coimbra* (Coimbra, 1941)

Other MSS in the set come from the late 16th century, some from the 17th. Repertory becomes less international, dominated by Spanish composers and by several local musicians. *P-Cug* 3 has 6 masses, 3 Lamentations and 4 motets, all but 1 of the pieces anonymous. *Cug* 9 also has mixed contents – 6 masses, 25 motets, 2 *Magnificat* settings etc. – by such composers as Morangam, Pregador, Vasco Pires, Bruxel, Paiva and Santa María. Only Morangam with 6 pieces and Morales, Francisco de Peñalosa and Vasco Pires with 1 each have been identified in *Cug* 32, with its 51 motets, 9 *Magnificat* settings and 7 miscellaneous pieces. More than half the pieces in *Cug* 34, with its 28 Mass sections and motets for the Office of the Dead, have been identified.

O. Rees: *Polyphony in Portugal, c1530–c1620: Sources from the Monastery of Santa Cruz, Coimbra* (New York, 1995)

23. South and Central American manuscripts. The earliest surviving MS sources of polyphony in this part of the world date from the last quarter of the 16th century. Most of them seem to have been in use at large metropolitan cathedrals and churches, though a few belonged to smaller parish churches and missions established among the Indians. At first there was a one-way flow from Spain; *maestros de capilla* and other musicians went to the New World, taking with them the repertory of Spanish churches of the time, in MSS and printed collections of music. Renaissance polyphony continued to be sung throughout the 17th century and into the 18th, as in Spain; much of the repertory was retrospective, and a certain amount of it was composed in the New World by musicians who had emigrated from Spain.

Among the earliest surviving sources are:

Bogotá, Archivo de la Catedral, s.s. ('Gutierre Fernández Hidalgo Choirbook'). *c*102 paper ff., *c*40 × 30 cm, copied for use at the cathedral in Bogotá during the period that Fernández Hidalgo (*c*1547–*c*1623) was *maestro de capilla* (1584–8).

Psalms, *Magnificat* settings (9) and motets by Fernández Hidalgo (13), Ceballos (6), Victoria, Guerrero and others. Remnants of another choirbook, *c*39 × 28 cm, copied at the same time, preserve masses (at least 5), *Magnificat* settings (at least 10) and motets, by Ceballos (8), Morales (7), Fernández Hidalgo and others. Many of the pieces remain unidentified.

StevensonRB, 3ff

Guatemala City, Catedral, Archivo Capitular, 2. 259 paper ff., 43 × 28 cm. Copied at the Cathedral of Guatemala City in the 17th century. MS in 2 sections: ff.1–79 contain vesper hymns; ff.80–259, *Magnificat* settings and vespers motets. MS 3 in this set, copied at various times from the 16th century to the 19th, contains mostly motets (53). MS 1 has 12 masses and 15 motets, and was copied in the 1760s; a note on f.1 explains that some of the masses were copied from a collection first copied for the cathedral by Gaspar Fernandes in 1602.

26 *Magnificat* settings, 35 hymns and 13 motets, by Guerrero (20), Morales (16), Bermúdez (12), Palestrina, Ceballos and others.

D. Pujol: 'Polifonía española desconocida conservada en el Archivo capitular de la Catedral de Guatemala', *AnM*, xx (1965), 3–10; *StevensonRB*, 65ff

The earliest MS surviving in Mexico City seems to be one owned by Octaviano Valdés, canon of México Cathedral; its 139 folios contain masses, motets and a few hymns by Palestrina, Lobo, Colin and others (*StevensonRB*, 131–2). The so-called 'Códice del Convento del Carmen', with masses, *Magnificat* settings and motets by Juan de Lienas, Victoria and Guerrero, is discussed in J. Bal y Gay: *Tesoro de la música polifónica en México* (México, 1952). This MS seems to have disappeared, but a microfilm is owned by the Library of Congress in Washington. The 'Franco Codex', a beautifully illuminated parchment MS of 89 folios containing 14 (of an original 16) *Magnificat* settings by Hernando Franco, was copied in 1611. This source is described and transcribed in S. Barwick: *The Franco Codex of the Cathedral of Mexico* (Carbondale, IL, 1965); see also *StevensonRB*, 134. Originally housed in the cathedral, it has been moved to the Viceregal Museum at Tepotzotlán.

A set of 20 choirbooks is in Puebla Cathedral, with music by Morales, Guerrero, Victoria, Palestrina, Hernando Franco, Lobo, Juan Navarro, Torres, Rogier and others. Much of this vast repertory remains anonymous. See R. Stevenson: 'Sixteenth and Seventeenth Century Resources in Mexico', *FAM*, i (1954), 69–78; ii (1955), 10–15; continued as 'Sixteenth- through Eighteenth-Century Resources in Mexico', *FAM*, xxv (1978), 156–87, and *StevensonRB*, 208ff

Among MSS now in the USA are:

Chicago, Newberry Library, Case VM 2147.C36 (#4). iii + 102 + i paper ff., 38·5 × 27 cm. Copied probably at the Convento de la Encarnación, Mexico City, in the 17th century. Original ink foliation, original covers of brown leather tooled in gold, original index. One of set of 6 related choirbooks acquired by the Newberry Library in 1899.

2 masses, 1 requiem mass, 3 *Magnificat* settings, 4 psalms, 8 hymns, 12 motets, by Guerrero (8), Morales (2) and others. Many are anonymous and not yet identified.

R. Stevenson: 'Mexican Colonial Music Manuscripts Abroad', *Notes*, xxix (1972–3), 203–14; R. Stevenson: 'Catalogue of the Newberry Library Mexican Choirbooks (Case MS VM 2147 C36)', *Inter-American Music Review*, ix/1 (1987–8), 65–73

The Lilly Library of Indiana University in Bloomington acquired in 1969 a set of MSS first studied and filmed by Stevenson in San Miguel Acatán, Guatemala, in 1963, apparently copied for use at missions of Santa Eulalia, San Juan Ixcoi and San Mateo Ixtatán. Rather crudely copied, by local musicians, they contain a wide range of pieces, from masses and motets by Compère, Mouton, Sermisy and Isaac to a few polyphonic settings of vernacular (Indian) texts. Typical is:

Indiana University, Bloomington, Lilly Library, Latin American MSS, Guatemala, Music 2. 19 paper ff., 31·5 × 21·5 cm. Poor condition with many folios missing or damaged. Original covers of crude brown leather, probably deerskin, secured by three leather thongs at the spine. Copied in 1582 at Santa Eulalia, Guatemala.

1 Kyrie, 1 *Magnificat*, 3 psalms, 5 motets, 2 vernacular pieces, 1 French secular piece, 3 textless pieces, by Isaac, Sermisy and unknown composers. Only 2 of the 16 pieces have been identified.

StevensonRB, 50ff

24. Manuscript additions to prints. A not inconsiderable amount of polyphonic music has come down in a rather curious form: as hand-copied music added to printed collections. Some of this music is also found elsewhere; some is unique to these sources.

Sometimes music has been copied on to pages (or parts of pages) left blank in printed books of music. *F-Pc* Rés.41 is a copy of the 1532 print *Liber primus missarum Carpentras*. The verso of the folio on which one mass ends is left blank, as is the recto of the folio on which the following one begins. Thus there are four blank openings separating the five masses, and four motets (three by Josquin, one by Mouton) have been copied in these places, one on each opening.

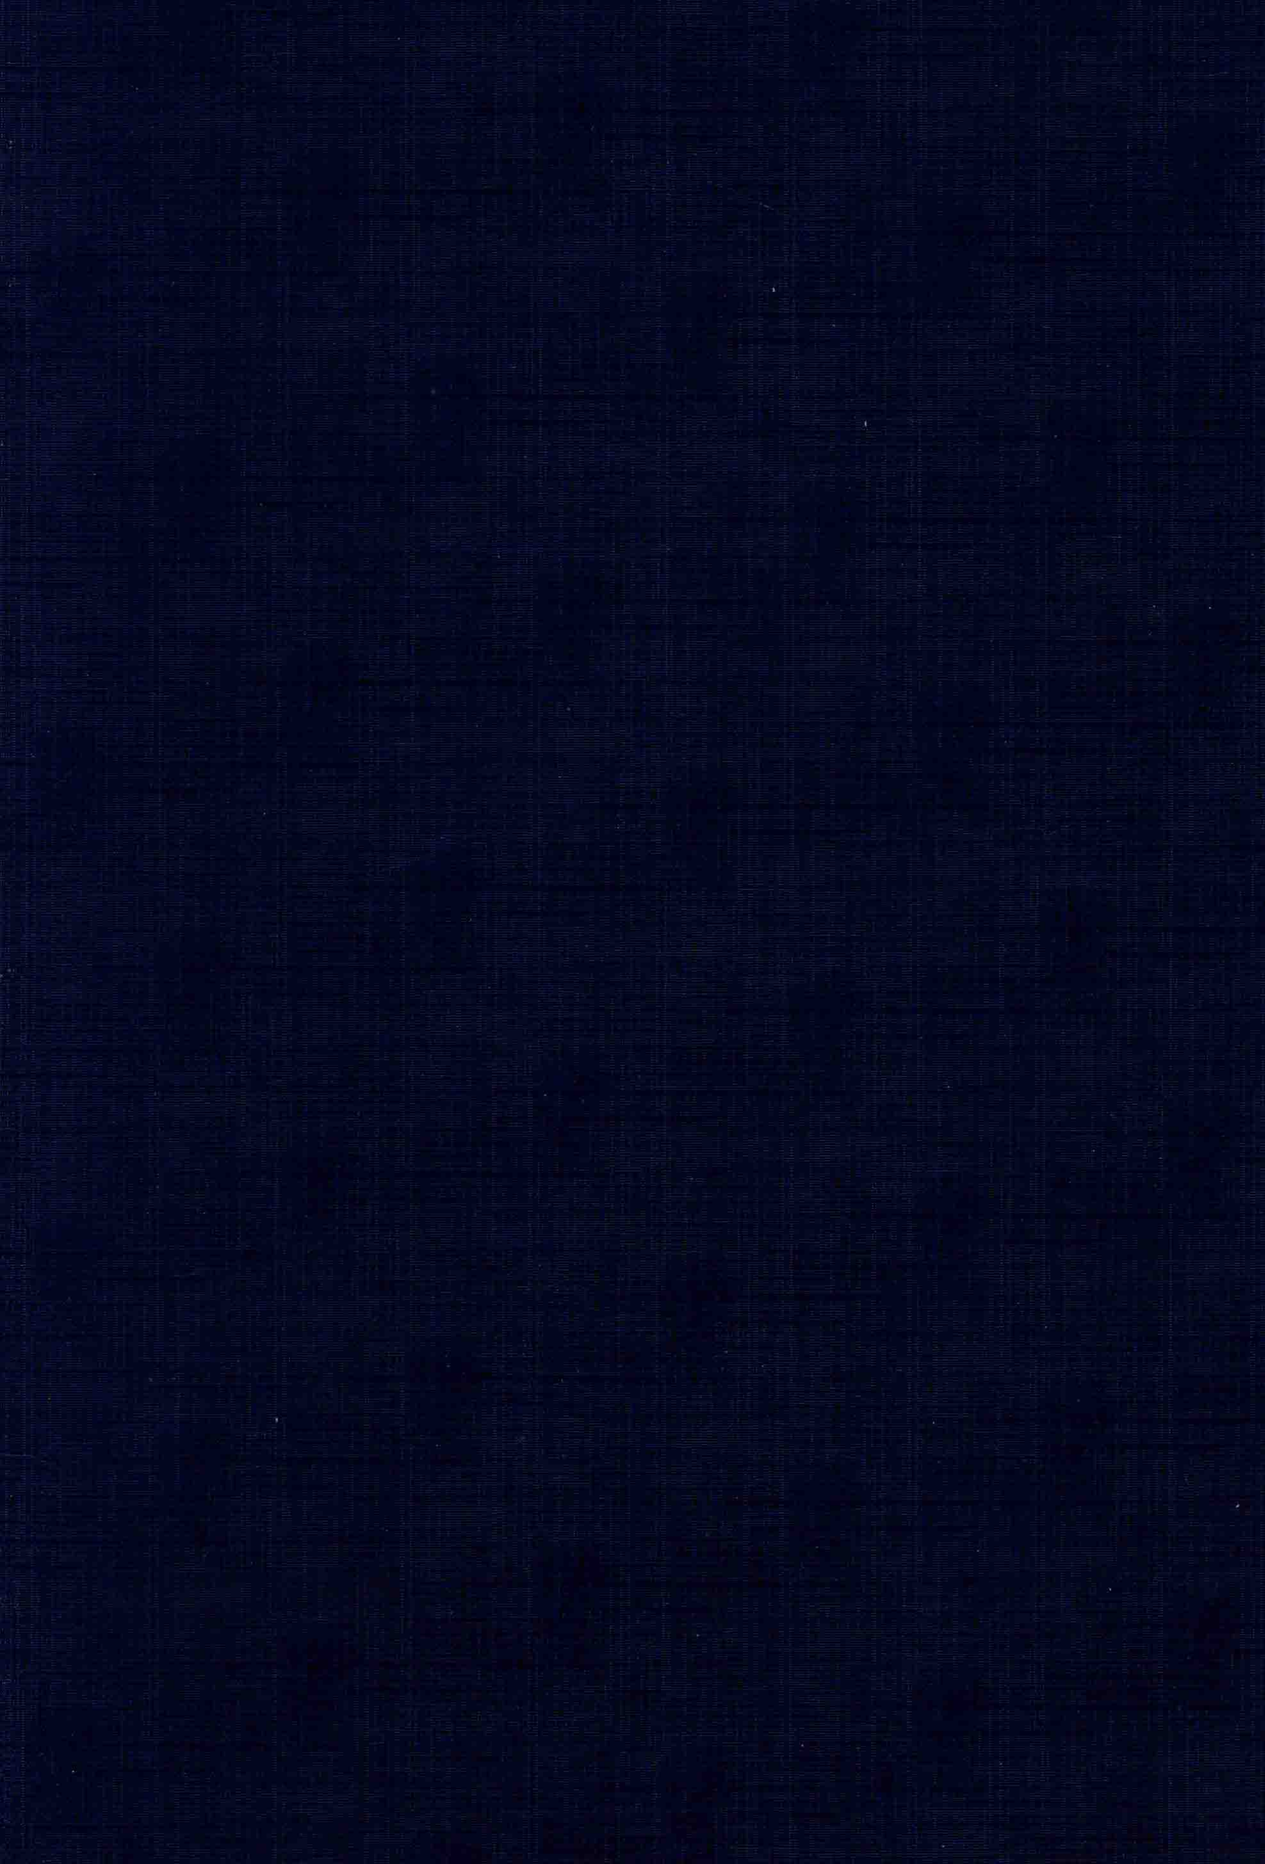
In other cases, additional folios (cut to the same size as the folios of the print) have been bound into the print, and additional music has been copied on to these. *F-Pc* Rés.862 consists of 16 paper folios measuring 22·3 × 16·6 cm added to a copy of Petrucci's *Motetti B* (RISM 1503[1]). A cycle of 20 hymns and a *Magnificat* by Gaffurius occupy the MS section. One can see from a handwritten addition to the printed index at the beginning of the book that there were originally 14 more MS folios, containing three *Magnificat* settings and eight motets. The MS addition was probably made in Milan *c*1505, though the hymns follow the standard Italian tradition rather than the Milanese.

N. Bridgman: 'Manuscrits clandestins: à propos du Ms. Rés. 862 de la Bibliothèque nationale de Paris, fonds du Conservatoire', *RdM*, liii (1967), 21–7

Some MS additions are quite substantial in size:

Budapest, Országos Széchényi Könyvtár (*National Széchényi Library*), *Bártfa Mus.pr.1*. 40 paper ff., 15·5 × 20 cm, added to a copy of the superius partbook of RISM 1545[5]. It may be assumed that each of the other partbooks of the set (now lost) contained similar MS additions. The pieces were copied at various times from *c*1555 to 1610 and after. This book was in the church of St Aegidi, Bártfa (now Bardejov, Czech Republic) until 1915, when it was brought to the National Library in Budapest.

1 mass Ordinary cycle, 11 Kyries, 5 Glorias, settings of various mass Propers, 4 *Magnificat* settings, 18 motets, by Michael Praetorius (15), Isaac (5), Lassus (4), Rener, Handl, Finck, Knöfel and others. Many other prints in this collection have similar MS additions.



O. Gombosi: 'Die Musikalien der Pfarrkirche zu St. Aegidi in Bártfa', *Musikwissenschaftliche Beiträge: Festschrift für Johannes Wolf*, ed. W. Lott, H. Osthoff and W. Wolffheim (Berlin, 1929/*R*), 38–47

These are samples. There are many others, and probably more wait to be discovered.

Once pieces of polyphony were copied into prints, they shared the same function as the music already there. The motets added to *F-Pc* Rés.41 were copied into a print in moderately large choirbook format, *c*41 × 27·5 cm, large enough to have been used by a number of singers grouped around a lectern. If the masses were sung from this print, so were the added motets. Likewise the partbook in Budapest could have been used for performance – of the pieces added in MS as well as the printed ones. On the other hand, the Petrucci print (*Pc* Rés.862) probably served as a collection from which pieces could be copied into MSS, pieces selected from the MS addition as well as the print.

Pieces added by hand to a printed collection often give clues as to where that particular copy of the print was used.
